Oodinium a genus of microscopic, parasitic dinoflagellates of fresh and salt water fish affecting the skin and the gills. Called also *Piscinoodinium*, *Amyloodinium*, velvet disease.
O. limneticum causes a dermatitis in fish which gives them a varnished appearance. It may kill the fish within a few days. See **velvet** disease.
O. pillularis a skin parasite of fish, tadpoles, axolotls and newts; causes a greenish appearance to the skin and kills by blocking the gills.
oogamous [o-og'ə-məs] pertaining or relating to or produced by oogamy; heterogamous.
oogamy [(o-og'ə-me] 1. fertilization of a large nonmotile egg by a small, motile male gamete or sperm, as seen in certain algae. 2. conjugation of two dissimilar gametes; heterogamy.
oogenesis [o"o-jen'ə-sis] the development of mature ova from oogonia. See also **avian** oogenesis.
oogonium [o"o-go'ne-əm] pl. *oogonia* [Gr.] an ovarian egg during fetal development; near the time of birth it becomes a primary oocyte.
ookinesis [o"o-kĭ-ne'sis] the mitotic movements of an ovum during maturation and fertilization.
oolemma [o"o-lem'ə] plasma membrane of the oocyte; see **zona** pellucida.
Oomycetes [o"o-mi-se'tēz] a class of fungi.
oomycosis [o-o-mi-ko'sis] infection with fungi of the class Oomycetes; a serious problem of aquarium fish.
Oonopsis North American plant genus in family Asteraceae; contains a selenocompound; causes alopecia, lameness, laminitis, hoof deformity, recumbency; includes *O. condensata*; called also golden weed.
oophorectomy [o"of-ə-rek'tə-me] excision of one or both ovaries; called also ovariectomy. The procedure is done for sterilization, tumors, severe infection, or other disorders of the ovary. Removal of the ovaries from a sexually immature animal prevents the development of secondary sex characters. If both ovaries are removed from an adult animal reproduction is not possible and

VetBooks.ir

the female sex hormones estrogen and progesterone are no longer produced.

oophoritis [o"of-ə-ri'tis] inflammation of an ovary; ovaritis.

oophor(o)- word element. [Gr.] *ovary*.

oophorocystectomy [o-of"ə-ro-sis-tek'tə-me] excision of an ovarian cyst.

oophorocystosis [o-of"ə-ro-sis-to'sis] the formation of an ovarian cyst.

oophorohysterectomy [o-of"ə-ro-his"tər-ek'tə-me] excision of the ovaries and uterus. See **ovariohysterectomy**.

oophoron [o-of'ə-ron] an ovary.

oophoropexy [o-of'ə-ro-pek"se] see **ovariopexy**.

oophoroplasty [o-of'ə-ro-plas"te] plastic repair of an ovary.

oophorostomy [o-of"ə-ros'tə-me] incision of an ovarian cyst for drainage purposes.

oophorotomy [o-of"ə-rot'o-me] incision of an ovary.

ooplasm [o'o-plaz-əm] cytoplasm of an ovum.

oorgle see **orgle**.

oosperm a fertilized ovum.

oosporein a plant toxin which may produce nephritic gout in poultry.

ootid [o'o-tid] the cell produced by meiotic division of a secondary oocyte, which develops into the ovum. In mammals, this second maturation division is not completed unless fertilization occurs.

oozing exudation of fluid.

O/P oropharyngeal.

opacification the development of an opacity.

opacity [o-pas'i-te] 1. the condition of being opaque, e.g. corneal opacity, lenticular opacity. 2. an opaque area. 3. radiopacity is the capacity of a substance to absorb radiation, rather than permit its passage.

opalescent [o"pəl-es'ənt] showing a milky iridescence, like an opal.

Opalina [o"pə-li'nə] a common ciliate protozoon in the gut of fish and amphibians.

opaque [o-pāk'] impervious to light rays or, by extension, to X-rays or other electromagnetic radiation; neither translucent nor transparent.

o,p'-DDD see **mitotane**.

open [o'pən] 1. said of tissues, cavities and lesions which are normally enclosed when they are exposed to the environment. 2. not pregnant but capable of being pregnant.

o. case lesions which carry a heavy load of infection are exposed to the air and represent a potent source of infection for other animals, e.g. an open case of bovine tuberculosis where the cow has extensive pulmonary lesions which are open to the bronchi.

o.-chest usually refers to thoracotomy or other procedure in which there is an opening in the chest wall.

o.-heart surgery in which the heart itself is exposed.

o. joint the joint capsule and synovial membrane have been punctured and the synovial lining of the joint is exposed to the air.

o. wound one without apposition of skin edges or left without sutures, usually to allow drainage and healing by granulation.

open nucleus breeding scheme [o'pən] a method of selecting and using breeding animals, consisting of a small number of elite breeding animals in a nucleus, or upper tier, and a large number of animals in a lower tier. In contrast to closed nucleus schemes, more flexible programs permit animals from the lower tiers to contribute progeny to the upper tiers. A popular variation on this system is the group breeding scheme.

opening [o'pən-ing] an aperture, orifice or rostium.

aortic o. 1. the aperture of the ventricle into the aorta. Called also *ostium aortae*. 2. the aperture in the diaphragm for passage of the descending aorta. Called also *hiatus aorticus*.

cardiac o. the opening from the esophagus into the stomach. Called also *ostium cardiacum*.

pyloric o. the opening between the stomach and duodenum. Called also *ostium pyloricum*.

operable [op'ər-ə-bəl] subject to being operated upon with a reasonable degree of safety; appropriate for surgical removal.

operant [op'ər-ənt] see instrumental and operant **conditioning**.

operate [op'ər-āt] 1. to perform an operation. 2. the subject of an experiment which has undergone a specific surgical procedure.

operating pertaining to operative surgery.

o. room a room set aside in which to perform surgical operations. Called also operating theater.

o. room emergency when a patient in the room is suddenly involved in a life threatening situation.

o. table designed for operative surgery with maximum flexibility to permit optimum positioning of the patient.

o. theater room devoted to the conduct of veterinary surgery.

operation [op"ər-a'shən] 1. any action performed with instruments or by the hands of a surgeon; a surgical procedure. 2. an agricultural, farming undertaking, e.g. cow–calf operation; an enterprise. 3. any effect produced by a therapeutic agent. For specific operations, see the specific name, such as Caslick operation.

cosmetic o. one intended to remove or correct a deformity in an esthetically acceptable manner.

covered o. one performed without exposing the part to the external air or to the possibility of confined tissues or organs escaping, e.g. covered **castration**.

exploratory o. incision into the body for determination of the cause of otherwise unexplainable symptoms.

flap o. any operation involving the raising of a flap of tissue.

radical o. one involving extensive resection of tissues for the complete extirpation of disease.

operative 1. pertaining to an operation. 2. effective; not inert.

o. technique the actual step-by-step procedure of performing a specific surgical procedure.

operator [op'ər-a-tər] 1. DNA sequence of 21 base pairs which is present within the promoter region of the *Escherichia coli* gene for β-galactosidase to which the regulatory protein called gene repressor protein binds. 2. sequences similar to (1), believed to be present in all genes.

opercular fold [o-pur'ku-lər] the fold formed by the second visceral arch in the embryo which expands caudoventrally and overgrows the caudal visceral arches of fish.

operculectomy [o-per"ku-lek'tə-me] a dental procedure involving the surgical removal of a dental **operculum** to allow further eruption and exposure of the crown.

operculum [o-pur'ku-ləm] pl. *opercula* [L.] 1. a lid or covering. 2. the folds of pallium from the frontal, parietal and temporal lobes of the cerebrum overlying the insula. 3. gill cover in a fish.

dental o. the hood of thick, fibrous gingival tissue overlying the crown of an erupting tooth.

trophoblastic o. the plug of trophoblast that helps close the gap in the endometrium made by the implanting blastocyst.

operon [op'ər-on] a segment of a chromosome comprising an operator gene and closely linked structural genes having related functions, the activity of the latter being controlled by the operator gene through its interaction with a regulator gene.

Ophidascaris a genus of roundworms found in reptiles, including *O. moreliae* in pythons and *O. robertsi*, *O. labiato-papillosa* in a variety of snakes.

ophidism [o'fi-diz-əm] poisoning by snake venom. Called also envenomation—properly the injection of the poison rather than the effects of the poison on the patient.

Ophionyssus a genus of mites of the family Dermanyssidae.

O. natricis blood-sucking mite of captive snakes. May cause anemia or transmit bacterial disease.

Ophiostoma stenoceras the perfect state of the fungus *Sporothrix schenckii* often found growing on parsnip roots; induces production of a furocoumarin which causes primary photosensitization.

ophthalmencephalon [of"thal-mən-sef'ə-lon] the retina, optic nerve and visual apparatus of the brain.

ophthalmia [of-thal'me-ə] severe inflammation of the eye or of the conjunctiva or deeper structures of the eye.

albinistic o. occurs in the pseudo-albinistic fry of the Atlantic salmon; results from the bilateral exophthalmia which is inherited in the species.

contagious o. a disease of sheep and goats caused by ***Rickettsia*** (*Colesiota*) *conjunctivae*. Characterized by lacrimation, blepharospasm, keratitis and corneal opacity.

o. neonatorum see **conjunctivitis** neonatorum.

periodic o. a previous name for equine recurrent **uveitis**.

sympathetic o. granulomatous uveitis of the contralateral eye following some weeks after a wound involving the uveal tract of the other eye. Not reported in non-primate species.

ophthalmic [of-thal'mik] pertaining to the eye.

o. genetics the study of inherited eye diseases.

o. reaction ophthalmoreaction.

ophthalmitis [of"thəl-mi'tis] inflammation of the eye.

ophthalm(o)- word element. [Gr.] *eye*.

ophthalmocele [of-thal"mo-sēl] exophthalmos.

O-11: Contagious ophthalmia (pink eye) in a sheep.

ophthalmodonesis [*of-thal"mo-də-ne'sis*] trembling motion of the eyes.
ophthalmodynamometry [*of-thal"mo-di"nə-mom'ə-tre*] determination of the blood pressure in the retinal artery (present only in primates).
ophthalmoeikonometer [*of-thal"mo-i"ko-nom'ə-tər*] an instrument used to determine both the refraction of the eye and the relative size and shape of the ocular images.
ophthalmography [*of"thəl-mog'rə-fe*] description or photography of the eye.
ophthalmogyric [*of-thal"mo-ji'rik*] see **oculogyration**.
ophthalmolith [*of-thal'mo-lith*] a lacrimal calculus.
ophthalmologist [*of"thəl-mol'ə-jist*] a veterinarian or physician who specializes in the diagnosing and surgical and medical treatment of ocular defects, injuries and diseases of the eye. Lay terms are eye doctor and eye specialist.
ophthalmology [*of"thəl-mol'ə-je*] that branch of medicine and veterinary medicine dealing with ocular anatomy, physiology, pathology, etc.
ophthalmomalacia [*of-thal"mo-mə-la'shə*] abnormal softness of the eye.
ophthalmometer [*of"thəl-mom'ə-tər*] any instrument used for measuring the eye, especially its refractive power.
ophthalmometry [*of"thəl-mom'ə-tre*] determination of the refractive powers and defects of the eye.
ophthalmomycosis any disease of the eye caused by a fungus.
ophthalmomyiasis [*of-thal"mo-mi-i'ə-sis*] infection of the conjunctival sac by fly larvae. See ***Gedoelstia*** and ***Oestrus ovis***.
ophthalmomyotomy [*of-thal"mo-mi-ot'ə-me*] surgical division of the muscles of the eyes.
ophthalmoneuritis [*of-thal"mo-nŏŏ-ri'tis*] inflammation of the optic nerve; optic neuritis.
ophthalmopathy [*of"thəl-mop'ə-the*] any disease of the eye.
ophthalmoplasty [*of-thal'mo-plas"te*] plastic surgery of the eye or its appendages.
ophthalmoplegia [*of-thal"mo-ple'jə*] paralysis of the eye muscles.
o. externa paralysis of the extraocular muscles.
o. interna paralysis of the iris and ciliary apparatus.
nuclear o. that due to a lesion of nuclei of motor nerves of the eye.
partial o. that affecting some of the eye muscles.
progressive o. gradual paralysis of all the eye muscles.
total o. paralysis of the intraocular and extraocular muscles.
ophthalmoptosis [*of-thal"mop-to'sis*] exophthalmos.
ophthalmoreaction local hypersensitivity reaction of the conjunctiva after instillation into the eye of toxins or organisms causing glanders and tuberculosis, being more severe in those animals affected with these diseases. Called also ophthalmic reaction.
ophthalmorrhagia [*of-thal"mo-ra'jə*] hemorrhage from the eye.
ophthalmorrhea [*of-thal"mo-re'ə*] oozing of blood from the eye.
ophthalmorrhexis [*of-thal"mo-rek'sis*] rupture of an eye.
ophthalmoscope [*of-thal'mə-skōp*] an instrument for examining the interior of the eye, especially the ocular fundus by use of a bright, focused beam of light and one or more lenses.
direct o. one that produces an upright and unreversed, highly magnified image of a small region of the fundus.
indirect o. one that produces an inverted and reversed image of lesser magnification but wider field of view than that produced by a direct ophthalmoscope.
ophthalmoscopic [*of-thal'mə-skop'ik*] pertaining to the ophthalmoscope.
o. examination see **ophthalmoscopy**.
ophthalmoscopy [*of"thəl-mos'kə-pe*] examination of the eye, especially the fundus, by means of the ophthalmoscope. For best results requires reduced ambient light, pupil dilatation and adequate restraint of a compliant patient. Called also fuduscopy.
ophthalmostasis [*of"thəl-mos'tə-sis*] fixation of the eye with the ophthalmostat.
ophthalmostat [*of-thal'mo-stat*] an instrument for holding the eye steady during surgery.
ophthalmosteresis [*of-thal"mo-stə-re'sis*] loss of an eye.
ophthalmosynchysis [*of-thal"mo-sin'kĭ-sis*] effusion into the eye.
ophthalmotomy [*of"thəl-mot'ə-me*] incision of the eye.
ophthalmoxerosis [*of-thal"mo-ze-ro'sis*] xerophthalmia; abnormal dryness and secondary changes to the corneoconjuncitval surface due to reduced tear production.
Ophyra aenescens a muscid fly which is a predator for filth flies.
opiate [*o'pe-ət*] any sedative narcotic containing opium or any of its derivatives. Used chiefly to induce sleep and to suppress cough. See also **opioid**.
endogenous o. naturally occurring substances with opiate effects.
opioid [*o'pe-oid*] 1. any synthetic narcotic that has opiate-like activities but is not derived from opium. 2. denoting naturally occurring peptides, e.g. enkephalins, that exert opiate-like effects by interacting with opiate receptors of cell membranes.
endogenous o. see **endorphin**, **enkephalin**.
o. receptors specific receptor sites for opioids, named for the drugs which have a high binding affinity for them. The main ones are mu (morphine), kappa (opioid agonist-antagonists such as pentazocine) and delta (enkephalin endogenous opioids). Subtypes exist and others, such as sigma and epsilon, have been identified.
opiopeptins endogenous opiates.
opisthorchiasis infection and obstruction of the biliary tract by the liver flukes *Opisthorchis* spp. Characterized by abdominal pain, diarrhea, jaundice and ascites.
Opisthorchis a genus of flukes (digenetic trematodes) parasitic in the liver and biliary tract of various reptiles, birds and mammals, including humans. Causes opisthorchiasis.
O. felineus see *Opisthorchis tenuicollis* (below).
O. sinensis see ***Clonorchis sinensis***.
O. tenuicollis found in the bile ducts, rarely the pancreatic duct and intestine, of dogs, cats, foxes, pigs, Cetacea and humans.
O. viverrini occurs in domestic and wild cats, civets, dogs and humans.
opisthotonos a form of spasm in which the head and tail are bent upward and the abdomen bowed downward. Indicates a lesion in the area of the medulla, pons and midbrain, or a general decrease in synaptic resistance, as in tetanus.
opium [*o'pe-əm*] the air-dried milky exudation from unripe capsules of the opium poppy *Papaver somniferum* or its variety *P. somniferum album*. Opium contains some 25 alkaloids, the most important being morphine (from which heroin is derived), narcotine, codeine, papaverine, thebaine and narceine; the alkaloids are used for their narcotic and analgesic effect. It is poisonous in large doses. Because it is highly addictive, opium production and cultivation of opium poppies is prohibited by most nations by international agreement, and its sale or possession for other than medical or veterinary uses is strictly prohibited by law.
camphorated tincture of o. see **paregoric**.
opodidymus [*o"po-did'ĭ-məs*] a fetus with two fused heads and sense organs partly fused.
opossum [*o-pos'əm*] (*Didelphis virginiana*) a cat-sized, arboreal, insectivorous and carnivorous marsupial with dense, black through every shade to white, fur with a pointed snout, bare prehensile tail and a noted ability to play dead when in danger—hence playing 'possum'.
opportunistic [*op"ər-too-nis'tik*] 1. denoting a microorganism which does not ordinarily cause disease but becomes pathogenic under certain circumstances. 2. denoting a disease or infection caused by such an organism.
opsin [*op'sin*] the protein component of retinal pigments, e.g. rhodopsin.
opsinogen [*op-sin'-o-jen*] a substance (antigen) capable of stimulating the formation of opsonins.
opsiuria [*op"se-u're-ə*] excretion of urine more rapidly during fasting than after a meal.

VetBooks.ir

opsoclonia, opsoclonus [op"so-klo'ne-ə] involuntary, nonrhythmic horizontal and vertical oscillations of the eyes due to central nervous system disease.

opsogen see **opsinogen**.

α_2-opsonic protein see **fibronectin**.

opsonin [op'sə-nin] a substance such as antibody, complement or properdin that renders bacteria and other cells more susceptible to phagocytosis.

immune o. an antibody that, when bound to particulate antigen, enhances *in vivo* or *in vitro* phagocytosis; the Fc portion of the antibody binds to an Fc receptor on the surface of the phagocytic cell.

opsoninopathy a condition marked by reduced concentrations of serum opsonins, leading to increased susceptibility to infection.

opsonization [op"sə-nĭ-za'shən] the rendering of bacteria and other foreign substance subject to phagocytosis.

opsonize [op'sə-nīz] to subject to opsonization.

opsonocytophagic [op"sə-no-si"to-faj'ik] denoting the phagocytic activity of blood in the presence of serum opsonins and homologous leukocytes.

opsonotherapy [op"sə-no-ther'ə-pe] treatment based on the administration of bacterial antibodies to increase the opsonic index.

optic [op'tik] of or pertaining to the eye.

o. chiasma see optic **chiasm**.

o. cortex see **visual** cortex.

o. cup an evagination of the optic vesicle, an outgrowth from the neural tube, which forms a cup, the embryologic forerunner of the eye.

o. disk disk-shaped region in the ocular fundus where the ganglion cell axons turn at right angles to exit the eye as the optic nerve; shape, vascularity and degree of myelination vary among species and, to a lesser extent, individuals of the same species. Since there are no photoreceptors at this site, it represents a blind spot.

o. nerve the second cranial nerve; it is purely sensory and is concerned with carrying impulses for the sense of vision. It is composed of ganglion cell axons, which synapse within the retina to cells within the inner nuclear layer and then to the rod and cone photoreceptors. Visible as the optic disk or optic disc or optic nerve head as it exits the eye just ventrolateral to the posterior pole. The retrobulbar optic nerve then passes through the optic foramen of the skull and into the cranial cavity. It then passes backward and undergoes a division; those nerve fibers originating from the nasal side of the retina cross to the opposite side in the optic chiasm while those from the temporal side continue to the thalamus uncrossed. The nerve tracts proceeding backward from the optic chiasm, pass around the cerebral peduncle, and dividing into a lateral and medial root, which end in the superior colliculus and lateral geniculate body, respectively. After synapsing in the thalamus the neurons convey visual impulses to the occipital lobe (visual cortex) of the brain.

o. nerve coloboma an uncommon congenital ocular anomaly in which the optic nerve head has a notch defect (partial absence); loss of vision is highly variable and may not be noticeable with small colobomata. Seen as part of the Collie eye anomaly, as an inherited anomaly in Charolais cattle, and with hypovitamosis A.

o. nerve hypoplasia an uncommon congenital ocular anomaly in which the optic nerve head is small; affected animals are blind from birth. (Compare with **micropapilla**.) Seen as an inherited condition in some dog breeds. Hypovitaminosis A in sheep or cattle and prenatal infection with bovine virus diarrhea are possible causes.

o. nerve inflammation optic neuritis.

o. primordia the earliest discernible indication of ocular development during embryology. Initially, a pair of shallow optic sulci on each side of the developing forebrain from which form optic vesicles and which in turn invaginate to form two double-walled optic cups.

o. radiation nerve fibers extending from each lateral geniculate body into the occipital (visual) cortex.

o. stalk evagination from the neural tube of the developing embryo which develops the optic cup at its distal extremity; the stalk persists as the optic nerve.

o. sulcus 1. see optic **groove**. 2. optic primordial visible as paired grooves or trenches in the forebrain neural ectoderm and from which the optic vesicles form.

o. vesicle optic primordia forming by ongoing invagination of the optic sulci. Gives rise to the optic cups and the optic stalk.

optical [op'tĭ-kəl] pertaining to vision.

opticociliary [op"tĭ-ko-sil'e-ar-e] pertaining to the optic and ciliary nerves.

opticofacial reflex see **menace response**.

opticopupillary [op"tĭ-ko-pu'pĭ-lar-e] pertaining to the optic nerve and pupil.

optics [op'tiks] the science of light and vision.

opt(o)- word element. [Gr.] *visible, vision, sight*.

optochin susceptibility test a means of distinguishing *Streptococcus pneumoniae* from other alpha hemolytic streptococci.

optogram [op'to-gram] the visual image formed on the retina by bleaching of visual purple under the influence of light.

optokinetic [op"to-kĭ-net'ik] pertaining to movement of the eyes, as in nystagmus.

optometer [op-tom'ə-tər] a device for measuring the power and range of vision.

optomyometer [op"to-mi-om'ə-tər] a device for measuring the power of ocular muscles.

OPU ovum pick-up.

Opuntia [o-pun'she-ə] American plant genus in family Cactaceae; spines cause stomatitis; called also cactus, prickly pear.

OR operating room.

or- prefix meaning mouth.

ora[1] pl. *orae* [L.] an edge or margin.

o. ciliaris retinae the marginal zone between the sensitive retina and nonsensitive retina and the commencement of the ciliary body.

o. serrata retinae the irregular margin between the anterior aspect of the neurosensory retina and the posterior aspect of the ciliary body. In non-primates the margin is less obviously serrated and so ora ciliaris retinae is the preferred term.

ora[2] [o'rə] [L.] plural of *os*, mouth.

orache ***Atriplex patula***.

orad [o'rad] toward the mouth.

oral [or'əl] 1. pertaining to the mouth; taken through or applied in the mouth, as an oral medication. 2. denoting that aspect of the teeth which faces the oral cavity or tongue.

orangutan [ə-rang'ə-tan"] (*Pongo* spp.) an arboreal, great ape, native to Southeast Asia, with mahogany colored hair, very long arms and no tail. Their species are endangered.

orange [or'ənj] the tree *Citrus aurantium* and its edible yellow fruit; the peel of two varieties is used in making various pharmaceuticals.

orb-weaver spiders spiders of the family Epeiridae; they contain poisonous substances in their body fluids and eggs and may cause illness in animals that eat them accidentally.

orbicular [or-bik'u-lər] circular; rounded.

orbicularis oculi muscle see Table 13.1F.

orbicularis oris muscle see Table 13.1A.

orbiculus ciliaris [or-bik'u-ləs] the posterior part of the ciliary body abutting the retina; the ciliary ring.

orbifloxacin a fluoroquinolone antibiotic effective against *Pseudomonas* spp.; used in dogs, cats and horses.

orbit [or'bit] 1. the bony cavity containing the eye and its associated muscles, vessels and nerves; the ethmoid, frontal, lacrimal, nasal, palatine, sphenoid and zygomatic bones and the maxilla contribute to its formation. 2. the path of an electron around the nucleus of an atom.

orbital [or'bĭ-təl] pertaining to the eye socket.

o. abscess may be associated with orbital cellulitis. Can be caused by foreign bodies, wounds, tooth infection, or fractures. Clinical signs include protrusion of the globe, pain on opening of the mouth, and often edema of the eyelids.

o. arteries the external and internal ophthalmic arteries.

o. gland see **Harderian gland**.

o. index the ratio of the height of the orbit to the width.

o. ligament the fibrous band which completes the lateral margin of the orbit in the cat, dog and other species which do not have a post-orbital bar; reaches from the frontal process of the zygomatic bone to the zygomatic process of the frontal bone.

o. neoplasm in dogs sarcoma and carcinoma common, multilobular osteoma occurs; in other species tumors uncommon except for metastatic lymphoma and cancer eye in cattle and to a lesser extent in horses.

VetBooks.ir

o. sinus bleeding see **retro-orbital bleeding**.
orbitography [*or"bĭ-tog'rə-fe*] radiography of the orbit.
contrast o. the use of positive or negative contrast agents injected into the orbital cone to define space-occupying lesions.
orbitomeatal [*or"bĭ-to-me-a'təl*] a line running from the external auditory meatus of the skull to the lower border of the orbit.
orbitonasal [*or"bĭ-to-na'zəl*] pertaining to the orbit and nose.
orbitonometer [*or"bĭ-to-nom'ə-tər*] an instrument for measuring backward displacement of the eye produced by a given pressure on its anterior aspect.
orbitotomy [*or"bĭ-to-ot'ə-me*] incision into the orbit.
Orbivirus [*or'bĭ-vi"rəs*] a genus in the the family *Reoviridae* that includes African horse sickness, bluetongue, epizootic hemorrhagic disease of deer and Ibaraki disease viruses.
orca see killer **whale**.
orcein [*or-se'in*] a brownish-red coloring substance obtained from orcinol; used as a stain for elastic tissue.
orcein-Giemsa stain [*or-se'in*] useful because of its capacity to stain elastic fibers, the metachromatic granules of mast cells, and differentiates smooth muscle from collagen.
orchard grass see ***Dactylis glomerata***.
orchidectomy [*or"kĭ-dek'tə-me*] orchiectomy.
orchidic [*or-kid'ik*] pertaining to a testis.
orchidorrhaphy [*or"-kid-or'ə-fe*] see **orchiopexy**.
orchiectomy [*or"ke-ek'tə-me*] excision of one or both testes. This procedure is common in animal husbandry as a promoter of growth. It may also be necessary when a testis is seriously diseased or injured. In farm parlance it is castration, caponizing for birds and gelding for horses. It is included in the term mark for lambs. The euphemism in dogs and cats is to 'have him fixed up', 'doctored' or 'dressed' (Scotland). Removal of both testes before puberty prevents the development of secondary sex characters and behavior because of the deficiency of testosterone. If the procedure is performed after puberty, when the masculine characteristics are already developed, the changes that occur are much less extreme. The ability to reproduce is ended, there is a diminution of the production of testosterone and sexual activity disappears, for the most part.
orchiepididymitis [*or"ke-ep"ĭ-did"ĭ-mi'tis*] inflammation of a testis and epididymis.
orchi(o)- word element. [Gr.] *testis*.
orchiocele [*or'ke-o-sēl"*] 1. hernial protrusion of a testis. 2. scrotal hernia. 3. tumor of a testis.
orchiopathy [*or"ke-op'ə-the*] any disease of the testes.
orchiopexy [*or'ke-o-pek"se*] surgical fixation of an undescended testis in the scrotum; an unethical practice in veterinary medicine.
orchioplasty [*or'ke-o-plas"te*] plastic surgery of a testis.
orchioscheocele scrotal tumor with scrotal hernia.
orchiotomy [*or"ke-ot'ə-me*] incision and drainage of a testis.
orchitis [*or-ki'tis*] inflammation of a testis. *Brucella abortus* and *B. suis* are known causes in cattle and pigs respectively. In rams *Actinobacillus seminis* is cultured from some lesions. *Corynebacterium pseudotuberculosis* causes a suppurative orchitis. The lesions may be specified as interstitial, intertubular or intratubular. The clinical signs of acute orchitis are swelling of one or both testes with pain and sensitivity to touch. In chronic orchitis there is no pain but the testes swell slowly and become hard.
Orchopeas howardii a flea that parasitizes squirrels but can be found on poultry.
orciprenaline a bronchodilator indicated in treatment of bronchial asthma, reversible bronchospasm of bronchitis, and emphysema. It is closely related to isoprenaline but has a longer duration and fewer cardiovascular side-effects. Called also metaproterenol.
ordeal tree *Erythrophleum africanum*.
order a taxonomic category subordinate to a class and superior to a family (or suborder).
order buyer buyers of all classes of cattle. In response to an order (purchase request) animals are purchased from auction market and private ranches and held in pens until the required number is reached when they are then shipped to the purchaser. Most order buyers' firms are also sellers of cattle and many have on-line video sales and digital marketing services.
ordinate [*or'dĭ-nət*] 1. the distance of the y-coordinate along the horizontal axis or x-axis from the vertical or y-axis in a rectangular coordinate system. 2. a commonly used alternate term for the vertical or y-axis of a graph.
Oregon disease see deep pectoral **myopathy** of turkeys and broilers.
Oreochromis niloticus Nile tilapia; a cichlid fish of importance in aquaculture, particularly in Africa and Asia. Called also *Tilapia niloticus*.
orexigenic [*o-rek"sĭ-jen'ik*] increasing or stimulating the appetite.
orf [*orf*] see contagious **ecthyma**.
organ [*or'gən*] a somewhat independent body part that performs a specific function or functions.
o. of Corti the organ lying against the basilar membrane in the cochlear duct, containing special sensory receptors for hearing, and consisting of neuroepithelial hair cells and several types of supporting cells.
effector o. a muscle or gland that contracts or secretes, respectively, in direct response to nerve impulses.
enamel o. see **enamel** organ.
female reproductive o's. paired ovaries, uterine tubes, uterus, vagina and vulva.
genital o. see **penis**, **vulva**, etc.
Golgi tendon o. see **Golgi tendon organ**.
gustatory o. **taste** bud.
gustus o. see **taste** bud.
o. of Jacobson vomeronasal organ.
male reproductive o. paired testes, gonadal duct systems (epididymis, ductus deferens), accessory glands, urethra, penis, prepuce and scrotum.
multiple o. dysfunction syndrome (MODS) hypotension and hypoperfusion associated with sepsis leads to dysfunction of one or more organs or systems. Called also multiple organ failure.
multiple o. failure (MOF) see multiple organ dysfunction syndrome (above).
ocular o. see **eye**.
olfactory o. the organ of smell in the nasal mucosa consisting of specialized cells with a tuft of very fine processes protruding into the nasal cavity. Internally they communicate with the olfactory nerves which pass through the cribriform plate of the ethmoid bone to synapse with cells in the glomeruli of the olfactory bulb of the brain.
reproductive o's those concerned with reproduction. See also **penis**, **vulva**, etc.
sense o's, sensory o's organs that receive stimuli that give rise to sensations, i.e. organs that translate certain forms of energy into nerve impulses which are perceived as special sensations.
solid o. any organ which does not contain a cavity or lumen and which is not gaseous; that is an organ which consists of parenchyma and stroma, the latter often arranged as trabeculae or surrounding groups of parenchymatous cells to provide support, e.g. liver, kidney.
spiral o. organ of Corti.
spiral o. of the inner ear the **cochlea**.
subfornical o. a small tubercle in the floor of the third ventricle.
target o. the organ affected by a particular hormone.
tubular o. an organ characterized by the presence of a lumen and four concentric tunics in its wall; centrifugally the layers are mucosal, submucosal, muscular and adventitia-serosal.
urinary o.'s see **kidney**, **ureter**, **urethra**, **urinary bladder**.
vascular o. of the lamina terminalis in the wall of the third ventricle of the brain.
vestibulocochlear o. the cochlear duct, semicircular canals, utricle and saccule that occupy the osseous labyrinth.
vestigial o. an undeveloped organ that, in the embryo or in some remote ancestor, was well developed and functional.
vomeronasal o. part of the olfactory sense system that consists of a pair of fleshy tubes found on the floor of the nasal cavity on either side of the nasal septum, supported by cartilage sleeve. Probably concerned with scenting and aftersmell of food and may be employed for detecting pheromones during the Flehmen response.
organ-specific restricted to, or having an effect only on, a particular organ, as an organ-specific antigen or enzyme.
organelle [*or"gə-nel'*] a specialized structure of a cell, such as a mitochondrion, Golgi complex, lysosome, endoplasmic reticulum, ribosome, centriole, chloroplast, cilium or flagellum.
organic [*or-gan'ik*] 1. pertaining to an organ or organs. 2. having an organized structure. 3. arising from an organism. 4. pertaining to substances derived from living organisms. 5. denoting chemical

VetBooks.ir

substances containing carbon. 6. pertaining to or cultivated by use of animal or vegetable fertilizers, rather than synthetic chemicals.

o. acids acids which contain carbon.

o. arsenic see **arsenic**.

o. chemistry see organic **chemistry**.

o. farming (6) farming without the use of manufactured chemicals (fertilizers, pesticides, antibiotics, hormones) or GMOs. It aims to use materials and practices that enhance the ecological balance of natural systems. In most countries the use of this term for food requires that its production must conform to a national regulatory body requiring very detailed production standards. A rapidly growing form of animal production and a niche market product as consumers consider it more tasty, safe, environmentally friendly than food produced conventionally and will pay a premium price for this. Organic food handlers, processors and retailers also must adhere to standards that maintain the integrity of organic agricultural products.

o. mercury see **mercury**.

organification oxidation of iodide and its incorporation into the tyrosyl residues of thyroglobulin in the thyroid gland.

organism [or'gə-niz-əm] an individual animal or plant.

organization [or"gə-nĭ-za'shən] 1. the process of organizing or being organized. 2. the replacement of blood clots by fibrous tissue. 3. an organized body, group or structure.

organizer [or'gə-nīz"ər] a special region of the embryo that is capable of determining the differentiation of other regions.

primary o. the dorsal lip region of the **blastopore**.

organ(o)- word element. [Gr.] *organ*.

organoarsenicals see **arsenic**.

organobromine includes some toxic compounds, e.g. polybrominated biphenyls.

organochlorines [or"gə-no-klor'ēn] see **chlorinated hydrocarbons**.

o. poisoning cause excitement and irritability, tremor, ataxia, weakness, paralysis, convulsions.

organogenesis [or"gə-no-jen'ə-sis] the development of organs.

organogeny [or"gə-noj'ə-ne] organogenesis.

organoid [or'gə-noid] 1. resembling an organ. 2. a structure that resembles an organ.

organology [or"gə-nol'ə-je] the sum of what is known regarding the body organs.

organomegaly [or"gə-no-meg'ə-le] enlargement of a viscus; visceromegaly.

organomercurial [or"gə-no-mər-ku're-əl] any mercury-containing organic compound, e.g. the mercurial diuretics. See also **mercury**.

organometallic [or"gə-no-mə-tal'ik] consisting of a metal combined with an organic radical, e.g. organical arsenical, organomercurial.

organon pl. *organa* [Gr.] organ.

organophosphate [or"gə-no-fos'fāt] term commonly used to describe **organophosphorus compounds**.

organophosphorus compound [or"gə-no-fos'for-əs] an organic ester of phosphoric or thiophosphoric acid; such compounds are powerful acetylcholinesterase inhibitors and are used as insecticides and anthelmintics. They are also used industrially as fire-resistant hydraulic fluids, coolants and lubricants and animals may be accidentally exposed to them. All organophosphorus compounds are poisonous, even those used pharmacologically, if given in large enough doses or in particular circumstances.

o. c.-induced delayed neurotoxicity paralysis occurring 2-3 weeks after exposure to some organophosphorus compounds, especially industrial organophosphates; the degree of paralysis varies from weakness appearing as knuckling of the fetlocks to complete flaccid paralysis.

industrial o. c. see organophosphorus compound (above). Includes aryl-, cresyl-, and tolyl- phosphates used commercially as flame retardants and wood preservatives. Access to the substances or, more commonly, premises contaminated by them may cause poisoning, especially delayed neurotoxicity.

o. c. insecticide includes a very wide range of contact insecticides, systemic insecticides for animals and plants; all have significant toxic potential.

o. c. poisoning signs of poisoning differ between the species. (1) Cattle show salivation and diarrhea, tremor and stiffness and a pathognomonic constriction of the pupil. (2) Sheep and pigs show predominantly nervous signs. In sheep ataxia, posterior paralysis and spinal cord degeneration are indicators. In pigs nystagmus, tremor, recumbency, posterior paralysis and drowsiness occur. (3) Horses show abdominal pain, diarrhea, ataxia, dyspnea and in foals acute bilateral laryngeal paralysis. (4) Dogs and cats show salivation, tremors and muscle fasciculations, vomiting and diarrhea, constriction of the pupils, ataxia and convulsions.

organotherapy [or"gə-no-ther'ə-pe] therapeutic administration of animal endocrine organs or their extracts. See **glandular** therapy.

organotrophic [or"gə-no-tro'fik] 1. relating to the nutrition of organs of the body. 2. deriving energy from the oxidation of organic compounds; said of bacteria.

organotropism [or"gə-not'rə-piz-əm] the special affinity of chemical compounds or pathogenic agents for particular tissues or organs of the body.

organum [or'gə-nəm] pl. *organa* [L.] an organ; a somewhat independent part of the body that performs a special function.

orgle, oorgle the guttural sound made by the male camelid during mating.

orgotein [or'go-tēn] a superoxide dismutase used as an anti-inflammatory agent.

Oriental a type and breed of cat with the oriental features seen in the Siamese: long, tapering lines with a long, wedge shaped head, large ears, slim body, long legs and a long, tapered tail. The coat can be short or long in various colors. In the USA, the two coat types are regarded as divisions of the one breed. Elsewhere, they are known as Oriental shorthair and Oriental longhair.

oriental having some connection with the Orient.

o. cattle plague see **rinderpest**.

o. sore see **leishmaniasis**.

oriental sore see cutaneous **leishmaniasis**.

Orientia tsutsugamushi [or"e-en'she-ə] obligately intracellular bacteria that cause scrub typhus in humans and many small feral mammals, especially rodents and occasionally dogs.

orienting reflex a component of the behavioral state of readiness or arousal.

Orientobilharzia see ***Ornithobilharzia***.

orifice [or'ĭ-fis] 1. the entrance or outlet of any body cavity. 2. any foramen, meatus or opening. The names of most orifices are self-defining, e.g. atrioventricular, preputial. See also **ostium**.

atrioventricular o. the opening between the atria and ventricles.

cecocolic o. aperture through which the cecum connects with the colon.

ileocolic o. the communicating orifice between the ileum and the colon.

infundibular o. slit-like orifice at the ovarian end of the avian oviduct; positioned near the ovary so that it can grasp the newly extruded oocyte.

intrapharyngeal o. the orifice between the nasopharynx and oropharynx which is bounded by the free border of the soft palate and the right and left palatopharyngeal arches. Called also *ostium intrapharyngeum*.

nasomaxillary o. the slit-like opening between the maxillary sinus and the middle meatus of the nasal cavity.

omasoabomasal o. large, oval opening at the end of the omasal canal which communicates with the abomasum. Called also *ostium omasoabomasicum*.

oviductal o. a slit-like opening in the avian urodeum.

pyloric o. aperture between the stomach and duodenum; opens infrequently, solely for the passage of ingesta.

ureteric o. paired orifices in the neck of the bladder.

orificium pl. *orificia* [L.] orifice.

origin [or'ĭ-jin] 1. the source or beginning of anything before which there is nothing. 2. In statistical terms expressed by the equation x = y = 0. 3. In anatomy the more fixed end or attachment of a muscle or the end closer to the trunk (as distinguished from its insertion), or the site of emergence of a peripheral nerve from the central nervous system.

original antigenic sin the observation that a secondary immune response occurs when B lymphocytes are exposed to closely related, but not identical, antigens and that the antibodies formed react more strongly with the antigen that elicited the primary response. Called also the doctrine of original antigenic sin. Noted originally for influenza virus. See also memory **cells**.

oris see **mouth**.

Orlov trotter Russian light horse, any color, bred from mating many light breeds together including Arab, Thoroughbred, Persian, Spanish saddle, Dutch draft, Mecklenberg, Hackney.

VetBooks.ir

O-12: Orlov trotter horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

ormetoprim a close analog of diaveridine and a folic acid antagonist used in potentiated sulfonamide mixtures used as coccidiostats.

Ormskirk terrier see **Lancashire heeler**.

ornamental fowl any of several breeds of fowl used for ornamental purposes, e.g. bantams, game birds and many other breeds such as the Yokohama, Silver spangled Hamburgs, Bearded silver Polish.

ornidazole a nitroimidazole used to treat anaerobic enteric protozoa.

ornithic of or pertaining to birds.

ornithine [or'nĭ-thēn] an amino acid obtained from arginine by the action of the enzyme arginase which also splits off urea; it is an intermediate in urea biosynthesis.

o. carbamoyl transferase (OCT), o. transcarbamoylase see ornithine carbamoyl **transferase**.

o. cycle alternative name for urea **cycle** since ornithine is the carrier of the nitrogens.

o. decarboxylase test a means of identifying different members of the Enterobacteriaceae as well as other gram-negative bacteria.

o.-δaminotransferase enzyme catalyzing the conversion of ornithine and α-ketoglutarate to glutamate semialdehyde and glutamate; deficiency causes **gyrate** atrophy.

Ornithobacterium rhinotracheale gram-negative, pleomorphic, rod-shaped bacteria associated with acute exudative pneumonia and airsacculitis in turkeys and broiler chickens.

Ornithobilharzia a genus of blood flukes (digenetic trematodes) in the family Schistosomatidae. Includes, as well as those listed below, *O. dattai*.

O. bomfordi occurs in the mesenteric veins of zebu cattle.

O. turkestanicum found in the mesenteric veins of most grazing herbivores and cats. Causes hepatic cirrhosis and nodules in the intestinal wall accompanied by loss of body weight in small ruminants.

Ornithobius mathisi louse of duck and geese.

Ornithocoris cimicid bug pest of poultry. Includes *O. toledoi* (Brazilian chicken bug), *O. pallidus*.

Ornithodorus [or"nĭ-thod'ə-ros] a genus of soft-bodied ticks in the family Argasidae.

O. coriaceus found on cattle and deer. A vector of **epizootic** bovine abortion.

O. erraticus a possible vector of African swine fever.

O. gurneyi the kangaroo tick, a vector of *Coxiella burnetii*. Its bite can cause severe local and systemic reactions in humans.

O. lahorensis causes tick paralysis.

O. moubata a parasite of mammals, including humans, birds and reptiles. A vector of African swine fever and Q fever and possibly of *Borrelia anserina* and *Aegyptianella pullorum* in fowls.

O. moubata porcinus **(syn.** *O. porcinus***)** infests wart hog burrows and transmits African swine fever.

O. puertoicensis a possible transmitter of the African swine fever virus.

O. savignyi occurs on most domestic animals and may bite humans.

O. turicata a vector of Q fever, *Theileria* and *Anaplasma* spp., and a cause of tick paralysis.

Ornithofilaria a roundworm genus in the family Onchocercidae. Called also *Splendidofilaria*.

O. fallisensis found in the subcutaneous tissues in ducks, including domesticated species.

Ornithogalum a genus of African plants in the family Liliaceae; contain cholestane glycosdes which causes severe, diarrhea, dysentery, abdominal pain and blindness; *O. umbellatum* contains the alkaloid lycorine; includes *O. conicum* subsp. *conicum* (*O. lacteum*, bulrush), *O. flexuosum* (*O. ornithogaloides*), *O. prasinum*, *O. saundersiae*, *O. pilosum* (*O. tenellum*), *O. thyrsoides* (chincherinchee, star of Bethlehem). Most of these plants are referred to as 'chincherinchee'.

Ornithoglossum vulgare African plant in the family Liliaceae; contains an unidentified toxin with some of the properties of a cardiac glycoside, which causes sudden death and diarrhea; called also *O. viride*, Cape poison onion, Cape slangkop.

Ornithonyssus [or"nĭ-tho-nis'əs] a mite genus in the family Dermanyssidae.

O. bacoti **(syn.** *Bdellonyssus, Liponyssus***)** *bacoti* parasitic in rats and humans, the intermediate host of the filarial nematode of rats, *Litomosoides sigmodontis*, vector of *Yersinia pestis* (human plague), murine typhus and Q fever. Called also tropical rat mite.

O. bursa parasitizes birds. Called also tropical fowl mite.

O. sylviarum a parasite of birds.

Ornithopus sativus African plant in legume family Fabaceae; indigestible fiber causes phytobezoars; called also seradella.

Ornithorhynchus anatinus see **platypus**.

ornithosis [or"nĭ-tho'sis] a systemic, contagious disease of nonpsittacine birds including domestic poultry, transmissible to humans, caused by *Chlamydophila psittaci*. The avian disease is called also chlamydiosis. In psittacine birds and humans the same disease is called psittacosis. Avian chlamydiosis is a disease notifiable to the OIE (see Table 22).

Ornithostrongylus a genus of worms in the superfamily Trichostrongyloidea.

O. quadriradiatus found in the crop, proventriculus and intestine of pigeons. Causes catarrhal and hemorrhagic enteritis and may cause heavy losses in young birds.

Orobanche minor parasitic plant in family Orobanchaceae; an unidentified toxin causes polydipsia, polyuria; called also broom rape.

orogastric pertaining to the mouth and stomach.

o. intubation passing a stomach tube via the mouth. The tube is of rubber or plastic. To avoid having the animal chew it there is a preference for a nasogastric tube. If it is passed per os, it is standard practice to use a mouth gag.

o. tube see orogastric intubation (above).

orogranulocyte any of the polymorphonuclear leukocytes suspended in the mucus layer on the free surfaces of oral tissues.

orolingual [or"o-ling'gwəl] pertaining to the mouth and tongue.

oronasal [or"o-na'səl] pertaining to the mouth and nose.

o. membrane temporary partition replacing the nasal pit in the embryo; degenerates to open the passage from the nostril into the oronasal cavity.

oropharyngeal [or"o-fə-rin'je-əl] pertaining to the mouth and pharynx. Called also O/P.

o. membrane a transient embryonic membrane which separates the stomodeum from the pharyngeal cavity in the early fetus. Called also oral plate.

oropharynx [or"o-far'inks] the part of the pharynx between the soft palate, the tongue and the epiglottis.

orosomucoid [or"o-so-mu'koid] an acute phase alpha globulin glycoprotein found in the blood.

orotic acid [ə-rot'ik] an intermediate in the biosynthesis of pyrimidine nucleotides.

orotracheal [or"o-tra'ke-əl] pertaining to the mouth and trachea.

Oroya fever [o-roi'ə] see ***Bartonella***.

orphan a newborn animal without a dam.

o. virus usually enteroviruses, that have no known disease attributed to them.

orphenadrine [or-fen'ə-drēn] an anticholinergic agent and analgesic used as a skeletal muscle relaxant.

orpiment a sulfide ore containing arsenic.

Orpington two breeds, Black and Buff, of meat fowl. All black or buff in color.

orthesis [or-the'sis] pl. *ortheses* [Gr.] orthosis.

orth(o)- word element. [Gr.] *straight, normal, correct*. In chemistry, *ortho-* indicates an isomer; also, a cyclic derivative having two substitutes in adjacent positions.

ortho-aminophenol an industrial chemical exposure associated with a high incidence of urinary bladder neoplasms.

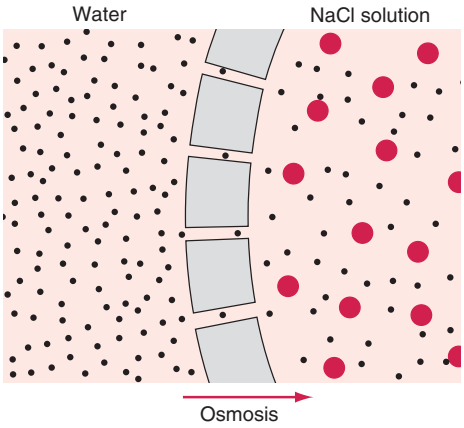
orthochromatic [or"tho-kro-mat'ik] staining normally.

orthoclusion normal dental occlusion.
orthodontic [*or"tho-don'tik*] pertaining to orthodontia.
o. applicance intraoral devices used to carry out orthodontic procedures, e.g. to correct abnormalities of occlusion; may be fixed or removable.
orthodontics, orthodontia [*or"tho-don'tiks*] that branch of dentistry concerned with irregularities of teeth and malocclusion.
interceptive o. selective extraction of deciduous teeth to prevent malocclusion of erupting permanent teeth; practiced mainly in dogs.
orthodromic [*or"tho-drom'ik*] conducting impulses in the normal direction; said of nerve fibers.
orthognathics [*or"thog-nath'iks*] the science dealing with the cause and treatment of malposition of the bones of the jaw.
orthograde [*or'tho-grād*] carrying the body upright in walking.
Orthohalarachne mesostigmatid mites of the family Halarachnidae.
O. attenuata, O. diminuta found in the nostrils, trachea and bronchi of seals and sea lions, causing sneezing and a nasal discharge.
Orthohepadnavirus [*or"tho-hep-ad'nə-vi"rəs*] a genus in the family *Hepadnaviridae*. It includes mammalian hepatitis B-like viruses.
orthometopic tending to have a vertical forehead as in some primates.
orthomolecular [*or"tho-mo-lek'u-lər*] pertaining to the theory that certain diseases are associated with biochemical abnormalities resulting in increased needs for certain nutrients, e.g. vitamins, and can be treated by administration of very large doses of these substances.
Orthomyxoviridae [*or"tho-mik"so-vir'ĭ-de*] a family of viruses containing influenza viruses A, B and C of which only influenza A viruses cause disease in domestic animals. Virions are 100 nm diameter, enveloped and contain a single-stranded negative sense RNA genome in eight segments. The envelope carries two glycoprotein spikes, hemagglutination (H) and neuraminidase (N), each of which is coded for by a different genome segment and undergo continuous antigenic variation, either because of mutation (antigenic drift) or genetic recombination (antigenic shift).
Orthomyxovirus [*or"tho-mik'so-vi"rəs*] a genus in the family ***Orthomyxoviridae***. They cause influenza in various species, including human influenza, **swine** influenza, **equine** influenza and **avian** influenza.
orthopedic [*or"tho-pe'dik*] pertaining to **orthopedics**.
o. implant see **implant**.
Orthopedic Foundation for Animals (OFA) [*or"tho-pe'dik*] an independent organization devoted to the evaluation of X-rays of orthopedic conditions in dogs, particularly hip dysplasia.
orthopedics [*or"tho-pe'diks*] that branch of surgery dealing with the preservation and restoration of the function of the skeletal system, its articulations, and associated structures; particularly associated with the correction of deformities of the musculoskeletal system.
orthopedist [*or"tho-pe'dist*] an orthopedic surgeon.
orthopercussion [*or"tho-pər-kush'ən*] percussion with the distal phalanx of the finger held perpendicularly to the body wall.
orthophoria [*or"tho-fo're-ə*] normal equilibrium of the eye muscles, or muscular balance.
orthopnea [*or"thop-ne'ə*] ability to breathe easily only while standing. Seen in dogs with congestive heart failure in which they maintain an orthopneic position, resist lying down and prefer to stand or sit in order to relieve pulmonary congestion.
Orthopoxvirus [*or'tho-poks-vi"rəs*] a genus in the order *Poxvirales*, family ***Poxviridae***.
***O.* infections** see **pox**.
orthopraxis [*or"tho-prak'sis*] orthopraxy.
orthopraxy [*or'tho-prak-se*] mechanical correction of deformities.
Orthoptera [*or-thop'tər-ə*] an order of insects of little direct importance to veterinary science except that some act as the intermediate host for some worms. Includes grasshoppers, crickets, cockroaches.
Orthoreovirus [*or"tho-re'o-vi"rəs*] a genus in the family *Reoviridae*. It includes the mammalian reoviruses of mammals and birds.
orthoscope [*or'tho-skōp*] an apparatus that neutralizes the corneal refraction by means of a layer of water; used in ocular examinations.
orthoscopic [*or"tho-skop'ik*] 1. affording a correct and undistorted view. 2. pertaining to orthoscopy.
orthoscopy [*or-thos'kə-pe*] examination by means of an orthoscope.
orthosis [*or-tho'sis*] pl. *orthoses* [Gr.] an orthopedic appliance or apparatus used to support, align, prevent or correct deformities or to improve function of movable parts of the body.
orthostatic [*or"tho-stat'ik*] pertaining to or caused by standing.
orthotic [*or-thot'ik*] serving to protect or to restore or improve function; pertaining to the use or application of an orthosis.
orthotics [*or-thot'iks*] the field of knowledge relating to orthoses and their use.
orthotist [*or-thot'ist*] a person skilled in orthotics and practicing its application in individual cases.
orthotonos, orthotonus [*or-thot'ə-nəs*] tetanic spasm that fixes the head, body, and limbs in a rigid straight line.
orthotopic [*or"tho-top'ik*] occurring at the normal place.
orthovoltage [*or'tho-vōl"təj*] in radiation therapy, voltage in the range of 140 to 400 kV.
orthozoonosis [*or'tho-zo-on'ə-sis*] a disease transmitted from birds to animals or humans.
Ortolani's sign [*or-to-lah'ne*] a test of hip laxity, used in dogs to diagnose hip dysplasia. A positive sign is a snap as the head of the femur moves back into the acetabulum after being moved to the rim of the acetabulum.
orts leftover feed that the animals will not eat.
-ory suffix meaning pertaining to.
Oryx a genus of antelopes in the sufamily Hippotraginae, characterized by their very long, straight or nearly straight horns for which they are hunted. Includes *O. leucoryn* (Arabian oryx, an endangered species), *O. dammah* (Scimitar oryx, extinct in the wild) and *O. gazella* (**gemsbok**).
oryx a member of the genus ***Oryx***.
OS [L.] *oculus sinister* (left eye).
Os chemical symbol, *osmium*.
os[1] pl. *ora* [L.] 1. any body orifice. 2. the mouth.
os[2] a bone. See Table 10.
o. acetabuli the acetabular bone, one of the bones of the developing pelvis of some species, such as large dogs, that forms a central portion of the floor of the acetabulum.
o. brevia short bones, e.g. tarsus, carpus bones.
o. compedale the shackle bone, or large pastern bone, an alternative name for the proximal phalanx of ungulates, so named because horses and other ungulates could be tethered by shackles around their pasterns.
o. cordis the bone(s) in the heart of some species that are located around the aortic anulus fibrosus; in cattle there are usually two bones, usually single in sheep, and often merely cartilaginous in carnivores and horses, if present at all.
o. cornu, o. cornua the bony process of the frontal bone as a component of the horn.
o. coronae the small pastern bone, the second or intermediate phalanx of ungulates that is located beneath the coronary band of the ungulate foot.
o. costale bony part of the rib.
o. coxae hip bone.
o. dorsale formed by the fusion of two or three thoracic vertebrae in some birds. Called also notarium.
o. longa long bone.
o. malleolare a small separate bone representing the distal end of the fibula, found in ruminants.
o. membri pelvini bones of the pelvic limb.
o. metacarpalia metacarpal bones.
o. opticus a U-shaped bone around the optic nerve, an ossification in the cartilage surrounding the nerve in adult game cocks. Called also *os nervi optici*, Gemminger's ossicle.
o. pedis the coffin bone, the third or distal phalanx of ungulates.
o. penis a bone in the penis of carnivores, and many other groups. Called also baculum.
o. plana flat bone.
o. rostrale the bone in the nose of the pig at the rostral end of the cartilaginous nasal septum.
o. suffraginis (archaic term) the large pastern bone, first or proximal phalanx of ungulates. Called also *os compedale*.
o. tarsi tarsal bone.
o. ungulare third or distal phalanx of ungulates.
OS strain an obese strain of White Leghorn chickens which have a selective IgA deficiency and in which there is an inherited predisposition to autoimmune thyroditis.
osage orange *Maclura pomifera*.

oscar common name for the fish *Astronotus ocellatus*. There are many ornamental varieties; popular as a tropical aquarium fish.
OSCC ocular squamous cell carcinoma.
oscheitis inflammation of the scrotum.
osche(o)- word element. [Gr.] *scrotum*.
oscheocele a swelling or tumor of the scrotum.
oscheoma tumor of the scrotum.
oscheoplasty plastic surgery of the scrotum.
Oschmarenia see ***Mathevotaenia***.
oscillating saw the saw oscillates backwards and forwards instead of rotating in a full circular path as is conventional with power saws. Used for bone surgery. The Stryker is the model.
oscillation [os″ĭ-la′shən] a backward and forward motion, like that of a pendulum; also vibration, fluctuation or variation.
Oscillatoria [ə-sil″ə-to′re-ə] genus of benthic (bottom-dwelling) cyanobacteria or plankton (blue-green algae) occurring in blooms in fresh water; toxins include anatoxins and microcystin; causes hepatic necrosis, sudden death, photosensitization. Includes *O. aghardii*.
oscillatory characterized by oscillation.
o. nystagmus see pendular **nystagmus**.
oscill(o)- word element. [L.] *oscillation*.
oscillometer [os″ĭ-lom′ə-tər] an instrument for measuring oscillations.
oscillometry [os″ĭ-lom′ə-tre] the measurement of oscillations.
oscilloscope [ŏ-sil′o-skōp] an instrument that displays a visual representation of electrical variations on the fluorescent screen of a cathode-ray tube.
oscitation [os″ĭ-ta′shən] the act of yawning.
osculant [os′ku-lənt] in taxonomy, having some of the characteristics of two related or similar taxonomic groups.
osculum [os′ku-ləm] a small aperture or minute opening.
Osgood–Schlatter disease [oz′good shlah′tər] avulsion of the tuberosity of the tibia, usually seen in puppies. Similar, but not identical to the disease seen in humans. Called also Schlatter–Osgood disease.
-osis word element. [Gr.] *disease, morbid state*. Sometimes used to mean an abnormal increase.
Osleroides massinoi see ***Vogeloides massinoi***.
Oslerus a genus of nematodes in the family Filaroididae and the superfamily Metastrongyloidea. Found in the respiratory tract of mammals.
O. osleri found in the trachea and bronchi of dogs.
Osm osmole.
Osm_m measured osmolality.
osmatic [oz-mat′ik] pertaining to the sense of smell.
osmic acid [oz′mik] a fixative used for the histochemical demonstration of lipid-rich cell components and for electron microscopy. See also **osmium** tetroxide.
osmics [oz′miks] the science dealing with the sense of smell.
osmidrosis [oz″mĭ-dro′sis] the secretion of foul-smelling sweat; bromhidrosis.
osmiophilia [oz″mĭ-o-fil′e-ə] the state in which tissue stains readily with osmic acid.
osmiophobia [oz″mĭ-o-fo′be-ə] the state in which tissue stains poorly with osmic acid.
osmium (Os) [oz′me-əm] a chemical element, atomic number 76, atomic weight 190.2. See Table 4.
o. tetroxide a pathology stain and fixative; called also osmic acid.
osmolal [oz″mo-lal] adjectival form of mole, a one osmolal solution contains 1 mole of solute in 1 L of water.

O-13: Multifocal proliferative tracheitis in a dog caused by *Oslerus osleri*.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

o. gap difference between the measured plasma osmolality and the osmolality calculated from the plasma concentration of normally measured solutes.
osmolality [oz″mo-lal′ĭ-te] the concentration of a solution in terms of osmoles of solutes per kilogram of solvent; expressed as mOsm/kg.
serum o. a measure of the number of dissolved particles per unit of water in serum. In a solution, the fewer the particles of solute in proportion to the number of units of water (solvent), the less concentrated the solution. A low serum osmolality would be indicative of a higher than usual amount of water in relation to the amount of particles dissolved in it. It would be expected, then, that a low serum osmolality would accompany overhydration, or edema, and an increased serum osmolality would be present in a state of **fluid** volume deficit. Measurement of the serum osmolality gives information about the hydration status within the cells because of the osmotic equilibrium that is constantly being maintained on either side of the cell membrane (**homeostasis**). Water moves freely back and forth across the membrane in response to the osmotic pressure being exerted by the molecules of solute in the intracellular and extracellular fluids. Serum osmolality reflects the status of hydration of the intracellular as well as the extracellular compartments and thus describes total body hydration.
urine o. a measure of the number of dissolved particles per unit of water in the urine. A more accurate measure of urine concentration than specific gravity, urine osmolality is useful in diagnosing renal disorders of urinary concentration and dilution and in assessing status of hydration.
osmolar [oz-mo′lər] pertaining to the concentration of osmotically active particles in solution.
o. gap the difference between the calculated and measured osmolality of a solution. The gap is due to laboratory error or to disease states.
osmolarity [oz″mo-lar′ĭ-te] the concentration of a solution in terms of osmoles of solutes per liter of solution. See also **osmolality**.
osmole (Osm) [oz′mōl] a unit of osmotic pressure equivalent to the amount of solute substances that dissociates in solution to form one mole (Avogadro's number) of particles (molecules and ions).
osmometer [oz-mom′ə-tər] 1. a device for testing the sense of smell. 2. an instrument for measuring osmotic pressure.
osmometry [oz-mom′ə-tre] the technique of measuring osmolar concentrations. The definitive method of measuring solute:solvent ratios.
osmophiles microorganisms that are able to grow in an environment with a high sugar concentration.
osmophilic [oz″mo-fil′ik] having an affinity for solutions of high osmotic pressure.
osmophore [oz′mo-for] the group of atoms in a molecule of a compound that is responsible for its odor.
osmoreceptor [oz″mo-re-sep′tər] 1. a specialized sensory nerve ending sensitive to stimulation giving rise to the sensation of odors. 2. any of a group of specialized neurons of the supraoptic nuclei of the thalamus that are stimulated by increased extracellular fluid osmolality to cause the release of antidiuretic hormone (ADH) from the posterior pituitary.
osmoregulation [oz″mo-reg″u-la′shən] adjustment of internal osmotic pressure of a simple organism or body cell in relation to that of the surrounding medium.
osmose [os′mōs] to diffuse by osmosis.
osmosis [oz-mo′sis] [Gr.] the passage of pure solvent from a solution of lesser to one of greater solute concentration when the two solutions are separated by a membrane which selectively prevents the passage of solute molecules, but is permeable to the solvent. The process of osmosis and the factors that influence it are important clinically in the maintenance of adequate body fluids and in the proper balance between volumes of extracellular and intracellular fluids. The term osmotic pressure refers to the amount of pressure necessary to stop the flow of water across the membrane. The hydrostatic pressure of the water exerts an opposite effect; that is, it exerts pressure in favor of the flow of water across the membrane. The osmotic pressure of the particles in a solute depends on the relative concentrations of the solutions on either side of the membrane, and on the area of the membrane. The osmotic pressure exerted by the nondiffusible particles in a



O-14: Osmosis. From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

solution is determined by the numbers of particles in a unit of fluid and not by the mass of the particles.

osmostat [*oz'mo-stat"*] the regulatory centers that control the osmolality of the extracellular fluid.

osmotherapy [*oz"mo-ther'ə-pe*] the use of hypertonic solutions to produce dehydration.

osmotic [*oz-mot'ik*] emanating from or pertaining to the pressure of osmosis.

o. concentration concentration of osmotically active particles in solutions.

o. fragility the susceptibility of red blood cells to hemolyze in hypotonic saline solutions; may be used as a test of red cell fragility when a series of increasing concentrations is used. Used most often to diagnose hereditary disorders of erythrocytes, such as hereditary **spherocytosis**, familial **stomatocytosis**, hereditary **elliptocytosis**. See also erythrocyte **fragility**.

osphresiology [*os"fre-ze-ol'ə-je*] the science of odors and sense of smell.

osphresis the sense of smell.

osprey (*Pandion haliaetus*)a large brown, fish-eating bird of prey with white underparts and head. Called also sea hawk.

OSPT one stage prothrombin time.

ossa cordis [*os'ə*] see **os**^{2} cordis or **heart** bones.

ossein [*os'e-in*] the collagen of bone.

osselets [*os'ə-lets*] periosteal inflammation on the anterior aspect of the epiphysis of the large metacarpal bone, the proximal end of the first phalanx and the joint capsule of the fetlock. Caused by overtraining of young horses.

osseocartilaginous [*os"e-o-kahr"tĭ-laj'ĭ-nəs*] composed of bone and cartilage.

osseofibrous [*os"e-o-fi'brəs*] made up of fibrous tissue and bone.

osseoligamentous [*os"e-o-lig"ə-men'təs*] made of bone and ligament.

osseomucin [*os"e-o-mu'sin*] the ground substance that binds together the collagen and elastin fibrils of bone.

osseous [*os'e-əs*] of the nature or quality of bone; bony.

o. cochlea see **cochlea**.

ossicle [*os'ĭ-kəl*] a small bone, especially one of those in the middle ear or the sclera of many non-mammalian species, notably birds.

auditory o's the three small bones of the middle ear: malleus, incus and stapes.

Gemminger's o. see **os**^{2} opticus.

heart o. see **heart** bones.

ossiculectomy [*os"ĭ-ku-lek'tə-me*] excision of one or more of the ossicles of the middle ear.

ossiculotomy [*os"ĭ-ku-lot'ə-me*] incision of the auditory ossicles.

ossiculum [*ə-sik'u-ləm*] pl. *ossicula* [L.] ossicle.

ossiferous [*ə-sif'ər-əsə-sif'ik*] producing bone.

ossific [*ə-sif'ik*] forming or becoming bone.

ossification [*os"ĭ-fĭ-ka'shən*] formation of or conversion into **bone** or a bony substance.

biceps brachii o. causes a progressive lameness of the shoulder joint of the horse. The calcification of the tendon can be identified radiologically.

o. center a locus in an epiphysis or other part of a bone at which ossification commences and from which it spreads over the entire section. Radiological examination can detect the appearance of each ossification center and this is of assistance in aging.

O-15: Dorsopalmar radiographs of the carpal joints in a foal demonstrating incomplete ossification with absence of many of the cuboidal bones and the proximal epiphysis of the metacarpal bone. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

dural o. an example of **ectopic** mineralization that occurs commonly in larger dog breeds and thought to be an incidental finding associated with age. The spinal dura becomes focally transformed into thin plates of bone that can be detected radiographically, most commonly in the lumbar and cranial and caudal cervical areas. Called also ossifying pachymeningitis; incorrectly so, since there is no association with inflammation.

ectopic o. see ectopic **mineralization**.

enchondral o. ossification that occurs in and replaces cartilage.

o. groove located at the physeal end of the perichondrial ring of long bones. It supplies chondrocytes to the physis for the diametric growth of the bone and also serves as a ring of attachment of the periostium. Called also groove of Ranvier, ossification notch.

incomplete o. term used for tarsal and carpal bones of premature or dysmature foals that show ossification that is delayed for that age.

intramembranous o. the formation of bone directly from fibrous tissue without the use of a cartilaginous model, e.g. as occurs in the parietal and frontal bones.

lateral cartilage o. see **sidebone**.

retarded enchondral o. the ossification of cartilage in growing large dogs may be retarded and, at the distal ulnar growth plate, resembles premature closure of the plate; the characteristic lesion is a cone of uncalcified cartilage in the growth plate.

ossify [*os'ĭ-fi"*] to change or develop into bone.

ossifying [*os'ĭ-fi"ing*] changing or developing into bone.

o. fibrotic myopathy metaplastic ossification in the semitendinosus, semimembranosus and biceps femoris muscles of the horse in areas that have been subjected to fibrotic myopathy.

osslets see **osselets**.

ostearthritis [*os"te-ahr-thri'tis*] osteoarthritis.

ostearthrotomy [*os"te-ahr-throt'ə-me*] excision of an articular end of a bone.

ostectomy [*os-tek'tə-me*] excision of a bone or part of a bone.

oste-ectopia [*os"te-ek-to'pe-ə*] displacement of a bone.

ostein [*os'te-in*] ossein.

osteitis [*os"te-i'tis*] inflammation of bone. The term is used to describe a number of conditions; for instance, advanced cases of brucellosis can lead to brucellar osteitis. See also **osteomyelitis**.

alveolar o. necrosis of alveolar bone at the site of a tooth extraction. Called also dry socket. An uncommon occurrence in veterinary dentistry.

o. deformans osteitis causing deformity of bones.

o. fibrosa see **osteodystrophia fibrosa**.

o. fibrosa cystica rarefying osteitis with fibrous degeneration and the formation of cysts and the presence of fibrous nodules on the affected bones, due to osteoclastic activity secondary to **hyperparathyroidism**. See also **osteodystrophia fibrosa**.

VetBooks.ir

O-16: Osteitis deformans in a Burmese python (*Python molurus bivittatus*).
From Preziosi R, Diana A, Florio D, Gustinelli A, Nardini G: Osteitis deformans (Paget's disease) in a Burmese python (Python molurus bivittatus) - A case report. Vet J 174:669-672, 2007. Elsevier.

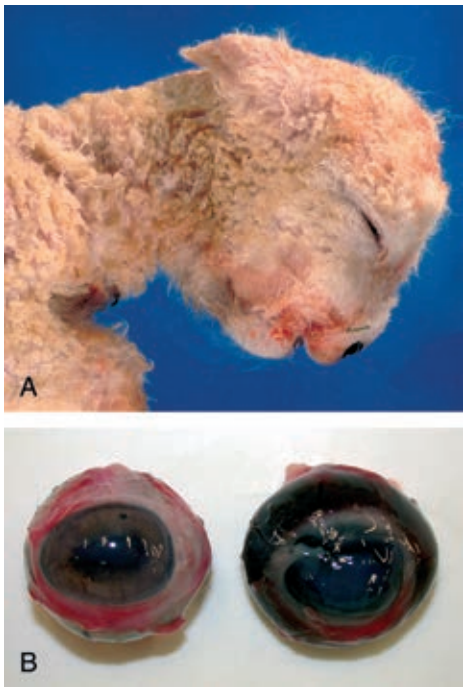
rarefying o. a bone disease in which the inorganic matter is diminished and the hard bone becomes cancellated.
sclerosing o. 1. sclerosing nonsuppurative osteomyelitis. 2. condensing osteitis.
ostempyesis [*os"təm-pi-e'sis*] suppuration within a bone.
oste(o)- word element. [Gr.] *bone*.
osteoarthritis [*os"te-o-ahr-thri'tis*] a noninflammatory degenerative joint disease marked by degeneration of the articular cartilage, hypertrophy of bone at the margins, and changes in the synovial membrane; called also degenerative joint disease. There is chronic lameness, the gait is stiff, the animals are reluctant to rise and have difficulty doing so. The affected limb shows atrophy, the joint is painful on passive movement and may show crepitus. Common in dogs, particularly in association with hip dysplasia; affected bulls are reluctant to serve. In pigs epiphysiolysis may occur. See also **osteochondrosis**, **leg weakness** of pigs.
chronic progressive o. result of repeated injury to joint surfaces, ligaments and cartilages.
inherited o. in cattle the coxofemoral joint is most affected in Herefords, the stifle in Holstein–Friesian and Angus. In horses the coxofemoral joint is affected.
osteoarthropathy any disease of the joints and bones.
osteoarthrosis chronic noninflammatory bone disease. See **osteoarthritis**.
osteoarthrotomy [*os"te-o-ahr-throp'ə-the*] ostearthrotomy.
osteoblast [*os'te-o-blast"*] a cell arising from a fibroblast, which, as it matures, is associated with bone production.
inactive o. see surface **osteocyte**.
resting o. see surface **osteocyte**.
osteoblastic [*os"te-o-blas'tik*] emanating from or pertaining to an osteoblast.
osteocalcin [*os"te-o-kal'sin*] a product of the resorption of bone.
osteocampsia [*os"te-o-kamp'se-ə*] curvature of a bone.
osteocartilaginous exostoses [*os"te-o-kahr"ti-laj'i-nəs*] see multiple cartilaginous **exostosis**.
osteochondral [*os"te-o-kon'drəl*] pertaining to bone and cartilage.
osteochondritis [*os"te-o-kon-dri'tis*] inflammation of bone and cartilage.
o. dissecans (OCD) incorrect designation of **osteochondrosis** dissecans. Inflammation is not the basis of this condition.
osteochondrodysplasia [*os"te-o-kon"dro-dis-pla'zhə*] any disorder of cartilage and bone growth. See **achondrodysplasia**, **chondrodysplasia**.

O-17: Marked swelling of the tarsal joint in a foal with septic osteoarthritis. Joint swelling and key features of septic osteoarthritis.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

Scottish fold o. the cartilaginous and bony malformations associated with the **Scottish fold** trait in cats.
osteochondroid [*os"te-o-kon'droid*] resembling bone and cartilage.
osteochondrolysis [*os"te-o-kon-drol'i-sis*] see **osteochondritis dissecans**.
osteochondroma [*os"te-o-kon-dro'mə*] a benign bone tumor consisting of projecting adult bone capped by cartilage which is proliferating and undergoing endochondral ossification; cartilaginous exostosis.
osteochondromatosis [*os"te-o-kon-dro"mə-to'sis*] the occurrence of multiple osteochondromas. See multiple cartilaginous **exostosis**.
osteochondrosis [*os"te-o-kon-dro'sis*] a disease characterized by abnormal differentiation of growth cartilage. Called also dyschondroplasia. It is a common disease in pigs and dogs and is also recognized in horses, turkeys and possibly in young bulls. The manifestations and sequelae vary with the species. In pigs osteochondrosis includes osteochondrosis dissecans, epiphysiolysis deformities of bones and arthropathy. See also **leg weakness**.
o. and arthrosis this disease of pigs causes severe degenerative lesions of the articular cartilage and underlying bone which are recognizable at necropsy but often without clinical signs. See also **leg weakness**.
o. dissecans (OCD) the splitting off of a piece of articular cartilage due to fissue formation in an area of dysplastic or degenerate subarticular cartilage so that it forms a flap or separates completely and falls into the joint space ('joint mouse'); occurs most commonly on the head of the humerus and distal condyles of the femur in dogs and pigs.
osteoclasia [*os"te-o-kla'zhə*] absorption and destruction of bony tissue.
osteoclasis [*os"te-ok'lə-sis*] surgical fracture or refracture of a bone.
osteoclast [*os'te-o-klast"*] 1. a large, multinuclear cell frequently associated with resorption of bone. 2. a surgical instrument used for osteoclasis.
o.-activating factor (OAF) a product of activated T lymphocytes that takes part in local resorption of bone.
osteoclastoma [*os"te-o-klas-to'mə*] giant cell tumor of bone.
osteoconduction [*os"te-o-kən-duk'shən*] the growth of bony tissue into the structure of an implant or graft.
osteocranium [*os"te-o-kra'ne-əm*] the fetal skull during the period of ossification.
osteocyte [*os"te-o-sīt"*] an osteoblast that has become embedded within the bone matrix, occupying a bone lacuna, and sending through canaliculi cytoplasmic processes that connect with other osteocytes in developing bone.
o.–osteoblast pump the interaction of osteocytes and osteoblasts, in response to parathyroid hormone, in moving calcium from the bone fluid to the extracellular fluid compartment.
surface o. a leaky barrier between cancellous and dense bone and lining the vascular channels in cortical bone. Called also resting osteoblast, inactive osteoblast.
osteocytic pertaining to osteocyte.
o. osteolysis one of the mechanisms involved in the resorption of bone by primary or metastatic tumors.
osteodentin [*os"te-o-den'tin*] dentin that resembles bone.
osteodiastasis [*os"te-o-di-as'tə-sis*] the separation of two adjacent bones.
osteodysplasia abnormal development of bone.
osteodystrophia fibrosa [*os"te-o-dis-tro'fe-ə*] when fibrous tissue tends to replace bone. The resorption is caused by **hyperparathyroidism** which may be primary or, more commonly, secondary to dietary deficiency of calcium relative to phosphorus, or to renal insufficiency. Called also osteitis fibrosa, osteitis fibrosa cystica.
nutritional secondary o. f. see nutritional secondary **hyperparathyroidism**.
renal secondary o. f. see renal secondary **hyperparathyroidism**.
osteodystrophic [*os"te-o-dis'trə-fe*] pertaining to or emanating from osteodystrophy.
osteodystrophy diseases of bone in which there is failure of normal development or abnormal metabolism in bone which is already mature. Principal clinical signs are distortion and enlargement of bones, susceptibility to fracture, and abnormalities of gait and posture. See also **osteodystrophia fibrosa**.
hypertrophic o. (HOD) a disease of unknown etiology that occurs in young, rapidly growing dogs primarily of the large or giant breeds, in which there is pain and soft tissue swelling

VetBooks.ir

O-18: Hypertrophic osteodystrophy in a 4-month-old Great Dane. From Lamb CR, Diagnostic Imaging of the Dog and Cat. Mosby, 1993.



O-19: (A) Newborn lamb with osteogenesis imperfecta. Note the domed head and brachygnathia inferior. (B) Enucleated eye from a normal lamb (left) and a lamb with osteogenesis imperfecta. The sclera from the affected lamb is dark blue. From Thompson KG, Piripi SA, Dittmer KE: Inherited abnormalities of skeletal development in sheep. Vet J 177:324-333, 2008. Elsevier.

usually around the distal radius, ulna and tibia, lameness, and varying degrees of fever, lethargy and anorexia. Periosteal new bone is formed around the metaphyses and sometimes diaphyses, contributing to the enlargement of the limbs. The cause is unknown but hypovitaminosis C has at various times been suggested. Called also Möller–Barlow's disease (from a similar human disease), Barlow's disease, skeletal scurvy, infantile scurvy, osteodystrophy II, metaphyseal osteopathy.

renal o. see renal secondary **hyperparathyroidism**.

canine juvenile o. see nutritional secondary **hyperparathyroidism**.

osteoepiphysis [*os"te-o-ə-pif'ĭ-sis*] any bony epiphysis.

osteofibroma [*os"te-o-fi-bro'mə*] ossifying fibroma; a benign, sometimes multiple, supraosseous ossifying spindle cell tumor.

osteofluorosis [*os"te-o-fl-ro'sis*] a generalized disturbance of bones caused by chronic fluorine poisoning and characterized by the development of multiple exostoses. There is lameness, ease of fracture of bones and mottling and pitting of the teeth.

osteogen [*os'te-o-jen"*] the substance composing the inner layer of the periosteum, from which bone is formed.

osteogenesis [*os"te-o-jen'ə-sis*] the formation of bone; the development of the bones.

o. imperfecta an inherited condition marked by abnormally brittle bones that are subject to fracture. Affected lambs and calves are normal in appearance but are unable to stand. There is a defect in formation of bone matrix caused by a deficiency of **procollagen** *N*-peptidase. In addition to evidence of bone fragility, often have a range of abnormalities, including a domed head, brachygnathia inferior, poorly erupted pink teeth, blue sclera and marked joint laxity. Usually inherited as an autosomal dominant trait. Called also paper-bone disease, juvenile osteoporosis.

osteogenic derived from or composed of any tissue concerned in bone growth or repair.

o. precursor cell see **osteoprogenitor cells**.

o. sarcoma see **osteosarcoma**.

osteogenin a morphogenetic bone matrix-derived protein which stimulates bone growth.

osteogeny [*os"te-oj'ə-ne*] osteogenesis.

osteography [*os"te-og'rə-fe*] description of the bones.

osteohalisteresis [*os"te-o-hə-lis"tər-e'sis*] deficiency in mineral elements of bone.

osteohematochromatosis [*os"te-o-he"mə-kro"mə-to'sis*] see bovine congenital erythropoietic **porphyria**.

osteoid [*os'te-oid*] 1. resembling bone. 2. the organic matrix of bone; young bone that has not undergone calcification.

osteoinduction [*os"te-o-in-duk'shən*] osteoprogenitor cells in surrounding tissue may be stimulated in the presence of bone grafts.

osteolathyrism [*os"te-o-lath'ĭ-riz-əm*] an experimental form of lathyrism caused by β-aminopropionitrile which occurs only in laboratory animals and is characterized by skeletal deformities and aortic aneurysms.

osteolipochondroma [*os"te-o-lip"o-kon-dro'mə*] osteochondroma with fatty elements.

osteoliposarcoma [*os"te-o-lip"o-sahr-ko'mə*] a malignant form of mesenchymoma in dogs; contains liposarcomatous and osteosarcomatous elements.

osteologist [*os"te-ol'ə-jist*] a specialist in osteology.

osteology [*os"te-ol'ə-je*] scientific study of the bones.

osteolysis [*os"te-ol'ĭ-sis*] dissoluton of bone; applied especially to the removal or loss of calcium from the bone.

osteoma [*os"te-o'mə*] a benign tumor composed of bony tissue. In animals seen most commonly on jaws and in the nasal sinuses of horses and cattle. Histologically similar to ossifying fibroma, fibrous dysplasia, heterotopic ossification and exostosis.

osteoid o. a small, benign but painful, circumscribed tumor of spongy bone, occurring especially in the bones of the extremities and vertebrae in humans. Similar growths have been reported in cats.

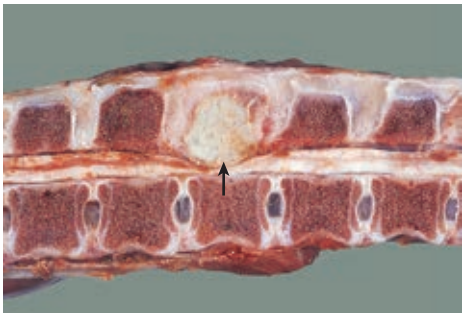
o. spongiosum one containing cancellated bone.

osteomalacia [*os"te-o-mə-la'shə*] softening of the bones of adult animals, resulting from impaired mineralization, with excess accumulation of osteoid, caused by a nutritional deficiency of vitamin D or phosphorus. The clinical signs are those of a painful condition of the bones and joints, including stiff gait, lameness, restlessness while standing, cracking sounds in the joints while walking, an abnormal posture including an arched back. Affected animals are disinclined to move and lie down for long periods. Fractures and tendon ruptures occur frequently and pelvic deformity may cause dystocia. Called also stifsiekte, stiffs, creeps, peglegs, cripples, bog-lame, milk-leg, milk-lame.

osteomatoid [*os"te-o'mə-toid*] resembling an osteoma.

osteomere [*os'te-o-mēr"*] one of a series of similar bony structures, such as a vertebra.

osteometry [*os"te-om'ə-tre*] measurement of the bones.



O-20: Suppurative osteomyelitis. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

O-21: Hypertrophic osteopathy in the front limb of a dog with a primary lung tumor. From Withrow SJ, Vail DM, Withrow s Small Animal Clinical Oncology. Saunders, 2007.

osteomycosis [*os'te-o-mi-ko'sis*] osteomyelitis caused by a fungus; fungal infection of bone, e.g. *Aspergillus* spp. in chickens.

osteomyelitis [*os"te-o-mi"ə-li'tis*] inflammation of bone, localized or generalized, due to a microbial infection. It may result in bone destruction, in stiffening of joints if the infection spreads to the joints, and, in extreme cases occurring before the end of the growth period, in the shortening of a limb if the growth center is destroyed. Specific osteomyelitides in animals are actinomycosis and necrotic rhinitis of pigs. Clinical signs include persistent, severe pain, surrounding cellulitis sometimes with sinuses to the exterior. The affected bone is subject to pathological fracture and is readily recognizable radiographically. There are local signs related to the position and function of the affected bone, e.g. lameness, inability to eat.

cervical vertebral o. causes abnormal posture and motor difficulties including stumbling, then stiff and restricted gait, reluctance to bend neck, resulting in kneeling to graze.

juvenile o. see **panosteitis**.

osteomyelodysplasia [*os"te-o-mi"ə-lo-dis-pla'zhə*] a condition characterized by thinning of the osseous tissue of bones, increase in size of the marrow cavities, and associated leukopenia and fever.

osteon [*os'te-on*] the basic unit of structure of compact bone, comprising a haversian canal and its concentrically arranged lamellae. Called also haversian system.

osteonal pertaining to the osteone.

o. canal canal around which the concentric laminae or sheets of osteonal bone are disposed.

osteone [*os'te-ōn*] the microscopic unit of compact bone construction; consists of thin lamellae of bone arranged in a series of concentric tubules around a small central canal.

osteonecrosis [*os"te-o-nə-kro'sis*] necrosis of a bone.

osteonectin [*os"te-o-nek'tin*] a glycoprotein found in bone but not cartilage or other connective tissues.

osteopath [*os'te-o-path*] a practitioner of **osteopathy** (2).

osteopathia [*os"te-o-path'e-ə*] osteopathy (1).

osteopathology [*os"te-o-pə-thol'ə-je*] any disease of bone.

osteopathy [*os"te-op'ə-the*] 1. any disease of a bone. 2. a medical discipline utilizing generally accepted physical, medicinal and surgical methods of diagnosis and therapy, and emphasizing the importance of normal body mechanics and manipulative methods of detecting and correcting faulty structures, particularly musculoskeletal.

craniomandibular o. (1) (CMO) a proliferative bone disease occurring predominantly in immature West Highland white and Scottish terriers, and infrequently in several other breeds. Symmetrical bony enlargements occur on the mandible, occipital and temporal bones, less often other bones of the skull, and rarely long bones. Affected dogs may have varying degrees of difficulty in opening the mouth, salivation and recurring fever. Called also craniomandibular hyperostosis, lion jaw.

hypertrophic o. (1) (HO) symmetrical periosteal proliferation of new bone on the four limbs, chiefly localized to the phalanges and terminal epiphyses of the long bones. There is bilaterally symmetrical, non-edematous soft tissue swelling accompanied by lameness and reluctance to move. Almost always associated with a chronic intrathoracic, occasionally an intra-abdominal, disease particularly a neoplasm. Called also Marie–Bamberger's disease (osteopathy), hypertrophic pulmonary osteopathy, secondary hypertrophic osteopathy.

metaphyseal o. (1) see hypertrophic **osteodystrophy**.

nutritional o. (1) includes rickets, osteomalacia, osteodystrophia fibrosa.

osteopenia [*os"te-o-pe'ne-ə*] reduced bone mass due to a decrease in the rate of osteoid synthesis to a level insufficient to compensate for normal bone lysis. The term is also used to refer to any decrease in bone mass below the normal.

osteoperiosteal [*os"te-o-per"e-os'te-əl*] pertaining to bone and its periosteum.

osteoperiostitis [*os"te-o-per"e-os-ti'tis*] inflammation of a bone and its periosteum.

osteopetrosis [*os"te-o-pe-tro'sis*] in mammals, a hereditary disease marked by abnormally dense bone, and by the common occurrence of fractures of affected bone. It may lead to obliteration of the marrow spaces, causing anemia. Readily diagnosable radiographically. Occurs in rats, rabbits and cattle, in which it is usually associated with other inherited, congenital skeletal defects including shortness of long bones. In calves needs to be differentiated from similar lesions caused by infection in utero by the bovine virus diarrhea virus.

avian o. occurs as part of the avian **leukosis**, **Rous sarcoma** complex. All bones are affected but the long bones are most obviously deformed. Called also thick leg disease of poultry.

osteopetrotic having the characteristics of osteopetrosis.

o. lymphomatosis a disease of birds, possibly a part of the avian **leukosis**, **Rous sarcoma** complex.

osteophage [*os'te-o-fāj*] osteoclast.

osteophagia [*os"te-o-fa'je-ə*] chewing of debris bones found in pasture by herbivores. Indicative of nutritional deficiency of phosphorus. Sequelae include foreign body stuck in mouth, esophageal obstruction, botulism. See also **pica**.

osteophlebitis [*os"te-o-flə-bi'tis*] inflammation of the veins of a bone.

osteophony [*os"te-of'ə-ne*] bone conduction.

osteophore [*os"te-o-for*] a bone-crushing forceps.

osteophyte, osteophyma [*os'te-o-fīt"*] a bony excrescence; a bony outgrowth. See also **exostosis**, **spondylosis**.

osteoplasty [*os'te-o-plas"te*] plastic surgery of the bones.

osteopoikilosis [*os'te-o-poi"kĭ-lo-sis*] a mottled condition of bones, apparent radiographically, due to the presence of multiple sclerotic foci and scattered stippling.

osteopontin (OPN) [*os"te-o-pon'tin*] first identified in bone as a multifunctional protein expressed in activated macrophages and T cells, smooth muscle, and endothelial and epithelial cells. It modulates immune function and stimulates Th1/Th2 switching and possibly also affects bone mineralization and growth.

osteoporosis [*os"te-o-pə-ro'sis*] a pathological loss of bone but the remaining bone is structurally normal. There is an imbalance in bone formation and resorption in favor of resorption. Bone

O-22: Lamb with osteoporosis due to calcium deficiency as a result of grain diet during drought-feeding.

becomes light and porous and fragile so that it fractures easily. It is associated with general undernutrition rather than specific nutritional deficiencies. Other causative factors are disuse, senility, lactation, weightlessness.

disuse o. that occurring when the normal laying down of bone is slowed because of lack of the normal stimulus of functional stress on the bone.

lactational o. may facilitate fracture of the femur, vertebrae and phalanges in lactating sows fed diets deficient in calcium and normal to high phosphorus.

post-traumatic o. loss of bone substance after an injury in which there is nerve damage, sometimes due to decreased blood supply caused by the neurogenic insult, or to disuse secondary to pain.

senile o. reduced bone mass due to advanced age.

osteoprogenitor cells the stem cells of the stromal system, the only cells capable of independent osteogenesis. Called also osteogenic precursor cells.

osteoradionecrosis [*os"te-o-ra"de-o-nĕ-kro'sis*] necrosis of bone as a result of excessive exposure to radiation.

osteorrhagia [*os"te-o-ra'jə*] hemorrhage from bone.

osteorrhaphy [*os"te-or'ə-fe*] fixation of fragments of bone with sutures or wires; called also osteosuture.

osteosarcoma [*os"te-o-sahr-ko'mə*] bone-producing malignant tumor; common in dogs, but rare in other species. Dogs of large breeds are more frequently affected and the most common sites are the appendicular long bones and predilection sites are the metaphyses that contribute most to the growth in length of the respective bones, i.e. distal radius and femur and proximal humerus or tibia. Lameness, swelling and rapid metastasis to the lungs are usual features. Osteosarcomas also arise in the axial skeleton; these typically grow slower and metastisize later than do those of the long bones.

O-23: Osteosarcoma of the proximal humerus in a dog.

osteosclerosis [*os"te-o-sklə-ro'sis*] the hardening, or abnormal density, of bone.

o. congenita achondroplasia.

o. fragilis osteopetrosis; so called because of frequency of pathological fracture of affected bones.

o. fragilis generalisata osteopoikilosis.

osteosis [*os"te-o'sis*] degeneration and necrosis of osseous tissue.

Osteospermum South African plant genus in family Asteraceae; causes cyanide poisoning; includes *O. ecklonis*, *O. jucundum* (*O. barbariae*), *O. spectabilis* (*Castelis spectabilis*); called also *Dimorphotheca* spp., South African daisy, bietou, madeliefies.

osteostixis surgical puncture of a bone.

osteosuture [*os'te-o-soo"chər*] osteorrhaphy.

osteosynovitis [*os"te-o-sin"o-vi'tis*] synovitis with osteitis of neighboring bones.

osteosynthesis [*os"te-o-sin'thə-sis*] surgical fastening of the ends of a fractured bone.

osteothrombosis [*os"te-o-throm-bo'sis*] thrombosis of the veins of a bone.

osteotome [*os'te-o-tōm"*] a chisel-like knife for cutting bone.

US Army o. there are two versions of this heavy duty instrument, which resembles a standard cold chisel. In one the cutting edge is beveled on one side, in the other on both sides.

osteotomoclasis [*os'te-o-tōm"ok'lə-sis*] correction of bone curvature by partial division with the osteotome, followed by forcible fracture.

osteotomy [*os"te-ot'ə-me*] incision or transection of a bone.

bulla o. a surgical procedure that drains the middle ear cavity, usually in the treatment of otitis media. Several different techniques may be used to penetrate the ventral or lateral portion of the tympanic bulla.

cuneiform o. removal of a wedge of bone.

cranial tibial wedge o. a wedge of bone is removed from below the tibial crest to reshape the slope of the tibial plateau. Used in the treatment of cranial cruciate ligament rupture.

displacement o. surgical division of a bone and shifting of the divided ends to change the alignment of the bone or to alter weight-bearing stresses.

linear o. the sawing or simple cutting of a bone.

tibial plateau leveling o. a patented orthopedic technique for treatment of cranial cruciate ligament rupture. The slope of the tibial plateau is reduced causing tibial forces on the stifle joint to shift from cranial to caudal with a greater reliance on the caudal cruciate ligament for stability.

triple pelvic o. (TPO) a surgical technique designed to provide increased acetabular cover over the femoral head in the treatment of hip dysplasia in dogs. Involves an osteotomy of the ilium, ischium and pubis, that is, triple pelvic osteotomy.

wedge o. see cuneiform osteotomy (above).

Oster the archetypal hair clipper used worldwide. Has a range of interchangeable heads.

Ostertagia [*os"tər-ta'jə*] a genus of worms in the family Trichostrongylidae. They are found in the abomasum, rarely the intestine, of ruminants, are thin and brown and called brown stomach worms. They cause **ostertagiasis**. Includes *O. bisonis* (cattle, wild ruminants), *O. circumcincta* (goats, sheep), *O. crimensis* syn. *O. leptospicularis*, *O. hamata* (springbok), *O. leptospicularis* (cervid deer, cattle), *O. lyrata*, syn. *Skrjabinagia lyrata*, *Grosspiculagia lyrata* (cattle), *O. orloffi* (Barbary sheep, cattle, deer), *O. ostertagi* (cattle, goats, rarely sheep, horses), *O. podjapolskyi*, syn. *Grosspiculagia podjapolskyi* (cattle, sheep, moufflon), *O. trifurcata* (sheep, goats, also cattle).

ostertagiasis [*os"tər-tə-ji'ə-sis*] a disease of ruminants caused by invasion of the abomasum by *Ostertagia* spp. Two forms occur. *Type I* is in lambs or calves in their first summer at pasture and is characterized by the presence of large numbers of adult worms in the abomasum, profuse watery diarrhea, depressed appetite and a high morbidity rate. *Type II* occurs in cattle in the late winter after that first summer and sometimes in adults. It is characterized by emergence of large numbers of inhibited larvae from the abomasal mucosa, by chronic diarrhea, emaciation, a high death rate and a greatly thickened and edematous abomasal mucosa, subcutaneous edema and high plasma pepsinogen concentrations. The timing of the two forms varies between countries. The disease is more properly referred to as ostertagiosis but common usage is ostertagiasis.

VetBooks.ir

O-24: Ostertagiasis in the abomasum of a steer.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

O-25: Chronic otitis externa in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

ostertagiosis [os"tər-taj"e-o'sis] ostertagiasis.
ostia [os'te-ə] plural form of ostium.
ostitis [os-ti'tis] see **osteitis**.
ostium [os'te-əm] pl. *ostia* [L.] a mouth or orifice; a general term to designate an opening into a tubular organ, or between two distinct body cavities. The names of most ostia are self-defining.
o. abdominale the fimbriated end of the uterine tube.
o. cardiacum the opening of the esophagus into the stomach.
coronary o. either of the two openings in the aortic sinuses which mark the origin of the (left and right) coronary arteries.
o. ejaculatorium the common orifice of the ductus deferens and the excretory duct of the seminal vesicle into the urethra.
o. internum the internal orifice of the uterus, the opening between the body of the uterus and the cervix. Called also ostium uterinum tubae.
o. pharyngeum the nasopharyngeal end of the auditory tube.
o. primum an opening in the lower portion of the membrane dividing the embryonic atria into right and left sides. Called also foramen primum. See also **atrial** septal defect.
o. pulmonary vein the opening of the pulmonary vein into the left atrium.
o. ruminoreticulare the opening between the rumen and the reticulum.
o. secundum an opening in the upper portion of the membrane dividing the embryonic atria into right and left sides, appearing later than the ostium primum. Called also foramen secundum. See also **atrial** septal defect.
tympanic o., o. tympanicum the internal opening of the auditory tube on the wall of the tympanic cavity.
o. uteri the external opening of the cervix of the uterus into the vagina.
o. uterinum tubae the point where the cavity of the uterine tube becomes continuous with that of the uterus.
o. vaginae the external orifice of the vagina into the vestibule. It is marked by the hymen or a transverse plane just cranial to the urethral orifice.
ostomate [os'tə-māt] an animal which has undergone enterostomy or ureterostomy.
ostomy [os'tə-mē] general term for an operation in which an artificial opening is formed, as in colostomy, ureterostomy, tracheostomy, etc. See also **stoma** (2).
Ostrea flat oysters; includes *O. angasi* (flat oyster), *O. edulis* (European flat oyster).
ostrich (*Struthio camelus*) large, 9 ft high, weighing 400 lb, running birds with long necks and legs. They are gregarious herbivores.
Oswaldocruzia a trichostrongyloid nematode genus found in amphibians and rarely in lizards.
OT old tuberculin.
otarid member of the Otariidae family of eared seals which includes the sea lions and the fur seals.
o. ataxia see otarid **ataxia**.
OTC over the counter; said of pharmaceuticals that can be purchased without requiring a prescription.
otectomy [o"tek'tə-me] excision of tissues of the internal and middle ear.
othelcosis 1. ulceration of the auricle or external meatus of the ear. 2. suppuration of the middle ear.
othematoma see **auricular** hematoma.
Othoretrovirinae a subfamily of viruses in the family *Retroviridae*.
otic [o'tik] pertaining to the ear; aural.
o. capsule cartilaginous envelope which surrounds the nervous elements of the embryo's inner ear, and which subsequently ossifies.
o. cup the invagination of the otic placode, destined to form an otic vesicle and ultimately the inner ear.
otitis [o-ti'tis] inflammation of the ear.
ceruminous o. that in which there is excessive cerumen and a characteristic rancid odor.
o. externa inflammation of the external ear characterized by frequent shaking of the head, pawing at the ear, intermittent rotation of the head with the affected ear down, pain on palpation of canal, bad odor and discharge. Called also swimmer's ear.
furuncular o. the formation of furuncles in the external acoustic meatus.
o. interna labrynthitis; usually due to an extension of otitis media. Clinical signs include varying degrees of peripheral vestibular dysfunction. Deafness may also occur. Called also otitis labyrinthica.
o. labyrinthica see otitis interna (above).
o. media inflammation of the middle ear. It may occur in young animals by hematogenous spread of infection from omphalophlebitis, but it may also arise from extension of otitis externa or by infection ascending the eustachian tube. Clinical signs are usually referable to an associated otitis externa (odor, discharge, pain) or otitis interna which may cause vestibular signs such as rolling, ataxia and nystagmus. In addition, inflammation of the middle ear may cause facial paralysis, Horner's syndrome or keratitis sicca.
parasitic o. see **otoacariasis**.
proliferative necrotizing o. erythematous plaques with erosions and crusts on the medial pinnae and sometimes face of cats less than a year of age. The cause is unknown.
ot(o)- word element. [Gr.] *ear*.
otoacariasis [o"to-ak"ə-ri'ə-sis] infestation of the ear with mites, e.g. with *Otodectes cynotis*, *Raillietia auris*, *R. caprae*, causing shaking of the head and scratching at the ear. The ear canal contains a waxy exudate. Called also parasitic otitis.
Otobius [o-to'be-əs] a genus of soft-bodied ticks in the family Argasidae.
O. lagophilus found on rabbits.
O. megnini found in the ears of most mammals, but most commonly in dogs, sheep, horses and cattle. They cause irritation, head shaking and general debility. Mainly a problem in cattle and horses, but recorded from a wide range of hosts.
otocephalic [o"to-sə-fal'ik] pertaining to or emanating from otocephaly.
o. syndrome a complex of inherited abnormalities, recorded in Beagles, that include distortion of craniofacial structures, hydrocephalus, partial agnathia and neurological signs.
otocephalus [o"to-sef'ə-ləs] an animal exhibiting otocephaly.
otocephaly [o"to-sef'ə-le] a congenital malformation characterized by lack of a lower jaw and by ears that are united below the face.
otocleisis [o"to- kli'sis] closure of the auditory passages.
otoconia [o"to-ko'ne-ə] see **statoconia**.
otocranium [o"to-kra'ne-əm] 1. the chamber in the petrous bone lodging the internal ear. 2. the auditory portion of the cranium.
otocyst [o'to-sist] 1. the auditory vesicle of the embryo. 2. the organ of hearing in some lower animals.
Otodectes [o"to-dek'tēz] acarid mite genus in the family Psoroptidae.
O. cynotis the ear mite of dogs, foxes, cats, raccoons and ferrets and causes otodectic mange.

O-26: *Otodectes cynotis.* From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

otodectic mange [*o"to-dek'tik*] the ear and skin disease caused by infestation with *Otodectes cynotis*. Signs include those of **otitis** externa, with thick, brownish-red crusts in the ear canal, and occasionally a pruritic dermatitis.
otoencephalitis [*o"to-ən-sef"ə-li'tis*] inflammation of brain extending from an inflamed middle or inner ear.
otoendoscopy [*o"to-en-dos'kə-pe*] visualization of the external acoustic meatus by means of the otoscope.
otoganglion [*o"to-gang'gle-on*] the otic ganglion.
otogenic, otogenous [*o"to-jen'ik, o-toj'ə-nə*] originating within the ear.
o. abscess usually part of a widespread abscessation; no specific syndrome associated with it.
otogenic precursor cells [*o"to-jen'ik*] see **osteoprogenitor cells**.
otography [*o-tog'rə-fe*] description of the ear.
otolaryngology, otorhinolaryngology [*o"to-lar"ing-gol'ə-je*] that branch of veterinary medicine dealing with disease of the ear, nose and throat.
otolith [*o'to-lith*] an earstone; concretions of calcium carbonate and protein in the labyrinth of the inner ear and which move with every change in the posture of the head. Called also **statolith**.
otolithic [*o'to-lith'ik*] emanating from or pertaining to otolith.
o. membrane gelatinous matrix in the labyrinth of the ear; contains otoliths or otoconia.
o. organs utricle and saccule; detect the position of the head in a gravitational field.
otologist [*o-tol'ə-jist*] a specialist in otology.
otology [*o-tol'ə-je*] the branch of veterinary medicine dealing with the ear and its anatomy, physiology and pathology.
otomucormycosis [*o'to-mu"ko-mi-ko'sis*] mucormycosis of the ear.
-otomy general term for a surgical procedure in which an incision is made into a hollow organ, as in cystotomy, gastrotomy, etc.
otomycosis [*o"to-mi-ko'sis*] a fungal infection of the external auditory meatus and ear canal. *Aspergillus* spp. and the yeasts *Pityrosporum* spp. are most commonly found in the ears of animals with otitis externa, sometimes as a result of prolonged antibiotic therapy rather than as primary pathogens.
otoneurology [*o"to-nŏŏ-rol'ə-je*] that branch of otology dealing especially with those portions of the nervous system related to the ear.
otopathy [*o"top'ə-the*] any disease of the ear.
otopharyngeal [*o"to-fə-rin'je-əl*] pertaining to the ear and pharynx.
otoplasty [*o'to-plas"te*] plastic sugery of the ear.
cosmetic o. see **ear cropping**.
otopolypus a polyp in the ear.
otopyorrhea [*o"to-pi"o-re'ə*] a copious purulent discharge from the ear.
otorhinolaryngology [*o"to-ri"no-lar"ing-gol'ə-je*] the branch of veterinary medicine dealing with disease of the ear, nose and throat; called also otolaryngology.
otorhinology [*o"to-ri-nol'ə-je*] the branch of veterinary medicine dealing with ear and nose.
otorrhagia [*o"to-ra'jə*] hemorrhage from the ear.
otorrhea [*o"to-re'ə*] a discharge from the ear.
otosclerosis [*o"to-sklə-ro'sis*] the formation of spongy bone in the capsule of the labyrinth of the ear, often causing the auditory ossicles to become fixed and less able to pass on vibrations when sound enters the ear. May be an inherited condition in humans.
otoscope [*o'to-skōp*] an instrument for inspecting the ear.
otoscopy [*o-tos'kə-pe*] examination of the external acoustic meatus with an otoscope.
otospongiosis [*o"to-spon"je-o'sis*] the formation of spongy bone in the bony labyrinth of the ear.
otosteal pertaining to the ossicles of the ear.
Otostrongylus a genus of lungworms in the family Crenosomatidae.
O. circumlitus found in the lungs or heart of true seals. Causes anorexia and coughing.
otosurgery surgery of the ear.
ototomy [*o"-tot'ə-me*] dissection of the ear.
ototoxic [*o'to-tok"sik*] having a deleterious effect upon the eighth cranial (vestibulocochlear) nerve or on the organs of hearing and balance.
ototoxicity [*o"to-tok-sis'ĭ-te*] the property of being ototoxic.
otter an aquatic or semi-aquatic, fish-eating mustelid, closely related to the polecat and marten. It has dark brown glossy, dense fur, webbed toes, a broad tail, short face whiskers and ears that can be closed off when diving. Includes the European or Eurasian otter (*Lutra lutra*), giant otter (*Pteronura brasiliensis*), and Northern river otter (*Lontra canadensis*).
sea o. (*Enhydra lutris*) native to the northern Pacific coast of North America and Russia; previously hunted extensively for their fur, conservation efforts have allowed their numbers to increase, but they remain an endangered species.
Otter hound a large (approximately 65–115 lb), muscular dog with a large, narrow head and distinctive long, pendulous ears that curl inward on the leading edge, large feet and a long tail. The coat is long, dense and rough with an oily, waterproof topcoat in solid colors. The breed is affected by an inherited platelet disorder (thromboasthenic thrombocytopathia).
Otter sheep extinct achondroplastic mutant sheep. Similar to **Ançon** sheep.
OU [L.] *oculi uterque* (each eye); can be interpreted as meaning both eyes.
ouabain [*wah-ba'in*] a cardiac glycoside obtained chiefly from the plant *Strophanthus gratus*; its effect is similar to that of digitalis, but digitalization is achieved more rapidly. Little used.
Ouchterloney technique [*ok'tər-lo"ne*] see **immunodiffusion** tests.
Oulou fato a form of nonfatal rabies described in dogs in Africa.
ounce [*ouns*] 1. a measure of weight in both the avoirdupois and the apothecaries' system; abbreviation oz. The ounce avoirdupois is 28.3495 g, 1/16 lb, or 437.5 gr. The apothecaries' ounce is 31.103 g, 1/12 lb, or 480 gr. See also Tables 2.1 and 2.2. 2. See snow **leopard**.
fluid o. a unit of liquid measure of the apothecaries' system, being 8 fluid drams, or the equivalent of 29.57 mL.
-ous suffix meaning pertaining to.
out-cross the mating of unrelated or only distantly related animals. Opposite to inbreeding or closebreeding.
out-of-hours before or after stated hours during which a clinic or hospital is fully staffed.
outbreak see **epidemic**.
outbreeding [*out'brēd-ing*] the mating of unrelated organisms. Called also crossbreeding.
outcome information data on result of treatment of disease, change in management, especially breeding and feeding, introduction of new genetic material or hygienic practice.
outflow tract the vascular structures associated with movement of blood from the ventricles. See also **ventricular** outflow obstruction.
outlet [*out'lət*] a means or route of exit or egress.
outlier [*out'li-ər*] an extremely high or low value lying beyond the range of the bulk of the data.
outpatient [*out'pa-shənt*] a patient who comes to the hospital, clinic or dispensary for diagnosis and/or treatment but does not occupy a cage or stall.
outpocketing [*out-pok'ət-ing*] evagination.
output [*out'poot*] the yield or total of anything produced by any functional system of the body.
energy o. the energy a body is able to manifest in work or activity.
stroke o. the amount of blood ejected by each ventricle at each beat of the heart.
tube o. the output of an X-ray tube usually quoted in milliamperes, the amount of current supplied to the cathode filament and the determining influence in the quantity of X-rays produced.

urinary o. the amount of urine secreted by the kidneys. See also **fluid** balance.

ova [o'və] plural of *ovum*.

ovalbumin [ōv"al-bu'min] principal protein in an egg white.

ovalocyte [o'və-lo-sīt] elliptocyte, an elliptical erythrocyte.

ovalocytosis [o-val"o-si-to'sis] elliptocytosis.

ovarian [o-var'e-ən] pertaining to an ovary.

o. agenesis one or both ovaries absent; usually accompanies defects of the tubular reproductive organs.

o. anomaly includes ovarian dysgenesis (see below), agenesis (above) or hypoplasia, as in Swedish Highland cattle.

o. bursa a pouch formed by the mesosalpinx and the mesovarium that encloses the infundibulum of the uterine tube and the ovary. It is shallow in the mare and does not enclose the ovary. It is capacious in sows and deep with a fat-filled wall in the bitch.

o. bursitis inlammation of the ovarian bursa; likely to affect the function of the ovary and ovulation.

o. cycle the cycle of follicle maturation and rupture, then luteinization and regression of the corpus luteum followed by recommencement of the cycle, unless pregnancy intervenes.

o. cyclicity the regular appearance of estrus as an indication of the regular occurrence of estrous cycles.

o. cyst see cystic ovarian disease (below).

cystic o. degeneration persistent cysts derived from ovarian follicles which do not ovulate. Follicular cysts are thin-walled and fluctuant, and often multiple. Luteal cysts have a thick wall of luteal tissue about the cyst, are firm to palpate and do not rupture easily. There is abnormal estral behavior, either anestrus or nymphomania, and diminished fertility. Cystic corpora lutea form after ovulation has occurred and do not interfere with reproduction. They have a characteristic ovulation papilla.

cystic o. disease common disease of cows and dairy goats, less common in sows, characterized by gross abnormalities of estrus, either anestrus or more frequent and prolonged. In cows the cysts can be palpated per rectum.

o. dysgenesis small, inactive ovaries lacking germ cells such as occur in mares lacking a second X chromosome.

o. follicle see ovarian **follicle**.

follicular o. cyst see cystic **follicle**.

o. hormones estrogens, progesterone.

o. hypoplasia functional hypoplasia in immature females and undernourished females of all ages are common findings; in the absence of these risk factors hypoplasia is genetic in origin in Swedish Highland and possibly white Ayrshire cattle.

o. imbalance an alternative name of endocrine dermatoses caused by abnormalities of ovarian function in bitches. *Type I*, associated with cystic ovaries or functional ovarian tumors, consists of a bilaterally symmetrical alopecia, gynecomastia, enlargement of the vulva, and abnormalities of the estrous cycle. *Type II* is a bilaterally symmetrical alopecia, sometimes with seborrhea, in spayed bitches. It is responsive to treatment with estrogen. Called also estrogen-responsive dermatosis.

o. inflammation see **oophoritis**.

intrafollicular o. hemorrhage hemorrhage into an ovarian follicle occurs in all species during ovulation; also rarely in anovulatory follicles.

luteal o. cyst see **luteal** cyst.

luteinized o. cyst see **luteal** cyst.

o. neoplasms includes mostly granulosa cell tumors and teratomas, but also rarely carcinomas, fibromas, thecomas, sarcomas.

o. pain a rare cause of colic in mares; identifiable by eliciting pain by transrectal palpation of ovary.

premature o. failure defective differentiation of ovarian tissue and the patient shows no signs of pubertal estrus until long past the customary age.

o. rebound return of cyclical ovarian activity after a period of inactivity, usually pregnancy and parturition.

o. remnant syndrome the return of estral activity in a desexed female; due to failure to remove all of the ovarian tissue or to dropping, and allowing to implant, a piece of the ovary.

rete ovarii o. cyst a convoluted system of epithelial cell cords and tubules occupying part of the ovarian medulla; the cysts are found mostly in the hilar region of the ovary.

o. serous inclusion cyst similar in size and appearance to, but distinguishable from, ovarian cysts by their intraovarian position; lined by cuboidal epithelium thought to be pinched off from indentations of surface epithelium.

tubular epithelial o. cyst formed from epithelial cells from the surface of the ovary.

ovariectomy [o-var"e-ek'tə-me] excision of an ovary. See also **oophorectomy**.

ovari(o)- word element. [L.] *ovary*. See also words beginning *oophor(o)-*.

ovariocele [o-var'e-o-sēl] hernia of an ovary.

ovariocentesis [o-var"e-o-sen-te'sis] surgical puncture of an ovary.

ovariocyesis [o-var"e-o-si-e'sis] an ectopic pregnancy developing in an ovarian follicle (ovarian pregnancy); extremely rare in domestic animals.

ovariohysterectomy [o-var"e-o-his"tər-ek'tə-me] surgical excision of the ovaries and the uterus, used as a means of preventing pregnancy and ovarian cyclicity, and for removal of a diseased uterus. The common 'spay' operation in dogs and cats.

o. hooks see spay **hook**.

ovariopexy [o-var"e-o-pek'se] the operation of elevating and fixing an ovary to the abdominal wall.

ovariorrhexis [o-var"re-o-rek'sis] rupture of an ovary.

ovariosalpingectomy [o-var"e-o-sal"pin-jek'tə-me] excision of an ovary and uterine tube.

ovariostomy [o-var"e-os'tə-me] incision of an ovary, with drainage; oophorostomy.

ovariotomy [o-var"e-ot'ə-me] surgical removal of an ovary, or removal of an ovarian tumor.

ovariotubal [o-var"e-o-too'bəl] pertaining to an ovary and uterine tube.

ovaritis [o"və-ri'tis] inflammation of an ovary; oophoritis.

ovarium [o-var'e-əm] pl. *ovaria* [L.] ovary.

ovarobursal pertaining to or emanating from the ovary and the ovarian bursa, e.g. adhesions.

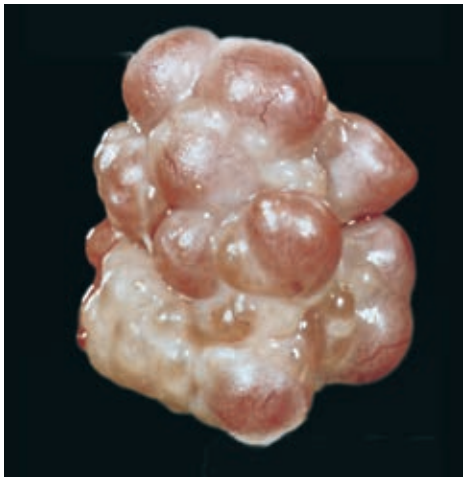
ovary [o'və-re] pl. *ovaries;* the female gonad; either of the sex glands in the female in which the ova are formed and from which the sex hormones, estrogen and progesterone, are released. Small, round bodies varying in size with the species and the stage of the estral cycle, they are located one each at the end of the ovarian (fallopian) tubes, in the ovarian bursa. In birds two ovaries are present but usually the right one remains small and nonfunctional.

accessory o. very rare in domestic animals; usually located close to or attached to a normal ovary. See also supernumerary ovary (below).

cystic o. see cystic **ovarian** disease

supernumerary o. occurs widely situated from normal ovary, formed presumably from a separate anlage in contradistinction to an accessory ovary which results from a splitting of the embryonic gonad and is usually attached to the normal gonad.

oven-dry see **moisture** free.



O-27: Ovary of a sow with mature follicles. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

VetBooks.ir

over at the knees a conformation defect in horses in which the carpal joints are incompletely extended when the horse is standing normally.

over-the-counter (OTC) a term for drugs that can be sold without prescription and by non-veterinary controlled sales outlets, as opposed to drugs which are available only to veterinarians.

over the hooks an abattoir term for meat purchased while still in the carcass stage and paid for by weight; contrast with 'on the hoof'.

overbite [*o'vər-bīt*] the upper teeth extend vertically over the corresponding lower teeth; they overlap. Seen commonly in the incisors of many mesocephalic dogs.

overcheck a strap stretching from the pollstrap of the bridle to the saddle. It prevents the horse getting its head down to kick.

overconditioned said of beef cattle; means overfat.

overcrowding overcrowding of animal accommodation. Many countries now publish codes of practice which define what the appropriate volumetric allowances should be for each species of animal when they are housed indoors. Breaches of these codes is overcrowding. Pastoral conditions are too varied for similar guidelines to be drawn up for range animals. The consequences of overcrowding include the development of neuroses, inability to gain proper access to food and water and spread of contagious disease.

overdosage [*o"vər-do'səj*] 1. the administration of an excessive dose. 2. the condition resulting from an excessive dose.

overdose [*o'vər-dōs*] 1. to administer an excessive dose. 2. an excessive dose.

overdrive suppression [*o'vər-drīv*] inhibitory effect of a fast cardiac pacemaker on a slow pacemaker.

overeating eating too much food too quickly; leads to acute gastric dilatation in dogs and horses, acute carbohydrate engorgement in ruminants, dietetic (dietary) diarrhea in young calves and foals, abomasal tympany in bottle fed lambs and calves.

o. disease 1. acute carbohydrate engorgement in ruminants. 2. enterotoxemia due to *Clostridium perfringens* type D.

overexertion horses appear to be able to race beyond their real capacity when they are not properly fit and develop pulmonary edema as a result.

overexposure too long an exposure time or too high a milliamperage causing too black a picture, loss of detail and some anomalies of translucency.

overextension [*o"vər-ek-sten'shən*] extension beyond the normal limit for a joint, commonly causing sprain of its ligaments.

overfeeding provision of more feed than necessary. Results in obesity, interference with normal parturition, fat cow syndrome, pregnancy toxemia in ewes, laminitis in ponies, diarrhea in puppies and kittens.

overgrazing see **overstocking**.

overgrown said of a part that has not been kept trimmed.

o. hoof overgrown hooves put unusual stresses on bones and tendons and allow for distortion of the wall and sole.

o. incisors occurs in guinea pigs, rabbits, rats, and puffer fish, due to a lack of wearing down by opposing teeth, or the lack of hard surfaces in the diet or environment for chewing. Excessively long teeth need to be clipped or reduced in length with a dental burr.

overhydration [*o"vər-hi-dra'shən*] a state of excess fluids in the body. Usually the result of the excessive administration of fluids parenterally. Causes pulmonary edema with dyspnea, froth from airways, watery feces without unpleasant odor, usually for only a brief period, polyuria.

overlay [*o'vər-la*] a later component superimposed on a pre-existing state or condition.

overload [*o'vər-lōd*] a larger load than the system can comfortably bear.

tube o. when repeated exposures are made at high output. This may vaporize the target or damage the cathode.

veterinary o. the popular term for the knowledge explosion and the need to learn more by the veterinarian.

overlying suffocation of piglets by the sow. The piglets may be weak from illness or malnutrition, the sow may be clumsy or ill, the pen may be inadequate in size or poorly designed so that piglets cannot escape.

overmilking leaving the milking machine cups on a cow after the rate of milk flow has fallen to negligible levels.

O-28: Overgrown claw in a cow ('scissor claw'). From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

overnutrition feeding, particularly calories, in excess of requirements; leads to obesity, rapid weight gain, and developmental skeletal abnormalities in dogs.

overo Spanish-American name for a coat color in a horse. A broken colored horse in which white coat is continuous over the body but there is pigmented hair continuously from the ears to the tail. Matings between two of these horses produces a high ratio of foals with atresia of gut segments (lethal white **foal** syndrome). Called also Paint horses. See also **tobiano**.

frame o. a colored horse with jagged white markings on the side or belly; so-called because the base body color seems to 'frame' the white pattern. See also lethal white **foal** syndrome.

overpopulation overcrowding of housing or pasturage.

overreach in gait analysis, the distance between the hind foot imprint and that of the front foot on the same side. It is positive if the hind foot lands in front. In horses, injury is possible if the toe of a hindhoof strikes the back of the pastern of the foreleg on the same side.

o. boot a circular rubber boot worn on the front foot to protect against injury by an overreaching hindhoof.

overriding [*o"vər-rid'ing*] 1. the position of fracture fragments in which they overlap one another. 2. anomalous positioning of major blood vessels, e.g. aorta or pulmonary arteries.

o. aorta a congenital anomaly occurring in tetralogy of Fallot, in which the aorta is displaced to the right so that it appears to arise from both ventricles and straddles the ventricular septal defect.

o. pulmonary artery a congenital cardiac defect in which the pulmonary artery straddles a defective interventricular septum and the aorta originates in the right ventricle.

overscald to scald chicken carcasses for too long in water that is too hot so that they have a cooked appearance and are not suitable for sale for human consumption.

overservicing carrying out more clinical or preventive work on an animal or herd than is needed or was requested by the owner with the express intention of raising a higher fee.

overshot protruding.

o. fetlock see **knuckling** over.

o. jaw a malocclusion in which the maxilla is longer than the mandible. See **brachygnathism**. Called also parrot mouth.

overstocking carrying more livestock on a particular area of pasture than it can support for any length of time. The pasture is

O-29: Overo mare with lethal white foal. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

killed, exposing the soil to erosion and the invasion of weeds. Called also overgrazing.

overtrack see **overreach**.

overtraining training horses or dogs too hard so that they lose spirit.

overventilation [*o"vər-ven"tĭ-la'shən*] hyperventilation.

overweight [*o'vər-wāt*] generally taken to mean body weight in excess of that considered to be optimal for the species, age and context within which the animal is managed, as well as the eye of the beholder. Semi-quantitative methods have been developed. See **body condition score**, **obesity**.

overwintering the ability of animals, plants or parasites to survive outdoors through a winter season.

overwork the condition produced by working a draft animal or working dog, an eventing or endurance horse too hard. See also **exhaustion**.

OvHV-2 ovine herpesvirus-2, a member of the genus *Macavirus* in the subfamily *Gammaherpesvirinae*. It is the sheep-associated malignant catarrhal fever virus transmitted to cattle from sheep.

ovi- word element. [L.] *egg, ovum*.

ovicide [*o'vĭ-sīd*] an agent destructive to the ova of certain organisms, usually helminths and arthropods.

oviduct [*o'vĭ-dəkt*] a passage through which ova leave the maternal body or pass to an organ communicating with the exterior of the body. See also **uterine** tube. In birds generally only the left oviduct and ovary are functional. See **infundibulum** of uterine tube, **magnum**, **isthmus** of uterine tube.

accessory o. see **müllerian duct**.

cystic right o. the right oviduct in birds regresses to a vestigial level in the adult; sometimes the regression is incomplete and a cyst develops.

o. hypoplasia failure of the tube to develop in the fetus; a rare cause of infertility.

o. impaction blockage of the oviduct in the hen by an inspissated mass of egg material.

o. inflammation see **salpingitis**.

oviductal [*o"vĭ-duk'təl*] emanating from or pertaining to the oviduct.

o. obstruction may be a congenital defect or the result of infection or injury; adhesions prevent the passage of the ovum, causing infertility from the ipsilateral ovary.

o. prolapse prolapse of the avian uterus (shell gland) through the cloaca; caused by chronic, excessive abdominal straining. Necrosis of prolapsed tissues develops rapidly.

o. rupture in birds, occurs secondary to dystocia or oviductal disease; there may be abdominal distension due to egg peritonitis.

oviferous [*o-vif'ər-əs*] producing ova.

oviform [*o'vĭ-form*] egg-shaped.

ovigenesis [*o"vĭ-jen'ə-sis*] oogenesis.

ovine [*o'vīn*] pertaining to, characteristic of, or derived from sheep.

o. atopic dermatitis symmetrical erythema, alopecia, lichenification, excoriation on woolless areas; sporadic cases, recur each summer.

o. balanoposthitis see **enzootic** balanoposthitis.

o. catarrhal fever see **bluetongue**.

o. encephalomyelitis see **louping ill**.

enzootic o. abortion see **enzootic** abortion of ewes.

o. genital campylobacteriosis see campylobacter **abortion**.

infectious o. keratoconjunctivitis see contagious **ophthalmia**.

o. interdigital dermatitis see **interdigital** dermatitis.

o. pneumonic complex involves one or more of the following pathogens: parainfluenza 3 virus, *Mycoplasma ovipneumoniae*, *Mannheimia haemolytica*, *Pasteurella multocida*, *Chlamydophila* spp.

o. progressive pneumonia see **maedi**.

o. pulmonary adenomatosis see ovine **pulmonary** adenomatosis.

o. respiratory syncytial virus a syncytium-forming virus; the cause of pneumonia lesions in sheep.

o. staphylococcal dermatitis see ovine staphylococcal **dermatitis**.

o. staphylococcal pyoderma see ovine staphylococcal **dermatitis**.

oviparity [*o"vĭ-parĭ-te*] the characteristic of being **oviparous**.

oviparous [*o-vip'ə-rəs*] producing eggs in which the embryo develops outside of the maternal body, as in birds.

oviposition [*o"vĭ-po-zi'shən*] the act of laying or depositing eggs.

ovipositor [*o"vĭ-pos'ĭ-tər*] a specialized organ by which many female insects deposit their eggs.

Ovis a genus of ruminant animals in the subfamily Caprinae. Includes wild and domestic sheep, small ruminants with spirally curled horns which are ridged transversely.

O. ammon wild sheep.

O. aries see **sheep**.

O. canadensis see **Bighorn sheep**.

Ovis canadensis californiana California Bighorn sheep.

Ovis canadensis canadensis Rocky Mountain bighorn sheep.

Ovis canadensis cremnobates desert wild sheep.

O. dalli see **Dall sheep**.

O. musimon see **moufflon**.

ovisacs [*o'vĭ-saks*] small sacs in the ovarian tissue that contain the immature ovocytes that develop into ova; a graafian follicle.

ov(o)- word element. [L.] *egg, ovum*.

ovocentesis in a bird with egg binding or dystocia, aspiration of contents from an egg located within the cloaca or abdomen in order to facilitate passage of remnants through the cloaca.

ovocyte [*o'vo-sīt*] oocyte.

ovoid [*o'void*] having the oval shape of an egg.

o. body colloid or colloidal body.

ovoplasm [*o'vo-plaz-əm*] the cytoplasm of an unfertilized ovum.

ovotestis [*o"vo-tes'tis*] a gonad containing both testicular and ovarian tissue.

ovoviviparity [*o"vo-viv"ĭ-parĭ-te*] the characteristic of being ovoviviparous.

ovoviviparous [*o"vo-vi-vip'ə-rəs*] bearing living young that hatch from eggs inside the maternal body, the embryo being nourished by food stored in the egg; said of lizards, etc.

ovular [*ov'u-lər*] pertaining to an ovule or an ovum.

ovulate [*ov"u-lat'*] see **ovulation**.

ovulation [*ov"u-la'shən*] the discharge of the ovum from the **graafian follicle**. The discharged ovum enters the **uterine** tube adjoining the ovary and moves toward the uterus; if it encounters a spermatozoon while it is still alive (about 48 hours), the two merge. Fertilization usually takes place in the uterine tube. The fertilized ovum then makes its way to the uterus, where it becomes embedded in the prepared wall as the first stage of growth of the embryo. See also **estrus** cycle.

double o. simultaneous ovulation in both ovaries or double ovulation on the same ovary.

o. failure the ripe follicle does not rupture and discharge its ovum.

o. fossa site of rupture of mature follicles in mares.

induced o. ovulation in rabbits, ferrets, cats, and camelids is induced by coitus (mechanical or neuroreflex) or semen deposition (biochemical); artifical induction is by hormonal treatment.

o. induction factor (OIF) a biochemical component of seminal plasma responsible for induction of ovulation in the female camelid.

multiple o. an important feature in the technique of embryo transfer. See **superovulation**.

noncopulatory o. spontaneous ovulation; standard procedure in species other than cats.

quiet o. see silent **estrus**.

o. tags strands of fibrin, proliferating capillaries and leukocytes on the peritoneal serosa close to ovulation sites especially in mares and cows.

ovule [*o'vūl*] 1. the ovum within the graafian follicle. 2. any small, egglike structure.

ovum [*o'vəm*] pl. *ova* [L.] egg; the female reproductive or germ cell which, after fertilization, is capable of developing into a new member of the same species; sometimes applied to any stage of the fertilized germ cell during cleavage and even until hatching or birth of the new animal.

centrolecithal o. one with the yolk concentrated at the center of the egg, surrounded by a peripheral shell of cytoplasm, and with an island of cystoplasm surrounding the nucleus.

holoblastic o. one that undergoes total cleavage.

isolecithal o. one with a small amount of yolk evenly distributed throughout the cytoplasm.

meroblastic o. one that undergoes partial cleavage.

o. penetration assay a biological assay using hamster, or other, zona-free ova as the test medium for the penetrating ability of individual samples of semen.

VetBooks.ir

O-30: Tawny owl (*Strix aluco*).
From Cooper JE, Sainsbury AW, Exotic Species. Mosby, 1994.

o. pick-up (OPU) term describing a technique for collection of oocytes from follicles; can be surgical aspiration or ultrasound-guided technique using a needle and negative pressure.
primitive o., primordial o. any egg cell very early in its development.
telolecithal o. one with a comparatively large amount of yolk massed at one pole.
o. transplant see **embryo** transfer.
OVVD oyster velar virus disease.
Owen contour lines [*o'ən*] accentuated incremental lines in dentin caused by sublethal systemic insults such as infectious disease which injure odontoblasts. Called also Owen's contour lines.
owl a bird of the order Strigiformes with very distinctive characteristics including nocturnal predation, soft feathers and silent flight, frontset eyes and ears that can be closed. There are two families, the barn owls (Tytonidae) and the typical owls (Strigidae).
owner proprietor.
absentee o. pays a manager to run the farm.
o.-manager the owner who also manages his own farm.
ox pl. *oxen;* mature, castrated male reared for meat production or draft purposes.
o. warbles see **warbles**.
oxacillin [*oks"ə-sil'in*] a narrow spectrum, semisynthetic penicillin.
oxalate [*ok'sə-lāt*] any salt of oxalic acid.
o. calculi see oxalate **urolith**.
o. crystalluria associated with ethylene glycol poisoning in dogs and cats.
insoluble forms (calcium) o. appear as needle-like raphide crystals in some plants (family Araceae) and irritate oral mucosa causing severe stomatitis; non-raphide crystals in tropical grasses prevent horses absorbing calcium from them and cause nutritional secondary hyperparathyroidism.
o. soluble forms sodium, magnesium and ammonium oxalates.
soluble o. poisoning in ruminants acute poisoning due to ingestion of large amounts causes hypocalcemia with muscle weakness and recumbency. Precipitation of oxalate crystals in renal tubules causes nephrosis. Long-term ingestion in horses can cause nutritional secondary hyperparathyroidism and osteodystrophia fibrosa. Most cases are the result of eating large amounts of oxalate-bearing plants, e.g. *Halogeton glomeratus, Oxalis* spp., *Portulaca oleracea, Setaria* spp.
oxalemia [*ok"sə-le'me-ə*] excess of oxalates in the blood.
oxalic acid [*ok-sal'ik*] a poisonous, dibasic acid found in various fruits and vegetables, and formed in the metabolism of ascorbic acid. In plants the acid is present in the form of **oxalate**. The commercial acid is highly toxic and if ingested should be neutralized by the administration of lime water (calcium hydroxide solution) or other convenient source of calcium, which reacts with the acid to form insoluble calcium oxalate.
o. a. test papers used to detect indole production in an **indole** test.
Oxalis a plant genus of the family Oxalidaceae; poisonous to herbivora because of high soluble oxalate content causing nephrosis and urolithiasis. Includes *O. acetosella* (wood sorrel), *O. corniculata* (creeping oxalis), *O. latifolia*, *O. pes-caprae* (*O. cernua*, soursob, Bermuda buttercup).
oxalism [*ok'səl-iz-əm*] poisoning by oxalic acid or by an oxalate.
oxaloacetate [*ok"sə-lo-as'ə-tāt*] a salt or ester of oxaloacetic acid.
oxaloacetic acid [*ok"sə-lo-ə-se'tik*] a metabolic intermediate in the tricarboxylic acid cycle and in gluconeogenesis, which is also a substrate of aspartate aminotransferase.
Oxalobacter formigenes a bacterial resident of the rumen involved in digestion.
oxalocetate oxaloacetate.
oxalosis [*ok"sə-lo'sis*] generalized deposition of calcium oxalate, in renal and extrarenal tissues, as may occur in primary or toxic hyperoxaluria.
pulmonary o. results from infection with *Aspergillus niger*; the fungus produces oxalic acid which causes tissue necrosis in adjacent tissues.
oxaluria [*ok"səl-u're-ə*] hyperoxaluria.
oxantel [*oks'ən-təl*] an analog of pyrantel, especially active against *Trichuris* spp.
oxatomide a histamine H1-receptor antagonist.
oxazepam [*ok-saz'ə-pam*] a benzodiazepine tranquilizer. See also **diazepam**.
oxazolidinediones [*ok"sə-zo-lid'ĭ-nōn*] a group of anticonvulsants that includes troxidone (trimethadione) and parametadione.
oxen adult castrated male of any breed of *Bos* spp.
oxethazaine a topical anesthetic.
oxfendazole [*oks-fen'də-zōl*] a benzimidazole anthelmintic used extensively in ruminants against a wide spectrum of worms. A special formulation is available for intraruminal injection. Also effective against equine strongyles.
Oxford Down a short-woolled, Downs-type meat sheep with dark brown face and legs. Called also Oxford, Oxfordshire Down.
Oxfordshire Down see **Oxford Down**.
oxibendazole [*ok"sĭ-ben'də-zōl*] a benzimidazole anthelmintic similar to oxfendazole.
oxicams a class of enolic acids with anti-inflammatory, analgesic and antipyretic activity. Includes the nonsteroidal anti-inflammatory drugs piroxicam and meloxicam.
oxidant [*ok'sĭ-dənt*] the electron acceptor in an oxidation–reduction (redox) reaction.
oxidase [*ok'sĭ-dās*] any of a class of enzymes that catalyze the reduction of molecular oxygen independently of hydrogen peroxide.
o. test used to identify bacteria that contain cytochrome *c* oxidase.
oxidation [*ok"sĭ-da'shən*] the act of oxidizing or state of being oxidized. Chemically it consists in the increase of positive charges on an atom or the loss of negative charges. Univalent oxidation indicates loss of one electron; divalent oxidation, the loss of two electrons. The opposite reaction to oxidation is reduction.
alpha o. important in the metabolism of fatty acids.
beta o. major process for the oxidation of fatty acids in the body leading to the production of ATP. Occurs predominantly in the mitochondrial matrix, but can occur in peroxisomes. Oxidation of the fatty acid occurs at the beta-carbon, leading to the release of the preceding two carbon as acetyl CoA.
omega o. oxidation beginning at the last carbon (omega carbon) of an acyl chain, usually a fatty acid.
oxidation–fermentation test [*ok"sĭ-da'shən*] used to identify bacteria by their ability to ferment or oxidize glucose in the test media. Called also the O-F test.
oxidation–reduction potential [*ok"sĭ-da'shən-re-duk'shən*] measure of the capacity of an element or compound, usually contained in half-cells consisting of electron donor and its conjugate electron acceptor, to donate electrons in aqueous medium. Often called redox potential and given the symbol E_0 or E'_0 for pH 7.0. Electrons flow from the half-cell of lower to that of higher redox potential.
oxidation–reduction reactions [*ok"sĭ-da'shən-re-duk'shən*] reactions involving electron transfer; the electron donor is the reductant,

which becomes oxidized while transferring electrons to the other substrate, the oxidant.

oxidative [ok'sĭ-da-tiv] pertaining to or emanating from oxidation.

o. deamination oxidative breakdown of amino acids; specialized enzyme systems carry out the process, e.g. glutamate dehydrogenase, D-amino oxidase.

o. metabolism enzymic pathways leading to the addition of oxygen or removal of hydrogen from intermediates in the pathway.

o. phosphorylation the mitochondrial process by which the free energy from the oxidation of intracellular substrates is made available in the form of ATP for cellular endergonic processes.

o. stress a condition in which levels of reactive oxygen species are raised in the body leading to oxidative damage ot cells and tissues.

oxide [ok'sīd] a compound of oxygen with an element or radical.

oxidize [ok'sĭ-dīz] to cause to combine with oxygen or to remove hydrogen.

oxidized having been modified by the process of oxidation.

o. cellulose see absorbable **cellulose**.

oxidized cellulose a specially treated form of surgical sponge which promotes clotting and is used as a temporary dressing.

oxidoreductase [ok"sĭ-do-re-duk'tās] a class of enzymes that catalyze the reversible transfer of electrons from one substance to another (oxidation–reduction, or redox reaction).

oxime [ok'sēm] any of a series of compounds formed by action of hydroxylamine on an aldehyde or ketone.

oximeter [ok-sim'ə-tər] a device for measuring oxygen concentration.

oximetry [ok-sim'ə-tre] measurement of the oxygen content of arterial blood.

pulse o. use of a spectrophotoelectric instrument applied to an area with a thin tissue bed to measure pulse rate and the percentage of oxygenated and reduced hemoglobin. Commonly used in critical care patients and for monitoring during anesthesia. In animals, sites for attachment of the probe include the tongue, lip, toe web, nasal septum, prepuce, and tail base.

oxirane [ok'sĭ-rān] see **ethylene** oxide.

2-oxoglutaric acid a metabolic intermediate involved in the tricaboxylic acid cycle, in amino acid metabolism, and as an amino group acceptor in transamination reactions. Called also α-ketoglutaric acid.

oxolinic acid [ok-so-lin'ik] a long-acting quinolone antibiotic, used orally in the treatment of urinary tract infections caused by susceptible gram-negative organisms. Side-effects in dogs include vomiting, diarrhea and neurological signs.

5-oxoproline [ok"so-pro'lēn] a modified amino acid occurring in several proteins. Called also pyroglutamic acid.

oxosteroids [ok"so-ster'oids] ketosteroids.

oxprenolol [oks-pren'ə-lol] a β-adrenergic blocker, antiarrhythmic drug.

oxtriphylline [oks-trif'ə-lēn] a derivative of xanthine, similar to theophylline; used as a bronchodilator and expectorant.

oxy- word element. [Gr.] *sharp, quick, sour, presence of oxygen in a compound.*

oxyblepsia [ok"se-blep'se-ə] unusual acuity of vision.

oxybutynin [ok"se-bu'tĭ-nin] an anticholinergic having direct antispasmodic effect on smooth muscle; used in the treatment of uninhibited neurogenic bladder and reflex neurogenic bladder.

oxycephaly [ok"se-sef'ə-le] congenital condition in which the top of the head is pointed due to premature closure of the coronal and lambdoid sutures. Called also acrocephaly, acrocephalia.

oxychlorosene [ok"se-klor'o-sēn] a stabilized organic complex of hypochlorous acid used as a topical antiseptic in the treatment of localized infections.

oxycinesia [ok"se-sĭ-ne'zhə] pain on motion.

oxyclozanide [ok"se-klo'zə-nīd] a useful treatment for adult liver fluke in dairy cattle. It has a short withholding period and is also effective against immature paramphistomes.

oxycodone [ok"se-ko'dōn] a semisynthetic narcotic analgesic derived from morphine.

4-oxycoumarin a hypothrombinemic substance in *Ferula communis*.

oxydemeton-methyl see **methyl** demeton.

oxygen (O) [ok'sĭ-jən] a chemical element, atomic number 8, atomic weight 15.999. See Table 4. It is a colorless and odorless gas that makes up about 20% of the atmosphere. In combination with hydrogen, it forms water; by weight, 90% of water is oxygen. It is the most abundant of all the elements of nature. Large quantities of it are distributed throughout the solid matter of the earth, because the gas combines readily with many other elements. With carbon and hydrogen, oxygen forms the chemical basis of much organic material. Oxygen is essential in sustaining all kinds of life.

o. analyzer an instrument that measures the concentration of oxygen in a gas mixture.

o. debt the extra oxygen that must be used in the oxidative energy processes after a period of strenuous exercise to reconvert lactic acid to glucose and decomposed ATP and creatine phosphate to their original states.

o. deficiency significant cause of losses in cultivated finfish in enclosed dams, but also in rivers and estuaries, caused by lack of natural aeration of the water or to heavy algal blooms, bushfire ash deposits and overcast conditions leading to respiration rather than photosynthesis or a high concentration of organic matter and leading to the development of a bacterial bloom; a high temperature exacerbates the development.

o. flux equation a calculation that determines the rate at which oxygen is made available to tissues, based on cardiac output and arterial oxygen content.

o. tank the heavy metal cylinder in which medical gases are compressed at high pressure. Called also oxygen cylinder.

o. tension see **tension** (2).

o. tent an enclosed space or plastic canopy used for oxygen therapy, humidity therapy or aerosol therapy.

o. toxicity tissue damage may occur with exposure to high concentrations of oxygen for long periods. See also **retrolental** fibroplasia.

o.-transfer chain a functional chain describing the transfer of oxygen from the external environment to the metabolizing tissue; includes uptake in the respiratory system, binding to hemoglobin, transport through the circulatory system, diffusion and dissociation in tissues and utilization in mitochondria, i.e. oxidatable substrates and enzymes.

o. transport process of transfer of oxygen around the body either attached to hemoglobin or myoglobin.

oxygenase [ok'sĭ-jən-ās] any enzyme of the oxidoreductase class that catalyzes the direct transfer of oxygen from molecular oxygen into a substrate molecule. Monooxygenases incorporate one O atom into the substrate and the other is reduced to water with the aid of a co-substrate; dioxygenases incorporate both O atoms into the substrate.

mixed-function o. monooxygenase.

oxygenation [ok"sĭ-jə-na'shən] saturation with oxygen.

hyperbaric o. exposure to oxygen under conditions of greatly increased pressure See also **hyperbaric** oxygenation.

oxygenator [ok'sĭ-jə-na"tər] an apparatus by which oxygen is introduced into the blood during circulation outside the body, as during open-heart surgery. See also **extracorporeal** circulatory support unit.

bubble o. a device in which pure oxygen is bubbled through an extracorporeal reservoir of blood, either directly or through a filter.

film o. a device, encased in a container of oxygen, that makes possible reduction of a thin film of blood to facilitate the exchange of gases.

rotating disk o. a type of film oxygenator in which a series of parallel disks rotate through an extracorporeal pool of venous blood in a container of oxygen; gaseous exchange occurs between the thin film of blood on the exposed surface of the disks and the oxygen in the container.

screen o. a type of film oxygenator in which the venous blood is passed over a series of screens in a container of oxygen, gaseous exchange taking place in the thin film of blood produced on the screens.

oxyhemoglobin [ok"se-he'mo-glo"bin] hemoglobin combined with molecular oxygen, the form in which oxygen is transported in the blood. See also **hemoglobin**.

o. dissociation curve see **hemoglobin**–oxygen dissociation curve.

Oxylipeurus a genus of lice that parasitize turkeys. Includes *O. corpelentis*, *O. polytrapezius*.

Oxylobium [ok"se-lo'be-um] see ***Gastrolobium***.

oxymetazoline [*ok"se-mət-az'o-lēn*] a selective agonist of α_1 and α_2-adrenergic receptors; a vasoconstrictor used topically as a nasal decongestant.
oxymetholone [*ok"se-meth'ə-lōn*] a 17α-alkylated androgen used for its anabolic effects in the treatment of aplastic and other nonregenerative anemias.
oxymorphone hydrochloride [*ok"se-mor'fōn*] a narcotic analgesic that is more potent and has longer duration than morphine.
oxymyoglobin [*ok"se-mi"o-glo'bin*] MbO_2; myoglobin charged with oxygen.
oxyntic [*ok-sin'tik*] secreting acid, as the parietal (oxyntic) cells of the stomach.
o. cells gastric mucosal cells that secrete gastric acid.
o. glands glands in the gastric mucosa that contain oxyntic cells.
oxyphenbutazone [*ok"se-fən-bu'tə-zōn*] a nonsteroidal anti-inflammatory agent, similar to phenylbutazone. Called also oxyphenylbutazone.
oxyphil [*ok'se-fil*] 1. Hürthle cell. 2. oxyphilic, i.e. stainable with an acid dye.
o. cell acidophilic cells found in parathyroid gland.
oxyphilic, oxyphilous [*ok"se-fil'ik*] stainable with an acid dye.
oxyquinoline [*ok"se-kwin'o-lēn*] see **hydroxyquinolines**.
Oxyspirura [*ok"se-spi-roo'rə*] a genus of nematodes in the family Thelaziidae. They are parasites of the eyes of birds and cause ophthalmitis, with ocular discharge, and scratching at the eyes.
O. mansoni, O. parvorum found under the third eyelid of fowls, turkeys and peafowl.
Oxysporum see ***Fusarium solani***.
oxytalan a connective tissue fiber found in the periodontal membrane.
Oxytenia acerosa North American plant member of the family Asteraceae containing an unidentified hepatoxin. Syndrome includes depression, recumbency; necropsy lesions include hepatitis and nephrosis. Called also copperweed.
oxytetracycline [*ok"se-tet"rə-si'klēn*] a short-acting water-soluble tetracycline. Called also Terramycin.
oxytocia [*ok-se-to'se-ə*] rapid labor.
oxytocic [*ok-se-to'sik*] 1. pertaining to, marked by, or promoting oxytocia. 2. an agent that promotes rapid labor by stimulating contractions of the myometrium.
oxytocin [*ok"se-to'sin*] a hypothalamic hormone stored in and released from the posterior pituitary, or prepared synthetically. Produced also by the corpus luteum of sheep, and perhaps other animals. Involved in the release of $PGF_{2\alpha}$ which induces luteolysis. It acts as a powerful stimulant to the pregnant uterus, especially toward the end of gestation. The hormone also causes milk to be expressed from the alveoli into the lactiferous ducts during suckling.
Oxytropis [*ok"se-tro'pis*] a genus of plants in the legume family Fabaceae. Very closely related botanically to *Astragalus* spp. and with very similar characteristics as poison plants. Contain the indolizidine alkaloid swainsonine; causes excitability, paralysis, blindness. Includes *O. besseyi*, *O. condensata*, *O. deflexa*, *O. glabra*, *O. glabra* var. *drakana*, *O. kansuenis*, *O. lambertii*, *O. ochrocephala*, *O. puberula*, *O. saximontana*, *O. sericea*. Called also locoweeds.
oxyuriasis [*ok"se-u-ri'ə-sis*] the disease caused by infestation with ***Oxyuris*** nematodes. Manifested by intense irritation of the perianal region causing rubbing and biting at the tail.
oxyuricide an agent that kills oxyurids.
oxyurid [*ok-se-u'rid*] an individual nematode of the family Oxyuridae.
Oxyuris [*ok"se-u'ris*] a genus of nematodes in the family Oxyuridae. Occupants of the large intestine; the females have long, tapering tails. Includes *O. equi* (horse), *O. karamoja* (rhinoceros), *O. poculum* (horse), *O. tenuicorda* (Burchell's zebra—*Equus burchelli*).
oyster bivalve marine molluscs; food oysters are in the family Ostreidae. See ***Crassostrea***, ***Saccostrea commercialis***, ***Ostrea***.
American cupped o. *Crassostrea virginica*.
flat o. *Ostrea* spp.

O-31: Tail-rubbing caused by *Oxyuris equi* infestation.
From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

O-32: Oxyurid egg (center) and oocysts of *Isospora* spp.
From Pasmans F, Blahak S, Martel A, Pantchev N: Introducing reptiles into a captive collection: The role of the veterinarian. Vet J 175:53-68, 2008. Elsevier.

Pacific cupped o. *Crassostrea gigas*.
Portuguese o. *Crassostrea angulata*, *C. pipas*.
Sydney rock o. *Saccostrea glomerata*.
o. velar virus disease (OVVD) caused by an iridovirus this disease causes severe losses in Pacific oyster hatcheries.
oyster feet said of horses having flat feet with ridges in the wall giving a general appearance not unlike an oyster shell. Usually the result of chronic laminitis.
oz ounce.
ozena, ozoena [*o-ze'nə*] an atrophic rhinitis marked by a thick mucopurulent discharge, mucosal crusting and fetor.
Ozobranchus branchiatus a leech found on green sea turtles in association with cutaneous fibroepitheliomas.
ozone [*o'zōn*] a bluish explosive gas or blue liquid, being an allotropic form of oxygen, O_3; it is antiseptic and disinfectant, and irritating and toxic to the pulmonary system.
ozonization exposure of stored meat to ozone to preserve it and especially to reduce any taint in the meat.
ozostomia [*o"zo-sto'me-ə*] foulness of the breath.
Ozothamnus diosmifolius Australian plant in family Asteraceae; contains an unidentified hepatotoxin affecting ruminants. Called also *Helichrysum diosmifolium*, riceflower.

VetBooks.ir

P

P chemical symbol, *phosphorus*; symbol, *peta-;* position; presbyopia; [L.] *proximum* (near); pulse; [L.] *punctum* (point); pupil.
P_1 parental generation.
P1,P2,P3 phalanges, numbered from proximal to distal. In horses, called also long pastern (os compedale), short pastern (os coronale) and coffin (os ungulare) bones.
P_2 pulmonic second sound. See **heart sounds**.
p53 a tumor suppressor gene active in the cellular response to DNA damage and cell cycle arrest.
***P*co$_2$** carbon dioxide partial pressure or tension; also written PCO_2, pCO_2 and pCO_2. See **respiration** and **blood gas analysis**.
***P*o$_2$** oxygen partial pressure (tension); also written PO_2, pO_2 and pO_2. See also **blood gas analysis**.
p symbol for (1) the short arm of a chromosome; or (2) the frequency of the more common allele of a pair; (3) pico-.
p- symbol, *para-*.
π pi, small letter; sixteenth letter in the Greek alphabet.
ϕ phi, small letter; twenty-first letter in the Greek alphabet.
ψ psi, small letter; twenty-third letter in the Greek alphabet.
P-450 enzymes superfamily of heme-containing monooxygenase enzymes important for detoxification of drugs, including pesticides, and the biosynthesis of steroid hormones from cholesterol; at high concentrations in some fish-eating birds, e.g. Atlantic puffins.
p-cresol see **cresols**.
P-K reaction Prausnitz-Küstner reaction.
P mitrale an electrocardiographic abnormality in which the P wave is prolonged, in dogs more than 0.04 s. Associated with left atrial enlargement.
P pulmonale an electrocardiographic abnormality in which the P wave is tall and peaked. Indicative of right atrial enlargement which is often associated with chronic pulmonary disease.
P site see peptidyl-tRNA binding site (under **tRNA**).
Pa chemical symbol, *protactinium*; symbol, *pascal*.
P_aCO_2 symbol for partial pressure of carbon dioxide in the arterial blood. See also **blood gas analysis**.
P_aO_2 symbol for partial pressure of oxygen in arterial blood. See also **blood gas analysis**.
PA inhibitor **plasminogen** activator inhibitor.
Paatsama technique a surgical method for reconstruction of a ruptured cranial cruciate ligament using a strip of fascia lata.
PAB, PABA para-aminobenzoic acid.
pabulum food or nourishment.
PAC Political Action Committee.
paca [*pă'kə*] a large, plump rodent, brown in color, with three to five lines of white spots down the sides of the body. Called also sooty paca, spotted cavy, *Cuniculus paca* (formerly *Coelogenys* spp.).
pacchionian granulations [*pak"e-o'ne-ən*] enlargements of the arachnoid villi which protrude into the dorsal sagittal sinus, as seen well developed in the horse.
pace an equine gait similar to a trot except that the front and rear limbs on each side are moved in unison instead of the diagonal limbs. A comfortable even gait for the rider, producing an even speed for the duration of a race. Similar to the **amble** gait but at a fast speed. Many pacing horses are raced and trained in harness. Called also sidewheel.
flying p. a natural gait of Icelandic horses.
pacemaker [*pās'mā-kər*] 1. an object or substance that controls the rate at which a certain phenomenon occurs; often used alone to indicate an artificial cardiac pacemaker; however, there are other natural and artificial pacemakers. 2. In biochemistry, a pacemaker is a substance whose rate of reaction sets the pace for a series of interrelated reactions.
asynchronous p. (1) an implanted cardiac pacemaker in which the induced ventricular rhythm is independent of the atrium; it is usually set at a fixed rate of ventricular stimulation.
p. cells (1) cells within the heart capable of spontaneous discharge.
gastric p. (1) a saddle-shaped area of the greater curvature of the stomach at the junction of its proximal and middle thirds, which regulates the frequency of gastric contractions.
phrenic p. (1) a device designed to facilitate respiration by converting radiofrequency signals into electrical impulses that stimulate the phrenic nerve, resulting in contraction and flattening of the diaphragm and improved inspiration of air.
p. therapy implantation of a pacemaker device in animals usually for the treatment of symptomatic bradyarrhythmias.
p. syndrome falling arterial pressure, low cardiac output and congestive heart failure, usually due to a suboptimal pacing mode.
uterine p. either of the two regulating centers that control uterine contractions.
wandering p. a condition in which the site of origin of the impulses controlling the heart rate shifts from the head of the sinoatrial node to a lower part of the node or to another part of the atrium. Normal in the dog and horse.
Pacheco's disease [*pə-chek'ōz*] a disease of psittacines caused by a psittacid herpesvirus 1 and characterized by weakness, diarrhea and focal necrosis in the liver and spleen. Intranuclear inclusion bodies in hepatocytes suggest the diagnosis. The disease causes very heavy mortalities.
pachy- word element. [Gr.] *thick*.
pachyacria [*pak"e-ak're-ə*] enlargement of the soft parts of the extremities.
pachyblepharon [*pak"e-blef'ə-ron*] thickening of the eyelids.
pachycephaly [*pak"e-sef'ə-le*] abnormal thickness of the bones of the skull.
pachycheilia [*pak"e-ki'le-ə*] thickening of the lips.
pachychromatic [*pak"e-kro-mat'ik*] having the chromatin in thick strands.
pachycurares [*pak"e-koo-rah'rez*] a group of neuromuscular blocking agents characterized by large, bulky molecules. Includes *d*-tubocurarine, gallamine, pancuronium; all of them are competitive blockers.
pachydactyly [*pak"e-dak'tə-le*] megalodactyly.
pachyderma [*pak"e-dur'mə*] abnormal thickening of the skin.
p. vesicae thickening of the mucous membrane of the bladder.
pachydermatocele [*pak"e-dər-mat'o-sēl*] plexiform neuroma attaining large size, producing an elephantiasis-like condition.
pachyglossia [*pak"e-glo'se-ə*] abnormal thickness of the tongue.
pachygyria [*pak"e-ji're-ə*] see **macrogyria**.
pachyhematous [*pak"e-dur'mə-təs*] pertaining to or having thickened blood.
pachyleptomeningitis [*pak"e-lep"to-men"in-ji'tis*] inflammation of all three meningeal layers.
pachymeninges [*pak"e-mə-nin'jēz*] dura mater.
pachymeningitis [*pak"e-men"in-ji'tis*] inflammation of the dura mater; perimeningitis.
ossifying p. see dural **ossification**.
pachymeningopathy [*pak"e-men"in-gop'ə-the*] noninflammatory disease of the dura mater.
pachymeninx [*pak"e-me'ninks*] the dura mater.
pachynsis [*pə-kin'sis*] an abnormal thickening.
pachyonychia [*pak"e-o-nik'e-ə*] abnormal thickening of the nails or claws.
pachyperiostitis [*pak"e-per"e-os-ti'tis*] periostitis of long bones resulting in abnormal thickness of affected bones.
pachyperitonitis [*pak"e-per"i-to-ni'tis*] inflammation and thickening of the peritoneum.
pachypleuritis [*pak"e-plŏŏ-ri'tis*] fibrothorax.
pachysalpingitis [*pak"e-sal"pin-ji'tis*] chronic interstitial inflammation of the muscular coat of the oviduct producing thickening; called also mural salpingitis and parenchymatous salpingitis.

pachysalpingo-ovaritis [*pak"e-sal-ping"go-o"və-ri'tis*] chronic inflammation of the ovary and oviduct, with thickening.
pachysomia [*pak"e-so'me-ə*] thickening of parts of the body.
Pachystigma a genus of South African plants in the family Rubiaceae; the causative toxin is the polyamine toxin, pavetamine, which causes myocarditis and sudden death (gousiekte). Includes *P. latifolium*, *P. pygmaeum*, *P. thamnus*. Called also *Vangueira* spp., goubos, gousiektebossie.
pachytene [*pak'e-tēn*] in prophase of meiosis, the stage following zygotene during which the chromosomes shorten, thicken and separate into two sister chromatids joined at their centromeres. Paired homologous chromosomes, which were joined by synapsis, now form a tetrad of four chromatids. Where crossing over has occurred between nonsister chromatids, they are joined by Y-shaped chiasmata.
pachyvaginalitis [*pak"e-vaj"ĭ-nəl-i'tis*] inflammation and thickening of the tunica vaginalis of the testis.
pachyvaginitis [*pak"e-vaj"ĭ-ni'tis*] chronic vaginitis with thickening of the vaginal walls.
Pacifastacus leniusculus American crayfish; signal crayfish.
Pacific Coast tick see ***Dermacentor*** *occidentalis*.
Pacific labrador tea ***Ledum*** *columbianum*.
pacing [*pās'ing*] 1. normal gait of some horses. See **pace**. 2. stereotyped pacing; a habit in all caged animals, especially if they are active species and are confined in very small areas. May cause excessive wear in footpads, in snakes the damage is usually to the front of the head. 3. setting the pace or rate of movement. See **cardiac** pacing.
pacinian corpuscle [*pə-sin'e-ən*] cutaneous mechanoreceptors that sense pressure and stretch.
pack [*pak*] 1. see sterile surgical pack. 2. jute container (13.5 cm × 7.5 cm × 7.5 cm) into which wool is packed to make a bale; other similar containers in which wool is packed include butts and sacks. 3. social unit that hunts, rears its young and protects a communal territory as a group.
packalacca ***Phytolacca*** *dioica*.
packed cell volume (PCV) the percentage of the volume of whole, unclotted blood occupied by the erythrocytes. A useful prognostic indicator in dehydration when the PCV rises markedly.
packer 1. an instrument for introducing a dressing into a cavity or a wound. 2. proprietor of a **meat packing plant**.
Packera see ***Senecio***.
packet knot slip knot; useful for the beginning of a continuous suture.
packing [*pak'ing*] 1. the filling of a wound or cavity with gauze, sponge or other material. 2. the material used for this purpose.
packing plant [*pak'ing*] a complete meat production unit including facilities for slaughtering animals, processing of meat and offal, boning out, making up of blocks of carcasses, chilling, freezing, storing of the meat, preparation of by-products.
paclitaxel [*pak"li-tak'səl*] a cell cycle-specific antineoplastic drug; adverse reactions in dogs and cats to the vehicle, Cremophor EL, require careful pretreatment with antihistamines and corticosteroids. Known as Taxol®.
PACS *P*icture *A*rchiving and *C*ommunication *S*ystem; a computer system of hardware and programs for the storage, display, transfer, archival and communication system of radiographic and other diagnostic images.
pad [*pad*] a cushion-like mass of soft material which may be (1) anatomical; (2) surgical.
abdominal p. a pad for the absorption of discharges from abdominal wounds, or for packing off abdominal viscera to improve exposure during surgery.
communal p. metacarpal pad.
fat p. a pad of fat lying within a joint, covered with synovial membrane and thought to assist in the spreading of synovial lubricant, e.g. infrapatellar fat pad of stifle joint.
foot p's see **footpad**.
Mikulicz's p. a pad made of folded gauze, for packing off viscera in surgical procedures.
pressure p. in surgery, gauze sponges used to apply pressure in the control of minor hemorrhage.
stripped p. avulsion of the pad with exposure of the dermis. A common injury in Greyhounds which have raced on asphalt or been over-exercised on a walking machine with a rough belt.
pad-saddle a thick pad of felt made like a saddle but without a tree. Can be made in leather with a minor arch. Used for riding horses in track work.
Padda oryzivora see Java **sparrow**.
paddock a fenced field or enclosure.
joining p. used for mating.
PAE post-antibiotic effect.
Paecilomyces a genus of soil-inhabiting imperfect fungi which are sometimes found as contaminants of the skin and oral mucosa. See also **hyalohyphomycosis**.
P. fumosoroseus associated with cutaneous and disseminated infections in dogs and cats.
P. varioti an opportunistic fungal infection of the respiratory tract of birds.
Paenibacillus larvae* subspecies *larvae the cause of American foulbrood in honeybees. Previously classified as *Bacillus larvae*.
PAF platelet activating factor.
Pagrus auratus finfish in family Sparidae. Called also snapper, red sea bream.
-pagus word element. [Gr.] *conjoined twins*.
PAH, PAHA para-aminohippuric acid.
Pahvant Valley fever see **tularemia**.
pail-fed said of neonates reared on milk or replacer fed from a pail instead of a bottle. Called also bucket-fed.
pail-feeding a method of rearing calves by weaning them off the dam and feeding them on her or another cow's milk or milk replacer in a bucket without the use of a nipple. Because of the common practice of feeding at too long intervals with cold milk there is a higher prevalence of dietary diarrhea in pail-fed calves than in calves that are suckled. See also dietary **diarrhea**.
pain [*pān*] a feeling of distress, suffering or agony, caused by stimulation of specialized nerve endings. Its purpose is chiefly protective; it acts as a warning that tissues are being damaged and induces the sufferer to remove or withdraw from the source. All receptors for pain stimuli are free nerve endings of groups of myelinated or unmyelinated neural fibers abundantly distributed in the superficial layers of the skin and in certain deeper tissues such as the periosteum, surfaces of the joints, arterial walls, and the falx and tentorium of the cranial cavity. The distribution of pain receptors in the gastrointestinal mucosa apparently is similar to that in the skin; thus, the mucosa is quite sensitive to irritation and other painful stimuli. Although the parenchyma of the liver and the alveoli of the lungs are almost entirely insensitive to pain, the liver as an organ and the bile ducts are extremely sensitive, as are the bronchi, ureters, parietal pleura and peritoneum. Some pain receptors are selective in their response to stimuli, but most are sensitive to more than one of the following types of excitation: (1) mechanical stress of trauma; (2) extremes of heat and cold; and (3) chemical substances, such as histamine, potassium ions, acids, prostaglandins, bradykinin and acetylcholine. The conscious perception of pain probably takes place in the thalamus and lower centers; interpretation of the quality of pain is probably the role of the cerebral cortex. There are some naturally occurring internal systems in the body that are known to control pain but none of them has been completely verified. One of the best known is the **gate control** system in which it is thought that pain impulses are mediated in the substantia gelatinosa of the spinal cord.
abdominal p. pain occurring in the area between the thorax and pelvis. Manifestations vary between species. Identifiable syndromes include: (1) horse and camelid—pawing, flank watching, rolling, straddling as though to urinate, lying on the back; (2) cattle—may depress back and paddle with hindfeet but mostly arched back, grunting, immobility; (3) dogs and cats—arched back, grunting, depression, reluctance to move. Sometimes there is elevation of the hindquarters, with the chest and forelegs on the ground (the so-called 'praying dog' attitude).
Beagle p. syndrome see steroid responsive **meningitis**-arteritis.
endogenous p. caused by factors within the body, e.g. stretching of mesentery.
p. hypersensitivity responsiveness to noxious stimuli that produces exaggerated and prolonged pain. May be either *peripheral* sensitization, which is a reduction in threshold and an increase in responsiveness of the peripheral ends of nociceptors, or *central*, which is an increase in the excitability of neurons within the central nervous system.

VetBooks.ir

P-1: Paint horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

projected p. pathology in one area can affect the nerve supply to a distant area in which pain is experienced.
p. receptors free nerve endings of tufts of fine points or buttons.
referred p. pain felt in an area distant from the site of pathology but not mediated through a common innervation. There is no evidence that referred pain occurs in animals but it seems likely on anatomical grounds.
p. threshold the lowest level at which a stimulus can be applied and cause perceptible pain.
p. tolerance the level of stimulation at which pain becomes intolerable.
visceral p. caused by inflammation of serous surfaces, distention of viscera and inflammation or compression of peripheral nerves. The pain caused by stretching of the wall of a hollow viscus is often intermittent because of its alternating relaxation and spasm in response to distention.
paint [pānt] commercial paint products are used in animal accommodation. Most contain some lead, even so-called lead-free paints. See **lead**[1] poisoning.
paint horse [pānt] see **American Paint horse**.
paintbrushes see ***Castilleja***.
paired pertaining to data or animals that are matched as being very similar.
p. controls see paired **control**.
p. data values which fall normally into pairs and can therefore be expected to vary more between pairs than within pairs.
Pajaroello tick see ***Ornithodorus*** *coriaceus*.
pakoein a toxic cycad glycoside found in *Bowenia*, *Cycas* etc.
palae(o)- for words beginning thus see *pale(o)-*.
palatability pleasantness of taste of feed; willingness of animals to eat the feed in preference to others, which may be based on factors other than taste, e.g. smell, appearance, the sound of cows munching on ensilage.
palate [pal'ət] the roof of the mouth. The front portion braced by the upper jaw bones (maxillae) is known as the hard palate and forms the partition between the mouth and the nose. The fleshy part arching from the hard palate to the throat is called the soft palate and separates the oropharynx from the nasopharynx. When the animal swallows, the rear of the soft palate swings up against the back of the pharynx and blocks the passage of food and air to the nose. See also **soft palate**.
cleft p. see **cleft** lip, **cleft** palate.
displaced p. the soft palate of the horse, except during deglutition, rests below the epiglottis. It may be displaced and come to lie above the epiglottis, due either to hypoplasia of the epiglottis or paresis of the soft palate.
midline defect of p. see **cleft** lip.
p. reflexes swallowing caused by stimulation of the palate.
palatine, palatal pertaining to the palate. See also **palate**.
p. abscess commonly diagnosed in companion birds. Are often accumulations of keratinized cellular debris as a result of a dietary deficiency of vitamin A.
p. fissure narrow gap beside the palatine process of the incisive bone; covered by the vomeronasal organ and pierced by the naso-incisive duct.
p. rugae see **rugae palatal**.
p. sinus one of the paranasal sinuses connecting with the nasal cavity that is particularly large in ruminants.
p. slit the caudal half of the palate in birds is divided by a median choanal slit.
palatitis [pal"ə-ti'tis] inflammation of the palate.
palat(o)- word element. [L.] *palate*.
palatoglossal [pal"ə-to-glos'əl] pertaining to the palate and tongue.
p. arch see palatoglossal **arch**.
palatognathous [pal"ə-tog'nə-thəs] having a congenitally cleft palate.
palatomaxillary [pal"ə-to-mak'sĭ-lar"e] pertaining to the palate and maxilla.
palatopharyngeal [pal"ə-to-fə-rin'je-əl] pertaining to the palate and pharynx.
p. arch see palatopharyngeal **arch**.
palatoplasty [pal'ə-to-plas"te] plastic reconstruction of the palate.
palatoplegia [pal"ə-to-ple'jə] paralysis of the palate.
palatorrhaphy [pal"ə-tor'ə-fe] surgical correction of a cleft palate.
palatoschisis [pal"ə-tos'kĭ-sis] cleft palate.
palatum [pə-la'təm] [L.] *palate*.
pale lacking the pink color of normal viable tissue that is perfused with blood.
pale soft exudative pork see **porcine** stress syndrome.
pale-encephalon the (phylogenetically) old brain; all of the brain except the cerebral cortex and its dependences.
pale(o)- word element. [Gr.] *old*.
paleocerebellum [pa"le-o-ser"ə-bel'əm] originally, the phylogenetically older parts of the cerebellum; the term is now applied specifically to those parts whose afferent inflow is predominantly supplied by spinocerebellar fibers.
paleocortex [pa"le-o-kor'teks] paleopallium.
paleogenetic [pa"le-o-jə-net'ik] originated in the past; not newly acquired; said of traits, structures, etc., of species.
paleokinetic [pa"le-o-kĭ-net'ik] old kinetic; a term applied to the nervous motor mechanism concerned in automatic associated movements.
paleopallium [pa"le-o-pal'e-əm] that part of the pallium (cerebral cortex) developing with the archipallium in association with the olfactory system; it is phylogenetically older and less stratified than the neopallium, and composed chiefly of the piriform cortex and parahippocampal gyrus. Called also paleocortex.
paleopathology [pa"le-o-pə-thol'ə-je] study of disease in bodies that have been preserved from ancient times.
paleopulmo [pa"le-o-pul'mo] the functional division of the avian respiratory tract formed by the parabronchi arising from the mediolateral and medioventral bronchi.
paleostriatum [pa"le-o-stri-a'təm] the phylogenetically older portion of the corpus striatum, represented by the globus pallidus.
paleothalamus [pa"le-o-thal'ə-məs] the phylogenetically older part of the thalamus, i.e. the medial portion which lacks reciprocal connections with the neopallium.
Palicourea [pal"ĭ-ko-u're-ə] South American plant genus in the family Rubiaceae; contain fluoroacetate, a cause of myocardial damage and sudden death; includes *P. aeneofusca*, *P. grandiflora*, *P. juruana*, *P. marcgravii*, cafezinho, cafe bravo, erva cafe, erva de rato, roxa, roxinha, roxona, vick.
pali(n)- word element. [Gr.] *again, pathological repetition*.
palindrome [pal'in-drōm] literally, something that reads the same backwards as forwards. In nucleic acid biochemistry palindromic sequences of 4 to 10 or more base pairs occur not infrequently. These function as recognition sites for cleavage by restriction endonuclease enzymes or secondary structures as the folding of RNA molecules or the hairpin structures found at the termini of the single-stranded DNA genomes of parvoviruses.
interrupted p. restriction enzymes such as *Bgl*I recognize sequences which are interrupted palindromes, e.g. GCCNNN↓NGGC where N is any nucleotide.
palindromia [pal"in-dro'me-ə] a recurrence or relapse.
palisade worms [pal"ĭ-sād'] see ***Strongylus***.
palisading giving the appearance of palisades, as in a picket fence.
p. crust alternating horizontal layers of keratin and exudate in a crust or scab.
p. granuloma see palisading **granuloma**.
palladium (Pd) [pə-la'de-əm] a chemical element, atomic number 46, atomic weight 106.4. See Table 4.
palliate [pal'e-āt] to relieve clinical signs.
palliative [pal'e-ə-tiv] affording relief; also, a drug that so acts.
pallidum [pal'ĭ-dəm] the globus pallidus, the medial subdivision of the lentiform nucleus, of the brain.
pallium [pal'e-əm] the cerebral cortex viewed in its entirety, i.e. the mantle of gray matter covering both cerebral hemispheres. Also, the cerebral cortex during its development.

VetBooks.ir

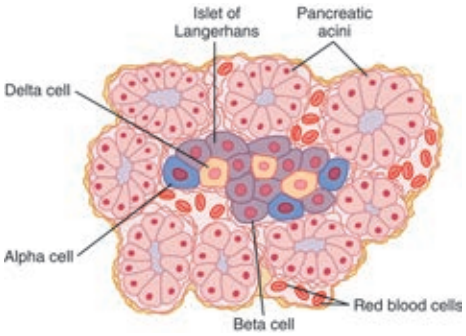
pallor [*pal'ər*] paleness, as of the skin or mucosae. Although it is commonly associated with anemia, many long-term cases show mucosae of normal color; pallor is also a common sign in shock.
central p. the lighter staining central area seen in discoid-shaped erythrocytes of dogs.
palm [*pahm, pahlm*] one of many flowering plants in the family Arecaceae (Palmae); including *Elaeis guineensis* (oil palm), *Phoenix dactylifera* (date palm), *Cocus nucifera* (coconut palm), *Caryota mitis* (fishtail palm), *Metroxylon sagu* (sago palm). See also **sago palm**.
Palma christi [*pahl'mə*] see ***Ricinus communis***.
palmar [*pahl'mər*] descriptive of the palm of the human hand, or of the homologous surface or direction of the limbs of other animal species.
p. nerve block see **plantar** nerve block.
palmar-plantar erythrodysesthesia syndrome [*pahl'mər*] a side effect of some chemotherapy drugs caused by capillary leakage of the drug into tissues, particularly the hands and feet in humans and the paws or feet in animals. Tissue damage results in redness, swelling and blisters. Tingling or burning is reported in humans.
Palmer dental notation [*pahl'mər*] a scheme for charting the position and number of teeth. A horizontal line indicates the occlusal plane and a vertical line in the middle indicates the midline. The teeth in each quadrant are numbered, starting from the point closest to the midline.
palmitate [*pal'mĭ-tāt*] salt or ester of palmitic acid, a common dietary fatty acid.
palmitic acid [*pal-mit'ik*] a 16-carbon saturated fatty acid from animal and 16-carbon vegetable fats, particularly palm oil.
palmitin [*pal'mĭ-tin*] glycerol tripalmitate, one of the common fats in animal fat. A crystallizable and saponifiable substance.
palmitoleic acid [*pal"mĭ-to-le'ik*] a 16-carbon monounsaturated, with a double bond at carbons 7,8, endogenously synthesized nonessential fatty acid.
palmityl-CoA-carnitine transferase an enzyme involved in the transport of fatty acids across the mitochondrial membrane.
palmus [*pa'məs*] 1. palpitation. 2. clonic spasm of limb muscles, producing a jumping motion.
palo santo tree see ***Bulnesia sarmientii***.
palomino [*pal-o-me'no*] not a breed of horse but a color type of gold with white mane and tail.
palpable [*pal'pə-bəl*] perceptible by touch.
palpate [*pal'pāt*] to perform palpation.
palpation [*pal-pa'shən*] the technique of examining parts of the body by touching and feeling them.
abdominal p. palpation of the contents of the abdomen and the state of the abdominal wall either through the wall or per rectum.
gastric p. internal palpation of the stomach via the esophagus is performed in dolphins and other cetaceans.
motion p. in chiropractic, examination of the range of movement in vertebral joints.
per-rectal p. palpation of the posterior abdomen and the organs in it by inserting the finger (in dogs) or hand and arm (in horses, cattle and pigs) in the rectum. Called also rectal palpation.
pharyngeal p. palpation via the external wall in small animals; can be performed per os in cattle but requires a mouth speculum for all but the most deft practitioners.
static p. in chiropractic, examination of the vertebral column for alignment and asymmetry and surrounding soft tissues for tone, heat and pain.
palpebra [*pal'pə-brə*] pl. *palpebrae* [L.] eyelid.
palpebra tertia [*pal'pə-brə*] third eyelid, *palpebra III*; **membrana** nictitans.
palpebral [*pal'pə-brəl*] pertaining to the eyelid.
p. conjunctiva conjunctiva lining the inner aspect of the eyelid.
p. commissure see **canthus**.
p. fissure see palpebral **fissure**.
medial p. ligament the medial canthal ligament which connects the medial canthus to the orbit.
p. nerve a branch of the auriculopalpebral nerve which innervates the orbicularis oculi muscle of the eyelid and effects eyelid closure. See Table 14.
p. reflex eyelid closure following stimulation of the periocular tissue; requires normal function of cranial nerves V and VII, as well as the orbicularis oculi muscle.
palpebritis [*pal"pə-bri'tis*] blepharitis.
PALS periarteriolar lymphoid sheath. See white **pulp**.

P-2: Assessing the palpebral reflex by lightly tapping the medial or lateral canthus.
From Thomas JA, Lerche P, Anesthesia and Analgesia for Veterinary Technicians, 4th Edition. Mosby, 2011.

palsy [*pawl'ze*] paralysis. A word used commonly in human medicine but rarely if ever in veterinary medicine.
palustrine a toxic alkaloid in *Equisetum* spp.
Palyam viruses a group of viruses in the genus *Orbivirus* which cause abortion and congenital abnormalities, including hydranencephaly and cerebellar hypoplasia, in cattle in Africa, Japan and Australia.
PAM, 2-PAM 2-pyridine aldoxime methchloride (pralidoxime chloride).
pamidronate [*pam"ĭ-dro'nāt*] a bisphosphonate used in the management of hypercalcemia and to alleviate osteolytic pain of osteosarcomas in dogs.
pampas grass see ***Cortaderia selloana***.
pampiniform shaped like a tendril, e.g. pampiniform plexus, a plexus of veins which tangle around the tortuous testicular artery.
PAMS *p* aminosalicylic acid.
pan- word element. [Gr.] *all*.
panacea [*pan"ə-se'ə*] a remedy for all diseases.
Panaeolina foenisecii see ***Psilocybe***.
panagglutinin [*pan"ə-gloo'tĭ-nin*] an agglutinin that agglutinates the erythrocytes of all human blood groups.
panangiitis [*pan"an"je-i'tis*] inflammation involving all the coats of a vessel.
panaritium an obsolete expression for **paronychia**. Still used with reference to cattle and meaning bovine footrot.
panarteritis nodosa [*pan"ahr"tə-ri'tis no-dōs'ə*] see **periarteritis** nodosa.
panarthritis [*pan"ahr-thri'tis*] inflammation of all the joints.
panatrophy [*pan-at'rə-fe*] atrophy of several parts; diffuse atrophy.
panautonomic [*pan"aw-tə-nom'ik*] pertaining to or affecting the entire autonomic (sympathetic and parasympathetic) nervous system.
pancarditis [*pan"kahr-di'tis*] diffuse inflammation of the heart.
pancolectomy [*pan"ko-lek'tə-me*] excision of the entire colon, with creation of an outlet from the ileum on the body surface.
pancreas [*pan'kre-əs*] a large, elongated, racemose gland located in the anterior abdomen between the liver, kidneys, stomach, spleen and duodenum. The pancreas is composed of both exocrine and endocrine tissue. The *acini* secrete digestive enzymes, and small ductules leading from the acini secrete ions, mainly sodium and bicarbonate. The combined product, *pancreatic juice*, enters a long pancreatic duct and from there is transported duct to the duodenum. The pancreatic juice contains enzymes for the breakdown of proteins, carbohydrates and fats. The bicarbonate ions in the pancreatic secretion help neutralize the acidic chyme that is passed along from the stomach to the duodenum. The endocrine functions of the pancreas are related to the islets of Langerhans which occur throughout the pancreas. These small islands contain three major types of cells: the *alpha*, *beta* and *delta* cells. The alpha cells secrete the hormone *glucagon*, which elevates blood sugar. The beta cells secrete *insulin*, which affects the metabolism of carbohydrates, proteins and fats. The delta cells secrete *somatostatin*, the functions of which are not fully understood, but it is known that it can inhibit the secretion of both glucagon and insulin and may act as a controller of metabolic processes. The somatostatin produced by the delta cells of the pancreas is the same as that produced by the hypothalamus as an inhibitor of the release of growth hormone from the pituitary gland.
p. disease pancreatic atrophy of post-smolt Atlantic salmon caused by a togavirus infection; clinical signs include anorexia, emaciation. Called also sleeping disease.

VetBooks.ir

pancreatectomy [*pan"kre-ə-tek'tə-me*] excision of the pancreas.
pancreatic [*pan"kre-at'ik*] pertaining to the pancreas. See also **pancreatitis**, **diabetes mellitus**, **cystic** pancreatic duct.
p. abscess occurs as a complication of acute pancreatitis or subsequent to pancreatic surgery due to bacterial contamination but is most common as an extension from a leaking gastric ulcer.
p. acinar atrophy the islets of Langerhans remain normal but acinar tissue atrophies and exocrine function is compromised. Seen most commonly in large breeds of dogs, particularly German shepherds and Collies. Clinical signs are related to the exocrine pancreatic insufficiency (see below).
acute p. necrosis see acute hemorrhagic **pancreatitis**.
p. alpha cells **alpha cells** cells in the islet of Langerhans which secrete glucagon.
p. anomaly includes acinar hypoplasia and congenital Islet of langerhans aplasia.
p. beta cells **beta cells** comprise the majority of pancreatic islet cell population; secrete insulin.
p. bladder a diverticulum in the pancreatic duct like a gallbladder in the bile duct. Seen in some cats.
p. calculus small concretions, 4 to 5 mm diameter, in the pancreatic ducts, caused by chronic inflammation. Seen, usually in large numbers, in cattle.
p. cysts anomalous obstructions of ducts, often associated with similar cysts in kidneys and bile ducts.
p. delta cells cells in the islet of Langerhans; known to secrete somatostatin.
p. duct one of the two excretory ducts of the pancreas. Depending on the species, it may unite with the common bile duct before entering the duodenum at the major duodenal papilla. Absent from the pig and ox which only have an accessory pancreatic duct (developed from the dorsal primordium) which opens on the minor duodenal papilla. See also **bile duct**.
p. duct obstruction congenitally by agenesis of the duct, by pancreatic lithiasis or inflammation or neoplasia in the vicinity; causes initial distention followed by atrophy of acinar tissue.
p. ectopic tissue small masses of pancreatic exocrine or endocrine tissue found occasionally in the wall of the stomach or intestines and in the gallbladder; presumed to be functional.
p. enzymes 1. the exocrine secretion into the intestine includes amylase, endo- and exopeptidases, and lipase. The endopeptidases include trypsin, chymotrypsin and elastase, the exopeptidases are the carboxypeptidases A and B. 2. preparations of various pancreatic extracts are used as enzyme replacement thereapy in the clinical management of exocrine pancreatic insufficiency in dogs and cats.
exocrine p. insufficiency (EPI) insufficient secretion of digestive enzymes, usually due to loss of acinar tissue from idiopathic acinar atrophy or acute or chronic inflammation, causes maldigestion and malabsorption with diarrhea, steatorrhea and weight loss.
p. F cells secrete pancreatic polytpeptide; called also PP cells.
p. fibrosis a sequel to pancreatitis, pancreatic duct obstruction, zinc poisoning.
p. gastrinoma a gastrin-producing tumor arising from the delta cells of the pancreatic islets that causes hypergastrinemia, hypersecretion of gastric acid and ulceration of the upper gastrointestinal tract. Occurs rarely in dogs. See also **Zollinger-Ellison syndrome**.
p. hypertrophy physiological response to diets high in protein and energy.
p. islets islets of cells scattered through the pancreas; contain alpha, beta, C and D cells.
p. islet cell tumor see **gastrinoma**, **insulinoma**.
p. lipase enzyme released from the exocrine pancreas; catalyzes the hydrolysis of dietary lipids in the presence of bile salts. See also **lipase**.
p. lithiasis see pancreatic calculus (above).
p. nodular hyperplasia firm, pale elevations on the surface of the gland; involve only the exocrine tissue; common in old cats and dogs; cause unknown; no discernible effect on patient.
p. polypeptide secreted by the PP cells in the pancreas; regulates endocrine and exocrine pancreatic secretion.
p. trypsin inhibitor see **trypsin** inhibitor.
pancreatic(o)- [*pan"kre-at'ik*] word element. [Gr.] *pancreatic duct*.
pancreaticoduodenal [*pan"kre-at"ĭ-ko-doo"o-de'nəl*] pertaining to the pancreas and duodenum.



P-3: Anatomy of pancreatic islets. From Guyton AC, Hall, JE, Textbook of Medical Physiology, 11th Edition. Saunders, 2005.

pancreaticoenterostomy [*pan"kre-at"ĭ-ko-en"tər-os'tə-me*] anastomosis of the pancreatic duct to the intestine.
pancreaticomesojejunal ligament [*pan"kre-at"ĭ-ko-me"zo-jə-joo'nəl*] an anomalous structure that extends between the pancreaticoduodenal vein, under the ileum and colon, to the left side of the mesojejunum. Reported to be the cause of diarrhea in kittens.
pancreatin [*pan'kre-ə-tin*] a substance from the pancreas of the hog or ox containing enzymes, principally amylase, protease and lipase; used in the treatment of pancreatic exocrine insufficiency.
pancreatitis [*pan"kre-ə-ti'tis*] inflammation of the **pancreas**; an important disease in dogs and cats.
acute hemorrhagic p. a condition due to autolysis of pancreatic tissue caused by escape of enzymes into the substance, resulting in hemorrhage into the parenchyma and surrounding tissues. Seen most commonly in dogs, rarely in horses and pigs. Clinical signs include abdominal pain that may be severe and associated with cardiovascular shock, vomiting and diarrhea. Fatalities are not uncommon. In the longer term, the process may be slowly progressive, appearing clinically to be relapsing, often with eventual destruction of the islets of Langerhans that leads to diabetes mellitus. Called also acute pancreatic necrosis.
chronic p. relapsing or continuing acute pancreatic necrosis. Called also relapsing pancreatitis.
focal p. focal lesions discovered incidentally in patients dying of other disease, e.g. canine distemper, foot and mouth disease.
interstitial p. inflammation of the interstitial tissue; may be acute or chronic.
necrotizing p. see acute hemorrhagic pancreatitis (above).
relapsing p. see chronic pancreatitis (see above).
pancreat(o)- word element. [Gr.] *pancreas*.
pancreatoduodenectomy [*pan"kre-ə-to-doo"o-də-nek'tə-me*] excision of the head of the pancreas along with the encircling loop of the duodenum.
pancreatogenous [*pan"kre-ə-toj'ə-nəs*] arising in the pancreas.
pancreatolithectomy [*pan"kre-ə-to-lĭ-thek'tə-me*] excision of a calculus from the pancreas.
pancreatolithiasis [*pan"kre-ə-to-lĭ-thi'ə-sis*] the presence of calculi in the ductal system or parenchyma of the pancreas.
pancreatolithotomy [*pan"kre-ə-to-lĭ-thot'ə-me*] incision of the pancreas for the removal of calculi.
pancreatolysis [*pan"kre-ə-tol'ĭ-sis*] destruction of pancreatic tissue.
pancreatotomy [*pan-kre-at'ə-me*] incision of the pancreas.
pancreatotropic [*pan"kre-ə-to-tro'pik*] having a special affinity for the pancreas.
pancrelipase [*pan"kre-li'pās*] a preparation of hog pancreas containing enzymes, principally lipase with amylase and protease, having the same actions as pancreatic juice; used in the treatment of exocrine pancreatic insufficiency.
pancreolithotomy [*pan"kre-o-lĭ-thot'ə-me*] pancreatolithotomy.
pancreolysis [*pan"kre-ol'ĭ-sis*] pancreatolysis.
pancreozymin [*pan'kre-o-zi"min*] a hormone of the duodenal mucosa that stimulates the external secretory activity of the pancreas, especially its production of amylase; identical with **cholecystokinin**.
pancuronium [*pan"ku-ro'ne-əm*] a non-depolarizing neuromuscular blocking agent, used as the bromide salt.
pancystitis [*pan"sis-ti'tis*] cystitis involving the entire thickness of the wall of the urinary bladder, as occurs in interstitial cystitis.
pancytopenia [*pan"si-to-pe'ne-ə*] abnormal depression of all the cellular elements of the blood. Results from the depression of activity of bone marrow, spleen and lymph nodes such as occurs in radiation injury and a number of poisonings, e.g. *Pteridium aquilinum*,

trichlorethylene extracted soybean meal, nitrofurans and stachybotrytoxicosis.

bovine neonatal p. an emerging disease of neonatal calves characterized by pancytopenia and bone marrow depletion and manifest with bleeding. Believed due to alloantibodies directed against surface antigens of neonatal leukocytes received in colostrum and induced by maternal vaccination with a BVD vaccine. Called also bleeding calf syndrome.

myelophthisic p. resulting from loss of bone marrow function.

tropical canine p. (TCP) see canine **ehrlichiosis**.

aplastic p. see aplastic **anemia**.

pancytopenic relating to pancytopenia.

panda includes the giant panda and red panda (see below).

red p. (*Ailurus fulgens*) the only living member of the family Ailuridae; not closely related to the giant panda (*Ailuropoda melanoleuca*) which is in the family of true bears, Ursidae. Native to the Himalayas, it is medium-sized with a dense, red and black coat and long, furry, ringed tail. Called also lesser panda, cat bear.

giant p. (*Ailuropoda melanoleuca*) in the family Ursidae; native to central China, it has a large bear-like body and short tail. The distinctive black and white coat is widely recognized because of the attention this animal receives in zoo exhibits and media accounts of conservation efforts.

pandemic [*pan-dem'ik*] a widespread epidemic, i.e the disease is clustered in time but not in space.

Pandy test a screening test for globulin in the cerebrospinal fluid; a positive result is an indication of inflammation in the central nervous system.

panencephalitis [*pan"ən-sef"ə-li'tis*] encephalitis with parenchymatous lesions of both the gray and white matter of the brain.

sclerosing p. see old dog **encephalitis**.

panendoscope [*pan-en'do-skōp*] a cystoscope that gives a wide-angle view of the bladder.

Paneth cell narrow, pyramidal or columnar epithelial cell with a nucleus close to its base. Found in the fundus of the mucosal crypts in the intestine.

pangenesis a now discarded hypothesis about heredity stating that the whole organism reproduces itself through all of its parts. The proposed mechanism is based on the supposed existence of gemmules in the blood each of them representing a cell of the body and each of them throws off an atom which is inherited by an offspring.

pangola grass ***Digitaria*** *decumbens*.

Pangonia [*pan-go'ne-ə*] a genus of flies in the family Tabanidae; some feed on blood and cause insect worry in horses and cattle. Called also deer fly. Do not suck blood but will mop up spilled blood.

panhypopituitarism [*pan-hi"po-pĭ-too'ĭ-tə-riz-əm*] generalized hypopituitarism due to absence or damage to the pituitary gland, which in its complete form, leads to absence of gonadal function and insufficiency of thyroid and adrenal function. When cachexia is a prominent feature, it is called **Simmonds' disease** or pituitary **cachexia**.

juvenile p. most frequent in German shepherd dogs but also in other breeds; puppy dwarfism not apparent until 2–3 months old; small stature, delayed dentition, alopecia, infantile genitalia and short life span are characteristic. See also German shepherd dog **dwarfism**.

panhysterectomy [*pan"his-tər-ek'tə-me*] total hysterectomy.

panhysterosalpingectomy [*pan-his"tər-o-sal"pin-jek'tə-me*] excision of the uterus, cervix and oviducts.

panhysterosalpingo-oophorectomy [*pan-his"tər-o-sal"ping-go-o"of-ə-rek'tə-me*] excision of the uterus, cervix, oviducts and ovaries.

panic grass [*pan'ik*] grasses that are members of the genus *Panicum*, e.g. *P. antidotale*.

bambatsi p.g. *Panicum coloratum* var. *makarikariense*.

blue p.g. *Panicum antidotal*.

giant p.g. see ***Brachiaria*** *mutica*.

green p.g. *Megathyrsus maximum* var. *pubiglumis* (*Panicum maximum* var. *trichoglume*).

hairy p.g. *Panicum effusum*.

panicled redshank ***Amaranthus*** *cruentus*.

Panicum [*pan'ĭ-kum*] a genus of grasses in the family Poaceae. May contain sufficient nitrate or oxalate to cause poisoning with these substances. They are highly productive and popular annual and perennial grasses and cereal crops but many of them cause hepatogenous photosensitization due probably to a high content of steroidal saponins in the plants. Edematous enlargement and icteric staining of the cranial tissues gives rise to the common names of yellow bighead and yellow thickhead. Some contain calcium oxalate crystals and cause equine nutritional secondary hyperparathyroidism. See also ***Megathrysus***.

P. anticum *Brachiaria mutica*.

P. antidotale may contain sufficient oxalate to cause oxalate poisoning in sheep or osteodystrophia in horses. Also reported as a cause of atypical interstitial pneumonia. Called also blue panic grass.

P. capillare causes nitrate–nitrite poisoning; called also witchgrass.

P. coloratum may contain high oxalate or cause hepatogenous photosensitization. Called also Coolah grass, kleingrass.

P. crus-galli reputed to cause photosensitization.

P. decompositum suspected high concentrations of steroidal saponins causing hepatogenous photosensitization. Called also native millet (Australia).

P. dichotomiflorum causes hepatogenous photosensitization due to steroidal saponins; called also smooth witchgrass.

P. effusum causes hepatogenous photosensitization due probably to steroidal saponins. Called also hairy millet.

P. gilvum causes hepatogenous photosensitization due to steroidal saponins. Called also *P. laevifolium* var. *contractum, P. schinzii*, sweet grass.

P. maximum see ***Megathyrsus***.

P. miliaceum an annual cereal crop. Causes hepatogenous photosensitization due probably to steroidal saponins. Called also French millet.

P. muticum ***Brachiaria*** *mutica*.

P. purpurascens a coarse, high-producing pasture grass. Called also para grass.

P. queenslandicum causes hepatogenous photosensitization due probably to steroidal saponins. Called also Yabila grass.

P. virgatum causes hepatogenous photosensitization due probably to steroidal saponins.

P. whitei causes hepatogenous photosensitization due probably to steroidal saponins. Called also *P. laevinode*, pepper grass.

panimmunity [*pan"ĭ-mu'nĭ-te*] immunity to a wide range of bacterial and viral infections.

panleukopenia [*pan"loo-ko-pe'ne-ə*] 1. abnormal depression in numbers of white blood cells. 2. the name of a disease caused by feline parvovirus; see **feline** panleukopenia.

feline p. virus feline parvovirus; the etiologic agent of **feline** panleukopenia.

p.-like syndrome is characterized by decreased numbers of leukocytes, often an anemia and thrombocytopenia, resembling clinically infection by the feline panleukopenia virus. Occurs in cats infected by feline leukemia virus.

panlife cycle life history; the series of stages in physical which an organism passes through from the primary stage to the germinal stage of adult demise.

panmyeloid [*pan-mi'ə-loid*] pertaining to all elements of the bone marrow.

panmyelophthisis [*pan-mi"ə-lof'thĭ-sis*] aplastic anemia.

panmyelosis [*pan-mi"ə-lo'sis*] proliferation of all the elements of the bone marrow.

feline p. a myeloproliferative disorder seen in cats; associated with infection by feline leukemia virus.

panniculitis inflammation of the subcutaneous fat. See also opportunistic **mycobacterial** infection.

lobular p. the inflammatory process primarily involves the fat lobules rather than the interlobular connective tissue.

lupus p. see **lupus erythematosus**.

necrotizing p. multifocal, erythematous, nonpruritic cutaneous lesions which ulcerate in the center and discharge seropurulent exudate; identifiable on histopathological examination.

nodular p. subcutaneous nodules that may become cystic or ulcerate or develop fistulous tracts that drain an oily material. They occur in dogs, cats and horses, and may be sterile or caused by infectious agents.

nodular nonsuppurative p. a disease marked by fever and the formation of tender, sterile nodules in the subcutaneous fatty tissues which drain oily, bloody material. Occurs in dogs, particularly Dachshunds. Similar to Weber–Christian or Christian–Weber disease in humans. Called also sterile panniculitis, or relapsing, febrile, nonsuppurative panniculitis.

postinjection p. occurs after a subcutaneous injection; the characterisitcs depend on the material injected, but range from a discrete

nodule with a necrotic center or an area of hair loss with minimal inflammation.
pyogranulomatous p. see opportunist **mycobacterial** granuloma.
relapsing, febrile, nonsuppurative p. see nodular nonsuppurative panniculitis (above).
septal p. the inflammatory process primarily involves the interlobular connective tissue septae rather than the fat lobules.
sterile p. see nodular nonsuppurative panniculitis (above).
Weber–Christian p. a subcutaneous panniculitis with systemic features. See nodular nonsuppurative panniculitis (above).

panniculus pl. *panniculi* [L.] a layer of membrane.
p. adiposus the subcutaneous fat; a layer of fat underlying the corium, well developed in pigs and marine mammals.
p. carnosus a muscular layer in the superficial fascia of most quadripedal mammals; it includes the cutaneous trunci.
p. muscle see panniculus carnosus (above).
p. reflex a quick twitch of the subcutaneous muscle along the back in response to a pinprick in the thoracolumbar area. Absence of the reflex is important in helping to localize the location of a lesion in the spinal cord.

pannus [*pan'əs*] 1. chronic superficial **keratitis**. 2. an inflammatory exudate overlying synovial cells on the inside of a joint capsule, usually occurring in rheumatoid arthritis or related articular rheumatism. 3. panniculus adiposus.

panophthalmitis [*pan"of-thəl-mi'tis*] inflammation of ocular structures and tissues from within all three of the tunics. Compare with **endophthalmitis**.

panosteitis [*pan"os-te-i'tis*] 1. inflammation of every part of a bone. 2. a self-limiting disease of young, large breed dogs, particularly German shepherd dogs, characterized clinically by shifting lameness and radiographically by enosteal and subperiosteal new bone formation on long bones. Called also enostosis, juvenile osteomyelitis, and eosinophilic panosteitis or panosteitis eosinophilica, because some cases are reported to have eosinophilia in peripheral blood.

panostosis [*pan"os-to'sis*] see **panosteitis**.

panotitis [*pan"o-ti'tis*] inflammation of all the parts or structures of the ear.

pansinusitis [*pan"si-nəs-i'tis*] inflammation involving all the paranasal sinuses.

pansteatitis [*pan"ste"ə-ti'tis*] 1. inflammation of body fat. 2. a disease of cats and aquarium fish fed on a diet high in polyunsaturated fats and low in vitamin E. In cats there is inflammation of all fat tissues; in fish there is also thickening of the swim bladder. See also **yellow** fat disease.

pansystolic [*pan"sis-tol'ik*] the whole of systole; includes presystolic and systolic phases. See also heart **murmur**.

panters atypical interstitial pneumonia of cattle.

panthenol [*pan'thə-nol*] nonproprietary name for pantothenyl alcohol.

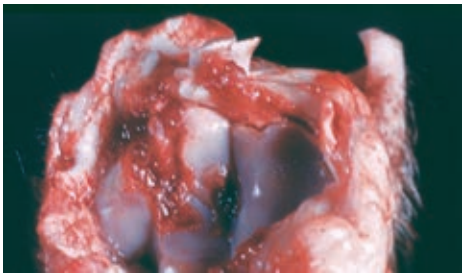
Panthera genus in the family Felidae; includes jaguar (*P. onca*), leopard (*P. pardus*), lion (*P. leo*), tiger (*P. tigris*), and snow leopard (*P. uncia*).

panting rapid, shallow breathing, a characteristic heat-losing reaction in dogs; represents an increase in dead-space ventilation resulting in heat loss without necessarily increasing oxygen uptake or carbon dioxide loss.
p. disease see **atypical interstitial pneumonia**, ***Zieria*** *arborescens*.

pant(o)- word element. [Gr.] *all, the whole*.

pantocaine see **tetracaine**.

Panton–Valentine leukocidin a nonhemolytic toxin produced by *Staphylococcus aureus* which kills segmented neutrophils and macrophages.



P-4: Synovitis and arthritis of hock joints of swine with pannus extending across the articular surface.
From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2004.

pantoprazole [*pan-to'prə-zōl*] a proton pump inhibitor used in the treatment of gastric ulceration and for preventing stress-related gastrointestinal ulceration in shock.

pantothenate [*pan"to-then'āt*] any salt of pantothenic acid.

pantothenic acid [*pan"to-then'ik*] a vitamin of the B complex group present in all living tissues as part of the coenzyme A (CoA) molecule or the acyl carrier protein.
p. a. nutritional deficiency a nutritional essential in all species other than ruminants which synthesize it in the rumen. Recorded as a natural occurrence only in poultry and pigs on heavy corn diets. Manifested in pigs by diarrhea, dermatitis, incoordination with a spastic gait and ulcerative colitis. Fowls show poor hatchability of eggs, poor feather development and dermatitis. In fish, deficiency causes pathologic changes in the gills.

pantothenyl alcohol alcohol of pantothenic acid (vitamin B5) that is oxidized in the body to pantothenate. Called also panthenol.

pantropic [*pan-tro'pik*] having affinity for tissues derived from all three of the germ layers (ectoderm, endoderm and mesoderm).

Panulirus genus of spiny lobsters, members of the family Palinuridae; called also rock lobster, langouste.

panuveitis [*pan"u-ve-i'tis*] inflammation of all parts of the uveal tract (iris, ciliary body and choroid).

panzootic [*pan"zo-ot'ik*] rarely used equivalent of pandemic when referring to animal diseases.

papain [*pə-pān'*] a proteolytic enzyme from the latex of pawpaw, *Carica papaya*, the active ingredient of meat tenderizers. In surgery it is used as a protein digestant and for enzymatic débridement and promotion of normal healing of surface lesions. Papain is also used in immunology to cleave immunoglobulin molecules into Fab and Fc fragments.

Papaver [*pə-pav'ər*] a plant genus of the family Papaveraceae which includes the poppies.
P. aculeatum may cause nitrate–nitrite poisoning.
P. nudicaule causes ataxia and muscle tremor. Called also Iceland poppy.
P. rhoeas a common weed in cultivation fields in Europe. Contains an isoquinoline alkaloid, e.g. rhoadine, and causes somnolence, abdominal pain, recumbency. Called also red poppy.
P. somniferum causes excitement and gastrointestinal disturbance. Called also opium poppy. See **opium**.

papaveretum a mixture of all of the alkaloids of the opium poppy and is better tolerated by dogs than morphine. Called also omnopon.

papaverine [*pə-pav'ər-in*] an alkaloid obtained from opium and prepared synthetically; the hydrochloride salt is used as a smooth muscle relaxant.

paper [*pa'pər*] see **newsprint**.
p. bark thorn ***Acacia*** *sieberana*.
p. bone disease see **osteogenesis** imperfecta, **osteodystrophia fibrosa**.
p. flowers see ***Psilostrophe***.

papilla [*pə-pil'ə*] pl. *papillae* [L.] a small, nipple-shaped projection or elevation.
buccal p. see under dental, conical, lingual etc. papilla (below).
circumvallate p. vallate papilla.
conical p. one of the sparsely scattered fleshy elevations on the tongue or lining the cheeks of cattle.
p. of corium conical extensions of the fibers, capillary blood vessels, and sometimes nerves of the corium into corresponding spaces among downward- or inward-projecting rete ridges on the undersurface of the epidermis. Special papillae coriales occur on the sensitive corium of the frog of the horse's hoof.
dental p., dentinal p. the small mass of condensed mesenchyme capped by each of the enamel organs in a developing tooth.
dermal p. finger- and ridge-like projections of the dermis which interdigitate with similar depressions in the epidermis.
duodenal p. either of the small elevations (major and minor) on the mucosa of the duodenum, the major at the entrance of the conjoined pancreatic and common bile ducts, the minor at the entrance of the accessory pancreatic duct.
filiform p. one of the short threadlike elevations covering most of the tongue surface. In cats and cattle they are heavily cornified to give a rasping tongue.
foliate p. one of the parallel mucosal folds on the tongue margin at the junction of its body and root, best developed in the horse and pig but rudimentary or absent from other domestic animals.

VetBooks.ir

P-5: Incisive papilla in a dog.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

P-6: Papilloma on a horse's muzzle.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

fungiform p. one of the knob-like projections of the tongue scattered among the filiform papillae.
gingival p. the triangular pad of the gingiva filling the space between the proximal surfaces of two adjacent teeth.
hair p. the fibrovascular mesodermal papilla enclosed within the hair bulb.
ileal p. papilla carrying the terminal orifice of the ileum and its entrance to the large bowel.
incisive p. an elevation at the anterior end of the raphe of the palate onto which the incisive ducts open.
lacrimal p. see **lacrimal** punctum.
lenticular p. rounded horny elevations on the dorsum of the ruminant tongue that serve to compress regurgitated stomach contents against the palate during rumination, squeezing out liquid which is then swallowed while retaining solid material for further mastication.
lingual p. elevations on the surface of the tongue, containing the taste buds; the conical, filiform, foliate, fungiform and vallate papillae.
major duodenal p. the papilla in the duodenum for the common opening of the bile duct and the pancreatic duct.
mammary p. the teat or nipple of the mammary gland.
marginal tongue p. transient, fleshy, filiform papillae on the margin of the tongue of puppies, piglets and kittens which are thought to facilitate sucking by helping the nursing animal form a vacuum in its mouth by sealing its tongue against the lips of the mouth.
optic p. optic disk.
palatine p. incisive papilla.
parotid p. the oral opening of the duct of the parotid salivary gland located opposite the third upper molar.
p. pili hair papilla.
renal p. the blunted apex of a renal pyramid.
ruminal p. papillae up to 0.5 inch long, flat or filiform that cover most of the ruminal wall but are absent from the pillars and the dorsal part of the dorsal sac.
tactile p. tactile corpuscles.
terminal hoof p. papillae on the distal ends of the sensitive laminae of the hoof.
tongue p. small projections from the mucous membrane of the tongue that include filiform, lenticular, fungiform, foliate and vallate papillae; most are to assist in grooming, food prehension and movement; some carry orifices for glands and others for taste.
p. unguiculiformes horny claw-shaped papillae at the reticulo-omasal orifice.
urethral p. a slight elevation in the vestibule of the vagina at the external orifice of the urethra.
vallate p. one of the eight to 12 large circular papillae arranged in a V near the base of the tongue.
p. of Vater, Vater's p. major duodenal papilla.
wool p. as for hair papilla (above).

papillary [*pap'ĭ-lar"e*] pertaining to a papilla; having the characteristics of a papilla.
p. duct urine passes from the collecting tubules into the papillary ducts as the last section of the renal tubular system.
p. necrosis necrosis of the renal papilla.
p. squirting a feature of seborrheic dermatitis, zinc-responsive dermatoses; the superficial papillae are edematous and contain dilated vessels, the overlying epidermis is edematous and parakeratototic.
p. sulcus the groove around a vallate papilla on the tongue into which the ducts of gustatory glands discharge.

papillectomy [*pap"ĭ-lek'tə-me*] excision of a papilla.
papilledema [*pap"il-ə-de'mə*] edema and sometimes hyperemia of the optic disk, without blindness or funduscopically detectable hemorrhage or inflammatory cell exudation from the optic disk (compare with optic **neuritis**); usually associated with increased intracranial pressure; called also 'choked disk'.
papillitis [*pap"ĭ-li'tis*] inflammation of a papilla, especially of the optic disk. Called also optic **neuritis**.
papilloadenocystoma [*pə-pil"o-ad"ə-no-sis-to'mə*] papillary cystadenoma.
papillocarcinoma [*pə-pil"o-kahr"sĭ-no'mə*] papillary carcinoma.
papilloma [*pap"ĭ-lo'mə*] the common wart. A benign tumor derived from epithelium, which may arise from skin, conjunctiva, mucous membranes or glandular ducts. Varies from keratinized, to fibrovascular, squamous. Caused by a species-specific papillomavirus in young animals; may arise spontaneously in older animals. In cattle, also called angleberry. See also ***Papillomavirus***, **papillomatosis**.
cutaneous p. the common form; distinguishable from papilloma of the esophageal groove and reticulum, bladder.
fibrovascular p. single or multiple, small, benign fibrovascular skin tumors, that occur occasionally on the extremities or ventral thorax of dogs. Called also skin tag, keratin tag, soft fibroma.
inverted p. skin nodules covered by skin with a central pore; seen on abdomen and groin of young dogs.
plexus p. a rare tumor of the choroid plexus, often causing an internal hydrocephalus.

papillomatosis [*pap"ĭ-lo-mə-to'sis*] disease state characterized by the development of multiple papillomas. See also **papilloma**, ***Papillomavirus***, **fibropapilloma**.
canine viral p. multiple papillomas, caused by a papillomavirus, occur most commonly on the oral mucosa and lips of young dogs. Occasionally skin, cornea, conjunctiva and eyelids are also involved. The tumors may persist for several months, occasionally longer, but spontaneous regression is usual.
cottontail rabbit p. infection by a papilloma virus specific to *Sylvilagus floridanus*, causes cutaneous papillomas which may become malignant.
genital p. multiple fibropapillomas of the anogenital skin transmitted venereally in cattle, usually involving the vulva and penis. There is also a genital form of the disease in pigs. See bovine ***Papillomavirus*** and transmissible porcine papillomatosis (below).
internal p. see mucosal papillomatosis (below).
mucosal p. occur on mucosal surfaces of the oral cavity or cloaca and less often in the crop, esophagus, proventriculus and

P-7: Skin tag (fibrovascular papilloma).
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

P-8: Canine viral papillomatosis.
From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

ventriculus, primarily in psittacine birds; caused by psittacid herpvesvirus 1 (Pacheco's disease virus); associated with bile duct and paqqncreatic duct carcinomas. Called also internal papillomatosis.

oral p. see oral lapine papillomatosis (below), canine viral papillomatosis (above).

oral lapine p. small, gray, sessile or pedunculated tumors on the undersurface of the tongue and rarely at other sites in the mouth, caused by a papillomavirus. Seen in *Oryctolagus* and *Sylvilagus* spp.

teat p. there are five antigenically identified papillomaviruses which cause warts on the teats of cows. Lesions vary from ricegrain lesions to long tags of keratinized tissue.

transmissible porcine p. in the prepuce of the boar as papular 0.5–1 inch diameter lesions; spontaneous disappearance and persistent subsequent immunity.

Papillomaviridae a family of viruses that includes members that cause papilloma in various animal species. Major branches of the phylogenetic tree of papillomaviruses are considered genera, which are identified by Greek letters; minor brances are considered species. This taxonomic system does not affect the traditional identification and characterization of papillomavirus 'types', and of 'subtypes' and 'variants', which are taxa below the level of species. The family was formerly a subfamily in the *Papovaviridae*, which is now obsolete.

Papillomavirus [*pap"ĭ-lo'mə-vi"rəs*] a virus in the family *Papillomaviridae*. They are non-enveloped, icosahedral viruses with a circular, supercoiled DNA genome of ~8 kilobases and are specific to each animal species and in some cases to specific epithelial sites in that species. Virions are very stable and readily transmissible especially if there is abrasion such as by grooming with a curry comb. The type virus is the Shope papilloma virus of rabbits. See also **sarcoid**, **papilloma**, **papillomatosis**.

papillomavirus [*pap"ĭ-lo'mə-vi"rəs*] a member of the family *Papillomaviridae*.

bovine p. (BPV) six major types have been identified. BPV-1, BPV-2 and BPV-5 cause fibropapillomas of the skin of the anteroventral part of the body including the forehead, neck and back, the common cutaneous wart, penile fibropapilloma and frond and rice grain fibropapillomas on the udder and teat skin.

P-9: Fibropapillomas on a cow's teat.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

BPV-2 is also associated with bladder cancer in cattle grazing bracken fern (*Pteridium* spp.). BPV-3 causes cutaneous papilloma; BPV-4 causes papilloma of the esophagus and small intestine, which can become malignant, particularly in animals fed bracken fern (*Pteridium* spp.); and BPV-6 causes frond epithelial papillomas of the bovine udder and teats.

Papillon [*pah"pe-yaw'*] a small, dainty dog with an alert expression, rounded head and long, silky coat in white with colored patches. The large, rounded ears are distinctive with their flowing fringe of hair and may be erect, resembling a butterfly, hence the name of the breed, or they may be dropped, a type called Phalene (moth) which is registered and shown as a separate breed in some countries. Called also butterfly dog.

papilloretinitis [*pap"ĭ-lo-ret"ĭ-ni'tis*] inflammation of the retina and optic disk.

papillotomy [*pap"ĭ-lot'ə-me*] incision of a papilla, as of a duodenal papilla.

Papovaviridae [*pə-po"və-vir'ĭ-de*] an obsolete family name now replaced by *Papillomaviridae* and *Polyomaviridae*.

papovavirus [*pə-po'və-vi"rəs*] a virus in the family *Polyomaviridae*.

Pappenheimer body see Pappenheimer **body**.

papple-shaped abdomen an abdomen pear-shaped on the right side and apple-shaped on the left.

papular characterized by the development of epidermal or oral mucosal papules.

bovine p. stomatitis a benign stomatitis caused by a poxvirus in the genus *Parapoxvirus* related to the orf virus. Lesions occur in young cattle and are characterized by round papules that develop a roughened center which expands and may merge with other adjacent lesions to give a network effect. The lesions are on the buccal mucosa and adjoining skin of the muzzle and occasionally esophagus and forestomachs. Occasionally manifest with lesions on the teat of milking cattle; also causes infections in humans with lesions characterized by large nodules on the hands and sometimes face.

papulation [*pap"u-la'shən*] the formation of papules.

papule [*pap'ūl*] a small circumscribed, solid, elevated lesion of the skin.

follicular p. one arising from a hair follicle; hair projects from the center.

lichenoid p. one that is elevated and flat-topped.

papulopustular [*pap"u-lo-pus'tu-lər*] marked by papules and pustules.

papulosis [*pap-u-lo'sis*] the presence of multiple papules.

papulosquamous [*pap"u-lo-squa'məs*] both papular and scaly.

papulovesicular [*pap"u-lo-və-sik'u-lər*] marked by papules and vesicles.

papyraceous [*pap"ĭ-ra'shəs*] like paper.

p. fetal mummification the commonest form of fetal mummification; fluids are resorbed, the placenta being reduced to paper-like sheets.

PAR post-anesthesia recovery.

par [L.] *pair*.

para [*par'ə*] [L.] used with numerals to designate the number of pregnancies that have resulted in the birth of viable offspring, as para 0 (none—nullipara), para I (one—unipara), para II (two—bipara, secundipara), para III (three—tertiipara), para IV (four—quadripara). The number is not indicative of the number of offspring produced where multiple offspring occur with a pregnancy.

P-10: Papular stomatitis.

VetBooks.ir

para- [*par'ə*] word element. [Gr.] *beside, beyond, accessory to, apart from, against.* In chemistry, a prefix indicating the substitution in a derivative of the benzene ring of two atoms linked to opposite carbon atoms in the ring; abbreviated *p-*.

para-aminobenzoic acid (PAB, PABA) [*par"ə-ə-me"no-bən-zo'ik*] a compound that is a growth factor for certain bacteria that use it to synthesize folic acid. Sulfonamides act by blocking a step in this synthesis.

para-aminohippurate any salt of para-aminohippuric acid.

para-aminohippuric acid (PAH, PAHA) [*par"ə-ə-me"no-hĭ-pūr'ik*] a derivative of para-aminobenzoic acid used to measure the effective renal plasma flow and to determine the functional capacity of the renal tubular excretory mechanism. Called also aminohippuric acid.

para-aminophenol a substance used in the manufacture of dyes and drugs. May cause skin sensitization and methemoglobinemia.

p. derivative analgesics include acetanilid, acetophenetidin and acetaminophen.

para-aminophenylarsonic acid arsanilic acid. See also organic **arsenic** poisoning.

para-aminosalicylic acid (PAS, PASA) see *p*-**aminosalicylic acid**.

para-anesthesia [*par"ə-an"əl-je'ze-ə*] 1. anesthesia of the lower part of the body. 2. anesthesia-related.

para-aortic [*par"ə-a-or'tik*] beside the aorta.

p. bodies see para-aortic **body**.

para-aural surrounding the ear.

p. abscess infection in the external ear canal or middle ear that extends to the surrounding soft tissues and forms a draining sinus through the skin because of obstruction of the external ear canal by atresia, neoplasm or proliferative tissue.

para grass ***Brachiaria*** *mutica*, ***Panicum*** *purpurascens*.

para-ureidobenzenearsonic acid used for the treatment of avian histomoniasis; fed in excessive amounts causes peripheral neuropathy with lameness in turkeys.

parabens see **hydroxybenzoate**.

parabiosis [*par"ə-bi-o'sis*] 1. the union of two individuals, as conjoined twins, or of experimental animals by surgical operation. 2. temporary suppression of conductivity and excitability.

parablackleg bacillus see **malignant edema**.

parabronchi [*par"ə-brong-ki'*] tertiary bronchi in the avian lung. The domestic fowl has some 500 parabronchi each 1 to 2 mm diameter with the wall of each containing the complex respiratory epithelium.

Parabronema a genus of alimentary tract nematodes found in wild animals. Includes *P. africum*, *P. rhodesiense* (in African elephants), *P. rhinocerotis* (rhinoceros, elephant).

parabuxine one of the toxic alkaloids found in the plant ***Buxus sempervirens***.

paracasein [*par"ə-ka'sēn*] casein. The insoluble product of rennin acting on caseinogen. In American terminology the term for casein; not included in British nomenclature.

paracentesis [*par"ə-sen-te'sis*] surgical puncture of a cavity for the aspiration of fluid.

abdominal p. insertion of a trocar through a small incision or a needle into the abdominal cavity, to remove ascitic fluids, inject a therapeutic agent, or to collect a sample for cytological and chemical examination. It is an important technique in the examination of horses for colic and in investigation of causes of ascites in all species. Called also abdominocentesis.

anterior chamber p. aspiration of aqueous humor from the anterior chamber. Indicated as a diagnostic procedure in anterior uveitis and for intraocular masses. Called also aqueocentesis.

pericardial p. see **pericardiocentesis**.

thoracic p. surgical puncture for drainage of the thoracic cavity and for collection of a sample of fluid for clinical pathology examination See also **thoracentesis**.

vitreous p. aspiration of vitreous to aid in the diagnosis of diseases of the posterior segment of the eye, e.g. intermediate uveitis, endophthalmitis, chorioretinitis, panophthalmitis and intraocular neoplasia. See also **hyalocentesis** and **vitreocentesis**.

paracephalus [*par"ə-sef'ə-ləs*] a fetus with a defective head and imperfect sense organs.

paracervical [*par"ə-sur'vĭ-kəl*] beside the neck, such as adjacent to the uterine cervix.

paracetamol [*par-as"ət-am'ol*] see **acetaminophen**.

parachordal [*par"ə-kor'dəl*] beside the notochord.

paraclinical [*par"ə-klin'ĭ-kəl*] pertaining to abnormalities (e.g. morphological or biochemical) underlying clinical manifestations (e.g. abdominal pain or fever). Used also as a collective term for the sciences that deal with pathology, including clinical pathology and immunology, and pathogenic agents including microbiology, parasitology and toxicology.

p. tests laboratory tests in the area of pathology, clinical pathology, immunology, microbiology, parasitology, toxicology.

Paracoccidioides [*par"ə-kok-sid"e-oi'dēz*] a genus of fungi that proliferate by multiple budding yeast cells in the tissues.

P. brasiliensis the etiological agent of **paracoccidioidomycosis**. Previously called *Blastomyces brasiliensis*.

paracoccidioidomycosis [*par"ə-kok-sid"e-oi"do-mi-ko'sis*] an often fatal, chronic granulomatous disease of humans, dogs, cats and most mammals caused by *Paracoccidioides brasiliensis*. The disease is endemic in South America, particularly Brazil. Infection primarily involves the lungs, but spreads to the skin, mucous membranes, lymph nodes and internal organs. Called also South American blastomycosis.

paracolitis [*par"ə-ko-li'tis*] inflammation of the outer coat of the colon.

Paracolobactrum not a valid genus. These bacteria rightly belong in *Escherichia*, *Klebsiella*, *Salmonella*, *Edwardsiella* spp. For *P. arizonae*, see ***Salmonella*** *arizonae*.

paracolon bacteria [*par"ə-ko'lən*] see ***Paracolobactrum***.

Paracooperia a genus of nematodes in the family Trichostrongylidae.

***P. nodulosa* (*P. matoffi*)** occurs in the intestines of buffalo and other wild animals and may cause nodules in the intestinal wall.

Paracoroptes allenopitheci a mange mite species in the family Psoroptidae. Found in the ears and on the body of primates.

paracortex [*par"ə-kor'teks*] the thymus-dependent part of the lymph node.

paracrine [*par'ə-krin*] indicative of the action of the secretion of one kind of endocrine cell on another kind which is not the normal effector cell.

p. hormones in contrast to true endocrines these hormones are not released into the bloodstream but into the surrounding tissues and act in the immediate vicinity, e.g. intestinal mucosal hormones.

paracystic [*par"ə-sis'tik*] situated near the bladder.

paracystitis [*par"ə-sis-ti'tis*] inflammation of tissues around the bladder.

paradental [*par"ə-den'təl*] 1. having some association with dentistry. 2. periodontal.

paradidymis [*par"ə-did'ĭ-mis*] remnants of mesonephric tubules sometimes found as a small body near the head of the epididymis.

paradigm [*par"ə-dim*] a pattern of thought, a similarity of conceptualization.

paradistemper [*par"ə-dis-tem'pər*] an old term for clinical syndromes which are now known to be manifestations of canine **distemper**, e.g. hardpad disease, or which have been shown to be separate diseases, e.g. infectious canine **hepatitis**.

paradoxical [*par"ə-dok'sĭ-kəl*] different from what is expected; at variance with the established laws.

p. motion see paradoxical respiration (below).

p. respiration a type of breathing in which all or part of a lung inflates during inspiration and balloons out during expiration; the opposite of normal chest motion. Called also paradoxical motion. The condition seriously inhibits the movement of gases during respiration and can produce severe and even fatal cardiovascular disturbances and respiratory insufficiency if not quickly relieved by emergency treatment. Paradoxical respiration or paradoxical motion of the lung usually results from traumatic injury to the thorax (**flail** chest) in which several ribs are fractured in two or more places and are no longer attached by bony cartilage to the rest of the rib cage. The condition can also be seen following surgical removal of several ribs and in paralysis of the diaphragm.

p. septal motion in echocardiography, the interventricular septum moves away from the left ventricular free wall during systole. Normally, it would move towards the wall. It is seen in right ventricular hypertrophy.

Paraelaphostrongylus see ***Parelaphostrongylus***, ***Pneumostrongylus***.

paraesophageal [*par"ə-e-sof"ə-je'əl*] beside the esophagus.

p. herniation see paraesophageal **hernia**.

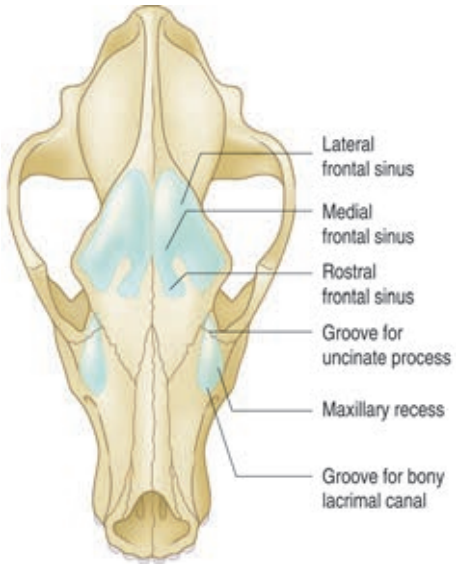
VetBooks.ir

Parafasciolopsis a genus of flukes (digenetic trematodes) in the family Fasciolidae.
P. fasciolaemorpha found in the digestive tract and gallbladder of the elk and deer.
paraffin [*par'ə-fin*] 1. kerosene. 2. petrolatum. 3. a purified hydrocarbon wax used for embedding histological specimens. See paraffin embedding technique (below).
p. embedding technique the most commonly used technique for the preparation of slides of tissue for light microscopic examination.
liquid p. liquid petrolatum. See mineral **oil**.
paraffinoma [*par"ə-fin-o'mə*] a chronic granuloma produced by prolonged exposure to paraffin.
Parafilaria [*par"ə-fi-lar'e-ə*] a genus of nematodes in the filarioid family Filariidae.
P. antipini found in deer.
P. bovicola causes hemorrhagic nodules in the skin of cattle and buffalo.
***P. multipapillosa* (syn. *Filaria haemorrhagica*)** causes nodules in the subcutaneous and intermuscular tissues of horses. The nodules break open and discharge blood and then heal. They reappear each summer.
parafilariasis [*par"ə-fil"ə-ri'ə-sis*] see ***Parafilaria multipapillosa***.
Parafilaroides a genus of nematodes in the metastrongyloid family Filaroididae; cause lesions in the lungs of aquatic mammals. Includes *P. decorus* (sealions), *P. gymnurus* (harbor seals), *P. nanus* and *P. prolificus* (Stellar's sea lion).
parafollicular [*par"ə-fə-lik'u-lər*] close to a follicle.
p. cell a **C cell** of the thyroid gland.
paraformaldehyde [*par"ə-for-mal'də-hīd*] a polymer of formaldehyde with many of the same properties. It is used in preparing tissue fixatives for special histological applications. Called also polyoxymethylene.
paraganglioma [*par"ə-gang"gle-o'mə*] a tumor of the tissue composing the paraganglia.
paraganglion [*par"ə-gang'gle-on*] pl. *paraganglia* [Gr.] a collection of chromaffin cells derived from neural ectoderm, occurring outside the adrenal medulla, usually near the sympathetic ganglia and in relation to the aorta and its branches. Most secrete epinephrine or norepinephrine.
Paragle redicum an anthomyiid fly that lays its eggs in canine feces.
paraglossia [*par"ə-hi"po-glos'e-ə*] inflammation of the oral tissues under the tongue.
paragonimiasis [*par"ə-gon"ĭ-mi'ə-sis*] infection with lung flukes of the genus *Paragonimus*. Characterized by lethargy, cough, dyspnea. At necropsy there is an eosinophilic peritonitis, pleurisy and myositis, and a chronic bronchitis and granulomatous pneumonia.
Paragonimus [*par"ə-gon'ĭ-məs*] a genus of digenetic trematode parasites in the family Paragonimidae. Causes **paragonimiasis**.
P. africanus, P. caliensis, P. iloktsuenensis, P. mexicanus, P. ohirai, P. peruvianus, P. uterobilateralis found in the lungs of a large number of animal species.
P. kellicotti found in the lungs of cat, dog and pig. Mink and muskrat are the probable primary hosts.
P. westermani found in the lungs and other organs of most animal species, and humans.
paraherquamide an anthelmintic effective against nematode parasites in ruminants, but not in use due to low safety margin. See also **derquantel**.

P-11: Ova of *Paragonimus kellicotti*. From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

Parahistomonas a genus of protozoa in the family Monocercomadidae.
P. wenrichi some similarity to *Histomonas* spp. but is nonpathogenic in gallinaceous birds, especially pheasants.
parahormone [*par"ə-hor'mōn*] a substance, not a true hormone, that has a hormone-like action in controlling the functioning of some distant organ.
parainfluenzavirus viruses classified in the family *Paramyxoviridae*, subfamily *Paramyxovirinae*, genus *Respirovirus*. Called also PI virus.
PI-1 causes bronchopneumonia in young pigs. Called also **Sendai virus**. Occurs also in humans.
PI-2 a group of viruses one of which causes infectious tracheobronchitis of dogs (SV-5 disease).
PI-3 involved in the complex etiology of shipping fever in cattle and similar respiratory tract infections in sheep and possibly horses.
PI-SV-5 an earlier name for parainfluenza 2 (above).
parakeelia, parakeelya see ***Calandrinia***.
parakeets one of the bird groups known as typical parrots in the family Psittacidae. Small parrots with long tails and include the **budgerigar**.
parakeratosis [*par"ə-ker"ə-to'sis*] persistence of the nuclei of keratinocytes as they rise into the horny layer of the skin; it occurs normally in the cornifying stratified squamous epithelium of the mouth, esophagus and vagina. When it occurs on the keratinizing external skin it indicates disordered keratinization. Affected skin is scaly and thickened to some degree. Occurs as a specific disease in pigs fed on rations deficient in zinc; the effect is exacerbated on diets high in calcium.
inherited p. occurs in calves, which are normal at birth but develop parakeratosis all over the body, especially on the legs and die after a long illness. Responds to treatment with zinc given orally. See also **thymic** hypoplasia. Called also lethal trait A46, adema disease.
ruminal p. the ruminal papillae are enlarged, leathery and adhered in clumps. The lesion is most severe in the dorsal part of the sac. Occurs principally in animals fed pelleted feed.
nasal p. a rare genodermatosis of Labrador retrievers; from a young age, the nasal planum becomes dry, thickened and develops proliferative changes with crusts and fissures. Hyperkeratosis may also occur on the footpads.
parakeratotic pertaining to parakeratosis.
p. caps focal parakeratotic hyperkeratosis.
parakinesia [*par"ə-kĭ-ne'zhə*] perversion of motor powers causing strange and unnatural movements; in ophthalmology, irregular action of an individual ocular muscle.
paraldehyde [*par-al'də-hīd*] a sedative and hypnotic that has an unpleasant taste and imparts an unpleasant odor to the breath. Because of its low therapeutic index, it is now little used.
parallagma [*par"ə-lag'mə*] displacement of a bone or of the fragments of broken bone.
parallergy [*par-al'ər-je*] a condition in which an allergic state, produced by specific sensitization, predisposes the body to react to other allergens with clinical manifestations that differ from the original reaction.
paralumbar [*par"ə-lum'bər*] next to the lumbar area.
p. fossa see paralumbar **fossa**.
paralysis [*pə-ral'ĭ-sis*] loss or impairment of motor function in a part due to a lesion of the neural or muscular mechanism; also, by analogy, impairment of sensory function (sensory paralysis). Called also palsy. Motor paralysis may be expressed as flaccid, with loss of motor tone in the case of a lower motor neuron lesion, or spastic, in the case of an upper motor neuron lesion. See also **paraplegia**, **quadriplegia**, **hemiplegia** and paralyses of individual cranial and peripheral nerves.
p. of accommodation paralysis of the ciliary body muscles; used to reduce accommodation and pain due to ciliary body spasm.
anal p. manifested by flaccidity and lack of tone of the anal sphincter, and loss of house training restraint in companion animals.
antepartum p. pressure on sciatic nerves by a large fetus in late pregnancy in a cow can cause posterior paralysis that is cured by a cesarean section.
ascending p. spinal paralysis that progresses forwards involving first the hindlimbs then the forelimbs, then the intercostal muscles, then the diaphragm, and finally the muscles of the neck.

birth p. that due to injury received by the neonate at birth.
bladder p. manifested by fullness of the bladder and response to manual pressure. See also motor paralytic **urinary bladder**.
cage p. see **thiamine** nutritional deficiency.
central p. any paralysis due to a lesion of the brain or spinal cord.
cerebral p. paralysis caused by some intracranial lesion.
Chastek p. see **thiamine** nutritional deficiency.
compression p. that caused by pressure on a nerve.
congenital p. paralysis of the newborn. Many cases are due to birth trauma especially when lay persons exert excessive traction. Other causes are enzootic ataxia, inherited congenital paraplegias in calves and pigs, spina bifida and spinal dysraphism and occipito-alanto-axial malformations in foals and puppies.
conjugate p. loss of ability to perform some parallel ocular movements.
coonhound p. see **polyradiculoneuritis**.
crossed p. paralysis affecting one side of the head and the other side of the body.
curled toe p. a disease of poultry caused by a nutritional deficiency of riboflavin. See also **curled toe paralysis**.
decubitus p. paralysis due to pressure on a nerve from lying for a long time in one position.
esophageal p. manifested by inability to swallow, and regurgitation.
facial p. weakening or paralysis of the facial nerve. See also **facial** paralysis.
flaccid p. paralysis characterized by loss of voluntary movement, decreased tone of limb muscles, absence of tendon reflexes and neurogenic atrophy.
immunological p. the absence of immune response to a specific antigen. See also **tolerance**.
infectious bulbar p. see **Aujeszky's disease**.
inherited posterior p. congenital paraplegia recorded in cattle and pigs. There are other nervous signs, e.g. opisthotonos, in some forms.
ischemic p. local paralysis due to stoppage of circulation.
lambing p. **maternal** obstetric paralysis in the ewe.
laryngeal p. see **laryngeal** hemiplegia.
mixed p. combined motor and sensory paralysis.
motor p. paralysis of the voluntary muscles.
nerve p. paralysis caused by damage to the local motor nerve supply. See also peripheral nerve paralysis (below).
obstetric p. a common abnormality after a difficult calving, especially in a heifer. It is caused by pressure on peripheral nerves, and manifests itself as weakness, paresthesia in one hindleg, or difficulty or inability to rise. The ligaments, joints and muscles are normal. See also **obturator** paralysis.
partial p. see **paresis**.
peripheral nerve p. the part deprived of its peripheral nerve supply shows flaccid paralysis, absence of spinal reflexes, muscle atrophy and a subnormal temperature.
postcalving p. see **maternal** obstetric paralysis.
posterior p. paralysis of the hindlimbs, tail and perineum. See also **paraplegia**.
progressive posterior p. see progressive **ataxia**.
range p. see **Marek's disease**.
sensory p. loss of sensation resulting from a morbid process.
spastic p. paralysis with rigidity of the muscles and heightened deep muscle reflexes.
tongue p. see **hypoglossal** nerve paralysis.
transient p. syndrome a syndrome in birds affected with Marek's disease. Ataxia and paralysis last for several days followed by recovery and subsequently, after a lapse of several months, a fatal outcome from MD.
paralytic [*par"ə-lit'ik*] 1. pertaining to paralysis. 2. an animal affected with paralysis.
p. bladder see atonic neurogenic **urinary bladder**.
p. rabies see **rabies**.
p. shellfish poisoning see **shellfish**.
paralyzant [*par'ə-līz"ənt*] 1. causing paralysis. 2. a drug that causes paralysis.
paramastitis [*par'ə-mas-ti'tis*] inflammation of tissues around the mammary gland.
parameatal [*par"ə-me-a'təl*] situated near or around a meatus.
Paramecium [*par"ə-me'se-əm*] a genus of ciliate protozoa, known also as Lady Slippers due to their appearance.
paramedian [*par"ə-me'de-ən*] beside the midplane.
paramesonephric see **müllerian duct**.
p. duct inhibiting factor secreted by the sustentacular cells of the testis; promotes the degeneration of the paramesonephric ducts.
parameter [*pə-ram'ə-tər*] 1. in mathematics and statistics, an arbitrary constant, such as a population mean or standard deviation. It wholly or partly determines a probability distribution. 2. a property of a system that can be measured numerically.
paramethadione an anticonvulsant drug.
paramethasone [*par"ə-meth'ə-sōn*] a glucocorticoid used as the 21-acetate ester for its anti-inflammatory and antiallergic effects.
Parametorchis [*par"ə-mə-tor'kis*] a genus of digenetic trematodes in the family Opisthorchidae.
P. complexus found in the bile ducts of dogs and cats. May cause abdominal pain, ascites, jaundice.
parametric [*par"ə-me'trik*] 1. situated near the uterus; parametrial. 2. pertaining to or defined in terms of a parameter.
p. method a method of testing a hypothesis which requires the user to assume a particular model for the distribution of data, e.g. Poisson, normal.
parametritis [*par"ə-mə-tri'tis*] inflammation of the parametrium.
parametrium [*par"ə-me'tre-əm*] the extension of the subserous coat of the uterus laterally between the layers of the broad ligament.
Paramoeba [*par"ə-me'bə*] cause of amebic **gill** disease in salmonids.
Paramonostomum [*par"ə-mo-nos'to-məm*] intestinal flukes (digenetic trematodes); *P. alveatum* and *P. parvum* are found in ducks but appear to cause little injury.
paramphistomes [*pə-ram'fi-stōm*] digenetic trematodes, members of the family Paramphistomatidae; belonging to genera such as *Paramphistomum*, *Calicophoron*, *Cotylophoron*, *Gigantocotyle*.
paramphistomiasis [*par"am-fis-to-mi'ə-sis*] infestation with members of the family Paramphistomatidae.
paramphistomosis [*par"am-fis-to-mo'sis*] the disease caused by infestation of ruminants with stomach flukes. Adult flukes cause weight loss, loss of production and anemia. Immature flukes cause diarrhea also. Called also stomach fluke disease. See also ***Calicophoron***, ***Ceylonocotyle***, ***Cotylophoron*** and ***Paramphistomum***.
Paramphistomum [*par"am-fis'to-məm*] a genus of ruminal flukes (digenetic trematodes) in the family Paramphistomatidae.
P. cervi, P. ichikawai, P. microbothrium important parasites of cattle, sheep, goats and buffalo.
P. explanatum, P. gotoi, P. hiberniae, P. liorchis, P. microbothrioides, P. scotiae other paramphistomes of cattle.
paramyoclonus [*par"ə-mi-ok'lə-nəs*] a condition characterized by myoclonic contractions of various muscles.
p. multiplex a condition characterized by sudden shocklike contractions.
paramyotonia [*par"ə-mi"o-to'ne-ə*] a disease marked by tonic spasms due to disorder of muscular tonicity, especially a hereditary and congenital affliction.
p. congenita myotonia congenita.
paramyotonic syndromes [*par"ə-mi"o-to'nik*] signs include stiffness and reluctance to walk, exacerbated by cold and by exercise; include congenital paramyotonia in King Charles spaniels, **hyperkalemic periodic paralysis** in horses, feline **hypokalemic** polymyopathy.
Paramyxoviridae [*par"ə-mik"so-vir'ī-de*] a family of viruses in the order *Mononegavirales* containing two subfamilies, *Paramyxovirinae* and *Pneumovirinae*. *Viruses in the family are large (180 nm diameter), enveloped and contain a genome that is a single molecule of single-stranded negative sense RNA. Paramyxovirinae* comprises five genera: *Avulavirus* (type species Newcastle disease virus), *Henipavirus* (type species Hendra virus; includes Nipah virus), *Morbillivirus* (type species measles virus; others include rinderpest virus, canine distemper virus, phocine distemper virus, cetacean morbillivirus (dolphins and porpoises), peste des petitis ruminants virus), *Respirovirus* (type species Sendai virus; others include human parainfluenza viruses 1 and 3), *Rubulavirus* (type species mumps virus; others include human parainfluenza viruses 2 and 4, simian parainfluenza virus 5, Menangle virus, Tioman virus, and an unnamed genus that contains Tupia paramyxovirus). *Pneumovirinae* which contains two genera: *Pneumonovirus* (type species human respiratory syncytial virus; others include bovine respiratory syncytial virus) and *Metapneumovirus* (type species avian pneumovirus; also human metapneumonavirus). there are several other viruses that are unassigned.



P-12: Paranasal sinuses of the dog.
From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

P-13: Paraphimosis.

paramyxovirus [*par"ə-mik'so-vi"rəs*] a member of the order *Mononegavirales* subfamily *Paramyxovirinae*.
avian p's include avian paramyxovirus-1 (**Newcastle disease** virus); avian paramyxovirus-2, which causes **Yucaipa disease**; avian paramyxovirus-3, which causes depression, coughing and a drop in egg production in turkeys and occasionally chickens and psittacine birds; and avian paramyxovirus-6, which causes mild respiratory infection in turkeys.
p. encephalomyelitis see **blue eye** disease.
paranal sacs [*par"an-al*] see **anal sacs**.
Paranaplasma an obsolete name for some members of the genus *Anaplasma*. *P. caudata* is now classified as *A. caudatum*.
paranasal [*par"ə-na'zəl*] beside the nasal cavity.
p. sinuses mucosa-lined air cavities in the bones of the skull, communicating with the nasal cavity. See also **sinus**.
p. sinus cysts occur in horses primarily in the caudal maxillary sinus and occasionally in the frontal or rostral sinus. Very young or old horses are affected. They present with nasal respiratory obstruction, facial swelling and nasal discharge. An increase in intramaxillary sinus pressure results in displacement of the nasal septum in a significant proportion of cases.
p. sinus polyps rare cause of nasal bleeding in horses.
paraneoplastic [*par"ə-ne"o-plas'tik*] auxiliary to neoplasia.
p. syndrome a collective term for disorders arising from metabolic effects of cancer on tissues remote from the tumor; such disorders may, for example, appear as primary endocrine, hematological or neuromuscular disorders. See also **pseudohyperparathyroidism**.
paranephric [*par"ə-nef'rik*] 1. near the kidney. 2. pertaining to the adrenal gland.
paranephritis [*par"ə-nə-fri'tis*] 1. inflammation of the adrenal gland. 2. inflammation of the connective tissue around the kidney.
paranephros [*par"ə-na'fros*] pl. *paranephroi* [Gr.] an adrenal gland.
paranesthesia [*par"an-es-the'zhə*] para-anesthesia.
paraneural [*par"ə-noor'əl*] alongside a nerve.
Paranoplocephala a genus of tapeworms in the family Anoplocephalidae. Parasitic in rodents. See also **anoplocephaloides**.
P. mamillana see ***Anoplocephaloides***.
paranucleus [*par"ə-noo'kle-əs*] a body sometimes seen in cell protoplasm near the nucleus.
paraovarian [*par"ə-o-var'e-ən*] beside the ovary.
p. cyst remnants of mesonephric or paramesonephric ducts and tubules.
paraparesis [*par"ə-pə-re'sis*] a partial paralysis of the lower extremities.
paraphimosis [*par"ə-fi-mo'sis*] inability to retract the penis because of its swollen state, or because of constriction of the preputial orifice.
paraplectic [*par"ə-plek'tik*] paraplegic.
paraplegia [*par"ə-ple'jə*] paralysis of the hindlimb and, in some cases, the posterior part of the body caudal to the last cervical vertebrae. The paralysis may be acute in onset as in fracture of a lumbar vertebra, or gradual; it may be spastic or flaccid. Paraplegia is a form of central nervous system paralysis, in which the paralysis affects all the muscles of the parts involved. In the majority of cases, paraplegia results from disease or injury of the spinal cord that causes interference with nerve paths connecting the brain and the muscles.
p. cart a two-wheeled cart into which a paraplegic dog can be strapped so that its hindquarters are supported and its front limbs rest normally on the ground tp provide a motor system. Used for short periods to give the animal exercise. Called also a wheelchair for dogs.
inherited congenital p. is observed in cattle and pigs. The paralysis may be flaccid or spastic and there may or may not be degenerative lesions in the spinal cord.
paraplegiform [*par"ə-ple'jĭ-form*] resembling paraplegia.
Parapoxvirus [*par"ə-poks'vi-rəs*] a genus in the order *Poxvirales*, family *Poxviridae*; includes viruses that cause bovine papular stomatitis, contagious ecthyma (scabby mouth) of sheep.
paraprofessional [*par"ə-pro-fesh'ən-əl*] 1. a person who is specially trained in a particular field or occupation to assist a veterinarian. 2. allied animal health professional. 3. pertaining to a paraprofessional.
paraprostatic [*par"ə-pros-tat'ik*] beside the prostate.
p. cyst arise from mesonephric duct remnants or as retention cysts. In dogs, they can be sizeable before producing clinical signs related to compression of the colon or urethra.
paraprotein [*par"ə-pro'tēn*] immunoglobulin produced by a clone of neoplastic plasma cells proliferating abnormally, e.g. myeloma proteins and cryoglobulins. See also monoclonal **gammopathy**.
paraproteinemia [*par"ə-pro"tēn-e'me-ə*] the presence in the blood of paraproteins.
paraproteinuria [*par"ə-pro"te-nu're-ə*] the presence in the urine of paraproteins.
parapsoriasis [*par"ə-sə-ri'ə-sis*] a disease resembling psoriasis of humans. There are erythematous, scaly plaques on the body, with hair loss and secondary bacterial infection.
paraquat [*par'ə-kwaht*] a dipyridilium herbicide which initially causes stomatitis, colic, vomiting and diarrhea, then 2 to 10 days later causes pulmonary edema and hemorrhage which leads to a fibrosing pneumonitis and death in all species if given in sufficiently large doses. Renal damage can also occur.
parareflexia [*par"ə-re-flek'se-ə*] any disorder of the reflexes.
pararosaniline [*par"ə-ro-zan'ĭ-lin*] a basic dye; a triphenylmethane derivative, one of the components of basic fuchsin.
pararrhythmia [*par"ə-rith'me-ə*] parasystole.
parasacral [*par"ə-sa'krəl*] situated near the sacrum.
Parascaris [*pər-as'kər-is*] a genus of roundworms in the family Ascarididae.
P. equorum **(syn. *Ascaris equorum*)** found in the small intestine of horses and zebras. In foals up to 9 months of age heavy infestation with migrating larvae causes coughing. Heavy burdens of adult worms may cause diarrhea, debility, potbelly in young animals.
parasinoidal [*par"ə-si-noi'dəl*] situated along the course of a sinus.
parasite [*par'ə-sīt*] a plant or animal that lives upon or within another living organism at whose expense it obtains some advantage. See also **symbiosis**. Among the many parasites in nature, some feed upon animal hosts, causing diseases ranging from the

VetBooks.ir

From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 3rd Edition. Mosby, 2006.

VetBooks.ir

mildly annoying to the severe and often fatal. Parasites include multicelled and single-celled animals, fungi and bacteria. Viruses are sometimes considered to be parasites. However, the commonest use of the word refers to the multicellular helminth, arachnid, crustacean (copepod) and arthropod parasites.

accidental p. one that parasitizes an organism other than the usual host.

e. parasites ectoparasites.

facultative p. one that may be parasitic upon another organism but can exist independently.

incidental p. accidental parasite.

obligate p., obligatory p. one that is entirely dependent upon a host for its survival.

periodic p. one that parasitizes a host for short periods.

temporary p. one that lives free of its host during part of its life cycle.

parasitemia [*par"ə-si-te'me-ə*] the presence of parasites, including filariae and protozoa, in the blood.

parasitic [*par"ə-sit'ik*] pertaining to parasites. See also **arteritis**, **bronchitis**, **gastritis**, **gastroenteritis**, **hypersensitivity**, **pneumonia**, **tracheobronchitis**, **helmintic**.

parasiticide [*par"ə-sit'ĭ-sīd*] destructive to parasites; also, an agent that is destructive to parasites.

parasitism [*par"ə-si'tiz-əm*] 1. symbiosis in which one population (or individual) adversely affects another, but cannot live without it. 2. infection or infestation with internal or external parasites.

parasitize [*par'ah-sĭ-tīz"*] to live on or within a host as a parasite.

parasitogenic [*par"ah-sĭ-to-jen'ik*] due to parasites.

parasitological [*par"ah-sĭ-to-loj'ĭ-kəl*] pertaining to or emanating from parasitology.

p. examination includes examination of feces for protozoa, worm eggs or larvae and for tapeworm segments, skin scrapings for arthropod parasites, blood samples for protozoa, microfilariae, for plasma pepsinogen concentrations, and examination of gross specimens.

parasitologist [*par"ə-si-tol'ə-jist*] a person who studies parasites.

parasitology [*par"ə-si-tol'ə-je*] the scientific study of parasites and parasitism.

parasitosis [*par"ə-si-to'sis*] a disease caused by a parasitic infestation. See also **helminthiasis**.

delusional p. a mental disorder of humans in which they (incorrectly) believe they are infested with parasites, most commonly on or under the skin; affected persons often attribute the source of parasites to their pet and seek veterinary assistance in treating them. Their demands may be unreasonable and relentless.

parasitotropic [*par"ə-si"to-tro'pik*] having affinity for parasites.

paraspadias [*par"ə-spa'de-əs*] a congenital condition in which the urethra opens on one side of the penis.

Paraspidodera a genus of nematodes in the superfamily Heterakoidea.

P. uncinata occurs in the large intestine of guinea pigs and agouti and appears to be nonpathogenic.

parasternal [*par"ə-ster'nəl*] beside the sternum.

Parastrigea intestinal digenetic trematodes in the family Strigeidae.

P. robusta found in the intestine of domestic ducks and may cause anemia and hemorrhagic enteritis.

parasympathetic [*par"ə-sim"pə-thet'ik*] pertaining to the parasympathetic nervous system.

p. cholinergic vasodilator fibers cause dilatation of blood vessels in tissues including cerebral vessels, tongue, salivary glands, external genitalia, bladder, rectum.

p. nervous system part of the **autonomic** nervous system, the preganglionic fibers of which leave the central nervous system with cranial nerves III, VII, IX and X and several sacral nerves (depending on species); postganglionic fibers are distributed to the heart, smooth muscles, and glands of the head and neck, and thoracic, abdominal and pelvic viscera. Almost three-quarters of all parasympathetic nerve fibers are in the **vagus** nerves, which serve both the thoracic and abdominal regions of the body. The predominant secretion of the nerve endings of the parasympathetic nervous system is *acetylcholine*, which acts on the various organs of the body to either excite or inhibit certain activities. For example, stimulation of the parasympathetic system causes constriction of the pupil of the eye and contraction of the ciliary muscle; increase of the glandular secretion of enzymes, as in the case of the pancreas; increased peristalsis; and a slowed heart rate. Excitation of the sympathetic nervous system often results in an effect opposite to that of the parasympathetic system; however, most organs are predominantly under the control of either one or the other of the two nervous systems that compose the autonomic nervous system.

p. outflow the total of parasympathetic nerves which leave the central nervous system. Includes the cranial and sacral outflows.

parasympatholytic [*par"ə-sim"pə-tho-lit'ik*] see **anticholinergic**.

parasympathomimetic [*par"ə-sim"pə-tho-mĭ-met'ik*] cholinergic; producing effects resembling those of stimulation of the parasympathetic nerve supply of a part. Also, an agent that produces such effects, e.g. physostigmine.

parasynapsis [*par"ə-sĭ-nap'sis*] the union of chromosomes side by side during meiosis.

parasynovitis [*par"ə-sin"o-vi'tis*] inflammation of the tissues about a synovial sac.

parasystole [*par"ə-sis'tə-le*] a cardiac irregularity attributed to the interaction of two foci independently initiating cardiac impulses at different rates. Called also pararrhythmia.

paratenic [*par"ə-ten'ik*] see paratenic **host**.

paratenon, paratendon [*par"ə-ten'on*] loose connective tissue filling the interstices of the fascial compartment in which a tendon is situated and which allows it to move freely, although not as freely as within a true synovial tendon sheath.

parathion [*par"ə-thi'on*] an agricultural insecticide highly toxic to humans and animals. See also **organophosphorus compound**.

p.-methyl a less toxic form of parathion.

parathormone [*par"ə-thor'mōn*] parathyroid hormone.

parathyroid [*par"ə-thi'roid*] 1. situated beside the thyroid gland. 2. one of the parathyroid glands. 3. a preparation containing parathyroid hormone from animal parathyroid glands; used for diagnosis and treatment of hypoparathyroidism.

p. calcium-regulating hormone see parathyroid hormone (below).

p. cyst remnants of the embryonic duct that connects the parathyroid and the thymus during embryogenesis. Called also Kursteiner's cyst.

p. gland small body in the region of the thyroid gland, occurring in a variable number of pairs, commonly two. The parathyroid contains two types of cell: chief cells and oxyphils. Chief cells are the major source of parathyroid hormone (PTH), the secretion of which is dependent on the serum calcium concentration. Through a closed-loop feedback mechanism a low serum calcium concentration stimulates secretion of PTH; conversely, a high serum calcium concentration inhibits its secretion. The essential role of PTH is maintenance of a normal serum calcium concentration in association with vitamin D and calcitonin.

p. gland hyperplasia may be focal and nodular or, more importantly diffuse. The latter occurs in cases suffering long-standing nutritional deficiency of calcium or renal insufficiency.

p. hormone (PTH) a simple, straight-chain polypeptide, synthesized in chief cells and stored in secretory granules. The hormone stimulates the formation and activity of resorptive osteocytes so that calcium is released into body fluids without extensive bone remodeling. This is its mineral homeostatic function and is a relatively quick, short duration response. It is also concerned in skeletal homeostasis by stimulating osteoclastic osteolysis, the slower acting process of bone remodeling.

p. hormone-related protein (PTH-rP), p. hormone-like peptide associated with humoral hypercalcemia of malignancy (HHM); see **pseudohyperparathyroidism**.

p. hyperfunction see **hyperparathyroidism**, **osteodystrophia fibrosa**.

p. secretory protein stored in secretory granules with parathyroid hormone but has no known function. Called also chromogranin A.

p. tumors carcinomas occur rarely and adenomas more commonly, particularly in older dogs. Either type of tumor may be nonfunctional or, if functional, cause a primary hyperparathyroidism.

parathyroidectomy [*par"ə-thi"roid-ek'tə-me*] excision of a parathyroid gland. Complete removal of all parathyroid tissue results in severe hypocalcemia.

parathyroiditis [*par"ə-thi"roid-i'tis*] usually a diffuse lymphocytic lesion, probably immune-mediated, and terminating in loss of most of the chief cells and replacement with fibrous tissue. Hypocalcemia may result.

lymphocytic p. a common cause of idiopathic hypoparathyroidism in dogs; the gland tissue may be almost completely replaced by lymphocytes. It may be an autoimmune disease.

parathyrotropic [*par"ə-thi"ro-tro'fik*] having an affinity for the parathyroid glands.

paratope [*par'ə-tōp*] the site in the variable region of an antibody or T cell receptor that binds to an antigenic epitope.

paratrichial [*par'ə-trik'ĭ-əl*] literally beside the hair or hair follicle; used to refer to the apocrine sweat glands.

p. cystic dilation cystic dilation of the apocrine sweat gland occurs with or without hyperplasia of the glandular tissue.

p. sweat gland see **sweat** glands.

paratrophy dystrophy.

paratuberculosis [*par"ə-too-bur"ku-lo'sis*] a tuberculosis-like disease not due to *Mycobacterium tuberculosis*, *M. bovis* or *M. avium*. Usually reserved as an alternative name for **Johne's disease**.

paratyphoid [*par"ə-ti'foid*] infection with any *Salmonella* spp. other than *S. typhi* in humans. See **salmonellosis**.

p. nodule very small, yellow, necrotic foci in the liver in calves and pigs with salmonellosis.

paraurethral [*par"ə-u-re'thrəl*] near the urethra.

paravaccinia [*par"ə-vak-sin'e-ə*] a synonym for ***Parapoxvirus***.

paravaginitis [*par"ə-vaj"ĭ-ni'tis*] inflammation of the tissues alongside the vagina.

paravertebral [*par"ə-vur'tə-brəl*] near the vertebrae.

p. ganglia postganglionic sympathetic neurons synapse in these ganglia close to the aorta.

p. block see paravertebral **block**.

paraveterinary allied to the veterinary profession.

p. technicians persons trained to assist veterinarians. Includes veterinary nurses, and also animal technicians who assist in laboratory animal care, animal welfare work and field testing of large numbers of agricultural animals. In developing countries these personnel are used more extensively in carrying out preventive and treatment work in the small groups of animals that are likely to be owned by small farm holders. A number of them usually work under the direction of a veterinarian.

parbendazole [*par-ben'də-zōl*] a broad-spectrum benzimidazole anthelmintic used with good effects against the common parasites of cattle, pigs and horses. It acts quickly reaching peak blood concentrations 6 to 8 hours after administration. Its use in pregnant animals is contraindicated because of its teratogenicity; the defects are largely skeletal. Like other benzimidazoles it suffers from the problem of resistance developing in the resident worm population if it is used persistently.

paregoric [*par"ə-gor'ik*] a mixture of powdered opium, anise oil, benzoic acid, camphor and glycerin, in diluted alcohol, used as an antiperistaltic, especially in the treatment of diarrhea.

parelaphostrongylosis see ***Parelaphostrongylus tenuis***.

Parelaphostrongylus [*pə-rel"ə-fo-stron'jĭ-lus*] a genus in the worm family Protostrongylidae.

P. andersoni found in the musculature, especially in the longissimus dorsi, in white-tailed deer.

P. odocoilei found in connective tissue around blood vessels and lymphatics of musculature below the vertebral column, abdomen and proximal parts of the limbs in mule and black-tailed deer and in moose.

***P. tenuis* (syn. *Pneumostrongylus tenuis, Odocoileostrongylus tenuis, Elaphostrongylus tenuis, Neurofilaria cornelliensis*)** found in the cranial venous sinuses of white-tailed deer but is nonpathogenic in this species. Infection also occurs in moose, elk, caribou, red deer, black-tailed deer, llama, sheep and goat. In these species the migrating larvae cause serious damage in the spinal cord and posterior paralysis, often in a number of animals at the one time. Called also moose sickness. Some infected goats also develop a local, linear dermatosis over the shoulders, thorax and flanks, believed to be caused by migrating *P. tenuis* larvae irritating nerve roots which leads to pruritus and self-trauma along dermatomes.

parenchyma [*pə-reng'kĭ-mə*] the essential or functional elements of an organ, as distinguished from its stroma or framework.

parenchymatitis [*par"əng-kim"ə-ti'tis*] inflammation of a parenchyma.

parent generation the immediate parents of the F_1 generation. Denoted by P_1.

parentage the animal's sire and dam. In animal circles the dam is usually evident, the sire is often a subject of conjecture.

p. determination see parentage testing (below).

p. exclusion testing see parentage testing (below).

p. testing a test originally based on red cell antigens but increasingly on restriction fragment length polymorphisms (RFLPs), also called DNA fingerprinting. The offspring can have only those blood group antigens possessed by one or both of its parents. Identification of the offspring's antigens makes it possible to exclude some possible sires because they carry antigens not possessed by the subject animal. Similarly, the inheritance of a particular RFLP is directly linked to that found in each parent. Called also parentage determination, parentage exclusion testing.

parental [*pə-ren'təl*] emanating from or pertaining to a parent.

parenteral [*pə-ren'tər-əl*] not through the alimentary canal, e.g. by subcutaneous, intramuscular, intrasternal or intravenous injection, e.g. parenteral fluid therapy.

p. alimentation see parenteral nutrition (below).

p. hyperalimentation see parenteral nutrition (below).

p. nutrition the provision of adequate carbohydrate, protein, vitamins, minerals and fluids parenterally to maintain the animal over a relatively long period of several weeks. Called also parenteral alimentation, parenteral hyperalimentation. See also parenteral **nutrition**.

p. therapy treatment by the parenteral route is limited to those substances that are soluble in a solvent that can be injected into tissues including the bloodstream. The choice of routes may depend on the nature of the vehicle used, e.g. oily preparations are injected into tissues, irritant substances are injected intravenously slowly.

parepididymis [*par"ep-ĭ-did'ĭ-mis*] paradidymis.

parer see hoof **knife**.

paresis [*pə-re'sis*] weakness as a result of neurological or muscular disease with motor function still present. Includes the animals that can make purposeful attempts to rise without being able to do so, those that are able to rise with assistance, those that are able to rise and walk with major difficulty including frequent falling, and those able to stand and walk without assistance but with slight errors, e.g. stumbling.

hypocalcemic p. a stage or form of hypocalcemia in which the patient remains ambulatory. See parturient **hypocalcemia** fever, ovine **hypocalcemia**.

inherited spastic p. a suspect inherited defect of cattle that appears several months after birth and occurs in most breeds of cattle. A hindleg is stiff and straight on rising, with the limb thrust out behind, and the hoof does not reach the ground. After several minutes the gastrocnemius muscle relaxes and the animal walks normally although the leg is still abnormally straight. Gradually the stiffness worsens until the animal is unable to walk. Called also Elso heel, so named after a bull of that name believed to have been the genetic source of the defect in Holstein cattle.

parturient p. see parturient **hypocalcemia**.

progressive canine p. see dural **ossification**, degenerative **myelopathy** of German shepherd dogs.

paresthesia [*par"es-the'zhə*] morbid or perverted sensation; an abnormal sensation, as burning, prickling, formication, etc. Difficult to define in animals because of its subjectivity. Sensations which give rise to itching or rubbing in animals are probably best classified as pruritus.

pargyline a monoamine oxidase inhibitor, used to treat hypertension.

VetBooks.ir

P-15: Spastic paresis. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

P-16: Paronychia in a cat caused by *Microsporum canis*. From Peterson M, Small Animal Pediatrics: The First 12 Months of Life. Saunders, 2010.

Parhadjelia neglecta a habronematid nematode found in the proventricular submucosa of ducks in Brazil.

pari-mutuel, parimutuel betting on the totalizator. Literally means betting between ourselves. All of the money wagered is divided up equally between those who have backed the winning and placed horses.

paries [*par'e-ēz*] pl. *parietes* [L.] wall of an organ (e.g. hoof) or cavity (e.g. abdomen).

p. labyrinthicus, p. mastoideus, etc. medial wall of the middle ear that separates it from the internal ear.

parietal [*pə-ri'ə-təl*] 1. of or pertaining to the walls of an organ or cavity. 2. pertaining to or located near the parietal bone.

p. block abnormal electrical conduction through the left branch of the bundle of His.

p. bone one of two quadrilateral bones forming the sides and roof of the cranium. See Table 10.

p. cells cells of the proper gastric mucosa that secrete hydrochloric acid. Called also oxyntic cells.

p. decidua see parietal **decidua**.

p. hernia when only the antimesenteric edge of the intestine is incarcerated in the defect of body wall or mesentery.

p. lobe the upper central portion of the cerebral hemisphere, between the frontal and occipital lobes, and above the temporal lobe. In the human brain, it is the receptive area for fine sensory stimuli, and the highest integration and coordination of sensory information is carried on in this area. Damage to the parietal lobe can produce defects in vision and aphasia.

p. peritoneum, p. pleura that part of the serous membrane that invests the wall of the cavity, as distinct from the visceral part.

parietofrontal [*pə-ri"ə-to-frun'təl*] pertaining to the parietal and frontal bones, gyri or fissures.

parietography radiographic visualization of the walls of an organ.

Parinaud's oculoglandular syndrome [*pah-re-no'*] cat-scratch disease.

Paris green an old-fashioned green pigment used in plaster and still found in old buildings. Can cause inorganic **arsenic** poisoning.

Parisian frill a large canary characterized by a mass of frilled feathers which appear to completely cover the body.

parity [*par'ĭ-te*] 1. para; the condition of a breeding female with respect to her having borne viable offspring. 2. equality; close correspondence or similarity.

Parker–Kerr suture pattern [*pahr'kər*] one used to close the stump of a hollow viscus, e.g. in intestinal anastomosis. A Cushing suture pattern is put in first over the top of the bowel clamp which is then gradually withdrawn and the suture pulled tight. A layer of Lembert pattern is then used to oversew the first row.

Parker retractor [*pahr'kər*] a shaped piece of flat metal with rounded ends both of which are curved back against the main blade. Used for holding a laparotomy incision open.

Parkinsonia aculeata [*pahr"kin-so'ne-ən*] plant in the legume family Caesalpiniaceae; causes nitrate–nitrite poisoning; called also horse bean, Jerusalem thorn, retama.

paroccipital [*par"ok-sip'ĭ-təl*] beside the occipital bone.

paromomycin [*par'ə-mo-mi"sin*] a broad-spectrum aminoglycoside antibiotic derived from *Streptomyces rimosus* var. *paromomycinus*; poorly absorbed after oral administration, it is used for the treatment of bacterial and protozoal enteric infections. Called also aminosidine.

paromphalocele [*par'om'fə-lo-sēl"*] hernia near the navel.

paronychia [*par"o-nik'e-ə*] inflammation involving the folds of tissue surrounding the nail or claw. Causes much pain and often results in loss of the nail or abnormalities in its growth such as grooves, discoloration or fragility. Called also perionychia, perionychitis.

paroöphoron [*par"o-of'ə-ron*] an inconstantly present, small group of coiled tubules between the layers of the mesosalpinx, being a remnant of the excretory part of the mesonephros.

parophthalmia [*par"of-thal'me-ə*] inflammation of the connective tissue around the eye.

parorchidium [*par"or-kid'i-əm*] displacement of a testis or testes.

parosteal [*par-os'te-əl*] pertaining to the outer surface of the periosteum, e.g. parosteal osteoma.

parostosis [*par"os-to'sis*] ossification of tissues outside of the periosteum.

parotid [*pə-rot'id*] near the ear.

p. adenitis inflammation of the parotid gland characterized by regional swelling, pain and heat.

p. duct see parotid glands (below).

p. duct transposition a surgical procedure in which the parotid duct is redirected so that it discharges into the lower conjunctival cul-de-sac. Used in the treatment of keratoconjunctivitis sicca.

p. glands the largest of the main pairs of salivary glands, located on either side of the head, just behind the jaw and below the ears. From each gland a duct, the parotid duct, runs forward across the cheek (carnivores and small ruminants) or runs on the inside of the jaw to wind around the ventral border of the jaw to the cheek (pig, horse and ox) and opens on the inside surface of the cheek generally opposite the upper molars, the precise location depending on the species.

p. region the region below the ear.

parotidectomy [*pə-rot"ĭ-dek'tə-me*] excision of a parotid gland.

parotiditis, parotitis [*pə-rot"ĭ-di'tis*] inflammation of the parotid gland.

contagious p., epidemic p. **mumps**, an acute, communicable viral disease of humans involving chiefly the parotid gland, but frequently affecting other oral glands or the pancreas or gonads. There are sporadic reports of the infection occurring in dogs.

parous [*par'əs*] having produced offspring.

parovarian [*par"o-var'e-ən*] 1. beside the ovary. 2. pertaining to the parovarium (epoophoron).

p. cyst developmental remnants of the mesonephric duct system; thin-walled sacs distended with clear fluid located in the mesosalpinx and the infundibulum of the oviduct. They appear to have no effect on fertility.

parovarium [*par"o-var'e-əm*] epoöphoron.

paroxetine [*pə-rok'sə-tēn*] a selective serotonin reuptake inhibitor used in the treatment of behavioral problems in dogs and cats.

paroxysm [*par'ok-siz-əm*] 1. a sudden recurrence or intensification of clinical signs. 2. a spasm or seizure.

paroxysmal [*par"ok-siz'məl*] having the characteristic of a paroxysm.

p. syndrome clinical neurological signs not due to lesions within the nervous system, but involving abnormal neurotransmitter function. Includes Scotty **cramp**, **episodic** falling of Cavalier King Charles spaniels, and **narcolepsy**.

parr a juvenile salmonid, especially *Salmo* spp., at a stage before it becomes a smolt; characterized by parallel transverse bands on its sides.

parrot any of a group of birds in the family Psittacidae which also includes cockatoos and lories. All are characterized by curved beaks with the lower one fitting inside the larger upper beak when they are closed. The typical parrots are the macaws, parakeets,

VetBooks.ir

lovebirds and budgerigars. They are characterized by their bright plumage, their gift of mimicry and their popularity as pets.
p. fever see **psittacosis**.
p. mouth serious malocclusion of the incisors with the upper arcade protruding beyond the lower. Called also overshot. See also **brachygnathism**.
p. pox see **parrotpox**.
parrotpox a pox disease caused by a poxvirus in the genus *Avipoxvirus*. Occurs in South American and Australian psittacine birds as dry scabs around the mouth, eyelids, face and legs or as a 'wet' form with white plaques in the oral cavity and with blunting of the choanal papillae.
pars pl. *partes* [L.] a division or part.
p. ciliaris retinae the dual epithelial layer lining the ciliary body.
p. distalis the major part of the anterior lobe of the pituitary gland, the adenohypophysis. It is separated from the neurohypophysis by the intraglandular cleft, the residual lumen of Rathke's pouch.
p. disseminata the thin layer of the prostate that surrounds the urethra; as distinct from the body of the gland.
p. flaccida the small, triangular portion of the tympanic membrane lying between the lateral process of the malleus and the margins of the tympanic incisure.
p. infundibularis the neural stalk that connects the neurohypophysis with the hypothalamus.
p. intermedia the part of the adenohypophysis consisting of a layer of cells contiguous with the neurohypophysis. The source of melanocyte-stimulating hormone.
p. iridica retinae the dual epithelial layer lining the posterior aspect of the iris.
p. longa glandis the long, cylindrical part of the dog's glans penis; distinct from the bulbar part.
p. major uteri the section of the bird's oviduct in which the egg is held while the shell is formed.
p. mastoidea the mastoid portion of the temporal bone, being the irregular, posterior part.
p. nervosa of the pituitary gland. See **neurohypophysis**.
p. optica retina the major part of the retina which contains the neurosensory elements extending from the ora to the optic nerve head.
p. petrosa the petrous portion of the temporal bone, containing the inner ear.
p. pigmentosa the pigmented part of the retina; the retinal pigment epithelium.
p. plana the thin flat part of the ciliary body; the orbicularis ciliaris.
p. plicata the folded part of the ciliary body; corona ciliaris.
p. pylorica distal segment of the stomach or abomasum, curved behind the omasum.
p. pylorica ventriculi the distal (aboral) third of the stomach.
p. squamosa the flat, scalelike, anterior and superior portion of the temporal bone.
p. tensa the drumlike part of the tympanic membrane.
p. tuberalis a layer of cells surrounding the neural stalk of the pituitary gland and forming part of the adenohypophysis.
p. tympanica the tympanic portion of the temporal bone, forming the anterior and inferior walls and part of the posterior wall of the external acoustic meatus.
parsley ***Petroselinum crispum***.
ass's p. ***Chaerophyllum*** *sylvestre*.
fool's p. ***Aethusa*** *cynapium*.
spring p. ***Cymopterus*** *watsonii*.
wild p. ***Cymopterus*** *longipes*.
parsnip see ***Pastinaca sativa***.
cow p. see ***Heracleum mantegazzianum***.
great water p. ***Sium*** *latifolium*.
water p. ***Sium*** *latifolium*, ***Berula erecta***.
wild p. any of several plant species including ***Trachymene***, ***Cicuta***.
Parson Russell terrier a small (13–17 lb), very active dog, with a short, smooth or wire-haired (broken, rough) coat in white with tan or black markings or tricolor. The ears are small and dropped and tail may be docked. There is a confusing variation in names applied to a range of similar, small working terriers in different countries, this one being recognized by the American Kennel Club and the UK Kennel Club for dogs that are called by others as **Jack Russell terrier** and sometimes the Parson Jack Russell terrier, although those may vary slightly in their breed standard, particularly in body size, length of legs, and texture and length of coat. The 'group' is affected by an inherited form of myasthenia gravis and a progressive ataxia.
Parsonsia Australian genus of woody vines in the Apocynaceae family. *P. eucalyptophylla*, *P. lilacina* and *P. straminea* are the species that are most suspect. Firm evidence about their toxic effects is lacking but some can cause nitrate–nitrite poisoning. Cardiac glycosides or cyanogenic glucosides may also be present. Called also gargaloo.
part–film distance [*pahrt*] the distance between the part being x-rayed and the film; the greater the distance the less definition of the image. See **object–film** distance.
Parthenium hysterophorus plant member of Asteraceae family; contains a sesquiterpene lactone which causes hepatopathy, dermatitis, stomatitis, nephropathy. Called also parthenium weed.
parthenium weed [*pahr-the'ne-əm*] see ***Parthenium hysterophorus***.
Parthenocissus quinquefolia garden plant in the family Vitaceae; contains unidentified toxin poisonous to birds. Called also Virginia creeper.
parthenogenesis [*pahr"thə-no-jen'ə-sis*] asexual reproduction in which an egg develops without being fertilized by a spermatozoon, as in certain lower animals, especially arthropods; it may occur as a natural phenomenon or be induced by chemical or mechanical stimulation (artificial parthenogenesis).
parti-color variegated in two or more colors; used to describe coat color in dogs.
partial pertaining to or having the characteristics of a part of something.
particle [*pahr'ti-kəl*] an extremely small mass of material. See also **radiation**.
elementary p. any of the subatomic particles, including electrons, protons, neutrons, positrons, neutrinos and muons.
particulate [*pahr-tik'u-lət*] composed of separate particles.
partridge two genera of gallinaceous game birds (*Perdix*, *Alectoris*) in the pheasant family Phasianidae. They are ground feeders and tree perchers. They are poor flyers but can run quickly when disturbed. The common species are the red-legged and the common partridges.
parts per million mg/kg or mL/L see **ppm**.
parturient [*pahr-tu're-ənt*] giving birth or pertaining to birth.
p. disease disease related to parturition and which occurs during or in close relationship to parturition.
p. injury injury sustained during birth, to the neonate or to the dam, not necessarily restricted to the birth canal or even the reproductive system, e.g. hip dislocation.
p. paresis see parturient **hypocalcemia**.
p. recumbency recumbency in a female that has just borne young. May be due to hypocalcemia, toxemia, physical injury or to being unable to find suitable footing.
parturiometer [*pahr"tu-re-om'ə-tər*] a device used in measuring the expulsive power of the uterus.
parturition [*pahr"tu-ri"shən*] the act or process of giving birth to a calf, foal, lamb, puppy, etc.
p. acceleration used most commonly in sows with uterine inertia; usual medication is oxytocin; carazolol a recent introduction to the list.
p. delaying attempted to give more time for relaxation of the cervix; clenbuterol the common medication.
difficult p. see **dystocia**.
p. induction is a common management practice in dairy herds in order to synchronize calvings and lactations. It is also used for therapeutic reasons when large fetuses are expected or in sows when mastitis–metritis–agalactia is a problem in the herd. The usual method is the injection of a suitable corticosteroid, oxytocin or $PGF_{2\alpha}$. Undesirable side-effects include high calf mortality rate, retained placenta, photosensitive dermatitis and unusual metabolic diseases. Called also calving induction. Called also parturition initiation.
p. initiation see parturition induction (above).
p. injury includes laceration of the cervix, vaginal wall or vulva, uterine rupture, fat hernia through the vaginal wall, uterine

VetBooks.ir

prolapse, rupture of middle uterine artery, sciatic nerve injury, maternal obstetric paralysis.

prolonged p. prolongation of parturition beyond the normal for the species is attended by risks to the dam and the fetuses.

p. psychosis see **farrowing** hysteria.

synchronized p. control of the date of parturition by controlling the date of estrus and of mating, or by the induction of parturition.

parulis [*pə-roo'lis*] a subperiosteal abscess of the gum originating from a periapical infection; called also **gum boil**.

parumbilical [*par"əm-bil'ĭ-kəl*] alongside the navel.

parvaquone an antiprotozoal agent.

parvicellular [*pahr"vi-sel'u-lər*] composed of small cells.

parvo [*pahr"vo*] slang for parvovirus infection.

parvoviral [*pahr'vo-vi"vəl*] pertaining to a parvovirus.

Parvoviridae [*pahr"vo-vir'ĭ-de*] a family of small (20 nm diameter) icosahedral single-stranded DNA viruses that are nonenveloped. There are three genera of veterinary importance: *Parvovirus*, which includes feline panleukopenia virus, mink enteritis virus, canine, bovine and porcine parvoviruses and Aleutian mink disease virus; *Densovirus*, which occur in insects; **Erythrovirus** which infect primates; and *Dependovirus*, which are defective, requiring adenoviruses to complete their replication, and are nonpathogenic (called also adeno-associated viruses). Autonomously replicating parvoviruses replicate only during S phase of the cell cycle, i.e. they attack dividing cells.

parvovirus [*pahr'vo-vi"rəs*] a virus of the family *Parvoviridae*, subfamily *Parvovirinae*.

bovine p. a *Bocavirus* of the family *Parvoviridae* that commonly infects the intestinal tract of cattle, but does not cause clinical disease.

canine p. type 1 (CPV1) is not associated with clinical disease. Called also minute canine virus (MCV).

canine p. type 2 (CPV2) the cause of enteritis and a panleukopenia-like disease in dogs, particularly puppies. Clinical signs include vomiting and diarrhea, often with blood, high fever, dehydration and a leukopenia. Perinatal or in utero infection may result in generalized disease or acute myocarditis. There is a high mortality rate in young puppies, but vaccines are available for prevention of the disease. The original parvovirus (CPV-2) was joined by an antigenic variant, CPV-2a in the early 1980s and a second variant, CPV-2b, emerged soon after. A new strain, CPV-2c, has been reported in Europe, Asia and South America.

feline p. see **feline** panleukopenia.

porcine p. a cause of stillbirths, abortion, mummification, embryonic death and infertility in young sows (SMEDI) which become infected with a parvovirus in early gestation.

PAS 1. *p*-aminosalicylic acid. 2. periodic acid–Schiff reaction (stain).

PASA *p*-aminosalicylic acid.

pas-de-côte the sidestep in equine dressage.

pascal (Pa) the SI unit of pressure, which corresponds to a force of one newton per square meter.

Pascalia glauca see ***Wedelia*** *glauca*.

Paschen bodies, Paschen's corpuscles inclusion bodies in the cells of tissues infected with vaccinia or variola viruses.

Paso a Spanish breed of horse that has given rise to related breeds through the Americas. Characterized by a smooth, even, four-beat symmetrical gait done at varying speeds, known as the paso.

paspalitrems tremorgens produced by *Claviceps paspali* which parasitize *Paspalum* spp. grasses.

Paspalum [*pas'pə-ləm*] a grass genus of the Poaceae family, containing a number of valuable pasture grasses, all of which are capable of causing poisoning if *Claviceps paspali* (paspalum ergot) infests their seed heads; includes *P. commersonii*, *P. compressum*, *P. conjugatum*, *P. dilatatum* (paspalum, Dallas grass), *P. distichum* (*P. vaginatum*, salt water couch), *P. notatum* (Bahia grass), *P. orbiculare* (ditch millet), *P. paspalodes* (water couch), *P. scrobiculatum*, *P. urvillei* (water couch).

paspalum ergot [*pas'pə-ləm*] the ergot fungus that grows on the seedheads of members of the *Paspalum* genus of grasses. See also **paspalum staggers**. Called also *Claviceps paspali*, *C. cinerea*.

paspalum grass [*pas'pə-ləm*] see ***Paspalum***.

paspalum staggers [*pas'pə-ləm*] caused by the ingestion of paspaltrems in *Claviceps paspali*, *C. cinerea*, the ergot of ***Paspalum***. Characterized by ataxia, gross muscular tremor, frequent falling, hypermetria, hyperesthesia. Recovery is spontaneous.

pasque flower ***Anemone*** *pulsatilla*.

passage [*pas'əj*] introduction followed by recovery of an infectious agent in an experimental animal or culture medium.

blind p. passage of an infectious agent through an experimental animal or medium without there being any evidence, clinical or cultural, that the agent is present.

serial p. repeated passage through a series of experimental animals or media, often with the objective of altering the virulence of the agent or adapting it to grow better.

Passalurus a genus of nematodes in the family Oxyuridae.

P. ambiguus found in the cecum and colon of rabbits, hares and other lagomorphs. They appear to be harmless even in very large numbers.

Passeriformes the order of birds including all of the 5000 or more perching birds, including the finches, sparrows, buntings, mynahs, canaries and serins.

passerines [*pas'ər-ins*] birds belonging to the order Passeriformes.

Passeromyia a genus of screw-worm flies of birds in Australia.

Passiflora [*pas"ĭ-flo'rə*] a plant genus of vines in the family Passifloraceae. Includes *P. edulis* (passion fruit) and *P. mollissima* (curuba) valued for their edible fruits. Most of the plants in the genus that have been tested have high concentrations of cyanogenetic glycosides and are potential causes of cyanide poisoning and there is good field evidence of poisoning of livestock by some of them. Suspected species are *P. aurantia* (red passion flower), *P. cinnabarina* (vermilion passion flower), *P. foetida* (stinking or mossy passion flower), *P. herbertiana*, *P. suberosa* (small passion flower).

P. subpeltata contains an unidentified toxin causing clonic seizures and blindness in cattle. Called also *P. alba*, white or wild passion flower.

passion flower see ***Passiflora***. Includes corky, small passion flower (*P. suberosa*), mossy, stinking passion flower (*P. foetida*), red passion flower (*P. aurantia*), whitem wild passion flower (*P. subpeltata*).

passivation [*pas"ĭ-va'shən*] the final stage in instrument manufacture, passing the finished instruments through a bath of nitric acid which removes foreign particles and promotes the formation of a protective coating of chromium oxide.

passive [*pas'iv*] neither spontaneous on the part of the patient, nor active response by the patient, the stimulus having been applied externally.

p. cutaneous anaphylaxis (PCA) test see passive cutaneous **anaphylaxis**.

p. diffusion passage of electrolytes to all parts of a solution, including through a permeable membrane. Plays some part in intestinal absorption.

p. hemagglutination test see **hemagglutination** test.

p. immunization see passive **immunization**.

p. neonatal immunity see passive **immunity**.

p. transfer 1. see passive diffusion (above). 2. the transfer of immunoglobulins from the dam to the neonate; usually refers to colostral transfer.

p. venous congestion noninflammatory distention of vessels with blood. Caused by simple accumulation resulting from obstruction or failure of the heart to eject the full volume of blood returned to it.

paste [*pāst*] highly viscous ointment containing a large amount of powder.

pastern [*pas'tərn*] in ungulates the segment of the limb between the fetlock and hoof, supported by proximal and middle phalanges; in dogs the metacarpal region.

equine p. dermatitis see **greasy heel**.

congenital p. flexure a common neonatal deformity in all species. If it is the only deformity it commonly corrects itself spontaneously or with minimal interference. Occurs also as part of multiple deformities, e.g. Akabane virus disease.

p. folliculitis folliculitis of the posterior pastern in horses from which *Staphylococcus hyicus* has been isolated.

p. joint in ungulates, the articulation between the proximal and middle phalanges. Called also proximal interphalangeal joint.

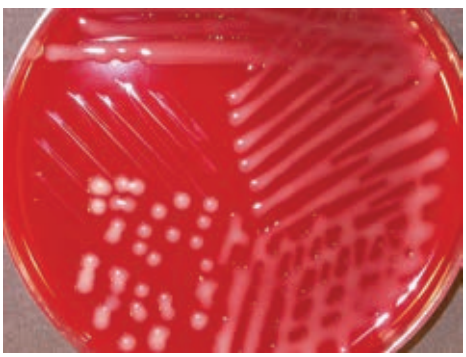
long p. bone first phalanx of ungulates; Called also large pastern bone, os compedale, os suffraginis, P1, proximal phalanx.

short p. bone second phalanx of ungulates. Called also small pastern bone, os coronale, middle phalanx, P2.

slack p. too much slope in the pastern.

VetBooks.ir

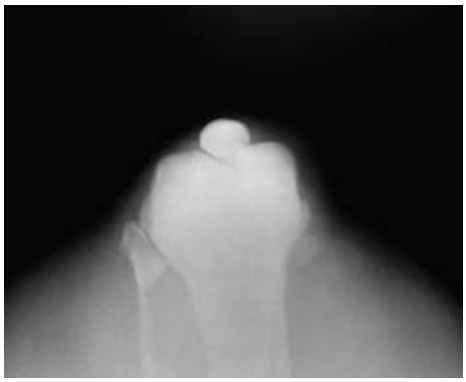
Pasteur [*pahs-toor'*] named after Louis Pasteur (1822-1895), French microbiologist and chemist.
P.–Chamberland filter see **Pasteur–Chamberland filter**.
P. effect the decrease in the rate of glycolysis and the suppression of lactate accumulation by tissues or microorganisms in the presence of oxygen.
Pasteur–Chamberland filter [*pahs-toor'*] a hollow column of unglazed porcelain through which liquids are forced by pressure or by vacuum exhaustion.
Pasteurella [*pas"tər-el'ə*] a genus of gram-negative facultatively anaerobic, rod-shaped bacteria.
P. aerogenes found in pigs. A cause of wound infections from pig bites.
P. anatipestifer see ***Riemerella*** *anatipestifer*.
P. anatis see ***Gallibacterium*** *anatis*.
P. avium see ***Avibacterium*** *avium*.
P. caballi causes respiratory infections in horses.
P. canis commensal in dogs. Can cause bite wound infections and also pneumonia in cattle and sheep.
P. dagmatis commensal of dogs and cats. Cause of bite wound infections.
P. gallinarum see ***Avibacterium*** *gallinarum*.
P. granulomatis see ***Mannheimia*** *granulomatis*.
P. haemolytica* biotype A** now called ***Mannheimia *haemolytica* and *M. glucosida*.
***P. haemolytica biotype* T** now called *Bibersteinia trehalosi*.
P. langaaensis a commensal of birds
P. lymphangitidis a cause of lymphangitis in cattle.
P. mairii a cause of abortion in sows.
***P. multocida* (syn. *P. septica*) types A, B, D, E, F** the cause of hemorrhagic septicemia in cattle, sheep and pigs, fowl cholera of birds, pasteurellosis of rabbits, and gangrenous mastitis of ewes. It is also commonly found in atrophic rhinitis of pigs. Divided into three subspecies, *gallicida, multocida* and *septica,* but these do not appear to have any host species predilection.
P. pestis now called ***Yersinia*** *pestis*.
P. piscicida causes pasteurellosis in a range of marine warm water species especially in the Mediterranean and Japan.
P. pneumotropica, P. stomatis recovered from dogs, cats and rodents and may be involved in infected bite wounds. *P. pneumotropica* also causes pneumonia and abscesses in rodents.
P. salpingitidis now called *Actinobacillus salpingitidis*.
P. skyensis cause of mortalities in farmed Atlantic salmon.
***P.* species A** cause of sinusitis and conjunctivitis in birds.
***P.* species B** cause of wound infections. Possibly a commensal of dogs and cats.
P. stomatis commensal in dogs and cats, but can cause bronchitis in dogs and wound infections.
P. testudinis associated with respiratory disease in tortoises.
P. trehalosa now called *Bibersteinia trehalosi*.
P. tularensis see ***Francisella*** *tularensis*.
P. volantium recovered from chickens. See ***Avibacterium*** *volantium*.
Pasteurellaceae [*pas"tər-el-a'se-e*] a family of gram-negative, facultatively anaerobic, relatively fastidious rod-shaped bacteria that are mostly commensals of mucosal surfaces but are capable of causing opportunistic infectin and disease. Includes the genera *Haemophilus, Actinbacillus, Pasteurella* (hence sometimes called the HAP group), *Bibersteinia, Histophilus, Gallibacterium, Avibacterium* and *Mannheimia*.



P-17: *Pasteurella multocida* cultivated on blood agar.
From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2004.

pasteurellosis [*pas"tər-ə-lo'sis*] infection with organisms of the genera ***Pasteurella*** and ***Mannheimia***. In animals includes septicemic pasteurellosis, pneumonic pasteurellosis, both of cattle, snuffles in rabbits and pasteurellosis of swine, sheep and goats. The causative bacteria include *Pasteurella multocida* types A, B, C, D, E and F, and ***Mannheimia*** *haemolytica*. Infection in humans often occurs following cat bites.
epidemic p. see **hemorrhagic** septicemia.
ovine, porcine and caprine p. the more common pneumonic disease is caused by *Mannheimia haemolytica* and the septicemic disease by *Pasteurella trehalosi.*
pneumonic p. the common pasteurellosis of cattle caused by ***Mannheimia*** *haemolytica* and sometimes *Pasteurella multocida* type A. Characterized by acute bronchopneumonia with fever, dyspnea, abnormal breath sounds, weak cough, severe toxemia and death in 24 to 48 hours.
septicemic p. see **hemorrhagic** septicemia.
pasteurization [*pas"chər-ĭ-za'shən*] the process of heating milk to destroy pathogenic microorganisms and delay the development of spoilage organisms. The holding method heats milk to at least 62.8°C (145°F) and holds it at that temperature for not less than 30 minutes. High-temperature short-time (HTST) pasteurization heats to 71.7°C (161°F) for at least 15 seconds. Ultrapasteurization heats to 88.3°C (191°F) for 1 second or 100°C (212°F) for 0.01 seconds.
Pasteurized Milk Ordinance (PMO) regulations approved by the Food and Drug Administration (USA) governing the design and maintenance of dairy farms and processing plants to make sanitation and milk quality uniform across state lines.
Pastinaca sativa the domestic parsnip; causes primary photosensitization, due to furocoumarin produced in response to the fungal or bacterial infection of the plant.
pastoral emanating from or pertaining to the use of land for pasture.
p. rearing raising of young, after weaning, on pasture where they are more susceptible to nutritional deficiencies and parasitic infestation than young reared indoors.
pasture fields or paddocks carrying a permanent or semipermanent growth of grasses and clovers or other legumes and usually some volunteer herbaceous plants. It is used as a complete or partial diet for herbivores and in some economies for omnivores. It may be permanent or temporary, even annual, irrigated or dry, native or improved.
clean p. refers to the status of the pasture as a source of infective helminth larvae and implies relative freedom. The degree of freedom from parasite larvae is important as a factor in prevention of parasitoses.
p. ley see **ley**.
p. meter device for measuring the amount of feed remaining; based on a design in which a flat metal plate traverses up a central spindle when the spindle is inserted through the plants so that it reaches the ground, the plate floating on top of the plants; measures in cow days.
native p. consists of the plants normally found growing wild in the area. Agriculturally speaking, this usually refers to areas with an annual rainfall of less than 20 in (500 mm). Areas with larger rainfalls usually carry improved pastures.
p. plants plants which occur naturally or are cultivated especially for growing in pasture to provide feed for grazing animals, with excess growth made into hay or ensilage.
p. rotation see rotational **grazing**.
pasturing the system of management based on the use of pasture as the principal source of dietary energy.
pasveer process the channel aeration method of sewage disposal in which the effluent is passed along deep channels 3–7 ft deep to undergo aeration.
patagiectomy [*pə-ta"zhe-ek'tə-me*] excision of the wing membrane on one side of the bird to prevent flight. See also **propatagium**.
patch [*pach*] a small area differing from the rest of a surface. In the skin, a large macule.
p. grafting see patch **graft**.
serosal p. creation of an adhesion between serosal surfaces in order to cover a defect or perforation of bowel, often accomplished by suturing another section of bowel over the area.
p. test a test of delayed type hypersensitivity in the skin used in the diagnosis of allergic contact dermatitis. The substance

VetBooks.ir



P-18: Radiograph of the skyline view of the patella.
From Lavin LM, Radiography in Veterinary Technology, 4th Edition. Saunders, 2007.

P-20: Testing the patellar reflex.
From Sharp NJH, Small Animal Spinal Disorders, 2nd Edition. Mosby, 2004.

suspected of being the cause is applied to the skin, either under a dressing (closed patch test) or without a covering (open patch test). The site is examined at regular intervals for up to 5 days to detect any inflammatory reaction of the skin.

patching antibody induced clustering of plasma membrane molecules, usually proteins or glycoproteins. Patching can also be induced by lectins.

patella pl. *patellae* [L.] a large sesamoid bone at the femorotibial joint. See also Table 10.

p. cubiti an anomalous sesamoid over the extensor aspect of the elbow; commonly seen in bats.

patellar of or pertaining to the patella.

p. cartilage a cartilaginous process borne on the medial side of the patella of horses and cattle.

p. fossa the depression in the anterior face of the vitreous humor in which the lens sits. Called also hyaloid fossa.

p. ligament the continuation of the central portion of the tendon of the quadriceps femoris muscle distal to the patella, extending from the patella to the tuberosity of the tibia; it is single in carnivores, pigs and sheep and triple in horses and cattle; called also patellar tendon. Called also patellar tendon.

p. ligament desmotomy section of the medial patellar ligament for relief of upward luxation of the patella in horses (and rarely, cattle).

p. luxation, p. dislocation a common, congenital or acquired orthopedic abnormality in dogs, causing mild to severe, continuous or intermittent lameness. *Medial* luxation is more common in toy or miniature breeds, often as an inherited defect and frequently associated with structural abnormalities of the distal femur and proximal tibia. *Lateral* luxation is less frequent, and occurs more often in large breeds associated with genu valgum. *Upward luxation and fixation* in cattle presents with temporary or permanent stiffness and extension of the affected hindlimb and the animal drags the tip of the toe. More common in Brahman cattle. The cause is not known. Correction is by medial patella desmotomy. Not common in foals and when seen usually in miniature horse foals. May be unilateral or bilateral and intermittent or complete. Most commonly occurs in a lateral direction.

P-19: Bilateral congenital patellar luxation.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

p. reflex involuntary contraction of the quadriceps muscle and jerky extension of the hindlimb when the patellar ligament is sharply tapped. It is often used as a test of nervous system function. Absence of the reflex, together with deficient muscle tone in the limb, suggests paralysis or paresis of the limb due to a lower motor neuron lesion affecting the femoral nerve. Called also quadriceps reflex.

p. tendon see patellar ligament (above).

patellectomy [*pat"ə-lek'tə-me*] excision of the patella.

patelliform [*pə-tel'ĭ-form*] shaped like a small plate.

patellofemoral [*pə-tel"o-fem'ə-rəl*] pertaining to the patella and femur.

patency [*pa'tən-se*] the condition of being open.

patent [*pa'tənt*] 1. open, unobstructed, or not closed. 2. apparent, evident.

p. ductus arteriosus (PDA) abnormal persistence of the left sixth aortic arch after birth leaving an open lumen in the ductus arteriosus, between the descending aorta and the pulmonary artery. The ductus arteriosus is open during prenatal life, allowing most of the blood of the fetus to bypass the lungs, but normally this channel closes shortly before birth. When the ductus arteriosus remains open, it places special burdens on the left ventricle and causes a diminished blood flow in the aorta. May remain open for up to 5 days in foals. One of the most common congenital heart defects in dogs, but less common in cats. Causes a continuous 'machinery' murmur that is loud in systole, soft in diastole, and a 'bounding' pulse. Correction is commonly carried out in dogs by surgical ligation of the structure or, more recently, transcatheter occlusion using coil embolization or deployment of various self-expanding devices.

p. ductus venosus see **ductus** venosus.

p. foramen ovale see **foramen** ovale (1).

p. medicine a drug or remedy protected by a trademark, available without a prescription.

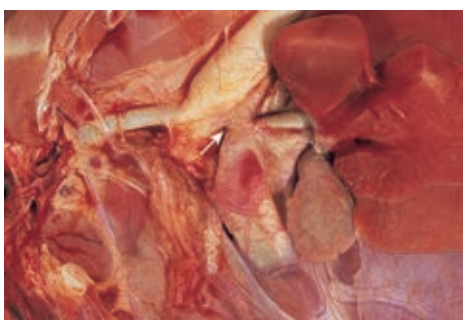
p. period the period during a disease in which the causative agent can be detected by clinicopathological tests, e.g. for helminth eggs.

p. ventricular septum includes several entities characterized by incomplete closure of ventricular wall. Characterized by palpable cardiac thrill and audible pansystolic murmur on both sides of the chest at birth, accompanied by exercise intolerance and developing dyspnea at rest. See also **ventricular** septal defect.

paternity testing see **parentage** testing.

Paterson's curse ***Echium*** *plantagineum*.

path [*path*] a course for a procedure, especially in statistical matters.



P-21: Patent ductus arteriosus (PDA) in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

p. analysis an analytical method suitable for the study of multiple variables. It has the advantage over the usual stepwise multiple regression analysis in that it allows the epidemiologist to decide the order in which the independent variables enter the regression equations, thus improving the chance that the modeled sequence of events will approximate the pattern in nature.

pathergasia [*path"ər-ga'zhe-ə*] mental malfunction, implying functional or structural damage, marked by abnormal behavior.

pathergy [*path'ər-je*] 1. a condition in which the application of a stimulus leaves the organism unduly susceptible to subsequent stimuli of a different kind. 2. a condition of being allergic to several antigens.

pathfinder [*path'find-ər*] 1. an instrument for locating urethral strictures. 2. a dental probe for tracing the course of root canals.

path(o)- word element. [Gr.] *disease*.

pathoanatomical diagnosis [*path"o-an"ə-tom'ĭ-kəl*] a diagnosis which defines the type and location of the disease without identifying the cause, e.g. polioencephalomalacia.

pathobiology [*path"o-bi-ol'ə-je*] pathology.

pathoclisis [*path"o-klis'is*] a specific sensitivity to specific toxins, or a specific affinity of certain toxins for certain systems or organs.

pathogen [*path'o-jən*] any disease-producing agent or microorganism.

p. risk factors risk factors dependent on the characteristics of the pathogen, e.g. virulence or persistence in the environment of a bacterium or virus.

pathogenesis [*path"o-jen'ə-sis*] the combination of mechanisms that operate at biochemical, cellular, anatomic and physiologic levels to cause pathoanatomic lesions and clinical disease. Pathogenetic studies aim to elucidate these mechanisms and their interactions.

pathogenic [*path-o-jen'ik*] capable of causing disease, e.g. bacteria, fungi, protozoa.

pathogenicity [*path"o-jə-nis'ĭ-te*] the ability of a pathogenic agent to produce disease in a host. See also **virulence**.

pathogeny [*path-oj'ə-ne*] pathogenesis.

pathognomonic [*path"og-no-mon'ik*] specifically distinctive or characteristic of a disease or pathological condition; denoting a sign or other indicant on which a diagnosis can be made.

pathological, pathologic [*path"o-loj'ĭ-kəl*] pertaining to or emanating from pathology.

p. anatomy see morbid **anatomy**.

pathologist [*pə-thol'ə-jist*] a specialist in pathology.

pathology [*pə-thol'ə-je*] 1. the study of disease, in particular its pathogenesis, and diagnosis by accurate interpretation of the associated biochemical, cellular and pathoanatomic changes. 2. the structural and functional manifestations of a disease.

clinical p. see **clinical** pathology.

comparative p. that which considers human disease processes in comparison with those of the lower animals.

experimental p. the study of artificially induced pathological processes.

oral p. that which treats of conditions causing or resulting from morbid anatomical or functional changes in the structures of the mouth.

surgical p. the pathology of disease processes that are surgically accessible for diagnosis or treatment.

pathomorphism [*path"o-mor'fiz-əm*] perverted or abnormal morphology.

pathonomia [*path-o-no'me-ə*] the science of the laws of disease.

pathophysiology [*path"o-fiz"e-ol'ə-je*] the physiology of disordered function.

pathway [*path'wā*] a course usually followed. In neurology, the nerve structures through which a sensory impression is conducted to the cerebral cortex (afferent pathway), or through which an impulse passes from the brain to the skeletal musculature (efferent pathway). Also used alone to indicate a sequence of reactions that convert one biological material to another (metabolic pathway).

biosynthetic p. the sequence of enzymatic steps in the synthesis of a specific end product in a living organism.

classical p. one of the two pathways of complement activation, initiated by antigen–antibody complexes and involving C1, C2 and C4. It leads to activation of C3 and the terminal pathway. See also alternate **complement** pathway.

coagulation p's see **coagulation** pathways.

direct oxidative p. see pentose phosphate pathway (below).

Embden–Meyerhof p. see **Embden–Meyerhof pathway**.

final common p. 1. the motor neurons by which nerve impulses from many central sources pass to a muscle or gland in the periphery. 2. any mechanism by which several independent effects ultimately exert a common influence.

pentose phosphate p. a pathway of hexose oxidation alternative to glycolysis in which glucose-6-phosphate undergoes two successive oxidations by NADP, each producing NADPH, the final forming a pentose phosphate. Called also the phosphogluconate pathway or hexose monophosphate shunt.

properdin p. alternative complement pathway.

-pathy word element. [Gr.] *morbid condition* or *disease;* generally used to designate a noninflammatory condition.

patient [*pa'shənt*] an animal that is ill or is undergoing treatment for disease.

p. data name, initials, sex, address, postcode, phone number.

p. monitoring continuous or frequent periodic clinical assessment.

p. rights are adapted from the statement applicable to human medicine. They are really only applicable to the client in the veterinary situation. See **client** rights.

patrilineal [*pat"rĭ-lin'e-əl*] descended through the male line.

Patterdale terrier a small (12–13 lb) hunting dog with a short, coarse coat in black, red, chocolate or black and tan. It has a broad head and ears that fold over; the tail is docked to a medium length. Called also Black fell terrier.

patterns [*pat'ərns*] the distribution of cases of disease, production maxima, population density or other measurable variable, in time or space. It may be random, or it may be in a pattern that is helpful in suggesting a diagnosis.

p. generators populations of neurons which generate a standard pattern of movements, e.g. respiratory basic rate and rhythm, rumination, mastication, eructation; they are not self-initiating but require stimulation from the brain or a sensory input.

patulin [*pat'u-lin*] a mycotoxin and an antibiotic substance derived from a group of fungi, including *Byssochlamys nivea*, *Penicillium* spp., which caused deaths when given to animals. The information suggests that patulin may also be a toxin.

patulous [*pat'u-ləs*] spread widely apart; open; distended.

Paullinia cupana [*paw-lin'e-ə*] a South American plant in the family Sapindaceae; contains caffeine; included are some herbal medicines that have poisoned dogs. Called also guarana.

paunch [*pawnch*] see **rumen**.

pause [*pawz*] an interruption, or rest.

compensatory p. the pause after a premature ventricular systole that occurs as the result of the impulse from the normal pacemaker conducting to the ventricle during its refractory period.

Pautrier microabscess [*po-tre-a'*] see Pautrier **microabscess**.

PAVE Program for the Assessment of Veterinary Education Equivalence. See **American Association of Veterinary State Boards**.

pavetamine the polyamine toxin which causes a myocarditis and sudden death syndrome in livestock in South Africa called gousiekte. See ***Fadogia homblei***, ***Pachystigma*** and ***Pavetta***.

Pavetta [*pə-vet'ə*] an African plant genus in the family Rubiaceae; plants contain the polyamine toxin, pavetamine, which causes myocarditis and sudden death (gousiekte). Includes *P. harborii*, *P. schumanniana*. Called also pavettabossie, tonnabossie, gousiekte tree, poison bride bush.

pavettabossie see ***Pavetta***.

pavilionitis inflammation of the fimbriated end of the oviduct.

Pavlovian conditioning see classical **conditioning**.

Pavo see **peafowl**.

paw [*paw*] foot; especially of carnivores and other digitigrade animals.

p. and mouth disease see paw and **mouth** disease.

pawing in horses, a form of behaviour characterized by persistent use of one forelimb to dig in the ground, or to thump it, or to scratch at a fixed object such as a door; stimulated by subacute pain, boredom.

pawpaw [*paw'paw*] see ***Carica papaya***.

PB *Pharmacopoeia Britannica* (British Pharmacopoeia).

Pb chemical symbol, *lead* (L. *plumbum*).

PBB polybrominated biphenyl.

PBFD psittacine beak and feather disease.

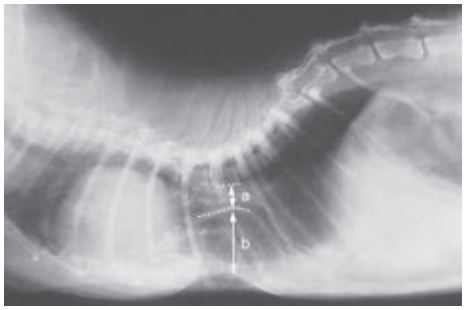
PBG-D porphobilinogen diaminase.

PBI protein-bound iodine.

PBS phosphate buffered saline.
p.c. [L.] *post cibum* (after meals).
PCA passive cutaneous anaphylaxis.
PCB polychlorinated biphenyl.
PCD polycystic disease.
PCG phonocardiogram.
PCNB pentachloronitrobenzene.
PCP pentachlorophenol.
PCR[1] polymerase chain reaction. The amplification of a specific DNA sequence, termed target or template sequence, that is present in a complex mixture, by adding two or more short oligonucleotides, also called primers, that are specific for the terminal or outer limits of the template sequence. The template–primers mixture is subjected to repeated cycles of heating to separate (melt) the double-stranded DNA and cooling in the presence of nucleotides and DNA polymerase such that the template sequence is copied at each cycle. Thermostable polymerases such as those obtained from a hot springs bacterium *Thermus aquaticus*, commonly termed *Taq* polymerase, are used. At the end of 20 to 30 such cycles, the amplified target sequence, which may have been present in as few as a single copy in the original mixture, can be readily detected, for example by electrophoresis and ethidium bromide staining in an argarose gel.
multiplex PCR the simultaneous amplification and detection of more than one specific template in a mixture by addition of more than one set of oligonucleotide primers.
nested PCR the primers used in the first round of amplification are either both replaced (nested PCR) with internally located primers for a second PCR reaction. Increases the sensitivity and specificity of the PCR.
quantitative PCR a means for quantifying the copy numbers of template DNA present in the original mixture. Usually achieved by the addition of a known amount of a target sequence that is amplified by the same primer set but can be differentiated, usually by size, at the end of the reaction and which compete for amplification. More amplification of the target sequence indicates relatively fewer template molecules. By running multiple PCR reactions with differing known amounts of the target sequence, the copy number of template molecules can be estimated.
real-time PCR a method for the detection and quantitation of an amplified PCR product based on incorporation or unquenching of a fluorescent reporter dye; the fluorescent signal increases in direct proportion to the amount of PCR product produced and is monitored at each cycle, 'in real time', such that the cycle number at which a significant increase in the amount of PCR product is first detected inversely correlates with the initial amount of target template.
reverse-transcriptase PCR (RT-PCR) a reaction applied when the target sequence is RNA, such as viral RNA or messenger RNA. Reverse transcriptase that copies DNA from an RNA template is performed before conventional PCR.
PCR[2] protein–calorie ratio.
PCT prothrombin consumption time.
PCTA see percutaneous transluminal **angioplasty**.
PCV packed-cell volume, the volume of packed red cells in milliliters per 100 mL of blood.
PCV2 porcine circovirus 2.
PD 1. pregnancy diagnosis. 2. predicted differences.
Pd chemical symbol, *palladium*.
pd potential difference; prism diopter.
PD_{50} the median protective dose of antiserum or vaccine; that which protects 50% of the animals challenged.
PDA patent ductus arteriosus.
PDGF platelet-derived growth factor; interacting with cell surface receptors and stimulating hydrolysis of inositol 1,4,5-triphosphate (IP_3).
PDS polydioxanone suture.
PDNS **porcine** dermatitis and nephropathy syndrome.
PDW platelet distribution width.
pe- for words beginning thus, see also those beginning *pae-*.
PE4 see **cyclonite**.
pea [*pē*] leguminous plants, members of the family Fabaceae. The plants may be used as green feed but are usually too succulent to make into hay. Silage is made from the crop residue after harvesting canning peas but is very subject to fungal infestation. Peas used for livestock feed include canning peas (*Pisum sativum*), field peas (*Pisum sativum* var. *arvense*), chick peas (*Cicer arietinum*) and cow peas (*Vigna sinensis*, syn. *V. catjang*, *V. unguiculata*). See also ***Lathyrus***.
angular p. *Lathyrus angulatus*.
Austrian p. ***Pisum*** *sativum* var. *arvense*.
bluebush p. ***Crotalaria*** *eremaea*.
Brazilian glory p. ***Sesbania*** *punicea*.
Broughton p. ***Swainsona*** *procumbens*.
budda p. *Aeschynomene indica*.
coral p. ***Abrus*** *precatorius*.
Darling p. specifically *Swainsona greyana* but used to refer to any ***Swainsona*** spp.
everlasting p. *Lathyrus sylvestris*, *L. latifolius*.
flat p. *Lathyrus sylvestris*.
flat-pod p. *Lathyrus cicera*.
Gambia p. ***Crotalaria*** *goreensis*.
garden p. ***Pisum*** *sativum*.
grass p. *Lathyrus sativus*.
gray swainson p. ***Swainsona*** *canescens*.
green p. *Lathyrus sativus*.
p. hulls a source of dietary fiber in manufactured pet foods.
Indian p. *Lathyrus sativus*.
kaley p. *Lathyrus hirsutus*.
perennial p. *Lathyrus latifolius*.
rosary p. see ***Abrus*** *precatorius*.
scurf p. see ***Cullen***.
singletary p. *Lathyrus pusillus*, *L. hirsutus*.
slender wild p. *Lathyrus angulatus*.
p.-struck poisoning by Darling peas. See ***Swainsona***.
sweet p. *Lathyrus odoratus*.
Tangier p. *Lathyrus tingitatus*.
p. vine ensilage is made from the commercial green pea plants after harvesting and removal of pods. It is now more common to harvest pods from the standing crop, which livestock then graze. Ensilage can be poisonous. Lambs show nervous signs soon after birth, an abnormal gait and intermittent recumbency with exercise, and there are degenerative lesions in the cerebral and cerebellar cortices at necropsy.
wild p. *Lathyrus incanus*, *L. sylvestris*.
wild winter p. *Lathyrus hirsutus*.
peach the fruiting tree of the genus *Prunus* in the family Rosaceae. The leaves and pips of this and other members of the family contain cyanogenetic glycosides and are potentially poisonous. Engorgement on the fruit may cause lactic acidosis and in occasional cases an entire fruit lodges in the esophagus and obstructs it. Called also *Prunus persica*.
poison p. ***Trema*** *tomentosa*. Called also peach-leaf poison bush.
peach-leaf poison bush see ***Trema***.
peacock see **peafowl**.
peafowl members of the genus *Pavo* of which there are a number of species including the common and the Javan. With the argus pheasant they represent the largest, most dramatically colored and longest tailed birds of the pheasant family Phasianidae. The peacock is a popular zoological specimen but has a typically raucous voice and may be muted surgically.
Péan forceps compression foceps with ratchet handles and long, wide, slightly bowed blades with longitudinal grooves.
peanut [*pē'nut*] seed kernels of the plant *Arachis hypogaea* cultivated as a commercial crop. Made into peanut meal after the oil is extracted. The kernels and meal are subject to fungal growth and may cause **aflatoxicosis**. Called also groundnut.
p. hulls a source of supplementary fiber in manufactured pet foods; it is high in lignin.
p. meal residue after the extraction of peanut oil; a high protein (40 to 50%) feed supplement; low in methionine, lysine and tryptophan. May be mixed with hulls when it becomes of less value because of the high (30%) of fiber.
p. oil a refined fixed oil extracted from peanuts; used as a solvent for drugs.
pearl 1. a small medicated granule, or a glass globule with a single dose of volatile medicine, as amyl nitrite. 2. a rounded mass of tough sputum, as seen in the early stages of an attack of bronchial asthma.
p. disease calcification of the nodular lesions of pleural tuberculosis in cattle.

VetBooks.ir

epidermic p's rounded concentric masses of epithelial cells found in certain papillomas and epitheliomas and as epithelial remnants of the dental lamina in the gingiva and jaws where they may give rise to cysts and tumors. Called also epithelial pearls.
epithelial p's see epidermic pearls (above).
keratin p. a concentrically laminated nodule of keratinized squames that occurs often in well-differentiated squamous cell carcinomas as a result of their dysplastic manner of growth. Called also squamous pearl.
squamous p. see keratin pearl (above).
pearled a method of processing grain feeds to increase digestibility; the grain is hulled and broken into small, smooth, pearl-like pieces. A process more suited to human nutrition where the appearance of the grain is more important.
PEARS porcine epidemic abortion and respiratory syndrome.
Pearson's chi-square test [*pēr'sən*] see **chi-square test**.
Pearson saw [*pēr'sən*] a chain saw used in large animal obstetrics. It is safe in operation but limited to making cuts in a longitudinal direction.
Pearson square [*pēr'sən*] a quick, simple method of calculating the amount of a supplement required to achieve the desired composition of a ration. Copies of tables of feed standards and feed compositions are necessary to carry out the sums involved.
peat, peat moss formed from decayed vegetable matter, particularly sphagnum mosses, in a wetland area or bog. Used as bedding for housed cattle and horses and is very absorbent of water. With pigs, peat bedding is a risk factor for atypical mycobacteriosis.
p. scours chronic diarrhea in ruminants grazing pasture on peat-derived soils low in copper and/or high in molybdenum. See also **copper** nutritional deficiency, **molybdenum**.
peavine 1. see ***Lathyrus***. 2. the haulms of pea vines after canning peas have been harvested. The ensilage made from these vines may be poisonous. See **pea**.
pebulate a thiocarbamate herbicide of low toxicity. Heavy doses cause muscular weakness, recumbency and weight loss.
peccary a small South American suiform animal of the genus *Tayassu.*, resembling a miniature wild boar. It has a sacculated stomach.
p. flea ***Pulex*** *porcinus.*
pecilomycosis infection with ***Paecilomyces***.
peck order the order of dominance established in a flock of birds and changed only by fighting. The concept is now transposed to all species and is of major importance where animals are kept in groups and have to compete for feed supplies and shelter.
pecten [*pek'tən*] pl. *pectines* [L.] 1. a comb; comblike structures. 2. a narrow zone in the anal canal, bounded cranially by the pectinate line.
p. oculi a black folded concertina shaped trapezoidal structure attached to the optic disk of the fowl and other birds; of unknown function.
p. ossis pubis cranial edge of the two pubic bones; so named because of the comb-like fringe of the tendon of the rectus abdominis which inserts here.
pubic p. cranial edge of the pubis bone; provides attachment to the abdominal muscles; see pectin ossis pubis (above).
retinal p. a black pleated outgrowth from the retina to cover the optic papilla in the avian eye.
Pecten yessoensis farmed scallop in the family Pectinidae; called also Japanese scallop.
pectenitis [*pek"tə-ni'tis*] inflammation of the pecten of the anus.
pectenosis [*pek"tə-no'sis*] stenosis of the anal canal due to an inelastic ring of tissue between the anal groove and anal crypts.
pectin [*pek'tin*] a homosaccharidic polymer of sugar acids of fruit, which forms gels with sugar at the proper pH; a purified form obtained from the acid extract of the rind of citrus fruits or from apple pomace is used as a protectant and in cooking. Has a gelatinizing capacity and may be important in stabilizing the foam in frothy bloat.
p. methyl esterase a plant enzyme thought to have significance in the cause of bloat in cattle because of its role in the digestion of pectin and liberation of frothing agents pectic and galacturonic acids.
pectinate [*pek'tĭ-nāt*] comb-shaped.
imperforate p. ligament a cause of primary glaucoma; considered to be an inherited defect in a number of breeds of dogs. See also pectinate ligament dysplasia (below).
p. ligament the comb-like trabeculae spanning the iridocorneal angle and, deep to that, the trabecular meshwork.
p. ligament dysplasia goniodysgenesis; anomalous development of the pectinate ligaments such that they fail to rarefy and obstruct the iridocorneal angle. A major contributing factor to closed-angle glaucoma in veterinary species.
p. line see pectinate **line**.
pectineal [*pek-tin'e-əl, pek"tĭ-ne'əl*] pertaining to the pecten.
pectineus muscle see Table 13.4.
pectiniform [*pek-tĭ'ni-form*] comb-shaped.
pectinotomy [*pek"tə-not'ə-me*] surgical transection of the pectineal muscle is a method of treatment in canine hip dysplasia; it provides relief from the pain associated with the condition.
pectoral [*pek'tər-əl*] 1. of or pertaining to the chest. 2. relieving disorders of the respiratory tract, as an expectorant.
p. girdle in birds is the three pairs of bones that support the wings: the furcula (fused clavicles), coracoids and scapulae. In mammals the coracoids and clavicles are often reduced, making the girdle incomplete.
p. limb the forelimb.
p. muscles extrinsic muscles of the forelimb arising from the brisket (ventral chest). See also Table 13. Outbreaks of defective development of these muscles are recorded in cattle.
p. myopathy a meat hygiene term for the lesions found in turkey and meat chicken breasts causing rejection of the meat. Called also green muscle disease.
pectoralis [*pek"tə-ra'lis*] [L.] pertaining to the chest or breast; pectoral.
pectus [L.] *breast, chest, thorax*.
p. carinatum a congential deformity in which the sternum is angled caudoventrally and protrudes; less common than pectus excavatum (below). Called also pigeon breast.
p. excavatum a congenital deformity in which the sternum and caudal ribs are concave, reducing the thoracic cavity space. Seen in puppies and kittens.
pedal [*ped'əl*] pertaining to the foot or feet.
p. arthritis seen most often in cattle with septic arthritis of the distal interphalangeal joint.
p. bone the distal phalanx of ungulates, especially the horse where it is called also *os ungulare* or coffin bone or P3.
p. bone rotation causing penetration of the sole of the horse's foot; a characteristic of severe laminitis.
p. fracture fractures of the pedal bone occur most commonly in horses. They may involve a wing or extensor process. They are usually transverse in cattle.
p. osteitis a rarefying osteitis of the pedal bone in the foot of the horse. Causes local pain and lameness.
pediatrics [*pe"de-at'riks*] a branch of human medicine that deals with the diseases of children; the name is also used in describing the medicine of young animals.
pedicellation [*ped"ĭ-sə-la'shən*] the development of a pedicle.
Pedicinus a genus of lice that infests monkeys. Members of the family Pediculidae.
P. eurygaster found on macaques.
P. mjobergi found on howler monkeys.
P. obtusus found on leaf and green monkeys and baboons.
P. patas found on colobus monkeys.
pedicle [*ped'ĭ-kəl*] a footlike, stemlike, or narrow basal part or structure, such as a narrow strip by which a graft of tissue remains attached to the donor site.
p. advancement technique a surgical technique, commonly used in the repair of skin defects and defects in eyelids, in which a



P-22: Lateral thoracic radiograph of a cat with severe pectus excavatum. The amount of depression is subjectively assessed based on the minimum distance between the vertebral column and the dorsal aspect of the sternum (a) or the depth of the cancavity (b). Note that in severe PE, costocartilages are also deformed.
From Fossum TW, Small Animal Surgery, 3rd Edition. Mosby, 2007.

P-23: Septic pedal interphalangeal arthritis.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

pedicle of tissue, usually skin, is formed and moved forward to fill a defect, without lateral movement. Various forms include the single or sliding flap, bipedicle flap, and V-Y technique. See also **flap** (1).

p. flap see pedicle **graft**.

omental p. flap a segment of omentum can be mobilized as a flap to aid in the reconstruction of the thoracic or body wall.

vertebral p. one of the paired parts of the vertebral arch that connect a lamina to the vertebral body.

Pedicularis a genus of plants in the family Scrophulariaceae that contain digitalis-like alkaloids and are potentially dangerous as poisons for animals. Called also louseworts.

pediculation [*pə-dik"u-la'shən*] 1. the process of forming a pedicle. 2. infestation with lice.

pediculectomy surgical removal of portions of vertebral pedicles at the level of the intervertebral foramen.

pediculicide [*pə-dik'u-lī-sīd*] 1. destroying lice. 2. an agent that destroys lice.

Pediculoides ventricosus the grain itch mite that infests cereal crops and stored hay and grain; parasitizes animals causing a mild dermatitis but a severe pruritus.

pediculosis [*pə-dik"u-lo'sis*] **louse** infestation.

pediculous [*pə-dik'u-ləs*] infested with lice.

pedigree [*ped'ĭ-gre*] a table, chart, diagram, or list of an animal's ancestors, used in genetics in the analysis of mendelian inheritance, and in the prediction of productivity and breed quality in the offspring.

p. analysis a useful basis for planning a program to eliminate an inherited defect; the analysis determines the probability that each prospective parent is homozygous for the normal gene, i.e. is not a carrier for the anomaly gene; potential parents with a probability of >95% can be used with confidence.

p. herds herds or flocks composed of animals whose pedigrees are known. Not necessarily stud herds or registered herd but the terms are usually synonymous.

p. index the average of the **predicted difference** of the sire and the cow index of the dam. The pedigree index is allotted to the offspring.

p. selection use of an individual's pedigree to select breeding animals.

p. verification verification via breed societies and production testing agencies, horse stud books and race records are all used; checks via coat color, blood cell antigens may assist.

ped(o)- [L.] *foot*.

pedogenesis [*pe"do-jen'ə-sis*] metamorphotic phenomenon of production of a number of separate individuals in an intermediate host, e.g. a snail, by a single larval form.

pedometer [*pə-dom'ə-tər*] instrument strapped on a limb and used in dairy cattle to electronically record walking activity as a measure of the occurrence of estrus or lameness.

peduncle [*pə-dung'kəl*] a stemlike connecting part, especially: (1) a collection of nerve fibers coursing between different regions in the central nervous system, or (2) the stalk by which a nonsessile tumor is attached to normal tissue.

cerebellar p's three pairs of thick, white fiber trunks that arise from the midbrain, pons and medulla and pass into the cerebellum on either side of the 4th ventricle.

cerebral p. the ventral half of the midbrain, divisible into a dorsal part (*tegmentum*) and a ventral part (the paired *crua cerebri*), which are separated by the substantia nigra.

olfactory p. caudal continuation of the olfactory bulb of the brain.

pineal p. see **habenula** (2).

peduncle disease see **coldwater disease**.

pedunculated [*pə-dung'ku-lāt-əd*] having a peduncle or stalk.

pedunculus [*pə-dung'ku-ləs*] [L.] *peduncle*.

PEEP positive-end-expiratory pressure.

peer review judgments of other scientists who work in the same field on the merits of papers submitted for publication, applications for research funding,

pefloxacin a third generation fluoroquinolone antibiotic, similar to ciprofloxacin.

PEG polyethylene glycol; percutaneous endoscopic gastrostomy.

peg [*peg*] a projecting structure; usually a small diameter, pointed piece of wood or metal, driven into a solid object.

rete p's see **rete** pegs.

p. sticking see **tent** pegging.

peg-leg osteomalacia. See **phosphorus** nutritional deficiency.

Pega ass Brazilian roan or dark gray donkey.

Peganum [*peg'ə-nəm*] a genus of plants in the family Zygophyllaceae. The plants contain β-carboline alkaloids, e.g. harmine, harmalol which cause incoordination and paralysis; includes *P. harmala* (African rue), *P. mexicana* (Mexican rue).

pegleg see **osteomalacia**.

PEG polyethylene glycol.

PEI pancreatic exocrine insufficiency.

Peke-faced a longhaired Persian cat with a very short, flattened face, resembling that of a Pekingese dog.

Pekin a deep-cream or buff canary meat duck with bright orange legs, which also has a fair egg output.

Pekingese a very small, compact dog with a large head, very short nose with undershot jaw, prominent eyes and pendulous ears. The coat is long, straight and profuse over the body, particularly around the neck where it forms a 'mane', and on the tail, which is carried over the back. Called also Peke, Foo dog, Lion dog. The breed is predisposed to distichiasis, hemivertebrae, intervertebral disk disease, proptosis, central corneal ulceration, facial fold pyoderma and anomalies of the upper respiratory tract.

pelada short-haired llama.

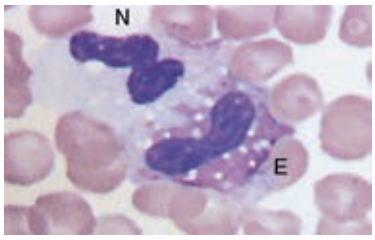
pelage [*pel'əj*] [Fr.] the hairy coat of mammals; the hairs, fur or wool of the body, limb and head, collectively.

pelagic living in the middle or near the surface of large bodies of water such as lakes or oceans.

Pelecitus roemeri filaroid nematode found in subcutaneous tissues, especially around the stifle joints, of wallabies and kangaroos. Called also *Dirofilaria roemeri*.

Pelger-Huët anomaly [*pel'gər*] an inherited anomaly of neutrophils and eosinophils in which there is hyposegmentation of the nuclei. Seen rarely in dogs, cats and Arabian horses with no clinical significance.

pseudo-P.-H. a. a transient hyposegmentation in neutrophils and eosinophils seen in cows, occasionally in dogs and in cats with FeLV-induced myeloid leukemia. May be mistaken as the congenital anomaly.



P-24: Nuclear hyposegmentation in neutrophil (N) and eosinophil (E) from a dog with Pelger-Huët anomaly.
From Hendrix CM, Sirois M, Laboratory Procedures for Veterinary Technicians, 5th Edition. Mosby, 2007.

VetBooks.ir

peliosis [*pel"e-o'sis*] purplish discoloration, usually due to vascular dilatation rather than hemorrhage.
p. hepatis in cattle, widespread dilatation of hepatic sinusoids, most severe around portal triads and under the liver capsule, caused by the profound expansion of blood volume that occurs in chronic ***Pimelea*** poisoning.
Pelistega europaea a gram-negative bacillus that causes respiratory disease in pigeons.
pellagra [*pə-lag'rə*] a syndrome in humans caused by a diet seriously deficient in niacin (or by failure to convert tryptophan to niacin). In dogs called blacktongue. See also **niacin** nutritional deficiency.
feline p. ulcerative stomatitis, especially of the tongue, and conjunctivitis.
pellagroid resembling pellagra.
pellet [*pel'ət*] a small pill or granule.
p. feeding see pelleted **feed**.
pellicle [*pel'ĭ-kəl*] 1. a thin scum forming on the surface of liquids. 2. a thin, nonliving outer covering.
dental p. a thin, acellular membrane of salivary proteins adsorbed to the enamel or cementum.
pellucid [*pə-loo'sid*] translucent.
Pelodera a genus of nematodes in the family Rhabditida.
P. strongyloides a freeliving worm which invades broken skin, usually from damp and infected bedding. Causes pelodera **dermatitis**.
pelt the undressed, raw skin of a wild animal with the fur in place. If from a sheep or goat there is a short growth of wool or mohair on the skin.
pelves [*pel'vēs*] plural form of pelvis.
pelvic [*pel'vik*] pertaining to the pelvis.
p. abscess commonest in horses as a result of a rectal tear during a manual examination. The tear is only mucosa deep and the infection is deposited in the pelvic fascia where an abscess develops. This has the potential to erode into the peritoneal cavity. The syndrome begins as a toxemia and fever caused by the local abscess but a common sequel is the abrupt appearance of severe abdominal pain and toxemic shock.
p. bone os coxae, comprising the ilium, ischium and pubis. See also Table 10.
p. canal the canal from the pelvic inlet to the pelvic outlet.
p. cavity the space bounded by the bones of the pelvis.
p. diaphragm the muscular structure formed by the levator ani and coccygeous muscles, separating the perianal tissues from the peritoneum.
p. inlet the cranial opening of the pelvis.
p. intestinal hernia see pelvic **hernia**.
p. ligaments include the dorsal, ventral and interosseous sacroiliac ligaments, the sacrotuberous and broad sacrotuberous ligaments, the sacrosciatic ligament and the iliolumbar ligaments.
p. limb the hindlimb.
p. nerve see Table 14.
p. organs includes reproductive organs, urinary bladder, ureter, rectum.
p. outlet the caudal opening of the pelvis, guarded by the pelvic diaphragm.
p. plexus the autonomic plexus that is distributed to the pelvic viscera that consists of the cranial vesical plexus, the middle genital plexus and the caudal hemorrhoidal plexus, located on the ventrolateral surface of the rectum. It innervates the urinary bladder, prostate, ductus deferens and cranial urethra. It is supplied by the hypogastric and pelvic splanchnic nerves.
p. splanchnic nerves see **nervi erigentes**.
p. symphysiotomy surgical separation of the symphysis in immature animals as an aid in dystocia due to maternal pelvic inadequacy.
p. urethra that part of the urethra that passes through the pelvis.
p. viscera includes urinary bladder and pelvic ureters and urethra, rectum, prostate, seminal vesicles, vas deferens and ampullae in males, and vagina cervix and uterus, possibly ovaries, in the female.
pelvicaliceal, pelvicalyceal pertaining to the renal pelves and calices.
pelvicephalometry [*pel"vĭ-sef"ə-lom'ə-tre*] measurement of the fetal head in relation to the maternal pelvis.
pelvifixation [*pel"vĭ-fik-sa'shən*] surgical fixation of a displaced pelvic organ.
pelvimeter [*pel-vim'ə-tər*] an instrument for measuring the pelvis.
pelvimetry [*pel-vim'ə-tre*] measurement of the capacity and diameter of the pelvis, either internally or externally or both, with the hands or with a pelvimeter.
pelviotomy [*pel"ve-ot'ə-me*] 1. incision or transection of a pelvic (hip) bone. 2. pyelotomy; incision of the renal pelvis.
pelviperitonitis [*pel"ve-per"ĭ-to-ni'tis*] inflammation of the pelvic peritoneum.
pelvirectal [*pel"vĭ-rek'təl*] pertaining to the pelvis and rectum.
pelvis [*pel'vis*] pl. *pelves;* the caudal portion of the trunk of the body, forming a basin bounded ventrally and laterally by the hip bones and dorsally by the sacrum and coccygeal vertebrae. Also applied to any basin-like structure, e.g. the renal pelvis. The bony pelvis is formed by the sacrum, coccyx, ilium, pubis and ischium.
android p. a type of pelvis typically found in the male. It is less easy to distinguish the sexes of domestic animal pelves than it is in humans.
extrarenal p. see renal pelvis (below).
rachitic p. one distorted as a result of rickets.
renal p. the funnel-shaped expansion of the cranial end of the ureter; it is usually within the renal sinus, but under certain conditions, a large part of it may be outside the kidney (extrarenal pelvis).
split p. one with a congenital separation at the symphysis pubis.
tipped p. a tilted pelvis as occurs in cows and causes the external urinary meatus to be higher than the anterior pelvic floor so that urine accumulates in the vagina. See also **urovagina**.
pelviureteral [*pel"ve-u-re'tər-əl*] relating to the renal pelvis and the ureter.
pelvospondylitis [*pel"vo-spon"də-li'tis*] inflammation of the pelvic portion of the spine.
Pembroke Welsh corgi see **Welsh corgi**.
pemoline [*pem'o-lēn*] a central nervous system stimulant.
pemphigoid [*pem'fĭ-goid*] 1. resembling pemphigus. 2. a group of skin disorders similar to but clearly distinguishable from pemphigus.
bullous p. an immune-mediated disease of skin and oral mucosa in which autoantibodies are formed against adhesion molecules of the epidermal-dermal junction. The inflammatory response results in cleft formation between the epidermis and dermis, with vesicles and bullae leading to deep ulcerations, mainly in the oral cavity, on lips and pinna. Even minor trauma causes lesions. Occurs rarely in dogs, cats and humans.
pemphigus [*pem'fĭ-gəs*] [Gr.] *pemphix* (blister); a group of immune-mediated diseases of the skin and mucous membranes caused by autoantibodies targeting adhesion molecules n the epidermis and characterized by vesicles, bullae, erosions and ulcerations; occurs in dogs, cats, goats and horses. There are three forms distinguished by the different adhesion molecules targeted: pemphigus foliaceus, pemphigus vulgaris and pemphigus erythematosus (see below).
p. erythematosus a form with features of both pemphigus foliaceus and lupus erythematosus; occurs in dogs and cats. There are erythematous, pustular lesions, mainly on the nose, periorbital skin and pinnae, and hypopigmentation of the planum nasale. Occurs most often in Collies where it is one of the diseases called Collie nose'.

P-25: Pemphigus foliaceus in a dog showing crusting erosive dermatitis on the nasal planum with depigmentation and loss of the normal cobblestone texture. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

p. foliaceus results from autoantibodies directed against desmoglein I, found in the superficial layers of the epidermis, paw pad and nasal planum. Autoantibodies in the skin of affected animals can be detected by immunofluorescence or immunoperoxidase tests. There are erythematous macules, and superficial sterile pustular eruptions that rupture, leaving a scaling disease, which may be generalized or limited to the face, ears, nasal planum, or feet. In dogs and cats, hyperkeratosis of foot pads is common, even in the absence of other lesions. Horses present multifocal to generalized crusting, scaling and alopecia, occasionally painful and/or pruritic, affecting the face, neck, trunk and extremities. Rare in goats, it results in pustules, crusts, scales and alopecia which predominate on the face, ventral abdomen, limbs, perineum, and tail.

p. vegetans a benign variant of pemphigus vulgaris, occurring only rarely in animals, in which the bullae are replaced by verrucoid hypertrophic vegetative masses.

p. vulgaris results from autoantibodies directed against desmoglein III, found in deeper levels of the epidermis and mucous membranes. There are vesicobullous eruptions followed by deep ulcerations and crusting, predominantly at mucocutaneous junctions and on oral mucosa; involvement of footpads and nail beds with loss of nails also occurs.

pen 1. a small enclosure in which animals are housed. 2. female swan.

add-on p. in a feedlot, one in which cattle are put together a few head at a time over several days or weeks. Has a risk for health problems.

calf rearing p. pens in which dairy calves are reared from birth until they are weaned off milk, commonly around 2 months of age, when they are eating sufficient solid food. The pens are located communally in an area of the dairy. Calves are usually reared in separate pens until weaned when they are penned in groups. Also called simply calf pens.

p. check the daily or twice daily examination of cattle in a feedlot to detect any sick animal. More frequent checks are made in the early period of a feeding program.

P-26: Hyperkeratosis of the footpads in a dog with pemphigus foliaceous.

P-27: Erosive dermatitis on the footpads of a dog with pemphigus vulgaris. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

p. checker the specially selected cowboys whose task it is to carry out intensive pen checks.

crowding p. situated at the entry to the milking shed. Pen can continually be made smaller so that the entry of cows into the milking parlor is facilited. Called also push pen.

p. deads feedlot term for cattle found dead in the pen as opposed to being found dead in the hospital pen. Suggest inadequate observation of the cattle.

p. design includes materials for floor and walls, floor drainage and warmth, disposal of feces and urine, sleep area versus feeding area, troughage and drinking facilities, space and number of occupants proposed.

pen-fed fed in small, compatible groups in pens to optimize feed utilization.

holding p. a pen, paddock or yard for holding a group of sheep or cattle temporarily, e.g. before slaughter, after shearing. A pen to which animals are added one by one until a group of sufficient size is accumulated.

maternity p. accommodation provided to encourage the establishment of the maternal–neonatal bond, to maximize the chances of survival of both and the return to a breeding status for the dam, and a good start for the growth period in the young animal. Includes maternity box stall, maternity barn.

push p. see crowding pen (above).

p. space space allocation per head of livestock proposed to be accommodated.

p. sweeps wool swept up from pens, shearing board, races.

wash p. a corral or pen with a solid floor and permanent sprinklers or other washing devices that jet upwards for cleaning cows collectively prior to milking. Usually associated with a holding pen.

Penaeus genus of farmed crustaceans in suborder Penaeidae; includes *P. chinensis* (fleshy or white prawn), *P. indicus* (Indian white prawn), *P. merguiensis* (banana prawn), *P. monodon* (giant tiger prawn), *P. vannamei* (whiteleg shrimp).

pencil bush ***Eremophila*** *deserti*.

pencil caustic ***Sarcostemma*** *australe*.

pendulous [*pen'du-ləs*] hanging loosely; dependent.

penectomy [*pe-nek'tə-me*] surgical removal of the penis.

penetrance [*pen'ə-trəns*] the frequency with which a heritable trait is manifested by individuals carrying the principal gene or genes conditioning it.

incomplete p. when penetrance is less than 100%.

penetrating [*pen'ə-trāt-ing*] breaching the tissues of the body.

penguin completely marine, aquatic flightless bird inhabiting only the southern hemisphere. There are six genera, all of them gregarious, monogamous and piscivorous. Includes King penguin (*Aptenodytes patagonicus*), Emperor penguin (*A. forsteri*), Crested penguin (*Eudyptes*) spp., Fairy penguin (*Eudyptula*) spp., and Adelie penguin (*Pygoscelis adeliae*).

-penia word element. [Gr.] *deficiency*.

penicillamine [*pen"i-sil'ə-mēn*] a product of penicillin which chelates copper and other metals; used in the treatment of copper accumulation associated with chronic hepatitis, copper-associated hepatopathy of Bedlington terriers, and lead poisoning. Called also D-penicillamine.

penicilliary radicles [*pen"i-sil'e-ar"e*] arborizing arterioles of the spleen, the blood supply for the splenic germinal centers.

penicillic acid [*pen"i-sil'ik*] a mycotoxin with antibiotic and carcinogenic acivity produced by various species of *Penicillium* and *Aspergillus*.

penicillin [*pen"i-sil'in*] any of a large group of natural or semisynthetic antibacterial antibiotics derived directly or indirectly from strains of fungi of the genus *Penicillium* and other soil-inhabiting fungi grown on special culture media. Penicillins exert a bactericidal as well as a bacteriostatic effect on susceptible bacteria by interfering with the final stages of the synthesis of peptidoglycan, a substance in the bacterial cell wall. Despite their relatively low toxicity for the host, they are active against many bacteria, especially gram-positive pathogens (streptococci, staphylococci); clostridia; certain gram-negative forms; certain spirochetes (*Treponema pallidum* and *T. pertenue*); and certain fungi. Certain strains of some target species, for example staphylococci, secrete the enzyme *penicillinase*, which inactivates penicillin and confers resistance to the antibiotic. Some of the newer penicillins, for example methicillin, are more effective against penicillinase-producing

VetBooks.ir

organisms. An additional class of extended-spectrum penicillins has been approved for use; it includes piperacillin and mezlocillin. There are four groups of penicillins, the natural penicillins, penicillin G and penicillin V, with a narrow spectrum of activity, mainly against gram-positive bacteria; the aminopenicillins (amoxicillin, ampicillin and hetacillin) are semisynthetic derivatives and have a broad spectrum of activity against gram-positive and many gram-negative organisms, but are susceptible to penicillinase-producing *Staphylococcus* spp.; penicillinase-resistant penicillins, which include cloxacillin, methicillin, nafcillin and oxacillin; and the extended-spectrum penicillins (azlocillin, carbenicillin, mezlocillin, piperacillin and ticarcillin), which are effective against gram-positive and gram-negative organisms, including *Pseudomonas aeruginosa*. Allergic reaction to penicillin occurs in some animals. The reaction may be slight—a stinging or burning sensation at the site of injection—or it can be more serious—severe dermatitis or even anaphylactic shock, which may be fatal.

p. allergy degradation products of the penicillins act as haptens, binding to proteins and stimulating an immune response.

p. G benzylpenicillin; the most widely used penicillin; used principally in the treatment of infections due to gram-positive bacteria. *Procaine* penicillin G is a parenteral preparation that gives extended action for up to 24 hours and *benzathine* penicillin G is a very slow-release, parenteral preparation that maintains blood concentrations for several days.

p.-induced hemolytic anemia rare problem in horses which develop IgG anti-penicillin antibodies.

phenoxymethyl p. a biosynthetically or semisynthetically produced antibiotic, similar to penicillin G, for oral administration; not affected by gastric acid and is suitable for oral administration. Its antibacterial spectrum is the same as for penicillin G. Called also penicillin V.

p. V see phenoxymethyl penicillin (above).

penicillinase [*pen"ĭ-sil'ĭ-nās*] an enzyme produced by bacteria that inactivates penicillin by hydrolyzing the beta-lactam ring, thus increasing resistance to the antibiotic; a purified form from *Bacillus cereus* is used in the treatment of reactions to penicillin.

penicilliosis [*pen"ĭ-sil"e-o'sis*] infection by the blue-green mold, *Penicillium*; causes a necrotic rhinitis and sinusitis that occasionally extends to the mouth or orbit. The disease is similar to aspergillosis.

P

Penicillium [*pen"ĭ-sil'e-əm*] a genus of mold-forming fungi that grow on stored feed and in growing plants. Some produce antibiotics, some can be opportunistic pathogens and some produce mycotoxins, including patulin.

P. chrysogenum, P. notatum cultures of these fungi produce penicillin. Now regarded as a single species, *P. chrysogenum*.

P. citreo-viride produces the neurotoxin citreoviridin which causes paralysis, convulsions and death in humans eating contaminated yellow rice. Resembles beriberi, thought originally to be due to thiamine deficiency.

P. citrinum produces ochratoxin, citrinin, causes growth retardation, hepatic necrosis and nephropathy.

P. claviforme, P. cyclopium, P. divergens, P. equinum, P. expansum, P. griseofulvum, P. lapidosum, P. leucopus, P. melinii, P. novae-zeelandiae, P. patulum **(syn. *P. urticae*)** produce the antibiotic patulin.

P. crustosum produces tremorgens which cause incoordination and recumbency and was thought at one time to cause ryegrass staggers.

P. cyclopium, P. janthinellum, P. nigricans (syn. **P. janczewskii),** ***P. palitans, P. piscarum, P. puberulum*** are soil fungi and produce tremorgens which cause tremor, ataxia and muscular rigidity in animals grazing infested pasture. The fungi were once thought to be involved in causing ryegrass staggers.

P. estinogenum produces tremorgens and causes incoordination and recumbency.

P. islandicum causes hepatic necrosis and has carcinogenic properties.

P. purpurogenum produces rubratoxin and causes anemia and widespread hemorrhages in chickens.

P. roqueforti grows on stored grain and ensilage; suspected of causing bovine abortion and retained placenta via an unidentified toxin. Produces roquefortine which causes tetanic convulsions in dogs.

P. rubrum contains rubratoxin which causes abdominal pain, jaundice, convulsions. Now classified as *P. purpurogenum*.

P. simplicissimus fungus which produces tremorgens, causing incoordination and recumbency.

P. viridicatum grows on stored grain and produces ochratoxin which causes nephrosis mostly in pigs. Also produces citrinin and viomellin.

penicilloyl-polylysine [*pen"ĭ-sil'o-əl pol"e-li'sēn*] prepared from polylysine and a penicillic acid, it is used as a diagnostic agent; intradermal reaction elicits a wheal and erythema response in those sensitive to penicillin.

penicillus [*pen"ĭ-sil'əs*] pl. *penicilli* [L.] any of the brushlike groups of arterial branches in the lobules of the spleen.

penile [*pe'nīl*] of or pertaining to the penis.

p. abscess causes apparent swelling of the ventral body line of affected bulls. The lesions are moderately painful to touch, are firm and hard and persist for long periods. Associated adhesions make it impossible for the bull to extrude the penis.

p. amputation carried out in horses for treatment of extensive neoplasms and granulomas and for paralysis of the penis.

p. apical ligament a fibrous band along the dorsal surface of the distal part of the penis of the bull which helps to produce a slight twist (with a left-hand spiral) in the erect state. Abnormality may contribute to the development of deviation of the penis during erection.

p. bulb a swelling at the origin of the corpus spongiosum penis.

p. crura the origins of the corpus cavernosum penis at the ischial arch.

p. deviation a common defect only in bulls in which an abnormality of the apical ligament, present congenitally or caused by trauma, causes a spiral, lateral or ventral deviation of the penis, causing difficulty in mating. See also penile translocation (below), **corkscrew** penis.

p. erection see **erection**.

p. eversion see penile **prolapse**.

p. frenulum see penile preputial **frenulum**.

p. glans see **glans** penis.

p. hair-ring long hairs from the preputial orifice pack up around the penis of the bull and cause pressure necrosis occasionally creating a hypospadia. Can occur in any species carrying preputial hairs.

p. hematoma in bulls, in which it is a common event, it is caused by trauma while the bull is mating a cow. It occurs halfway along the penis with an obvious swelling and an inability to breed cows. There is a tear in the tunica albuginea of the corpus cavernosum and a surrounding hematoma.

p. hypoplasia occurs as part of an intersex deformity or as a sequel to prepubertal castration.

inadequate p. protrusion due to congenital shortness of the penis, adhesions caused by injury and hematoma, and persistence of the penile frenulum.

p. ossification common radiological finding in aged dogs; ossification caudal to os penis.

p. paralysis common only in stallions, due to local neurological lesion, or as a rare occurrence after the administration of phenothiazine-derived tranquilizers or severe debility.

persistent p. frenulum see penile preputial **frenulum**.

p. prepuce see **prepuce**.

p. protrusion failure caused by persistent frenulum, adhesions to prepuce, fibropapilloma.

p. sigmoid flexure the S-shaped bend in the penis of ruminants, camelids and pigs; effacement of this flexure is the principal means of creating an elongation of the penis during erection; the subsequent detumescence of the penis brings about a return of the S-shape and retraction of the now flaccid organ to its resting position in these species. See Table 13.2 retractor penis.

p. tiedown an adhesion of the penis to the prepuce created artificially to prepare the animal as a teaser.

p. translocation surgical procedure to prepare teaser bulls or rams; the prepuce and its orifice are displaced laterally in order to eliminate any chance of copulation.

VetBooks.ir

p. tunica albuginea the dense connective tissue covering of the corpus cavernosum penis.

penis [*pe'nis*] the external male organ of urination and copulation. Its structure varies a great deal between the species. In carnivores and horses the bulk of the organ is erectile tissue; in cats and dogs there is a bone included in the glans. In cats the penis is directed backwards (retromingent). In ruminants and pigs the bulk of the penis is connective tissue and the organ is long and firm and has a large sigmoid flexure which disappears when the penis is in the erect state. In rams and goat bucks the penile urethra is continued beyond the glans as the urethral process. See also **penile**.

broken p. see **penile** hematoma.

corkscrew p. see **corkscrew** penis.

corpus cavernosum p. one of the two bodies that make up the dorsal compartment of erectile tissue of the penis, grooved below to carry the corpus spongiosum penis (syn. corpus cavernosum urethrae). It arises from each side of the ischial arch as the crus penis and at its anterior end is enclosed by the glans which is an extension of the corpus spongiosum; in many species the two bodies fuse in the midline and in carnivores the bodies are continued cranially as an os penis that supports the surrounding glans penis.

corpus spongiosum p. a column of erectile tissue around the urethra of the penis and extending into the glans penis.

double p. diphallus.

short p. an uncommon, possibly inherited, defect in some breeds of cattle.

supernumerary p. a rare deformity, usually ectopic.

p. urethral process detached the free end of the penis has a bifid structure.

penitis [*pe-ni'tis*] inflammation of the penis. See also **balanitis**.

penitrem-A a tremorgen toxin causing nervous signs and renal damage; isolated from the fungi *Penicillium cyclopium*, *P. palitans*, *P. puberulum*, *P. viridicatum*.

Penn State particle separator stacked series of sieves with different aperture sizes used to determine the particle size distribution in total mixed rations.

PennHIP Pennsylvania Hip Improvement Program. A radiographic screening method for assessing, measuring and interpreting hip joint laxity as a means of detecting hip dysplasia, using a range of techniques in positioning and evaluation of X-rays taken by veterinarians specially trained in the methodology. A database is maintained as a research tool. The service is carried out at the University of Pennsylvania.

penniform [*pen'ĭ-form*] shaped like a feather.

Pennisetum a genus of grasses in the family Poaceae.

P. americanum a large grass used as a fodder crop. Can be poisonous if infested with the fungus *Claviceps fusiformis*, known to cause agalactia in sows. Called cattail, bulrush, Indian, horse or pearl millet.

P. ciliare a grass of the family Poaceae; called also *Cenchrus ciliaris*, buffel grass. Grazing of pure or near-pure swards of this pasture plant by horses can cause nutritional secondary hyperparathyroidism because most of the calcium in the grass is in the form of oxalate crystals and unavailable for absorption. In very lush pasture it can cause acute oxalate poisoning in sheep and cattle, but only if they are very hungry.

P. clandestinum perennial, creeping grass with hairy leaves and inconspicuous flowers. Has a rapid summer growth period; suitable for green chop, silage or grazing. May have a low fiber content and cause depression of fat content of milk. A very valuable grass producing an enormous bulk of feed in suitable climates. It can be poisonous, causing so-called kikuyu poisoning of cattle, a high case-fatality ratio syndrome of salivation, dehydration, sham drinking, ruminal distention and stasis, staggering and a high-stepping gait, kidney dysfunction, rumen microvesication and nephrosis. Various causes have been suggested, the currently most promising being wortmannin, a viridian-like furanosteroid mycotoxin produced by *Fusarium torulosum*. Trichothecene mycotoxins from *Myrothecium* spp. and *Phoma herbarum* growing on plant debris after a period of lush growth or infestation with army caterpillars is unlikely as the cause. *P. clandestinum* can also cause oxalate and nitrite poisoning. Called also Kikuyu grass.

P. glaucum see *Pennisetum americanum* (above).

P. polystachyon *P. purpureum*. Called also mission grass.

P. purpureum its oxalate content is known and is associated with the occurrence of nutritional secondary hyperparathyroidism in horses. Called also elephant or Napier grass.

P. typhoides see *Pennisetum americanum* (above).

penny-cress see ***Thlaspi arvense***.

pennyroyal [*pen"e-roi'əl*] ***Mentha pulegium***.

native p. *Mentha satureoides*.

p. oil an aromatic extract of several mint plants, particularly *Mentha pulegium* and *M. canadensis*. Sometimes used as an insecticide or insect repellent on dogs and cats, but can be a cause of poisoning, particularly in cats, causing liver necrosis.

pennywort ***Cotyledon umbilicus***.

Penrose drain see Penrose **drain**.

Penstemon a North American genus of plants in the family Scrophulariaceae which act as facultative selenium converters; the selenocompounds produced by the plant cause alopecia, lameness, laminitis; called also beard tongue.

pent(a)- word element. [Gr.] *five*.

pentachloronaphthalene see **chlorinated naphthalenes**.

pentachloronitrobenzene (PCNB) a soil fungicide used extensively in agricultural crops and not known to cause illness but it is of environmental concern because of its capacity to enter the human food chain and cause tissue residues in all species.

pentachlorophenol (PCP) [*pen"tə-klo"ro-fen'ol*] a wood preservative with great capacity to enter the body by any route, including percutaneously; causes weight loss, low milk production and general debility. PCP can uncouple oxdative phosphorylation in exposed animals, leading to hyperthermia, tremors and seizures.

pentadactyl [*pen"tə-dak'təl*] having five digits.

pentadiene isomers compounds used as herbicides; can cause excitability, incoordination and prostration.

pentagastrin a synthetic pentapeptide consisting of β-alanine and C-terminal tetrapeptide of gastrin; once used in a test of gastric secretory function.

Pentalinon luteum Central American plant in the family Apocynaceae; causes sudden death, generlized hemorrhaage and cardiomyopathy in cattle. Called also *Urechites lutea*, bejuco marrullero, wild allamanda, yellow nightshade.

pentamer [*pen'tə-mər*] a polymer formed from five molecules of a monomer.

pentamidine isethionate [*pen-tam'ĭ-dēn*] a diamidine derivative effective against protozoa. Used in the treatment of *Babesia*, *Leishmania* and *Pneumocystis* spp.

pentaploidy [*pen'tə-ploi"de*] having a chromosome number which is five times the standard number.

pentasomy [*pen"tə-so'me*] the presence of three additional chromosomes of one type (e.g. 5 X chromosomes) in an otherwise diploid cell (2n+3).

pentastome [*pen'tə-stōm*] aberrant arthropod parasite belonging to the class Pentastomida. Includes *Linguatula*, *Porocephalus* and *Armillifer* spp.

pentastomiasis [*pen"tə-sto-mi'ə-sis*] infection by parasites of the class Pentastomida; found in the respiratory tract of reptiles.

Pentastomida [*pen"tə-sto'mid-ə*] see **pentastome**.

pentastomidiasis [*pen"tə-sto-mid'i-ā-sis*] infection with pentastomes.

Pentatrichomonas [*pen"tə-trik"o-mo'nəs*] a genus of protozoan parasites with five flagella.

***P. hominis* (syn. *Trichomonas hominis, T. intestinalis*)** found in dogs, primates and humans but appears to be nonpathogenic.

pentavalent [*pen"tə-va'lənt*] having a valence of five.

p. antimony compounds see **antimony**.

p. organic arsenicals includes the pharmaceuticals arsanilic acid, roxarsone, nitarsone. See also organic **arsenical**.

pentazocine lactate [*pen-taz'o-sēn*] a synthetic narcotic used as an analgesic.

pentetic acid [*pen-tet'ik*] diethylenetriamine penta-acetic acid, an iron-chelating agent.

pentobarbital [*pen"to-bahr'bĭ-təl*] a short- to intermediate-acting barbiturate; used as a hypnotic and sedative in the form of the sodium salt.

pentobarbitone [*pen"to-bahr'bĭ-tōn*] pentobarbital.

VetBooks.ir

pentosan polysulfate [*pen'to-san*] a chondroprotective drug used in the treatment of osteoarthritis in dog and cats and feline lower urinary tract disease.

pentosans pentose polysaccharides found in fruits and other foods; form pentoses on hydrolysis.

pentose a monosaccharide containing five carbon atoms in a molecule.

p. cycle see pentose phosphate pathway (below).

p. phosphate pathway called also pentose cycle; see pentose phosphate **pathway**.

pentoside [*pen'to-sīd*] a compound (glycoside) of pentose with another substance.

pentosuria [*pen"to-su're-ə*] high concentration of pentose in the urine.

pentoxifylline [*pen"tok-sif'ə-lin*] a methylxanthine derivative that causes an increase in microvascular blood flow and has an immunomodulating effect by suppression of proinflammatory cytokines. Used in the treatment of some canine skin diseases, especially vasculitis and dermatomyositis.

pentylenetetrazol see **leptazol**.

penumbra [*pə-num'brə*] a blurred edge to an image, a halo effect, in an X-ray film caused usually by an overlarge focal spot exacerbated by a long object-to-film distance.

People for the Ethical Treatment of Animals (PETA) an activist animal rights group that is active in garnering political and public support and funding against the mistreatment of animals. It is considered a radical organization by some and its goal is that animals are not available to humans for food, clothing, entertainment, or medical advancement.

People's Dispensary for Sick Animals a charitable organization providing free veterinary care to sick and injured animals in Britain.

PEP phosphoenolpyruvate.

PEP-CK phosphoenolpyruvate-carboxykinase.

peplomer [*pep'lo-mər*] a glycoprotein structural unit found in the lipoprotein envelope of enveloped viruses, e.g. H and N spikes of influenza virus. Called also spikes.

peplos [*pep'lōs*] the lipoprotein envelope of some types of virions.

pepper grass [*pep'ər*] ***Panicum*** *whitei*.

pepperina ***Schinus*** *molle*.

Peppin famous strain of Australian Merino sheep.

pepsin [*pep'sin*] a proteolytic enzyme that is the principal digestive component of gastric juice. It acts as a catalyst in the chemical breakdown of protein to form a mixture of polypeptides; it is formed from pepsinogen in the presence of acid or, autocatalytically, in the presence of pepsin itself. Pepsin also has milk-clotting action similar to that of rennin and thereby facilitates the digestion of milk protein.

p. barrier the gastric mucosal mechanism which prevents rediffusion of hydrochloric acid back into gastric tissues; includes an electrical resistance, mucus, plus bicarbonate ions trapped in the mucus, endogenous prostaglandins.

pepsinogen [*pep-sin'ə-jən*] a zymogen secreted by the chief cells of the gastric glands and converted into pepsin in the presence of gastric acid or of pepsin itself.

plasma p. high concentrations are indicative of extensive mucosal damage in the abomasum, as in ostertagiasis in ruminants.

peptic [*pep'tik*] pertaining to pepsin or to digestion or to the action of gastric juices.

p. ulcer an ulceration of the mucous membrane of the esophagus, stomach or duodenum, caused by the action of the acid gastric juice. There are two kinds of peptic ulcers: *gastric* ulcers occur in the stomach; *duodenal* ulcers occur in the duodenum, the part of the small intestine nearest the stomach. Most common in cattle and dogs, but they do occur sporadically in other species. See also **Zollinger-Ellison syndrome**.

peptidase [*pep'tī-dās*] any of a subclass of proteolytic enzymes that catalyze the hydrolysis of peptide linkages.

peptide [*pep'tīd*] any of a class of compounds of low molecular weight which yield two or more amino acids on hydrolysis; known as di-, tri-, tetra- etc. peptides, depending on the number of amino acids in the molecule. Peptides form the constituent parts of proteins. See also **polypeptide**.

leader p. peptide coded for by a leader sequence in the regulation of transcription by attenuation in bacteria.

P-28: Peptic ulcer of the duodenum.
From Kumar V, Robbins Basic Pathology, 8th Edition. Saunders, 2007.

p. map a pattern of peptide fragments, characteristic of a particular protein. Produced by using either proteolytic enzymes such as trypsin or chemicals such as cyanogen bromide to cut proteins at a relatively small number of particular sites, the peptide fragments are then separated by chromatographic or electrophoretic procedures. Called also fingerprint.

p.-para-aminobenzoic acid test see **BT-PABA test**.

signal p. see signal **sequence**.

peptidergic [*pep"tī-dur'jik*] of or pertaining to neurons that secrete peptide hormones.

p. neurons a group of enteric interneurons which contain peptides; the peptides include enkephalins and somatostatins.

peptidoglycan [*pep"tī-do-gli'kən*] a glycan (polysaccharide) attached to short cross-linked peptides; found in bacterial cell walls and responsible for their structural rigidity.

peptidolytic [*pep"tī-do-lit'ik*] capable of splitting up peptide bonds.

peptidoma see **apudoma**.

peptidyl site see peptidyl-**tRNA** binding site.

Peptococcus [*pep"to-kok'əs*] a genus of non-spore-forming, gram-positive anaerobic cocci which have been recovered from infected dog bite wounds. The type species is *P. niger*.

peptogenic [*pep"to-jen'ik*] 1. producing pepsin or peptones. 2. promoting digestion.

peptolysis [*pep-tol'ī-sis*] the splitting up of peptone.

peptone [*pep'tōn*] protein derivative formed by partial hydrolysis of a protein.

Peptoniphilus indolicus [*pep"to-nĭ-phil'əs*] a coccoid gram-positive anaerobic bacterium implicated in the etiology of mastitis in cattle, especially in summer mastitis. Previously called *Peptostreptococcus indolicus*.

Peptostreptococcus [*pep"to-strep"to-kok'əs*] gram-positive round or oval bacteria occurring singly or in long chains. Found as an normal flora in many species and humans.

P. anaerobius isolated from abscesses in dogs and cats.

P. heliotrinreducens now called *Slackia heliotrinireducens*.

P. indolicus implicated in the etiology of mastitis in cattle, especially in summer mastitis. Now called *Peptoniphilus indolicus*.

per- word element. [L.] 1. throughout, completely, extremely. 2. in chemistry, a large amount, combination of an element in its highest valency.

per anum [*pər a'nəm*] [L.] *through the anus*.

per cloaca [*pər klo-ā'kə*] water can be absorbed from the cloaca, so in birds fluids can be administered into the cloaca for rehydration.

per oral peroral; per os.

per os [L.] *by mouth*.

per primam [L.] *by first intention;* see also **healing**.

per rectum [L.] *by way of the rectum*.

per secundam [L.] *by second intention;* see also **healing**.

per tertiam [L.] *by third intention;* see also **healing**.

per tubam [L.] *through a tube*.

per vaginam [L.] *through the vagina*.

peracetic acid [*per"ə-se'tik*] a potent disinfectant used as a 3% concentration; suitable for the destruction of anthrax spores.

peracid [*per-as'id*] an acid containing more than the usual quantity of oxygen.

peracute [*per"ə-kūt'*] very acute; a duration of a few hours only.

peramine metabolite of the fungus *Neotyphodium (Acremonium) lolii*; repellent to insects.

Perca a genus of freshwater fish in the family Percidae; includes **perch** and **pike-perch**.

VetBooks.ir

P. pluviatilis European freshwater fish species used extensively as food; introduced into many countries. Variously regarded as a valuable sports species or as a pest. Called also redfin perch.

Percavirus a genus in the subfamily *Gammaherpesvirinae* that contains *Equid herpesvirus 2, Equid herpesvirus 5* and *Mustelid herpesvirus 1*.

percentile [*pər-sen'tīl*] 1. one of 100 equal parts of a series of measurements, each group being of equal size, and arranged in order of their magnitude; the 20th percentile is the value in the series below which 20% of the values fall. 2. the dividing points between such groups.

perception [*pər-sep'shən*] the conscious mental registration of a sensory stimulus. The ability of animals to perceive is apparent from their responses to the application of stimuli but the nature of the perceptivity is only surmised. The difficulty in examining an animal is to decide whether a failure to respond to a stimulus is due to lack of perception, inability to respond or disinclination to do so.

perch common name given to fish in the genus *Perca* and, with some variations, in other genera.

giant sea p. see ***Lates calcarifer***.

redfin p. see ***Perca pluviatilis***.

Percheron a French heavy draft horse, of graceful build and action. Gray, white or black, 15.2–17 hands high.

perching characteristic resting posture of birds on thin branches or perches; facilitated by anatomical arrangement of the digital flexor tendons—when the bird squats the knee and hock joints are flexed and the digital tendons flex passively, the digits grasping the perch.

perchlorate ion one of the competing ions which blocks the uptake and transport of iodine ions.

percolate [*pur'ko-lāt*] 1. to strain; to submit to percolation. 2. a liquid that has been submitted to percolation. 3. to trickle slowly through a substance.

percolation [*pur"kə-la'shən*] the extraction of soluble parts of a drug by passing a solvent liquid through it.

percuss [*pər-kus'*] to perform percussion.

percussible [*pər-kus'ĭ-bəl*] detectable on percussion.

percussion [*pər-kŭ'shən*] in veterinary diagnosis, striking a part of the body with short, sharp blows of the fingers in order to determine the size, position and density of the underlying parts by the sound obtained. Percussion is most commonly used on the chest and back for examination of the heart and lungs. For example, since the heart is not resonant and the adjacent lungs are, when the examiner's fingers strike the chest over the heart the sound waves will change in pitch. This serves as a guide to the precise location and size of the heart. The value of percussion in animals is limited by their haircoat, their reluctance to cooperate and their anatomy. Radiology and ultrasonographic imaging have pretty much supplanted the percussionist.

auscultatory p. auscultation of the sound produced by percussion. See also **auscultation** with percussion.

immediate p. that in which the blow is struck directly against the body surface.

mediate p. that in which a pleximeter is used.

palpatory p. a combination of palpation and percussion, affording tactile rather than auditory impressions. See also **ballottement**.

p. therapy see **coupage**.

percussor [*pər-kus'ər*] an instrument for performing percussion.

P-29: Percheron horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

percutaneous [*pur"ku-ta'ne-əs*] performed through the skin, e.g. percutaneous cystocentesis.

Père David's deer (*Elaphurus davidianus*) a Chinese deer found only in zoos or park reserves. It has a long tail and branched antlers.

perencephaly [*per"ən-sef'ə-le*] porencephaly.

Perendale a dual-purpose, polled, New Zealand sheep, produced by crossing the Romney Marsh and Cheviot breeds; wool 28–32 microns. It has a head clear of wool and a profile and stance like the Cheviot.

perennial [*pə-ren'e-əl*] a plant with a life cycle of more than one year.

perfect state [*pur'fəkt*] the sexual stage in the life cycle of fungi.

perfloxacin a fluorinated quinolone antibiotic with a broad range of activity against gram-negative, gram-positive and anerobic bacteria.

perforans [*pur'fə-ranz*] [L.] *penetrating;* a term applied to various muscles and nerves.

perforating canals canals in bone through which blood vessels pass.

perforation [*pur"fə-ra'shən*] a hole or break in the containing walls or membranes of an organ or structure of the body. Perforation occurs when erosion, infection or other factors create a weak spot in the organ and internal pressure causes a rupture. It also may result from a deep penetrating wound caused by trauma.

bladder p. usually the result of obstructive urolithiasis with eventual leakage of urine into the peritoneal cavity. See also congenital **urinary bladder** rupture.

eardrum p. occurs when an infectious process erodes the tympanic membrane or leads to increased pressure in the middle ear.

esophageal p. causes local cellulitis and obstruction of the esophagus.

gallbladder p. sometimes occurs as a complication of **cholecystitis** and **gallstones**. When the gallbladder is infected, necrosis may progress to the point of destroying the wall so that the bile spills out into the abdominal cavity causing biliary peritonitis.

intestinal p. a complication of ulcerative colitis (see **colitis**), **intestinal** obstruction, ulceration and other disorders in which there is inflammation of the intestinal wall or obstruction of the intestinal lumen.

ulcer p. a complication of duodenal and gastric ulcers. It requires immediate surgical correction to prevent hemorrhage, shock and peritonitis.

urethral p. is usually a result of obstructive urolithiasis; urine collects in a ventral subcutaneous site.

perforin [*pur'fə-rin*] a protein in cytotoxic T lymphocytes that creates transmembrane pores that act as ion channels in the target cell. Structurally and chemically related to C9 protein of complement which performs a similar function.

performance [*pər-for'məns*] in the context of animals, a comprehensive term including productivity, racing performance, reproductive efficiency, and any other form of activity that contributes to the owner's financial and psychological welfare.

p. diet one formulated to be high in energy, fat and protein, and highly digestible. Used not only for performance animals, but also suitable for other above-maintenance requirements such as reproduction, lactation, growth, stress and after surgery or trauma.

p. testing a widely used technique in agricultural animals. Sample animals are tested in controlled surroundings and on controlled diets and ranked in the order of their productivity, e.g. bull test stations.

performing animals animals trained to perform unusual acts as an entertainment for humans. The practice could be subject to cruel procedures and the animals could be brutalized to perform painful movements. Of some importance is the imposition by humans of training in tricks that are demeaning to the animals and hold them up to ridicule.

perfusate a liquid that has been subjected to perfusion.

perfusion [*pər-fu'zhən*] 1. the act of pouring through or over; especially the passage of a fluid through the vessels of a specific organ. 2. a liquid poured through or over an organ or tissue.

p. pressure the gradient between arterial blood pressure and venous pressure in a comparable location in the vascular tree.

pulmonary p. blood flow through the pulmonary capillaries.
renal p. the rate of perfusion in the kidney is much higher than in any other organ. The rate of formation of urine depends to a large extent on the perfusion rate.
p. scan using pulmonary scintigraphy, radionucleotide agents injected into a peripheral vein can be detected where it is trapped in the pulmonary capillary bed. Used to assess pulmonary blood flow.
p. technique maintenance of blood circulation to tissues during cardiopulmonary bypass.
p.:ventilation ratio see **ventilation**: perfusion ratio.

pergolide [*pur'go-līd*] a dopamine receptor agonist used in the treatment of equine Cushing's syndrome. Withdrawn from the market in the USA.

peri- word element. [Gr.] *around, near*. See also words beginning *para-*.

periacinar see **acinar, centrilobular**.
p. necrosis see **centrilobular** necrosis.

periadenitis [*per"e-ad"ə-ni'tis*] inflammation of tissues around a gland.

periadnexal in dermatology, surrounding or in the vicinity of pilosebaceous units (hair follicles and sweat glands). See also **periglandular infiltrates**.

periampullary [*per"e-am'pu-lar"e*] situated around an ampulla.

perianal [*per"e-a'nəl*] around the anus.
p. abscess under the skin outside the anal canal. Causes sufficient pain to inhibit defecation.
p. fistulae a syndrome of inflammation, ulceration, and draining sinuses and fistulae in the perianal region of dogs, particularly German shepherds. The lesions include fistulae of the anal sinuses, anal sac rupture and fistulae, submucous fistulae and sinuses and fistulae of the rectum. Clinical signs include painful defecation and unpleasant odor. A variety of medical treatments and surgical techniques have been developed, but the condition can be very resistant to treatment. Called also anal furunculosis.
p. gland modified sebaceous glands found in skin around the anus of dogs. Other regions also contain modified glands, e.g. the perineum, prepuce, thigh, dorsal lumbosacral area and tail base. Called also circumanal glands, hepatoid glands.
p. gland hyperplasia most perianal gland enlargements in male dogs are hormone-dependent hyperplasia and regress following castration.
p. gland tumors nodular hyperplasia, adenomas and carcinomas are common in older male dogs, occurring occasionally in females.
p. pyoderma see perianal fistulae (above).
p. sinus see perianal fistulae (above).
p. warts papilloma around anus, virus possibly transmitted by veterinarian performing rectal examination.

periangiitis [*per"e-an"je-i'tis*] inflammation of the tissue around a blood or lymph vessel.

periangiocholitis [*per"e-an"je-o-ko-li'tis*] inflammation of tissues around the bile ducts; pericholangitis.

periaortitis [*per"e-a"or-ti'tis*] inflammation of tissues around the aorta.

periapical [*per"e-ap'ĭ-kəl*] surrounding the apex of the root of a tooth.

periaqueductal gray [*per"e-ak"wĭ-duk'təl*] a core of gray matter nervous tissue surrounding the cerebral aqueduct in the midbrain.

periarterial [*per"e-ahr-tēr'e-əl*] around an artery.

P-30: Perianal fistulae. Severe ulcerative dermatitis of the entire perianal region with numerous deep fistulae. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

periarteriolar lymphoid sheath [*per"e-ahr-tē-re-o'lər*] splenic white pulp, containing mainly T lymphocytes, surrounding arteries.

periarteritis [*per"e-ahr"tə-ri'tis*] inflammation of the outer coat of an artery and of the tissues surrounding it.
p. nodosa an inflammatory disease of the coats of small and medium-sized arteries, marked by a variety of systemic signs. Seen sporadically in domestic animals. See also **collagen** diseases. Called also Kussmaul's disease, polyarteritis, panarteritis nodosa.

periarthritis [*per"e-ahr-thri'tis*] inflammation of the tissues around a joint.

periarticular [*per"e-ahr-tik'u-lər*] situated around a joint.
p. osteophytes bony excrescences around the periphery of a joint.

periauricular cyst [*per"e-aw-rik'u-lər*] dentigerous cyst. See **dental** cyst.

periaxial [*per"e-ak'se-əl*] around an axis.

periaxillary [*per"e-ak'sĭ-lar"e*] around the axilla.

periblast [*per"e-blast'*] the portion of the blastoderm of telolecithal eggs, the cells of which lack complete cell membranes.

peribronchial [*per"e-brong'ke-əl*] around a bronchus or bronchi.

peribronchiolar [*per"e-brong-ki'o-lər*] around the bronchioles.

peribronchiolitis [*per"e-brong"ke-o-li'tis*] inflammation of the tissues around the bronchioles.

peribronchitis [*per"e-brong-ki'tis*] a form of bronchitis consisting of inflammation and thickening of the tissues around the bronchi.

pericaliceal, pericalyceal [*per"e-kal"ĭ-se'əl*] situated near or around a renal calix.

pericallosal [*per"e-kə-lo'səl*] situated around the corpus callosum.

pericardectomy [*per"e-kahr-dek'tə-me*] pericardiectomy

pericardiac [*per"e-kahr'de-ak*] pertaining to the pericardium; around the heart.

pericardial [*per"e-kahr'de-əl*] pertaining to the pericardium.
p. diaphragmatic hernia see **peritoneopericardial** hernia.
p. effusion accumulation of fluid within the pericardial space; may be due to pericarditis, when much inflammatory exudate accumulates, part of a general edematous state, or neoplasia. In dogs, it is commonly associated with hemangiosarcoma of the right atrium or heart base chemodectoma, but idiopathic pericardial effucsion also occurs. Characterized by enlargement of the cardiac silhouette on radiography and outline on percussion, muffling of heart sounds and congestive heart failure due to compression of the heart by cardiac **tamponade**.
p. fibrosis a chronic change in pericarditis, leading to constriction that limits diastolic ventricular volume. See also constrictive **pericarditis**.
p. friction rub see pericardial **rub**.
p. inflammation see **pericarditis**.
p. knock an early diastolic sound caused by loss of pericardial elasticity accompanying fibrosis that limits ventricular filling.
p. paracentesis see **pericardiocentesis**.
p. tamponade see cardiac **tamponade**.
p. window surgical excision of part of the pericardial sac to provide drainage of the pericardium, usually to relieve cardiac tamponade.

pericardicentesis [*per"e-kahr"de-sen-te'sis*] pericardiocentesis.

pericardiectomy [*per"e-kahr"de-ek'tə-me*] excision of a portion of the pericardium. A form of treatment for pericardial effusion and cardiac tamponade. See also **pericardiostomy**.

pericardiocentesis [*per"e-kahr"de-o-sen-te'sis*] surgical puncture of the pericardial cavity with aspiration of fluid, usually for the purpose of obtaining fluid for cytological examination or to relieve cardiac tamponade.

pericardiolysis [*per"e-kahr"de-ol'ĭ-sis*] the operative freeing of adhesions between the visceral and parietal pericardium.

pericardiophrenic [*per"e-kahr"de-o-fren'ik*] pertaining to the pericardium and diaphragm.

pericardiopleural [*per"e-kahr"de-o-ploor'əl*] pertaining to the pericardium and pleura.

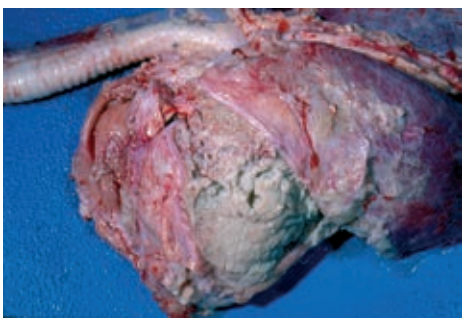
pericardiorrhaphy [*per"e-kahr"de-or'ə-fe*] suture of the pericardium.

pericardiostomy [*per"e-kahr"de-os'tə-me*] creation of an opening into the pericardium, usually for drainage of effusions.

pericardiotomy [*per"e-kahr"de-ot'ə-me*] incision of pericardium.
balloon p. a balloon placed in the pericardial space by percutaneous catheterization is used to create a window in the pericardium. Used in treatment of recurring pericardial effusion and cardiac tamponade.

P-31: Pericardiocentesis in a dog.
From Tilley LP, et al, Manual of Canine and Feline Cardiology, 4th Edition. Saunders, 2008.

pericarditis [*per"e-kahr-di'tis*] inflammation of the pericardium. Initially there is an audible friction rub on auscultation. Later as fluid accumulates there is a muffling of the heart sounds and sometimes a washing machine sound on auscultation. Congestive heart failure develops terminally. Classified according to exudate produced as fibrinous, fibrinohemorrhagic, hemorrhagic, purulent.
bread-and-butter p. see **bread and butter pericarditis**.
constrictive p. adhesions between the epicardium and pericardium may limit dilatation of the heart sufficiently to cause congestive heart failure. See also cardiac **tamponade**.
niche p. an abattoir finding in normal cattle; small red velvety patches on the outside of the great vessels.
traumatic p. occurs in cattle and goats, rarely sheep, when a sharp foreign body is swallowed and lodges in the reticulum, subsequently perforating its wall. The perforation may go as far forward as the pericardial sac, especially if the animal is pregnant. The animal dies of a combination of congestive heart failure and toxemia due to the bacterial infection and restrictive pericarditis.
pericardium [*per"ĭ-kahr'de-əm*] the fibroserous sac enclosing the heart and the roots of the great vessels, composed of external (fibrous) and internal (serous) layers; the serous layer is, in turn, divided into a parietal part that lines the fibrous pericardium, and a visceral part that coats the heart muscle. See also **pericardial**.
adherent p. one abnormally connected with the heart by dense fibrous tissue.
congenitally absent p. the heart lies free in the pleural sac; recorded in dogs.
fibrous p. the external layer of the pericardium, consisting of dense fibrous tissue.
parietal p. the parietal layer of the serous pericardium, which is in contact with the fibrous pericardium.
serous p. the inner, serous portion of pericardium, consisting of two layers, visceral and parietal; the space between the layers is the pericardial cavity.
visceral p. the inner layer of the serous pericardium, which is intimately attached to the heart and roots of the great vessels. Called also epicardium.
pericecal [*per"e-se'kəl*] around the cecum.
pericecitis [*per"e-se-si'tis*] inflammation of the tissues around the cecum.
pericellular [*per"e-sel'u-lər*] surrounding a cell.



P-32: Purulent traumatic pericarditis.

pericementitis [*per"e-se"mən-ti'tis*] periodontitis.
pericervical around the cervix, especially the uterine cervix.
p. abscess caused by trauma during parturition or laceration during mating. Causes infertility.
pericholangitis [*per"e-ko"lan-ji'tis*] inflammation of tissues surrounding the bile ducts; periangiocholitis.
pericholecystitis [*per"e-ko"lə-sis-ti'tis*] inflammation of tissues around the gallbladder.
perichondrial, perichondral [*per"ĭ-kon'dre-əl*] pertaining to or composed of perichondrium.
p. mineralization aberrant deposits of calcium salts in the perichondrium.
p. ring surrounds and supports the growth plate at the end of each long bone.
perichondritis [*per"e-kon-dri'tis*] inflammation of the perichondrium.
perichondrium [*per"ĭ-kon'dre-əm*] the layer of fibrous connective tissue investing all cartilage except the articular cartilage of synovial joints.
perichordal [*per"e-kor'dəl*] surrounding the notochord.
perichoroidal [*per"e-kor-oi'dəl*] surrounding the choroid coat of the eye.
pericolic [*per"e-kol'ik*] around the colon.
pericolitis, pericolonitis [*per"e-ko-li'tis*] inflammation around the colon, especially of its peritoneal coat.
pericolpitis [*per"e-kol-pi'tis*] inflammation of the tissues around the vagina; perivaginitis.
periconchal [*per"e-kong'kəl*] around the concha.
Periconia a fungus that grows on forage growing in the field and contains an unidentified hepatoxin. Livestock grazing the infected forage may develop hepatic injury and photosensitization.
pericorneal [*per"e-kor'ne-əl*] around the cornea.
pericoronal [*per"e-kor'ə-nəl*] around the crown of a tooth.
pericoronitis [*per"e-kor"o-ni'tis*] inflammation of the gums around a crown, usually associated with eruption.
pericranitis [*per"e-kra-ni'tis*] inflammation of the pericranium.
pericranium [*per"e-kra'ne-əm*] the periosteum of the skull.
pericystitis [*per"e-sis-ti'tis*] inflammation of tissues about the bladder.
pericyte [*per'e-sīt*] one of the peculiar elongated, contractile cells found wrapped about precapillary arterioles outside the basement membrane.
pericytial [*per"e-si'te-əl*] around a cell.
periderm [*per'ĭ-durm"*] the outer layer of the bilaminar fetal epidermis, generally disappearing before birth. Called also epitrichium.
peridesmitis [*per"e-dez-mi'tis*] inflammation of the peridesmium.
peridesmium [*per"ĭ-dez'me-əm*] the areolar membrane that covers the ligaments.
perididymis [*per"ĭ-ep"ĭ-did'ə-mis*] the tunica vaginalis testis, the membrane covering the front and sides of the testis and epididymis.
perididymitis [*per"ĭ-did"ə-mi'tis*] inflammation of the tunica vaginalis testis.
peridiverticulitis [*per"e-di"vər-tik"u-li'tis*] inflammation around an intestinal diverticulum.
peridontal [*per"e-don'təl*] periodontal.
periductal [*per"e-duk'təl*] around a duct.
periduodenitis [*per"e-doo"o-də-ni'tis*] inflammation around the duodenum.
peridural [*per"e-doo'rəl*] external to the dura mater.
periencephalitis [*per"e-en-sef"ə-li'tis*] inflammation of the surface of the brain.
periencephalomeningitis [*per"e-en-sef"ə-lo-men"in-ji'tis*] inflammation of the cerebral cortex and meninges.
perienteritis [*per"e-en"tər-i'tis*] inflammation of the peritoneal coat of the intestines.
periesophageal [*per"e-ə-sof'ə-je-əl*] around the esophagus.
p. hiatal hernia see paraesophageal **hernia**.
periesophagitis [*per"e-ə-sof'ə-ji'tis*] inflammation of the tissues around the esophagus.
perifistular [*per"e-fis'tu-lər*] around a fistula.
perifollicular [*per"e-fə-lik'u-lər*] surrounding a follicle.
perifolliculitis [*per"e-fə-lik"u-li'tis*] inflammation around the hair follicles.
nodular granular p. see **Majocchi's granuloma**.
perigangliitis [*per"e-gang"gle-i'tis*] inflammation around a ganglion.
perigastric [*per"e-gas'trik*] around the stomach; pertaining to the peritoneal coat of the stomach.

VetBooks.ir

perigastritis [*per"e-gas-tri'tis*] inflammation of the peritoneal coat of the stomach.
periglandular infiltrates [*per"e-glan'du-lər*] in dermatohistopathology, dermal cellular infiltrates around glands. Called also periadnexal.
perihepatic [*per"e-hə-pat'ik*] around the liver.
perihepatitis [*per"e-hep"ə-ti'tis*] inflammation of the peritoneal coat of the liver and the surrounding tissue.
peri-islet [*per"e-i'let*] situated around the islets of Langerhans.
perijejunitis [*per"e-je"joo-ni'tis*] inflammation around the jejunum.
perikaryon [*per"e-kar'e-on*] the cell body of a neuron.
perilabyrinthitis [*per"e-lab"ə-rin-thi'tis*] inflammation of the tissues around the labyrinth.
perilacunar [*per"e-lə-ku'nər*] around the lacunae.
p. bone see perilacunar **bone**.
perilaryngitis [*per"e-lar"in-ji'tis*] inflammation of the tissues around the larynx.
perilenticular [*per"e-len-tik'u-lər*] around the crystalline lens.
perilesional [*per"e-le'zhən-əl*] located or occurring around a lesion.
perilimbic, perilimbal [*per"e-lim'bik, per"e-lim'bəl*] around the limbus of the eye.
Perilla frutescens [*pə-ril'ə*] North American plant, in the family Lamiaceae, containing ipomeanol-like toxins which cause acute bovine pulmonary emphysema (interstitial pneumonia). Called also purple mint plant, wild mint.
perilla mint ketone [*pə-ril'ə*] toxic ketone found in *Perilla frutescens* (mint bush) causes interstitial pneumonia in cattle.
perilymph, perilympha [*per'e-limf, per"e-lim'fə*] the fluid contained in the space separating the membranous and osseous labyrinths of the ear.
perilymphangitis [*per"e-lim"fan-ji'tis*] inflammation around a lymphatic vessel.
perimeningitis [*per"e-men"in-ji'tis*] pachymeningitis; inflammation of the dura mater.
perimetritis [*per"ĭ-mə-tri'tis*] a localized inflammation of the tissues around the uterus.
perimetrium [*per"ĭ-me'tre-əm*] the serous membrane enveloping the uterus.
perimyelitis [*per"e-mi"ə-li'tis*] inflammation of (1) the pia of the spinal cord, or (2) the endosteum.
perimyositis [*per"e-mi"o-si'tis*] inflammation of connective tissue around a muscle.
perimysiitis [*per"e-mi"se-i'tis*] inflammation of the perimysium; myofibrositis.
perimysium [*per"ĭ-mis'e-əm*] connective tissue demarcating a fascicle of skeletal muscle fibers.
perinatal [*per"e-na'təl*] relating to the period shortly before and after birth; the actual time varies between species. The last 10 to 15% of the pregnancy before parturition to the end of a comparable period after birth would cover present usage of the term.
p. mortality the percentage of animals in the danger period which die, as a ratio of the total number exposed.
perinatologist [*per"e-na-tol'ə-jist*] a specialist in perinatology.
perinatology [*per"e-na-tol'ə-je*] the branch of veterinary medicine (obstetrics and pediatrics) dealing with the fetus and the newborn during the perinatal period.
perineal [*per"ĭ-ne'əl*] pertaining to the perineum.
p. body central tendon of the perineum. The fibromuscular mass in the median plane between the anus and vulva or anus and bulbus penis of the perineum where the bulbospongiosus, external anal sphincter, the levator ani and transverse perineal muscles attach. Called also *centrum tendineum perinea*, *perinea*, *corpus perineale*.
p. fistula see **perianal** fistula.
Gelpi p. retractor a small self-retaining tissue retractor.
p. hernia a defect in the pelvic diaphragm that permits deviation of the rectum and protrusion of pelvic fat and abdominal contents, particularly the prostate and urinary bladder. Clinical signs include a uni- or bilateral ventrolateral perianal swelling with constipation or straining. Seen most often in middle-aged, entire male dogs, but occurs rarely in females and in cats.
p. laceration laceration of the perineal area such as by the birth of a foal. Three degrees of severity are recognized. *First degree* laceration is when only the mucosa of the vulva and vagina are involved. *Second degree* is when the submucosa and muscularis layers of the vulva, the anal sphincter and the perineal body are involved. *Third degree* is when there is also tearing through the rectovaginal septum, the muscles of the vagina and rectum, and the perineal body.

P-33: First degree perineal laceration showing tearing of the dorsal commissure of the vulva.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

p. reconstruction various surgical techniques are used to repair perineal lacerations. It is necessary to reconstruct the rectal floor and vaginal roof.
p. reflex stimulation of the perineum causes contraction of the anal sphincter and flexion of the tail. It is a test of the integrity of the caudal spinal segments and the pudendal nerve. Called also the anal reflex.
p. sling a surgical technique that uses a fascial strip under the urethra to increase resistance to urine flow in the treatment of urinary incontinence.
perineocele [*per"ĭ-ne'o-sēl*] a hernia between the rectum and the prostate or between the rectum and the vagina.
perineomelia [*per"ĭ-ne'o-mel'e-ə*] an ectopic limb which projects from the perineum.
perineoplasty [*per"ĭ-ne'o-plas"te*] plastic repair of the perineum.
perineorrhaphy [*per"ĭ-ne-or'ə-fe*] suture of the perineum.
perineotomy [*per"ĭ-ne-ot'ə-me*] incision of the perineum.
perineovaginal [*per"ĭ-ne"o-vaj'ĭ-nəl*] pertaining to or communicating with the perineum and vagina.
perinephric [*per"e-nef'rik*] around the kidney.
perinephritis [*per"e-nə-fri'tis*] inflammation of the perinephrium.
perinephrium [*per"ĭ-nef're-əm*] the peritoneal envelope and other tissues around the kidney.
perineum [*per"ĭ-ne'əm*] the region between the tail and the ischiatic arch, especially the region between the anus and genital organs made up of the pelvic diaphragm and associated structures occupying the pelvic outlet, bounded ventrally by the pelvic symphysis, laterally by the ischial tuberosities, and dorsally by the coccygeal vertebrae. During parturition the perineum may be torn, resulting in possible damage to the urinary meatus and anal sphincter. To avoid a perineal laceration the veterinarian may cut the perineum just before delivery and suture the incision after delivery. See also **episiotomy**, **perineorrhaphy**.
perineural [*per"ĭ-noor'əl*] around a nerve.
p. block see perineural **block**.
perineuritis [*per"e-nŏŏ-ri'tis*] inflammation of the perineurium.
perineurium [*per"e-noor'e-əm*] the connective tissue sheath surrounding each bundle (fascicle) of nerve fibers in a peripheral nerve.
perinuclear space [*per"e-noo'kle-ər*] the space between the inner and outer nuclear membranes as illustrated in electron microscope recordings.
perioceutics [*pĕr"e-o-soo'tiks*] topical application of medication into the periodontal pockets.
periocoronitis [*pĕr"e-o-kor-ə-ni'tis*] inflammation around the crown of a tooth.

periocular [*per"e-ok'u-lər*] around the eye.
p. hemorrhage a sign of viral hemorrhagic septicemia and vitamin C deficiency in fish.
periodic repeated or recurring at intervals.
p. movement see **cyclical**.
p. reassessment re-examination at intervals of registered veterinarians to ensure their continued educational refreshment. Adequate performance obligatory for reregistration.
periodicity [*pēr"e-o-dis'ĭ-te*] recurrence at regular intervals of time.
circadian p. every 24 hours.
diurnal p. twice daily.
periodontal [*per"e-o-don'təl*] around a tooth; pertaining to the periodontium.
p. abscess a localized, acute infection that may drain into the gingival pocket or directly through the gum. There is often local bone destruction. See also **malar** abscess.
p. charting recording the periodontal indices in dental records.
p. disease any disease or disorder of the periodontium. See also **periodontitis**.
p. fibrous hyperplasia see periodontal fibromatous **epulis**.
p. indices indicators of periodontal health; includes amount of plaque and calculus, changes in the gingiva, probing depth, evaluation of attachment, and grade of mobility.
p. ligament the connective tissue that occupies the space between each tooth and its socket and that suspends the tooth.
p. pocket a deep space between the gingiva and the crown or root of a tooth. It can be the result of hyperplasia of the gingiva (false pocket) or migration of the epithelial attachment toward the apex (true pocket).
p. probe a round or flat instrument with markings on the side to measure the depth in millimeters of the gingival sulcus or periodontal pocket. See also periodontal probing (below).
p. probing measuring the depth of a gingival sulcus or periodontal pocket in millimeters, using a periodontal probe. Increased probing depth occurs with attachment loss.
p. pseudopocket gingival hyperplasia or swelling causes increase in gingival height and thereby increased sulcus depth, but the periodontal membrane and alveolar bone are normal.
periodontics [*per"e-o-don'tiks*] the branch of dentistry dealing with the study and treatment of diseases of the periodontium.
periodontist [*per"e-o-don'tist*] a dentist who specializes in periodontics.
periodontitis [*per"e-o-don-ti'tis*] plaque-induced inflammation of the periodontium. The condition is caused by residual food, bacteria and calcium deposits (tartar) that collect in the spaces between the gum and lower part of the tooth crown. If it continues unchecked the inflammation will spread to the bone in which the teeth are rooted. The bone then resorbs and the teeth are slowly detached from their supporting tissues. A common problem in dogs and cats and in sheep, causing premature loss of teeth and in the case of sheep, culling. Called also peridentitis, pyorrhea. See also **cara inchada**.
periodontium [*per"e-o-don'she-əm*] pl. *periodontia* [L.] the tissues investing and supporting the teeth, including the periodontal ligament, cementum, alveolar bone and gingiva.
periomphalic [*per"e-om-fal'ik*] situated around the umbilicus.
perionychia [*per"e-o-nik'e-ə*] see **paronychia**.
perionychitis [*per"e-o-ni-ki'tis*] see **paronychia**.

P-34: A periodontal probe used to evaluate the depth of the periodontal pocket. From DuPont GA, DeBowes JL, Atlas of Dental Radiography in Dogs and Cats. Saunders, 2008.

perionychium [*per"e-o-nik'e-əm*] the epidermis bordering a nail or claw.
perioophoritis [*per"e-o-of"o-ri'tis*] inflammation of the tissues around the ovary.
perioophorosalpingitis [*per"e-o-of"o-ro-sal"pin-ji'tis*] inflammation of the tissues around the ovary and oviduct.
perioperative [*per"e-op'ar-ə-tiv*] pertaining or relating to the period immediately before and/or after an operation, as perioperative care. Usually relates to immediately before, as in perioperative antibiotics, extending to just after.
periophthalmic [*per"e-of-thal'mik*] periocular.
periople [*per'e-o"pəl*] the layer of soft, light-colored horn which covers the coronary border of the hoof in ungulates and serves as a transition between soft skin and hard hoof wall.
perioplic [*per"e-o'plik*] pertaining to or emanating from periople.
perioral [*per"e-or'əl*] around the mouth.
periorbita [*per"e-or'bĭ-tə*] the fascial sheet that encloses the eye and its muscles that is continuous medially with the periosteum of the bones forming the orbit.
periorbital [*per"e-or'bĭ-təl*] around the eye socket.
p. eczema ovine staphylococcal **dermatitis**.
periorbitis inflammation of the periorbita.
periorchitis [*per"e-or-ki'tis*] inflammation of the tunica vaginalis testis; vaginalitis.
periorchitis–orchitis [*per"e-or-ki'tis*] inflammation of the investing membranes, the tunica vaginalis of the testis and the testicular parenchyma.
periosteal [*per"e-os'te-əl*] pertaining to or emanating from the periosteum.
p. bud a stage in the development of bone to replace existing cartilage; periosteal bud formation results in the removal of calcified cartilage.
p. elevator a heavy metal instrument, with a broad, flat thin end for prising between periosteum and bone and lifting the periosteum prior to working on the bone. See also **Sayre elevator**, **Matson elevator**.
p. reaction production of new bone by the periosteum in response to injury or irritation.
p. stripping may occur in association with fractures, damaging vascular supply and delaying callus formation.
periosteitis [*per"e-os"te-i'tis*] periostitis.
periosteoma [*per"e-os-te-o'mə*] a morbid bony growth surrounding a bone.
periosteomyelitis [*per"e-os"te-o-mi"ə-li'tis*] inflammation of the entire bone, including periosteum and marrow.
periosteophyte [*per"e-os'te-o-fīt"*] a bony growth on the periosteum.
periosteotomy [*per"e-os"te-ot'ə-me*] incision of the periosteum.
periosteum [*per"e-os'te-əm*] a specialized connective tissue covering all bones of the body, and possessing bone-forming potential. It is made up of an outer tough fibrous layer and a deeper more succulent osteogenic layer. Periosteum also serves as a point of attachment for certain muscles, tendons and ligaments. The connective tissues fuse with the fibrous layers of periosteum.
periostitis [*per"e-os-ti'tis*] inflammation of the periosteum.
dental p. periodontitis.
diffuse p. widespread periostitis of the long bones.
periostosis [*per"e-os-to'sis*] abnormal deposition of periosteal bone; the condition manifested by the growth of periosteomas.
periotic [*per"e-o'tik*] 1. situated about the ear, especially the internal ear. 2. the petrous and mastoid portions of the temporal bone, at one stage a distinct bone.
periovarian around the ovary, e.g. periovarian adhesions.
peripachymeningitis inflammation of the substance between the dura mater and the bone of the cranium.
peripancreatitis [*per"e-pan"kre-ə-ti'tis*] inflammation of tissues around the pancreas.
peripapillary [*per"e-pap'ĭ-lar"e*] around a papilla, such as the optic papilla.

P-35: Periosteal elevator. From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2011.

VetBooks.ir

p. conus a small zone of tapetal hyper-reflectivity immediately surrounding the optic disk due to normal thinning of the retina at this point. Sometimes abbreviated to conus.

peripartum [*per"e-pahr'təm*] occurring during the last 10% of the gestation period or the first few weeks after delivery, with reference to the mother.

periparturient [*per"e-pahr-tu're-ənt*] see **peripartum**.

p. rise the phenomenon of increase in number of nematode eggs produced by ewes and sows in the period 4 to 8 weeks before and after parturition. A reduction in the resistance of the dam permits greater establishment and fecundity of the worms.

periphacitis inflammation about the capsule of the crystalline lens.

peripharyngeal [*per"e-fə-rin'je-əl*] around the pharynx.

peripherad [*pə-rif'ər-ad*] toward the periphery.

peripheral [*pə-rif'ər-əl*] pertaining to or situated at or near the periphery.

p. circulatory failure see **circulatory** failure.

p. gangrenous ergotism see **ergotism**.

p. giant cell granuloma see giant-cell **epulis**.

p. lymphatics see **lymphatic**.

p. nerve see peripheral **nerve**.

p. nerve degeneration see **axonal** degeneration, **Wallerian degeneration**.

p. nerve paralysis see peripheral **nerve**.

p. nervous system see peripheral **nervous** system.

p. proteins see **membrane** proteins.

p. sinus the peripheral lymph space just beneath the capsule of a lymph node.

peripheralization [*pə-rif'ər-əl-ĭ-za'shən*] colonization of other tissues by T lymphocytes from the thymus which populate specific regions of lymph nodes and the periarteriolar zone of splenic corpuscles.

periphery [*pə-rif'ə-re*] an outward structure or surface; the portion of a system outside the central region.

periphlebitis [*per"e-flə-bi'tis*] inflammation of the tissues around a vein, or the external coat of a vein.

periplasmic [*per"e-plas'mik*] around the plasma membrane; between the plasma membrane and the cell wall of a bacterium.

periportal [*per"e-por'təl*] hepatic parenchyma immediately adjacent to the portal triads.

p. necrosis necrosis of periportal hepatocytes; much less common than periacinar necrosis. Caused by some hepatotoxins.

periproctitis [*per"e-prok-ti'tis*] inflammation of tissues around the rectum and anus.

periprostatic [*per"e-pros-tat'ik*] around the prostate.

periprostatitis [*per"e-pros"tə-ti'tis*] inflammation of the tissues around the prostate.

peripylephlebitis [*per"e-pi"le-flə-bi'tis*] inflammation of tissues around the portal vein.

peripyloric [*per"e-pi-lor'ik*] around the pylorus.

perirectal [*per"e-rek'təl*] around the rectum in the tissues of the pelvic cavity.

p. abscess caused usually by minor perforation of vagina or rectum.

perirenal [*per"e-re'nəl*] around the kidney.

p. edema an exaggeration around the kidney of generalized subserous edema; seen only in pigs and cattle.

feline p. cysts uni- or bilateral accumulations of fluid in cystlike masses (pseudocysts) between the renal parenchyma and capsule or entirely extracapsular occur in aged, male cats causing a progressive abdominal enlargement, but not usually renal dysfunction. Called also perinephritic pseudocyst, renal capsular cyst, capsulogenic renal cyst, perirenal hygroma, capsular hydronephrosis and retroperitoneal perirenal cyst.

perirhinal [*per"e-ri'nəl*] around the nose.

perisalpingitis [*per"e-sal"pin-ji'tis*] inflammation of tissues around the uterine tube.

periscopic [*per"ĭ-skop'ik*] affording a wide range of vision.

perisigmoiditis [*per"e-sig"moid-i'tis*] inflammation of the peritoneum of the sigmoid flexure of the colon.

perisinusitis [*per"e-si"nəs-i'tis*] inflammation of the tissues around a sinus.

perisinusoidal space [*per"e-si"nə-soi'dəl*] the space separating sinusoids from hepatocytes; it is occupied by cells, reticular fibers and hepatocytic microvilli.

perispermatitis [*per"e-sper"mə-ti'tis*] inflammation of tissues around the spermatic cord.

perisplanchnic [*per"ĭ-splank'nik*] around a viscus or the viscera.

perisplanchnitis [*per"e-splank-ni'tis*] inflammation of tissues around the viscera.

perisplenic [*per"e-splen'ik*] around the spleen.

perisplenitis [*per"e-splə-ni'tis*] inflammation of the peritoneal surface of the spleen.

perispondylitis [*per"e-spon"də-li'tis*] inflammation of tissues around a vertebra.

perissodactyl, perissodactylids [*pə-ris"o-dak'təl*] any member of the order Perissodactyla, animals which have an odd number of toes. Includes the pentadactyls, e.g. elephants, tridactyls, e.g. tapir (but only on the hindlimbs, the front limbs have four digits), and the monodactyls, e.g. horses.

peristalsis [*per"ĭ-stawl'sis*] the wormlike movement by which the alimentary canal or other tubular organs with both longitudinal and circular muscle fibers propel their contents, consisting of a wave of contraction passing along the tube. Increased peristalsis means faster movement of ingesta through the gut and less absorption of fluid, both tending to diarrhea. Reduced peristalsis means a longer alimentary sojourn, greater inspissation of ingesta and a tendency to constipation. See also **peristaltic**, paralytic **ileus**.

reverse p. peristalsis directed orally is a result of intestinal obstruction and acute, significant distention of the intestinal lumen; it is a major contributing mechanism in vomiting.

peristaltic [*per"ĭ-stawl'tik*] pertaining to or emanating from peristalsis.

p. reflex onward movement of a bolus of ingesta in the intestine is preceded by a reflex dilation of the intestine.

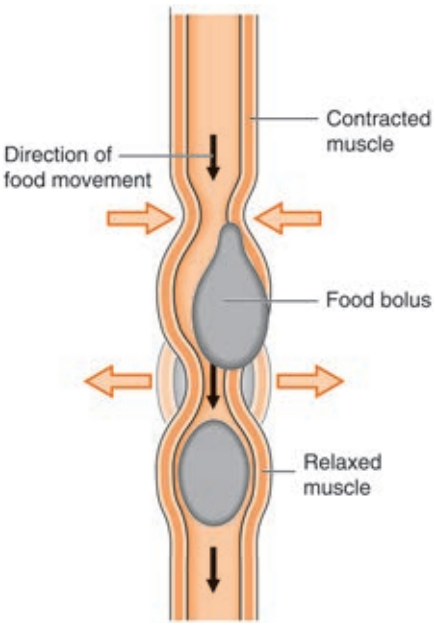
p. rush a rapid movement of intestinal contents that results in diarrhea caused by an absence of peristaltic rhythm and sphincter tone.

p. sounds made by the vigorous and rapid mixing of fluid and gas by peristaltic movement in the intestines and forestomachs. Are loudest and evocative in the rumen of the cow and the colon and cecum of the horse. Thoracic peristaltic sounds can be suggestive of intestines located in thorax via a diaphragmatic hernia and need to be differentiated from normal intestinal sounds transmitted via viscera from the peritoneal cavity.

perisynovial [*per"e-sĭ-no-ve'əl*] around a synovial structure.

peritectomy [*per"ĭ-tek'tə-me*] excision of a ring of conjunctiva from behind the corneoscleral limbus followed by cautery of the trench. Not done in veternary medicine.

peritendineum [*per"ĭ-tən-din'e-əm*] connective tissue investing larger tendons and extending between the fibers composing them.



P-36: Peristalsis.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

peritendinitis, peritenonitis [*per"e-ten"dī-ni'tis*] inflammation of the sheath of a tendon; **tenosynovitis**.

peritenon [*per"ĭ-te'non*] the connective tissue structures attached to and surrounding a tendon.

perithelioma [*per"ĭ-the"le-o'mə*] see **hemangiopericytoma**.

perithelium [*per"e-the'le-əm*] the connective tissue layer surrounding the capillaries and smaller vessels.

perithyroiditis [*per"e-thi"roi-di'tis*] inflammation of the capsule of the thyroid.

peritomy [*pə-rit'ə-me*] surgical incision into the conjunctiva and subconjunctival tissue about the whole circumference of the cornea as would be performed as part of a transconjunctival enucleation.

peritoneal [*per"ĭ-to-ne'əl*] pertaining to the peritoneum.

continuous ambulatory p. dialysis the use of an indwelling catheter with external tubing that is strapped to the body wall when not being used for infusion and drainage of the dialysate fluid.

p. cysts include vestigial remnants of primordial urogenital organs, cestode intermediate stages, inclusion cysts or lymphatic ectasia.

p. dialysis the employment of the peritoneum surrounding the abdominal cavity as a dialyzing membrane for the purpose of removing acumulated waste products or toxins. In veterinary medicine, the main indication is acute, reversible renal failure. Certain crystalloids such as urea, creatinine and electrolytes, and some drugs, such as the salicylates, bromides and barbiturates, can be removed. Fluid equal in osmolarity and similar in chemical composition to normal body fluid is introduced into the peritoneal cavity via a catheter. After a period of time ('dwell time') determined by the molecular weight of the substance being used as the dialyzing solution, the fluid is drained and the cycle repeated.

p. implantation attachment and growth of other tissues to the peritoneum, e.g. a fetus escaped from the genital tract, direct metastasis of malignant tumors.

p. lavage see abdominal **lavage**.

p. lymph the fluid normally present in very small amount in the peritoneal cavity.

p. membrane see **peritoneum**.

peritoneocentesis [*per"ĭ-to"ne-o-sen-te'sis*] paracentesis of the abdominal (peritoneal) cavity.

peritoneoclysis [*per"ĭ-to"ne-ok'lĭ-sis*] injection of fluid into the peritoneal cavity.

peritoneography [*per"ĭ-to"ne-og'rə-fe*] radiography of the peritoneal cavity.

peritoneopathy [*per"ĭ-to-ne-op'ə-the*] any disease of the peritoneum.

peritoneopericardial [*per"ĭ-to-ne"o-per"ĭ-kahr'de-əl*] pertaining to the peritoneum and pericardium.

p. hernia anomalous development of the diaphragm and pleuropericardial membranes that allows herniation of variable amounts of abdominal contents into the pericardial sac. May cause dyspnea, tachypnea, vomiting, diarrhea, cardiac tamponade and congestive heart failure, but some cases are only detected incidentally at postmortem examination. Seen in dogs and cats.

peritoneoscope [*per"ĭ-to'ne-o-skōp"*] an endoscope for use in peritoneoscopy.

peritoneoscopy [*per"ĭ-to"ne-os'kə-pe*] visual examination of the organs of the abdominal (peritoneal) cavity with a peritoneoscope.

peritoneotomy [*per"ĭ-to"ne-ot'ə-me*] incision into the peritoneum.

peritoneovenous [*per"ĭ-to-ne"o-ve'nəs*] communicating with the peritoneal cavity and the venous system. See also LeVeen **shunt**.

peritoneum [*per"ĭ-to-ne'əm*] the serous membrane lining the walls of the abdominal and pelvic cavities (parietal peritoneum) and investing contained viscera (visceral peritoneum), the two layers enclosing a potential space, the peritoneal cavity. The diseases which are important in the peritoneum of animals are peritonitis, including a special group of rectal tear, retroperitoneal abscess, lipomatosis, neoplasia, ascites and peritoneal effusion.

peritonitis [*per"ĭ-to-ni'tis*] inflammation of the peritoneum. The cause may be infectious or chemical. Typical signs are rigidity and pain on palpation of the abdominal wall, absence of feces, severe toxemia and fever. In horses there is colic and in dogs and cats there is often effusion. Paracentesis may show evidence of inflammation.

acute diffuse p. in the early stages pain is evident all over the abdomen. There is soon a disappearance of pain, a profound pre-mortal toxemia develops that may mask the presence of diffuse peritonitis.

acute local p. added to the usual signs there is a sharp pain response over the site of the lesion.

adhesive p. peritonitis characterized by adhesions between adjacent serous structures.

aseptic p. see chemical peritonitis (below).

biliary p., bile p. leakage of bile from the common bile duct or gallbladder may occur as a result of trauma, including perforation during percutaneous needle biopsy of the liver, and (rarely) erosion from biliary calculi. A chemical peritonitis results and may be fatal unless surgical repair is accomplished.

chemical p. may be caused by leakage of bile, urine, gastric juices or pancreatic enzymes in acute pancreatitis. Infusion of irritant materials can cause a similar chemical irritation.

chronic p. is manifested by chronic toxemia, bouts of colic due to adhesions and an accumulation of exudate which may cause a visible distention of the abdomen. See also **retroperitoneal** abscess.

chylous p. an uncommon result of abdominal trauma or tumors, intestinal obstruction or lymphangiectasia.

egg p. peritonitis in birds due to release of an egg into the peritoneal cavity with subsequent infection by *Escherichia coli* which have ascended via the oviduct.

feline infectious p. (FIP) see **feline** infectious peritonitis.

idiopathic p. one caused by a primary infection of the peritoneal cavity, e.g. feline infectious peritonitis, or hematogenous spread from a noncontiguous site.

post-stripping p. fatal peritonitis occurring in cultured salmonid fish soon after stripping, sometimes before. Caused by a number of gram-positive cocci and coccobacilli; *Carnobacterium piscicola* considered to be the most important infection.

primary p. see idiopathic peritonitis (above).

septic p. secondary to disruption of the abdominal cavity or a hollow viscus, particularly leakage from the gastrointestinal tract.

silent p. asymptomatic peritonitis.

starch granulomatous p. talcum powder, and to a lesser extent, other powders used on surgical gloves can cause a granulomatous reaction on the peritoneum.

traumatic p. perforation of the gut wall or abdominal wall introducing infection into the peritoneal cavity. May result from stake or bite wound, inexpert passing of urinary or insemination catheter, sadistically by a broom handle in the vagina, or stabbing of the rumen as an emergency measure in acute ruminal tympany. See also **traumatic** reticuloperitonitis.

urine p. prolonged exposure of the peritoneum to urine, usually due to leakage from the bladder or a ureter, results in a peritonitis and the development of uremia. Bacterial infection may also be introduced.

peritonsillar [*per"e-ton'sĭ-lər*] around a tonsil.

p. abscess a localized accumulation of pus in peritonsillar tissue subsequent to suppurative inflammation of the tonsil. Called also quinsy.

peritonsillitis [*per"e-ton"sĭ-li'tis*] inflammation of peritonsillar tissues.

peritracheal [*per"e-tra'ke-əl*] around the trachea.

peritrichous [*pə-rit'rĭ-kəs*] 1. having flagella around the entire surface; said of bacteria. 2. having flagella around the cytostome only; said of Ciliophora.

peritubular [*per"e-too'bu-lər*] investing the uriniferous tubules.

p. plexus a plexus of capillaries formed by the renal intertubular arterioles around cortical uriniferous tubules.

p. space water and electrolytes resorbed by tubular epithelium passes into this space.

periumbilical [*per"ĕ-əm-bil'ĭ-kəl*] around the umbilicus.

periureteral [*per"e-u-re'tər-əl*] around the ureter.

periureteritis [*per"e-u-re"tər-i'tis*] inflammation of tissues around the ureter.

periurethral [*per"e-u-re'thrəl*] around the urethra.

periuterine [*per"e-u'tər-in*] around the uterus.

perivaginal [*per"e-vaj'ĭ-nəl*] around the vagina.

p. needle see **gerlach needle**.

perivaginitis [*per"e-vaj"ĭ-ni'tis*] inflammation of tissues around the vagina; pericolpitis.

perivascular [*per"e-vas'ku-lər*] around a vessel.

p. cellulitis may be caused by the introduction of infection at the time of an injection or the injection of an irritant substance such as

VetBooks.ir

thiacetarsamide into tissues while attempting an intravenous injection.

p. cuffing the accumulation of lymphocytes or plasma cells in a dense mass around the vessel. An indication of inflammation or of an immune reaction. In the brain, it is indicative of viral infection.

p. dermatitis a classification of inflammatory skin disease in which the reaction is centered around superficial or deep dermal blood vessels.

perivasculitis [*per"e-vas"ku-li'tis*] inflammation of a perivascular sheath and surrounding tissue.

periventricular gray [*per"e-ven-trik'u-lər*] a diffuse mass of neurons and fiber tracts which surrounds the spinal canal and the ventricular system cranial to the mid-cervical region in the medial part of the reticular formation.

perivenular [*per"e-ven'u-lər*] around a vein; in the connective tissue about a vein.

perivesical [*per"e-ves'ĭ-kəl*] around the bladder.

perivesiculitis [*per"e-və-sik"u-li'tis*] inflammation of tissues around the seminal vesicles.

periwinkle [*per'e-wing"kəl*] see ***Vinca***. Includes blue periwinkle (*V. major*), Madagascan periwinkle (***Catharanthus*** *roseus*).

Perkinsus genus of protozoan parasites of molluscan tissues. Includes *P. marinus* (a major pathogen of the American oyster), *P. olseni* (a pathogen of abalone in warm waters). The disease is notifiable to the OIE (see Table 22).

perlèche [*per-lesh'*] inflammation with exudation, maceration and fissuring at the labial commissures.

perloline photosensitizing agent in *Lolium perenne*.

permanganate [*pər-mang'gə-nāt*] salts of permanganic acid; the potassium salt is an oldfashioned, out-of-favor, weak disinfectant compound which used to be used topically. Its purple color in solution was an advantage. Called also Condy's crystals.

permeability [*pur"me-ə-bil'ĭ-te*] the level or degree of the state of being permeable.

permeable [*pur'me-ə-bəl*] not impassable; pervious; permitting passage of a substance.

permease [*pur'me-ās*] any carrier protein involved in transporting substances across cell membranes.

permeate [*pur'me-āt"*] 1. to penetrate or pass through, as through a filter. 2. the constituents of a solution or suspension that pass through a filter.

permethrin [*pər-meth'rin*] a third-generation synthetic pyrethroid widely used in the control of ectoparasites. It is very stable and lasts for several weeks.

permissible dose see **dose** equivalent limits.

permissible medication treatments that are permitted of animals before racing or performing or just appearing at shows, race meetings and the like.

Perna canaliculus [*pur'nə*] see green-lipped **mussel**.

pernicious [*pər-nish'əs*] tending to a fatal issue.

p. anemia a form of anemia in humans caused by a genetically determined lack of the intrinsic factor, which normally is produced by the stomach mucosa. The deficiency results in inadequate and abnormal formation of erythrocytes, and failure to absorb vitamin B_{12}. Not reported in animals.

pero- word element. [Gr.] *deformity, maimed.*

perobrachius [*pe"ro-bra'ke-əs*] a fetus with deformed forelimbs.

perocephalus [*pe"ro-sef'ə-ləs*] a fetus with a deformed head.

perochirus [*pe"ro-ki'rəs*] a fetus with deformed forelimb extremities.

perocormus [*pe"ro-kor'məs*] see **Perosomus elumbus**.

perodontium [*per"o-don'she-əm*] periodontium.

peromelia [*pe"ro-me'le-ə*] congenital deformity of the limbs.

peromelus [*pe-rom'ə-ləs*] a fetus with deformed limbs.

peroneal [*per"o-ne'əl*] pertaining to the fibula or to the outer side of the leg or shank; fibular.

common p. nerve a nerve originating in the sciatic nerve; innervates parts of the calf and foot. See also Table 14.

p. muscles see Table 13.4.

p. nerve block see peroneal **block**.

p. nerve paralysis causes a characteristic inability to flex the hock and extend the digits so the animal bears weight on the dorsum of the foot. There is anesthesia of the cranial leg and dorsal paw or foot. Occurs in recumbent cattle and from trauma to the lateral stifle in dogs.

Peronia rostrata [*pe-ro'ne-ə*] a tertiary blowfly parasitizing carcasses which are tending to dry out.

P-37: Peromelia in a newborn lamb. Both hind limbs and the left forelimb are affected. The right forelimb is normal.
From Thompson KG, Piripi SA, Dittmer KE: Inherited abnormalities of skeletal development in sheep. Vet J 177:324-333, 2008. Elsevier.

peroral [*pər-or'əl*] performed or administered through the mouth. Called also per os.

perosis [*pə-ro'sis*] a disease of young birds caused by a nutritional deficiency of manganese and characterized by a deformity of the leg bones. There is gross enlargement of the tibiotarsal joint and deformity of the bones above and below the joint, and slipping of the gastrocnemius tendon from the condyles. The birds are crippled and usually die of starvation.

perosomus elumbus [*pe"ro-so'məs*] a congenital skeletal defect occurring in most animals but commonest in calves and lambs. The vertebral column stops at the caudal thoracic region and the posterior part of the body is joined to the front half by soft tissue only.

Perostrongylus a subgenus of nematodes in the family Filaroididae. See ***Aelurostrongylus***.

peroxidase [*pər-ok'sĭ-dās*] any of a group of iron–porphyrin enzymes that catalyze the oxidation of some organic substrates in the presence of hydrogen peroxide.

p. stain a group of staining techniques that demonstrate peroxidases in tissue sections or smears.

peroxidation [*pər-ok"sĭ-da'shən*] conversion of oxides to peroxides.

peroxide [*pər-ok'sīd*] that oxide of any element containing more oxygen than any other; more correctly applied to compounds having such linkage as −O−O−.

hydrogen p. H_2O_2, used in solution as an antibacterial agent. A 3% solution foams on touching skin or mucous membrane and appears to have a mechanical cleansing action.

hydrogen p.-based teat dips see **teat dip**.

p. value said of a feed sample; an indication of the degree of rancidity of oils and fats in the feed.

peroxisome [*pər-ok'sĭ-sōm*] a membrane-bound body found in vertebrate animal cells, especially kidney and liver cells, that contains urate oxidase, amino acid oxidase, catalase and other enzymes.

perphenazine [*pər-fen'ə-zēn*] a phenothiazine compound used as a tranquilizer and antiemetic.

Perralderia coronopifolia North American plant in family Asteracea; causes cyanide poisoning, characterized by dyspnea, in camels. Called also tafes, lahiel el tis.

Perreyia a genus of South American **sawflies** whose larvae cause severe liver necrosis when ingested; the toxin is **lophyrotomin**. Includes *P. flavipes* and *P. lepida*.

Perro de Presa Canario a medium to large-sized (85–100 lb) mastiff-type farm dog, originally from the Canary Islands. The body is muscular and the head broad and powerful with small ears, usually cropped. The fawn or brindle coat is short. Called also Presa Canario.

Persea americana American fruit tree in the Lauraceae family; all parts of the plant except the seed contains the toxic monoglycide persin which causes cardiomyopathy manifested by sudden death in caged birds and by heart failure and severe edema of the head in horses; some horses develop necrosis of masseter muscles and tongue muscles; also causes sterile mastitis in lactating females. Guatemalan varieties and their hybrids are toxic; Mexican varieties are not. Called also avocado, alligator pear.

Persian the traditional longhaired cat with a broad head, short nose and cobby body, medium to large size, with short legs. A variety of colors are seen in the coat and eyes. Also known as Angora, although originally that was a type with finer, satiny coat, or simply as longhair.

Persian insect powder see **pyrethrum**.

VetBooks.ir

P-38: Persian cat. From August JR, Consultations in Feline Internal Medicine, Volume 6. Saunders, 2009.

Persicaria plant genus in the Polygonaceae family; contains an unidentified hepatotoxin which causes hepatitis and photosensitive dermatitis; includes *P. hydropiper* (willow weed), *P. lapathifolia*, *P. maculosa* (*P. vulgaris*), *P. orientalis*, *P. persicaria* (spotted persicaria). Called also *Polygonum*, smart weeds.

persimmon see ***Diospyros***.

persin monoglyceride toxin in *Persea americana* (avocado).

persistent relative to embryological defects refers to persistence of an entity into external life in such a way as to cause some reduction of efficiency. The common defects are listed under the names of the compromised organs. See also persistent right **aortic arch**, **ductus** arteriosus, penile preputial **frenulum**, imperforate **hymen**, patent **urachus**, persistent hyperplastic **vitreous**, persistent **pupillary** membrane.

p. corpus luteum see **corpus** luteum.

p. ductus arteriosus see **patent** ductus arteriosus.

p. ductus venosus see **ductus** venosus.

p. infection see persistent **infection**.

p. omphalomesenteric duct see **omphalomesenteric** duct.

p. posterior perilenticular vascular tunic the tunic is generated in the embryo but atrophies just before birth. Persistence of some part of the tunic into adult life is common but of no clinical significance.

p. recumbency the animal is normal in other respects but does not rise to its feet for a period exceeding 24 hours.

p. right aorta arch see persistent right **aortic arch**.

p. truncus arteriosus may cause neonatal congestive heart failure and cyanosis; the interventricular septum is usually patent. See also **truncus** arteriosus.

personality [*pur"sə-nal'ĭ-te*] that which constitutes, distinguishes and characterizes an animal as an entity over a period of time; the total reaction of an animal to its environment. Many factors that determine personality are inherited; they are shaped and modified by the animal's environment.

perspiration [*pur"spĭ-ra'shən*] see **sweat**, **sweating** (1).

insensible p. sweat lost from skin and mucosal surfaces which is not secreted by sweat glands.

pertechnate ion a competitive agent in the uptake and transport of iodine in the thyroid gland.

perthane a **chlorinated hydrocarbon** insecticide with conventional toxicity.

Perthes' disease [*per'təz*] see **Legg–Calvé–Perthes disease**.

Peru balsam see **balsam**.

peruke bizarre collection of velveted antlers developed by male caribou and roe deer males castrated as adults. Called also wigged.

Peruvian bark tree see ***Alstonia constricta***.

Peruvian guinea pig see **guinea pig**.

Peruvian Inca orchid a rare hairless sighthound originating in Peru. As with other hairless dog breeds, there is also a coated variety. The hairless variety has prick ears; the coated dogs have a rose ear. Called also Peruvian hairless dog.

pes pl. *pedes* [L.] foot; the terminal organ of the lower limb; any footlike part; the tarsus, metatarsus and digits (the phalanges and sesamoid bones). See also **dipes**.

pessary [*pes'ə-re*] 1. an instrument placed in the vagina to support the uterus or rectum or as a contraceptive device. 2. a medicated vaginal suppository.

pessulus a wedge-shaped cartilage in the syrinx of the fowl, lying at the bifurcation of the trachea and dividing it into the two bronchi.

pest [*pest*] 1. an organism that injures, irritates or damages livestock or crops. 2. a highly fatal, rapidly spreading disease with an acute course. See also **plague**, **peste des petits ruminants**, **peste du porc**, **peste suina**.

fowl p. see **avian** influenza. Newcastle disease was at one time known as new fowl pest and as pseudo fowl pest.

integrated p. management the use of all suitable methods of pest (insect, weed, rodent, etc) control to keep populations below the economic injury level. Methods include farming practices and the use of biological, physical and genetic control agents and selective use of pesticides.

peste des petits ruminants [*pest*] [Fr.] a highly infectious and fatal disease of sheep and goats caused by a paramyxovirus in the genus *Morbillivirus* which is very closely related to the rinderpest virus. Typical signs are purulent nasal discharge, erosive stomatitis, diarrhea and bronchopneumonia. The spread is rapid and the mortality rate high. See also **rinderpest**. A disease notifiable to the OIE (see Table 22). Called also pseudorinderpest. An historical name is contagious pustular stomatitis.

peste du porc [Fr.] hog cholera; now called classical swine fever.

peste suina [Span.] hog cholera; now called classical swine fever.

pesticide [*pes'tĭ-sīd*] a poison used to destroy pests of any sort. See **arsenical**, **carbamates**, **chlorinated hydrocarbons**, **organophosphorus compound**, **pyrethroids**.

p. poisoning pesticides are selective poisons chosen for use because of their relative safety for humans and animals. It is likely that they will poison these species if they are used in sufficient quantity or in special circumstances.

p. resistance continued use of a single agent, or a group of closely allied agents, can cause selective survival of insects with innate tolerance of the agent and lead to the development of a resistant population.

p. tissue residues some pesticides have had to be withdrawn from use because of their persistence in the tissues of animals including humans. The passage of the agent in the milk of the animal is a comparable problem.

pestilence [*pes'tĭ-ləns*] a virulent contagious epidemic or infectious epidemic disease.

pestis [*pes'tis*] see **plague**.

pestis equorum [*pes'tis*] see **African** horse sickness.

Pestivirus [*pes'tĭ-vi"rəs*] a genus in the family ***Flaviviridae***. Four different species or genotypes have been identified in the genus: bovine virus diarrhea virus (BVDV) types I and II, classical swine fever virus (CSFV), and border disease virus (BDV). Isolates from border disease predominantly fall within the BDV genotype, but sheep and goat isolates also fall in the BVDV genotypes.

pestle [*pes'əl*] an instrument with a rounded end, used in a mortar to reduce a solid to a powder or produce a homogeneous mixture of solids.

PET positron emission **tomography**, a nuclear medicine technique that combines computed tomography and radioisotope brain scanning.

pet a nonfood animal included in a human household. Called also companion animals. Includes dogs, cats, cage birds, aquarium fish, and exotic species such as monkeys, alligators, tortoises, monkeys, big cats, axolotls, newts, yabbies, seahorses, snakes, gerbils, hamsters, mice, rats and spiders.

p.-assisted therapy, p. facilitated therapy the use of animals in a specific medical program as an adjunct to conventional therapy, especially for seriously ill and recuperating persons and persons with psychological problems. See also **animal** facilitated therapy.

children's p's those pets which can be properly cared for by children; usually taken to include the common companion pets, dogs, cats and cage birds, and the unusual species such as lizards, tortoises, terrapins, hamsters, guinea pigs, mice, rats, gerbils, rabbits, and even snakes and spiders.

exotic p's those other than the conventional dogs, cats, aquarium fish and cage birds.

PETA People for the Ethical Treatment of Animals.

VetBooks.ir

peta- (P) [Gr.] *five*; a prefix used in the metric system of naming units of measurement to designate a quantity 10^{15} (a thousand-million-million or a quadrillion) times the unit to which it is joined.

-petal word element. [L.] *directed, moving toward*.

PETCT see positron emission and computed **tomography**.

petechia [*pə-te'ke-ə*] pl. *petechiae* [L.] a small (1-2 mm), nonraised, purplish red spot on serosal, mucosal or cutaneous surfaces. They are small local hemorrhages and indicate a hemorrhagic disorder such as thrombocytopenia or, less often, a paroxysmal increase in blood pressure such as might be associated with convulsions. See also **purpura** and **diathesis**.

petechial fever [*pə-te'ke-əl*] see **bovine** petechial fever.

petechiation [*pə-te"ke-a'shun*] a state in which petechiae are present.

Peter's anomaly a range of abnormalities of ocular development in which the cornea, lens, and anterior uvea fail to completely or appropriately cleave to form the anterior chamber.

Peterson block see Peterson **block**.

petfood usually refers to commercially prepared food such as canned, semimoist, dry, kibbled, biscuits and loaves or butcher's scraps provided for dogs and cats in various forms.

convenience p. commercial pet foods.

dry p. the meal or biscuit type dog and cat foods that contain approximately 10% water. Economical, easily transported and stored; in many countries, this is the most commonly used form of mass produced pet food.

expanded p. a form of dry pet food production in which the ingredients are cooked, then forced through a die under pressure, resulting in expansion.

generic p. commercially prepared pet foods without a brand name; usually of low cost and possibly of poor quality. High concentrations of calcium in generic dog foods have reportedly been the cause of copper, zinc and iodine deficiency in a syndrome called generic dog food disease.

premium p. a commercially prepared dog or cat food, sold through selected outlets and at higher prices than other pet foods, suggesting a superior quality. The formula is generally constant, irrespective of variations in cost and availability of ingredients.

private label p. a product marketed under the label of the retailer; the house brand.

puréed p. foods of a gruel-like consistency; designed for enteral feeding.

variable formula p. manufactured pet foods in which the ingredients vary according to their availability and cost; the type most commonly marketed.

puréed p. foods of a gruel-like consistency; designed for enteral feeding.

convenience p. commercial pet foods.

pethidine [*peth'ĭ-din*] meperidine.

petiole [*pet'e-ōl*] a stem, stalk or pedicle.

epiglottic p. the pointed caudal end of the epiglottic cartilage, attached to the thyroid cartilage. Called also *petiolus epiglotticus*.

petiolus [*pə-ti'o-ləs*] petiole.

Petit Basset Griffon Vendéen [*pə-te'*] a short-legged, compact scent hound with a slightly elongated body and head, pendulous, narrow ears and straight tail. The coat is long and harsh and can be any solid color, bicolored or tricolored. In the UK, called the Basset Griffon Vendeen (Petit). See also **Grand Basset Griffon Vendeen**.

petit mal [*pə-te' mahl*] a relatively mild seizure contrasting with grand mal, a major seizure. Occurs in humans where the patient loses consciousness only momentarily and there are few motor signs. True petit mal seizures would be difficult to detect, but probably do occur occasionally in animals. See also focal **seizure**.

petits poussins milk-fed chickens, 6 weeks old, approximately 1.5 lb (650–700 g) in weight, and fattened on a special diet. A gourmet delicacy.

Petiveria alliacea South American plant in the family Phytolaccaceae; causes digestive disturbance, muscular atrophy and glomerulonephritis. Contains an unidentified garlic-odored, carbamate-like toxin. Called also anamu.

Petri dish [*pe'tre*] a shallow, circular, glass or disposable plastic dish used to grow bacteria on solid media such as agar.

Petriellidium boydii now called *Pseudallescheria boydii*.

pétrissage [*pa"trĭ-sahzh'*] [F.] a technique of deep muscle massage using kneading, rolling or squeezing movements. The purpose is to free adhesions and improve local circulation.

petrolatum [*pet"ro-la'təm*] a purified mixture of hydrocarbons obtained from petroleum; used as a base for ointments, protective dressings and soothing applications to the skin. Called also petroleum jelly. Two types of liquid petrolatum are recognized, light and heavy. See also mineral **oil**.

white p. Vaseline.

petroleum jelly [*pə-tro'le-əm*] petrolatum.

petromastoid [*pet"ro-mas'toid*] 1. pertaining to the petrous portion of the temporal bone and its mastoid process. 2. **otocranium** (2).

petrosal [*pə-tro'səl*] pertaining to the pars petrosa, or petrous portion of the temporal bone.

Petroselinum crispum cultivated plant in family Apiaceum; contains furanocoumarins which cause primary photosensitization. Called also *P. hortense*, *P. sativum*, parsley.

petrositis [*pet"ro-si'tis*] inflammation of the pars petrosa or petrous portion of the temporal bone.

petrosphenoid [*pet"ro-sfe'noid*] pertaining to the petrous portion of the temporal bone and to the sphenoid bone.

petrosquamous [*pet"ro-skwa'məs*] pertaining to the petrous and squamous portions of the temporal bone.

petrous [*pet'rəs*] resembling rock or stone; stony.

p. bone the pars petrosa, or petrous portion of the temporal bone. Radiographs of the skull often reveals the high calcific density of this 'stony bone'. See also Table 10.

PETS Act Pets Evacuation and Transportation Standards Act 2006 ensures that State and local emergency preparedness operational plans address the needs of individuals with household pets and service animals in order to qualify for Federal funding.

pexis [*pek'sis*] 1. the fixation of matter by a tissue. 2. surgical fixation, usually by suturing.

-pexy word element. [Gr.] *surgical fixation*.

Peyer's patches oval, elevated patches of closely packed lymph follicles in mucous and submucous layers of the small intestine. Called also aggregated lymphoid nodules.

continuous p. p. found in the terminal ileum in calves, lambs, piglets. Thought to be a primary site for B-cell generation; involute with age.

peyote [*pa-yo'ta*] see ***Lophophora williamsii***, **hallucinogen**.

Peyronella glomerata a fungus isolated from hyperkeratoses on the ears of wild goats.

Pezzer's catheter a self-retaining urinary catheter with a bulbous extremity.

PF-3 platelet factor-3.

Pfeifferella a bacterial name no longer in use.

P. anatipestifer see ***Riemerella*** *anatipestifer*.

P. mallei see ***Burkholderia*** *mallei*.

Pfiesteria [*fe-ste're-ə*] a toxic dinoflagellate associated with water blooms which cause deaths inl fish.

PFK phosphofructokinase.

PFU plaque-forming unit; in virology, areas of cell lysis (CPE) in monolayer cell culture, under overlay conditions, initiated by infection with a single virus particle.

PG prostaglandin.

pg picogram.

PGA pteroylglutamic (folic) acid.

$PGF_{2\alpha}$ prostaglandin $F_{2\alpha}$.

PGI_2 prostacyclin

PGK phosphoglycerate kinase.

PGM-2 phosphoglucomutase-2.

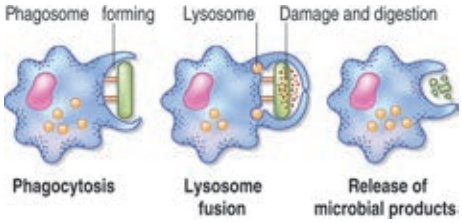
pH the negative logarithm of the hydrogen ion concentration [H+]; a measure of the degree to which a solution is acidic or alkaline. An acid is a substance that can give up a hydrogen ion (H+); a base is a substance that can accept H+. The more acidic a solution the greater the hydrogen ion concentration and the lower the pH; a pH of 7.0 indicates neutrality; a pH of less than 7 indicates acidity, and a pH of more than 7 indicates alkalinity.

p.–bicarbonate diagram an aid to the assessment of an acid–base problem; expresses the relationship between bicarbonate ions and the pH of the plasma.

blood p. normal blood pH varies a little between species but is of the order of 7.32 to 7.5. See also **acid-base balance**, **acidosis**, **alkalosis**.

p. partition the partition that occurs in the degree of ionization of electrolytes, including soluble drugs, about semipermeable membranes depending on the pH of the medium.

skin p. in haired mammals, the pH of skin is usually acidic. In dogs it is from 5.5 to 7.2; in cats from 5.6 to 7.4; in cattle from 5.4 to 5.75; and in the horse from 4.8 to 6.8.
Ph. Eur. European Pharmacopoeia.
PHA phytohemagglutinin, a plant lectin.
phacitis [*fə-si'tis*] inflammation of or about the crystalline lens of the eye.
phac(o)- word element. [Gr.] *lens.*
phacoanaphylaxis [*fak"o-an"ə-fə-lak'sis*] hypersensitivity to protein of the crystalline lens of the eye, induced by escape of lens material through the lens capsule.
phacocele [*fak'o-sēl*] crystalline lens dislocation or herniation.
phacocystectomy [*fak"o-sis-tek'tə-me*] excision of part of the lens capsule for cataract; capsulotomy.
phacocystitis [*fak"o-sis-ti'tis*] inflammation about the capsule of the crystalline lens.
phacodonesis [*fak"o-do-nes'əs*] tremulousness of the lens on movement of the eye, pathognomonic for lens subluxation. See also **iridodonesis**.
phacoemulsification [*fak"o-e-mul"si-fi-ka'shən*] a technique of **cataract** extraction, utilizing high-frequency ultrasonic vibrations to fragment the lens combined with controlled irrigation to maintain normal pressure in the anterior chamber, and aspiration of the lens fragments and irrigating fluid. Called also phacofragmentation.
phacoerysis [*fak"o-ə-re'sis*] surgical removal of the cataractous lens by suction.
phacofragmentation [*fak"o-frag-mən-ta'shun*] see **phacoemulsification**.
phacoid [*fak'oid*] shaped like a lens.
phacoiditis [*fak"oi-di'tis*] phacitis.
phacolysis [*fə-kol'i-sis*] discission and extraction of the crystalline lens.
phacomalacia [*fak"o-mə-la'shə*] softening of the crystalline lens; a soft cataract, that is, one without a hard nucleus.
phacometachoresis [*fak"o-met"ə-ko-re'sis*] displacement of the crystalline lens.
phacosclerosis [*fak"o-sklə-ro'sis*] hardening of the crystalline lens; more commonly called nuclear sclerosis.
phacoscope [*fak'o-skōp*] an instrument for viewing accommodative changes of the crystalline lens.
phacotoxic [*fak'o-tok"sik*] exerting a deleterious effect upon the crystalline lens.
Phaenicia [*fe-nish'ə*] see ***Lucilia***.
phae(o)- for words beginning thus see words beginning *phe(o)-*.
phaeohyphomycosis [*fe"o-hi"fo-mi-ko'sis*] opportunistic infections caused by the pigmented (dematiaceous) fungi, including *Alternaria*, *Aureobasidium*, *Bipolaris*, *Cladophialophora*, *Curvularia*, *Drechslera*, *Exophiala*, *Exserohilum rostratum*, *Moniliella* and *Phialophora*, *Wangiella* spp.
subcutaneous p. subcutaneous nodules containing yellow-brown fungal hyphae, and which may ulcerate and produce a sinus tract. May cause mycetoma if the lesions develop to granuloma.
phage [*fāj*] see **bacteriophage**.
p. type a group of bacteria within a species with the same susceptibility to a panel of bacteriophages; called also lysotype and phagotype.
p. typing characterization of bacteria, extending to strain differences, by demonstration of susceptibility to one or more (a panel) bacteriophages; widely applied to staphylococci, salmonellae, and some other species for epidemiological purposes.
phagedena [*faj"ə-de'nə*] rapidly spreading and sloughing ulceration.
phagedenic [*faj"ə-den'ik*] pertaining to or emanating from phagedena.
-phagia, -phagy word element. [Gr.] *eating, swallowing.*
phag(o)- word element. [Gr.] *eating, ingestion.*
phagocyte [*fa'go-sīt*] any cell that ingests microorganisms or other cells and foreign particles.
phagocytic [*fa"go-sit'ik*] emanating from or pertaining to phagocytes.
p. deficiency usually related to a deficiency in opsonization or a failure of intracellular killing.
p. system see **reticuloendothelial system**.
p. vacuole see **phagosome**.
phagocytin a bactericidal substance from neutrophilic leukocytes.



P-39: Phagocytosis. From Roitt IM, Brostoff J, Male D, Immunology, 5th Edition. Mosby, 2001.

phagocytize phagocytose.
phagocytoblast a cell giving rise to phagocytes.
phagocytolysis destruction of phagocytes.
phagocytose [*fa"go-si'tōs*] to envelop and destroy bacteria and other foreign material; phagocytize.
phagocytosis [*fa"go-si-to'sis*] the engulfing of microorganisms or other cells and foreign particles by phagocytes.
phagodynamometer [*fa"go-di"nə-mom'ə-tər*] an apparatus for measuring the force exerted in chewing food.
phagokaryosis [*fa"go-ka-re-o'sis*] phagocytosis effected by the cell nucleus.
phagolysosome [*fag"o-li'so-sōm*] a phagocytosed substance is initially engulfed by the cell to form from an invagination of a small region of the cell membrane a phagocytic vacuole, which then fuses with a lysosome to form a phagolysosome within which the lysosomal enzymes are released and other killing mechanisms are activated and the phagocytosed material is degraded.
phagosome [*fag'o-sōm*] a membrane-bound vesicle in a phagocyte containing the phagocytized material. Called also a phagocytic vacuole.
phagotype [*fag'o-tīp*] phage type.
phak(o)- for words beginning thus see words beginning *phac(o)-*.
phalangeal [*fə-lan'je-əl*] pertaining to a phalanx.
phalangectomy [*fal"ən-jek'tə-me*] excision of a phalanx.
phalanger see **possum**.
phalanges [*fə-lan'jēz*] plural of *phalanx*.
congenital reduced p. incomplete limbs in newborn animals; they may have an inherited defect or may have been exposed to a noxious environmental influence such as irradiation in early pregnancy.
Phalangida see **harvestmen**.
phalangitis [*fal"ən-ji'tis*] inflammation of one or more phalanges.
phalanx [*fa'lanks*] pl. *phalanges* [Gr.] any of the principal bones of a digit. Commonly referred to as P1, P2 and P3, being numbered from proximal to distal. Called also proximal, middle and distal. In horses, called also long pastern, short pastern and coffin bones. In some aquatic animals (some turtles and Cetacea) the number of phalanges is often increased (hyperphalangy) in some digits. The feet of birds have digits I, II, III, and IV with 2, 3, 4, and 5 phalanges, respectively. See also Table 10.
inherited reduced p. a congenital absence of the first two phalanges on all limbs. The hoof and third phalanx are attached by skin. An inherited defect in cattle.
Phalaris [*fə-lar'is*] a grass genus of the Poaceae family containing some of the best temperate pasture grasses which can, on occasion, be poisonous. Cause two kinds of poisoning: (1) acute heart failure and sudden death in sheep—caused by *P. aquatica*, *P. arundinacea* and Rhompa grass (a hybrid variety) - and in horses caused by *P. coerulescens* (blue canary grass) and *P. paradoxa* (paradoxa grass, paradoxical canary grass, gnawed canary grass), (2) incoordination with tremor and head nodding, finally recumbency and convulsions (called also phalaris staggers and caused by all species.) New cases occur for many weeks after removal from the pasture. There is a characteristic gray-green discoloration of the brainstem and midbrain. Includes *P. aquatica* (*P. tuberosa*, Australian phalaris, Toowoomba canary grass), *P. arundinacea* (reed canary grass), *P. minor* (canary grass), *P. angusta*, *P. brachystachys*, *P. canariensis*, *P. caroliniana* and Rhompa grass, a hybrid form. Toxins include β-carbolines, tryptamine and indole alkaloids.
phalaris [*fə-lar'is*] plants in the genus ***Phalaris***.

P

phalaris staggers [fə-lar'is] see ***Phalaris***.
Phalene a small, drop eared dog, usually included as a variant of the **Papillon**, but in some countries is regarded as a separate variety.
phallectomy [fə-lek'tə-me] amputation of the penis.
phallic [fal'ik] pertaining to the penis.
p. body see phallic **body**.
phallitis [fə-li'tis] penitis.
phallocampsis [fal"o-cam'sis] curvature of the penis during erection.
phallocrypsis [fal"o-krip'sis] retraction of the penis.
phalloidine [fə-loi'dēn] a hexapeptide toxin from the mushroom *Amanita phalloides*, which causes fatal liver necrosis.
phalloncus [fə-long'kəs] a pathological swelling of the penis.
phallopexy [fal"o-pek'se] surgical fixation of the penis, e.g. as performed to create a teaser bull, or to correct a chronically prolapsed penis in a horse.
phallus [fal'əs] the penis.
phantom [an'təm] 1. a model of the body or of a specific part thereof. 2. a device for simulating the in vivo effect of radiation on tissues.
p. mare a dummy of a mare used to collect semen for artificial insemination. A padded, hollow device about the height and width that would suit the stallion to be used. Excellent for collecting from an insecure or lame stallion.
p. parturition see false **pregnancy**.
p. pregnancy see false **pregnancy**.
phar., pharm. pharmacy; pharmaceutical; pharmacopoeia.
Pharaoh hound a medium-sized, lean, graceful dog with broad-based, erect ears and a long, thin tail. The coat is very short and fine, colored tan with white markings with a white tip on the tail and spot on the chest ('star').
pharmaceutical [fahr"mə-soo'ti-kəl] 1. pertaining to pharmacy or drugs. 2. a medicinal drug.
p. incompatibility substances that react chemically with each other, e.g. acids and alkalis, and cannot both be included in the same formulation.
p. industry the manufacturers of pharmaceuticals. Also one of the biggest research contributors to human and veterinary medicine. This includes basic research into chemotherapy but includes also the otherwise neglected fields of formulations, packaging, dosing regimens and dispensing information. The industry also has access to the biggest database relating to chemicals and their uses.
pharmaceutics [fahr"mə-soo'tiks] 1. pharmacy. 2. pharmaceutical preparations.
pharmacist [fahr'mə-sist] an individual who is licensed to prepare, compound and dispense drugs upon written order (prescription) from a licensed veterinary, medical or dental practitioner. A pharmacist is a health care professional who cooperates and consults with and sometimes advises the licensed practitioner concerning drugs.
pharmac(o)- word element. [Gr.] *drug, medicine*.
pharmacodiagnosis [fahr"mə-ko-di"ag-no'sis] use of drugs in diagnosis.
pharmacodynamics [fahr"mə-ko-di-nam'iks] the study of the mechanisms of action of drugs and other biochemical and physiological effects.
pharmacoepidemiology [fahr"mə-ko-ep"i-de"me-ol'ə-je] the study of the utilization and effects of drugs in large numbers of patients.
pharmacogenetics [fahr"mə-ko-jə-net'iks] the study of the relationship between genetic factors and the nature of responses to drugs. An example in dogs is the susceptibility of Collies (in general) and related breeds to the adverse effects of ivermectin. (See **MDR1 gene**).
multifactorial p. the metabolism of many drugs is determined by the action of an unknown number of genes, besides an unknown number of non-genetic effects; as a result a continuous distribution of drug concentrations in patients, ranging from subtherapeutic to toxic, may ensue.
pharmacognosy [fahr"mə-kog'nə-se] the branch of pharmacology dealing with natural drugs and their constituents.
pharmacokinetics [fahr"mə-ko-ki-net'iks] the study of the movement of drugs in the body, including the processes of absorption, distribution, localization in tissues, biotransformation and excretion.
pharmacologic [fahr"mə-kə-loj'ik] pharmacological.
pharmacological [fahr"mə-kə-loj'ik] pertaining to pharmacology.
p. antagonism the relationship between drugs in which an antagonist inhibits the activity of an agonist by reacting with the receptor or other part of the effector mechanism. The antagonist has no other pharmacological function. It may be a competitive or non-competitive antagonist.
pharmacologist [fahr"mə-kol'ə-jist] a specialist in pharmacology.
pharmacology [fahr"mə-kol'ə-je] the science that deals with the origin, nature, chemistry, effects and uses of drugs; it includes pharmacognosy, pharmacokinetics, pharmacodynamics, pharmacotherapeutics and toxicology.
pharmacopeia [fahr"mə-ko-pe'ə] an authoritative treatise on drugs and their preparations. Outside the USA, spelled pharmacopoeia. See **British Pharmacopoeia**, **European Pharmacopoeia**, **International Pharmacopoeia**, **United States Pharmacopeia**.
pharmacophore [fahr'mə-ko-for"] the group of atoms in the molecule of a drug responsible for the drug's action.
pharmacopoeia. [fahr"mə-ko-pe'ə] see **pharmacopeia**.
pharmacotherapy [fahr"mə-ko-ther'ə-pe] treatment of disease with medicines.
pharmacovigilence [fahr"mə-ko-vij'i-ləns] the surveillance of a drug's performance, particularly of adverse reactions, after it has been released for marketing.
pharmacy [fahr'mə-se] 1. the branch of the health sciences dealing with the preparation, dispensing and proper utilization of drugs. 2. a place where drugs are compounded or dispensed.
pharyngeal [fə-rin'je-əl] pertaining to the pharynx.
p. abscess an abscess in the wall of the pharynx causing painful and difficult swallowing, pain on palpation, cough and if sufficiently large, the signs of pharyngeal obstruction.
p. cyst subepiglottic cysts (remnants of thyroglosssal duct) and cysts on dorsum of pharynx and soft palate (remnants of craniopharyngeal ducts) may cause obstruction of the pharynx in the horse.
p. diverticulum a small, 3–4 cm, midline diverticulum dorsal to the pharyngeal opening of the esophagus. Found only in pigs. It can become impacted with dried food and cause dysphagia. It also needs to be circumvented when passing an esophageal-gastric cannula for artificial feeding of neonatal piglets.
p. dysphagia see oropharyngeal **dysphagia**.
p. hypophysis cyst a distended remnant of the pharyngeal anlage of the pituitary gland. It may protrude into the nasopharynx and obstruct respiration.
p. lymphadenopathy enlargement of the pharyngeal lymph nodes, due to abscess, neoplasia, e.g. bovine viral leukosis, or hyperplasia and granuloma in chronic pharyngitis, is a possible cause of pharyngeal obstruction.
p. lymphoid hyperplasia there is hyperplasia of lymphoid follicles on the roof of the pharynx thought to be a sequel of an upper respiratory tract virus infection. Clinically there is a chronic cough and a poor racing performance and the lesions can be observed via a fiberoptiscope.
p. neoplasia a high incidence of squamous cell carcinoma in the mouth, pharynx and rumen is recorded in several countries, some associated with grazing on bracken. Chronic dysphagia and tympany result.
p. obstruction characterized by noisy breathing, difficult swallowing, coughing and the coughing up of food. In dogs and cats pawing at the mouth is usual. There is no regurgitation through the nostrils. Manual or endoscopic examination of the interior of the pharynx is necessary. A common cause is foreign body impaction. See also **throat** abscess (1), pharyngeal cyst and pharyngeal lymphadenopathy (above), pharyngeal polyp (below) and impaction of the pharyngeal diverticulum (above) in pigs.
p. paralysis presents a syndrome similar to pharyngeal obstruction with coughing, inability to swallow, but with no signs of pain or respiratory obstruction. See also **cud** dropping. A feature of acute doxycycline poisoning in calves.
p. phlegmon a peracute peripharyngitis, most commonly of cattle, characterized by profound toxemia, respiratory distress, swelling and pain of the throat area, painful cough and high fever. *Fusobacterium necrophorum* is usually present in the lesion. Called also intermandibular cellulitis.
p. polyp a fibrous or mucoid, usually pedunculated mass that causes intermittent pharyngeal obstruction.
p. pouch one of the paired bilateral outpockets of the embryonic pharynx located opposite external branchial clefts and separated from each other by the developing visceral or branchial arches.

VetBooks.ir

p. reflex gag reflex.
p. swab **nasopharyngeal** swab.
pharyngectomy [*far"in-jek'tə-me*] excision of part of the pharynx.
pharyngemphraxis obstruction of the pharynx.
pharyngismus [*far"in-jiz'məs*] muscular spasm of the pharynx.
pharyngitis [*far"in-ji'tis*] inflammation of the pharynx, characterized by coughing, painful swallowing and lack of appetite. The throat is sore on palpation. In severe cases food and saliva may be regurgitated through the nostrils.
chronic equine p. is relatively common after viral infections. There is persistent coughing and moderate dyspnea on exercise. Training cannot be done. Endoscopic examination shows lymphoid infiltration and follicular hyperplasia.
equine lymphoreticular p. see chronic equine pharyngitis (above).
plasma cell p. see feline plasma cell **gingivitis–**pharyngitis.
pharyng(o)- word element. [Gr.] *pharynx*.
Pharyngobolus a genus of parasitic flies in the family Oestridae. The larval stages resemble those of *Oestrus ovis*.
P. africanus found in the pharynx of African elephants. Called also elephant throat bot fly.
pharyngocele [*fə-ring'go-sēl*] a herniation or cystic deformity of the pharynx.
pharyngoesophageal [*fə-ring"go-ə-sof'ə-je"əl*] pertaining to the pharynx and esophagus.
pharyngoglossal [*fə-ring"go-glos'əl*] pertaining to the pharynx and tongue.
pharyngogram a radiograph of the pharynx aided by the administration of contrast agent.
pharyngokeratosis [*fə-ring"go-ker"ə-to'sis*] keratosis of the pharynx.
pharyngolaryngitis [*fə-ring"go-lar"in-ji'tis*] inflammation of the pharynx and larynx.
pharyngomycosis [*fə-ring"go-mi-ko'sis*] any fungal infection of the pharynx.
pharyngonasal [*fə-ring"go-na'səl*] pertaining to the pharynx and nose.
pharyngoparalysis [*fə-ring"go-pə-ral'ĭ-sis*] paralysis of the pharyngeal muscles; pharyngoplegia.
pharyngoperistole pharyngostenosis.
pharyngoplasty [*fə-ring'go-plas"te*] plastic repair of the pharynx.
pharyngoplegia [*fə-ring"go-ple'jə*] pharyngoparalysis.
pharyngorhinitis [*fə-ring"go-ri-ni'tis*] inflammation of the nasopharynx.
pharyngorrhea [*fə-ring"go-re'ə*] mucous discharge from the pharynx.
pharyngoscope [*fə-ring'go-skōp*] an instrument for inspecting the pharynx.
pharyngoscopy [*far"ing-gos'kə-pe*] direct visual examination of the pharynx.
pharyngospasm [*fə-ring'go-spaz"əm*] spasm of the pharyngeal muscles.
pharyngostenosis [*fə-ring"go-stə-no'sis*] narrowing of the pharynx; pharyngoperistole.
pharyngostomy [*far"ing-gos'tə-me*] creation of an artificial opening into the pharynx.
p. intubation an opening created through the skin of the neck or throat can be used to insert (1) an esophagostomy tube for feeding when the oral cavity must be bypassed following injury or surgery, or (2) an endotracheal tube.
pharyngotomy [*far"ing-got'ə-me*] incision of the pharynx.
pharyngotympanic tube [*fə-ring"go-tim-pan'ik*] the narrow channel that connects the middle ear with the nasopharynx; called also auditory tube, eustachian tube. The tube serves to equalize pressure on either side of the tympanic membrane (eardrum). Called also *tuba auditiva*.
pharynx [*far'inks*] the throat; the musculomembranous crossroads of the digestive and respiratory systems, found behind the nasal cavities and mouth, and rostral to the larynx and esophagus. The pharynx includes many individual structures and may be divided into three parts: the nasopharynx (above), oropharynx (below) and laryngopharynx (behind). The nasopharynx, connected with the nasal cavities, provides a passage for air during breathing; it also contains the openings of the auditory tubes through which air enters the middle ear. The oropharynx and laryngopharynx provide passageways for both air and food. The pharynx also functions as a resonating organ in vocalization. The pharynx is subdivided by the soft palate. In swallowing, the palate lifts up, closing off the nasopharynx as food passes from the mouth to the esophagus.
phascogales (*Phascogale* spp.) small, carnivorous Australian marsupials. Like their close relatives, the **antechinus**, the males die after their first breeding season.
phase [*fāz*] 1. one of the aspects or stages through which a varying entity may pass. 2. In physical chemistry, a component that is homogeneous of itself, bounded by an interface, and mechanically separable from other phases of the system.
continuous p. in a heterogeneous system, the component in which the disperse phase is distributed, corresponding to the solvent in a true solution.
disperse p. the discontinuous portion of a heterogeneous system, corresponding to the solute in a true solution.
p. plate a critical component of a phase microscope.
phase variation alternate expression of two or more genes in bacteria, effected by a genetic rearrangement or by insertion or deletion of one or more bases.
phaseolunatin [*fa"se-o-loo'nə-tin*] a cyanogenetic glycoside found in ***Phaseolus*** *lunatus*—the Java bean.
Phaseolus [*fa"ze-o'ləs*] a genus of bean plants in the family Fabaceae; contain a number of phytotoxins including phaseolus hemolytic agent, lunatin, a cyanogenetic glucoside, and a hemagglutinating lectin which causes vomiting, diarrhea. Includes garden kidney beans (*P. vulgaris* - French beans, *P. coccineus* - scarlet runner climbing bean) and crop beans such as Lima and Java beans (*P. lunatus*).
phaseolus hemolytic agent [*fa"ze-o'ləs*] hemolytic agent found in members of the genus *Phaseolus*.
Phasianus see **pheasant**.
phasmid either of the two caudal chemoreceptors occurring in certain nematodes (Phasmidia).
Phe phenylalanine.
pheasant gallinaceous birds which are members of the family Phasianidae, which also includes partridge, quail and peafowls. They are ground feeders and tree roosters, with profuse, brightly colored plumage and a long tail and are the best game bird. There very many species, the best known being *Phasianus colchicus*, the common ringneck pheasant. Others include blue-eared pheasant (*Crossoptilon auritum*), golden pheasant (*Chrysolophus pictus*), Reeves pheasant (*Syrmaticus reevesii*), silver pheasant (*Lophura nycthemera*).
pheasant's eye ***Adonis*** *annua*, *A. microcarpa*.
red-flowering summer p's. e. *Adonis aestivalis*.
yellow p's. e. *Adonis vernalis*.
phemerol [*fe'mər-ol*] see **benzethonium chloride**.
phenacemide [*fə-nas'ə-mīd*] an anticonvulsant drug.
phenacetin [*fə-nas'ə-tin*] a para-aminophenol-derivative analgesic, similar to acetanilide. Its toxicity is much higher than that of the salicylates and other analgesics, especially for cats, so that it is not much used. Called also acetophenetidin.
phenamidine isethionate an aromatic diamidine used as an antiprotozoal agent, particularly in the treatment of infections by *Babesia*, *Leishmania* and *Pneumocystis* spp.
phenanthrene [*fĕ-nan'thrēn*] a colorless, crystalline hydrocarbon used in industry. Has caused photosensitization.
phenanthridium, phenanthridine a group of chemotherapeutic agents used in the treatment of trypanosomiasis. Includes isometamidium, homidium, pyrithidium (Prothidium) and quinapyramine.
phenarsonic acid pharmaceutical aliphatic organic arsenical; see also organic **arsenical**.
phenazone [*fen'ə-zōn*] antipyrine.
phenazopyridine [*fen"ə-zo-pir'ĭ-dēn*] an azo dye, used as a urinary analgesic and antiseptic in humans. Causes hemolytic anemia and hepatic injury in cats.
phencyclidine [*fen-si'klĭ-dēn*] a dissociative agent most used in non-human primates and other wild animals.
phenelzine [*fen'əl-zēn*] a monoamine oxidase inhibitor, used as an antidepressant.
phenethicillin a semisynthetic acid-resistant penicillin, which is a methyl analog of phenoxymethyl penicillin.
phenethylamine [*fən-ir'ə-mēn*] a toxic substance in North American mistletoe, *Phoradendron villosum*.
phenidone 1-phenyl-3-pyrazolidone; a developer used with hydroquinone in the development of X-ray film.

VetBooks.ir

pheniprazine one of the monoamine oxidase inhibitors used as an antidepressant but is toxic on continued use in dogs, causing irreversible cerebellar ataxia and hemolytic anemia.
pheniramine a histamine H_2-receptor antagonist. with anticholinergic properties.
phenobarbital [*fe"no-bahr'bĭ-təl*] a hypnotic, anticonvulsant and sedative.
phenobarbitone [*fe"no-bahr'bĭ-tōn*] phenobarbital.
phenocopy [*fe'no-kop"e*] 1. an environmentally induced phenotype mimicking one usually produced by a specific genotype. 2. an individual exhibiting such a phenotype; the simulated trait in a phenocopy. 3. experimentally produced phenocopies have been created in unfertilized rabbit eggs by the microinjection of the nuclei of embryonic rabbit cells.
phenodeviant [*fe"no-de've-ənt*] an individual whose phenotype differs significantly from that of the typical phenotype in the population.
phenogroup [*fe"no-groop*] alleles that are always inherited in groups of two or more.
phenol [*fe'nol*] 1. an extremely poisonous compound obtained by distillation of coal tar or produced synthetically; used as a disinfectant and used extensively as a wood preservative. Called also carbolic acid. 2. any organic compound containing one or more hydroxyl groups attached to an aromatic or carbon ring.
plant p. includes gossypol, tannins.
p. poisoning animals can be exposed to phenol by skin contact with floors and housing which have been treated with the disinfectant, or other phenol-rich substance such as lignite pitch. Causes local tissue necrosis and hepatic injury. Cats are particularly susceptible.
p. red see **phenolsulfonphthalein**.
chlorinated p. see **biphenyl**.
phenolphthalein [*fe"nol-thal'ēn*] 1. an acid–base indicator dye; it is colorless below pH 8.5, but turns red above pH 9.0. 2. in monogastric animals, a cathartic administered orally, usually with a bulk laxative such as agar. When ingested by ruminants causes the urine to change color to red on exposure to air.
phenolsulfonphthalein (PSP) [*fe"nol-sul"fon-thal'ēn*] an acid–base indicator dye.
p. (PSP) clearance test see phenolsulfonphthalein (PSP) **clearance** test.
phenoltetrachlorphthalein a dye once used intravenously as a liver function test.
phenomenon pl. *phenomena* [Gr.] any observable occurrence or fact of which the cause is not immediately evident. In veterinary science usually relates to laboratory findings but can relate to clinical signs. Typical examples are **Berry–Dedrick phenomenon**, **CAMP phenomenon**, **Koch** phenomenon, **rickettsial interference phenomenon**, **satellitism**, **swarming** (1).
phenothiazine the first broad-spectrum veterinary anthelmintic and the market leader in all agricultural animals for many years. Now largely superseded by more efficient compounds. Not recommended for use in pregnant mares because of the fear of causing abortion. Its principal use is in mixtures with piperazine and in small daily doses to inhibit egg-laying by resident worms. It must be supported by regular dosing at full dose rates. The name is also used to denote a group of major tranquilizers resembling phenothiazine in molecular structure.
phenotype [*fe'no-tīp*] 1. the outward appearance of the animal in all of its anatomical, physiological and behavioral characteristics as dictated by the genetic and environmental influences in its environment; in contradistinction to genotype in which only the inherited factors are taken into account. 2. an individual exhibiting a certain phenotype; a trait expressed in a phenotype.
phenoxyacids [*fə-nok"se-as'idz*] phenoxy derivatives of fatty acids used as herbicides; are largely innocuous to animals. They may make poisonous plants temporarily more palatable and increase their content of cyanide or nitrate. The common members of the group are 2,4-D, 2,4,5-T, MCPA, 2,4-DB, MCPB and fenoprop. Myotonia can be seen in dogs poisoned with phenoxy herbicides.
phenoxybenzamine [*fə-nok"se-ben'zə-mēn*] an α-adrenergic blocking agent with prolonged action; used as a vasodilator and as a relaxant in functional urethral obstruction associated with urinary retention. Has proved useful in some cases of chronic diarrhea in horses.

P-40: Polypay lamb with the phenotype of Border disease (hairy shaker disease).

phenoxymethylpenicillin [*fə-nok"se-meth"əl-pen"ĭ-sil'in*] see phenoxymethyl **penicillin**.
phenpropionate [*fən-pro'pe-ə-nāt"*] USAN contraction for 3-phenylpropionate.
phensuximide [*fən-suk'sĭ-mīd*] an anticonvulsant. See **succinimides**.
phentanyl [*fen'əl*] see **fentanyl**.
phentolacin an indandione derivative used as an anticoagulant rodenticide.
phentolamine [*fən-tol'ə-mēn*] a potent α-adrenergic blocking agent; it blocks the hypertensive action of epinephrine and norepinephrine and most responses of smooth muscles that involve α-adrenergic cell receptors. Its hydrochloride and mesylate salts are used in the diagnosis of hypertension due to pheochromocytoma.
phenyl the monovalent radical, C_6H_5.
p. salicylate a salicylic acid ester used as an analgesic.
phenylalanine [*fen"əl-al'ə-nēn*] a naturally occurring amino acid essential for optimal growth in young animals and for nitrogen equilibrium in adults.
p. deaminase test a biochemical test used for the identification of bacteria, based on the formation of phenylpyruvic acid from phenylalanine.
phenylbutazone [*fen"əl-bu'tə-zōn*] a nonsteroidal anti-inflammatory drug resembling cortisone in its action; used in the treatment of painful conditions of joints and skeletal muscles. It has powerful analgesic and antipyretic effects, but causes bone marrow suppression with high doses or prolonged administration.
phenylephrine [*fen"əl-ef'rin*] an α-adrenergic stimulant used as the hydrochloride salt as a nasal decongestant and in ophthalmology to produce mydriasis.
phenylhydrazine [*fen"əl-hi'drə-zēn*] a chemical reagent for detection of reducing substances such as sugars, ketones and aldehydes.
phenylmercuric [*fen"əl-mər-ku'rik*] denoting a compound containing the radical $C_6H_5Hg–$, forming various antiseptic, antibacterial and fungicidal salts; compounds of the acetate and nitrate salts are used as bacteriostatics, and the former is also used as a herbicide.
p. acetate used as a bacteriostatic preservative in pharmaceutical preparations, as a topical fungistatic agent, and as a herbicide.
p. chloride used as a bacteriostat in pharmaceuticals.
p. nitrate used as a bacterial preservative in pharmaceutical preparations, and as a topical antiseptic.
phenylpropanolamine [*fen"əl-pro"pə-nol'ə-mēn*] an α-adrenergic agonist used in the treatment of urethral sphincter incompetence in bitches.
phenylpyruvic acid [*fen"əl-pi-roo'vik*] an intermediate product of the metabolism of phenylalanine in the body.
phenylurea a chemical compound on which relatively nontoxic herbicides are based. Very high intakes of these cause loss of appetite and weight and weakness of the hindquarters.
phenytoin [*fen'ĭ-toin"*] an anticonvulsant used as the sodium salt. Occasionally used in the treatment of tonic–clonic and psychomotor seizures; also used for the control of cardiac arrhythmias, especially those caused by digitalis intoxication. Formerly called diphenylhydantoin.
pheo- a combining form meaning brown, dun or dusky.
pheochrome [*fe'o-krōm*] chromaffin.
pheochromoblast [*fe"o-kro'mo-blast*] any of the embryonic structures that develop into chromaffin (pheochrome) cells.

VetBooks.ir

pheochromocyte [*fe"o-kro'mo-sīt*] a chromaffin cell.

pheochromocytoma, phaeochromocytoma [*fe"o-kro"mo-si-to'mə*] a small chromaffin cell tumor, usually located in the adrenal medulla but occasionally occurring in chromaffin tissue of the sympathetic paraganglia. It occurs most often in dogs and cattle; in bulls it develops concurrently with C-cell tumors of the thyroid gland. Functional tumors secrete catecholamines, causing arteriolar sclerosis and medial hyperplasia and clinical signs of hypertension: tachycardia, edema and cardiac hypertrophy.

pheomelanin [*fe"o-mel'ə-nin*] yellow to red-brown pigment produced by melanocytes. See also **eumelanin**.

pheomelanosome [*fe"o-mel'ə-no-som*] brown-colored **melanosome** producing pheomelanin.

pheresis [*fə-re'sis*] any procedure in which blood is withdrawn from a donor, a portion (plasma, leukocytes, etc.) is separated and retained, and the remainder is retransfused into the donor. It includes plasmapheresis, leukapheresis, etc.

pheromone [*fer'o-mōn*] a substance secreted to the outside of the body and perceived (as by smell) by other individuals of the same species, releasing specific behavior in the percipient. Feline and canine pheromone products are marketed commercially for the management of inappropriate urination (spraying), anxiety and aggression.

pheromonotherapy [*fer'o-mōn-o-ther'ə-pe*] the use of pheromones in the treatment of behavioral disorders of dogs and cats. See also **pheromone**.

phi [*fi*] the twenty-first letter of the Greek alphabet, φ or φ.

phialide [*fi'ə-līd*] an open-ended, tubular or flask-like conidiophore that produces phialoconidia. Seen in *Aspergillus* and *Penicillium* spp.

phialoconidium [*fi"ə-lo-kə-nid'e-əm*] pl. *phialoconidia;* a conidium that develops from a phialide.

Phialophora [*fi"ə-lof'ə-rə*] a dematiaceous fungus associated with phaeohyphomycosis and chromoblastomycosis.

Philadelphia chromosome the 9:22 chromosomal translocation characterisitic of human patients with inherited predilection for chronic myelogenous leukemia.

Philaemon grandidieri a leech that invades the dorsal lymph sac of New Guinea frogs.

-philia word element. [Gr.] *affinity for, morbid fondness of.*

Phillips technique a method of teat stripping of dairy cows before commencing milking. Aimed at reducing the rate of new quarter infections. The top of the teat is clamped off with one hand and the teat is stripped with the other, preventing reflux of infected milk into the udder cistern.

Philodendron plant genus in the family Araceae and popular house plants. Toxin is insoluble calcium oxalate raphide crystals. Causes stomatitis and suspected to cause renal damage in cats.

Philometra genus of deep red-colored, large nematode of the dracunculoid family Philometridae; found in the peritoneal cavity of fish.

Philophthalmus a genus of flukes (digenetic nematodes) in the family Philophthalmidae.

P. gralli found in the conjunctival sacs of birds causing congestion and erosion of the conjunctiva. Called also oriental avian eye fluke.

philtrum [*fil'trəm*] the junction between the left and right upper lips; not distinctive in many animal species. In some, such as dogs, the term also applies to the noticeable junction between the two sides of the nose pad.

Philydrum lanuginosum Australian plant in the family Philydraceae; contains an unidentified toxin which causes diarrhea; called also woolly water lily.

phimosis [*fi-mo'sis*] constriction of the orifice of the prepuce so that it cannot be drawn back over the glans.

phlebangioma [*fleb"an-je-o'mə*] a venous aneurysm.

phlebarteriectasia [*fleb"ahr-tēr"e-ək-ta'zhə*] general dilatation of veins and arteries.

phlebectasia [*fleb"ek-ta'zhə*] dilatation of a vein or veins; a varicosity.

phlebectomy [*flə-bek'tə-me*] excision of a vein, or a segment of a vein.

phlebedema [*fleb"ed-e'mə*] edema resulting from venous insufficiency.

phlebemphraxis [*fleb"əm-frak'sis*] stoppage of a vein by a plug or clot.

phlebismus [*fleb"iz'məs*] obstruction and consequent turgescence of veins.

phlebitis [*flə-bi'tis*] inflammation of a vein. Phlebitis is not serious when the inflammation is located in a superficial vein since these veins are numerous enough to permit the flow of blood to be rechanneled, so that the inflamed vein is bypassed. When a deep vein is involved, however, phlebitis is potentially more dangerous. It can also have serious consequences if it leads to thromboembolism or metastatic infection. Phlebitis of the jugular vein, as a result of intravenous medication at this site, can lead to endocarditid and pulmonary infarcts. The common causes in animals are omphalophlebitis and injection phlebitis caused by the inadvertent injection of irritant substances or the prolonged use of intravenous catheters. The vein is swollen and painful and the blood flow obstructed.

phleb(o)- word element. [Gr.] *vein.*

phleboclysis [*flə-bok'lī-sis*] injection of fluid into a vein; venoclysis. See also **intravenous** infusion.

phlebogram [*fleb'o-gram*] 1. a radiograph of a vein filled with contrast medium. 2. a phlebographic or sphygmographic tracing of the venous pulse.

phlebograph [*fleb'o-graf*] an instrument for recording the venous pulse.

phlebography [*flə-bog'rə-fe*] 1. radiography of a vein filled with contrast medium. 2. the graphic recording of the venous pulse. 3. a description of the veins.

phlebolith [*fleb'o-lith*] a venous calculus or concretion.

phlebolithiasis [*fleb"o-lī-thi'ə-sis*] the development of phleboliths.

phlebomanometer [*fleb"o-mə-nom'ə-tər*] an instrument for the direct measurement of venous blood pressure.

phlebophlebostomy [*fleb"o-flə-bos'tə-me*] operative anastomosis of one vein to another, as of the portal vein and inferior vena cava.

phleboplasty [*fleb'o-plas"te*] plastic repair of a vein.

phleborrhaphy [*flə-bor'ə-fe*] suture of a vein.

phleborrhexis [*fleb"o-rek'sis*] rupture of a vein.

phlebosclerosis [*fleb"o-sklə-ro'sis*] fibrous thickening of the walls of veins.

phlebostasis [*flə-bos'tə-sis*] 1. retardation of blood flow in veins. 2. temporary sequestration of a portion of blood from the general circulation by compressing the veins of an extremity.

phlebothrombosis [*fleb"o-throm-bo'sis*] the development of venous thrombi in the absence of associated inflammation of the vessel wall, as opposed to thrombophlebitis, in which there are inflammatory changes in the vessel wall. See also **venous** thrombosis.

Phlebotomus [*flə-bot'ə-məs*] a genus of biting flies, called sandflies, the females of which are blood-sucking. They are vectors of various human diseases, including kala-azar (*P. argentipes, P. chinensis, P. martini, P. perniciosus*), Carrion's disease (*P. noguchi, P. verrucarum, P. columbianum*), cutaneous leishmaniasis (*P. sergenti, P. papatasi, P. major, P. caucasicus*) and phlebotomus or sandfly fever (*P. papatasi, P. chinensis, P. mongolensis*).

phlebotomy [*flə-bot'ə-me*] incision of a vein. See **venisection**.

Phlebovirus [*fleb'o-vi"rəs*] a genus in the family ***Bunyaviridae***.

phlegm [*flem*] viscid mucus excreted in abnormally large quantities from the respiratory tract.

phlegmasia [*fleg-ma'zhə*] inflammation.

phlegmon [*fleg'mon*] diffuse inflammation of the soft or connective tissue due to infection. See also **cellulitis**.

throat p. see **pharyngeal** phlegmon.

phlegmonous [*fleg'mən-əs*] pertaining to or emanating from phlegmon.

Phleum pratense [*fle'əm*] the oldfashioned but still popular pasture grass in the family Poaceae which can be infested with *Claviceps purpurea* and cause ergotism. Historically has been claimed to be a good hay for horses. Called also timothy grass.

phlogistic [*flo-jis'tik*] inflammatory.

phlog(o)- word element. [Gr.] *inflammation.*

phlogogenic [*flo"go-jen'ik*] producing inflammation.

phloridzin, phlorizin [*flo-rid'zin*] a dihydrochalcone extracted from the root bark of the apple tree. Thought at one time to be present in cherry, plum and pear. Blocks the renal tubular reabsorption of glucose hence promoting the development of glycosuria.

phlyctena [*flik-te'nə*] 1. a small blister made by a burn. 2. a small vesicle containing lymph seen on the conjunctiva in certain conditions.

phlyctenoid [*flik'tə-noid*] resembling a phlyctena.

VetBooks.ir

phlyctenular [*flik-ten'u-lər*] associated with the formation of phlyctenules, or of vesicle-like prominences.

phlyctenule [*flik'tən-ūl*] a minute vesicle; an ulcerated nodule of the cornea or conjunctiva.

phlyctenulosis [*flik"tən-u-lo'sis*] a condition marked by formation of phlyctenules.

Phoca vitulina see **harbor seal**.

Phocanema a genus of nematodes in the family Anisakidae. This genus parasitizes codfish and may be transmitted to humans who eat the fish,

P. decipiens found in the South American sea lion and fur seals.

phocine pertaining to or emanating from seals.

p. distemper see phocine **distemper**.

Phocitrema fusiforme a liver fluke found in fur seal, ringed seal and otter.

phocomelia [*fo"ko-me'le-ə*] congenital absence of the proximal portion of a limb or limbs, the distal parts being attached to the trunk by a small, irregularly shaped bone.

phocomelus [*fo-kom'ə-ləs*] an animal exhibiting phocomelia.

Pholcus phalangoides daddy-long-legs; crane fly; harvestman.

pholedrine an adrenergic vasopressor and cardiac stimulant used in cases of shock and toxemia.

phomopsins [*fo-mop'sins*] hepatoxic mycotoxins in the fungus ***Phomopsis leptostromiformis***.

Phomopsis leptostromiformis [*fo-mop'sis*] see ***Diaporthe toxica***.

phonal [*fo'nəl*] pertaining to the voice.

phonasthenia [*fo"nas-the'ne-ə*] weakness of the voice; difficult phonation from fatigue.

phonation [*fo-na'shən*] the utterance of vocal sounds.

phonatory [*fo'nə-tor"e*] subserving or pertaining to phonation.

phonendoscope [*fōn-en'do-skōp*] a stethoscopic device that intensifies auscultatory sounds. Consists of a flat chamber closed at its contact with the skin by a thin plastic diaphragm. It is most useful in picking up higher frequency sounds from the respiratory tract and heart. The classical bell stethoscope is more suited to picking up the lower pitched heart sounds.

phonic [*fon'ik*] pertaining to the voice.

phon(o)- word element. [Gr.] *sound, voice*.

phonoangiography [*fo"no-an"je-og'rə-fe*] the recording and analysis of arterial bruits to estimate the extent of arterial stenosis.

phonocardiogram [*fo"no-kahr'de-o-gram*] the record produced by phonocardiography.

phonocardiograph [*fo"no-kahr'de-o-graf*] the instrument used in phonocardiography.

phonocardiography [*fo"no-kahr"de-og'rə-fe*] the graphic recording of heart sounds and murmurs; by extension, the term includes pulse tracings (carotid, apex and venous pulse). Phonocardiography involves picking up, through a highly sensitive microphone, sonic vibrations from the heart which are then converted into electrical energy and fed into a galvanometer, where they are recorded on paper. The procedure is most useful when there is evidence of heart murmurs or unusual heart sounds, such as gallops, that are difficult to discern by the human ear. Most recordings are made through an externally applied microphone but intracardiac recordings, made through a phonocatheter, are possible.

phonocatheter [*fo"no-kath'ə-tər*] a catheter with a device in its tip for picking up and transmitting sound.

phonoendoscope [*fo"no-en'do-skōp*] a stethoscope with a large diameter flat head sealed by a thin plastic or celluloid diaphragm. Most useful for picking up small sounds from lung.

phonogram [*fo'no-gram*] a graphic record of a sound.

phonomyoclonus [*fo"no-mi-ok'lə-nəs*] myoclonus in which a sound is heard on auscultation of an affected muscle, indicating fibrillar contractions.

phonomyogram [*fo"no-mi'o-gram*] a record produced by phonomyography.

phonomyography [*fo"no-mi-og'rə-fe*] the recording of sounds produced by muscle contraction.

phonophoresis [*fo"no-fo-re'sis*] ultrasonic energy used to facilitate absorption of drugs across the epidermal barrier.

phonophotography [*fo"no-fo-tog'rə-fe*] photographic recording of the movements of a diaphragm set up by sound waves.

phonoreceptor [*fo"no-re-sep'tər*] a receptor for sound stimuli.

phonorenogram [*fo"no-re'no-gram_*] a record of the sounds produced by pulsation of the renal artery obtained by a phonocatheter passed through a ureter into the renal pelvis.

phonostethograph [*fo"no-steth'o-graf*] an instrument by which chest sounds are amplified, filtered and recorded.

Phoradendron a genus of parasitic plants that grow on other trees; known in North America as mistletoes. Contain the toxic substance, phenethylamine. Dogs and cats have been poisoned eating berries, with hypersalivation, vomiting, diarrhea, and increased heart and respiratory rates. See also ***Viscum album*** (European mistletoe).

P. villosum Pacific mistletoe; contains cardiotoxic amines β-phenylethylamine and tyramine and causes sudden death due to heart failure.

phorate an **organophosphorus compound** used as an insecticide and capable of causing poisoning.

phorazetim a very toxic **organophosphorus compound** used as a rodenticide.

-phore word element. [Gr.] *a carrier*.

-phoresis word element. [Gr.] *transmission*.

phoresy [*for'ə-se*] a method of dispersal, e.g. of insect pests, in which the insect clings to a moving animal or other insect. Includes transmission of a parasite by a parasite, e.g. *Histomonas meleagridis* by *Heterakis gallinarum*.

Phormia [*for'me-ə*] a genus of blowflies. *P. regina* and *P. terra-novae* are involved in cutaneous **myiasis** in North America.

phosdrin see **mevinphos**.

phosmet an organophosphorus insecticide used as a spray or pour-on to control ectoparasites. Called also phthalophos.

phosphatase [*fos'fə-tās*] any of a group of enzymes capable of catalyzing the hydrolysis of esterified phosphoric acid, with liberation of inorganic phosphate, found in practically all tissues, body fluids and cells, including erythrocytes and leukocytes.

p. inhibitor-1 inhibitor of phosphatase enzymes known to activate glycogen synthesis or inactivate glycogen breakdown. Need to themselves be phosphorylated by cAMP-dependent kinases before they are effective in their inhibitory activity.

phosphate [*fos'fāt*] any salt or ester of phosphoric acid. 1. Phosphates are widely distributed in the body, the largest amounts being in the bones and teeth. They are continually excreted in the urine and feces, and must be replaced in the diet. Inorganic phosphates function as buffer salts to maintain the **acid–base balance** in blood, saliva, urine and other body fluids. The principal phosphates in this buffer system are monosodium and disodium phosphate. Organic phosphates, in particular adenosine triphosphate (ATP), are used to store the chemical bond energy released during the oxidation of compounds such as glycogen or fatty acids, which may later be expended in muscle contraction. This is thought to occur through the hydrolysis of the so-called high-energy phosphate bond present in ATP, phosphocreatine and certain other body compounds. See also **hypophosphatemia**, **hyperphosphatemia**. 2. used extensively in agricultural industry as fertilizers and organic compounds as cleaning agents.

p. binders usually aluminum- or calcium-based exchange compounds, used to bind dietary phosphates and limit their absorption from the intestine. Used in the treatment of the hyperphosphatemia of renal failure.

p. buffer important phosphate-containing buffers.

p. buffered saline (PBS) a special phosphate buffered saline used in tissue cultures and for the storage and transport of bovine embryos.

p. calculi see struvite **urolith**.

dietary p. supplementation of the diet with phosphate in some form is a very common practice in farm animals. Materials used include rock phosphate (defluorination may be necessary), sodium dihydrogen phosphate produced by the agricultural chemical industry, calcium triphosphate and bone meal or flour.

inorganic p. any salt of phosphoric acid.

p. retention a phenomenon resulting from reduced glomerular filtration; contributes to a chronic hypocalcemic state.

p. ridge see **mineralization** front.

p. rock see **rock phosphate**.

phosphatemia [*fos"fə-te'me-ə*] hyperphosphatemia.

phosphatidic acid [*fos"fə-ti'dik*] a precursor of triacylglycerols and some phospholipids. Its biologically important derivatives include cardiolipin and compounds consisting of a phosphate ester linked to ethanolamine, inositol, serine or choline, i.e. phosphatidylcholine, phosphatidylethanolamine, phosphatidylinositol, phosphatidylserine.

phosphatidyl [*fos"fə-ti'dəl*] any of several univalent groups derived from phosphatidic acid; includes phosphatidyl choline, phosphatidyl ethanolamine, phosphatidyl inositol, and phosphatidyl serine.

p. inositol 4,5-biphosphate (PIP_2) a minor phospholipid found in cell membranes; precursor of the second messengers inositol 1,4,5-triphosphate and diacylglycerol; acts as a docking phospholipid that recruits proteins to the plasma membrane and activates signal transduction pathways.

p. serine a phospholipid found in mammalian cells.

phosphatidylcholine [*fos"fə-ti"dəl-ko'lēn*] major phospholipid component of cell membranes. Called also lecithin.

phosphatidylserine [*fos"fə-ti"dəl-ser'ēn*] one of the phospholipids concerned in the structure of cell membranes. Usually found in the inner (cytosolic) half of the lipid bilayer.

phosphaturia [*fos"fə-tu're-ə*] phosphates in the urine.

phosphine [*fos'fēn*] a coal tar dye used as a stain; called Philadelphia yellow.

phosphoamidase [*fos"fo-am'ĭ-dās*] an enzyme that catalyzes the conversion of phosphocreatine to creatine and orthophosphate.

phosphocreatine [*fos"fo-kre'ə-tin*] a compound of creatine and phosphoric acid occurring in muscle, being an important storage form of chemical bond energy when excess ATP donates a phosphate group to creatine and an energy source in muscle contraction via the transfer of the phosphate group to ADP to form ATP; both reactions catalyzed by creatine kinase. Called also creatine phosphate.

phosphodiester group [*fos"fo-di-es'tər*] the bonds that join the 5′ phosphate of one nucleotide and the 3′-OH group of the adjacent nucleotide, i.e. the phosphate group esterified to both the 3′- and 5′-carbon atoms of the sugar.

phosphodiesterase [*fos"fo-di-es'tər*] a group of enzymes that catalyze the hydrolysis of a phosphodiester.

phosphoenolpyruvate (PEP) [*fos"fo-e"nol-pi'roo-vāt*] an intermediary metabolite in the Embden–Myerhof glycolytic pathway and in gluconeogenesis.

phosphoenolpyruvate–carboxykinase (PEP-CK) [*fos"fo-e"nol-pi'roo-vāt kahr-bok"se-ki'nās*] the rate-controlling enzyme in gluconeogenisis. It assists in the conversion of oxaloacetate to phosphoenolpyruvate (PEP) and carbon dioxide.

6-phosphofructokinase 1 an enzyme of the glycolytic (Embden–Meyerhof) pathway that catalyzes the conversion of fructose-6-phosphate to fructose-1,6-bisphosphate using ATP as the source of the phosphate. Allosteric enzyme regulating glycolysis.

p. deficiency an inherited autosomeal recessive disorder of glucose metabolism in English springer spaniels and Cocker spaniels. Affected dogs have exercise intolerance and develop a chronic hemolytic anemia. Called also Type 7 glycogen storage disease, glycogenosis type VII, Tarui disease.

6-phosphofructokinase 2 enzyme catalyzing the phosphorylation of fructose-6-phosphate to fructose 2,6-bisphosphate using ATP as the source of the phosphate. Fructose 2,6-bisphosphate is a key allosteric influence of the activity of 6-phosphofructokinase 1.

phosphoglucomutase [*fos"fo-gloo"ko-mu'tās*] a glycolytic pathway enzyme that catalyzes the conversion of glucose-1-phosphate to glucose-6-phosphate in a reversible reaction.

p.-2 a minor histocompatibility system in dogs; genetic polymorphism of this enzyme has been associated with graft-versus-host reactions.

6-phosphogluconate pathway see **hexose** monophosphate shunt, pentose phosphate **pathway**.

phosphoglycerate kinase [*fos"fo-glis'ər-āt*] an enzyme which catalyzes the transfer of high-energy phosphate from 1,3-bisphosphoglycerate to ADP, forming ATP and 3-phosphoglycerate.

phosphoglyceride [*fos"fo-glis'ər-īd*] a class of phospholipids, including lecithin and cephalin, consisting of a glycerol backbone, two fatty acids, and a phosphorylated alcohol, e.g. choline, ethanolamine, serine or inositol. They are a major component of cell membranes.

phosphoglyceromutase [*fos"fo-glis"ər-o-mu'tās*] an enzyme which converts 3-glycerophosphate to 2-glycerophosphate in one of the steps in the Embden–Meyerhof pathway. A dimeric protein existing as two isoforms, the M (muscle) and B (brain) forms.

phosphokinase [*fos"fo-ki'nās*] see **kinase**.

phospholipase [*fos"fo-lip'ās*] any of four enzymes (phospholipase A to D) which catalyze the hydrolysis of a phospholipid.

phospholipase A_2 [*fos"fo-lip'ās*] enzyme catalyzing the hydrolysis of the fatty acyl group esterified in the 2-position of a phospholipid. Key enzyme in the release of arachidonic acid from this position for subsequent conversion to the eicosanoid group of humoral agents.

phospholipase C [*fos"fo-lip'ās*] enzyme catalyzing the removal of polar head group such as choline from phospholipids.

phospholipid [*fos"fo-lip'id*] any lipid that contains phosphorus, including those with a glycerol backbone (phosphoglycerides and plasmalogens) or a backbone of sphingosine or a related substance (sphingomyelins). They are the major lipids in cell membranes.

p. bilayer a double layer of phospholipid molecules in which the hydrophobic fatty acid tails face the center and the hydrophilic head groups face the aqueious environment; forms the basic structural unit of all biological membranes.

phospholipidosis [*fos"fə-lip"ĭ-do'sis*] a generalized phospholipid disturbance with major deposits, derived from alveolar surfactant, in the pulmonary alveoli.

phosphoprotein [*fos"fə-pro'tēn*] a conjugated protein in which phosphoric acid is esterified with a hydroxy amino acid.

phosphorated [*fos'fə-rāt"əd*] charged or combined with phosphorus.

phosphorescence [*fos"fə-res'ans*] the emission of light without appreciable heat; it is characterized by the emission of absorbed light after a delay and at a considerably longer wavelength than that of the absorbed light. Caused by a number of bacteria, especially in seawater. One of them, *Pseudomonas phosphorescens*, may infect coldrooms via infected fish but does not constitute decomposition so that phosphorescent meat is still edible.

phosphoribulokinase an enzyme that catalyzes the conversion of ATP and D-ribulose 5-phosphate to ADP and D-ribulose 1,5-diphosphate. Participates in carbon fixation.

phosphoric acid [*fos-for'ik*] a crystalline acid formed by oxidation of phosphorus; its salts are called **phosphates**. Used in dentistry in the **acid etch technique**.

phosphorolysis [*fos"fə-rol'ĭ-sis*] cleavage of a chemical bond with simultaneous addition of the elements of phosphoric acid to the residues.

phosphorus (P) [*fos-for'əs*] a chemical element, atomic number 15, atomic weight 30.974. See Table 4. Phosphorus is an essential element in the diet. In the form of phosphates it is a major component of the mineral phase of bone and is involved in almost all metabolic processes. It also plays an important role in cell metabolism. It is obtained by the body from milk products, cereals, meat and fish, and its use by the body is controlled by vitamin D and calcium.

p.-32 (^{32}P) a radioisotope of phosphorus having a half-life of 14.3 days and emitting only beta rays; used in the form of sodium phosphate P-32 for treatment of polycythemia vera, chronic myelocytic leukemia and chronic lymphocytic leukemia, and in localizing certain tumors during surgery.

calcium:p. ratio see **calcium**: phosphorus ratio.

inorganic p. any phosphorus-containing compound which does not also contain carbon.

p. nutritional deficiency causes rickets in the young and **osteomalacia** in adult ruminants. In less severe deficiency states there is pica, growth retardation, infertility and possibly retention of placenta. See also **postparturient** hemoglobinuria. An unlikely nutritional deficiency in carnivores.

p. poisoning is very rare because of the absence of elemental phosphorus from the environment. Causes severe gastroenteritis with vomiting and diarrhea. If the animal survives the gastroenteritis there is a subsequent acute hepatic insufficiency.

p. restriction indicated in the dietary management of chronic renal disease and secondary hyperaparathyroidism; in dogs and cats, usually accomplished by reducing the content of meat.

p. supplements supplementing the diets of animals exposed to phosphorus deficient feeds is usually achieved by feeding bone meal, or calcium or sodium phosphates. All are readily assimilable but none are palatable and special devices are often necessary to get animals to take required amounts. See also dietary **phosphate**.

phosphorylase [*fos-for'ə-lās*] a key regulatory enzyme that, in the presence of inorganic phosphate, catalyzes the removal of one glucose unit from glycogen to form glucose-1-phosphate. See also **myophosphorylase**.

citrulline p. see ornithine carbamoyl **transferase**.

p. kinase an enzyme that activates phosphorylase by catalyzing the phosphorylation of serine. See also **kinase**.

phosphorylated glycerolipids [*fos-for'ə-lāt-ed*] chief constituents of the lipid bilayer of cell membranes in which apolar acyl chains face each other in the membrane interior.

phosphorylation [*fos-for"ə-la'shən*] the process of introducing a phosphate group into an organic molecule.

oxidative p. the final common oxidative pathway in which high-energy phosphate bonds are formed by phosphorylation of ADP to ATP; ATP synthase harnesses the proton motive force generated from pumping of protons from the matrix of mitochondria across the inner mitochondrial membrane to the intermembrane space which is coupled with the transfer of electrons along a chain of carrier proteins with molecular oxygen as the final acceptor.

substrate-level p. formulation of high energy phosphate bonds in a reaction in which the phosphorylation of ADP or GDP to ATP or GTP is directly coupled to the splitting of a high energy metabolie, e.g. in glycolysis and the tricarboxylic acid cycle.

phosphosphingolipids a subset of sphingolipids; are membrane constituents of cells, constituents of plasma lipoproteins, blood group substances and act as receptors for bacterial toxins.

phosphotransacetylase an enzyme which catalyzes the transfer of an acetyl group between acetylphosphate and acetylcoenzyme A.

phosphotransferase [*fos"fo-trans'fər-ās*] any of a class of enzymes that catalyze the transfer of a phosphate group.

photic [*fo'tik*] pertaining to light.

Photinia genus of garden plants in the family Rosaceae; can cause cyanide poisoning; called also Christmas berry, Chinese hawthorn.

phot(o)- word element. [Gr.] *light*.

photo timer an alarm device for use in a darkroom to advise the need to move to the next stage of the developing program. More commonly used to control X-ray exposure time automatically for spot filming or photofluorography connected with the output optical detector.

photoactivated see **photoaggravated**.

photoactive [*fo"to-ak'tiv*] reacting chemically to sunlight or ultraviolet radiation.

photoaggravated [*fo"to-ag'rə-vāt"əd*] condition produced when a pre-existing condition worsens on being exposed to sunlight. Called also photoactivated.

p. dermatoses term used in human medicine when referring to pemphigus, lupus erythematosus, bullus pemphigoid; may be applicable to the same diseases in dogs.

p. vasculitis a dermatosis of horses affecting only the white extremities of the limbs.

photoallergy [*fo"to-al'ər-je*] a hypersensitivity that develops against the photoproduct of an exogenous chemical.

photobiology [*fo"to-bi-ol'ə-je*] the branch of biology dealing with the effect of light on organisms.

photobiotic [*fo"to-bi-ot'ik*] living only in the light.

photocatalysis [*fo"to-kə-tal'ĭ-sis*] promotion or stimulation of a chemical reaction by light.

photocatalyst [*fo"to-kat'ə-list*] a substance, e.g. chlorophyll, that brings about a chemical reaction on exposure to light.

photochemical [*fo"to-kem'ə-kəl*] in laser treatment, the laser light is absorbed and converted into chemical energy.

photochemistry [*fo"to-kem'is-tre*] the branch of chemistry that deals with the chemical properties or effects of light rays or other radiation.

photochemotherapy [*fo"to-ke"mo-ther'ə-pe*] treatment by means of drugs (e.g. methoxsalen) that react to ultraviolet radiation or sunlight.

photochromogen [*fo"to-kro'mə-jən*] a microorganism whose pigmentation develops as a result of exposure to light. A characteristic of Runyon Group I mycobacteria.

photocoagulation [*fo"to-ko-ag"u-la'shən*] condensation of protein by the controlled use of a laser; used especially in the treatment of retinal detachment (retinopexy), destruction of abnormal retinal vessels (in primates), intraocular tumor masses, or ciliary body epithelium (in glaucoma).

photodermatitis, photodermatosis [*fo"to-dur"mə-ti'tis*] an abnormal state of the skin in which light is an important causative factor, e.g. actinic **dermatitis**.

photodisruptive [*fo"to-dis-rup'tiv*] in laser treatment, the laser energy is converted to shock waves which disrupt tissues or structures; used in lithotripsy and ophthalmic surgery.

photodynamic [*fo"to-di-nam'ik*] activated or made more powerful by light.

p. agent a substance that is activated by light to cause damage to tissue. It may be exogenous and absorbed preformed from the environment, or endogenous in that it is formed within the body as an abnormal metabolite, e.g. porphyrins, or as a normal metabolite, e.g. phylloerythrin, and accumulate in tissues because of faulty excretion, e.g. in hepatic disease.

p. therapy the use of a photosensitizing chemical, administered locally or which accumulates in tissues, administered to the patient and then utilizing a reaction with that chemical activated by light energy to treat certain diseases, in particular skin cancers and other skin conditions.

photoelectric pertaining to the electrical effects of light or other radiation.

p. absorption the basis of diagnostic radiology. The difference in absorption of X-ray energy by different tissues causes differences in electromagnetic energy arriving at the film.

photofluorography [*fo"to-floor-og'rə-fe*] the photographic recording of fluoroscopic images on small films, using a fast lens. Called also fluorography and fluororadiography.

photogenic [*fo"to-jen'ik*] 1. produced by light. 2. emitting or producing light.

photogrammetry [*fo"to-gram-ə-tre*] a stereophotographic technique for estimating body weight and parts of the body by three-dimensional measurement.

photohemolysis [*fo"to-he-mol'ə-sis*] lysis of red cells when the patient is exposed to sunlight. Occurs in erythropoietic protoporphyria.

photokinetic [*fo"to-kĭ-net'ik*] moving in response to the stimulus of light.

photolysis [*fo-tol'ĭ-sis*] chemical decomposition by light.

photolyte [*fo'to-līt*] a substance decomposed by light.

photometer [*fo-tom'ə-tər*] a device for measuring the intensity of light.

photometry [*fo-tom'ə-tre*] an analytic chemistry technique to measure the concentration of substances and the activities of enzymes by measuring the intensity of light passing through it.

photomicrograph [*fo"to-mi'kro-graf*] a photograph of an object as seen through an ordinary light microscope.

photomirex environmental pollutant capable of causing testicular degeneration in animals ingesting it.

photomyoclonic [*fo"to-mi"o-klon'ik*] photomyogenic.

photomyogenic [*fo"to-mi"o-jen'ik*] clonic spasm of muscles when the patient is exposed to flashes of light. Requires electoencephalographic recognition of response to be a valid result.

photon [*fo'ton*] a particle (quantum) of radiant energy.

X-ray p. a particle of X-ray energy.

photoperiod [*fo'to-pēr"e-əd*] the period of time per day that an organism is exposed to daylight (or to artificial light).

photoperiodicity [*fo"to-pēr"e-o-dis'ĭ-te*] the rhythm of certain biological phenomena such as hibernation and reproductive activity which are determined by the regularly recurring changes in light and dark caused by the annual passage of the earth about the sun.

photoperiodism [*fo"to-pēr'e-əd-iz-əm*] the physiological and behavioral reactions brought about in organisms by changes in the duration of daylight and darkness, e.g. in reproductive activity, shedding of hair. Birds respond to longer daylight hours by increased sexual activity. Use is made of the phenomenon by using artificial light to stimulate egg production.

photophilic [*fo"to-fil'ik*] thriving in light.

photophobia [*fo"to-fo'be-ə*] abnormal visual intolerance to light. Expressed in animals by excessive closing of the eyelids when exposed to light. However, since it is a symptom, it is impossible to differentiate from blepharospasm due to any painful eye disorder.

photophthalmia [*fo"tof-thal'me-ə*] ophthalmia caused by exposure to intense light.

photopia [*fo-to'pe-ə*] day vision.

photoreactivation [*fo"to-re-ak"tĭ-va'shən*] reversal of the biological effects of ultraviolet radiation on cells by subsequent exposure to visible light.

photoreception [*fo"to-re-sep'shən*] perception of light waves which are in the range of visible light.
photoreceptive [*fo"to-re-sep'tiv*] sensitive to stimulation by light.
photoreceptor [*fo"to-re-sep'tər*] a nerve end organ or receptor sensitive to light. In the retina of the eye, the rods and cones.
photorefractoriness [*fo"to-re-frak'tər-e-nes*] the state of being refractory to the stimulus of light; an important feature of sexual nonreceptivity in some species.
photoretinitis [*fo"to-ret"ĭ-ni'tis*] retinitis due to exposure to intense light.
photosensitive [*fo"to-sen'sĭ-tiv*] exhibiting abnormally heightened sensitivity to sunlight. See also photosensitive **dermatitis**.
photosensitivity [*fo"to-sen"sĭ-tiv'ĭ-te*] the state of being photosensitive.
photosensitization [*fo"to-sen"sĭ-tĭ-za'shən*] the development of abnormally heightened reactivity of the skin to sunlight. In food animals the principal photodynamic agents are porphyrins and phylloerythrin. The principal clinical manifestations are dermatitis, especially of non-pigmented skin, and areas exposed to the sun, such as the lateral aspects of the teats and the ventral aspect of the tongue, exposed when licking the nose, and conjunctivitis. There may be an accompanying hepatic insufficiency or porphyrinuria. See **liver** dysfunction, photosensitive **dermatitis**. Called also light sensitization. There is a long list of drugs that can cause photosensitization reactions. Antineoplastics, antimicrobials, diuretics, hypoglycemic agents, and even antihistamines are capable of triggering photosensitivity reactions in certain individuals.
inherited p. in Corriedale and Southdown sheep is caused by an inherited liver transport defect. The liver is histologically normal but phylloerythrin excretion is impeded. Photosensitive dermatitis appears as soon as the lambs begin to eat grass.
primary p. caused by the ingestion of exogenous photosensitizing agents such as dianthrone derivatives (e.g. hypericin, fagopyrin), furanocoumarins, perloline, phenothiazine, rose bengal.

P-41: (A) Hereford with severe dermatitis from photosensitivity. (B) Photosensitive dermatitis on the teat of a cow.

secondary p. secondary to hepatic cell damage, biliary obstruction leading to the accumulation in the body of phylloerythrin, a metabolic end-product of chlorophyll.
photosensitizing causing photosensitivity.
p. plants. some plants contain primary photodynamic agents, e.g. dianthrone derivatives and furanocoumarins. Others are hepatotoxic or carry hepatotoxic mycotoxin-producing fungi and are indirectly photosensitizing by interfering with the excretion of phylloerythrin through the animal's biliary system.
photostable unchanged by the influence of light.
photostimulator [*fo"to-stim'u-la"tər*] a source of an intense flash of light of very short duration that serves as the light stimulus for electroretinography.
photosynthesis [*fo"to-sin'thə-sis*] a chemical combination caused by the action of light; specifically the formation of carbohydrates from carbon dioxide and water in the chlorophyll tissue of plants under the influence of light.
phototaxis [*fo"to-tak'sis*] the movement of cells and microorganisms under the influence of light.
phototherapy [*fo"to-ther'ə-pe*] treatment of disease by exposure to light. Malignant tumors are treated by using photosensitizing drugs and laser light.
photothermal [*fo"to-thur'məl*] in laser treatment, the laser light is absorbed and converted to heat in the tissues.
phototoxic [*fo'to-tok"sik*] having a toxic effect triggered by exposure to light.
phototoxicity [*fo"to-tok-sis'ĭ-te*] pertaining to phototoxic.
primary p. see solar **dermatitis**, **sunburn**.
phototrophic [*fo"to-tro'fik*] capable of deriving energy from light.
phototropism [*fo-tot'rə-piz-əm*] 1. the tendency of an organism to turn or move toward (positive phototropism) or away from (negative phototropism) light. 2. change of color produced in a substance by the action of light.
photuria [*fo-tu're-ə*] excretion of urine having a luminous appearance.
PHPV persistent hyperplastic primary vitreous.
phrenetic [*fren-et'ik*] maniacal.
phrenic [*fren'ik*] pertaining to the diaphragm.
p. nerve one of the paired nerves to the diaphragm that arises from the caudal cervical nerves (4–7, the specific branches varying with species), passes through the thoracic inlet and in the mediastinum and adjacent structures to the diaphragm.
phrenicectomy [*fren"ĭ-sek'tə-me*] resection of the phrenic nerve.
phrenicoexeresis [*fren"ĭ-ko-ek-ser'ə-sis*] extraction of a portion of the phrenic nerve, producing one-sided paralysis of the diaphragm and partial collapse of the corresponding lung.
phrenicotomy [*fren"ĭ-kot'ə-me*] surgical division of the phrenic nerve.
phrenicotripsy [*fren"ĭ-ko-trip'se*] phrenemphraxis.
phrenitis [*frə-ni'tis*] 1. delirium or frenzy. 2. diaphragmitis.
phren(o)- word element. [Gr.] 1. diaphragm. 2. mind.
phrenocolic [*fren"o-kol'ik*] pertaining to the diaphragm and colon.
phrenogastric [*fren"o-gas'trik*] pertaining to the diaphragm and stomach.
phrenohepatic [*fren"o-hə-pat'ik*] pertaining to the diaphragm and liver.
phrenoplegia [*fren"o-ple'jə*] paralysis of the diaphragm.
phrenosin [*fren'o-sin*] a cerebroside containing cerebronic acid attached to the sphingosine.
phrynoderma [*frin"o-dur'mə*] a follicular hyperkeratosis probably due to deficiency of vitamin A or of essential fatty acids.
phthalamic acid [*thal'əm-ik*] an organic herbicide. Poisoning is manifested by bloat and incoordination.
alpha-pthalic-acid esters, *o*-phthalic acid plasticizers in polyvinyl products; cause testicular degeneration in rats.
phthalofyne an anthelmintic used specifically for the treatment of whipworm (*Trichuris vulpis*) in dogs.
phthalophos see **phosmet**.
phthalylsulfacetamide a sulfonamide with a high solubility and suited for systemic use for diseases of the eye. Used for topical application to the skin and the conjunctiva.
phthalylsulfathiazole the phthyl form of **sulfathiazole** which is poorly absorbed from the gastrointestinal tract. Administered orally it is hydrolyzed to sulfathiazole which is the effective antibacterial agent.
phthisis [*thi'sis; ti'sis*] 1. a wasting of the body. See also **myelophthisis**. 2. tuberculosis.

P-42: Fungating phycomycosis lesions on the chest of a horse. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

p. bulbi shrinkage and disorganization of the eye due to scar formation following severe or chronic uveitis.

phyco- word element. [Gr.] *seaweed, algae*.

phycology the scientific study of algae.

Phycomycetes [*fi"ko-mi-se'tēz*] a group of fungi comprising the common water, leaf and bread molds. Called also Zygomycota. Includes *Mucor* spp. and *Rhizopus* spp.

phycomycosis [*fi"ko-mi-ko'sis*] any of a group of acute fungal diseases caused by members of the Phycomycetes. See **pythiosis**, **lagenidiosis**, and **zygomycosis**.

equine p. see **swamp cancer**.

Phyllanthus [*fə-lan'thəs*] a genus in the plant family of Euphorbiaceae.

P. abnormis North American plant; contains an unidentified toxin which causes liver and kidney damage manifested by compulsive walking, tenesmus, rectal prolapse, petechiation and death. Called also spurge.

P. gasstroemii may cause cyanide poisoning.

P. lacunarius causes gastroenteritis.

phylloerythrin [*fil"o-er'i-thrin*] an end-product of chlorophyll metabolism normally excreted in the bile. It is a photodynamic agent and its accumulation in the tissues in animals on a diet of green feed and with liver insufficiency leads to the development of photosensitization.

phylloquinone [*fil"o-kwin'ōn*] see **phytomenadione**.

phylogeny [*fi-loj'ə-ne*] the evolutionary history of a race or group of organisms.

phylum [*fi'ləm*] pl. *phyla* [L., Gr.] a primary division of the plant or animal kingdom, including organisms that are assumed to have a common ancestry.

phyma [*fi'mə*] pl. *phymata* [Gr.] a skin tumor or tubercle.

Physalia physalis [*fi-sa'le-ə*] see **Portuguese man-of-war**.

Physalis [*fis'ə-lis*] genus of plants in the family Solanaceae; suspected of poisoning livestock. Includes *P. minima*, *P. peruviana*. Called also wild or ground cherry.

Physaloptera [*fis"ə-lop'tər-ə*] a genus of spirurid worms in the family Physalopteridae. The gastric mucosa may become eroded, inflamed and produce much mucus. Clinically there may be vomiting, melena, anorexia and weight loss.

P. alata found in the gizzard and intestines of doves and other birds.

P. canis found in the stomach of cats and dogs.

P. caucasica found in the esophagus, stomach and intestines of simian primates.

P. clausa, P. dispar, P. erinacea found in hedgehogs.

P. dilitata found in the stomach of simian primates.

P. felidis found in the stomach and intestines of cats.

P. gemina found in fowl and cat.

P. maxillaris found in skunks and *Procyon* and *Mustela* spp.

P. poicilometra found in simian primates.

P. praeputialis found in the stomach of cats and wild cats.

P. pseudopraeputialis found in the stomach and larynx of cats and coyotes.

P. rara found in the stomach and duodenum of dogs and wild dogs and cats.

P. tumefasciens occurs in the stomach of simian primates.

Physconelloides zenaidurae a pigeon louse.

physeal [*fiz'e-əl*] pertaining to growth or to that part of a bone that is responsible for lengthening—the physis.

p. delayed closure occurs when there is inadequate growth hormone, as in hypopituitarism.

p. dysplasia essentially a disease of horses which consists of a self-limiting disturbance of endochondral ossification affecting the metaphyseal physes of young horses; called also physitis, epiphysitis.

p. focal closure occurs as a result of damage to or displacement of the growth plate; bony bridges develop uniting the epiphysis and the metaphysis, many leading to bone deformities.

p. premature closure usually the result of injury and seen most often in dogs. Causes abnormal development of the bone, the type and severity depending on the age of the animal and the particular location. The most vulnerable are the radius and ulna, mainly because closure of one physis results in unequal growth of the two parallel bones and angular deformity often results.

p. scar see **epiphyseal** scar.

physic [*fiz'ik*] 1. the art of medicine and therapeutics. 2. a medicine, especially a cathartic. See also **purging** ball.

p. nut ***Jatropha*** *curcas, J. multifida*.

physic ball see **purging** ball.

physical [*fiz'i-kəl*] pertaining to the body, to material things, or to physics.

p. findings results of a physical examination. Observations made visually, by auscultation, palpation, smell, percussion, succussion and ballottement.

p. map in genetics, determination of the array of genes within a DNA segment of a chromosome.

p. therapist one who is skilled in the physical and therapeutic techniques of helping to alleviate suffering from muscle, nerve, joint and bone diseases and from injuries and to overcome or prevent disabilities. Among the procedures used by the physical therapist are exercise to increase strength, endurance, coordination, and range of motion; electrical stimulation to activate paralyzed muscles; massage, vibrators and many other patented devices to try to improve the circulation and condition of a part. Called also physiotherapist.

physician [*fi-zish'ən*] a veterinarian who devotes him or herself to work with medical rather than surgical or reproductive diseases.

physicochemical [*fiz"i-ko-kem'i-kəl*] pertaining to both physics and chemistry.

physics [*fiz'ik*] the study of the laws and phenomena of nature, especially of forces and general properties of matter and energy.

physi(o)- word element. [Gr.] *nature, physiology, physical*.

physiochemical [*fiz"e-o-kem'i-kəl*] pertaining to both physiology and chemistry.

physiologic, physiological [*fiz"e-o-loj'ik*] 1. pertaining to physiology; 2. normal; not pathological. Conforming to the normal function of an organ or the body as a whole.

p. saline 0.9% solution of sodium chloride. See also **normal** saline.

physiologist [*fiz"e-ol'ə-jist*] a specialist in physiology.

physiology [*fiz"e-ol'ə-je*] 1. the science which deals with the functions of the living organism and its parts, and of the physical and chemical factors and processes involved. 2. the basic processes underlying the functioning of a species or class of organism, or any of its parts or processes.

cell p. the scientific study of phenomena involved in cell growth and maintenance, self-regulation and division of cells, interactions between nucleus and cytoplasm, and general behavior of protoplasm.

morbid p., pathological p. the study of disordered functions or of function in diseased tissues.

physiopathological pertaining to pathological physiology.

physiotherapist [*fiz"e-o-ther'ə-pist*] physical therapist.

physiotherapy [*fiz"e-o-ther'ə-pe*] physical therapy.

physique [*fi-zēk'*] the body organization, development and structure. In animals it is more customary to speak of conformation.

physis [*fi'sis*] the segment of a bone that is responsible for lengthening. There are four zones within the physis, the resting cartilage zone, the proliferating cartilage zone, the zone of hypertrophy and the zone of calcification. Called also the growth plate. See also **physeal**.

-physis [*fi'sis*] root meaning to grow, growth.

physitis [*fis-i'tis*] see **physeal** dysplasia.

phys(o)- word element. [Gr.] *air, gas*.

Physocephalus [*fi"so-sef'ə-ləs*] a spirurid nematode in the family Spirocercidae. Causes gastritis manifested by anorexia, increased thirst, loss of weight and rarely death.

VetBooks.ir

P. cristatus found in the dromedary.
P. sexalatus found in the stomach of the pig.
physohematometra [*fi"so-hem"ə-to-me'trə*] gas and blood in the uterine cavity.
physohydrometra [*fi"so-hi"dro-me'trə*] gas and serum in the uterine cavity.
physometra [*fi"so-me'trə*] gas in the uterine cavity.
Physopsis [*fi-sop'sis*] water snail intermediate host for *Schistosoma* spp.
physopyosalpinx [*fi"so-pi"o-sal'pinks*] gas and pus in the oviduct.
physostigmine [*fi"zo-stig'mēn*] an alkaloid usually obtained from the dried ripe seed of *Physostigma venenosum*; it is used in the treatment of myasthenia gravis and in treating overdosage of atropine, scopolamine and other anticholinergics; used also as a topical miotic in the form of the base and of the salicylate and sulfate salts.
p. challenge test a test for the diagnosis of cataplexy; after increasing doses of physostigmine, affected dogs show a dose-related severity of reactions when offered food.
phytase [*fi'tās*] a hydrolase enzyme found in plants; catalyzes the hydrolysis of phytic acid to inositol and phosphoric acid.
phytate [*fi'tāt*] inositolhexaphosphoric acid; a source of phosphorus for ruminants and horses but indigestible to carnivores. Present in large amounts in plants.
phytate-phosphorus relatively unavailable phosphorus combined with phytic acid, in feeds with a high fiber content. See also **phytate**.
phytic acid [*fi'tik*] used synonymously with phytate. See also **phytin**.
phytin the calcium and magnesium salt of phytic acid.
phyt(o)- word element. [Gr.] *plant, an organism of the vegetable kingdom*.
phytoagglutinin an agglutinin of plant origin.
phytoalexins [*fi"to-ə-lek'sins*] defense chemicals produced by plants in response to tissue damage by microbes (fungi, bacteria) or herbivores, usually insects. Such chemicals may be toxic to vertebrate animals that eat the affected plants, e.g. furanocoumarins in fungus-infected parsnips may cause primary photosensitization in pigs.
phytobezoar [*fi"to-be'zor*] a bezoar composed of vegetable fibers. Common in cattle as abomasal inclusions. Important as a cause of pyloric or intestinal obstruction. See **intestinal** obstruction, ***Romulea***, bovine **colic**.
phytoestrogens [*fi"to-es'tro-jəns*] substances with activity as estrogens produced in plants. Includes isoflavones and coumestans. Most of these agents undergo major changes in the rumen, the agents becoming much more potent as a result of the change, e.g. formononetin, which has very little activity is converted to a potent estrogen.
phytogenous [*fi-toj'ə-nəs*] derived from plants, or caused by a vegetable growth.
phytohemagglutinin [*fi"to-hēm"ə-gloo'tĭ-nin*] a lectin found in beans which agglutinates both red and white blood cells and exhibits mitogenic activity.
phytoid [*fi'toid*] resembling a plant.
Phytolacca [*fi"to-lak'ə*] genus of plants in the family Phytolaccaceae; suspected to contain a toxic saponin which causes enteritis with vomiting, abdominal pain and diarrhea. The illness may be fatal. Includes *P. americana* (*P. decandra*, poke or pokeweed), *P. dioica*, *P. dodecandra*, *P. octandra* (ink weed).
phytomedicine [*fi"to-medĭ-sin*] see **herbal medicine**.
phytomenadione [*fi"to-men"ə-di'ōn*] vitamin K_1; a naturally occurring form of vitamin K obtained from plants; used as an antidote in poisoning by warfarin and other anticoagulant rodenticides.
Phytomonas a genus of protozoan parasites found in plants and insects.
phytonadione [*fi-to"nə-di'ōn*] vitamin K.
phytoparasite [*fi"to-par'ə-sīt*] any plant parasitic organism.
phytophagous [*fi-tof'ə-gəs*] plant-eating.
phytophotocontact dermatitis [*fi"to-fo"to-kon'takt dur"mə-ti'tis*] photosensitization following skin contact with plants which leads to absorption of psoralens.
phytophotodermatitis [*fi"to-fo"to-dur"mə-ti'tis*] phototoxic dermatitis due to contact with certain plants and subsequent exposure to sunlight.
phytoplankton [*fi"to-plank'ton*] see **plankton**.
phytoprecipitin [*fi"to-pre-sip'ĭ-tin*] a precipitin formed in response to vegetable antigen.
phytosis [*fi-to'sis*] any disease caused by a phytoparasite.
phytosterol [*fi-tos'tər-ol"*] a sterol of vegetable origin.
phytotherapy [*fi"to-ther'ə-pe*] see **herbal medicine**.
phytotoxic [*fi'to-tok"sik*] 1. pertaining to phytotoxin. 2. poisonous to plants.
phytotoxin [*fi'to-tok"sin*] an exotoxin produced by certain species of higher plants; any toxin of plant origin.
phytotrichobezoars [*fi"to-tri"ko-be'zors*] fiber balls found in the intestines. They are light compared with enteroliths, being composed of plant or animal fiber cemented by some phosphate salt. They are smooth and usually have a hairy surface. They are usually innocuous.
P_i inorganic orthophosphate.
pI isoelectric point.
pi the sixteenth letter of the Greek alphabet, Π or π.
PI virus parainfluenzavirus.
Pi lines thin, black lines running longitudinally across the X-ray film caused by chemical deposits on the rollers in the automatic developer tank.
pia mater [*pi'ə, pe'ə*] [L.] the innermost of the three meninges covering the brain and spinal cord.
pia-arachnitis [*pi"ə-ar"ak-ni'tis*] leptomeningitis; inflammation of the leptomeninges, or pia mater and arachnoid.
pia-arachnoid [*pi"ə-ə-rak'noid*] the pia mater and arachnoid considered together as one functional unit; the leptomeninges.
piaffe [Fr.] *a strut*; a horse dressage gait in which the horse moves actively but stays in place. The action is high.
pial [*pi'əl, pe'əl*] pertaining to the pia mater.
pialabatement [*pi'əl-ə-bāt'mənt*] decrease in severity of a pain or sign.
piarachnitis [*pi"ar"ak-ni'tis*] leptomeningitis; pia-arachnitis.
piarachnoid [*pi"ə-rak'noid*] pia-arachnoid.
pica [*pi'kə*] craving for unnatural articles of food; a depraved appetite. Expressed in animals by licking or eating foreign materials. Often caused by a nutritional deficiency of bulk, fiber or a specific nutrient, e.g. phosphorus, salt or copper. May lead to botulism, foreign body lodgement in mouth, pharynx, esophagus, in the reticulum to cause reticuloperitonitis, at the pylorus and, in the horse, in the small colon. Called also allotriophagia.
Pichia ohmeri [*pich'e-ə*] a yeast that has caused bovine mastitis.
pick [*pik*] a sharp-pointed instrument, of varying size and function, e.g. tooth pick, hoof pick.
hoof p. consists of a palm grip and a stem with a sharp point. Used for picking out debris, especially stones, from between the bars and the frog of horses' hooves.
picking out removing the accumulated dirt, manure and stones from the sole of the horse's feet with a hoof pick.
pickling [*pik'ling*] a form of curing in which the meat is immersed in a solution of the curing agents instead of being rubbed with and packed in the dry agent (**bacon curing**). The method is faster but does not provide the mouthwatering, smoky dryness of a York or Virginian ham.
Pick's cell see Pick's **cell**, **sphingomyelinosis**.
pickwickian syndrome [*pik-wik'e-ən*] alveolar hypoventilation, somnolence and erythrocytosis associated with extreme obesity as seen in Charles Dickens' fat boy in the *Pickwick Papers*. A similar syndrome has been observed rarely in dogs.
picloram a picolinic acid derivative used as a herbicide; causes weakness, anorexia and depression in poisoned animals.
pico- (p) [It.] *small*; prefix used in the metric system of measurements to designate 10^{-12} (one-million-millionth) part of the unit to which it is joined.
picobirnaviruses a name provisionally applied to small (35 nm) double segment, double-stranded RNA viruses which may cause diarrhea in humans, pigs and rodents.
picogram (pg) [*pi'ko-gram*] one million-millionth (10^{-12}) gram.
picolinic acid a base compound from which a number of derivatives are produced and used as herbicides.
picometer (pm) [*pi'ko-me'tər*] a unit of length, 10^{-12} meter.
Picornaviridae [*pī-kor"nə-vir'ĭ-de*] a family of small (25 nm diameter), nonenveloped single-stranded, plus sense RNA viruses, the members of which cause a variety of diseases including poliomyelitis of humans (genus *Enterovirus*), respiratory disease in cattle (*Rhinovirus*), encephalomyocarditis in pigs (*Cardiovirus*),

VetBooks.ir

foot-and-mouth disease and equine rhinitis A (genus *Aphthovirus*), porcine encephalomyelitis (genus *Teschovirus*), avian encephalomyelitis and hepatitis A of humans (genus *Hepatovirus*) and equine rhinitis B viruses (genus *Erbovirus*), bovine and porcine kobuviruses (genus *Kobuvirus*).

picornavirus [*pi-kor'nə-vi"rəs*] a member of the virus family *Picornaviridae*.

picrate [*pik'rāt*] any salt of picric acid.

p. test a field test for cyanogenetic compounds in plants and gut contents. Based on the conversion of yellow sodium picrate to a brick red color in contact with hydrocyanic acid. Called also Henrici test.

alkaline p. test a method of creatinine assay based on the orange-red color produced by creatinine reacting with alkaline picrate (Jaffe reaction).

picric acid [*pik'rik*] a substance used as dye, tissue fixative, antiseptic, astringent and stimulant of epithelialization; it can be detonated on percussion or by heating above 570°F (300°C). Called also trinitrophenol.

picrocarmine [*pik"ro-kahr'min*] a histological stain consisting of a mixture of carmine, ammonia, distilled water and aqueous solution of picric acid.

picrotoxin [*pik'ro-tok"sin*] a central nervous system and respiratory stimulant formerly used in barbiturate and other anesthetic poisonings; extracted from the seeds of the plant *Anamirta cocculus*.

Pictou disease Canadian term for pyrrolizidine alkaloidosis in cattle eating *Senecio jacobaea*.

picture frame theory a theory of wound healing and contraction stating that mitotically active cells migrate inward from the margin of the wound, pulling on the material within the margins of the defect. See also **pull theory**.

PIE syndrome pulmonary infiltrates with eosinophils; may be associated with lunworms, heartworms, larval migration, fungal infections and hypereosinophilic syndrome, but often of unknown origin. Characterized by coughing, dyspnea, reduced exercise tolerance, diffuse pulmonary infiltration by eosinophils and a peripheral eosinophilia. Called also eosinophilic bronchopneumopathy.

piebald [*pi'bawld*] a horse coat color of large, distinct, irregularly shaped patches of black and white.

piebaldism [*pi'bawld-iz-əm*] a condition in which the skin is partly brown and partly white, as in partial albuminism and vitiligo. See also **Waardenburg's syndrome**.

piecemeal patchy, e.g. necrosis of the liver in which individual hepatocytes are attacked by small groups of inflammatory cells and fine, fibrous septa follow extension of the inflammatory process beyond the limiting plate.

pieces a wool-classer's term; when classing fleece wool preparatory to sale, these are the inferior pieces of wool, including skirtings from around the edge and broken wool.

pied [*pīd*] coloring of haircoat or feathers that consists of uneven patches or spots of color on a white or cream background.

Piedmont, Piedmontese a breed of white or pale gray, with black points, dual-purpose cattle. They have short horns and a deep forehead, like other brachyceros-type cattle.

piedra [*pya'drə*] a fungal disease of the hair in which white or black nodules of fungi form on the shafts.

piercing jaundice needle large wide pointed acupuncture needle, threaded with horse tail or hemp thread passed through the skin of the edematous region and the ends of the thread knotted together and a weight tied to them; used to maintain drainage through the holes.

***Pieris*[1]** temperate zone garden plant genus in the family Ericaceae. Contains grayanotoxin (andromedotoxin). Includes *P. formosanum*, *P. japonicum* (*Andromeda japonica*, Japanese pieris), *P. ovalifolia*.

***Pieris*[2]** an insect genus in the order Lepidoptera.

P. brassicae the cabbage butterfly of which the caterpillars are cryptoxic, causing colic, stomatitis and paraplegia.

-piesis word element. [Gr.] *pressure.*

Pietrain dirty white pig with black or red spots and semi-lop ears.

P. creeper pigs inherited myopathy with atrophy of type-1 myofibers in the Pietrain breed of pigs; characterized by progressive muscular weakness in young pigs, progressing to recumbency. An autosomal recessive trait. Called also creeper pigs.

P-43: Pietrain pig.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

piezoelectric [*pi-e"zo-e-lek'trik or pē"zo-e-lek'trik*] the generation of electricity in response to mechanical stimulation. See ultrasonography.

PIF prolactin inhibitory factor.

pig [*pig*] an even-toed non-ruminant ungulate with a simple stomach. A member of the suborder Suiformes of the order Artiodactyla. Includes domestic pigs, which are very prolific, heavy, ponderous, rapid-growing, grunting creatures bred almost completely for the purpose of providing meat, but in some cultures are assuming importance as house pets. There are many breeds and colors, the ears may be erect or lop, there are a large number of mammary glands and they have a characteristic snout, thin skin and heavy bristles. They are descendants of the wild boar, *Sus scrofa*. Called also hog. There are many indigenous domesticated breeds. Popular commercial breeds include **Berkshire**, **Chester white**, **Duroc** (**Duroc Jersey**), **Gloucester old spot**, **Hampshire**, **Lacombe**, **Landrace**, **Large white**, **Pietrain**, **Poland China**, **Tamworth**, **Wessex saddleback**, **Yorkshire**. Wild genera include wild boar, wild pigs (both *Sus* spp.), bush pigs (*Potamochoerus* spp.), wart hog (*Phacochoerus aethiopicus*), forest hog (*Hylochoerus meinertzhageni*), babirussa (*Babirussa babyrussa*). Pigs are becoming popular as companion animals, especially pot-bellied pigs. it seems reasonable to assume that this trend will increase because of the advent of 'Babe'.

bearded p. (*Sus barbatus*) a medium-sized, wild pig of Southeast Asia; it has distinctive hairs on the face that form the beard. A meat source for indigenous people.

p. ears dried ears (pinnae) marketed as a chew toy for dogs; have been a source of *Salmonella* infection in humans handling them.

miniature p. developed in the early 1960s as research animals by interbreeding local American feral pigs with natural dwarf pigs of Yucatan, Vietnamese, Taiwanese breed origin. Pet pigs called 'miniature pet pigs' may be purebred Vietnamese pot-bellied pigs (black, short-nosed, heavy-jowled, pot-bellied, with straight wagging tail), or Yucatan type (straight-bellied, long-snouted, coarse-haired and coarse-coated, without a pot belly and weighing 120–250 lb when mature—called also Mexican hairless), or African Pygmy—called also Guinea hog (with straight back, no pot belly, short to medium length hair, kinky tail, black, sometimes with white markings).

pot-bellied p. not a specific breed; originate from dwarf, pot-bellied indigenous Chinese and South East Asian pigs.

p. pox see **swinepox**.

p. typhoid see **salmonellosis**.

pig-sticking the so-called sport of hunting wild pigs on horseback and stabbing them to death with spears.

pigCHAMP commercial swine database program produced by University of Minnesota.

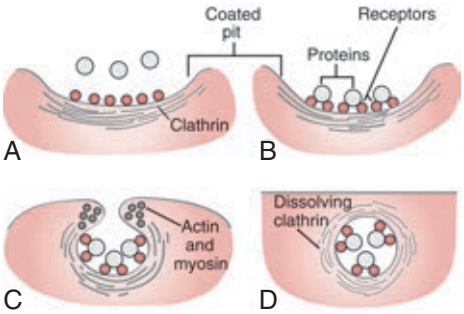
P-44: Pot-bellied pig.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

pigeon [*pij'ən*] a member of the family Columbidae which also includes the doves. The domestic pigeons are generally gray, medium-sized birds which exist in a large number of breeds and races including Romans, Jacobins, tumblers, fantails, pouters, carrier pigeons and turtle-doves.
p. berry ***Phytolacca*** *americana*.
p.-breeder's lung see **bird-fancier's lung**.
carrier p. pigeon with strong homing instincts used to carry messages over relatively long distances. Produced by breeding and selection between races of domestic pigeons. See also homing pigeon (below).
p. circovirus the cause of lethargy, respiratory and gastrointestinal signs and poor racing performance in young pigeons.
p. fever deep-seated abscesses in the pectoral muscles of horses. See pectoral **abscess**.
p. grass ***Panicum*** *whitei*, ***Setaria*** spp.
p. herpesvirus the cause of respiratory disease (coryza) in domestic pigeons.
homing p. pigeon with strong homing instincts used in racing and as a carrier pigeon (above). Produced by breeding and selection between races of domestic pigeon.
p. pox see **pigeonpox**.
purple p. grass ***Setaria*** *incrassata*.
p. toed a condition in which the toes are turned inwards.
pigeonberry *Duranta repens*.
pigeonpox a disease caused by a poxvirus in the genus *Avipoxvirus*; characterized by the presence of pox lesions in the mouth and serious involvement of the eyes which may be sufficiently serious as to cause blindness.
pigeonwood see ***Hedycarya arborea***.
pigface see ***Mesembryanthemum***.
piggery condensate the liquid or dried condensate which collects on walls of piggeries in very cold climates; may be toxic because of its high nitrate content.
piglet baby pig from birth to conventional weaning age, usually 8 weeks but now more commonly 3 weeks.
p. anemia see **iron** nutritional deficiency.
hysterectomy-derived p. see **HYPAR**.
pigment [*pig'mənt*] 1. any coloring matter of the body. 2. a stain or dyestuff. 3. a paintlike medicinal preparation applied to the skin.
abnutzen p. see **lipofuscin**.
age p. lipofuscin.
bile p. any one of the coloring matters of the bile, derived from heme, including bilirubin, biliverdin, etc.
blood p. any one of the pigments derived from hemoglobin, including heme, hematoidin, hermosiderin etc.
p. cells see **melanocyte**.
p. genes genes for each of the coat colors, e.g. white gene, black gene, orange gene.
respiratory p's substances, e.g. hemoglobin, myoglobin or cytochromes, which take part in the oxidative processes of the animal body.
pigmentary [*pig'mən-tar"e*] pertaining to or emanating from pigment.
p. incontinence a histopathological lesion in which melanin granules are free in the dermis and within dermal macrophages; it is associated with damage to the stratum basale and basement membrane of the epidermis.
pigmentation [*pig"mən-ta'shən*] the deposition of coloring matter; the coloration or discoloration of a part by a pigment. See also **hyperpigmentation**, **hypopigmentation**, **melanosis**.
bacterial p. production of pigment is a characteristic of some bacteria which may be useful in identification. Examples are *Pseudomonas aeruginosa*, *Chromobacterium violaceum* and *Serratia marcescens*.
p. disorders see **hyperpigmentation**, **leukoderma**, **leukotrichia**, **hypopigmentation**.
hematogenous p. pigmentation produced by accumulation of hemoglobin derivatives, such as hematoidin or hemosiderin.
pigmented [*pig'mən-təd*] colored by deposit of pigment.
pigmentolysin a lysin that destroys pigment.
pigmentophage any pigment-destroying cell, especially such a cell of the hair.
pigweed ***Amaranthus*** spp., ***Portulaca*** *oleracea* (inland pigweed), ***Trianthema*** *portulacastrum* (black or giant pigweed).
PIH prolactin-inhibitory hormone.
piitis [*pi-i'tis*] inflammation of the pia mater.
pika (*Ochotona* spp.) small lagomorphs in the family Ochotonidae, native to Asia, North American and Eastern Europe. They are very small with short tails and have dense fur that resembles hamsters or chinchillas, but they are often called rock rabbits or mouse hares.
pike a freshwater fish in the genus ***Esox***. Includes northern pike (*E. lucius*).
p. fry rhabdovirus the cause of disease similar to **spring viremia of carp**.
pike-perch important food fish in Europe and the USSR, including *Lucioperca*, *Perca* and *Sander* (formerly *Stizostedion*) spp. See also **walleye** (4).
pila [*pi'lə*] pillar, e.g. pila coronaris dorsalis—one of the several pillars in the rumen that divides it into semiseparate sacs.
pilar, pilary [*pi'lər*] pertaining to the hair or to bacterial flagella, as in pilar antigens.
p. cyst **trichilemmal** cyst.
pilary canal [*pil'ə-re*] lumen of the hair follicle.
pilewort ***Ranunculus*** *ficaria*.
pili [*pi'li*] plural of *pilus*.
p. torti curvature of the hair follicle results in twisted, flattened hairs; may be caused by systemic disease or inflammation of the hair follicle. Reported in cats.
pill [*pil*] a small globular or oval medicated mass to be swallowed; a tablet.
enteric-coated p. one enclosed in a substance that dissolves only when it has reached the intestines.
pillar [*pil'ər*] a supporting column.
p's of the fauces two paired folds of mucous membrane coated muscle at the sides of the throat; the palatoglossal arches (the anterior pillar) and the palatopharyngeal arches (the posterior pillar).
p. reins short reins attached to each side of a horse's headstall and fixed to a pillar on each side of the horse, the ties at 5 ft above the ground and the pillars 3 ft apart; method of restraint while grooming or saddling a horse.
ruminal p. fleshy ridges which circle the rumen dividing it into dorsal and ventral sacs; lesser coronary pillars demarcate the caudal sacs. Called also *pila longitudinalis dextra, pila longitudinalis sinistra, pila accessoria dextra, pila accessoria sinistra, pila coronaria dorsalis, pila coronaria ventralis, pila cranialis pila caudalis*.
pillory [*pil'ər-e*] a contrivance of pipe or wood that fits around the neck of the cow and stops the head from getting loose, but allows it to move up and down. Called also yokebail.
pil(o)- word element. [L.] *hair, composed of hair*.
Pilobolus a fungus which grows prolifically on cow feces and facilitates the spread of lungworm larvae by projecting them up to 10 feet when the fungal sporangia explode, as they do when they ripen.
pilocarpine [*pi"lo-kahr'pēn*] a cholinergic alkaloid from leaves of *Pilocarpus jaborandi* and *P. microphyllus*; used as an ophthalmic miotic in the form of its hydrochloride and nitrate salts.
pilocystic [*pi"lo-sis'tik*] hollow or cystlike, and containing hair; said of dermoid tumors.
piloerection [*pi"lo-e-rek'shən*] erection of hair.
pilojection introduction of one or more hairs into an aneurysmal sac, to promote formation of a blood clot.
pilomatricoma [*pi"lo-ma"trĭ-ko'mə*] pilomatrixoma.
pilomatrixoma [*pi"lo-ma"trik-so'mə*] a benign, circumscribed, calcifying epithelial neoplasm derived from hair matrix cells, manifested as a small firm, partly calcified intracutaneous spheroidal mass. Kerry blue terriers are predisposed to develop these. Called also epithelioma of Malherbe, calcifying epithelioma.
pilomotor [*pi"lo-mo'tər*] causing movement of the hairs, piloerection; pertaining to the arrector muscles.
p. nerves the nerves supplying the arrector muscles of the hair.
pilonidal [*pi"lo-ni'dəl*] having a nidus of hairs.
p. sinus see **dermoid** cyst.
pilose [*pi'lōs*] hairy; covered with hair.
pilosebaceous [*pi"lo-sə-ba'shəs*] pertaining to the hair follicles and sebaceous glands.
p. follicle sebaceous glands empty into the pilary canal.
pilot trials preliminary trial using a small number of animals to obtain general information without necessarily achieving statistical significance.

VetBooks.ir

pilus pl. *pili* [L.] 1. a hair. 2. fine, filamentous appendage found on the surface of many gram-negative bacteria, shorter, thinner and straighter than flagella. There are two kinds of pili: (a) a larger form that is hollow and found on male bacterial cells only; it is used in bacterial cell conjugation, and (b) a smaller form which is of major significance in adherence of bacterial cells to epithelial surfaces such as the intestinal mucosa or mammary gland epithelium. Antipilus antibody can provide protection against disease. Called also fimbriae.
p. cuniculatus pl. *pili cuniculati;* burrowing hair.
p. incarnatus pl. *pili incarnati;* ingrown hair.
p. lanei wool fiber.
p. tacti tactile hairs about the lips, nostrils and eyes.
p. tortus pl. *pili torti;* twisted hair; see also pili torti.
pimecrolimus an immunosuppressive agent similar to **tacrolimus**.
Pimelea Australian genus of poisonous annual herbs and perennial shrubs in the family Thymelaeaceae; contain irritant diterpenoids; cause two major syndromes: (1) *Pimelea* poisoning of cattle, called also St. George disease or Marree disease, caused only in cattle only by a diterpenoid ester, simplexin; the syndrome is one of chronic, right-sided heart failure leading to hydrothorax, massive anasarca and jugular vein distention plus profound anemia and persistent diarrhea; (2) in species other than cattle the only sign is severe diarrhea and a fatal outcome. All species are considered toxic; those with most impact on animal health include *P. decora* (Flinders poppy), *P. elongata*, *P. haematostachya* (pimelea or red poppy), *P. latifolia* (*P. altior*), *P. microcephala*, *P. neo-anglica*, *P. pauciflora*, *P. prostrata* (Strathmore weed), *P. simplex*, *P. trichostachya*. Called also many common names, mostly some variation on riceflower, flaxweed.
pimelea plants in the genus ***Pimelea***. Includes poison pimelea (*P. pauciflora*).
pimelitis [*pim″ə-li′tis*] inflammation of the adipose tissue.
pimelosis [*pim″ə-lo′sis*] 1. conversion into fat. 2. obesity.
pimobendan phosphodiesterase inhibitor used in dogs for its positive inotropic effect and vasodilation ('inodilator') in the management of congestive heart failure and dilated cardiomyopathy.
pimozide an antipsychotic agent in humans; used for its long-acting central antiemetic effect in dogs.
Pimpinella [*pim″pĭ-nel′ə*] genus of plants in family Apiaceae; includes *P. anisum*. See **anise**.
pimple [*pim′pəl*] an elevated inflamed lesion about 0.5 inch diameter, raised above the skin surface, with a necrotic center which commonly points and bursts.
pimply gut see **esophagostomiasis**.
pin [*pin*] a slender, elongated piece of metal used for securing fixation of parts.
p. bone the triangular ischial tuber; a term used almost exclusively in cattle.
p. cutter a sophisticated, surgical version of a boltcutter, usually with multiple scissor joints.
p. drill a sterilizable drill chuck can be fitted to a surgical power drill and fitted with a surgical bit to match plating screws or orthopedic pins.
intramedullary p. see internal skeletal **fixation**.
Steinmann p. a metal rod for the internal fixation of fractures. See also **Steinmann** pin.
p. teat inverted nipple, seen mostly in sows.
p. toes toes turned inwards. Called also pigeon toes.
p. vise a device for attaching to the end of an intramedullary pin to provide a grip for placement in bone. See also **chuck**.
pincement [Fr.] pinching of the flesh in massage.
Pincer emasculatome [*pin′sər*] see **Burdizzo emasculatome**.
pinch biopsy [*pinch*] a method for gastrointestinal biopsy using forceps, introduced by endoscopy, to grasp and cut small specimens of mucosa and lamina propria.
pinch technique [*pinch*] a method of correcting entropion in which forceps are used to crush enough skin of the lower lid to correct the abnormal position; it is then cut away and the defect sutured. Largely replaced now by the more controlled **Hotz-Celsus procedure**
pincherry ***Prunus*** *pennsylvanica*.
pindan poison ***Velleia*** *panduriformis*.
pindborg tumor [*pind′borg*] see **calcifying** epithelial odontogenic tumor.
pindolol [*pin′də-lol*] a partial β-agonist used to treat aggression in dogs.
pindone [*pin′dōn*] one of a series of 2-aryl-1,3-indandiones which have potent anticoagulant activity. Can cause fatal hemorrhage in animals.
pine [*pīn*] 1. unthriftiness of calves due to nutritional deficiency of copper. There is a stiff gait, painful joints, graying of the haircoat and diarrhea in some. May also be used to describe the unthriftiness caused by nutritional deficiency of cobalt. 2. trees in the genus ***Pinus***. Many other trees are also called pine incorrectly, e.g. cypress pine, milky pine. Includes loblolly pine (*P. taeda*), ponderosa, Western yellow or yellow pine (*P. ponderosa*), radiata pine (*P. radiata*).
p. needle abortion see pine needle **abortion**.
p. oil an extract from pine trees which is used as an astringent, antiseptic, antitussive and in cattle as an antifoaming agent to treat bloat.
pineal [*pin′e-əl*] 1. shaped like a pine cone. 2. pertaining to the pineal body.
p. body, p. gland a small, conical endocrine gland attached by a stalk to the dorsal wall of the third ventricle of the cerebrum. In certain amphibians and reptiles the gland functions as a light receptor. In most mammals, including humans, it appears to be the major or unique site of melatonin biosynthesis. The effect of melatonin on the body and the exact function of the pineal body remain uncertain. There is an increasing body of evidence that the pineal body is inhibitory to the gonads and that it is the principal mechanism in the known effect of environmental illumination on estrous cycles. It is proposed that the retina perceives the changes in light intensity and stimulates the pineal gland via the sympathetic nervous system.
p. extract see **melatonin**.
p. eye in non-mammalian vertebrates, the pineal body is a third or pineal eye.
p. gland see pineal body (above).
pinealism [*pin′e-əl-iz-əm*] the condition due to deranged secretion of the pineal body.
pinealoblastoma [*pin″e-ə-lo′blas-to′mə*] pinealoma in which the pineal cells are not well differentiated.
pinealocyte [*pin′e-ə-lo-sīt″*] an epithelioid cell of the pineal body.
pinealoma [*pin″e-ə-lo′mə*] a rare tumor of the pineal body composed of neoplastic nests of large epithelial cells; it may cause hydrocephalus, precocious puberty and gait disturbances.
pinene [*pī′nēn*] the principal component of turpentine oil.
ping clear, sharp, high-pitched, metallic, musical note created by a flicking percussion stroke over a viscus containing gas under moderate pressure and a small amount of fluid; used extensively in the physical examination of the abdomen in cattle and horses.
pingue [*ping-gwĕ*] *Hymenoxys richardsonii*; called also Colorado rubberweed.
piniform [*pin′ĭ-form*] conical or cone-shaped.
pining [*pīn′ing*] the state of having **pine** (1).
pinion rear section of a bird's wing; holds the flight feathers.
pinioning a permanent alteration of a bird to prevent its flying. The standard operation is amputation of the distal wing including the carpal, metacarpal and phalangeal bones of one wing. Alternative procedures are tenotomy and ankylosis of a joint.
pink disease [*pink*] pink color of tissues in broiler chickens dying of fatty liver and kidney disease which responds to dietary supplementation with biotin. Called also pinks.
pink-eyed coat color series the *p* allele series causes dilution mainly of dark colors, loss of retinal pigmentation and sometimes male sterility.
pink nose [*pink*] ***Lantana*** poisoning.
pink rot [*pink*] see **fleece** rot.
pink rot fungus of celery *Sclerotinia* spp.; of parsnip *Ceratocystis* spp.
pink tooth [*pink*] see pink **teeth**.
pinkeye [*pink 'i*] see **infectious** bovine keratoconjunctivitis, contagious **ophthalmia** (sheep and goats).
pinks see **pink disease**.
pinky syndrome vitiligo. See also Arabian **fading** syndrome.
pinna [*pin′ə*] the projecting part of the ear lying outside the head; auricle.
pinnal [*pin′əl*] pertaining to or emanating from the pinna, e.g. pinnal **alopecia**. See also **auricular**, **ear**.

VetBooks.ir



P-45: Mechanism of pinocytosis.
From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

P-47: Pinzgau dual-purpose cow.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

p. cartilage see auricular **cartilage**.
p. fissure see ear **fissure**.
p. pedal reflex see pinnal pedal **reflex**.
pinnate [*pin'āt or pin'ət*] featherlike; said of a muscle in which the fibers lie at angles to its tendon. The fibers may be unipinnate, bipinnate, etc.
pinnation in a pinnate muscle, the way in which the muscle fibers are attached to its tendon.
pinning a method of bone fixation, usually for treatment of fractures, in which metal pins are placed within the medullary cavity or anchored in bone. Two types of pin in common use are Steinmann and Rush. See also internal skeletal **fixation**.
pinniped member of the mammal superfamily of Pinnipedia, the seals, sea lions, walruses. They are semi-aquatic with sleek, fishlike bodies covered with fur and four limbs modified to flippers. Seals in the family Phocidae do not have external ears, while sea lions and fur seals in the family Otariidae have external ears and their rear flippers turn forward allowing better movement on land.
pinocyte [*pin'o-, pi'no-sīt*] a cell that exhibits pinocytosis.
pinocytosis [*pin"o-, i"no-si-to'sis*] a mechanism by which cells ingest extracellular fluid and its contents; it involves the formation of invaginations by the cell membrane, which close and break off to form fluid-filled vacuoles in the cytoplasm.
pinosome [*pin'o-, pi'no-sōm*] the intracellular vacuole formed by pinocytosis.
pinscher a general term that could refer to any of several breeds, including **Affenpinscher**, **Doberman pinscher**, **German pinscher**, or **Miniature pinscher**.
pint [*pīnt*] a unit of liquid measure in the apothecaries' system, 16 fluid ounces. The Imperial pint is 568.26 milliliters and the American pint is 473.17 milliliters.
Pinta fever [*pēn'tah*] see **Rocky Mountain spotted fever**.
pinto a broken colored or paint horse used for riding. See also **piebald**, **skewbald**. See also **American Paint horse** .
Pinus [*pi'nəs*] a genus of coniferous trees in the family Pinaceae.
P. cubensis, P. ponderosa, P. radiata the leaves of the trees *P. ponderosa* (western yellow pine), *P. radiata*, *P. contorta* (lodgepole pine) and *P. cubensis* contain isocupressic acid and are abortifacient when fed to cows. See pine needle **abortion**.
P. taeda the leaves are reported to cause fatal indigestion in cows. Called also loblolly pine.
pinworm [*pin'werm*] any oxyurid, especially *Oxyuris equi* and *Probstmayria vivipara* both in horses, *Passalurus ambiguus* in rabbits, *Syphacia obvelata* in hamster and mouse.
Pinzgau a multipurpose breed of central European cattle, red-brown color, colorsided, colored head. Called also Pinzgauer.
Pinzgauer 1. **Pinzgau** cattle. 2. **Noric horse**.

P-46: Pinto horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

Piophila casei the cheese or ham fly. The larvae are the skippers of neglected food. They leap around when they are looking for a dry spot to pupate.
pipecurium pipecuronium bromide.
pipecuronium bromide [*pip"ə-ku-ro'ne-əm*] a long-acting, nondepolarizing neuromuscular blocking agent similar to tubocurarine.
pipemidic acid a quinolone antibiotic, similar to nalidixic acid.
piperacetazine a phenothiazine tranquilizer used as a sedative and antipruritic.
piperacillin [*pi-per'ə-sil"in*] an extended-spectrum semisynthetic penicillin active against a wide variety of gram-negative, gram-positive and anaerobic bacteria, including *Pseudomonas aeruginosa*.
piperazine [*pi-per-ə-zēn*] an anthelmintic; several of its salts are used, especially in horses and dogs. A useful agent especially against ascarids. Combined with a benzimidazole is effective against *Parascaris equorum* and benzimidazole-resistant small strongyles. Piperazine is a very safe medicament but poisoning occurs on doses that are several times normal. Signs include incoordination, pupillary dilatation, hyperesthesia, somnolence, tremor, swaying at rest and recumbency. Spontaneous recovery usual.
piperidine alkaloids include **coniine**, **cynapine**, **lobeline**, **nicotine**.
piperocaine [*pi'pər-o-kān"*] a local anesthetic, used as the hydrochloride salt. Has the characteristic of being able to be autoclaved repeatedly without loss of potency.
piperonyl butoxide [*pi-pur'o-nəl*] a synergist used with, and as an enhancer for, pyrethrum and rotenone in the control of ectoparasites.
pipestem long, thin, firm and rounded like the stem of a pipe.
p. feces loose feces passed as long tube-like stools through a stenotic or undilated sphincter.
p. liver bovine liver with the calcified, fibrosed bile ducts of chronic **fascioliasis**.
pipet [*pi-pet'*] pipette.
pipette [*pi-pet'*] [Fr.] 1. a volumetrically accurate glass or transparent plastic tube used in measuring or transferring small quantities of liquid or gas. 2. to dispense by means of a pipette.
Pipturus argenteus toxic plant in the family Urticaceae; an unidentified toxin causes diarrhea, dyspnea, recumbency.
pirbuterol [*pir-bu'tər-ol*] a synthetic β-receptor agonist, used as the acetate or hydrochloride salt in the treatment of bronchospasm.
pirenzepine [*pir"ən-zē'pēn*] a selective M_1 cholinergic antagonist; used as an antiemetic in dogs.
piriform [*pir'ĭ-form*] pear-shaped.
pirimiphos an heterocyclic organophosphate compound used in ear tags for control of horn flies and face flies on cattle.
piritrexin see **tetroxoprim**.
pirlimycin a lincosamide antibiotic active against gram-positive bacteria. Used as an intramammary treatment for clinical and subclinical mastitis in cattle.
Piroplasma [*pi"ro-plaz'mə*] see ***Babesia, Theileria***.
piroplasmosis [*pi"ro-plaz-mo'sis*] see **babesiosis**.
equine p. caused by *Babesia caballi* and *B. equi* affecting horses, donkeys, mules, and zebras; transmitted from carrier animals via tick bites or through mechanical transmission by improperly disinfected needles or surgical instruments. Infection may be inapparent or manifest with signs including fever, anemia, hemoglobinuria, jaundice, dyspnea and colic. Infection is present in most regions including, recently, North America.
piroxicam [*pir-ok'sĭ-kam*] a nonsteroidal anti-inflammatory agent with antineoplastic activity as well as being an effective analgesic; used in the treatment of transitional cell carcinoma in dogs.

P

Piry virus in the genus *Vesiculovirus*.
Piscinoodinium see ***Oodinium***.
piscirickettsiosis rickettsial disease of salmonids caused by *Piscirickettsia salmonis*. Has caused huge losses of Coho salmon in Chile. See also **rickettsial** fish disease.
piscivorous [*pi-siv'ə-rəs*] fisheating; said of birds.
pisgoed [Af.] see **ulcerative** dermatosis.
pisgras [Af.] see **ulcerative** dermatosis.
pisiform [*piz'ĭ-form*] 1. resembling a pea in size and shape. 2. the accessory carpal bone.
pistol a weapon for delivery of a missile; usually a weapon to fire a bullet, used in euthanasia.
balling p. a device shaped like a pistol but loaded with a medicinal bolus which is fired into the pharynx of a horse by the operation of a spring loaded piston.
Pisum [*pi'səm*] a genus of plants in the legume family Fabaceae; an unidentified toxin causes lameness, incoordination, recumbency; deranged behavior has occurred in cattle grazing field peas; includes *P. sativum* (garden pea), *P. sativum* var. *arvense* (field pea or Austrian pea).
pit [*pit*] 1. a hollow fovea or indentation. 2. a pockmark. 3. to indent, or to become and remain for a few minutes indented, by pressure. 4. seed of a fruit, e.g. cherry. Strictly refers to the hard woody coating which surrounds the seed.
anal p. the proctodeum of the embryo.
auditory p. a distinct depression in each auditory placode, marking the beginning of the embryonic development of the internal ear.
lens p. a pitlike depression in the fetal head where the lens develops.
nasal p. a depression appearing in the olfactory placodes in the early stages of development of the nose. Called also olfactory pit.
occlusal p. indentation on the occlusal surface of a tooth, such as a molar.
olfactory p. see nasal pit (above).
otic p. early stage in the development of the embryonic inner ear.
p. of stomach the epigastric fossa or epigastric region.
pit bull a common term describing a type of small to medium sized, short-haired muscular dog with a powerful head and jaws. Usually associated with aggression towards other dogs and humans. Breeds commonly included in this stereotype are **American pit bull** and **Staffordshire bull terrier**.
pitch [*pich*] 1. a dark, more or less viscous residue from distillation of tar and other substances. 2. natural asphalt of various kinds. 3. the quality of sound dependent on the frequency of vibration of the waves producing it
coal tar p. see **coal tar pitch**.
pitchblend a black mineral containing uranium oxide; from it are obtained radium, polonium and uranium.
pitchery ***Duboisia hopwoodii***.
pith [*pith*] soft, spongy, plant tissue.
pithecoid [*pith'ə-koid*] apelike.
pithing [*pith'ing*] 1. destruction of the brain and spinal cord by thrusting a blunt needle into the vertebral canal and cranium, done on animals to destroy sensibility preparatory to experimenting on their living tissue. 2. an abattoir method of euthanasia; the animal is stunned by a captive bolt pistol and a cane or coiled wire passed into the cranium through the hole. The brain is destroyed by moving the cane about.
Pithomyces chartarum [*pith"o-mi'sēz*] previously called *Sporidesmium bakeri*. Causes **facial** eczema.
pithomycotoxicosis [*pith"o-mi"ko-tok"sĭ-ko'sis*] liver damage caused by the toxins of *Pithomyces chartarum*. See also **facial** eczema.
pitis pitis see ***Sarcolobus globosus***.
Pitressin [*pĭ-tres'in*] trademark and commonly used name for a preparation of **vasopressin**.
P. tannate test see **antidiuretic** hormone response test.
pitting [*pit'ing*] 1. the formation, usually by scarring, of a small depression. 2. the removal from erythrocytes, by the spleen, of such structures as iron granules, without destruction of the cells. 3. remaining indented for a few minutes after removal of firm finger-pressure, distinguishing fluid edema from myxedema.
pituicyte [*pĭ-too'ĭ-sīt*] any of the distinctive fusiform cells comprising most of the neurohypophysis.
pituicytoma [*pĭ-too'ĭ-sīt-o"mə*] a neoplasm of the neurohypophysis.
pituitary [*pĭ-too'ĭ-tar"e*] 1. a neuroepithelial endocrine gland of dual origin at the base of the brain in the sella turcica, attached by a stalk to the hypothalamus; called also hypophysis. It is composed of two main lobes, the anterior lobe (anterior pituitary, **adenohypophysis**), secreting several important hormones that regulate the proper functioning of the thyroids, gonads, adrenal cortex, and other endocrine glands, and the posterior lobe (posterior pituitary, **neurohypophysis**) whose cells serve as a reservoir for hormones having antidiuretic and oxytocic action, releasing them as needed, and in response to signals from the hypothalamus, itself responding to incoming signals from the nervous system received by the thalamus. Called also hypophysis. See also **pituitrin**, **vasopressin**, **oxytocin**, **antidiuretic** hormone, **thyrotropin** releasing hormone, **adrenocorticotropic** hormone, **follicle-stimulating hormone**, **luteinizing hormone**, **melanocyte**-stimulating hormone, **prolactin** and **growth hormone**. 2. pertaining to the pituitary gland. 3. a preparation of the pituitary glands of animals, used therapeutically.
p. abscess abscess in the rete mirabile of the pituitary is recognizable clinically in cattle. The syndrome begins with a characteristic inability to close the mouth. Saliva drools, the tongue is prolapsed slightly, and there may be blindness, opisthotonos, loss of balance and recumbency.
p.–adrenal axis the interactions between hypothalamus, pituitary and adrenal cortex, involving releasing factors, tropic hormones and negative feedback mechanisms.
p. alopecia see **alopecia** X.
p. cachexia see pituitary **cachexia**.
p. dwarfism congenital dwarfism with all parts properly proportioned. Affected animals are miniatures of normals. There is delayed bone development and epiphyseal fusion is retarded. It is inherited in cattle and German shepherd dogs. See also German shepherd dog **dwarfism**.
p. giantism acromegaly.
p. gonadotropins **follicle-stimulating hormone**, **luteinizing hormone**.
fetal p. hormones in sheep, cows and goats fetal pituitary ACTH stimulates fetal adrenal cortisol production inducing in turn placental estrogen secretion. Hence fetal placental hormone is important in the induction of parturition.
p. hypoplasia congenital absence (aplasia) or incomplete growth (hypoplasia) of gland. Occurs in one form of inherited prolonged gestation in cattle and in poisoning by the weed *Salsola tuberculata* var. *tomentosa*. It is an inherited trait in German shepherd dogs.
posterior p. 1. the posterior lobe of the pituitary gland; the neurohypophysis. 2. a preparation of animal posterior pituitary having the pharmacological actions of its hormones, oxytocin and vasopressin; used mainly as an antidiuretic in the treatment of diabetes insipidus and as a vasoconstrictor.
p. rete mirabile abscess see **pituitary** abscess.
p. tumor includes adenoma, carcinoma and craniopharyngioma. All cause pressure on surrounding tissue and some cause endocrinological disturbances.
pituitrin an extract of bovine pituitary gland containing oxytocin and vasopressin, now displaced by preparations containing only one of the hormones.
Pituranthos triradiatus see ***Deverra triradiata***
pituri, pitury ***Duboisia hopwoodii***.
pityriasis [*pit"ĭ-ri'ə-sis*] a group of skin diseases in humans characterized by branlike scales on the skin surface. The skin is not thickened and its surface is unbroken. Pityriasis rosea of pigs is the only diseases in animals that is similar.
p. rosea a disease of pigs, most commonly white breeds such as Landrace, up to 3 months old characterized by circular lesions 1 inch (2–3 cm) diameter which often coalesce to produce large irregular lesions. The central area of the lesion is an area of comparatively normal skin, covered by thin brown scales and surrounded by a very narrow, 1–2 mm raised zone of erythema. There is no irritation or no bristle loss and spontaneous recovery is usual. The etiology is unknown. Called also porcine juvenile pustular psoriasiform dermatitis, pseudoringworm.
pityroid [*pit'ĭ-roid*] furfuraceous; branny; resembling pityriasis.
Pityrosporon [*pit"ĭ-ros'pə-ron*] see ***Malassezia***.
pivalate [*piv'ə-lāt*] USAN contraction for trimethylacetate.
pivamdinocillin [*piv-am"pĭ-sil'in*] an ester of amdinocillin. Called also pivmecillinam.

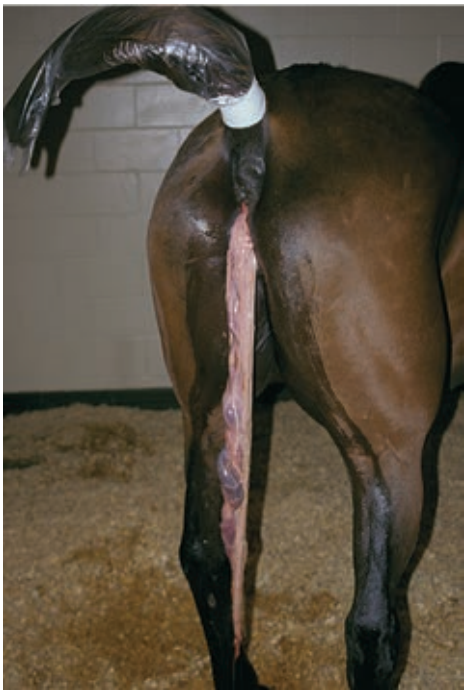
P-48: Pityriasis rosea.

pivampicillin an ester of ampicillin with the same broad spectrum of antibiotic activity.
PIVKA proteins induced by vitamin K deficiency or antagonists; nonfunctional precursor forms of vitamin K-dependent coagulation factors, lacking carboxylation of glutamic acid residues, found in animals treated or poisoned with anticoagulants.
pivmecillinam [*piv"mə-sil'ĭ-nəm*] pivamdinocillin.
pivoters a term used in the meat industry for animals that walk in circles.
pivoting said of the exercise demanded of a horse when testing a limb for weakness or lameness; the horse is forced to turn very tightly so that it actually pivots on the limb being examined.
pixel [*pik'sel*] a *pic*ture *el*ement such as a dot on a video or computer display screen. The greater the concentration of pixels the clearer the image. The total number of pixels elements is specified in megapixels (1 megapixel=1 million pixels). A CT scan or PET scan is composed of an array of squares (pixels), each of which is colored a uniform shade of gray or another color. The corresponding region in the tissue slice that is imaged is called a *voxel* (volume element). See also computed tomography.
pizzle [*piz'əl*] 1. prepuce. 2. penis.
p. dropping a farm procedure used in male sheep to reduce local wetting of the wool as a prevention against pizzle rot. The anterior attachment of the prepuce to the abdominal wall is severed.
p. rot see **enzootic** balanoposthitis.
p. stain wool stained by urine; in belly wool from male sheep.
PK pyruvate kinase.
pK the negative logarithm of the ionization constant (K) of an acid, the pH of a solution in which half of the acid molecules are ionized.
PKU phenylketonuria.
placebo [*plə-se'bo*] [L.] a substance given to a patient as medicine or a procedure performed on a patient that has no intrinsic therapeutic value but pleases the patient's owner who expects to have to give the animal some medicine. A placebo may be administered in the form of a sugar pill or an injection of sterile water. Placebos are also used in controlled clinical trials of new drugs. While some patients selected at random are given the new drug, others are given a placebo. Often this is an active placebo that mimics the new drug's side-effects. Neither the patients nor the veterinarians know who is receiving the real drug. The patients taking the new drug must have significantly more relief of signs than the control group taking the placebo for the new drug to be considered to be effective. Placebos can produce an effect that is either positive, with improvement of signs, or negative, with worsening of signs or the appearance of adverse side-effects.

placenta [*plə-sen'tə*] pl. *placentae, placentas* [L.] an organ characteristic of true mammals during pregnancy, joining mother and offspring, providing endocrine secretion and selective exchange of soluble bloodborne substances through apposition of uterine and trophoblastic vascularized parts. Called also afterbirth. See also **fetal** membranes, **placentation**. Domestic animals have a chorioallantoic placenta in which the outer layer of the allantois is fused with the chorion and the fetal umbilical vessels are distributed in the connective tissue between the two. Placentae are classified in several ways; based on the tissues of the dam and the fetus that contact each other; based on the proportion of the surface area of the fetal membranes that is in fact placentacious; based on loss of tissue at birth, etc. Thus the bovine placenta is epitheliochorial, cotyledonary and nondeciduate. The major function of the placenta is to allow diffusion of nutrients from the dam's blood into the fetus's blood and diffusion of waste products from the fetus back to the dam. This two-way exchange takes place across the placental membrane, which is semipermeable. The placenta also produces hormones such as progesterone and estrogen.
adeciduate p. see epitheliochorial placenta (below).
choriovitelline p. a placentation in which the yolk sac becomes involved in the fetal–maternal union.
cotyledonary p. distribution of the villi on the fetal chorion is localized in multiple circumscribed areas—the cotyledons.
diffuse p. the villi on the fetal chorion is diffuse over the entire placenta as in mares and sows.
discoid p. a placenta in which the chorionic villi are arranged in a circular plate as in human and rodent placentae.
endotheliochorial p. the maternal vessels in the endometrium are bared to their endothelium and these are in contact with the chorion of the fetal membranes. This occurs in the bitch and queen.
epitheliochorial p. the uterine epithelium and the chorion are in contact and there is no erosion of the epithelium. Characteristic of cows, sows and mares. Called also adeciduate placenta.
hemochorial p. a type of placenta in which all maternal layers are lost so that fetal tissue is in contact with frank maternal blood, as occurs in insectivores, rodents, rabbits and most primates.
nondeciduate p. no maternal tissue is lost when the pregnancy terminates.
retained p. the placenta has not been passed within a certain time (cow 12 hr, sheep and goat 6 hr, mare and camelid 3 hr) after the fetus has been delivered. Represents a potential beginning for metritis and infertility. Often difficult to assess in carnivores as they rapidly eat the placenta, but of less concern than in other species. Called also retained fetal membranes.
syndesmochorial p. a type of placentation characterized by an endometrial attachment to the chorion with a limited amount of destruction of the endometrial epithelium. Formerly thought to be characteristic of the ewe and goat doe, these species are now known to have epitheliochorial placentae.
zonary p. a placenta in which the chorionic villi are restricted to an equatorial girdle, as in the bitch and queen.
placental [*plə-sen'təl*] pertaining to or emanating from placenta.
p. barrier the placental separation of maternal and fetal blood which varies in its structure and permeability between the species. In general the more layers of cells between the two circulations the less permeable the membrane. In none of the domestic animals are significant amounts of immune globulins

P-49: Cotyledonary placenta of ruminants. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

VetBooks.ir



P-50: Retained fetal membranes.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

or erythrocyte antigens passed through the membranes unless the epithelium is damaged. See also **placenta**.

p. calcification accumulations of mineral deposit especially around the vessels and in the allantois, a normal occurrence in most species.

p. cavities the allantoic and amniotic cavities; called also amniotic and allantoic sac.

p. edema edema of the placenta, without necessarily any involvement of the fetus.

p. hormones the placenta in all species produces estrogens and progesterone. In the cow it also produces lactogen, a hormone that influences structural and functional aspects of milk production. In the mare the **endometrial** cups produce **PMSG** (now called eCG) which assists in the maintenance of pregnancy. The canine, equine, feline and primate placentae also produce **relaxin** which has a similar action.

p. implantation the placenta of a viable fetus, escaped from the genital tract, can implant successfully to the peritoneum.

p. inflammation see **placentitis**.

p. lactogen a placental hormone present in the cow's peripheral circulation at about 160 days of pregnancy; thought to have prolactin and growth-hormone capabilities. Used for pregnancy diagnosis in some species. Called also placenta associated glycoprotein (PAG), chorionic somatomammotropin.

p. mole see **mole**.

p. plaques are normal structures on the amnion in most species. They are foci of squamous epithelium.

p. transfer of immunoglobulins see placental barrier (above) and passive **immunity**.

placentation [*pla"sən-ta'shən*] 1. the series of events following implantation of the embryo and leading to development of the placenta. 2. the nature of the implantation. See also **placenta**.

adventitial p. developmental of additional areas outside the normal areas, e.g. intercotyledonary in cattle.

cotyledonary p. the areas of placentation are limited to caruncles, approximately circular masses scattered over the placenta. Characteristic of the cow, ewe and goat doe.

diffuse p. the whole of the surface of the chorion is placental.

intercotyledonary p. abnormal placental attachments between the cotyledons, in cows.

zonal p. only some zones of the placenta have a vascular area involved in placentation. Characteristic of the bitch and the queen.

placentitis [*pla"sən-ti'tis*] inflammation of the placenta; causes abortion or, by adhesions, retention of the placenta. Infection is hematogenous in most species, but ascending infections are common in mares resulting in inflammation and detachment of the chorioallantois at the level of the cervical star.

ascendant p. infection ascends from the vagina through the cervix. Common in mares with abnormal vulvar and vaginal conformation.

hematogenous p. infection of the placenta after septicemia.

nocardioform p. distinct type of chronic placentitis in mares with the lesion on the chorionic surface of the placenta; caused by *Crossiella equi*. A proportion of infections result in late-term abortion, stillbirth, or premature birth. Reported only in Kentucky.

placentography [*pla"sən-tog'rə-fe*] radiological visualization of the placenta after injection of a contrast medium.

placentoid [*plə-sen'toid*] resembling the placenta.

placentome the cotyledon plus the caruncle.

placentopathy [*pla"sən-top'ə-the*] any placental disease.

placentophagia eating of placenta by the dam; common in carnivores.

placing the way in which an animal places its feet when moving.

p. reflex a postural reaction tested by supporting the animal and approaching a surface such as a table to see how the animal positions its feet; performed with and without a blindfold to test its tactile and visual responses.

Placobdella leeches found in the nasal cavities of aquatic anatid birds. Recorded species include *P. rugosa*, *P. catanigera.*

placode [*plak'ōd*] a platelike structure, especially a thickening of the ectoderm marking the site of future development in the early embryo of an organ of special sense, e.g. the *auditory placode* (ear), *lens placode* (eye) and *olfactory placode* (nose).

lens p. the ectodermal thickening which develops into the lens vesicle and later the lens.

nasal p. one of a pair of ectodermal thickenings which are the forerunners of the external nares and nasopharyngeal epithelium.

olfactory p. an ectodermal thickening of the embryo which ultimately provides the sensory nerves for the olfactory region of the nasal mucosa.

otic p. one of the pair of ectodermal thickenings in the vertebrate embryo which invaginates and is a major contributor to the internal ear.

placoid [*plak'oid*] platelike or plaquelike.

Plagiobothrys genus of plants in family Boraginaceae; causes nitrate–nitrite poisoning; called also popcorn flower.

plagiocephaly [*pla"je-o-sef'ə-le*] bizarre oblique distortion of the shape of the skull resulting from irregular, asymmetrical closure of the cranial sutures.

P-51: Zonary placenta of carnivores.
From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

P-52: Ascending placentitis viewed from the allantoic surface, note the thickening and discoloration around the cervical star.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

Plagiorchis a genus of flukes (digenetic trematodes) in the family Plagiorchiidae.
P. arcuatus found in, and causes inflammation of, the oviduct of fowls.
P. lutrae found in otters.
***P. megalorchis* (syn. *P. laricola*)** found in turkey poults and in wild birds.
Plagiorhynchus formosus see ***Prosthorhyncus formosus***.
plague [*plāg*] 1. an epidemic of disease attended by great mortality. 2. an acute febrile, infectious, highly fatal disease caused by the bacillus *Yersinia pestis*. It is primarily a disease of rats and other rodents, dogs and cats, and is usually spread to humans by fleas. The more common form of plague is the *bubonic*. There is also a *pneumonic* type in humans, which can be spread directly from person to person by droplet infection. The clinical signs in all species are fever, vomiting and enlargement of lymph nodes, the buboes that give the disease its name. See also septicemic plague (below).
bubonic p. a highly contagious and severe disease caused by the bacillus *Yersinia pestis* carried in infected rats and transmitted to humans by fleas. See also **plague**.
cattle p. see **rinderpest**.
duck p. an acute infectious disease of ducks caused by a herpesvirus and characterized by tissue hemorrhages and blood free in body cavities, eruptions on the mucosae of the digestive tract, degeneration of parenchymatous organs and lesions in lymph nodes. Called also duck virus enteritis.
equine p. see **African** horse sickness.
fowl p. see **avian** influenza.
septicemic p. hematogenous spread of infection to many organs may occur without the formation of buboes; occurs in the cat with pulmonary involvement, disseminated intravascular coagulopathy and death.
swine p. see **swine** plague.
sylvatic p. bubonic plague in wild animals in uninhabited areas, including wild rats, ground squirrels, mice, marmots, owls, gophers, badgers, rabbits, prairie dogs and chipmunks and which serves as a reservoir for urban rats which are the origin, via the oriental rat flea (*Xenopsylla cheopis*), of bubonic plague in humans. Caused by *Yersinia pestis*,
plain bodied said of a sheep with very few wrinkles.
plainhead in canaries, one with plain feathering on the head instead of a crest.
plains bahia see ***Bahia oppositifolia***.
plane [*plān*] 1. a flat surface determined by the position of three points in space. 2. a specified level, as the plane of anesthesia. 3. to rub away or abrade. See also **planing** and plastic **surgery**. 4. a superficial incision in the wall of a cavity or between tissue layers, especially in plastic surgery, made so that the precise point of entry into the cavity or between the layers can be determined.
coronal p. a plane that passes through the coronal suture (ie between the frontal and parietal bones); an ambigulous term that cannot be applied to both quadrupeds and bipeds to denote similar planes of reference. Sometimes called 'frontal plant'. Fundamentally there are three planes of reference in quadrupeds: the safittal, dorsal and transverse.
dorsal p. any plane passing longitudinally through the body from side to side, at right angles to the median plane and dividing the body into dorsal and ventral parts. Also, erroneously called coronal plane, frontal plane.
horizontal p. one passing through the body at right angles to the median plane, and dividing the body into upper and lower parts. In quadrupeds, synonymous with dorsal plane; in bipeds, with transverse plane.
inclined p. an intraoral acrylic or metal appliance used in orthodontics to guide a tooth into a new position by using pressure applied when the mouth is closed normally. Commonest use is to move canines laterally.
median p. one passing longitudinally through the body from front to back and dividing it into right and left halves. See also sagittal plane (below).
nasal p. the zone of hairless and non-glandular, usually pigmented (in dogs) skin around the nostrils and around the tip of the nose in carnivores. Called also the *planum nasale*.
nasolabial p. the hairless glandular extension of the nasal plane between the nostrils into the upper lip in cattle. Called also *planum nasolabiale*.
nuchal p. the flat surface at the back of the occipital bone below the nuchal crest.
rostral p. the bare glandular area on the snout disk of the pig. Called also *planum rostrale*.
sagittal p. any vertical plane through the body parallel to the median plane (or to the sagittal suture) and dividing the body into left and right portions.
transverse p. one passing through the body, at right angles to the sagittal and dorsal planes, and dividing the body into cranial and caudal portions.
vertical p. one perpendicular to a horizontal plane, dividing the body into left and right, or front and back portions.
planigraphy [*plə-nig'rə-fe*] a method of body-section radiography that shows in detail structures lying in a predetermined plane of the body while blurring structures in other planes, produced by movement of the film and X-ray tube in certain specified directions. See also **tomography**.
planing [*plān'ing*] abrasion of disfigured skin to promote re-epithelization with minimal scarring; done by mechanical means (dermabrasion) or by application of a caustic (chemabrasion). See also plastic **surgery**.
root p. smoothing and cleaning surfaces of a tooth root in the treatment of advanced periodontal disease.
plank method a method of relieving a torsion of the uterus in a mare. The mare is cast and laid on her side (direction of the torsion). A plank with several people standing on it is used to put pressure on the abdomen (stabilizing the uterus) while the mare is rolled.
plankton [*plank'ton*] a collective name for small animal and plant (phytoplankton) organisms that drift passively in all natural bodies of water. The starting point of the aquatic food chain. Called also microalgae.
planktonophagous eating or subsisting solely on plankton.
planned animal health/production program regular visits to farms by a veterinarian to monitor biosecurity and health parameters, especially fertility and mastitis in dairy herds, and check productivity indexes, e.g. weight gains in beef cattle, followed by reports on achievement relative to targets and the application or recommendation about treatment or preventive measures.
planoconcave [*pla"no-kon'kāv*] flat on one side and concave on the other.
planoconvex [*pla"no-kon'veks*] flat on one side and convex on the other.
planography planigraphy.
Planorbis [*plə-nor'bis*] a water snail intermediate host to paramphistomes.
plant [*plant*] a member of the vegetable kingdom (Kingdom Plantae); living things characterized by cellulose in cell wals, absence of locomotion, absence of special senses, and feeding only on inorganic substances; most are autotrophs using photosynthesis through chlorophyll to acquire energy.
abortigenic p. plants that cause abortion include *Pinus*, *Cupressus* and *Astragalus* spp.
p. alkaloids see **alkaloid**.
annual p. one that completes its life cycle within one year. A *winter annual plant* germinates in the fall (autumn), overwinters as a seedling and flowers and seeds in spring. The dominant grazing species in the early spring. Examples would be many mustard weeds of disturbed places incriminated in the congenital hypothyroid **dysmaturity** syndrome in foals.
p. awns sharp, long processes attached to seed casings of plants, mostly grasses; important causes of skin and oral lesions in grazing animals, and to housed animals when fed hay containing the plants.
biennial p. one that completes its life cycle in two years, generally germinating and growing in the first year and flowering, fruiting and subsequently dying in the second year.
p. eating both dogs and cats may eat grass; indoor animals sometimes eat ornamental plants, some of which are poisonous.
p. hormones organic substances produced by plants which are extracted and used as herbicides or plant growth stimulants. Some of them cause long-term ill health in animals if drunk in large quantities.
perennial p. one that completes its life cycle over more than two years.

p. poisoning the list of poison plants is very large and it is necessary to know the suspect plant's botanical name to begin an effective search for information about it. In order to exert an effect on an animal the plant has, in most cases, to be eaten. There are a few plants that exert a toxic effect by inhalation or by skin contact.
p. protein the proteins in plants. Common, protein-rich plants include alfalfa, the oilseed meals, e.g. soyabean, cottonseed and linseed meals, clover, the legume seeds, e.g. peas, beans.
teratogenic p. plants that cause congenital defects include *Astragalus, Conium, Lathyrus, Leucaena, Lupinus, Nicotiana, Oxytropis, Salsola, Veratrum, Vicia* spp.
p. toxins phytotoxins, elaborated by plants, in some cases incorporating an inorganic element, e.g. selenocompounds, and in some cases present in the plant in non-toxic state, requiring metabolism to activate it.

Plantago [*plan-ta'go*] a large genus of plants in the family Plantaginaceae.
P. psyllium a plant whose seeds resemble fleas. Used at one time as a flea repellent. See also **psyllium**.
P. varia a common weed of native pastures providing scant feed. Called also plaintain and sometimes lamb's tongue.

plantain two plant species are called by this common name. See ***Plantago varia***.

plantar [*plan'tər*] pertaining to the sole or caudal aspect of the digit.
p. cushion see **digital** cushion.
p. ligament strong ligaments running down the backs of the hind paws, or the plantar surface of the hock in ungulates. Strain of this ligament results in the condition knwon as 'curb'. Called also *ligamenta tarsi plantaria* which includes the long plantar ligament, *ligamentum plantare longum* and the calcaneocuboid ligament *ligamentum calcaneocuboideum*.
p. nerve block see plantar **block**.

plantaris [*plan-ta'ris*] [L.] 1. plantar. 2. the superficial digital flexor muscle of the hindlimb.

plantation walk [*plan-ta'shən*] the four-beat, running walk gait characteristic of the Tennessee walking horse.

plantigrade [*plan'ti-grad*] a method of locomotion seen in bears, monkeys and humans, in which the animal walks on the phalanges, metacarpal and carpal or tarsal bones, as distinct from **digitigrade** and **unguligrade**.
p. stance seen in dogs and cats with various neuropathies and myopathies, particularly in diabetic neuropathy and hypokalemic myopathy.

planum pl. *plana* [L.] plane.
p. nasale see nasal **plane**.
p. nasolabiale the plate of moist, highly cornified epidermis, completely hairless, containing tubular merocrine glands around the nostrils and upper lip which is characteristic of the muzzle of cattle.
p. rostrale the front plate of the snout of pigs; highly cornified epithelium, contains many tubular merocrine glands and a few fine hairs.

plaque [*plak*] 1. any patch or flat area; in the skin, a flat-topped, elevated lesion. 2. a clear area of cell lysis caused by viral replication on a cell monolayer.
amniotic p. small, 1–2 inch diameter, poxlike lesion on the inside of the amnion. Constant on the bovine amnion during the middle trimester and causes no problems.
annular p. seen in equine lupus erythematosus panniculitis.
p. assay a method of quantifying the number of infectious units by inoculating serial dilutions of a viral suspension on a cell culture monolayer, overlaying with a medium containing agarose and after several days incubation, counting the number of plaques formed; recorded as plaque forming units/mL.
atheromatous p. a deposit of predominantly fatty material in the lining of blood vessels occurring in atherosclerosis.
cutaneous p. an elevated, solid structure without a necrotic center, up to 1–2 inch diameter with an unbroken surface.
dental p. a biofilm adhering to the enamel surface of a tooth, composed of a mixed colony of bacteria in an intercellular matrix of bacterial and salivary polymers and remnants of epithelial cells and leukocytes. It is important in the development of caries, dental calculi and periodontal disease.
drug p. cutaneous, subcutaneous or subconjunctival deposits formed as a result of injection of some drugs, particularly repository steroid preparations. May be unsightly and a cause of conjunctivitis.
ear p. see **ear** plaque.
eosinophilic p. see **eosinophilic** plaque.
p.-forming units the number of plaques formed in the plaque assay; expressed as pfu/mL.
p. index an assessment used in dental charting to record the extent of plaque on the buccal surface of the tooth.
pigmented epidermal p. heavily pigmented hyperplastic epidermis seen in dogs and associated with papillomavirus infection. Intranuclear inclusion bodies are seen in lesions which may occur as multiple macules, papules and plaques. Comparisons have been made with epidermodysplasia verruciformis, a condition in humans.
senile p. described in the brain of old dogs.
siderotic p. nodules observed as dry, yellow encrustations on the splenic capsule of old dogs.

plasm [*plaz'əm*] 1. plasma. 2. formative substance (cytoplasm, hyaloplasm, etc.).

plasma [*plaz'mə*] the fluid portion of the blood in which corpuscles are suspended. Plasma is to be distinguished from serum, which is plasma from which the fibrinogen has been separated in the process of clotting.
p. bound many electrolytes exist in plasma in a form in which they are bound to protein which reduces their lability and liability to loss in the urine, e.g. protein-bound iodine.
p. cell gingitivitis–pharyngitis see feline plasma cell **gingivitis–pharyngitis**.
p. cell myeloma see multiple **myeloma**.
p. clearing factor a lipoprotein lipase which lipolyses the triglyceride in the chylomicrons of the plasma and hence clears it of cloudiness.
p. exchange the removal of plasma from withdrawn blood (plasmapheresis) and retransfusion of the formed elements and type-specific fresh-frozen plasma into the donor; done for removal of circulating antibodies or abnormal plasma components.
p. expanders see plasma volume **expander**.
fresh-frozen p. prepared from whole blood; a source of coagulation factors.
p. protein the heterologous group of proteins in circulating blood that includes albumin, lipoproteins, glycoproteins, transcortin, haptoglobin, ceruloplasmin, cholinesterase, α_2-macroglobulin, erythropoietin, transferrin, hemopexin, fibrinogen, plasminogen and the immunoglobulins (γ-globulins).
p. substitute a fluid suitable for use as a replacement for plasma in the animal body. Usually a solution of gelatin or dextran.
therapeutic p. concentration a therapy–response relationship determined only by experiment; the plasma concentration which is matched by the desired therapeutic response.
p. turbidity test a qualitative test for fat absorption, performed by comparing the turbidity of plasma before and 2, 3 and 4 hours after the oral administration of fats, usually vegetable oil. Results are greatly influenced by delays in gastric emptying, so normally this test can only be relied upon to rule out malabsorption or maldigestion when evidence of absorption is found.
p. volume the estimation of plasma volume is essential to a complete knowledge of a patient's fluid status. The common technique is by the intravenous injection of a known amount of a dye such as Evans blue and the subsequent measurement of the dilution that it has undergone in a set time period.

plasmablast [*plaz"mə-blast'ik*] the immature precursor of a plasmacyte, or plasma cell.

plasmacyte, plasmocyte [*plaz'mə-sīt*] see plasma **cell**.

P-53: Plantigrade posture in a cat with diabetes mellitus and exocrine pancreatic insufficiency.
From Nelson RW, Couto CG, Small Animal Internal Medicine, 4th Edition. Mosby, 2008.

plasmacytic [*plaz"mə-sit'ik*] of the nature of or pertaining to plasmacyte.

p. stomatitis see feline plasma cell **gingivitis**–pharyngitis.

plasmacytic–lymphocytic see **lymphocytic–plasmacytic**.

plasmacytoma [*plaz"mə-si-to'mə*] any focal neoplasm of plasmacytes, including those of multiple myeloma (immunoblastic sarcoma). Isolated plasmacytomas may occur outside the bone marrow (extramedullary plasmacytomas), affecting such tissues as the nasal, oral, pharyngeal and gastrointestinal mucosa and the skin; called also plasma cell tumor.

oral p. an unusual benign oral neoplasm of older dogs; appears as a red, lobulated, raised mass on the gingiva.

plasmacytosis [*plaz"mə-si-to'sis*] 1. an excess of plasmacytes in the blood. 2. a synonym for **Aleutian mink disease**.

plasmalemma [*plaz"mə-lem'ə*] plasma membrane.

plasmalogen [*plaz-mal'ə-jən*] one of a group of phospholipids found in platelets, cell membranes of muscle and myelin sheaths of nerve fibers. In platelets their hydrolysis produces aldehydes which appear to play a significant part in the coagulation function of those cells.

plasmapheresis [*plaz"mə-fə-re'sis*] the removal of plasma from withdrawn blood, with retransfusion of the formed elements into the donor; generally, type-specific fresh frozen plasma or albumin is used to replace the withdrawn plasma. The procedure may be done for purposes of collecting plasma components or for therapeutic purposes. See also **plasma** exchange.

plasmatic [*plaz-mat'ik*] pertaining to plasma; of the nature of plasma.

p. imbibition the process by which fluid from the recipient tissue bed provided nourishment for the donor tissue to maintain the viability of a skin graft in the initial 48-72 hours of grafting.

plasmatorrhexis bursting of a cell from internal pressure.

plasmic [*plaz'mik*] plasmatic; pertaining to or of the nature of plasma.

plasmid [*plaz'mid*] an extrachromosomal self-replicating genetic element of a cell. In bacteria, plasmids are circular (or sometimes linear) DNA molecules that reproduce themselves and are thus conserved, apart from the chromosome, through successive cell divisions; they include the F factor and R factor.

high copy number p. occurs in tens to several hundred copies per bacterium and are dependent solely on host enzymes for replication.

R factor p. see R **factor**.

relaxed p. a conformation in which the typical negative supercoiling of plasmid DNA has been enzymatically relaxed.

plasmin [*plaz'min*] the active principle of the fibrinolytic or clot-lysing system, a proteolytic enzyme formed from plasminogen which hydrolyzes fibrin, fibrinogen, factor V and other proteins. It has the particular ability to dissolve formed fibrin clots. Called also fibrinolysin.

p. inhibitors include α_2-macroglobulin, α_1-antitrypsin, C1-inactivator, antithrombin III.

plasminogen [*plaz-min'ə-jən*] the inactive precursor of plasmin, occurring in plasma and converted to plasmin by activators present in most tissues, blood, vessel walls and body fluids; called also profibrinolysin.

p. activator inhibitor can protect the fibrin clot from premature lysis; called also PA inhibitor.

plasmocyte [*plaz'mo-sīt*] plasmacyte.

plasmocytoma [*plaz"mo-si-to'mə*] plasmacytoma.

plasmodesma [*plaz"mo-des'mə*] pl. *plasmodesmata;* a bridge of cytoplasm connecting adjacent cells.

plasmodicidal [*plaz"mo-dī-sī'dəl*] destructive to plasmodia; malariacidal, antimalarial.

Plasmodium [*plaz-mo'de-əm*] a genus of apicomplexan protozoa in the family Plasmodiidae parasitic in the blood cells of animals and humans; malarial parasites. See also **avian** malaria.

P. berghei occurs naturally in tree rats; transmissible experimentally to other rodents.

P. brasilianum occurs in several monkey species, transmissible experimentally to humans and marmosets.

P. cathemerium occurs in passerine birds including sparrows, blackbirds.

P. chabaudi occurs in tree rats, transmissible to mice.

P. circumflexum parasitizes a wide range of birds including passerines and Canada goose.

P. coatneyi occurs in cynomolgus monkey; transmissible to other monkeys.

P. cynomolgi occurs in a wide range of monkeys; transmissible to humans causing tertian type malaria.

P. durae occurs in turkeys, transmissible to ducks.

P. elongatum transmissible experimentally to sparrows, canaries and ducks.

P. eylesi found in gibbon monkeys.

P. falciparum, P. malariae, P. ovale, P. vivax the causes of the four specific types of human malaria. They are transmitted to the bloodstream of humans by the bite of anopheline mosquitoes. The sporozoites migrate and are transported via the blood stream to the liver, where they develop and multiply within the parenchymal cells as merozoites, which then burst the liver cells and invade erythrocytes. Some of the merozoites develop into gametocytes, which are ingested by mosquitoes, beginning the sexual stage, which ends with the development of sporozoites.

P. fallax occurs in guinea fowl; transmissible to other birds.

P. gallinaceum occurs in fowls and transmissible to some other birds; many are resistant.

P. gonderi occurs in mandrills, mangabeys, rhesus monkeys.

P. griffithsi occurs in turkeys.

P. hexamerium found in passerine birds.

P. inui found in several species of monkeys.

P. juxtanucleare occurs in fowls; transmitted experimentally to turkeys.

P. knowlesi occurs in several species of monkeys and transmissible to humans in some countries.

P. lophurae occurs in pheasants; experimentally transmitted to chickens and ducklings.

P. reichenowi occurs in chimpanzee and gorilla.

P. relictum occurs in a variety of bird species.

P. rouxi found in sparrows and finches.

P. schwetzi occurs in chimpanzee and gorilla; transmissible experimentally to humans.

P. simium occurs in howler monkeys and humans.

P. vaughani found in many bird species.

P. vinckei occurs in a variety of rat species; transmissible to mice.

plasmodium [*plaz-mo'de-əm*] pl. *plasmodia* [Gr.] 1. an ampicomplexan protozoan parasite of the genus *Plasmodium*; includes species that infect birds. 2. a multinucleate continuous mass of protoplasm.

plasmogen [*plaz'mo-jen*] the more vital or essential part of the cytoplasm; called also bioplasm.

plasmolysis [*plaz-mol'ī-sis*] contraction of cell protoplasm due to loss of water by osmosis.

plasmoma [*plaz-mo'mə*] plasmacytoma.

plasmon [*plaz'mon*] extrachromosomal hereditary factors.

plasmoschisis [*plaz"mo-ske'sis*] the splitting up of cell protoplasm.

plasmotropism [*plaz"mo-tro'piz-əm*] destruction of erythrocytes in the liver, spleen or marrow, as contrasted with their destruction in the circulation.

plaster [*plas'tər*] 1. a mixture of materials that hardens; used for immobilizing or making impressions of body parts. 2. an adhesive substance spread on fabric or other suitable backing material, for application to the skin, often containing some medication, such as an anodyne or rubefacient.

p. cast see **cast** (5).

p. of Paris calcium sulfate dihydrate, reduced to a fine powder; the addition of water produces a porous mass used in making casts and bandages to support or immobilize body parts.

p. rolls the dry material for constructing plaster casts is packaged as rolls of impregnated gauze which is thoroughly soaked in water before being applied by unrolling around the site of the fracture.

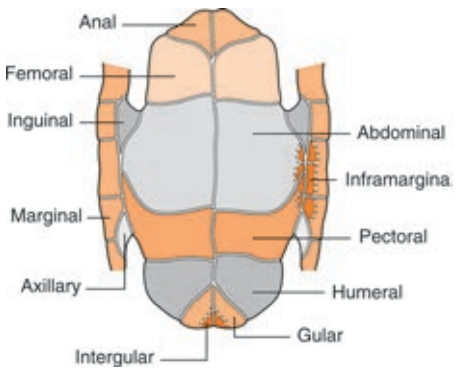
p. shears special shears to cut plaster of Paris casts. Designed to cut upwards away from the tissues to avoid injury. Called also plaster scissors, Esmarch plaster shears.

p. spreader a reverse pincer device with flat blades that are fitted down into a cut made in a plaster cast that is to be removed. Opening the handles forces the plaster apart.

plastic [*plas'tik*] 1. tending to build up tissues to restore a lost part. 2. capable of being molded. 3. a substance produced by chemical condensation or by polymerization.

p. dish dermatitis an inflammatory skin reaction on the muzzle of dogs caused by a hypersensitivity to plastic feeding dishes.

p. toy poisoning nervous signs including ataxia, hyperexcitability and muscle twitching sometimes occur in cats after eating chidren's plastic toys made of rubber and polythene.
p. vinyl sheeting a surgical drape made of synthetic material with the advantage of not being capillary and not abrasive to exposed tissue.
plasticity [*plas-tis'ĭ-te*] the quality of being plastic, or capable of being molded.
nervous system p. the ability of the nervous system to change its capabilities by experience; plays a major role in compensating for the loss of neurons with age and in recovery following neuronal damage.
plasticizers [*plas'tĭ-si"zərs*] mostly triaryl phosphates, such as tricresyl, triphenyl phosphates, which are poisonous. See also **triorthocresyl phosphate**.
plastid [*plas'tid*] 1. any elementary constructive unit, as a cell. 2. any specialized organ of the cell other than the nucleus and centrosome, such as chloroplast, mitochondria or amyloplast.
plastination a process of preserving tissues, organs and whole bodies in which water and fats are extracted and replaced with polymers. Used to prepare anatomical specimens for teaching and controversially in exhibits as works of art.
plastron [*plas'tron*] skeletal and epidermal structure protecting the ventral surface of turtles and other chelonians.
-plasty word element. [Gr.] *formation, plastic repair of.*
plate [*plāt*] 1. a flat structure or layer, as a flat layer of bone. 2. used as a fracture repair medium, including compression plates. 3. to apply a culture medium to a glass plate. 4. to cultivate bacteria on such plates.
axial p. the primitive streak of the embryo.
basal p. primordial ventral horn of the spinal cord.
p. bender (2) a strong crimping device for manually bending a plate for a tricky bit of orthopedic repair.
buttress p. (2) a metal plate used in fracture repair to bridge and support a diaphyseal gap filled with a cancellous bone graft.
cloacal p. blind ending of the hindgut in the embryo.
cribriform p. a sievelike partition between the cranial and nasal cavities. The posterior surface is divided by the vertical ethmoidal crest into two concave surfaces which contain the olfactory bulbs. It contains many small perforations through which the filaments of the olfactory nerves pass.
deck p. see roof plate (below).
dorsal p. see roof plate (below).
equatorial p. the collection of chromosomes at the equator of the spindle in mitosis.
floor p. the unpaired ventral longitudinal zone of the neural tube; called also ventral plate.
foot p. the flat portion of the stapes.
growth p. the epiphyseal cartilage at which new bone formation occurs to lengthen long bones during their growth phase. Called also physis. See also **epiphyseal** plate.
medullary p. neural plate.
muscle p. myotome (2).
nasal p. region of modified skin around the nostrils in the embryonic carnivore or small ruminant.
nasolabial p. region of modified skin around the nostrils in the embryo of cattle.
neural p. a thickened band of ectoderm in the midbody region of the developing embryo, which develops into the neural tube; called also medullary plate.



P-54: Plastron of the tortoise.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

P-55: Metacarpal-phalangeal radiograph demonstrating trandphyseal bridging with a 'plate and screw' technique.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

neutralization p. (2) a bone plate placed to protect against the forces acting on the fracture site.
oral p. separates the stomodeum from the pharyngeal cavity; subsequently breaks down to become the palatoglossal arch; called also oropharyngeal membrane.
orthopedic bone p. (2) a metal plate screwed to the two fragments of a fractured bone to provide fixation and permit healing in correct alignment.
roof p. the unpaired dorsal longitudinal zone of the neural tube; called also dorsal plate and deck plate.
rostral p. region of modified skin around the nostrils in the porcine embryo.
sole p. a mass of protoplasm in which a motor nerve ending is embedded.
spinal p. metal or plastic plates may used to stabilize thoracolumbar or lumbar spinal fractures. With one plate on each side of a row of dorsal spinal processes, they are bolted together in the spaces between processes.
tarsal p. one of the plates of connective tissue forming the framework of either (upper or lower) eyelid.
tectorial p. the roof of the ethmoidal labyrinth of the internal ear.
tension band p. (2) a bone plate placed on the tension side of a fracture and which counteracts tensile forces, converting them into compression forces at the fracture site.
ventral p. floor plate.
platelet [*plāt'lət*] a small disk or platelike structure, the smallest of the formed elements in blood. Blood platelets (called also thrombocytes) are disk-shaped, non-nucleated blood elements with a very fragile membrane; they tend to adhere to uneven or damaged surfaces. They average about 250×10^3 platelets/μL and are formed in the red bone marrow by fragmentation of megakaryocytes, the largest of the bone marrow cells. Platelet production is controlled by a hormone, thrombopoietin, and regulatory lymphocytes acting at the stem cell level. At any given time about one-third of the total blood platelets can be found in the spleen; the remaining two-thirds are in the circulating blood. The functions of platelets are related to the clotting of blood. Because of their adhesion and aggregation capabilities platelets can occlude small breaks in blood vessels and prevent the escape of blood. Platelets which have adhered to exposed collagen in damaged vessels release ADP in

milliseconds which in turn initiates the synthesis of thromboxane A_2, a very potent prostaglandin which causes platelet aggregation and localized vasoconstriction. Fibrinogen, factors V and VIII, calcium ions, platelet phospholipid (PF-3), associated with the platelet membrane are also released. Substances contained within the platelet granules such as thromboglobulin, heparin neutralizing activity (PF-4) mitogens such as platelet derived growth factor, thrombospondin, ADP, serotonin and calcium ions are also released by aggregated platelets.

p.-activating factor (PAF) see platelet-activating **factor**.

p. adhesion the adherence of platelets to exposed subendothelium; the first step in component of hemostasis.

p. aggregation the progressive accumulation of platelets, attracted by other platelets once adhesion begins. Thromboxane A_2 causes irreversible platelet aggregation.

p. aggregation test a known platelet aggregating factor such as collagen, ADP or thrombin is added to a suspension of the platelets under test and the degree of aggregation measured by decrease in turbidity of the suspension.

p. count platelet numbers are assessed by counting the platelets in a counting chamber, a hematology analyzer, or by estimating the number on a stained blood smear and reported as cells/μL. Counts less than 10000 to 50000 are likely to be associated with spontaneous hemorrhage. See also **thrombocytopenia**.

p.-derived growth factor one of three growth factors released by platelets which undergo the release reaction; the growth factors stimulate endothelial cell proliferation.

p. distribution width (PDW) an indication of variation in platelet size (anisocytosis) which can be a sign of active platelet release.

p. factor 3 (PF-3) test, p. release test test the antiplatelet activity of serum; used to detect circulating antiplatelet antibodies. Antibody–antigen reactions involving platelets cause the release of PF-3 from platelets which in turn shortens the contact-activated clotting time of platelet-rich plasma (PRP).

p. factors factors important in hemostasis which are contained in or attached to the platelets: platelet *factor 1* is adsorbed **clotting** factor V from the plasma; platelet *factor 2* (Ornithorhynchus anatinus)(Ornithorhynchus anatinus) is an accelerator of the thrombin–fibrinogen reaction; platelet *factor 3* is a phospholipid with potent procoagulant activity; platelet *factor 4* is capable of inhibiting the activity of heparin (heparin neutralizing activity).

mean p. volume (MPV) the average size of circulating platelets, reported as fL (μm^3). Greater size is an indication of increased megakaryocyte shedding of platelets and a decreased size is seen in thrombocytopenia.

p. plug formation see platelet aggregation (above).

p. release reaction measured by the degree of secondary ADP-mediated aggregation that occurs. This is assessed by the amount of PF-4, PF-3 or serotonin, etc. released.

p. retention tested by testing the adhesiveness of a suspension of the subject platelets to a glass bead column or standard size filter.

p. rich plasma plasma prepared by centrifugation to separate out red blood cells but not platelets for transfusion.

p. storage-pool disease an inherited autosomal thrombopathia in American foxhounds and cats characterized by a deficiency of platelet storage granules.

p. transfusion transfusion of fresh, nonchilled whole blood is the usual method of transfusing platelets to an animal with thrombocytopenia.

plateletpheresis [*plāt"lət-fə-re'sis*] thrombocytapheresis.

platform scales [*plat'form*] a weighing machine which has a platform on which animals can stand to be weighed.

plating [*plāt'ing*] 1. the process of using a **plate** as in orthopedic surgery. 2. in bacteriology, the processof inoculating bacteria onto agar media for cultivation.

bone p. a method of fracture fixation in which one or more metal plates are applied across the fracture and anchored, usually by screws, in the fragments.

replication p. the transfer of cells from bacterial colonies on one plate to another plate, with a colony growing in the same position as in the original plate.

platinum (Pt) [*plat'i-nəm*] a chemical element, atomic number 78, atomic weight 195.09. See Table 4.

p. chemotherapy see platinum complexes (below).

p. complexes inhibit DNA synthesis and have some alkylating activity. They are sometimes used in cancer chemotherapy, but have marked side-effects of nausea, vomiting, nephrotoxicity and bone marrow suppression. See also **cisplatin**, **carboplatin**.

platy- word element. [Gr.] *broad, flat*.

platybasia [*plat"i-ba'se-ə*] malformation of the base of the skull, with forward displacement of the upper cervical vertebrae and bony impingement on the brainstem. It is accompanied by neurological signs referable to the medulla oblongata, cervical spinal cord and cranial nerves. Called also basilar impression.

platycephalic, platycephalous [*plat"i-sə-fal'ik*] having a wide, flat head.

Platycobboldia loxodontis a stomach bot of the African elephant. The fly lays eggs around the nostrils and the larvae migrate to the stomach through the tissues.

platycoelous [*plat"i-se'ləs*] having one surface flat and the other concave, referring to vertebrae.

platycoria [*plat"i-kor'e-ə*] a dilated condition of the pupil of the eye.

platyfishes popular and colorful aquarium fish (***Xiphophorus***) spp. They give birth to live young. Includes the common platy (*X. maculatus*) and many variations.

platyhelminth [*plat"i-hel'minth*] one of the Platyhelminthes; the flatworms. Includes cestodes and trematodes, the tapeworms and the flukes.

platyhieric [*plat"e-hi-er'ik*] having a wide sacrum.

platynosomiasis [*plat"i-no-so-mi'ə-sis*] infection with trematodes in the genus *Platynosomum*.

Platynosomum [*plat"i-no-so'mum*] a genus of digenetic trematodes in the family Dicrocoeliidae.

P. ariestis a nonpathogenic fluke found in the intestine of sheep.

P. fastosum occurs in the liver and bile ducts of cats; causes a mild disease, called lizard poisoning, characterized by vomiting, diarrhea and jaundice. Cats become infested by eating infected lizards. Called also *P. concinnum*.

platypellic, platypelloid [*plat"i-pel'ik*] having a broad pelvis.

platypus pl. *platypuses (Ornithorhynchus anatinus)*; a semi-aquatic, carnivorous monotreme, found only in Australia. It resembles a beaver, being about 12–16 inches long, covered with fine red-brown to gray fur, with a broad, dorsally flattened tail, webbed and clawed paws, and a broad flat, duck-like beak. The males have a prominent tarsal spur, which is used defensively and which emits a powerful toxin. It lives in a burrow that has an underwater entrance. It lays eggs, hatches them and feeds the young from milk which is discharged through the skin in a skinfold. Called also duckbill, duckmole.

platyrrhine [*plat'i-rīn*] 1. having a broad nose. 2. member of the parvorder Platyrrhini of **primates**.

platys see **platyfishes**.

platysma [*plə-tiz'mə*] the superficial sheet of cutaneous muscle over the face and neck.

Playdo a child's modeling medium useful in obliterating air spaces in superficial sites, e.g. clefts in the sole of the normal horse hoof, and improving the quality of the radiographical image.

PLE protein losing enteropathy.

pledget [*plej'ət*] a small compress or tuft, usually of cotton or cotton wool, cotton batting, used to apply disinfectant or medicament to the skin.

-plegia word element. [Gr.] *paralysis*.

pleiotropism, pleiotropy [*pli-ot'rə-piz-əm*] the production by a single gene of multiple phenotypic effects.

Pleistophora [*plīs-tof'ə-rə*] sporozoan parasites, mostly of fish, belonging to the class Microsporidea.

P. anguillarum occurs in the muscles of eels and causes body deformities when muscles atrophy.

P. cepedianae produces large cysts that protrude from the body wall of affected fish.

P. hyphessobryconis found in the skeletal muscles of aquarium fish causing 'neon fish disease'. The muscles are patchily transparent and the fish lose their balance and the fins degenerate.

P. macrozoarcidis causes the development of cysts and tumors in the muscles of marine fish.

P. ovariae infects the ovaries of minnows causing infertility.

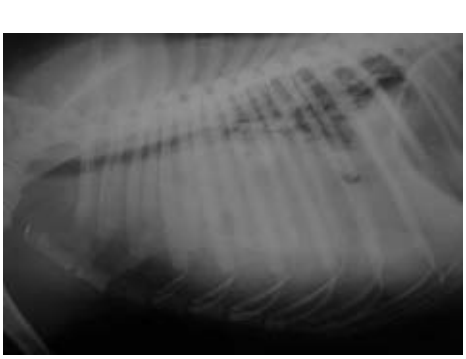
P. salmonae infects the gills of trout causing clubbing and fusion.

pleocytosis [*ple"o-si-to'sis*] the presence of a greater than normal number of cells in cerebrospinal fluid.

pleomastia [*ple"o-mas'te-ə*] the presence of supernumerary mammary glands or nipples; polymastia.

VetBooks.ir

pleomorphism [*ple"o-mor'fiz-əm*] having more than one shape or form.
pleonasm [*ple'o-naz-əm*] an excess of parts; see **polymeria**.
pleonectic [*ple"o-nek'tik*] characterized by having a higher than normal O_2 content at a given Po_2; said of blood.
pleonosteosis [*ple"on-os"te-o'sis*] abnormally increased ossification.
plerocercoid [*ple"ro-sur'koid*] the second larval stage of a bothriocephalidean or dephyllobothriidean (=pseudophyllidean) cestode which follows the procercoid. This larva infects a wide range of vertebrate hosts including fish, amphibia, reptiles, mammals, birds. They are elongated, have a solid body and carry an adult scolex. As a migrating larva of a tapeworm, this is an infectious stage of importance in predation; the definitive host becomes infected by eating the tissues of the second intermediate host.
Plesiomonas [*ple"se-o-mo'nas*] facultatively anaerobic gram-negative rods which are mainly found in fish and reptiles. The only species is *P. shigelloides*.
plesiotherapy [*ple"se-o-ther'ə-pe*] a form of very superficial radiotherapy; ^{90}Sr probes are used. Called also surface brachytherapy.
plessesthesia [*ples"es-the'zhə*] palpatory percussion.
plessimeter [*ples-im'ə-tər*] pleximeter.
plessor [*ples'or*] plexor.
PLET agar for growth of *Bacillis anthracis*.
plethora [*pleth'ə-rə*] a general term denoting an overabundance, or specifically, an excessive amount of blood.
plethysmograph [*plĕ-thiz'mo-graf*] any device for measuring and recording variations in the volume of an organ, part or limb.
body p. a device used in **pulmonary** function tests to measure parameters such as functional residual capacity (FRC) and lung–thorax compliance (C_{LT}). It consists of a large box in which the subject can be sealed so that volume of the thorax can be determined from pressure changes in the box while the lung volume and gas pressure in the lungs are measured by spirometry.
plethysmography [*plĕ"thiz-mog'rə-fe*] the determination of changes in volume by means of a plethysmograph.
pleura [*ploor'ə*] pl. *pleurae* [Gr.] the serous membrane investing the lungs (pulmonary pleura) and lining the walls of the thoracic cavity (parietal pleura), the two layers enclosing a potential space, the pleural cavity.
pleuracotomy [*ploor"ə-kot'ə-me*] incision into the pleural cavity.
pleural [*ploor'əl*] emanating from or pertaining to the pleura.
p. effusion accumulation of fluid in the space between the membrane encasing the lung and that lining the thoracic cavity. The normal pleural space contains only a small amount of fluid to prevent friction as the lung expands and deflates. If, however, there is a disturbance in either the production of this fluid or its removal, the fluid accumulates and threatens collapse of the lung. In extreme cases there is total collapse of the lung and **mediastinal** shift.
p. friction rub the abrasive sound made by the rubbing together of two acutely inflamed serous surfaces, as in acute pleurisy. Later separation of the surfaces by accumulated exudate marks the disappearance of the rub. The sound is synchronous with the respiratory movements.
p. gas may be produced by gas-forming bacteria or be caused by leakage from thoracentesis or lesions of the airways.
p. hemorrhage see **hemothorax**.
p. infection see **pyothorax**.
p. inflammation see **pleuritis**.
p. paracentesis see **thoracentesis**.
p. peel heavy fibrinous deposits on the pleura.
p. stripping 1. removal of the pleura at an abattoir when the tissue is discolored or superficially diseased and the remainder of the carcass is suitable for human consumption. 2. surgical removal of excessive pleural fibrin deposits via thoracotomy.
pleurapophysis [*ploor"ə-pof'i-sis*] a rib, or a vertebral process corresponding to a rib.
pleurectomy [*plŏŏ-rek'tə-me*] excision of a portion of the pleura.
pleuritic [*plŏŏ-rit'ik*] pertaining to or emanating from pleurisy. See also **pleural**.
p. ridge thoracic immobility with the chest expanded combined with abdominal respiration causes the costochondral arches to be more visible than usual. Called pleuritic ridge because of its occurrence in pleurisy as a response to pain on chest movement.
p. thrill palpable counterpart of the pleural friction rub.
pleuritis, pleurisy [*plŏŏ-ri'tis ploor'i-se*] inflammation of the pleura; it may be caused by infection, injury or tumor. It may be a complication of lung diseases, particularly of pneumonia or lung abscess. Typical signs of acute pleurisy include painful respiratory movements causing grunting and rapid shallow breathing. Chronic pleurisy includes empyema with collapse of lung and dyspnea with toxemia, or interference with respiratory movements by adhesions.
bile p. inflammation of the pleura resulting from perforating thoracic trauma with hepatodiaphragmatic fistula or iatrogenically from percutaneous liver biopsy techniques.
constrictive p. adhesions between the parietal and visceral pleura restrict movement of the lungs and the chest wall.
dry p. inflammation of the pleura without effusion. Painful, the cause of dry cough, shallow, rapid respiration and sounds of friction rubbing. Can be a stage in the development or healing of serous or purulent pleuritis.
restrictive p. development of fibrous tissue on pleura may restrict expansion of lungs.
pleur(o)- word element. [Gr.] *pleura, rib, side.*
pleurocele [*ploor'o-sēl*] hernia of lung tissue or of pleura.
pleurocentesis [*ploor"o-sen-te'sis*] thoracentesis; paracentesis of the pleural cavity.
pleurocentrum [*ploor"o-sen'trəm*] the lateral element of the vertebral column.
pleuroclysis [*plŏŏ-rok'lə-sis*] injection of fluids into the pleural cavity.
pleurodesis [*plŏŏ-rod'ə-sis*] the production of adhesions between the visceral and parietal pleurae. May be produced intentionally by the instillation of irritating drugs into the pleural cavity or by abrading the visceral and parietal pleural surfaces to achieve adhesions. Called also pleural symphysis, pleural sclerosis.
pleurodont [*ploor'o-dont*] teeth with no roots or alveoli that are ankylosed to the jaw bones; seen in snakes and lizards.
pleurodynia [*ploor"o-din'e-ə*] paroxysmal pain in the intercostal muscles due to muscular disease or irritation of the pleural surface.
pleurogenic, pleurogenous [*ploor"o-jen'ik*] originating in the pleura.
pleurography [*plŏŏ-rog'rə-fe*] radiography of the pleural cavity by coating the parietal and visceral pleura with a contrast agent.
pleurohepatitis [*ploor"o-hep"ə-ti'tis*] hepatitis with inflammation of a portion of the pleura near the liver.
pleurolith [*ploor'o-lith*] a concretion in the pleura.
pleurolysis [*plŏŏ-rol'i-sis*] surgical separation of the pleura from its attachments.
pleuromutilins a class of antimicrobials that inhibit bacterial protein synthesis; includes **tiamulin**tiamulin and **valnemulin**; used



P-56: Lateral thoracic radiograph of a dog with a pleural effusion. Increased density is seen within the thoracic cavity, obscuring the cardiac silhouette.
From Klainbart S, Mazaki-Tovi M, Auerbach N, Aizenberg I, Bruchim Y, Dank G, Lavy E, Aroch I, Harrus S: Spirocercosis-associated pyothorax in dogs. Vet J 173:209-214, 2007. Elsevier.

P-57: Fibrinous pleuritis in a horse at necropsy.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

to treat respiratory infections in pigs and poultry and they are important in the treatment of swine dysentery.

pleuroparietopexy [*ploor"o-pə-ri'ə-to-pek"se*] the operation of fixing the visceral pleura to the parietal pleura, thus binding the lung to the chest wall.

pleuropericardial [*ploor"o-per"ĭ-kahr'de-əl*] pertaining to the pleura and pericardium.

p. celom, p. coelom that part of the original body cavity in the fetus which subsequently divides into the pericardial and pleural cavities.

p. fold the beginnings of the pleuropericardial septum in the developing embryo.

p. septum the septum produced by the fusion of the two pleuropericardial folds; it divides the original pleuropericardial coelom into the pleural and pericardial coeloms, later the cavities of the same names.

pleuropericarditis [*ploor"o-per"ĭ-kahr-di'tis*] inflammation involving the pleura and the pericardium.

pleuroperitoneal [*ploor"o-per"ĭ-to-ne'əl*] pertaining to the pleura and peritoneum.

p. canal an embryonic, transient canal venting pleural and peritoneal cavities.

p. hernia herniation of abdominal viscera through a pleuroperitoneal hiatus defect.

p. hiatus defect faulty closure of the pleuroperitoneal canals by the embryonic diaphragm.

p. membrane folds of tissue which extend into the peritoneal cavity of the developing embryo and participate in the separation of the pleural and peritoneal cavities.

pleuropneumonia [*ploor"o-nŏŏ-mo'ne-ə*] pneumonia accompanied by pleurisy.

contagious bovine p. see **contagious** bovine pleuropneumonia.

contagious caprine p. see **contagious** caprine/ovine pleuropneumonia.

porcine p. a highly contagious disease of growing pigs caused by *Actinobacillus (Haemophilus) pleuropneumoniae* (*parahaemolyticus*) and characterized by severe dyspnea, and a short course and high mortality rates. A blood-stained frothy discharge from the nose and mouth is characteristic. Disease follows a stressor such as transport or movement to another pen or building.

pleuropneumonia-like organisms (PPLO) a term applied to the mycoplasmas because of their similarity to *Mycoplasma mycoides* subspecies *mycoides* small colony type, the cause of contagious bovine pleuropneumonia in cattle.

pleuroscopy [*ploor-os'kə-pe*] visual examination of the pleural cavity via a pleuroscope introduced through an incision in the chest wall.

pleurothotonos [*ploor"o-thot'ə-nəs*] tetanic bending of the body to one side.

pleurothotonus [*ploor"o-thot'ə-nəs*] pleurothotonos.

pleurotomy [*plŏŏ-rot'ə-me*] incision of the pleura.

pleurovisceral [*ploor"o-vis'ər-əl*] pertaining to the pleura and viscera.

plexiform [*plek'sĭ-form*] resembling a plexus or network.

pleximeter [*plek-sim'ə-tər*] a plate to be struck in mediate percussion; preferably with a percussion hammer.

plexitis [*plek-si'tis*] inflammation of a nerve plexus.

plexogenic [*plek'so-jen"ik*] giving rise to a plexus or plexiform growth.

p. pulmonary arteriopathy pulmonary vascular lesions caused by pulmonary hypertension and hyperfusion in congenital cardiac defects such as patent ductus arteriosus.

plexopathy [*plek-sop'ə-the*] any disorder of a plexus, especially of nerves.

lumbar p. neuropathy of the lumbar plexus.

plexor [*plek'sor*] a hammer used in diagnostic percussion; plessor. See also **pleximeter**.

plexus [*plek'səs*] pl. *plexus, plexuses* [L.] a network or tangle, chiefly of veins or nerves.

brachial p. see **brachial** plexus.

cardiac p. the plexus around the base of the heart, chiefly in the epicardium, formed by cardiac branches from the vagus nerves and the sympathetic trunks and ganglia, and made up of sympathetic, parasympathetic and visceral afferent fibers that innervate the heart.

carotid p's nerve plexuses surrounding the common, external and internal carotid arteries.

celiac p. a plexus of autonomic fibers and sympathetic nerve ganglia which surround the origin of the celiac artery, and supply the abdominal viscera.

celiacomesenteric p. a plexus of autonomic nerve fibers and sympathetic ganglia around the origin of the celiac and cranial mesenteric arteries; called also solar plexus.

cervical p. a network of nerve fibers formed by the first four cervical nerves and supplying the structures in the region of the neck.

choroid p. infoldings of blood vessels of the pia mater covered by a thin coat of ependymal cells that form tufted projections into the third, fourth, and lateral ventricles of the brain; they secrete the cerebrospinal fluid.

coccygeal p. a nerve plexus formed by the ventral branches of the coccygeal and last sacral nerves.

coronary p. a venous plexus within the coronet of the hoof.

cutaneous p's superficial, middle and deep, inter-communicating plexuses of blood vessels are identified as supplying blood to haired skin.

cystic p. a nerve plexus near the gallbladder.

dental p. either of two plexuses (inferior and superior) of nerve fibers, one from the inferior alveolar nerve, situated around the roots of the lower teeth, and the other from the superior alveolar nerve, situated around the roots of the upper teeth.

gonadal p. the collection of parasympathetic and sympathetic nerves to the gonads.

hoof p. plexus of veins draining the hoof region in the horse.

lumbar p. see **lumbar** plexus.

lumbosacral p. see **lumbosacral** plexus.

mesenteric p. parasympathetic and sympathetic nerve supply to the abdominal organs.

myenteric p. see **Auerbach plexus**.

nerve p. a plexus composed of intermingled nerve fibers.

pampiniform p. 1. a plexus of veins from the testis and the epididymis, constituting part of the spermatic cord. 2. a plexus of ovarian veins in the broad ligament of the uterus.

parametrial p. the venous plexus within the broad ligament providing venous drainage to the uterus and vagina.

p. papilloma see plexus **papilloma**.

pulmonary p. the array of autonomic nerves which supply the lungs.

renal p. autonomic nerve supply to the kidney.

sacral p. a plexus arising from the ventral branches of the last few lumbar and first few sacral spinal nerves.

solar p. see celiacomesenteric plexus (above).

subpapillary p. a superficial plexus, one of three, of blood vessels in haired skin.

tympanic p. a network of nerve fibers supplying the mucous lining of the tympanum and auditory tube.

PLH **pharyngeal** lymphoid hyperplasia.

PLI pancreatic **lipase** immunoreactivity.

plica [*pli'kə*] pl. *plicae* [L.] a ridge or fold.

p. abomasi permanent folds in the abomasal mucosa.

p. circulares permanent folds in the mucosa of the small intestine.

p. glossoepiglottica a median fold in the pharyngeal mucosa that passes from the root of the tongue to the base of the epiglottis.

pterygomandibular p. passes from the lower jaw to the upper behind the last molar teeth on both sides of the mouth.

p. rumenoreticularis the fold that partly separates the rumen from the reticulum.

p. semilunaris conjunctivae the fold of conjunctiva that encloses the substance of the third eyelid.

p. venae cavae the pleural fold which extends from the mediastinum to the caudal vena cava.

plicamycin an antineoplastic antibiotic produced by *Streptomyces argillaceus* and *S. tanashiensis*; particularly effective in treating the hypercalcemia associated with canine lymphosarcoma. Called also mithramycin.

plicate [*pli'kāt*] plaited or folded.

plication [*pli-ka'shən*] the operation of taking tucks in a structure to shorten it.

bowel p. suturing of one bowel segment to another; done to prevent recurrence of intussusception.

plicotomy [*pli-kot'ə-me*] surgical incision of the posterior fold of the tympanic membrane.

Pliohippus the last three-toed horse in the evolution of Equidae; existed during the Pliocene era. The lateral toes were small and finally disappeared in this stage. The connecting link from the primitive horse to the modern day *Equus*.

plombage [*plom-bahzh'*] [Fr.] the filling of a space or cavity in the body with inert material; once a treatment for tuberculosis in humans.

plooks colloquial term for 3–4 week old lamb.

Plott a medium-sized (40–60 lb), sturdy dog with large, pendulous ears. The distinctive black and brindle coat is short and the tail is long and tapered. Developed in the USA, the breed is used in packs for hunting bear, wild boar, wolves and mountain lions, traditionally in the Great Smoky Mountains. Called also Plott hound. Mucopolysaccharidosis I, an inherited metabolic storage disease, occurs in the breed.

plow harness a harness which consists of a collar and hames, a backstrap and chains that run from the hames through the back strap to the swingle-bar of the plow.

plowman's spikenard see ***Inula conyza***.

plowshare bone see **pygostyle**, **vomer**.

PLP pyridoxal phosphate.

PLR pupillary light reflex.

PLT *p*sittacosis-*l*ymphogranuloma venereum-*t*rachoma (group); the Chlamydiales.

pluck 1. an abattoir term for the thoracic viscera plus the liver, after separation from the esophagus and the diaphragm. Includes the larynx, trachea, lungs, heart and liver, plus the spleen in sheep. 2. removal of the feathers from birds during the preparation of the carcass for meat. Scalding for 2 minutes in water plus detergent at 134˚F is a great aid. 3. removal of wool from the carcass of a sheep dead long enough for the wool to become loose.

plucking box restraint box used for feather harvesting of ostriches.

plug [*plug*] an obstructing mass.

epithelial p. mass of ectodermal cells that temporarily closes the external naris of the fetus.

mucous p. a plug formed by secretions of mucous glands, of the cervix uteri and closing the cervical canal during pregnancy.

plum ***Prunus domestica***.

yellow plum see ***Ximenia americana***.

plum pudding dog see **Dalmatian**.

'plum pudding' liver see **telangiectasia**.

plumage the feather coat of a bird for one molt.

nuptial p. the brightly colored feathers that are present on drakes and many male birds prior to and during the breeding season; this plumage is replaced during the eclipse **molt**.

plumbic [*plum'bik*] pertaining to lead.

plumbism [*plum'biz-əm*] see lead[1] poisoning.

plumbum (Pb) [L.] *lead*.

plumping forming up of the egg in the hen's oviduct before investing it with the shell.

pluri- word element. [L.] *many*.

pluriglandular pertaining to several glands or their secretions.

plurigravida [*ploor"ĭ-grav'ĭ-də*] multigravida; a female pregnant for the third (or more) time.

plurilocular [*ploor"ĭ-lok'u-lər*] multilocular; having many cells or compartments.

pluripara [*ploo-rip'ə-rə*] multipara; a female which has had two or more pregnancies that resulted in viable offspring.

pluriparity [*ploor"ĭ-par'ĭ-te*] multiparity; the condition of being a pluripara (multipara).

pluripotent [*plŏŏ-rip'ə-tənt*] able to form all cell lineages, including germ cells, and some or even all extra embryonic cell types; a property of embryonic stem cells.

p. stem cell. see stem **cell**.

pluripotential [*ploor"ĭ-po-ten'shal*] characterized by pluripotentiality.

pluripotentiality [*ploor"ĭ-po-ten"she-al'ĭ-te*] having the ability to develop in any one of several different ways, or to affect more than one organ or tissue.

pluronic detergent [*plur-on'ik*] used as an oral prophylactic against bloat in ruminants; overdosing can have toxic effects.

plus sense in RNA viruses, the genomic RNA is of the same polarity 3′ to 5′ as messenger RNA so that after adsorption, penetration, uncoating and release of the viral RNA into the cytoplasm of the cell the viral RNA acts immediately as a messenger RNA for the synthesis of viral proteins, some of which are essential for the replication of the virus.

plutonium (Pu) [*ploo-to'ne-əm*] a chemical element, atomic number 94, atomic weight 242. See Table 4.

Plymouth Rock a black-and-white barred colored fowl, with distinctive crossbands of black and white across the feathers, giving the bird a spangled look. A heavyweight meat bird with a single comb.

Pm chemical symbol, *promethium*.

pm picometer.

PMI point of maximal intensity.

PMN polymorphonuclear neutrophil.

PMO Pasteurized Milk Ordinance.

PMS pregnant mare serum.

PMSG pregnant mare serum gonadotropin. Now equine chorionic gonadotropin (eCG).

PMSY pigs marketed per sow per year. A major determinant of profitability in farrow-to-finish swine units. 20 is a minimal target.

PMWS postwearing multisystemic **wasting** syndrome.

PN parenteral nutrition.

-pnea word element. [Gr.] *respiration, breathing*.

pne(o)- word element. [Gr.] *breath, breathing*.

pneogram spirogram.

pneograph spirograph.

pneometer spirometer.

pneoscope pneograph.

pneumarthrograph [*noo"mahr'thro-graf*] a radiograph obtained by pneumarthrography.

pneumarthrography [*noo"mahr-throg'rə-fe*] radiography of a joint after it has been injected with a gas as a contrast medium; pneumoarthrography.

pneumarthrosis [*noo"mahr-thro'sis*] gas or air in a joint.

pneumatic [*noo-mat'ik*] pertaining to air or respiration.

pneumatization [*noo"mə-tĭ-za'shən*] the formation of air cavities in tissue, especially such formation in the temporal bone.

pneumat(o)- word element. [Gr.] *air* or *gas; lung*.

pneumatocele [*noo-mat'o-sēl*] 1. hernia of lung tissue. 2. a usually benign, thin-walled, air-containing cyst of the lung. 3. a tumor or sac containing gas, especially a gaseous swelling of the scrotum.

pneumatogram [*noo-mat'o-gram*] spirogram.

pneumatograph [*noo-mat'o-graf"*] spirograph.

pneumatometer [*noo"mə-tom'ə-tər*] spirometer.

pneumatometry [*noo"mə-tom'ə-tre*] measurement of the air inspired and expired.

pneumatonograph [*noo"mə-to'mo-graf*] a pneumatic applanation tonometer or tonographer that measures intraocular pressure via a gas-suspended plunger.

pneumatorrhachis [*noo"mə-to-rak'is*] the presence of gas in the vertebral canal.

pneumatosis [*noo"mə-to'sis*] air or gas in an abnormal location in the body.

p. coli gas or air dissecting the tissues in the wall of the large intestine.

p. cystoides intestinalis a condition characterized by the presence of thin-walled, gas-containing cysts in the wall of the intestines in humans, a condition similar to intestinal emphysema in pigs.

pneumaturia [*noo"mə-tu're-ə*] gas or air in the urine.

pneumectomy [*noo-mek'tə-me*] pneumonectomy.

pneum(o)- word element. [Gr.] *air* or *gas;lung*.

pneumoacupuncture acupuncture in which air is injected to stimulate an acupuncture point; used to treat muscle atrophy.

pneumoangiography [*noo"mo-an"je-og'rə-fe*] radiography of the blood vessels of the lungs.

pneumoarthrography [*noo"mo-ahr-throg'rə-fe*] roentgenography of a joint after injection of air or gas as a contrast medium; pneumarthrography.

pneumobilia [*noo"mo-bil'e-ə*] gas in the biliary tree.

pneumocephalus [*noo"mo-sef'ə-ləs*] air in the intracranial cavity.

pneumococcus [*noo"mo-kok'əs*] see ***Streptococcus pneumoniae***.

pneumocolon [*noo"mo-ko'lən*] air in the colon; it may be placed there as an aid to diagnosis.

pneumocolonography [*noo"mo-ko"lən-og'rə-fe*] radiography of the colon after air or gas has been introduced to aid in contrast.

pneumoconiosis [*noo"mo-ko"ne-o'sis*] any of a group of lung diseases resulting from inhalation of particles of industrial substances, such as the dust of iron ore or coal, and permanent deposition of substantial amounts of such particles in the lungs.

The disease is rare in animals unless there is an unusual exposure to a dusty environment. Horses are the ones most commonly exposed, usually in a mining operation (pit ponies). Exercise intolerance and chronic cough are the cardinal signs.

Pneumocystis [noo"mo-sis'tis] opportunistic fungal pathogens that cause severe pneumonia in immunocompromised hosts, now considered as part of an early-diverging lineage of *Ascomycetes*.

P. carinii the causative agent of interstitial plasma cell pneumonia in humans and immunocompromised Arab foals and dogs.

pneumocystogram [noo"mo-sis'to-gram] a radiograph obtained by pneumocystography.

pneumocystography [noo"mo-sis-tog'rə-fe] radiography of the urinary bladder after injection of air or gas.

pneumocystosis [noo"mo-sis-to'sis] 1. pneumonia characterized by interstitial accumulation of plasma cells. 2. pneumonia caused by *Pneumocystis carinii* infection; usually latent or sucbclinical except in immunocompromised humans, dogs, cats, pigs, horses, goats, primates, rabbits.

pneumocyte [noo-mo-sīt'] includes granular and alveolar pneumocytes; see **alveolar^2 cell**.

pneumoderma [noo"mo-dur'mə] subcutaneous emphysema; air or gas in subcutaneous tissues.

pneumodynamics [noo"mo-di-nam'iks] the dynamics of the respiratory process.

pneumoencephalitis [noo"mo-ən-sef"ə-li'tis] see **Newcastle disease**.

pneumoencephalogram [noo"mo-ən-sef'ə-lo-gram] the radiograph produced by pneumoencephalography.

pneumoencephalography [noo"mo-ən-sef"ə-log'rə-fe] radiographic visualization of the fluid-containing structures of the brain after cerebrospinal fluid is withdrawn and replaced by air, oxygen or helium.

pneumoenteritis [noo"mo-en"tər-i'tis] inflammation of the lungs and intestine as in stomatitis pneumoenteritis. See **peste des petits ruminants**.

pneumoextraperitoneography [noo"mo-eks"trə-per"ĭ-to-ne-o-og'rə-fe] infiltration of the subperitoneal tissues with nitrogen or carbon dioxide to give a better visualization of the kidney.

pneumogastric nerve [noo"mo-gas'trik] vagus nerve. See Table 14.

pneumogastrogram [noo"mo-gas'tro-gram] radiograph of an air-filled stomach, used to screen for gastric foreign bodies and assessment of stomach position, size and shape. Not useful for defining details of the mucosa.

pneumogastrography [noo"mo-gas-trog'rə-fe] a radiographic technique which utilizes a gas-filled stomach to visualize the organ. See also **gastrography**.

pneumography 1. description of the lungs. 2. graphic recording of the respiratory movements. 3. radiography of a part after injection of a gas.

pneumohemopericardium [noo"mo-he"mo-per"ĭ-kahr'de-əm] air or gas and blood in the pericardium.

pneumohemothorax [noo"mo-he"mo-thor'aks] gas or air and blood in the pleural cavity.

pneumohydrometra [noo"mo-hi"dro-me'trə] gas and fluid in the uterus.

pneumohydropericardium [noo"mo-hi"dro-per"ĭ-kahr'de-əm] air or gas with fluid in the pericardium.

pneumohydrothorax [noo"mo-hi"dro-thor'aks] air or gas with fluid in the thoracic cavity.

pneumolith [noo'mo-lith] a pulmonary concretion.

pneumolithiasis [noo"mo-li-thi'ə-sis] the presence of concretions in the lungs.

pneumolobectomy [noo"mo-lo-bek'tə-me] excision of lung tissue, usually of a single lobe (lobectomy).

pneumomediastinum [noo"mo-me"de-əs-ti'nəm] the presence of air or gas in tissues of the mediastinum, occurring pathologically or introduced intentionally.

pneumometer [noo"mom'ə-tər] spirometer.

pneumometra air or gas in the uterus; occurs in mares with incompetent perineum and vestibulovaginal junction.

pneumomycosis [noo"mo-mi-ko'sis] any fungal disease of the lungs.

pneumomyelography [noo"mo-mi"ə-log'rə-fe] a generally unused technique of radiography of the spinal canal after withdrawal of cerebrospinal fluid and injection of air or gas.

pneumonectomy [noo"mo-nek'tə-me] excision of lung tissue, of an entire lung (total pneumonectomy) or less (partial pneumonectomy), or of a single lobe (lobectomy).

pneumonia [noo-mo'ne-ə] inflammation of the parenchyma of the lung. It is often accompanied by inflammation of the airways and sometimes of the adjoining pleura. Clinically it is manifested by an increase in the rate and depth of respiration at all degrees of severity up to dyspnea. There is also cough, and abnormality of the breath sounds on auscultation. In bacterial pneumonia there is usually a severe toxemia, in viral pneumonia it is usually minor. See also **bronchopneumonia**, **pleuropneumonia**.

Arabian foal p. an inexorably progressive pneumonia of certain Arabian foals born with primary severe combined immunodeficiency in which adenovirus plays a dominant role but is complicated by other microorganisms, particularly *Pneumocystis carinii*.

aspiration p. see **aspiration** pneumonia.

atypical p. histologically the pneumonia is atypical in that there are no signs of acute inflammation and it is characterized by an exudation of eosinophilic, protein-rich fluid in the alveoli which may become organized to form a hyaline membrane. In animals that survive for several days there is epithelialization of the alveolar walls. In humans there is a primary atypical pneumonia caused by *Mycoplasma pneumoniae*. In animals the best known example is **atypical interstitial pneumonia** of cattle.

bronchointerstitial p. the lesions are centered on the bronchioles and a prominent feature is the accumulation of lymphocytes in interstitial tissue; typical of pneumonias caused by aerogenous virus infections, especially myxoviruses.

brooder p. see **brooder** pneumonia.

chronic undifferentiated p. of sheep see **enzootic** pneumonia.

corynebacterial p. see ***Rhodococcus equi*** pneumonia.

cuffing p. chronic undifferentiated pneumonia of sheep in which lymphofollicular sheaths around the bronchioles are a feature.

equine cryptococcal p. see **epizootic** lymphangitis.

desquamative p. a chronic pneumonia associated with *Mycoplasma* spp. and characterized by organization of the exudate within bronchioles and bronchi, and proliferation of the interstitial tissue and epithelium.

desquamative interstitial p. chronic pneumonia with desquamation of large alveolar cells and thickening of the walls of distal air passages; marked by dyspnea and nonproductive cough.

embolic p. results from hematogenous spread from an intravascular lesion elsewhere in the body. The best known example is caudal vena caval thrombosis.

endogenous-lipid p. focal alveolar accumulations of foamy, lipid-filled macrophages which may impede alveolar clearance. Usually an incidental postmortem finding in laboratory rodents, fur-bearing animals and uncommonly cats and dogs.

enzootic p. see **enzootic** pneumonia.

fibrinous p. an acute fulminating pneumonia, often lobar in distribution, characterized by a fibrinous exudate. Fibrinous describes the exudate, not the anatomical distribution so that the term fibrinous pneumonia should not be used interchangeably with lobar pneumonia.

foreign body p. see **aspiration** pneumonia.

gangrenous p. usually an accompaniment of aspiration pneumonia.

giant-cell p. a secondary lesion in dermatosis vegetans in pigs; lesions marked by the presence of a proliferative giant-cell type of diffuse interstitial pneumonia.

granulomatous p. has a slow course characterized by granulomatous, not exudative, inflammation. Sporadic cases occur in immunodeficient animals. It is a characteristic of tuberculosis and systemic fungal infections, e.g. coccidioidomycosis.

hypostatic p. caused by pooling of blood and some decrease in viability of the dependent lung in an old, sick or debilitated animal that is in lateral recumbency for a long period. The infection is secondary to hypostasis.

inhalation p. see **aspiration** pneumonia.

interstitial p. pneumonia in which there is diffuse or patchy damage to alveolar septa widely distributed through the lungs. There is an early intra-alveolar exudative phase followed by significant proliferation and enlargement of the alveolar epithelial cells and a thickening of the interstitial tissue. Most interstitial pneumonias in animals are infectious including viral, bacterial, fungal and protozoal causes, but may be caused by chemical injury, acute pancreatitis or shock, as in acute respiratory distress syndrome.

lipid p. a specific type of aspiration pneumonia caused by the inhalation of oil droplets; most commonly associated with the forced administration of paraffin oil or cod-liver oil to cats. Called also medication pneumonia, lipoid pneumonia. See also **aspiration** pneumonia.
lobar p. a fulminating bronchopneumonia in which entire pulmonary lobes are diffusively inflamed and then consolidated. Pneumonic pasteurellosis in cattle is the type disease. The animal is critically ill with anoxia and toxemia.
lobular p. an oldfashioned term for **bronchopneumonia**.
lymphoid interstitial p. see **maedi**.
ovine progressive p. see **maedi**.
parasitic p. see **lungworm** disease.
rhodococcal p. of foals see ***Rhodococcus equi*** pneumonia.
stable p. see **equine** influenza.
suppurative p. of foals see ***Rhodococcus equi*** pneumonia.
uremic p. occurs in dogs with terminal uremia; lesions characterized by absence of inflammatory cells.

pneumonic [*noo-mon'ik*] pertaining to the lung or to pneumonia.

pneumonitis [*noo"mo-ni'tis*] inflammation of lung tissue. See also **pneumonia**.
feline p. infection by *Chlamydophila felis* causes a chronic, often recurrent, conjunctivitis and infrequently lower respiratory disease. See also **feline** viral respiratory disease complex.
hypersensitivity p. a local type III hypersensitivity reaction resulting from inhalation of antigens, seen in cattle fed moldy hay and the group of diseases in humans that includes **farmer's lung** and **bird**-fancier's lung.
chemical p. results from aspiration of gastric acids.

pneumon(o)- word element. [Gr.] *lung*.

pneumonocentesis [*noo-mo"no-sen-te'sis*] surgical puncture of a lung for aspiration.

pneumonocyte [*noo-mon'o-sīt*] collective term for the alveolar epithelial cells (great alveolar cells and squamous alveolar cells) and alveolar phagocytes of the lungs.

pneumonolysis [*noo"mo-nol'ĭ-sis*] division of tissues attaching the lung to the wall of the chest cavity, to permit collapse of the lung.

pneumonomycosis [*noo-mo"no-mi-ko'sis*] pneumomycosis.

pneumonopathy [*noo"mo-nop'ə-the*] any lung disease.

pneumonopexy [*noo-mo'no-pek"se*] fixation of the lung to the thoracic wall.

pneumonorrhaphy [*noo"mo-nor'ə-fe*] suture of the lung.

pneumonosis [*noo"mo-no'sis*] any lung disease.

pneumonotomy [*noo"mo-not'ə-me*] incision of the lung.

Pneumonyssoides [*noo"mo-nis-oi'dēz*] syn. *Pneumonyssus*; a genus of mites in the family Dermanyssidae.
P. caninum a mite found in the nasal cavity of dogs. See also ***Pneumonyssus caninum***.

Pneumonyssus [*noo"mo-nis'əs*] a genus of mites in the family Dermanyssidae.
P. caninum found in the nasal passages and sinuses of dogs causing irritation manifested by sneezing, and rubbing of the nose. Now known as *Pneumonyssoides caninum*.
P. simicola found in the bronchi of the rhesus monkey where it may cause irritation with sneezing and coughing.
P. stammeri a mite found in the lungs of New World primates.

pneumopericardiography [*noo"mo-per"e-kahr"de-og'rə-fe*] injection of air or carbon dioxide into the pericardial sac, usually after a comparable amount of fluid has been withdrawn.

pneumopericardium [*noo"mo-per"ĭ-kahr'de-əm*] the presence of air or gas in the pericardial cavity.

pneumoperitoneography [*noo"mo-per"ĭ-to"ne-og'rə-fe*] a radiograph taken of the abdomen after the intraperitoneal infusion of air or carbon dioxide to give better contrast.

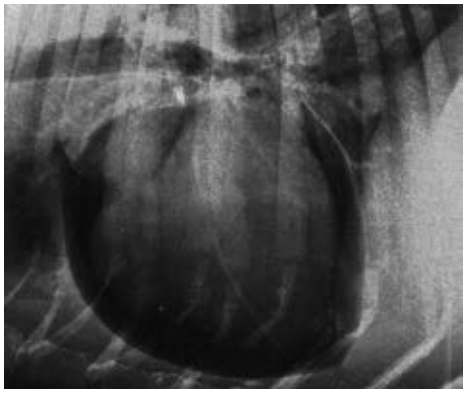
pneumoperitoneoscopy [*noo"mo-per"ĭ-to"ne-os'kə-pe*] the infusion of air into the peritoneal cavity in order to improve the view obtained through a laparoscope.

pneumoperitoneum [*noo"mo-per"ĭ-to-ne'əm*] the presence of air or gas in the peritoneal cavity, occurring pathologically or introduced intentionally.

pneumoperitonitis [*noo"mo-per"ĭ-to-ni'tis*] peritonitis with accumulation of air or gas in the peritoneal cavity.

pneumopleuritis [*noo"mo-plŏŏ-ri'tis*] inflammation of the lungs and pleura.

pneumopyopericardium [*noo"mo-pi"o-per"ĭ-kahr'de-əm*] air or gas and pus in the pericardium.



P-58: Pneumopericardiogram in a dog.
From Lamb CR, Diagnostic Imaging of the Dog and Cat. Mosby, 1993.

pneumopyothorax [*noo"mo-pi"o-thor'aks*] air or gas and pus in the pleural cavity.

pneumoradiography [*noo"mo-ra"de-og'rə-fe*] radiography of a part after injection of air or other gas as contrast material.

pneumoretroperitoneum [*noo"mo-ret"ro-per"ĭ-to-ne'əm*] the presence of air or gas in the retroperitoneal space.

pneumorrhagia [*noo"mo-ra'jə*] hemorrhage from the lungs; severe hemoptysis.

Pneumospirura a genus of spiruroid nematodes in the family Pneumospiruridae.
P. bassarisci found in the bronchioles of the ringtail.
P. capsulata found in the common badger.
P. rodentium found in the lungs of gerbils and birds.

Pneumostrongylus a genus of nematodes in the family Protostrongylidae. Parasites of the lungs of African antelopes.

pneumotachograph [*noo"mo-tak'o-graf*] an instrument for recording the velocity of respired air.

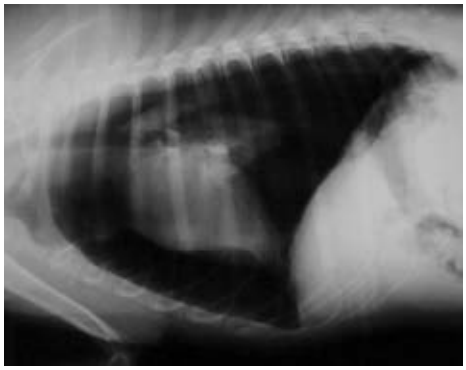
pneumotachography [*noo"mo-tak-og'ra-fe*] the science of using a **pneumotachograph**.

pneumotachometer [*noo"mo-tə-kom'ə-tər*] a transducer for measuring expired air flow.

pneumotaxic [*noo"mo-tak'sik*] regulating the respiratory rate.
p. center one of the four respiratory centers; located in the upper, rostral part of the pons; rhythmically inhibits inspiration.

pneumotherapy [*noo"mo-ther'ə-pe*] treatment of disease of the lungs.

pneumothorax [*noo"mo-thor'aks*] entry of air into the pleural cavity in sufficient quantity to cause collapse of the lung and consequent respiratory embarrassment. If it is unilateral there is a mediastinal shift with displacement of the heart to the other side of the chest. Breath sounds are absent from the affected side.
closed p. air leaks from a discontinuity in the lung into the pleural cavity.
false p. artifactual increased radiolucency of the thorax resembling free air in the pleural cavity.
iatrogenic p. may occur following intrathoracic surgery or in association with procedures which involve entry into the pleural cavity, such as thoracentesis or placement of a chest drain.
open p. caused by an open wound in the chest wall.
spontaneous p. due to an unknown cause.
tension p. a particularly dangerous form of pneumothorax that occurs when air escapes into the pleural cavity from a bronchus



P-59: Pneumothorax.
From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.

VetBooks.ir

but cannot regain entry into the bronchus. As a result, continuously increasing air pressure in the pleural cavity causes progressive collapse of the lung tissue. If not relieved, it can lead to lung collapse and **mediastinal** shift.

pneumotomy [*noo-mot'ə-me*] pneumonotomy.

pneumotoscopy [*noo"mo-tos'kə-pe*] a means of assessing compliance of the tympanic membrane and determining whether there is fluid in the middle ear. The tympanic membrane is visualized through an otoscope, watching for movement when air is moved in using a pneumatic bulb.

pneumouterus [*noo"mo-u'tər-əs*] see **pneumometra**.

pneumovagina [*noo"mo-və-ji'nə*] involuntary aspiration of air into the vagina so that the vagina is chronically distended. Usually incompatible with fertility. See also **rectovaginal** fistula.

pneumoventriculogram [*noo"mo-ven-trik'u-lo-gram*] the radiograph produced by the use of **ventriculography** (1).

pneumoventriculography [*noo"mo-vən-trik"u-log'rə-fe*] pneumoencephalography.

Pneumovirinae [*noo'mo-vir-i'ne*] a subfamily of viruses in the family *Paramyxoviridae*. See ***Pneumovirus***.

Pneumovirus [*noo'mo-vi"rəs*] a genus in the subfamily *Paramyxovirinae* that includes respiratory syncytial virus of humans, cattle, sheep and cats.

-pnoea see **-pnea**.

PNS peripheral nervous system.

PO, p.o. [L.] *per os* (by mouth; orally).

Po chemical symbol, *polonium*.

Poa [*po'ə*] genus of grasses in family Poaceae. Contains many very productive fodder grasses including the bluegrasses.

P. aquatica ***Glyceria*** *maxima*.

P. hueca South American grass; contains an indole alkaloid which causes incoordination and convulsions.

P. pratensis Kentucky bluegrass, a popular pasture grass.

poach damage caused to sodden pasture by the hooves of cattle and sheep. In clay soils and when the ground is sufficiently wet the damage caused by a heavy stocking rate of sheep may be very high. Said also of the take-off in front of a jump in an equitation course or a race. Called also pugging.

poaching 1. illegal, secret trapping or killing of game. 2. excessive traffic by animals, especially ungulates, on wet pasture fields causing rupture of pasture mat and loss of grass and clover carrying capacity.

pock [*pok*] a pustule typified by the cutaneous lesions of poxviruses.

pocket pet [*pok'ət*] a general term, used to describe very small animals kept as pets; usually includes hamsters, guinea pigs, gerbils, rats and mice.

pockmark [*pok'mahrk*] a depressed scar left by a pustule.

pod a small herd or school of cetaceans, such as whales, dolphins or porpoises.

podarthritis [*pod"ahr-thri'tis*] inflammation of the joints of the feet.

poddy 1. the act of artificial rearing. 2. an animal being reared in this way, e.g. a poddy calf.

poddying technique for artificial rearing of young, e.g. on a bottle, with an eyedropper, from a bucket. See also artificial **rearing**.

podencephalus [*pod"ən-sef'ə-ləs*] a fetus without a cranium, the brain hanging by a pedicle.

poditis see **bumblefoot**.

podium pl. *podia* [L.] a footlike process, such as an extension of the protoplasm of a cell.

pod(o)- word element. [Gr.] *foot*.

podocyte [*pod'o-sīt*] an epithelial cell of the visceral layer of a renal glomerulus, having a number of footlike radiating processes (pedicles).

pododemodicosis [*po"do-dem"ə-dĭ-ko'sis*] pododermatitis caused by *Demodex* spp.

pododerm [*pod'o-dərm*] the specially adapted part of the skin that provides nourishment to the hooves or claws. See also **corium**.

pododermatitis [*po"do-dur"mə-ti'tis*] inflammation of that portion of the skin which continues downward within the horny structure of the hoof. Most common use is with reference to cattle where it is used synonymously with **footrot**, but also used increasingly to describe dermatitis or pyoderma of the feet in dogs.

p. circumscripta bruising and necrosis of the sole in the angle between the bar and the wall of the hoof in horses. See also **corn** (2).

P-60: Pododemodecosis. From Ghubash R: Parasitic miticidal therapy. Clin Tech Sm Anim Pract 21:135-144, 2006. Elsevier.

demodectic p. see **pododemodicosis**.

plasma cell p. a nonpainful swelling, sometimes with ulceration and exuberant granulation tissue, on the footpads of cats. The cause is unknown but believed to be immunological.

suppurative p. underrun sole with pus formation.

ulcerative p. a disease of rabbits, guinea pigs and other caged small mammals, caused by pressure from a cage floor on the backs of the metatarsal bones; it may progress to arthritis. Wet conditions and restriced movement also contribute. *Staphylococcus aureus* is most commonly recovered. Called also sore hocks in rabbits, and bumblefoot in guinea pigs.

pododynamometer [*pod"o-di"nə-mom'ə-tər*] a device for determining the strength of the leg muscles.

podophyllin [*pod"o-fil'in*] the pharmacologically active resin extracted from **podophyllum**.

podophyllotoxin [*pod"o-fil'o-tok"sin*] podophyllin resin; a pharmacological precursor for **etoposide**.

podophyllum [*pod"o-fil'əm*] the dried rhizome and roots of *Podophyllum peltatum*.

p. resin a mixture of resins from podophyllum, used as a topical caustic in the treatment of certain papillomas. Was used at one time as a purgative but was capable of causing fatal superpurgation.

Podophyllum peltatum [*pod"o-fil'əm*] Northern American plant in the family Berberidaceae; contains podophyllum resin which causes diarrhea; called also American mandrake, mayapple.

podoplasty [*pod"o-plas'te*] plastic repair of the paw

fusion p. surgery of the paw that excises interdigital skin between digital and metacarpal or metatarsal pads and sutures pads together.

separation p. complete surgical removal of interdigital skin as a treatment for interdigital cysts.

podotrochlear apparatus [*pod"o-trok'le-ər*] the navicular bone, navicular bursa, navicular suspensory ligament, distal sesmoidean impar ligament, deep digital flexor tendon and the distal digital annular ligament.

P-61: Plasma cell pododermatitis in a cat.

P

podotrochleitis [*po"do-trok-le-ī'tis*] see **navicular** disease.
podotrochlosis [*po"do-trok-lo'sis*] podotrochlitis.
Poecilia [*pe-sil'e-ə*] a genus of brackish water fish that bear live offspring; known generally as **mollies**. Includes **guppies**.
Pogona barbata see **bearded dragon**.
pogonion [*po-go'ne-on*] the craniometric point located at the anterior midpoint of the chin.
-poiesis word element. [Gr.] *formation.*
poikil(o)- prefix meaning irregular.
poikiloblast [*poi'kĭ-lo-blast"*] an abnormally shaped erythroblast.
poikilocyte [*poi'kĭ-lo-sīt"*] an abnormally shaped erythrocyte; includes **acanthocyte**, **codocyte**, **dacryocyte**, **eccentrocyte**, **echinocyte**, **elliptocyte**, **keratocyte**, **leptocyte**, **ovalocyte**, **pyknocyte**, **schizocyte**, **spherocyte**, **stomatocyte**.
poikilocytosis [*poi"kĭ-lo-si-to'sis*] the presence of poikilocytes in the blood.
poikiloderma [*poi"kĭ-lo-dur'mə*] a condition characterized by pigmentary and atrophic changes in the skin, giving it a mottled appearance.
poikilospherocyte [*poi"kĭ-lo-sfēr'o-sīt*] small spheroidal erythrocytes caused by fragmentation.
poikilotherm [*poi-kil'o-therm"*] an animal that exhibits poikilothermy; a cold-blooded animal.
poikilothermic [*poi-kil'o-therm"ik*] characterized by poikilothermy.
poikilothermism [*poi"kĭ-lo-thur'miz-əm*] the state induced by poikilothermy.
poikilothermy [*poi"kĭ-lo-thur'me*] the physiological state of having body temperature that varies with that of the environment.
poinsettia see ***Euphorbia*** *pulcherrima*.
point [*point*] 1. a small area or spot; the sharp end of an object. 2. to approach the surface, like the pus of an abscess, at a definite spot or place. 3. a single tine of an antler. 4. extremities of a sheep fleece which has been removed from the sheep and laid out on a classing table. 5. in acupuncture, specific locations usually along meridians where needles or other methods of treatment are applied. Called also acupoints.
auricular p. the carniometric point marked by the center of the opening of the external acoustic meatus.
boiling p. the temperature at which a liquid will boil: at sea level, 212°F (100°C).
dew p. the temperature at which moisture in the atmosphere is deposited as dew.
electrical p. finding identification of acupuncture points by the use of an electrical point finder; this measures the resistance of the skin to the flow of electricity; it is much lower over acupuncture points.
freezing p. the temperature at which a liquid begins to freeze; for water, 32°F (0°C).
ice p. the temperature of equilibrium between ice and air-saturated water under one atmosphere pressure.
isobestic p. the wavelength at which two substances have the same absorptivity.
isoelectric p. (pI) the pH of a solution in which molecules of a specific substance, such as a protein, have equal numbers of positively and negatively charged groups and therefore do not migrate in an electric field.
lacrimal p. lacrimal puncta.
p. of lay the age of sexual maturity in female fowls.
p. of maximal impulse (PMI) the point on the chest where the impulse of the left ventricle is felt most strongly. It is usually on the left chest wall, around the area of the 5th costochondral junction.
melting p. the minimum temperature at which a solid begins to liquefy.
nodal p's two points on the axis of an optical system situated so that a ray falling on one will produce a parallel ray emerging through the other.
p. outbreak see point **epidemic**.
paper p. very fine, tapered swabs used in endodontics to dry up the root canal.
p. prescriptions details of the exact needle procedures and locations of insertions for the treatment of specific diseases.
p. selection can be based on a table of prescriptions for specific diseases, or on the basis of which acupoints are tender, or on the basis of the innervation of the area of the lesion, and so on for a series of 11, and possibly more, strategies.
special action p's. acupoints used only to influence specific organs or tissues.
trigger p. a spot on the body at which pressure or other stimulus gives rise to specific sensations or clinical signs.
triple p. the temperature and pressure at which the solid, liquid, and gas phases of a substance are in equilibrium.
point finder an electronic device used to detect the exact location of points in acupuncture, based on variations in electrical impedance of the skin.
Pointer [*point'ər*] a medium-sized (55–65 lb), lean gun dog with long neck, pendulous ears, and long pointed tail. The coat is short and fine in solid color or white with lemon, black, liver or orange patches or ticks. Called also English pointer to distinguish it from several other breeds with pointer in their name. See also **pointing** (2).
Hungarian p. see **Vizsla**.
Italian p. see **Spinoni Italiani**.
pointer [*point'ər*] an injury such as a contusion or avulsion of muscle attachments at a bony prominence.
pointillage [Fr.] massage with the points of the fingers.
pointing 1. the posture adopted by a horse with one lame limb, lame with a weight-bearing lameness. The toe of the affected limb is rested on the ground in front of its normal position and less weight is taken on it than normal. 2. the posture adopted by a pointer type hunting dog when it detects the presence of a bird —looking straight at the location of the bird, perfectly still with the tail straight out behind and one front limb flexed with the carpus at right angles. 3. the coming to a head or maturation of an abscess.
point-of-care test various clinicopathologic testing procedures which may be carried out in the veterinary hospital or clinic, rather than sending the samples out to a distant commercial laboratory. Called also cage-side test.
points 1. specific parts of the conformation. 2. restricted areas of color. In dogs this refers to contrasting coloring over the eyes, on the face, legs and feet. In cats it is the face, ears, feet and tail and is used to describe the pigmentation pattern seen in Siamese, e.g. seal-point, blue-point, tabby-point, etc.
p. of the horse a list of the outstanding anatomical landmarks of the animal which are used as guiding points when judging the quality of the animal's conformation. This is used mostly in show judging. The list is usually expressed in lay terms such as muzzle, pastern, hock.
poise [*poiz, pwahz*] the unit of viscosity of a liquid; the number of grams per centimeter per second. Centipoise, 0.01 poise, is the standard unit used.
Poiseuille's law, Poiseuille's equation [*pwah-swēz'*] the law which expresses the relationship between the rate of flow of a liquid in a tube and the pressure gradient in the tube, the radius of the tube, the length of the tube and the viscosity of the liquid.
poison [*poi'zən*]a substance that, on ingestion, inhalation, absorption, application, injection or development within the body may cause structural damage or functional disturbance. Called also a toxicant. Corrosives are poisons that destroy tissues directly. They include the mineral acids, such as nitric acid, sulfuric acid and hydrochloric acid, and the caustic alkalis, such as ammonia, sodium hydroxide (lye), sodium carbonate and sodium hypochlorite; and carbolic acid (phenol). Irritants are poisons that inflame the mucous membranes by direct action. These include copper sulfate, salts of lead, cantharidin, oxalate raphides, and many plant and insect poisons. Nerve poisonss act on the nerves or affect some of the basic cell processes. This large group includes the narcotics, such as opium, heroin and cocaine, and the barbiturates, anesthetics and alcohols. Blood poisons act on the blood and deprive it of oxygen. They include carbon monoxide, carbon dioxide, nitrite and the gases used in chemical warfare. Some blood poisons destroy the blood cells or the platelets. See also **poisoning** and names of individual poisons. Includes: berry poison, box poison, marlock poison (*Gastrolobium parvifolium*), bullock poison (*G. trilobum*), poison bush (*Thesium namaquense*), poison bride bush (*Pavetta schumanniana*), bushman's poison (*Acokanthera* spp.), camel poison (*Erythrophleum chlorostachys*), candyup poison (*Stypandra glauca*), Champion Bay poison (*G. oxyloboides*), clover-leaf poison (*Goodia lotifolia*), cluster poison (*Gastrolobium bennettsianum*), crinkle-leaf poison (*G. villosum*), desert poison bush (*G. grandiflorum*), Gilbernene poison (*G. rotundifolium*), granite poison (*G. graniticum*),

VetBooks.ir

heart-leaf poison bush (*G. bilobum, G. grandiflorum*), Hill River poison, horned poison (*G. polystachyum*), hook-point poison (*G. hamulosum*), Hutt River poison (*G. propinquum*), poison ivy (*Toxicodendron radicans*), kite-leaf poison (*Gastrolobium laytonii*), lamb poison (*Isotropis cuneifolia*), poison leaf (*Dichapetalum cymosum*), mallet poison (*G. densifolium*), narrow-leaf poison (*G. stenophyllum*), net-leaf poison (*G. racemosum*), pea-blossom poison (*Isotropis* spp.), prickly poison (*G. spinosum*), rigid-leaf poison (*G. rigidum*), river poison (*G. forrestii*), river poison tree (*Excoecaria dallachyana*), rock poison (*G. callistachys*), Roe's poison (*G. spectabile*), round-leaf poison (*G. pycnostachyum*), runner poison (*G. ovalifolium*), sandplain poison (*G. microcarpum*), scale-leaf poison (*G. appressum*), poison sedge (*Schoenus asperocarpus*), slender poison (*G. heterophyllum*), slender lamb poison (*I. juncea*), spike poison (*G. glaucum*), Stirling Range poison (*G. velutinum*), poison suckleya (*Suckleya suckleyana*), thick-leaf poison (*G. crassifolium*), wallflower poison (*G. grandiflorum*), poison walnut (*Cryptocarya pleurosperma*), wodjil poison (*G. floribundum*), woolly poison (*G. tomentosum*), York Road poison (*G. calycinum*).

insect p. see bee sting, *Epicauta vittata*, tick paralysis.

Poison Control Center public facility set up to provide information around the clock on toxicity of substances and current information of correct first aid methods and antidotes for poisoning emergencies. See **Animal Poison Control Center**.

poisoning [*poi'zən-ing*] the morbid condition produced by a poison. The poison may be swallowed, inhaled (as in **carbon monoxide** poisoning), injected by a stinging insect as in a **bee sting**, or spilled or otherwise brought into contact with the skin.

blood p. septicemia.

food p. a group of acute illnesses due to ingestion of contaminated food. See also **food** poisoning.

malicious p. laying a bait to poison an animal without the owner's consent.

poisonous [*poi'zən-əs*] having the properties of a poison.

p. plants plants which contain specific chemical poisons, although they may not have been identified. They are a different group from plants which cause illness if eaten in very large amounts or have physical qualities that cause illness, e.g. clover in bloat, tree loppings in omasal impaction, thorns or spines. There is a third group of plants, those that are only intermittently poisonous. These form a very large group known to have caused nitrite, cyanide or oxalate poisoning but are valuable plants and are safe if used appropriately. See also under the names of individual plants or the toxins that they contain.

Poisson distribution [*pwah-saw'*] a statistical distribution which often describes the sampling frequency of individual, isolated counts in time and space.

Poitou ass a French, longhaired, black or dark brown donkey.

poke ***Phytolacca*** *americana*.

pokeroot [*pōk'root*] ***Phytolacca*** *americana*.

pokeweed [*pōk'wēd*] ***Phytolacca*** *americana*.

p. mitogen (PWM) see pokeweed **mitogen**.

***pol* gene** a gene found in the retroviral genome that encodes reverse transcriptase.

Poland China a black pig with white points produced in the USA.

polar [*po'lər*] 1. emanating from or pertaining to a pole. 2. being at opposite ends of a spectrum of values.

polarimeter [*po"lə-rim'ə-tər*] a device for measuring the rotation of plane polarized light.

polarimetry [*po"lə-rim'ə-tre*] measurement of the rotation of plane polarized light.

polarine a glycoalkaloid found in plants of the family Solanaceae and thought to contribute to poisoning by them.

polariscope [*po-lar'ĭ-skōp*] an instrument used to measure polarized light.

polarity [*po-lar'ĭ-te*] the condition of having poles or of exhibiting opposite effects at the two extremities.

cell p. a feature of epithelial cells which defines an apical surface facing the outside which is separated by a tight junction from the basolateral surface.

polarization [*po"lər-ĭ-za'shən*] the production of that condition in light in which its vibrations are parallel to each other in one plane, or in circles and ellipses.

polarizer [*po'lər-īz"ər*] an appliance for polarizing light.

polarography [*po"lər-og'rə-fe*] an electrochemical technique for identifying and estimating the concentration of reducible elements in an electrochemical cell by means of the dual measurement of the current flowing through the cell and the electrical potential at which each element is reduced.

P-62: Poitou ass.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

pole [*pōl*] 1. either extremity of any axis, as of a body organ. 2. either one of two points that have opposite physical qualities (electric or other).

control p. a pole with a loop at one end for capturing wild or dangerous small animals. The loop is put over the animal's head and pulled tight. Good poles have a nonslip device so that the animal cannot slip free because of relaxation on the cord by the operator.

frontal p. the most prominent part of the anterior end of each hemisphere of the brain.

occipital p. the posterior end of the occipital lobe of the brain.

temporal p. the prominent anterior end of the temporal lobe of the human brain.

poleaxe a long-handled hammer, about 9–10 lb, originally with an axe blade at the front, used at one time for stunning cattle prior to bleeding out at slaughter.

polecat (*Mustela putorius*), a member of the Mustelidae family of Carnivora, it has a long body, short legs, and short furry tail; the coat is dark brown with a dark raccoon-like mask. Can eject a foul smelling material from its anal glands when attacked. Called also fitch. See also **ferret**.

poley 1. a polled animal; one without horns. 2. a pad on an American saddle.

poliglecaprone 25 a monofilament synthetic absorbable suture material characterized by low tissue reactivity and high tensile strength.

poli(o)- [*po'le-o*] word element. [Gr.] *gray matter*.

polioclastic [*po"le-o-klas'tik*] destroying the gray matter of the nervous system.

poliodystrophia [*po"le-o-dis-tro'fe-ə*] poliodystrophy.

poliodystrophy [*po"le-o-dis'trə-fe*] atrophy of the cerebral gray matter.

polioencephalitis [*po"le-o-ən-sef"ə-li'tis*] inflammatory disease of the gray matter of the brain.

polioencephalomalacia [*po"le-o-en-sef"ə-lo-mə-la'shə*] softening of the cerebrocortical gray matter distributed in a laminar pattern. Called also laminar cortical necrosis, cortical necrosis.

periventricular p. degenerative changes in periventricular nuclei in carnivores in thiamine deficiency. See **thiamine** nutritional deficiency.

ruminant p. a sporadic disease, occurring in cattle and sheep, that has several different causes, including the ingestion of esxcess amount of sulfates in feed and water, thiamin inadequacy caused by ingestion of preformed thiaminases in certain plants or production of thiaminase by ruminal microbes. Characterized by a sudden onset of blindness, nystagmus, opisthotonos and clonic-tonic convulsions and death in 24 to 48 hours. Mild cases may remain standing, walk aimlessly and head press. At necropsy, there is cerebral edema and laminar necrosis of the gray matter of the brain. Called also cerebrocortical necrosis. May also be seen in some cases of acute lead poisoning in cattle.

sulfur-associated p. diets with more than 0.4% sulfur can induce polioencephalomalacia in cattle; forage content of the diet will influence this threshhold; major sulfur sources include elemental sulfur, molasses, sulfates in drinking water, plants in the family Brassicaceae, manure gas (hydrogen sulfide). Called also 'blind

VetBooks.ir

staggers' and previously attributed erroneously to selenium poisoning.

polioencephalomeningomyelitis [*po"le-o-ən-sef"ə-lo-mə-ning"go-mi"ə-li'tis*] inflammation of the gray matter of the brain and spinal cord and of the meninges.

polioencephalomyelitis [*po"le-o-en-sef"ə-lo-mi"ə-li'tis*] inflammation of the gray matter of the brain and spinal cord.

feline p. a slowly progressive disease of unknown etiology in cats, including large Felidae; clinical signs include ataxia, paresis and hyperesthesia.

polioencephalomyelopathy a degeneration of gray matter of the brain and spinal cord.

hereditary p. an autosomal recessive disorder in Australian cattle dogs. Starting at a young age, there are psychomotor seizures, weakness and thoracic limb stiffness progressing to spastic tetraparesis.

polioencephalopathy [*po"le-o-ən-sef"ə-lop'ə-the*] any disease of the gray matter of the brain.

poliomalacia [*po"le-o-mə-la'shə*] softening of the gray matter of the central nervous system.

focal symmetrical spinal p. a disease of young sheep and of unknown etiology observed only in Kenya and characterized by focal softening of the gray matter of the spinal cord, especially the cervical cord, and paralysis especially of the forelimbs. Similar lesions and clinical signs are also observed in pigs, except that the paralysis is posterior. It is associated with selenium toxicosis.

poliomyelitis [*po"le-o-mi"ə-li'tis*] inflammation of the gray matter of the brain; also the name applied to the viral disease of humans and also known as polio.

feline p. see feline **polioencephalomyelitis**.

p. suum see porcine viral **encephalomyelitis**.

poliomyelopathy [*po"le-o-mi"ə-lop'ə-the*] any disease of the gray matter of the spinal cord.

poliosis [*po"le-o'sis*] localized loss of pigment in the hair.

uveitis–p.–vitiligo syndrome see **Vogt–Koyanagi–Harada-like syndrome**.

poliovirus [*po'le-o-vi"rəs*] the human poliomyelitis virus capable of infecting nonhuman primates. Causes paralysis due to encephalomyelitis in which motor neurons are selectively destroyed.

Polish lowland sheepdog a medium-sized, cobby dog with a long, thick, shaggy coat that covers the eyes. The tail is very short or may be docked.

Polish rabbit a small, compact breed of rabbits with short ears and a glossy coat in black, blue, chocolate, or white with ruby or blue eyes. In the UK, the name refers to a breed of small, fine-boned rabbits with a sleek, silky coat which are known in the USA as Britannia Petite.

polishing [*pol'ish-ing*] the final step in dental prophylaxis which smooths the tooth surface and delays the rate of new plaque adhesion. Carried out with a mechanical polisher, prophy cup and paste.

air p. blasting with particles, usually bicarbonate of soda, to polish the supragingival surfaces of the teeth.

polishings byproduct of the rice industry; the material removed from the rice grain. Its quality varies depending on whether hulls are included; without them it is a high-protein supplement. With them it is largely fiber.

political action committee a group of professional veterinarians, usually a committee of a state veterinary association, prepared to lobby their legislative representatives on legislation that concerns veterinary practice in the state. Its activities are funded by a voluntary levee solicited with annual dues. National issues are addressed by a committee of the national veterinary association. In some countries called legislative action group.

poll [*pōl*] top of the head; the occiput.

p. evil a condition of horses involving inflammation of the supra-atlantal bursa and infection with *Brucella abortus,* occasionally *B. suis* or *Actinomyces* spp. The bursa is swollen and painful initially and may rupture to discharge through a sinus.

p. gland steroid dependent glands in the male camel located in the neck (poll) region; secrete a substance (pheromone) used by the male for marking.

p. Hereford cattle see **Hereford**.

p. pad worn on top of the bridle to protect a horse's poll while traveling.

p. presentation see poll **presentation**.

P-63: Poll evil in horse. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

p. Shorthorn cattle see **Shorthorn**.

Poll Dorset an Australian meat sheep produced by crossing the Dorset Horn with the Corriedale or Ryeland. A **Downs sheep** with all of their characteristics.

pollakiuria [*pol"ə-ke-u're-ə*] abnormally frequent passage of urine.

pollard fine protein-rich feed supplement for farm animals; a byproduct from the milling of wheat for flour. Called also shorts.

polled [*pōld*] an individual animal of a normally horned breed, or a breed of a normally horned species, that does not grow horns. Selection for polledness amongst horned breeds has produced some remarkable breeds, e.g. polled Dorset, polled Hereford.

polledness the hornless characteristic.

pollen [*pol'ən*] the male fertilizing element of flowering plants.

p. allergy see canine **atopy**.

Pollenia a genus of flies in the family Calliphoridae. Larvae occur in earthworms.

P. rudis messy and a nuisance in animal accommodation because of their habit of clustering in roof spaces. Called also cluster fly.

pollenosis [*pol"ə-no'sis*] pollinosis.

pollex [*pol'əks*] [L.] *thumb*.

pollinosis [*pol"ĭ-no'sis*] an allergic reaction to pollen; hay fever.

pollutants see **environmental** pollution.

pollution [*pə-loo'shən*] defiling or making impure, especially contamination by noxious substances. See also **environmental** pollution.

anesthetic p. escape of inhalant anesthetic agents into the surgery environment has been linked to cases of spontaneous abortion, birth defects, cancer, liver disease, loss of cognitive and motor skills and drug dependence in operating room personnel. See also **anesthetic** scavenging.

polo a game played between two teams of four mounted riders armed with polo sticks, consisting of wooden mallets on long sticks, and contesting the driving of a ball through a set of goals at either end of the ground which is 300 yd (274 m) long and 160 yd (146 m) wide. A match consists of six chukkas (eight in Argentina) each of 7 minutes.

polo pony not a breed but a type of horse adapted for playing polo. The majority are Argentine thoroughbreds, and well over 15 hands high. They have a typical wiry quality, like Australian Stock horses and American and Canadian cutting horses.

polocrosse a combination of polo and lacrosse played on horseback by teams of three players armed with polo-type sticks with nets attached on a field 146 m×54 m. The ponies used must not be taller than 15 hands.

polonium (Po) [*pə-lo'ne-əm*] a chemical element, atomic number 84, atomic weight 210. See Table 4.

poloxalene [*pol-ok'sə-lēn*] a block polymer of ethylene and propylene oxides; it is a surfactant and given daily in the feed or as a drench. An effective preventer of **ruminal** tympany.

Polwarth an Australian medium-woolled (22–25 microns) Merino (75%) crossed with a Lincoln (25%) sheep with at least five generations of in-breeding within the foundation stock.

poly- word element. [Gr.] *many, much.*

poly I:C **polyinosinic acid–polycytidilic acid**.

poly(A) polyadenylate.

poly(A) synthesis see **polyadenylation**.

poly(A) tail see **polyadenylation**.

polyadenitis [*pol"e-ad"ə-ni'tis*] inflammation of several glands.

polyadenosis [*pol"e-ad"ə-no'sis*] disorder of several glands, particularly endocrine glands.

polyadenylation [*pol"e-ə-den"ə-la'shən*] the addition of up to 250 adenylate residues to the 3' end of eukaryotic mRNAs to form a so-called poly(A) tail. The primary transcript is cleaved by a specific endonuclease that recognizes the sequence AAUAAA which is also referred to as a polyadenylation signal sequence. The poly (A) tail protects the mRNA from digestion with nuclease and greatly increases the efficiency of translation.

polyamide [*pol"e-am'īd*] material used in the creation of nonabsorbable, synthetic, nylon sutures.

polyamines [*pol"e-am'ēns*] widely distributed cationic cell components especially abundant in rapidly proliferating cells. Major polyamines are spermidine and spermine but the diamine, putrescine is often grouped in this category. Multiple role in stabilizing intracellular negatively charged nucleic acids and membranes.

polyandry [*pol"e-an'dre*] the mating of a female animal with more than one male.

polyanethol sulfonate an anticoagulant and inhibitor of complement and lysozymes, included in bacterial culture media.

polyangiitis [*pol"e-an"je-i'tis*] inflammation involving multiple blood or lymph vessels.

polyarteritis [*pol"e-ahr"tə-ri'tis*] inflammatory and degenerative lesions of the arterial walls in a number of isolated locations.

p. nodosa See **periarteritis** nodosa.

polyarthric [*pol"e-ahr'thrik*] polyarticular.

polyarthritis [*pol"e-ahr-thri'tis*] inflammation of several joints. More common in very young animals because of the frequency of navel infection and bacteremia and the immaturity of the arthrodial tissues. See also **arthritis**.

chlamydial p. caused by *Chlamydophila pecorum* and characterized by joint enlargement, lameness, stiff gait, fever, conjunctivitis, a high morbidity and mortality in young animals. There are also lesions and signs of involvement of other organs, e.g. pneumonia, encephalomyelitis and interstitial focal nephritis. An important disease of feedlot lambs.

chronic villous p. chronic inflammation of the synovial membrane of several joints.

crystal-induced p. see **gout**, **pseudogout**.

feline chronic progressive p. see periosteal proliferative polyarthritis (below).

Greyhound p. an erosive joint disease of unknown etiology occurring in young Greyhounds. See **greyhound** polyarthritis.

immune-mediated p. see immune-mediated **arthritis**.

inherited p. a disease of young Akita dogs, in which there is sytemic illness with fever, lethargy and peripheral lymphadenopathy, as well as polyarthritis.

p.–meningitis syndrome an immune-mediated, nonerosive polyarthritis, seen in Weimaraners and several other breeds. There is fever and spinal pain.

mycoplasmal p. *Mycoplasma hyorhinis* and *M. hyosynoviae* cause polyarthritis in pigs, the first in suckling pigs in which there may also be a serositis, the latter more common in older growing pigs. *M. agalactiae bovis* causes polyarthritis in feedlot cattle, *M. mycoides* var. *capri* causes polyarthritis and serositis in goats and *M. capricolum* causes polyarthritis in goats and sheep.

periosteal proliferative p. occurs in young, adult male cats as an acute, febrile illness accompanied by severe joint pain and stiffness, mainly in the hocks and carpi, followed by generalized stiffness, swollen joints and akylosis. Characterized by marked periosteal new bone formation. The disease is believed to be immune-mediated and associated with infection by feline leukemia virus and feline syncytium-forming virus. In a variant form, the onset is insidious and the joint changes are erosive and deforming. Called also Reiter's disease.

p.-polymyositis an immune-mediated, nonerosive polyarthritis seen most often in spaniel breeds. Affected dogs show a marked stiffness and poor exercise tolerance. There is a chronic myositis with muscle atrophy.

polyarticular [*pol"e-ahr-tik'u-lər*] affecting many joints; polyarthric.

polyatomic [*pol"e-ə-tom'ik*] made up of several atoms.

polybasic [*pol"e-ba'sik*] having several replaceable hydrogen atoms.

polybrominated biphenyls see **biphenyl**.

polybutester [*pol"e-bū'tes-tər*] a synthetic material used in suture materials. It has the advantage of being flexible, very strong and forms knots well.

polycarbophil [*pol"e-kahr'bo-fil*] see **calcium** polycarbophil.

polychemotherapy [*pol"e-ke"mo-ther'ə-pe*] simultaneous administration of several chemotherapeutic agents.

polychlorinated biphenyls see **biphenyl**.

polycholia [*pol"e-ko'le-ə*] excessive flow or secretion of bile.

polychondritis [*pol"e-kon-dri'tis*] inflammation of many cartilages of the body.

relapsing p. an immune-mediated destruction and eventual collapse of ear cartilage; affected cats have a history of swollen, painful ears. Called also auricular chondritis.

polychromasia [*pol"e-kro-ma'zhə*] 1. variation in the hemoglobin content of erythrocytes. 2. polychromatophilia.

polychromatic [*pol"e-kro-mat'ik*] many-colored.

polychromatocyte [*pol"e-kro-mat'o-sīt*] a cell stainable with various kinds of stains.

polychromatophil [*pol"e-kro-mat'o-fil*] 1. a structure stainable with many kinds of stains. 2. a polychromatophilic erythrocyte.

polychromatophilia [*pol"e-kro"mə-to-fil'e-ə*] 1. the property of being stainable with various stains; affinity for all sorts of stains. 2. a condition in which the erythrocytes (usually immature), on staining, show various shades of blue (cytoplasmic RNA) combined with tinges of pink (hemoglobin); characterisitic of reticulocytes.

polychromatophilic [*pol"e-kro"mə-to-fil'ik*] having the property of polychromatophilia.

p. erythrocyte reticulocyte.

polychrome methylene blue [*pol"e-krom*] the preferred stain for a smear when the presence of anthrax bacilli is suspected. A positive result is a McFadyean reaction of a purple capsule around a blue bacillus.

polychromemia [*pol"e-kro-me'me-ə*] increase in the coloring matter of the blood; hyperhemaglobinemia.

polycistronic [*pol"e-sis-tron'ik*] a single mRNA encoding several different polypeptide chains; typical of prokaryotes.

p. mRNAs a mRNA found in prokaryotes that encodes more than one protein. See also **monocistronic mRNAs**.

polyclinic a hospital and school where diseases and injuries of all kinds are studied and treated.

polyclonal [*pol"e-klo'nəl*] derived from different cells; pertaining to several clones.

p. antiserum see polyclonal **antibody**.

p. gammopathy see polyclonal **gammopathy**.

polyclonia [*pol"e-klo'ne-ə*] a disease marked by many clonic spasms; called also polymyoclonus.

polycloning site in recombinant DNA technology, an artificially synthesized nucleotide sequence incorporated in a plasmid that contains multiple cleavage sites for different restriction enzymes enabling a choice of the most appropriate restriction enzyme for cloning. Called also restriction site bank or polylinker site.

polycoria [*pol"e-kor'e-ə*] more than one pupil in an eye. Differentiated from **pseudopolycoria** in which the supernumerary 'pupils' do not have a sphincter muscle on their border.

polycrotism [*pol-ik'rə-tiz-əm*] the quality of having several secondary waves to each beat of the pulse.

polycyclic [*pol"e-sik'lik*] having two or more usually fused chemical ring structures in their molecule.

p. hydrocarbons thyroid initiators, i.e. they increase the incidence of thyroid tumors.

polycyesis [*pol"e-si-e'sis*] multiple pregnancy.

polycystic [*pol"e-sis'tik*] containing many cysts.

p. kidney disease see polycystic **kidney** disease.

VetBooks.ir

p. liver congenital anomaly in which cystic remnants of the bile duct occur in the liver; the bile duct is patent; seen in kittens, pups, piglets.
p. ovarian disease multiple thin-walled cysts in one or both ovaries of the mature bitch; may cause hyperestrogenism.
p. pancreas cystic pancreatic and bile ducts and polycystic kidneys may occur in the same patient.
p. renal disease see polycystic **kidney** disease.
polycythemia [*pol"e-si-the'mē-ə*] an increase in the circulating red blood cell mass; may be used synonymously with erythrocytosis or reserved for neoplastic proliferation of marrow cell precursors.
absolute p. an increase in total hemoglobin and red cell mass with a normal plasma volume. Called also true polycythemia.
compensatory p. a physiological condition resulting from a decreased oxygen supply to the tissues, caused by living at high altitudes, heart disease, circulatory insufficiency or severe pulmonary disease, or the production of erythropoietin or erythropoietin-like compounds, as in polycystic kidney disease, hydronephrosis or renal neoplasms.
familial p. occurs as an autosomal recessive trait in Jersey cattle.
inherited p. an inherited defect of cattle. Clinically there is dyspnea.
primary p. see polycythemia vera (below).
pseudo-p. relative polycythemia.
relative p. apparent polycythemia resulting from loss of plasma and the hemoconcentration that follows or from splenic contraction. Called also spurious polycythemia, pseudo-polycythemia.
secondary p. see compensatory polycythemia (above).
spurious p. relative polycythemia.
p. vera a myeloproliferative disorder of unknown etiology. It occurs as an inherited defect in cattle and is a rare disease in dogs and cats. There is hyperplasia of the cell-forming tissues of the bone marrow, with resultant elevation of the erythrocyte count and hemoglobin concentration, and an increase in the number of leukocytes and platelets. Called also primary polycythemia, primary erythrocytosis.
polydactylia [*pol"e-dak-til'e-ə*] polydactyly.
polydactylism [*pol"e-dak'təl-iz-əm*] the presence of supernumerary digits; occurs as an inherited defect in cattle, cats and some breeds of dogs; occurs not uncommonly also in horses.
polydactyly [*pol"e-dak'tə-le*] polydactylism.
Polydelphis an ascarid nematode parasitic in the esophagus, stomach and small intestine of reptiles.
polydioxanone a polymer of paradioxanone, used in a monofilament absorbable suture material.
polydipsia [*pol"e-dip'se-ə*] excessive thirst manifested by excessive water intake. The histories that accompany animal patients are often inaccurate on this point and should be qualified quantitatively.
compensatory p. one caused by an obligatory polyuria.
drug-induced p. diuretics, corticosteroids, salt, vitamin D, and megestrol acetate may cause a polyuria and, secondarily, a polydipsia.
primary p. excessive water drinking in hyperactive, stressed dogs. See also psychogenic **diabetes insipidus**.
psychogenic p. horses confined in a stall and having little or no exercise may drink excessively from boredom, up to three times normal amounts. It may also occur in dogs, apparently from psychological causes, with large amounts of water a day being consumed and a corresponding polyuria with a large volume of dilute urine produced. Yet, when water intake is restricted normal tubular function with concentration of urine is possible. See also psychogenic **diabetes insipidus**.
polydysplasia [*pol"e-dis-pla'zhə*] faulty development of several tissues, organs or systems.
polyembryony [*pol"e-em-bri'o-ne*] the production of two or more embryos from one ovum, e.g. monozygotic twins. Armadillos are the only consistently polyembryonic mammals. It is a phenomenon in some helminths, e.g. *Gyrodactylus* spp., in which viviparous adults produce trematodes that are identical with themselves and as larvae they carry larvae within their uteri which contain larvae in their uteri. The rate of reproduction can be very high. Also occurs in some insects in which fertilized eggs give rise to a number of larvae.
polyemia excessive blood in the body.
polyendocrine [*pol"e-en'do-krin*] pertaining to several endocrine glands.

P-64: Polydactylism with the extra digit located at the level of the metacarpo-phalangeal joint.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

p. gland failure see **polyglandular** syndrome.
polyene [*pol'e-ēn*] chemical compound characterized by the presence of several conjugated double bonds.
p. antibiotics a group of agents, synthesized by *Streptomyces* spp., with antifungal activity; includes amphotericin B, nystatin and candicidin.
polyester [*pol"e-es'tər*] a multifilament strand of synthetic polymer.
p. base the film on which the photographic emulsion is added to make an X-ray plate.
polyestrus [*pol"e-es'trəs*] having two or more estral cycles in each breeding season.
seasonally p. having estrous cycles only during part of the year. Increasing daylight hours stimulates cycling in spring and summer in mares and cats, but decreasing hours of daylight stimulates cyclicity in ewes and does in autumn.
polyethylene [*pol"e-eth'ə-lēn*] polymerized ethylene $(CH{-}CH_2)_n$, a synthetic plastic material, forms of which have been used in reparative surgery.
p. glycol (PEG) a polymer of ethylene oxide and water, available in liquid form (polyethylene glycol 300 or 400) or as waxy solids (polyethylene glycol 1540 or 4000), used in various pharmaceutical preparations as a water-soluble ointment base.
p. glycol electrolyte solution an osmotic solution used as a cathartic to empty the bowel in preparation for endoscopy. Called also GoLYTELY.
p. suture one of the better monofilament fibers because of its good handling, low capillarity, high tensile strength and longevity in tissue. It has only moderate knot-holding capacity.
Polygala klotzchii [*po-lig'ə-lə*] South American plant in the family Polygalaceae; an unidentified toxin causes heavy mortality in cattle. Manifested by diarrhea, tremor and incoordination. Called also jaranjinha.
polygalactia [*pol"e-gə-lak'she-ə*] excessive secretion of milk.
polygamous [*pə-lig'ə-məs*] as a male or female, having more than one mate.
polygene [*pol'e-jēn*] a group of nonallelic genes that interact to influence the same character with additive effect.
polygenic [*pol"e-jen'ik*] pertaining to or determined by several different genes.
polyglactin 910 [*pol"e-glak'tin*] a synthetic absorbable multifilament surgical suture material, an alternative to catgut.
polyglandular [*pol"e-glan'du-lər*] pertaining to or affecting several glands.

p. syndrome immune-mediated disease of more than one organ or endocrine gland in the animal, associated with the presence of autoantibodies. A heritable disorder in humans. In dogs, hypothyroidism and hypoadrenocorticism (Addison's disease) are the most frequent findings. Called also Schmidt's syndrome.

polyglycolic acid (PGA) [*pol"e-gli-kol'ik*] a polymer of glycolic acid used as an absorbable suture material and capable of replacing catgut. Does not swell when wet and is nonantigenic. Is available coated in tissue lubricant which improves passage through tissue. See also **polyglactin 910**.

polyglyconate [*pol"e-glik'ə-nāt*] a monofilament synthetic absorbable suture material with good tensile strength.

Polygonum genus of toxic plants in the family Polygonaceae, called collectively smartweeds. Some cause nitrate–nitrite poisoning, some cause photosensitization; includes *P. aviculare* (wireweed), *P. convolvulus* (*Fallopia convolvulus*), *P. hydropiper* (water pepper), *P. lapathifolium* (*Persicaria lapathifolium*), *P. orientale* (*Persicaria orientalis*), *P. pennsylvanicum* (willow weed), *P. persicaria* (spotted persicaria).

polygram [*pol'e-gram*] a tracing made by a polygraph.

polygraph [*pol'e-graf*] an apparatus for simultaneously recording several mechanical or electrical impulses, such as blood pressure, pulse and respiration, and variations in electrical resistance of the skin.

polygyny [*pə-lij'ĭ-ne*] 1. union of two or more female pronuclei with one male pronucleus, resulting in polyploidy of the zygote. 2. as a male, having more than one mate.

polygyria [*pol"e-ji're-ə*] a condition in which there is more than the normal number of convolutions on the external surface of the brain.

polyhedral [*pol"e-he'drəl*] having many sides or surfaces.

polyhidrosis [*pol"e-hĭ-dro'sis*] hyperhidrosis.

polyhydramnios [*pol"e-hi-dram'ne-os*] hydramnios.

polyhydric [*pol"e-hi'drik*] a molecule containing more than two hydroxyl groups.

polyhydroxydine an iodine-containing skin and wound disinfectant.

polyinfection [*pol"e-in-fek'shən*] infection with more than one organism at the one time.

polyinosinic acid–polycytidylic acid synthetic double-stranded RNA polynucleotides, once considered for use as antiviral agents that act by inducing host interferon production. Abbreviated poly I–poly C.

polyionic [*pol"e-i-on'ik*] containing a number of different ions, e.g. sodium, potassium, chloride, bicarbonate.

p. replacement solutions used in the treatment of patients with fluid and electrolyte deficit, the choice of solution to be used depending on the exact nature of the deficit. In the uncompromised patient undergoing elective surgery it is usual to use an alkalizing, isotonic solution such as lactated Ringer's.

polyleptic [*pol"e-lep'tik*] having many remissions and exacerbations.

polylinker site see **polycloning site**.

polymastia [*pol"e-mas'te-ə*] the presence of supernumerary mammary glands or nipples; pleomastia.

polymelia [*pol"e-me'le-ə*] the presence of supernumerary limbs.

polymelus [*pə-lim'ə-ləs*] an animal with supernumerary limbs.

polymer [*pol'ĭ-mər*] a compound, usually of high molecular weight, formed by combination of simpler molecules (monomers).

p.-fume fever see **polytetrafluoroethylene**.

polymerase [*pə-lim'ər-ās*] an enzyme that catalyzes polymerization, particularly of nucleic acids.

p. chain reaction see **PCR**[1].

RNA p. 1. an enzyme that synthesizes an RNA copy of the sequence in a limited region of DNA in a process known as DNA transcription. Called also DNA-dependent RNA polymerase. 2. a viral enzyme that synthesizes RNA from an RNA template during viral replication. Called also RNA-dependent RNA polymerase.

RNA-dependent RNA p. see RNA polymerase (above).

***Taq* p.** a DNA polymerase that functions at high temperature; derived from the bacterium *Thermus aquaticus* and used in the polymerase chain reaction.

polymeria [*pol"e-mēr'e-ə*] a developmental anomaly in which there are supernumerary parts or organs of the body.

polymeric [*pol"e-mer'ik*] exhibiting the character of a polymer.

p. biguanide see **biguanides**.

p. diet see polymeric **diet**.

polymerization [*pə-lim"ər-ĭ-za'shən*] the combining of several simpler compounds to form a polymer.

polymerized caprolactam a braided synthetic fiber used as a nonabsorbable suture material but only in animals. It has high tensile strength, modest knot-holding capacity, reduced capillarity because of a coating over the twisted fibers, and low tissue reactivity. Called also Vetafil.

polymicrobial, polymicrobic marked by the presence of several species of microorganisms.

polymicrogyria [*pol"e-mi"kro-ji're-ə*] a brain malformation marked by development of numerous microgyri.

polymorph [*pol'e-morf*] a colloquial term for a polymorphonuclear leukocyte.

polymorphic [*pol"e-mor'fik*] occurring in several or many forms; appearing in different forms in different developmental stages.

polymorphism [*pol"e-mor'fiz-əm*] the quality of existing in several different forms.

balanced p. an equilibrium mixture of homozygotes and heterozygotes maintained by natural selection against both homozygotes.

polymorphocellular [*pol"e-mor"fo-sel'u-lər*] having cells of many forms.

polymorphonuclear [*pol"e-mor"fo-noo'kle-ər*] 1. having a nucleus so deeply lobed or so divided as to appear to be multiple. 2. a polymorphonuclear leukocyte.

p. neutrophil (PMN) see **neutrophil**.

polymorphous [*pol"e-mor'fəs*] polymorphic.

Polymorphus a genus of thorny-headed worms in the phylum Acanthocephala.

P. boschadis found in the posterior part of the small intestine of many domesticated and wild birds including ducks and fowls. Causes anemia, wasting and enteritis, and heavy infestations cause death losses in colonies of aquatic birds.

P. botulus causes death losses in eider duck colonies.

P. magnus found in the intestines of wild anseriform birds.

polymyarian the distinctive somatic musculature of *Ascaris*, *Dracunculus*, *Filaria*.

polymyoclonus [*pol"e-mi-ok'lə-nəs*] 1. a fine or minute muscular tremor. 2. polyclonia.

polymyopathy [*pol"e-mi-op'ə-the*] any disease affecting a number of muscles simultaneously.

endocrine p. occurs in association with hyperadrenocorticism in dogs.

hypokalemic p. see **hypokalemic** polymyopathy.

idiopathic p. a cause of acute pain, muscle weakness and lameness or, in a chronic form, muscle atrophy, in dogs. May be generalized or affecting only certain muscle groups, particularly of the head.

polymyositis [*pol"e-mi"o-si'tis*] inflammation of several or many muscles at once, along with degenerative and regenerative changes, and marked by muscle weakness. See also **polymyopathy**.

equine p. see **rhabdomyolysis**.

polymyxin [*pol"e-mik'sin*] a generic term for antibiotics derived from various strains of *Bacillus polymyxa*, several closely related compounds being designated by letters.

p. B a bacteriostatic and bactericidal antibiotic, effective mainly against gram-negative organisms. It is used as the sulfate salt, and is especially effective against *Pseudomonas aeruginosa* and is also used against *Klebsiella* spp. It is used mostly in combinations with other antibiotics as a topical dressing including ophthalmic and aural preparations. It is not absorbed from the alimentary tract and is not recommended for systemic use because of its nephrotoxicity and neurotoxicity.

p. E see **colistin**.

polynesic [*pol"e-ne'sik*] occurring in many foci.

polyneural [*pol"e-noor'əl*] pertaining to or supplied by many nerves.

polyneuralgia [*pol"e-nŏŏ-ral'jə*] neuralgia of several nerves.

polyneuritis [*pol"e-nŏŏ-ri'tis*] inflammation of many nerves simultaneously.

p. equi see **cauda equina neuritis**.

idiopathic p. see **Guillain–Barré syndrome**, idiopathic **polyradiculoneuritis**.

postinfectious p. see **Guillain–Barré syndrome**.

VetBooks.ir

polyneuromyositis [*pol"e-noor"o-mi"o-si'tis*] inflammation involving the muscles and peripheral nerves, with loss of reflexes, sensory loss and paresthesias.

polyneuropathy [*pol"e-nŏŏ-rop'ə-the*] a disease involving several nerves. See also **neuropathy**.

acute idiopathic p. see idiopathic **polyradiculoneuritis**.

familial p. see Boxer progressive **axonopathy**, hereditary neuronal **abiotrophy** of Swedish Lapland dogs, giant axonal **neuropathy**.

hypoglycemic p. associated with hyperinsulinism of β-cell insulinomas; there is generalized muscle weakness, paraparesis and tetraparesis.

hypothyroid p. a progressive lower motor neuron disease associated with hypothyroidism.

idiopathic p. see **polyradiculoneuritis**.

immune-mediated p. may occur in association with systemic lupus erythematosus in dogs.

polyneuroradiculitis [*pol"e-noor"o-rə-dik"u-li'tis*] inflammation of spinal ganglia, nerve roots and peripheral nerves.

polynomial [*pol"e-no'me-əl*] a relationship between two variables such that $y=a+bx+cx^2+...qx^n$. A straight line is $y=a+bx$. Any curve can be approximated with a polynomial formula.

polynuclear [*pol"e-noo'kle-ər*] 1. polynucleate. 2. polymorphonuclear.

polynucleate [*pol"e-noo'kle-āt*] having many nuclei.

polynucleosomes [*pol"e-noo'kle-o-sōmz*] a level of organization of nucleoprotein consisting of numerous nucleosomes joined by 'linker' DNA.

polynucleotide [*pol"e-noo'kle-o-tīd*] any polymer of mononucleotides.

polyodontia [*pol"e-o-don'shə*] the presence of supernumerary teeth; called also hyperdontia. See also **pseudopolyodontia**.

heterotopic p. see **ear** cyst.

polyol dehydrogenase [*pol'e-ol de-hi'dro-jən-ās*] see L-iditol **dehydrogenase**.

polyolefin [*pol"e-o'lə-fin*] synthetic material used for surgical sutures, e.g. in polyethylene and polypropylene sutures.

Polyomaviridae a family of viruses, formerly part of the *Papovaviridae*.

Polyomavirus [*pol"e-o'mə-vi"rəs*] the sole genus in the family *Polyomaviridae*. Polyomaviruses are non-enveloped, icosahedral in shape, 40-50 nm in diameter with a double-stranded DNA, ~5000 base pairs, circular genome. They are potentially oncogenic, but often persist as latent infections in a host without causing disease, but may produce tumors in a host of a different species or a host that is immunocompromised. The name *polyoma* derives from the observation that the viruses produce multiple (poly-) tumors (-oma).

polyomavirus [*pol'e-o-mə-vi"rəs*] a member of the genus *Polyomavirus*.

avian p. the cause of highly fatal, acute or chronic inflammatory diseases in several bird species and includes **budgerigar** fledgling disease; in contrast to polyomaviruses of other species, tumors are not seen in infected birds.

polyonychia [*pol"e-o-nik'e-ə*] the presence of supernumerary nails or claws.

polyorchidism [*pol"e-or'kĭ-diz-əm*] the presence of more than two testes.

polyorchis [*pol"e-or'kis*] an animal exhibiting polyorchidism.

polyorchism [*pol"e-or'kiz-əm*] polyorchidism.

polyosteomyelitis [*ol"e-os"te-o-mi"ə-li'tis*] osteomyelitis at a number of sites in the one patient.

polyostotic [*pol"e-os-tot'ik*] affecting several bones.

polyotia [*pol"e-o'shə*] the presence of more than two ears.

polyovular [*pol"e-ov'u-lər*] pertaining to or produced from more than one oocyte, as polyovular twins.

polyovulatory [*pol"e-ov'u-lə-tor"e*] discharging several ova in one ovarian cycle.

polyoxyethylenes [*pol"e-oks"e-eth'ə-lēns*] alcohols used as emulsifiers in pharmaceuticals. They have low toxicity but may reduce growth rate.

polyp [*pol'ip*] any growth or mass protruding from a mucous membrane. Polyps may be attached to a membrane by a thin stalk, in which case they are known as pedunculated polyps, or may have a broad base (sessile polyps). They are usually an overgrowth of normal tissue, but sometimes polyps are true tumors or masses of new tissue separate from the supporting membrane. Usually benign, they may lead to complications or eventually become malignant. Polyps may occur wherever there is mucous membrane: in the nose, ears, mouth, lungs, heart, stomach, intestines, urinary bladder, uterus and cervix. Terminology includes location and/or contents, e.g. adenomatous, fibrous, gastric, tracheal.

nasal p. causes nasal obstruction in sporadic cases. Mycotic nasal granuloma of cattle is manifested by respiratory obstruction and polyps in the anterior part of the nasal cavity. They are eosinophilic granulomas containing spores and hyphae of the fungus *Drechslera halodes (Setosphaeria rostrata)*. Also caused by nasal schistosomiasis. In cats, inflammatory polyps arise from mucosa of the nasal cavity or auditory canal.

nasopharyngeal p. occur in cats of any age; inflammatory in origin, originating in the osseous bulla and extending to the nasopharynx through the eustachian tube, They may cause dyspnea, sometimes sneezing, stridor, gagging and difficulty eating or swallowing.

pharyngeal p. cause difficult swallowing and breathing. In cattle they are pedunculated and capable of much movement and erratic clinical signs.

polypathia [*pol"e-path'e-ə*] the presence of several diseases at one time.

Polypay a relatively new American breed of sheep developed as a multipurpose breed from four existing breeds using Finnish-Landrace for prolificacy and early puberty, Rambouillet and Targhee for fleece quality and long breeding season and Dorset for mothering ability, carcass quality, early puberty and long breeding season.

polypectomy [*pol"ĭ-pek'tə-me*] excision of a polyp.

polypeptide [*pol"e-pep'tīd*] a compound containing two or more amino acids linked by a peptide bond; called dipeptide, tripeptide, etc., depending on the number of amino acids present.

polypeptide-oma see **apudoma**.

polypeptidemia [*pol"e-pep"tĭ-de'me-ə*] the presence of polypeptides in the blood.

polyphagia [*pol"e-fa'jə*] excessive ingestion of food. Polyphagia is a permanent objective with food animals in which carbohydrate engorgement and gastric dilatation are constant threats to health. In companion animals it may be a sign of metabolic disease in which the nutritional requirements of the subject are greater than normal. See also **diabetes mellitus**, **hyperthyroidism**, **Cushing's syndrome**.

polyphalangia [*pol"e-fə-lan'je-ə*] excess of phalanges in a digit.

polypharmacy [*pol"e-fahr'mə-se*] 1. the administration of many drugs together. 2. administration of excessive medication.

polyphosphate a chemical preservative used as a 2 to 4% solution in the treatment of meat.

polyphyodonty [*pol"e-fi'o-don-te*] teeth lost are replaced; there is an endless succession of teeth; seen in sharks, crocodilians and snakes.

polyplastic [*pol"e-plas'tik*] 1. containing many structural or constituent elements. 2. undergoing many changes of form.

Polyplax [*pol'e-plaks*] a genus of sucking lice in the family Hoplopleuridae.

P. serrata common louse of laboratory mice. Transmits *Mycoplasma* spp. and *Francisella* spp.

P. spinulosa the common louse of the laboratory rat. Transmits *Mycoplasma* spp.

polyplegia [*pol"e-ple'jə*] paralysis of several muscles.

polyploid [*pol'e-ploid*] 1. characterized by polyploidy. 2. an individual or cell characterized by polyploidy.

polyploidy [*pol'e-ploi"de*] the state of having more than two sets of homologous chromosomes; that is a multiple of the normal diploid number. Results from replication within a nucleus without nuclear division.

polypnea [*pol"ip-ne'ə*] increased rate of respiration. See also **hyperpnea**.

polypnoea see **polypnea**.

polypodia [*pol"e-po'de-ə*] the presence of supernumerary feet.

Polypogon monspeliensis Australian grass in family Poaceae; causes poisoning when the grass seed head is infested with *Anguina agrostis* nematodes carrying *Rathayibacter toxicus* producing corynetoxins; causes incoordination, tremor, convulsions, sudden death; called Stewart's Range syndrome. Called also annual beard grass.

polypoid [*pol'ĭ-poid*] resembling a polyp.

polyporous [*pol'e-por"əs*] having many pores.
polyposia [*pol"e-po'zhə*] ingestion of abnormally increased amounts of fluids for long periods.
polyposis [*pol"ĭ-po'sis*] the formation of numerous polyps.
polypous [*pol'ĭ-pəs*] polyp-like.
polypropylene [*pol"e-pro'pə-lēn"*] a polyolefin available in monofilament form and used as a nonabsorbable surgical suture. Very popular as a vascular suture material. Like most synthetics it has poor knot security but it causes little tissue reaction and has very long life. It is also available in mesh form.
polyptychial [*pol"e-ti'ke-əl*] arranged in several layers; said of glands.
polypus [*pol'ĭ-pəs*] pl. *polypi* [L.] polyp.
polyradiculitis [*pol"e-rə-dik"u-li'tis*] inflammation of the nerve roots.
polyradiculoneuritis [*pol"e-rə-dik"u-lo-nŏŏ-ri'tis*] an acute, idiopathic inflammation in dogs that predominently affects the spinal nerve roots and to a lesser extent the peripheral nerves. The disease is acute in onset and produces signs of generalized lower motor neuron disease with sensation largely spared. Recovery is usual but may take weeks or months. The cause is unknown but thought to be autoimmune in nature and the disease resembles **Guillain-Barré syndrome** in humans. In the USA, the disease is more common in Coonhounds and one proposed theory for its etiology is that a component in raccoon saliva initiates the autoimmune response. Called also Coonhound paralysis.
protozoan p. canine **neosporosis**.
polyribonucleotide [*pol"e-ri"bo-noo'kle-o-tīd*] a RNA molecule.
polyribosome [*pol"e-ri'bo-sōm*] a cluster of ribosomes connected with messenger RNA; they are formed for the translation of mRNA to proteins. See also **ribosome**.
polysaccharide [*pol"e-sak'ə-rīd*] a complex carbohydrate which, on acid hydrolysis, yields many monosaccharides.
polyscelia [*pol"e-se'le-ə*] the presence of more than two hindlimbs.
polyserositis [*pol"e-se-ro-si'tis*] general inflammation of serous membranes, with effusion.
porcine p. see **Glässer's disease**, mycoplasmal **polyarthritis**.
polysinusitis [*pol"e-si"nəs-i'tis*] inflammation of several sinuses.
polysome [*pol'e-sōm*] polyribosome. See also **ribosome**.
polysomia [*pol"e-so'me-ə*] doubling or tripling of the fetal body.
polysomus [*pol"e-so'məs*] a fetus exhibiting polysomia.
polysomy [*pol"e-so'me*] an excess of the numbers of a particular chromosome present.
polyspermia [*pol"e-spur'me-ə*] 1. excessive secretion of semen. 2. polyspermy.
polyspermy [*pol"e-spur'me*] fertilization of an ovum by more than one spermatozoon; occurring normally in certain species (physiological polyspermy) and sometimes abnormally in others (pathological polyspermy).
polystichia [*pol"e-stik'e-ə*] two or more rows of eyelashes on an eyelid.
polystyrene [*pol"e-sti'rēn*] the resin produced by polymerization of styrol, a clear resin of the thermoplastic type.
sodium p. sulfonate a potassium exchange resin that may be administered orally or rectally in the treatment of hyperkalemia.
polysulfated glycosaminoglycan see **glycosaminoglycan** polysulfate.
polysynaptic [*pol"e-sĭ-nap'tik*] pertaining to or relayed through many synapses.
polysyndactyly [*pol"e-sin-dak'tə-le*] association of polydactyly and syndactyly.
polysynovitis [*pol"e-sin"o-vi'tis*] synovitis at a number of sites in the one patient.
polytef [*pol'ĭ-tef*] the pharmaceutical name for Teflon, a polymer of **polytetrafluoroethylene**; used as a surgical implant material for many prostheses, such as artificial vessels and orbital floor implants, and for many applications in skeletal augmentation and skeletal fixation.
polytenosynovitis [*pol"e-ten"o-sin"o-vi'tis*] inflammation of several or many tendon sheaths at the same time.
polytetrafluoroethylene (PTFE) [*pol"e-tet"rə-floor"o-ro-eth'ə-lēn*] a synthetic material commonly used as a nonstick lining in domestic cooking utensils (frypans); called also Teflon. Overheating produces toxic fumes that cause an acute hemorrhagic pneumonitis and death in small caged birds, which are particularly susceptible. Called also polymer-fume fever, kitchen deaths. See also **polytef**.
polythelia [*pol"e-the'le-ə*] the presence of supernumerary nipples.
polythiazide [*pol"ĭ-thi'ə-zīd*] a diuretic and antihypertensive.
polytocous [*po-lit'ə-kəs*] giving birth to several offspring at one time.
polytomogram [*pol"e-to'mo-gram*] the record produced by polytomography.
polytomography [*pol"e-to-mog'rə-fe*] tomography of tissue at several predetermined planes.
polytrichia [*pol"e-trik'e-ə*] hypertrichosis; excessive hairiness.
polyunsaturated [*pol"e-ən-sach'ər-āt"əd*] denoting a fatty acid, e.g. linoleic acid, having more than one double bond in its hydrocarbon chain.
p. fatty acids see **fatty acids**.
polyurethane [*pol"e-u'rə-thān*] a synthetic material used for nonwoven vascular grafts.
polyuria [*pol"e-u're-ə*] the formation and excretion of a large volume of urine, which may physiologic, pharmacologic or pathologic. A history of polyuria in an animal is as unreliable as a history of polydipsia. A quantitative assurance that polydipsia is present suggests an error of renal tubular efficiency either as a result of toxic damage or an absence of the pituitary gland's antidiuretic hormone.
compensatory p. see physiological polyuria (below).
pathological p. that caused by a disease of the kidney or disorder elsewhere in the body, e.g. diabetes mellitus or liver failure.
pharmacological p. is caused by administered fluids or medication, such as glucocorticoids or diuretics.
physiological p. the result of increased fluid intake; called also compensatory polyuria (above).
polyvalent [*pol'e-va'lənt*] multivalent; having more than one valence.
p. vaccine see polyvalent **vaccine**.
polyvinyl [*pol"e-vi'nəl*] a polymer of a normally monomeric compound, e.g. vinyl chloride.
p. alcohol technique a method of fixation and preservation of feces for later examination.
polyvinylpyrrolidone (PVP) [*pol"e-vi"nəl-pĭ-rōl'ĭ-dōn*] see **povidone**; called also PVP.
POM prescription only medicine.
pomace the residue of fruits after juice is extracted and contains skins, pips and stalks; refers usually to grapes. Used as animal feed but useful only if dried. Called also pulp, marc.
Pomax umbellata Australian plant of the family Rubiaceae; causes cyanide poisoning.
Pomeranian a very small (3–7 lb), alert dog with prominent eyes, a fox-like expression, erect ears and a tail carried over the back. The long, straight coat is profuse and covers the body. The breed is predisposed to patent ductus arteriosus, patellar luxation and tracheal collapse.
pommel the high part at the front of the seat of the riding saddle.
Pompe's disease [*pom'pə*] see bovine generalized **glycogenosis**, **glycogenosis** type II.
Pomphorhynchus an acanthocephalan or thorny-headed genus of worms.
P. laevis found in the intestine of freshwater and marine fish.
POMR Problem-Oriented Medical Record.
ponazuril a triazine anticoccidial with activity against *Sarcocystis neurona*, the cause of equine protozoal **myeloencephalitis**; approved as an oral paste for treating horses.
Pongamia glabra Asian oil tree in plant legume family Fabaceae; toxicity is in cake made by expressing oil from seeds; contains an unidentified toxin which causes hepatitis and nephrosis; called also *Pongamia pinnata,* poonga oil tree, karanja, Indian beech.
pons [*ponz*] 1. that part of the metencephalon lying between the medulla oblongata and the midbrain, ventral to the cerebellum. See also **brainstem**. 2. slip of tissue connecting two parts of an organ.
p. varolii **pons** (1).
pontine [*pon'tīn, pon'tēn*] pertaining to the pons.
pontobulbar [*pon"to-bul'bər*] pertaining to the pons and the adjacent egion of the medulla oblongata.
pontocerebellar [*pon"to-ser"ə-bel'ər*] pertaining to the pons and cerebellum.
pontomedullary [*pon"to-med'u-lar"e*] pertaining to the pons and the medulla oblongata.

VetBooks.ir

p. syndrome lesions in this area cause spastic, uni- or bilateral weakness to paralysis, depression of ipsilateral postural reactions, cranial nerve deficits, and sometimes alterations in consciousness.

pontomesencephalic [*pon"to-mes"ən-sə-fal'ik*] pertaining to or involving the pons and the mesencephalon.

pony an equine animal of about 14 hands high. Breed definitions vary from 14–14.2 hands. The term is also used regardless of height, e.g. polo pony. The only safe procedure when writing a certificate for a pony, e.g. for sale, is to state the animal's actual height.

p. hypertriglyceridemia see equine **hyperlipemia**.

pit p. pony used in mines to haul mined rock. Breed varies as long as it is small, e.g. Shetland pony.

Poodle a dog characterized by its thick curly coat and the intriguing, yet standardized, patterns created by clipping and grooming that usually leave isolated patches of profuse coat separated by areas that are closely clipped. Originally a retriever, these patterns are believed to have been intended to insulate joints and vital organs from cold water. Three size varieties are recognized as separate breeds: *Standard*, which must be 15 inches or more tall; *Miniature*, 10–15 inches tall; and *Toy*, which is less than 10 inches (11 inches in the British Kennel Club standards). The breeds are predisposed to otitis externa, progressive retinal atrophy, epilepsy, patent ductus arteriosus, cystinuria, patellar luxation, cataracts, distichiasis and atlanto-axial luxation.

P. cat see **Rex** (1).

Poole suction tube a tube with multiple holes at the end, which reduces plugging with fat and omentum.

poonga oil tree see ***Pongamia glabra***.

pooper-scooper a flat-bottomed shovel and separate spatula of corresponding size and shape, each on a long handle; used to collect dog feces from the ground, usually for disposal.

poor performance syndrome said of horses which have performed well in the past but are now having a string of poor performances without any obvious disease. Called also loss-of-form.

poorness a state of agricultural animals of being thin or emaciated.

popcorn flower see ***Plagiobothrys***.

popliteal [*pop-lit'e-əl*] pertaining to the area behind the stifle joint.

p. lymph node one of the palpable superficial lymph nodes; found behind the stifle joint, between the semimembranosus and semitendinous muscles; deep and superficial groups may occur, the latter being less frequent.

p. tendon transposition a surgical technique for reconstruction of the caudal cruciate ligament.

popped knee see **carpitis**. A term usually reserved for diseases of horses.

poppy [*pop'e*] member of the plant family Papaveraceae. Includes the genera ***Papaver***, ***Chelidonium***, ***Eschscholtzia***, and ***Argemone***. The common name is also applied to plants in other families. Includes California poppy (*E. californica*), celandine poppy (*C. majus*), corn, field or red poppy (*P. rhoeas*), Flinders poppy (*Pimelea decors*), Iceland poppy (*Papaver nudicaule*), Mexican poppy (*A. mexicana, A. ochroleuca*), opium, horticultural or white poppy (*P. somniferum*), pimelea poppy (*Pimelea haematostachya*), prickly poppy (*Argemone* spp.) .

poprosie ***Helichrysum*** *argyrosphaerum*.

population [*pop"u-la'shən*] all of the animals in a specifically defined area considered as a whole. The population may also be defined in modes other than geography, e.g. the cow population, a species specification, the nocturnal bird population.

binomial p. see **binomial** population.

p. cartogram a map of populations.

case p. see **case** population.

closed p. e.g. closed herd or flock; a population into which no introductions are permitted, including artificial insemination or embryo transfer; the population is genetically and/or hygienically isolated.

comparison p. see **comparison** population.

contiguous p's the populations are separated but have a common border. Some diseases are very difficult to restrain from spreading from one population to the next.

control p. see **control** population.

p. density see population **density**.

experimental p. the population in which the experiment, or trial, is being conducted.

finite p. one capable of total examination by census.

general p. includes all classes and levels of animals (or plants) without any attempt to categorize them.

genetic p. see **deme**.

genetically defined p. one in which the ancestry of the animals in it is known.

p. genetics deals with the frequency of occurrence of inherited characteristics in a population.

infinite p. cannot be examined as a total population because they may never actually exist but are capable of statistical importance.

p. limitation restricting the growth of an animal population by desexing, by culling or by managemental means of interfering with reproduction.

p. mean the mean of the population.

p. numbers see population size (below).

open p. one in which immigration in and out is unrestrained.

parent p. the original population about which it is hoped to make some inferences by examination of a sample of its constituent members.

p. proportion the percentage of the population that has the subject characteristics.

p. pyramid a graphic presentation of the composition of a population with the largest group forming the baseline, the smallest at the apex.

p. at risk see risk population (below).

risk p. the population which is composed of animals that are exposed to the pathogenic agent under discussion and are inherently susceptible to it. Called also population at risk. High or special risk groups are those which have had more than average exposure to the pathogenic agent.

p. size actual counting of a total population, the *census* method, is not often possible in large animal populations. Alternatives are by various sampling techniques including *area trapping,* the trapping of all animals in an area, the *capture–release–recapture* method, the *nearest neighbor* and *line transect* methods, The population size is expressed as the population present at a particular instant. Alternatively it can be expressed as an animal-duration expression when the population is a shifting one and it is desired to express the population size over a period (e.g. cow-day).

special risk p. a population of animals that is especially likely to contract a disease because of some peculiarity of genetics or husbandry or because of geographic or climatic factors.

stable p. a population which has constant mortality and fertility rates, and no migration, therefore a fixed age distribution and constant growth rate.

standard p. a population not yet divided into classes; the population against which each of its constituent classes can be compared.

target p. in epidemiological terms the population from which an experimenter wishes to draw an unbiased sample and make inferences about it.

POR Problem-Oriented Record.

poradenitis [*por-ad"ə-ni'tis*] inflammation of lymph nodes with formation of small abscesses.

Poranthera plant genus in the family Euphorbiaceae; suspected of poisoning livestock. May contain high amounts of cyanogenetic glycosides and some toxic alkaloids. Includes *P. corymbosa*, *P. microphylla* (small-leaf poranthera).

porcine [*por'sīn*] pertaining to pig. See also **hog**[1], **swine**.

p. circovirus 1 a nonpathogenic virus.

p. circovirus 2 cause of postweaning multisystemic **wasting** syndrome (PMWS) and porcine dermatitis and neuropathy syndrome (below).

p. congenital progressive ataxia and spastic paresis inherited autosomal recessive disease of swine manifest shortly after birth as a severe lethal neuropathy.

p. contagious pleuropneumonia see porcine **pleuropneumonia**.

p. dermatitis and nephropathy syndrome (PDNS) an immune complex mediated disease caused by porcine circovirus type 2 (PCV2) that occurs principally in grower/finisher pigs; clinical signs may include extensive purplish red, slightly raised lesions of various sizes and shapes over the thorax, abdomen, thighs and forelegs. Case fatality is usually high. At postmortem, the kidneys are swollen, pale and mottled with many small hemorrhages showing through the surface. There are enlarged lymph nodes and hemorrhages at multiple sites. The symptoms and postmortem findings are very similar to classical swine fever.

p. epidemic abortion and respiratory syndrome (PEARS) see porcine reproductive and respiratory syndrome (below).
p. epidemic diarrhea see porcine epizootic diarrhea (below).
p. epizootic diarrhea outbreaks of diarrhea similar to **transmissible** gastroenteritis caused by a different coronavirus.
p. hemagglutinating encephalomyelitis see hemagglutinating **encephalomyelitis** virus disease of pigs.
p. hepatitis E virus an enteric virus of pigs related to human hepatitis E that is not known to be pathogenic.
p. herpesvirus-1 see **Aujeszky's disease**.
p. idiopathic chronic recurrent dermatitis a dermatitis observed only in sows and only in specific farrowing houses; affected sows recovered when moved from the houses; lesions consisted of annular macules and patches of erythema.
p. inclusion body rhinitis see **inclusion body** rhinitis.
p. intestinal adenomatosis see porcine proliferative **enteropathy**.
p. juvenile pustular psoriasiform dermatitis see **pityriasis** rosea.
p. lymphosarcoma a rare tumor in pigs but a high proportion of all porcine tumors. Caused by an oncovirus.
p. malignant hyperthermia see porcine stress syndrome (below).
p. myocarditis a syndrome recently described in Australia affecting late-term and neonatal pigs and characterized with stillbirth, mummification and preweaning deaths associated with a multifocal non-suppurative myocarditis with myonecrosis. Believed associated with Bungowannah virus, a recently recognized pestivirus.
p. necrotic ear syndrome see **necrotic** ear syndrome.
p. parvoviral abortion see porcine **parvovirus**.
p. polioencephalomyelitis see porcine viral **encephalomyelitis**.
p. poliomyelitis see porcine viral **encephalomyelitis**.
p. proliferative enteritis complex see **proliferative** hemorrhagic enteropathy.
p. reproductive and respiratory syndrome (PRRS) an arterivirus disease of pigs first recognized in the USA in 1987 and subsequently in many other countries; characterized by severe reproductive failure in sows and respiratory disease in young pigs and an influenza-like syndrome in grower finisher pigs. Acute phases of the disease typically last 2 to 3 months after which reproductive parameters often return to normal or exhibit decreases in the farrowing rate and irregular returns to estrus. Numerous strains of the virus are reported in the USA and Europe with differences in pathogenicity. A disease notifiable to the OIE (see Table 22). Prior to a consensus, called also mystery swine disease, swine infertility respiratory syndrome (SIRS), porcine epidemic abortion and respiratory syndrome (PEARS), blue ear disease, and Heko-Heko.
p. respiratory coronavirus closely related but distinct from transmissible gastroenteritis (TGE) virus. Causes a mild, sometimes inapparent, respiratory infection, but no gastrointestinal disease
p. rubulavirus a paramyxovirus in the genus *Rubulavirus*. See **blue eye** disease.
p. SMEDI viruses enteroviruses or parvoviruses causing stillbirths, mummification, embryonic deaths and infertility in sows.
p. streptococcal meningitis see **streptococcal** meningitis.
p. stress syndrome (PSS) is an acute death syndrome in pigs occurring usually after transportation, fighting, exercise or even high environmental temperature. If signs are observed they include increasing dyspnea, tremor and stiffness, severe hyperthermia and a rapid onset of rigor mortis after death. A genetic disorder, more common in breeds where there has been selection for muscling. Homozygous recessive (Hal gene) pigs are susceptible to develop the syndrome following stress. Heterozygous pigs are at risk to develop pale soft exudative pork (PSE) at slaughter. Halothane testing or genotyping can be used to determine the genotype of pigs for breeding. Called also herztod, pale soft exudative pork, malignant hyperthermia, transport death, acute back muscle necrosis.
p. ulcerative spirochetosis see **ulcerative** granuloma of swine.
porcupine two families of rodents, the New World (Erethizontidae) and Old World (Hystricidae) porcupines have long, erectile spines or quills. All are nocturnal, some are arboreal, some live in burrows. The quills are a cause of major injury to predators.
p. fish *Diodon* spp. in the family Diodontidae. They have sharp spines and, like their relatives the pufferfish, can defensively inflate their body to a large size. Some species contain tetrodotoxin, a potent neurotoxin that causes hypotension, hypothermia, emesis, paralysis and death. Called also balloonfish.
pore [*por*] a small opening or empty space.
nuclear p. a group of proteins with a central hole through which molecules pass through a nuclear membrane.
dilated p. of Winer a benign follicular tumor that occurs on the head and neck of older cats; they resemble epidermal cysts with a keratin filled, wide opening (pore).
porencephalia [*por"en-sə-fal'e-ə*] porencephaly.
porencephalitis [*por"en-sef"ə-li'tis*] porencephaly with inflammation of the brain.
porencephalous [*por"en-sef'ə-ləs*] characterized by porencephaly.
porencephaly [*por"en-sef'ə-le*] development or presence of abnormal cysts or cavities in the brain tissue, usually communicating with a lateral ventricle.
porging the process of removing all blood vessels from meat to be sold for consumption in Jewish households. This is a religious requirement.
pork the fresh, uncured meat of the pig.
p. bellies boneless cut of meat from the belly of the pig, used to make bacon. Once a popular commodity in futures markets on the stock exchange. Now delisted.
p. measles ***Taenia*** *solium* and ***Cysticercus*** *cellulosae*.
pale soft exudative p. see **porcine** stress syndrome.
porker the class of pig judged to be most suitable for conversion to pork. The target age and weight vary too much between localities to make a general statement worthwhile.
Porocephalus [*por"o-sef'ə-ləs*] internal parasites in the class Pentastomida and the family Porocephalidae.
P. clavatus, P. crotali, P. subulifer the adults of these wormlike arthropods are found in the respiratory passages of large snakes. Heavy infestations may kill the snakes.
poroconidia conidia produced through a pore in the conidiophores. Seen in *Alternaria* spp.
poroporo ***Solanum*** *aviculare*.
porosis [*pə-ro'sis*] 1. formation of the callus in repair of a fractured bone. 2. cavity formation.
porosity [*pə-ros'ĭ-te*] the condition of being porous; a pore.
porotomy [*pə-ro'tə-me*] meatotomy.
porous [*por'əs*] penetrated by pores and open spaces.
porphin [*por'fin*] the fundamental ring structure of four linked pyrrole nuclei around which porphyrins, hemin, cytochromes and chlorophyll are built.
porphobilinogen [*por"fo-bĭ-lin'ə-jən*] an intermediary product in the biosynthesis of heme. Not detectable in normal animals.
p. deaminase an enzyme involved in the condensation of porphobilinogen. Now called uroporphyrinogen I synthetase.
porphobilinogen synthase [*por"fo-bĭ-lin'o-jən sin'thās*] see **aminolevulinate dehydratase**.
porphynuria [*por"fin-u're-ə*] see bovine congenital erythropoietic **porphyria**.
porphyria [*por-fēr'e-ə*] a group of inherited or acquired diseases in which there are abnormalities of porphyrin metabolism, with accumulation in the tissues and increased excretion of porphyrins.
bovine congenital erythropoietic p. inherited as an autosomal recessive trait in cattle; from birth, affected animals have varying degrees of reddish-brown discoloration of bones, teeth and urine, anemia and photosensitization, associated with a deficiency of the enzyme uroporphyrinogen III cosynthetase.
erythropoietic p. porphyria of genetic origin; a manifestation of involvement of erythropoietic tissue.
feline p. inherited as an autosomal dominant trait; affected cats have discolored teeth, urine and tissues, severe anemia and photosensitivity associated with a deficiency of uroporphyrinogen III cosynthetase.
inherited p. the disease is inherited in cattle, swine and cats and is similar to erythropoietic porphyria of humans. There are excessive amounts of porphyrins in urine and deposits in the bones and teeth causing a dark red-brown discoloration. The animals are very photosensitive and cannot live outside. See also **protoporphyria**, **hematoporphyrinuria**, **osteohematochromatosis**.
pig p. an erythropoietic porphyria, similar to bovine congenital erythropoietic porphoryia, but inherited as a dominant trait. Discoloration of the teeth, bones and tissues occurs, but not of the urine, except in severely affected cases. Photosensitization is not a feature. The enzymatic defect is unknown.

porphyrin [*por'fə-rin*] any of a group of iron- or magnesium-free cyclic tetrapyrrole derivatives which forms the basis of the respiratory pigments of animals and plants. Porphyrins, in combination with iron, form hemes.
p. test the presence of porphyrin in cultures of *Haemophilus* spp. or *Tayorella equigenitalis* indicates that hemin is not required for growth.
porphyrinogen [*por"fə-rin'ə-jən*] partly reduced precursor form of porphyrin rings which can then have metals such as iron introduced to produce heme or other porphyrin structures.
porphyrinuria [*por"fə-rĭ-nu're-ə*] an excess of porphyrin in the urine. The urine is of normal color on voiding but darkens to a red-brown after exposure to light.
Porphyromonas [*por"fĭ-ro-mo'nəs*] a genus of gram-negative, anaerobic bacteria previously grouped in the genus *Bacteroides*. Involved in periodontal disease and a cause of dog and cat bite wound infections.
P. levii associated with summer mastitis in cattle.
P. macacae causes subcutaneous abscesses in cats.
P. salivosa now classified as *P. macacae*.
porphyropsin [*por"fĭ-rop'sin*] a visual pigment found in freshwater fish and some frogs.
porpoise the smallest cetaceans, family Phocoenidae; related to whales and dolphins. b, black on top, white belly, piscivorous and an excellent swimmer. Includes the harbor porpoise (*Phocoena phocoena*), sometimes also known as the common porpoise, and the showy Dall's porpoise (*Phocoenoides dalli*) that resembles the orca or killer whale.
Porrocaecum a genus of roundworms in the family Ascarididae.
P. angusticolle found in birds of prey.
P. aridae found in the heron.
P. crassum found in the intestine of ducks; causes nasal discharge, diarrhea, anemia and loss of weight.
P. decipiens found in the small intestine of the walrus.
P. depressum found in birds of prey.
port [*port*] 1. a term given to an endoscopic sheath used to allow access of endoscopic equipment into the body. 2. the upward curve in a bar bit on a horse's bridle.
porta [*por'tə*] pl. *portae* [L.] an entrance or gateway, especially the site where blood vessels and other supplying or draining structures enter an organ.
p. hepatis the fissure on the visceral surface of the liver, where the portal vein and hepatic artery enter and the bile duct leaves. Called also portal fissure and transverse fissure.
portacaval [*por"tə-ka'vəl*] pertaining to or connecting the portal vein and caudal vena cava.
p. anastomosis surgical, traumatic or congenital defect resulting in an anastomosis between the portal vein and the caudal vena cava including a portal–azygos anastomosis, or the portal vein and the hepatic artery resulting in portal hypertension. More commonly provides the physical basis for a **portosystemic** shunt.
portal [*por'təl*] 1. an avenue of entrance; porta. 2. pertaining to an entrance, especially the porta hepatis.
p.–azygos anastomosis a form of portacaval shunt with the portal vein bypassing the liver and emptying directly into the azygos vein.
p. biliary bacterial circulation a continuous normal circulation of bacteria brought to the liver in the portal vein from the gut and excreted back into the gut via the biliary system.
p. canal tissue space situated between three or more hepatic lobules; carries the blood and lymphatic vessels and connective tissue.
p. circulation circulation of blood from the capillaries of one organ to those of another; applied especially to the passage of blood from the gastrointestinal tract and spleen through the portal vein to the liver. See also **circulatory** system.
p. of entry the pathway by which bacteria or other pathogenic agents gain entry to the body.
p. fibrosis the formation of excess fibrous tissue (fibroplasia) in and around the hepatic portal triads. usually as the result of chronic inflammation/irritation of the associated bile ducts. See also **biliary** fibrosis.
p. hypertension see **portal** obstruction.
p. obstruction obstruction of portal venous blood flow through external pressure on the portal vein, by abscess or tumor or by hepatic fibrosis constricting the hepatic vascular bed, causes interference with digestion and absorption and eventually venous return so that ascites and diarrhea develop.
p. system an arrangement by which blood collected from one set of capillaries passes through a large vessel or vessels and another set of capillaries before returning to the systemic circulation, as in the pituitary gland and liver. Includes the hepatic portal system consisting of portal vein and its tributaries from the stomach, intestine, pancreas and spleen, the vessels into which the portal vein divides in the liver. See also **renal** portal system in birds.
p. systemic shunt see **portosystemic** shunt.
p. triad anatomically close association of interlobular bile duct, branches of hepatic artery and portal vein.
p. vascular anomalies see **portacaval** anastomosis.
p. vein a short, thick trunk formed by the union of the caudal mesenteric and splenic veins; at the porta hepatis, it divides into successively smaller branches, following branches of the hepatic artery, until it forms a capillary system of sinusoids that permeates the entire substance of the liver. See Table 15.
p. vein obstruction acute, complete obstruction causes a syndrome similar to that of intestinal obstruction without signs suggesting liver involvement; partial occlusion causes shrinkage and eventual atrophy of the relevant section of the liver.
p. vein rupture rare complication of epiploic foraminal herniation; sudden death from internal hemorrhage results.
p. venule absence a congenital defect resulting in the development of multiple shunts within the liver, hepatoportal fibrosis and ascites, general immaturity and hepatic encephalopathy.
portio [*por'she-o*] pl. *portiones* [L.] a part, division or portion.
p. intermedia intermediate nerve, a root of the facial nerve.
p. vaginalis the portion of the uterus that projects into the vagina; the vaginal formix winds around it.
portocaval [*por"tə-ka'vəl*] portacaval.
portoenterostomy [*por"to-en"tər-os'tə-me*] surgical anastomosis of the jejunum to a decapsulated area of liver in the porta hepatis region, and to the duodenum; done to establish a conduit from the intrahepatic bile ducts to the intestine in biliary atresia.
portogram [*por'to-gram*] the film obtained by portography.
portography [*por-tog'rə-fe*] radiography of the portal vein after injection of opaque material.
jejunal p. opaque material is injected into a jejunal vein.
portal p. portography after injection of opaque material into the superior mesenteric vein or one of its branches, the abdomen being opened.
splenic p. see **splenoportography**.
portosystemic [*por"to-sis-tem'ik*] pertaining to the portal vein and the systemic circulation.
p. anastomosis see **portacaval** anastomosis.
p. shunt (PSS) a vascular communication between the portal and systemic vascular systems that permits circulation to bypass the liver. Congenital shunts may be *intrahepatic*, when there is failure of the fetal ductus venosus to close so that blood flow persists between the portal vein and the caudal vena cava ; these are most common in large breed dogs and may be inherited as in Irish wolfhounds; or *extraheptic*, in which there is communication, sometimes with multiple vessels, between the portal venous system and the systemic venous system, usually the abdominal vena cava. These are more common in cats and small-breed dogs, especially Maltese and Yorkshire terriers in which they are inherited. Clinical signs include poor growth from a young age, post-prandial seizures, coma, somnolence, blindness, head pressing, and/or aggression. Serum bile acid concentrations are greatly increased. Ammonium biurate crystals may be found in the urine.
p. vascular anomaly see portosystemic shunt (above) and **hepatic** microvascular dysplasia.
portovascular dysplasia [*por"to-vas'ku-lər dis-pla'zhə*] dysplasia of the liver caused by interference with the organ's blood supply; e.g. obstruction of radicles of the portal vein leads to rapid atrophy with condensation and scarification of the affected tissue.
Portuguese fishing dog [*por'chə-gēs*] see **Portuguese water dog**.
Portuguese man-of-war, man-o'-war [*por'chə-gēs*] a floating colony of hydrozoa (*Physalia physalis*) with stinging filaments trailing from a central medusa that resembles its relatives the jellyfishes. Found in tropical and sub-tropical waters, it is known for its very

painful stings, both in and out of the water. Records of poisoning in animals are very rare, but deaths do occur in infested colonies of farmed fish. Called also bluebottle.

Portuguese podengo [*por'chə-gēs*] a hunting dog from Portugal. There are small, medium and large, and smooth or wire coat varieties. A cerebellar cortical abiotrophy has been described in the breed. Called also Warren hound.

Portuguese pointer [*por'chə-gēs*] a medium size, compact hunting dog with a square head, well defined stop and triangular ears. The coat is short and yellow or light brown. The tail may be docked.

Portuguese sheepdog [*por'chə-gēs*] see **Estrela mountain dog**.

Portuguese water dog [*por'chə-gēs*] a medium-sized (35–60 lb), well-muscled dog with characteristic swimming and fishing traits. The coat is profuse and may be either long, loosely waved, or short, harsh and curled. In addition, the dog may be shown with a lion clip, which involves short clipping of the mid-body, hindquarters, muzzle and tail, except the tip; or a working-retriever clip in which the coat is trimmed evenly to a length of about 1 inch over the whole body, except at the end of the tail where it is left full length. Called also Portuguese fishing dog. The breed is predisposed to distichiasis, GM1 gangliosidosis (storage disease), cardiomyopathy and cataracts.

Portulaca plant genus in the family Portulacaceae. Contains high concentrations of oxalic acid and sometimes nitrate, either of which can cause fatal poisoning in hungry ruminants. Manifested by recumbency and high mortality in sheep. Includes *P. australis*, *P. filifolia*, *P. oleracea* (pigweed, purslane), *P.* spp. aff. *oleracea* (munyeroo, inland pigweed).

porus [*por'əs*] pl. *pori* [L.] an opening or pore.

p. acusticus externus the outer end of the external acoustic meatus.

p. acusticus internus the opening of the internal acoustic meatus in the cranial cavity.

p. opticus the opening in the sclera for passage of the optic nerve; better referred to as *area cribrosa sclerae*.

posaconazole a triazole antifungal drug, derived from itraconazole. It has potent activity against *Aspergillus*, *Candida* spp. and molds.

-posia word element. [Gr.] *intake of fluids*.

position [*pə-zish'ən*] a bodily posture adopted by a patient to facilitate breathing or a distended viscus or cavity, or to relieve pain by moving pressure from an organ.

positional pertaining to position or posture.

p. nystagmus see positional **nystagmus**.

positioning passive arrangement of the head, trunk or limbs in order to obtain the optimum X-ray image, or to make a physical clinical examination, e.g. palpation of the abdomen.

p. equipment devices to hold limbs or head and neck in a predetermined position for radiographic or other examination.

positive [*poz'ĭ-tiv*] having a value greater than zero; indicating existence or presence, as chromatin-positive or coagulase-positive; characterized by affirmation or cooperation.

p. end-expiratory pressure (PEEP) In mechanical ventilation, a positive airway pressure maintained until the end of expiration. A PEEP higher than the critical closing pressure holds alveoli open until the end of expiration and can markedly improve the arterial Po_2 in patients with a lowered functional residual capacity (FRC), as in acute respiratory failure.

positron [*poz'ĭ-tron*] the antiparticle of the electron. When a positron is emitted by a radionuclide it combines with an electron and both undergo annihilation, producing two 511 keV gamma rays traveling in opposite directions. This effect is used in positron emission **tomography** (PET).

posological [*po-so-loj'ik-əl*] pertaining to posology.

p. table one listing drugs and their dosages.

posology [*po-sol'ə-je*] the science of dosage or a system of dosage.

possum [*pos'əm*] members of the large suborder Phalangeriformes, found in Australia and New Guinea, they were introduced to New Zealand where they are now considered pests. They are nocturnal and most are arboreal. In urban settings, the common ringtail (*Pseudocheirus peregrinus*) and the common brushtail (*Trichosurus vulpecula*) possums forage ornamental garden plants and invade roof spaces. It is not related to the American opossum.

post- [*pōst*] word element. [L.] *after, behind*.

post-anesthetic occurring after recumbency imposed by general anesthesia; any sequel may be the result of either.

p. compartment syndrome syndrome caused by compression of an anatomical part of the body causing decreased blood flow, i. e. ischemia and loss of function and sensation, and eventually necrosis; see also **downer cow syndrome**.

p. morbidity tissue damage resulting from hypoxia during anesthesia.

p. myonecrosis see post-anesthetic myopathy (below).

p. myopathy muscle ischemia sufficient to cause death of muscle fibers results from prolonged recumbency.

post-antibiotic effect (PAE) the continued suppression of antibacterial growth after the administration of antibiotic has ceased and serum concentrations have fallen below the minimum inhibitory concentration.

post-dipping lameness lameness in sheep due to laminitis caused by infection with *Erysipelothrix rhusiopathiae* after dipping in insecticidal solutions which do not contain a bactericidal agent.

post-milking teat disinfection see **teat dip**.

post mortem postmortem.

post-surgery starvation starving of horses after surgery can have the unfortunate sequel that the patient, intellectually incompetent, will gorge on bedding if not muzzled and develop gastric impaction.

post-transcriptional RNA processing a series of enzymatic reactions that convert the primary transcript to a mature functional molecule. Processing includes: base modification, sugar modification, pyrimidine ring rearrangements, formation of helices and tertiary conformations, additions to the 5′- and 3′-termini, specific exonucleolytic and endonucleolytic cleavages, complex cleavages with splicing and the formation of RNA–protein complexes. The number, type and order of the processing events varies with the RNA species.

post-traumatic occurring as a sequel to trauma.

post-traumatic sarcoma see feline post-traumatic **sarcoma**.

post-weaning pertaining to the period of about 2 weeks after weaning. Relates to the dam or the offspring.

p. anestrus a problem in sows, particularly those that have lost significant weight during lactation. See **anestrus**.

p. diarrhea a cause of serious losses in young pigs during the first 2 weeks after weaning, associated with viral and bacterial infection of the intestine following the loss of lactogenic immunity; a form of coliform gastroenteritis.

p. *Escherichia coli* diarrhea see **coliform** gastroenteritis.

p. growth check the sudden slowing of weight gain in piglets when they change from sow's milk to prepared grain rations.

postalbumin [*pōst"al-bu'min*] a peak on the electrophoresis pattern of serum proteins producing a shoulder on the cathodal side of the albumin peak.

postauricular [*pōst"aw-rik'u-lər*] located or performed behind the auricle of the ear.

postaxial [*pōst-ak'se-əl*] behind or caudal to an axis; the ulnar aspect of the forelimb, and the fibular aspect of the hindlimb.

postbrachial [*pōst-bra'ke-əl*] on the caudal part of the upper forelimb.

postcapillary [*pōst-kap'ĭ-lar'e*] a venous capillary.

p. venule located in lymphoid tissue these are the site of recirculation of the lymphocytes from the blood to the lymphoid tissue.

postcardiotomy [*pōst"kahr-de-ot'ə-me*] occurring after open-heart surgery.

postcava [*pōst-ka'və*] the caudal vena cava.

postcibal [*pōst-si'bəl*] postprandial; after eating.

postcoital [*post-koi'təl*] after coitus.

postcordial dorsal to the heart.

postcornu the posterior horn of the lateral ventricle of the brain.

postdiastolic [*pōst"di-əs-tol'ik*] after diastole.

postdicrotic [*pōst"di-krot'ik*] after the dicrotic elevation of the sphygmogram.

postdistemper after an attack of canine **distemper**.

p. convulsions convulsions due to encephalitis caused by the distemper virus.

p. encephalitis see old dog **encephalitis**.

postduplication phase termination of DNA replication; histone and RNA synthesis occurs during this phase: called also postsynthesis or G_2 phase.

postencephalitic [*pōst"en"sə-fal'ik*] occurring after or as a consequence of encephalitis.
postepileptic [*pōst"ep"ĭ-lep'tik*] following an epileptic attack.
posterior [*pos-tēr'e-ər*] directed toward or situated at the back; opposite of anterior. In quadrupeds usually applied only to parts of the head.
p.–anterior with the X-ray beam passing from the back to the front, especially to the limbs.
p. functional stenosis failure of pyloric outflow from the abomasum, as part of the syndrome of vagus indigestion in cattle.
p. limiting membrane of the cornea see **Descemet's membrane**.
p. segment collective term for those parts of the eye posterior to the lens, including the vitreous body, retina, choroid, optic nerve and sclera. Compare with **anterior** segment.
p. station trypanosomes one of the two types of development of trypanosomes. In this form, the metacyclic trypomastigotes accumulate in the hindgut of an arthropod vector and are passed out with the feces. Infection of the definitive vertebrate host occurs via the skin or skin wound. Called also **Stercoraria**. See also **anterior** station .
postero- word element. [L.] *the back, posterior to*.
posteroanterior [*pos"tər-o-an-tēr'e-ər*] directed from the back toward the front (caudo-cranial).
posteroexternal [*pos"tər-o-ek-stur'nəl*] situated on the outside of a caudal aspect.
posteroinferior [*pos"tər-o-in-fēr'e-ər*] behind and below.
posterolateral [*pos"tər-o-lat'ər-əl*] situated on the side and toward the caudal aspect.
posteromedian [*pos"tər-o-me'de-ən*] situated on the middle of a caudal aspect.
posterosuperior [*pos"tər-o-soo-pēr'e-ər*] situated behind and above.
postesophageal [*pōst"ə-sof"ə-je'əl*] dorsal to the esophagus; retroesophageal.
postganglionic [*pōst"gang-gle-on'ik*] distal to a ganglion.
p. axon an axon arising from a cell body within an autonomic ganglion, and distal to it.
p. fibers nerve fibers arising from cell bodies within an autonomic ganglion, and distal to it.
postgraduate after first degree graduation, the registerable degree in veterinary science.
p. degree may be a research degree, e.g. PhD, or a course-work masterate with a vocational bias, or any combination of these. Oriented towards a research career, or a vocational one.
p. internships clinical posts in teaching hospitals, usually at university veterinary schools, which include a large segment of in-service training. An essential step for veterinarians contemplating academic careers in the clinical sciences or eventual registration as a specialist. Mostly of 1 year duration; some have an incorporated diploma or course-work masterate achievable by examination at the end of the internship.
p. professional education continuing education, usually structured to provide a continuum of training in a particular segment of professional work, e.g. companion animal medicine and surgery.
Postharmastomum a genus of intestinal flukes (digenetic trematodes) in the family Brachylaemidae.
P. commutatus (syn. *P. gallinarum*) found in the ceca of fowl and other birds and may cause typhlitis.
P. suis occurs in the small intestine of pigs but causes little apparent injury.
posthepatitic [*pōst"hə-pat'ik*] occurring after or as a consequence of hepatitis.
posthetomy [*pos-thet'ə-me*] circumcision.
posthioplasty [*pos'the-o-plas"te*] plastic repair of the prepuce.
posthitis [*pos-thi'tis*] inflammation of the prepuce.
enzootic p. of sheep see **enzootic** balanoposthitis.
Posthodiplostomum a genus of flukes (digenetic trematodes) in the family Diplostomatidae.
P. cuticula the adults are found in the intestine of herons and kingfishers, but it is the second intermediate stage, the metacercariae, which occur in the skin, fin, cornea and superficial muscles of fish that are pathogenic. They cause black spot disease of cyprinid fish, especially carp, and may cause some deaths.
P. minimum the metacercaria cause 1 mm diameter white cysts in most internal organs of many freshwater fish. Called also white grub. Herons are the definitive host.
postholith [*pos'tho-lith*] a preputial concretion or calculus. See also preputial **urolith**.
postholithiasis [*pos'tho-lith-i'a-sis*] see preputial **urolithiasis**.
postictal [*pōst-ik'təl*] following a seizure.
postiness the thickness and heaviness of the lower limbs of bulls and horses. The animal with thick, heavy legs is said to be posty.
posting the rising of the rider to the trot.
postmaturity [*pōst"mə-chōōr'ĭ-te*] the condition of a neonate after a prolonged gestation period.
postmitotic [*pōst"mi-tot'ik*] occurring after or pertaining to the time following mitosis.
postmortem [*pōst mor'təm*] performed or occurring after death.
p. decomposition the changes that occur after death of an animal. They include autolytic effects mediated by endogenous tissue enzymes, as well as the putrefactive effects of saprophytic microbes, and the destructive activity of insect larvae.
p. examination a careful dissection of a cadaver with the objective of deciding the cause of death. Called also autopsy or necropsy examination.
p. inspection that part of a meat inspection or food inspection at an abattoir that is conducted after the animal has been killed and dressed. Supplements the antemortem examination.
p. report a detailed report of a postmortem examination of a cadaver, including a complete identification of the animal, the body condition, age, sex, species, breed, parity and the changes observed.
postnatal [*pōst-na'təl*] relates to the newborn in the period immediately after birth. A suitable subdivision is: early postnatal—within 48 hours of birth; delayed postnatal—2 to 7 days; late postnatal—1 to 4 weeks. See also **perinatal**, **parturient** disease.
p. diseases diseases which are more prevalent at this time in the animal's life because of its small size, its immunological inadequacy and its dependence on the dam for nourishment, protection from predators and from inclement weather, especially protection from the cold.
postnecrotic scarring [*pōst" nə-krot'ik*] a reaction to primary parenchymal injury in organs such as liver and pancreas; after the primary injury the resulting connective tissue undergoes condensation and scarification.
postobstruction subsequent to relief of a uni- or bilateral obstruction of the urinary tract.
p. diuresis diuresis occurring after relief of the obstruction. Caused by the retention of natriuretic substances and extracellular fluid during the obstruction. May cause fluid and electrolyte imbalance.
postOp postoperative.
postoperative [*pōst-op'ər-ə-tive*] after a surgical operation.
p. care care of the patient following a surgical procedure. Includes correct positioning relative to the surgery performed and the application of minimum pressure and strain on the operation site, maintenance of an open airway, maintenance of body temperature, moving from side to side if the recovery period is prolonged, maintenance of fluid and electrolyte balance and monitoring for signs of developing shock.
postoral [*pōst-or'əl*] in the back part of the mouth or somewhere in the digestive tract beyond the mouth.
postparalytic [*pōst-par"ə-lit'ik*] following an attack of paralysis.
postpartum [*pōst pahr'təm*] [L.] *after parturition;* see also **postparturient**.
p. metritis in the cow, *Arcanobacterium pyogenes* is the common cause with *Fusobacterium necrophorum* and **Prevotella** *melaninogenica* as contaminants. End result can be pyometra or infertility due to endometritis.
p. septic metritis commonly associated with retained placenta and poor uterine involution. *Arcanobacterium pyogenes, Escherichia coli, Staphylococcus aureus, Streptococcus spp., Proteus spp., Pseudomonas aeruginosa*, rarely *Clostridium* spp. are common infections responsible for the putrid smell of the exudate and severe toxemia.
postparturient [*pōst-pahr-tu're-ənt*] relates to the dam, in the period immediately after parturition.
p. debilitation the effects of pregnancy, parturition and the onset of heavy lactation especially in animals with multiple offspring, coupled with the high incidence of metabolic diseases and disease of the uterus and the mammary gland at this time can cause

VetBooks.ir

serious debilitation which requires intensive management to correct.

p. endometritis inflammation of the endometrium as a result of infection introduced usually at parturition; one of the principal causes of infertility.

p. fever of sows see **mastitis–metritis–agalactia**.

p. hemoglobinuria a disease of high-producing dairy cows in the period of about a month after calving characterized by acute intravascular hemolysis, hemoglobinuria, pallor of mucosae and a heavy mortality rate. Predisposed by a nutritional deficiency of phosphorus or copper.

p. hemolytic anemia see postparturient hemoglobinuria (above).

p. hypocalcemia see parturient **hypocalcemia**.

p. immunosuppression drain of antibodies in colostrum depletes maternal resources and reduces immune status.

p. paresis see parturient **hypocalcemia**.

postprandial [*pōst-pran'de-əl*] after eating. Called also postcibal.

p. alkaline tide see postprandial alkaline **tide**.

postpuberal, postpubertal [*pōst-pu'bər-əl*] after puberty.

postpubescent [*pōst"pu-bes'ənt*] after puberty.

postradiation [*pōst-ra"de-a'shən*] following exposure to radiation.

postrenal [*pōst-re'nəl*] pertaining to those parts of the urinary system that, anatomically and physiologically, are distal to the kidney. Includes ureters, bladder and urethra.

postrotatory [*pōst-ro"tə-tor'e*] occurring after the patient has been spun around passively.

p. nystagmus see postrotatory **nystagmus**.

postshearing sheep in a state of susceptibility to cold stress immediately after shearing.

p. mortality death of sheep due to hypothermia, especially if they are thin and poorly fed, in the period immediately after shearing.

postsphygmic after the pulse wave.

p. interval, p. period the short period (0.08 second) of ventricular diastole, after the sphygmic period, and lasting until the atrioventricular valves open.

poststenotic [*pōst"stə-not'ik*] located or occurring distal to or beyond a stenosed segment.

postsynaptic [*pōst"sĭ-nap'tik*] distal to or occurring beyond a synapse.

postsynthesis phase [*pōst"sin'thə-sis*] see **postduplication phase**.

postulate [*pos'tu-lāt*] anything assumed or taken for granted.

Koch's p's see **Koch's postulates**.

postural [*pos'chər-əl*] pertaining to posture or position.

p. reflexes, p. reactions reflexes which respond to changes of position of the body or head to maintain the eyes looking straight ahead and the poll–nose axis pointing similarly, e.g. hanging the animal by its hindlimbs should provoke a lifting of the nose, and if this is obstructed an upward rotation of the eye.

posture [*pos'choor*] an attitude of the body. Good posture cannot be defined by any rigid formula. It is usually considered to be the natural and comfortable bearing of the body in normal, healthy animals. This generally means that in a standing position the body is naturally, but not rigidly, straight with the four legs evenly placed below the body, the back straight and the head held up so that the eyes look directly ahead. The position of the ears varies with the mental state of the animal. Continuous or frequent departure from this norm may indicate the need to look further for overt signs of disease. See also **stance, dog -sitting**.

p. abnormality includes sternal or lateral recumbency, head deviation or rotation, head-pressing, dog-sitting, arched back.

kangaroo p. one which mimics the characteristic pose of kangaroos, sitting upright on the hindquarters with front legs held against the chest. Adopted by some cats affected by the spinal exostoses of hypervitaminosis A.

praying p. one in which the forequarters are close to the ground while the hindquarters are elevated by extension of the hindlegs. Assumed in dogs and cats, often because of abdominal pain.

sawhorse p. one in which the feet are placed wider apart than would normally be required to remain standing. Seen in tetanus and neurological diseases in which there are proprioceptive deficits.

submissive p. manifestation of appeasement behavior, for example with dogs, tail tucked, body lowered, head down, gaze averted, or rolling over and exposing the belly.

postvaccinal [*pōst-vak'sĭ-nəl*] occurring after vaccination. Usually used in reference to an adverse reaction to the vaccine or occurrence of disease caused by the infectious agent contained in the vaccine because of an altered immune status in the recipient or a fault in the vaccine manufacture.

P-65: Praying posture in a dog with acute abdominal pain.

p. anaphylaxis see **anaphylaxis**.

p. hepatitis is most common after vaccination of horses against equine encephalomyelitis but also occurs after other vaccinations and in some cases at times unrelated to any vaccination. Clinically there is intense jaundice, gut stasis, oliguria and stupor or mania.

p. sarcoma see feline vaccine-associated **sarcoma**.

potable [*po'tə-bəl*] fit to drink.

potash, potassa [*pot'ash*] chemically speaking, potassium hydrate, a strong caustic. In farming terms, potassium carbonate as it is mixed into fertilizers to redress a deficiency of potassium in the soil.

potassa see **potash**.

potassemia [*pot"ə-se'me-ə*] kalemia.

potassium (K) [*po-tas'e-əm*] a chemical element, atomic number 19, atomic weight 39.102. See Table 4. The major intracellular cation. In combination with other minerals, potassium forms alkaline salts that are important in body processes and play an essential role in maintenance of its acid–base and water balance. All body cells, especially muscle tissue, require a high content of potassium. A proper balance between sodium, calcium and potassium in the blood plasma is necessary for proper cardiac function. Alfalfa meal, molasses and soyabean meal are good sources for herbivores. Causes of increased serum concentration (**hyperkalemia**) include renal failure, urinary tract obstruction or rupture or hypoadrenocorticism.

p. acetate, bicarbonate, bitartrate, citrate, gluconate electrolyte replenishers, weak diuretics and urinary alkalinizers. Some are also used as expectorants.

p. arsenite see **Fowler's solution**.

p. bromide an antiepileptic drug used in dogs. In cats, there are adverse respiratory reactions.

p. carbonate used commercially as a fertilizer.

p. channel see **channel**.

p. chloride a compound used orally or intravenously as an electrolyte replenisher.

p. cyanide may be present in industrial effluents. A potent cause of cyanide poisoning.

p. exchange resins an oral preparation administered to limit the amount of potassium available for absorption; used in the management of hyperkalemia. See also **ion-exchange resin**; sodium **polystyrene** sulfonate.

p. guaiacolsulfonate an expectorant.

p. hydroxide (syn. potassium hydrate) used commercially as a caustic. In veterinary medicine used mostly for clearing skin scrapings in the diagnosis of ectoparasite infestation.

p. iodate used as a constituent of salt blocks and mixes to supplement the diet with iodine. Overdosing will cause **iodism**. It has also been used in the treatment of hyperthyroidism in cats.

p. iodide an expectorant and antithyroid agent.

p. nitrate used commercially as a fertilizer and a meat preservative. Can cause nitrate poisoning or nitrite poisoning in ruminants.

p. nitrite a compound sometimes used in place of potassium nitrate. Overdosing causes methemoglobin formation and severe, sometimes fatal hypoxia.

VetBooks.ir

p. nutritional deficiency extremely rare; has been associated with poor growth, anemia and diarrhea in pigs and calves. Electrocardiographic changes are also recorded. See also **hypokalemia**.
p. oxalate causes oxalate poisoning.
p. permanganate a topical anti-infective, oxidizing agent, and antidote for many poisons. See also **permanganate**.
p. phosphate a cathartic. Also used intravenously for aggressive treatment of hypophosphatemia.
p. sodium tartrate a compound used as a saline cathartic and also in combination with sodium bicarbonate and tartaric acid (Seidlitz powders, a cathartic).
potato ***Solanum*** *tuberosum*.
p. bush *Solanum esuriale*.
p. dermatitis scabby dermatitis on the lower limbs in cattle or water buffaloes on a diet heavily supplemented with potatoes over a period of some weeks.
p. poisoning see **carbohydrate engorgement**.
sweet p. ***Ipomoea*** *batatas*.
p. weed ***Heliotropum*** *europaeum*.
potbellied abnormal relative enlargement of the abdomen. May be caused by increased size of viscera and contents, or diminution in volume of skeletal muscle, fat and fascia due to malnutrition or wastage due to parasitism.
potency [*po'tən-se*] power; especially (1) the ability of the male to perform coitus; (2) the power of a medicinal agent to produce the desired effects; (3) the ability of an embryonic part to develop and complete its destiny.
centesimal p. see **centesimal scale**.
decimal p. see **decimal scale**.
potential [*po-ten'shəl*] 1. existing and ready for action, but not active. 2. electric tension or pressure.
action p. see **action potential**.
after-p. the period following termination of the spike potential.
membrane p. see **membrane** potential.
resting p. the potential difference across the membrane of a normal cell at rest.
spike p. the initial, very large change in potential of an excitable cell membrane during excitation.
zeta p. a net negative charge.
potentiation [*po-ten"she-a'shən*] enhancement of one agent by another so that the combined effect is greater than the sum of the effects of each one alone.
premature activation p. see **postextrasystolic potentiation**.
postsynaptic p. increased rate of discharge of a nerve cell that has been subjected to intensive stimulation. Appears to be related to the appearance of a greater number of dendritic spines.
postextrasystolic p. occurs in mammalian ventricular muscle after a premature contraction which is weaker than preceding beats; for several regular beats after the premature beats, the contractions are greater than normal.
Potentilla anserina member of the plant family Rosaceae, has a high tannic acid content. Reputed to poison horses. Called also silver weed.
Poteriostomum a genus of strongylid roundworms in the subfamily of Cyathostominae. Found in the large intestine of horses.
Poth-Gold suture pattern a simple interrupted suture pattern used in intestinal anastomosis which is tied very tightly so that it cuts through the serosa, mucosa and muscularis and remains holding the submucosa in apposition.
potion [*pō'shən*] a large dose of liquid medicine.
Potomac horse fever see equine monocytic **ehrlichiosis**.
potoroo (*Potorous* spp.) small marsupial known as rat kangaroo or kangaroo rat.
Pott's technique a surgical technique for management of tetralogy of Fallot involving a side-to-side anastomosis of the aorta and pulmonary artery.
Potter–Bucky see Potter–Bucky **grid**, **diaphragm**, **Bucky tray**.
potteries possible source of fluorine, used in glazes and art work, causing poisoning of livestock grazing on surrounding contaminated pasture.
potto (*Perodicticus potto*) a very small, nocturnal, arboreal, tailless primate in the family Lorisidae, native to equatorial Africa. They are sometimes found in the pet trade.
Potts anastomosis a method of joining the aorta and the pulmonary artery, side-by-side, in the surgical repair of tetralogy of Fallot.
Potts-Smith scissors [*pots*] fine pointed scissors with various blade angles.
Potts–Smith forceps long, fine-pointed, serrated jaw, tissue forceps useful for cardiovascular work.
pouch [*pouch*] a pocket-like space, cavity or sac, e.g. one formed by bending back of the peritoneum on the surfaces of adjoining organs. See also **bursa**, **pharyngeal** pouch, marsupium.
abdominovesical p. the pouchlike reflection of the peritoneum from the abdominal wall to the ventral surface of the bladder.
adenohypophyseal p. see Rathke's pouch (below).
cutaneous p. an invagination of the skin, especially a glandular invagination such as the infraorbital, inguinal or interdigital pouch of sheep (see below).
guttural p. see **guttural pouch**.
infraorbital p. a cutaneous pouch rostral to the medial canthus of the eye, 0.5–1 inch deep, in sheep and many other ungulates. Called also lacrimal pouch.
inguinal p. an extensive cutaneous pouch in the inguinal region of male and female sheep. Called also mammary pouch.
interdigital p. a tubular invagination of the skin between the toes in sheep and some other cloven footed animals that anoints the hooves with its waxy secretion.
lacrimal p. see infraorbital pouch (above).
mammary p. see inguinal pouch (above).
pubovesical p. formed by a reflection of the peritoneum from the floor of the pelvis onto the neck of the bladder.
Rathke's p. a diverticulum from the embryonic buccal cavity from which the anterior lobe of the pituitary gland is developed.
rectogenital p. the pouch contained by the extension of the peritoneal cavity into the pelvic cavity between the rectum and the uterus or the uterus masculinus in the male.
rectouterine p. the pouch formed by the extension of the peritoneal cavity into the pelvic cavity between the uterus (or the uterus masculinus in the male) and the bladder.
Seesel's p. an outpouching of the embryonic pharynx rostrad to the pharyngeal membrane and caudal to Rathke's pouch.
vesicogenital p. the peritoneal pouch between the bladder and the genital fold in the male, or the uterus in the female.
poudrage [*poo-drahzh'*] [Fr.] application of a powder to a surface, as done to promote fusion of serous membranes (e.g. two layers of pericardium or pleura).
poult a young turkey.
poultice [*pōl'tis*] a soft, moist, mass about the consistency of cooked cereal, spread between layers of muslin, linen, gauze or towels and applied hot to a given area in order to create moist local heat or counterirritation.
poultry [*pōl'tre*] farmed, domestic birds including fowls, turkeys, ducks, geese. For other words relating to domestic birds, see under **avian**.
p. hemorrhagic syndrome see **hemorrhagic** syndrome.
p. waste spilled feed, dried litter and fecal residues from chicken houses can be used to provide a high-protein supplement feed for livestock. There are hazards, especially botulism, salmonellosis and poisoning by feed additives such as copper and phosphorus. The material may also contain an unidentified hepatoxin. Regardless of protein content, or potential hazards, esthetically it is not desirable for use as livestock food and, in the face of consumer concerns for food wholesomness, is a remarkably stupid choice for use as a livestock feed. Called also dried poultry waste.
pound [*pound*] 1. a unit of weight in the avoirdupois (453.6 g, or 16 ounces) or apothecaries' (373.2 g, or 12 ounces) system. 2. said of the gait of a horse which strikes the ground hard with the front feet at the canter. 3. an enclosure or building maintained by a local government authority in which stray animals are kept until claimed by their owners. See also **animal** shelter.
Poupart's ligament [*poo-pahr'*] inguinal ligament.
pour-on a technique for the application of insecticides, in which a small amount of liquid is poured onto the animal's back without any attempt to spread it over the surface. It is suited to systemic insecticides which are absorbed percutaneously or which spread within the dermis.
Pouret technique a surgical procedure for the correction of pneumovagina and urovagina in mares.
poussin [Fr.] see **milk** chickens.
pouters see **pigeon**.
poverty weed [*pov'ər-te*] ***Pimelea*** *trichostachya*.

povidone (PVP) [*po'vĭ-dōn*] polyvinylpyrrolidone, a synthetic polymer used as a dispersing and suspending agent. It has also been used as a plasma volume expander.

povidone–iodine (PVP-I) [*po'vĭ-dōn*] a complex produced by reacting iodine with the polymer **povidone**; used as a topical anti-infective. Known also Betadine.

Powassan virus [*po-wah'sən*] see ***Flaviviridae***.

powder [*pou'dər*] an aggregation of particles obtained by grinding or triturating a solid.

dusting p. a fine powder used as a talc substitute.

glove p. sterile and special grind for powdering surgical gloves.

powderpuff a **Chinese crested** dog with a full haircoat.

powered driven by explosive or electrical power.

p. missiles used in euthanasia of animals. Includes conventional weapons such as revolvers, rifles and shotguns, Greenough humane killers and captive bolt pistols.

p. surgical instruments include saws, drills.

pox [*poks*] a group of diseases caused by poxviruses and affecting primarily the skin and manifested by a characteristic progression of lesions from erythema to papule to vesicle to pustule to a round, reddish, raised scab about 0.5 inch diameter to a pock mark which remains at the site of lesions after healing. Includes **buffalopox**, **camelpox**, **canarypox**, **cowpox**, **ectromelia** (2), elephantpox, **feline** cowpox, **fowlpox**, **goatpox**, **horsepox**, **monkeypox**, **parrotpox**, **pseudocowpox**, **rabbitpox**, **sealpox**, **sheeppox**, **swinepox**.

Poxvirales an order of viruses that contains poxviruses that are classified in the subfamilies *Chordopoxvirinae*, family *Poxviridae*, which includes viruses that infect animals, and *Entomopoxvirinae*, family *Entomopoxviridae*, which includes viruses that infect insects.

Poxviridae [*poks"vir'ĭ-de*] a family of viruses, the members of which are large, brick- or oval-shaped particles containing a double-strand DNA genome that replicate in the cytoplasm of cells. There are six genera in the family that infect animals and avian species: (1) *Orthopoxvirus*, which includes alastrim, buffalopox, camelpox, cowpox, ectromelia (mousepox), horsepox, monkeypox, rabbitpox, vaccinia, variola; (2) *Avipoxvirus*, closely related viruses that include canarypox, fowlpox, juncopox, lovebirdpox, pigeonpox, quailpox, sparrowpox, starlingpox, turkeypox and others; (3) *Capripoxvirus*, which includes goatpox, lumpy skin disease, and sheeppox viruses; (4) *Leporipoxvirus*, which includes squirrel, hare, and rabbit (Shope) fibroma viruses and myxoma viruses; (5) *Suipoxvirus*, which includes swinepox virus; (6) *Parapoxvirus*, which includes contagious ecthyma, bovine papular stomatitis, sealionpox and pseudocowpox viruses. There are also unclassified poxviruses isolated from cats, elephants, lions, raccoons and gerbils.

poxvirus [*poks'vi-rəs*] a virus in the family *Poxviridae*.

p. officinalis vaccinia virus.

raccoon p. a poxvirus that causes typical pox lesions in the raccoon.

PPD purified protein derivative; used for tuberculin testing.

PP_i inorganic pyrophosphate.

PPLO pleuropneumonia-like organisms. See also ***Mycoplasma***.

ppm abbreviation for parts per million; a weight-for-weight (w/w) concentration equal to 1 mg/kg or 1 g/tonne. Used most commonly to express the concentration of toxicants or trace elements in water, feeds, solvents and tissues.

PPR peste des petitis ruminants.

PPV porcine parvovirus.

P–R in electrocardiography, refers to the P and R waves.

P–R interval the period from the beginning of the P wave to the beginning of the QRS complex.

P–R segment the isoelectric tracing that follows the P wave and ends with the deflection of the Q wave. It represents the delay of the electrical impulse at the atrioventricular node.

Pr chemical symbol, *praseodymium*.

PRA progressive retinal atrophy.

practice [*prak'tis*] the exercise of a profession.

absence from p. a convention in the veterinary profession recognizing that clients who are accustomed to obtain professional services at a particular premises are entitled to expect that those services will always be available, either directly or by being referred to another, comparable service with which suitable arrangements have been made beforehand.

advisory p. practice limited to giving advice, usually to farmers on the subjects of breeding, feeding and housing in relation to maximum health maintenance and optimum production. Usually called a consultation practice.

association p. a group of individual practices contract to use common facilities, possibly franchised by a central practice. Similar to a group practice, having the benefits of a large group of veterinarians but maintaining independence of the individual practitioner.

branch p. the term has two meanings. 1. a separate enterprise connected to the parent practice only by having a common ownership. 2. a subsidiary practice utilizing the resources and staff of the parent practice. Usually attended only at specified, limited hours, with the opportunity for a client to go to the parent practice in an emergency. This is really a branch premises.

company p. where the law permits is practice by a company with all of the commercial and financial benefits that the arrangement permits. Has the unattractive appearance of an attempt to evade financial responsibility to clients.

consultant p. practice as a specialist providing consultations and carrying out referrals for other veterinarians. Commonly used to refer to advisory practices (see above).

contract p. contracts are made with individual clients for work to be done for a flat fee or a sliding scale based on time spent, or per head in the risk population or a percentage of the profit.

corporate p. see company practice (above).

domiciliary p. house calls. The average country practice is mostly domiciliary in that the veterinarian visits the patient in its own surroundings.

emergency p. a practice set up specifically to attend to emergencies that arise at times when most other surgeries are not available, e.g. nights, weekends, public holidays.

fire engine p. the standard practice based on providing attention for sick and injured animals in the surrounding area. For small animals the service is available at the veterinarian's premises but large animals are seen at the owner's domicile.

group p. individual veterinarians use the same facilities and provide mutual support but each has his/her own clients and receives their fees after central costs are deducted.

illegal p. includes practice by veterinarians who are not registered and practice by persons who are not veterinarians.

partnership p. partners are co-owners of a practice, not necessarily by equal shares, and have consequential proportional entitlement to the profits.

primary accession p. a veterinary practice that does most of its work with primary accession cases—not a specialty practice.

principal–assistant p. the principal owns the practice and hires assistants who are paid salaries and allowances. Most veterinarians work as assistants for one or two years after graduation.

private p. practice by a self-employed veterinarian who is obliged by convention to be available to the public although it is accepted that such a veterinarian is entitled to limit the practice to a particular class of work, or to a geographical area or to a particular list of clients.

single enterprise p. a veterinary practice in which the veterinarian has only one client, usually a large industrial enterprise such as a feedlot.

special interest p. a practice in which the veterinarian limits the species or the kind of work that will be done, e.g. 'practice limited to cagebirds'.

specialist p. see consultant practice (above).

subsidized practice a system of private practice in which some organization, local government, cooperative dairy company, a farmers' club, subsidizes the veterinarian. The method of subsidy varies from a salary with the right to private practice to a guaranteed total income with the subsidy making up any shortfall. A novel and successful method has been to provide the professional premises for the veterinarian at a minuscule rental.

subsidized p. the veterinarian does not subsist on fee income only but is subsidized, usually by an organization interested in having a veterinary presence in an area that is sparsely populated. The sponsor is usually a government but may be a dairy manufacturing company or a wool-selling agency.

surreptitious independent p. carrying on a private practice whilst supposedly fully employed by another veterinarian. This includes government or university employment. Conducting the practice in the same geographical area as that serviced by the employer is implied in the charge.

P-66: Prairie dog (*Cynomys* spp.). Courtesy of CDC/Susy Mercado.

veterinary p. see **veterinary** practice.

practitioner [*prak-tish'ən-ər*] a person who practices a profession. This may be in one of the many forms of practice.

private p. a veterinarian who conducts a private practice.

practolol [*prak'to-lol*] a β-adrenergic blocking agent with the same actions as **propranolol**.

prae- for words beginning thus, see those beginning *pre-*.

Prague ratter originally from Bohemia but now a popular breed in the Czech Republic, this very small dog (3.5–6.5 lb) with a very short coat in black and tan, yellow, and brown with yellow spots resembles a Miniature Pinscher. It has a keen sense of smell and, as the name suggests, was used for killing rats.

prairie dog (*Cynomys* spp.) small, 12 inches, 2 lb, gray-brown, herbivorous, diurnal rodent, living in burrows, in colonies or towns. In 2003 it was associated with the first outbreak of monkeypox in humans in the USA.

pralidoxime (2-PAM) [*pral"ĭ-doks'ēm*] a cholinesterase reactivator, effective against the nicotinic cholinergic effects of organophosphorus compounds; it also has limited value in counteracting carbamate-type cholinesterase inhibitors.

prallethrin a pyrethroid insecticide used to control fleas and ticks on dogs and cats.

pramoxine, pramocaine [*pră-mok'sēn*] a topical anesthetic.

prandial [*pran'de-əl*] pertaining to a meal.

praseodymium (Pr) [*pra"ze-o-dim'e-əm*] a chemical element, atomic number 59, atomic weight 140.907. See Table 4.

Prausnitz–Küstner (PK) reaction [*prous'nits kēst'ner*] a local hypersensitivity reaction induced by intradermal injection into a normal person of serum from a hypersensitive individual. Injection 24 hours later of the antigen to which the donor is allergic results in a wheal-and-flare response.

prawn see ***Penaeus***.

fleshy p. ***Penaeus chinensis***.

g. tiger prawn ***Penaeus monodon***.

praying posture see praying **posture**.

prazepam [*praz'ə-pam*] a benzodiazepine tranquilizer, similar to diazepam.

praziquantel [*pra"zĭ-kwahn'təl*] a widely used cestocide in dogs and cats. Has a very high efficiency against *Echinococcus granulosus*, removing all of the worms with a single dose. Called also Droncit.

prazosin [*pra'zo-sin*] a postsynaptic α-adrenergic receptor blocker that acts as a peripheral vasodilator; used in the treatment of congestive heart failure and urinary incontinence.

PRD progressive retinal degeneration.

pre- word element. [L.] *before* (in time or space).

pre-ejection period the period between when the ventricular contraction occurs and the semilunar valves open and blood ejection into the aorta commences.

pre-excitation premature excitation of a portion of the ventricle caused by stimuli passing along one of the auxiliary pathways of cardiac stimulation that are not subject to the same physiological delays as the A-V node. Characterized electrocardiographically by a short P–R interval and a wide QRS interval. See also accessory tract atrioventricular **conduction**, **Wolff–Parkinson–White syndrome**, **Lown–Ganong–Levine syndrome**.

pre-mRNA precursor mRNA.

preagonal [*pre-ag'ə-nəl*] immediately before the death agony.

prealbumin [*pre"al-bu'min*] an electrophoretically fast-migrating protein in human serum but not positively identified in animals. Concerned in thyroxine binding and transport.

preanesthesia preliminary anesthesia; sedation, light anesthesia or narcosis induced by medication as a preliminary to administration of a general anesthetic.

preanesthetic [*pre"an-əs-thet'ik*] 1. pertaining to preanesthesia. 2. an agent that produces a physiologic condition that facilitates induction of anesthesia. Acepromazine, atropine, diazepam are examples. 3. occurring before the administration of an anesthetic.

preantiseptic [*pre"an"tĭ-sep'tik*] pertaining to the time before the discovery of antisepsis.

preauricular [*pre"aw-rik'u-lər*] in front of the auricle of the ear.

p. alopecia an area of sparse haircoat located between the eyes and base of the ears in cats; a normal variation, but sometimes incorrectly interpreted as alopecia.

preaxial [*pre-ak'se-əl*] situated before an axis; the lateral radial aspect of the forelimb, and the tibial aspect of the hindlimb.

prebetalipoprotein [*pre-ba'tə-li"po-pro'tēn*] very low-density lipoprotein.

prebetalipoproteinemia [*pre-ba"tə-lip"o-pro"te-ne'me-ə*] hyperprebetalipoproteinemia.

prebiotic [*pre"bi-ot'ik*] dietary fiber supplements, consisting of complex oligosaccharides, primarily fructooligosaccharides, mannooligosaccharides, xylooligsaccharides, and arabinooligosaccharides. Oligosaccharides are resistant to mammalian enzymatic digestion, but are readily fermented by enteric bacteria. Their includsion in feeds is believed to promote nonpathogenic colonic bacterial growth, primarily of bifidobacteria and lactobacilli, and to maintain colonic health by production of beneficial short chain fatty acids with a decrease in intestinal pH, thus adversely altering the environment for pathogenic bacteria and reducing of colostridial numbers.

prebloom the last stage of a plant's growth, just before it blooms. It is at maximum bulk and the nutriment is still largely in the foliage. Subsequently the nutritional mass moves out of the foliage and into the seeds and fruits.

precancer [*pre'kan-sər*] a condition that tends to become malignant but does not necessarily do so, e.g. precancerous eye lesions in cancer-eye of cattle. See **squamous** cell carcinoma, **neoplasia**.

precapillary [*pre-kap'ĭ-lar"e*] a vessel lacking complete coats, intermediate between an arteriole and a capillary.

p. sphincters capillaries with a muscle layer which controls the flow of blood from the arterioles into the capillary bed.

precardial [*pre-kahr'de-əl*] pertaining to the **precardium**.

precardium [*pre-kahr'de-əm*] the area of the chest wall ventral to the heart.

precava [*pre-ka'və*] the cranial vena cava.

preceptor [*pre'sep-tər*] an instructor. Common usage of the term is that of a skilled practitioner or veterinarian in other field of work who gives one-to-one in-service training to undergraduate students in their practices or other places of work.

preceptorships an appointment as a preceptor.

prechordal [*pre-kor'dəl*] situated in front of the notochord in the developing embryo.

precipitant [*pre-sip'ĭ-tənt*] a substance that causes precipitation.

precipitate [*pre-sip'ĭ-tāt*] 1. to cause settling of a soluble substance in solution. 2. a deposit of solid particles settled out of a solution. 3. occurring with undue rapidity, as precipitate labor.

precipitation [*pre-sip"ĭ-ta'shən*] the act or process of precipitating.

p. test see **precipitin** reaction.

precipitin [*pre-sip'ĭ-tin*] an antibody to soluble antigen that specifically aggregates the antigen in vivo or in vitro to give a visible precipitate.

p. curve a plot showing the amount of antibody precipitated with increasing amounts of antigen added in a precipitin reaction.

double diffusion p. test see **immunodiffusion**.

p. reaction, p. test a reaction involving the specific precipitation of an antigen in solution by mixing with a specific antiserum in the presence of electrolytes. See also **lattice** theory.

precipitinogen a soluble antigen that stimulates the formation of and reacts with a precipitin.

precision [*pre-sizh'ən*] the quality of being sharply defined by virtue of exact detail, an important criteria of a diagnostic test. A precise test is free from random error. Precision is a requirement of **accuracy**.

preclinical [*pre-klin'ĭ-kəl*] before a disease becomes clinically recognizable.

VetBooks.ir

precocial [*pre-ko'shəl*] said of some species of birds and mammals that give birth to young that are relatively well developed with open eyes, good covering of feathers or hair, and are independently mobile. This is usually associated with a longer gestation period. Seen in most ungulates and in guinea pigs. The opposite of **altricial**.

precocity [*pre-kos'ĭ-te*] unusually early development of physical and sexual traits.

preconditioning [*pre"kən-dish'ən-ing*] preparation of 6 to 8 months old range-reared, recently weaned beef calves for entry into a feedlot and an intensive fattening program. Includes castration, dehorning and branding 3 weeks before and all vaccinations 2 weeks before weaning, and weaning 3 to 4 weeks before sale or entry to the feedlot. During this postweaning period the calf should become accustomed to feedlot feeds and conditions.

precordial [*pre-kor'de-əl*] pertaining to the precordium.

p. electric shock see **cardioversion**.

p. thump a sharp blow to the sternum to revive heart action is used in certain types of cardiac arrest in humans. It has not been of proven benefit in animals.

precordium [*pre-kor'de-əm*] area of the chest wall over which the heart contractions can be palpated and auscultated; typically it is found on the ventral third of the left chest wall behind the elbow, which may be advanced cranially for better access.

precorneal anterior to or external to the cornea.

p. tear film the thin layer of secretions from the conjunctival goblet cells and lacrimal, tarsal and nictitans glands that covers the outer surface of the cornea and conjunctiva. Typically abbreviated to tear film or tears.

precostal [*pre-kos'təl*] ventral or cranial to the ribs.

precuneus [*pre-ku'ne-əs*] pl. *precunei* [L.] a small convolution on the medial surface of the parietal lobe of the cerebrum.

precursor [*pre'kər-sər*] something that precedes. In biological processes, a substance from which another, usually more active or mature substance is formed. In clinical medicine, a clinical sign or syndrome that heralds another.

p. fragments see **Okazaki fragments**.

predation [*pre-da'shən*] the characteristic of preying on other animals as a source of food. Can be a big cause of loss in animal flocks and herds, especially lambs. See also **predatory**.

predator [*prĕ'də-tər*] an animal that derives its life support by **predation**.

predatory [*prĕ'də-to"re*] pertaining to **predator**.

p. lesions dog attacks cause massive hemorrhages, much tissue disruption, broken bones; attack mostly thighs, flanks, lambs have crushed skulls; foxes attack tongue, lower jaw, tail area, thigh; coyotes eat a part of the carcass, crushing and tearing of larynx, fang marks in skin, lambs crushed head and neck; crows attack eyes, tongue, anus, umbilicus of already immobilized victim.

predentin [*pre-den'tin*] immature, uncalcified dentin, consists chiefly of fibrils.

prediabetes [*pre-di"ə-be'tēz*] a state of latent impairment of carbohydrate metabolism in which the criteria for diabetes mellitus are not all satisfied.

prediastole [*pre"di-as'tə-le*] the interval immediately preceding diastole.

predicrotic [*pre"di-krot'ik*] occurring before the dicrotic wave of the sphygmogram.

predicted difference predicting the improvement in production of the offspring as compared with that of the dam's which will result with the use of a particular sire. The estimate is based on the actual performance of the male in this regard, as measured on a sample of his offspring. Incorporates adjustments for environmental and management group effects and genetic trend. Called also expected progeny difference (EPD).

predictive value a measure used by clinicians to interpret diagnostic test results. the diagnostic value of a test is defined by its sensitivity, specificity, predictive value and efficiency. See also **sensitivity**, **specificity**, **test** efficiency.

positive p. v. 1. the probability that a patient with a positive test result really does have the condition for which the test was conducted. 2. the proportion of true positives to the total number of positives in the population. The higher the disease prevalence the greater the probability that a positive result will be truly correct.

negative p. v. 1. the probability that a patient with a negative test result really is free of the condition for which the test was conducted. 2. the proportion of the true negatives to the total number of negatives in the population.

predigestion [*pre"di-jes'chən*] partial artificial digestion of food before its ingestion into the body.

predisposition [*pre"dis-pə-zish'ən*] a latent susceptibility to disease which may be activated under certain conditions.

prediverticular [*pre-di"vər-tik'u-lər*] denoting a condition of thickening of the muscular wall of the colon and increased intraluminal pressure without evidence of diverticulosis.

prednisolone [*pred-nis'ə-lōn"*] a glucocorticoid; an analog of hydrocortisone with 3–5 times the potency. Used as the crystalline form for oral administration, as the acetate or butylacetate for soft tissue injection or the sodium phosphate or sodium succinate for intravenous administration.

prednisone [*pred'nĭ-sōn*] a synthetic glucocorticoid; a prodrug converted into **prednisolone**.

preen gland see uropygial **gland**.

preformation theory [*pre"for-ma'shən*] a defunct theory that each germ cell contains a complete microscopic replica of the organism.

prefrontal [*pre-fron'təl*] situated in the anterior part of the frontal region or lobe of the brain.

preganglionic [*pre"gang-gle-on'ik*] nerve fibers, usually autonomic ones located proximal to a ganglion.

pregnable [*preg'nə-bəl*] capable of becoming pregnant.

pregnancy [*preg'nən-se*] the condition of having a developing embryo or fetus in the body, after union of an ovum and spermatozoon. The duration of pregnancy in each animal species varies widely. See also **gestation**.

abdominal p. ectopic pregnancy within the peritoneal cavity.

p. diagnosis see pregnancy tests (below).

double p. see **superfetation**.

p. duration see **gestation** period.

early p. hormone (factor) identified in mice and several other species including sheep, cattle, pigs, humans; appears in the blood within a few hours of conception and persists for several weeks; identifiable by laboratory test. Known also as early conception factor (ECF). Commercial kits are available for pregnancy diagnosis based on detection of ECF, but their accuracy has been challenged.

ectopic p., extrauterine p. development of the fertilized ovum outside the cavity of the uterus. The site of implantation usually is one of the uterine tubes. Not recorded as occurring in animals.

p. edema see **udder** edema.

p. failure includes fetal resorption, fetal mummification, abortion, miscarriage.

false p. development of all the signs of pregnancy without the presence of an embryo. Commonly seen in bitches, 40 to 60 days after estrus, associated with the persistence of corpora lutea. There may be all the signs of impending parturition with mammary development, lactation and behavior changes, including nest building and aggression. Tends to recur in the same bitch. Sometimes pyometra is a sequel. Called also pseudopregnancy, pseudocyesis.

hormonal p. diagnosis the use of any specific hormone to determine a state of pregnancy; can use chorionic gonadotropin (equine), pregnancy specific proteins or pregnancy associated proteins (ruminants), progesterone (camelids), relaxin (canine).

multiple p's. twins, triplets and more in usually uniparous species.

phantom p. see false pregnancy (above).

p. prolonged see **prolonged gestation**.

p. rate (overall) the percentage of all services given to a group of females during a defined period which result in pregnancies (diagnosed at 42 days or more after service), or percentage of all females which become pregnant during a specified (usually seasonal) breeding period.

secondary p. toxemia pregnancy toxemia secondary to another condition which reduces the ewe's or cow's feed intake.

p. specific protein B a pregnancy diagnosis test available commercially; based on detection of a protein (PSPB) secreted by the trophoblastic ectoderm and present in the cow's peripheral circulation at day 24 of gestation; persists in the circulation for 90 days after parturition. The test is used in all ruminants (domestic and wild) at various stages of pregnancy.

p. termination in the early stages of pregnancy prostaglandins are used; in the later stages corticosteroids are used. The efficacy of the various treatments varies between the species. See also **parturition** induction.

p. tests cover a wide range with different diagnostic techniques being most satisfactory in different species. *Mare*—ultrasound at 14-16 days, transrectal palpation of the uterus 30 to 35 days, serum gonadotropin concentrations at day 40 to 100. *Cow*—ultrasound at 27 days, transrectal palpation from 35 days onwards; progesterone assay in milk at day 24 after breeding, pregnancy specific protein B (PSPB). *Ewes*—ultrasound transrectal at 25 days, transabdominal after 40 days, rectal probe after 70 days, PSPB after 24 days. *Sow*—estrone sulfate content of the urine at 25 days, rectal examination at 30 days, ultrasound at 28 days. *Bitch, queen*—palpation through the abdominal wall in a cooperative patient at 21 days, radiographic examination at day 45, ultrasound at 35 days, (dogs) relaxin at 4 weeks.

tubal p. see ectopic pregnancy (above).

p. toxemia is recorded in ruminants. 1. Ewes. Pregancy toxemia occurs only in the last month of pregnancy, most commonly in fat ewes carrying twin lambs, and in circumstances in which the feed supply is declining. Sheep have encephalopathy with blindness, muscle tremor, convulsions, metabolic acidosis and a clinical course of 2 to 8 days, usually terminating fatally unless treated early. See also **fat** ewe pregnancy toxemia. 2. Cows. Fat cows in the last 6 weeks of pregnancy and which suffer a sharp decrease in feed are subject. Dairy cows that calve in an excessively fat state and then are stressed nutritionally develop a syndrome very similar to pregnancy toxemia but called more commonly **fat** cow syndrome. In all of the diseases there is blindness, recumbency and severe ketosis. In early cases there may be some excitation, even convulsions. 3. in guinea pig sows, particularly obese ones, uteroplacental ischemia caused by aortic compression and iliac arterial hypoplasia occurs in late pregancy, causing lethargy, anorexia and rapid death.

pregnane [*preg'nān*] one of the two major types of steroid hormone involved in female reproductive processes; includes progesterone.

pregnane glycosides [*preg'nān gli'ko-sīdz*] neurotoxins isolated from plants in the family Asclepiadaceae such as *Cynanchum, Marsdenia, Sarcostemma*; cause muscle tremor, hypersensitivity, tetanic and clonic seizures. Include cynafosides, sarcovimosides. Syndrome called cynanchosis (South Africa).

pregnanediol [*preg"nān-di'ol*] a crystalline, biologically inactive dihydroxy derivative of pregnane, formed by reduction of progesterone and found especially in urine of pregnant women.

pregnanediol-3-glucuronide a common urinary metabolite of progesterone used in assays of the hormone.

pregnanetriol [*preg"nān-tri'ol*] a metabolite of 17-hydroxyprogesterone; its excretion in the urine is greatly increased in certain disorders of the adrenal cortex.

pregnant [*preg'nənt*] having one or more developing embryo or fetus within the uterus; gravid; in calf, in lamb, in pig, in foal, in pup.

p. mare serum gonadotropin (PMSG) originates in the endometrial cups and present in the blood during the period 40 to 140 days of pregnancy. Used pharmaceutically to stimulate growth of follicles in inactive ovaries in adult animals, and in combination with prostaglandin to induce superovulation in cows which are acting as donors for embryo transfers. Now called equine chorionic gonadotropin (eCG).

P-67: Ewe with drought-induced pregnancy toxemia. The ewe is separated from other sheep in the flock, she can hear the approach of a person but cannot see and usually can be easily caught.

pregnenolone [*preg-nēn'ə-lōn*] first intermediate in the synthesis of steroid hormones from cholesterol.

prehemiplegic [*pre-hem"i-ple'jik*] preceding hemiplegia.

prehensile [*pre-hen'sil*] adapted for grasping or seizing; usually said of tails (as in certain reptiles, New World primates opossum, and kinkajou), hands or feet, or nose (as in elephants).

prehension [*pre-hen'shən*] the act of grasping. Common usage is grasping with the mouth for food.

difficult p. needs to be classified into difficulty in approaching food, paralysis of the tongue or jaws, malapposition of incisor teeth, pain in the mouth, foreign body in the mouth, and defective development of the lips or tongue.

prehormone [*pre-hor'mōn*] prohormone.

prehypophysis [*pre"hi-pof'i-sis*] the anterior lobe of the hypophysis, or pituitary gland.

preictal [*pre-ik'təl*] occurring before a seizure.

preicteric [*pre-ik-ter'ik*] preceding the appearance of jaundice.

preimmunization [*pre-im"u-nĭ-za'shən*] vaccination well in advance of the expected threat, e.g. 4 weeks before cattle go into a feedlot rather than the day of entry.

preinvasive [*pre"in-va'siv*] not yet invading tissues outside the site of origin.

Preisz–Nocard bacillus [*prīs no-kahr'*] see ***Corynebacterium pseudotuberculosis***.

prekallikrein [*pre"kal-i-kre'in*] **Fletcher factor** in blood coagulation. Precursor of plasma kallikrein which circulates in the blood. Acts in the initiation of intrinsic coagulation.

prekeratin [*pre"ker'ə-tin*] a fibrous protein precursor of keratin synthesized by basal cells of the epidermis.

prekeratocyte an abnormal erythrocyte form in which there is a cytoplasmic clear space caused by a hole; an intermediate form of a **keratocyte**. Called also blister cell

preleukemia [*pre-loo-ke'me-ə*] a stage of bone marrow dysfunction which may progress to the development of granulocytic leukemia. Neoplastic cells are present in the bone marrow, but not in peripheral blood. It occurs in cats which in most cases are infected by feline leukemia virus. The disease is also called subleukemic granulocytic leukemia.

prelimbic [*pre-lim'bik*] in front of a limbus; refers usually to the limbus fossae ovalis (the margin of the fossa between the two atria).

preload [*pre'lōd*] see **cardiac** preload.

premalignant [*pre"mə-lig'nənt*] precancerous.

premating uterus disinfection in some herd health programs; includes uterine infusion in all or selected cows with antibiotic or other antibacterial material. Previously practised, but no longer recommended.

premature [*pre-mə-chōōr'*] born or interrupted before the state of maturity; occurring before the proper time.

p. heartbeats arise from irritable foci from within the myocardium in either the atrium or ventricle or close to the A-V node (junctional premature beats). They may cause irregularity of the heartbeat but they can be accurately identified only by the use of an electrocardiograph. The clinical significance of intermittent premature hearbeats is difficult to ascertain, but persistent occurrence is indicative of heart disease.

p. ventricular complexes see premature heartbeats (above).

p. ventricular contraction (PVC) see premature heartbeats (above).

p. young a newborn animal born before the full term of its pregnancy but capable of maintaining an independent existence.

prematurity [*pre"mə-chōōr'i-te*] underdevelopment; the condition of being born prematurely.

p. and dysmaturity in foals term used for foals that show signs of prematurity and may be born prematurely, full term or even after a prolonged gestation, that may be small in size, slow to rise and suck, have a fine silky hair coat with soft ears and lips, incomplete ossification of the carpal and tarsal bones, a domed forehead, a red tongue and increased susceptibility to hypothermia and failure of passive transfer of immunoglobulins.

premaxilla [*pre"mak-sil'ə*] the incisive bone, the bone which bears the upper incisor teeth.

cleft p. see **cleft** lip.

premaxillary [*pre-mak'si-lar'e*] 1. situated in front of the maxilla proper. 2. incisive bone. 3. pertaining to the premaxilla.

premaxillectomy [*pre-mak"sĭ-lek'tə-me*] surgical removal of a premaxilla, usually performed for radical excision of an oral neoplasm.

premedication [*pre"med-ĭ-ka'shən*] preliminary medication, particularly internal medication to produce sedation or narcosis prior to general anesthesia, e.g. acepromazine, diazepam, promethazine.

premilking 1. in the period immediately before commencing to milk the cow, ewe or doe goat. 2. the act of milking the cow prior to parturition to reduce the severity of udder edema or to reduce the risk of parturient hypocalcemia (milk fever). Better methods of prevention are available. This practice will result in a decreased concentration of colostral immunoglobulins at parturition and a higher risk for neonatal calf disease.

p. udder preparation includes cleaning of the teats and udder so as to provide milk of good quality, massage to encourage letdown and fast milking, and physical examination and rejection of the first few streams of milk which are most likely to contain transient bacterial infections.

premises a building or part of a building, including land and other appurtenances, especially mechanical services.

veterinary p. does not define whether the accommodation is classified as a hospital, or a clinic, or is less than those and does not fit any special criteria. Does indicate that the premises are used for veterinary purposes, e.g. branch premises indicates that the premises are used for veterinary work but is serviced from a main clinic at a distance and is not manned for sufficiently long periods each day to qualify as a branch practice.

premix a finite mixture of nutritional supplements such as minerals and vitamins, usually combined with a carrier and ready for mixing with a total ration.

premolar [*pre-mo'lər*] in front of (mesial or proximal to) the molar teeth, yet still behind (distal to) the canines. See also **teeth**.

premorbid [*pre-mor'bid*] occurring before the development of disease.

premucin [*pre-mu'sin*] mucin prior to its discharge from its goblet cell; gives the cell a foamy appearance.

premunition [*pre"mu-nish'ən*] resistance to infection by the same or closely related pathogen established after an acute infection has become chronic, and lasting as long as the infecting organisms are in the body.

premyeloblast [*pre-mi'ə-lo-blast"*] a precursor of a myeloblast.

premyelocyte [*pre-mi'ə-lo-sīt"*] promyelocyte; progranulocyte.

prenarcosis [*pre-nahr-ko'sis*] the induction of narcosis usually as a preliminary to general anesthesia or as an adjunct to local or regional anesthesia.

prenatal [*pre-na'təl*] preceding birth.

p. care care of the pregnant female before delivery of the neonate.

p. cytogenetic studies cytogenetic studies carried out on amniotic fluid cultures, the fluid being collected by amniocentesis, is not much used in veterinary medicine because of lack of knowledge of congenital disease linked to chromosomal abnormality. Could be used as a means of early sex determination.

p. infection infection of the fetus via an intact placenta, in the case of viruses, or via a placentitis in the case of bacterial or metazoan infections.

p. loss see **abortion**, **stillbirth**, early **embryonic** mortality, **mummification**.

preneoplastic [*pre"ne-o-plas'tik*] before the formation of a tumor. See also **precancerous**.

Prenia vygie ***Psilocaulon*** *rogersiae*.

preOp preoperative.

preoperative [*pre-op'ar-ə-tiv*] preceding an operation.

p. care the preparation of a patient before operation. The preoperative period may be extremely short, as with an emergency operation, or it may encompass several days during which diagnostic tests, specific medications and treatments, and measures to improve the patient's general well-being are employed in preparation for surgery.

p. cleansing preparation of the patient and surgical personnel to minimize contamination of the wound. See also **scrub** (2).

p. scrub-up see surgical **scrub**.

preoptic nuclei [*pre-op'tik*] nuclei in the anterior part of the hypothalamus.

preoral [*pre-or'əl*] situated rostral to the mouth; in front of the mouth.

preoxygenation [*pre-ok"sĭ-jən-a'shən*] administration of oxygen before the anaesthetic is given in order to increase oxygen tension.

prep abbreviated form of 'preparation'; most commonly used in reference to antiseptic skin preparation for surgery.

preparalytic [*pre-par"ə-lit'ik*] preceding paralysis.

prepartum [*pre-pahr'təm*] just before parturition.

prepatellar [*pre"pə-tel'ər*] in front of (cranial to) the patella.

prepatent [*pre-pa'tənt*] before it becomes manifest. Used with reference to infection with bacteria, viruses and particularly helminth parasites.

p. period the period between infection of the host and the earliest time at which the causative agent can be recovered from the patient or, in the case of parasites, eggs or larvae can be recovered from feces, urine or blood. It is usually shorter than the incubation period but may be longer in some parasitic infestations, e.g. hookworm infestation in puppies.

prepotent having great power; of the two parents, the one with greater power to transmit heritable characteristics to the offspring.

preprandial [*pre-pran'de-əl*] before meals.

prepriming complex in DNA replication, an assembly of proteins that include dnaB–dnaC complex and proteins n, n', n'' and i, formed at an intermediate time during DNA replication.

prepriming protein in the initiation of prokaryotic DNA replication, a group of proteins that bind to tetranucleotide motifs (T7 phage) prior to the synthesis of oligonucleotide primers by primase.

preprocessing controls in an ultrasound machine, controls which alter the character of the incident beam of ultrasound, thus enhancing the resultant image.

preprocollagen chain [*pre"pro-kol'ə-jən*] primary translational product in the production of collagen.

preproinsulin [*pre"pro-in'su-lin*] the precursor of proinsulin, containing an additional polypeptide sequence at the *N*-terminal.

preproparathyroid hormone [*pre"pro-par"ə-thi'roid hor'mōn*] a precursor of proparathyroid hormone, synthesized on the ribosomes of chief cells; abbreviated pre-proPTH.

preproprotein [*pre"pro-pro'tēn*] any precursor of a proprotein.

prepuberal, prepubertal [*pre-pu'bər-əl*] before puberty; pertaining to the period preceding gonadal maturity.

prepubescent [*pre"pu-bes'ənt*] prepuberal.

prepubic [*pre-pu'bik*] in front of the pubis.

p. tendon rupture occurs in late pregnancy in mares and cows. In horses, it is in inactive or older mares, especially of the draft breeds. The onset is usually acute and presents with painful ventral edema, followed by a pendulous 'dropped' abdomen. Diagnosis is facilitated by transcutaneous ultrasonography.

prepuce [*pre'pūs*] an invagination of skin which covers the free portion of the penis in the non-erect state. In horses the invagination is a double one. In cattle called also pizzle.

preputial [*pre-pu'shəl*] emanating from or pertaining to the prepuce.

p. anastomosis a treatment for preputial prolapse in pigs involving resection of the prolapsed portion and joining of the skin and mucosal surfaces at the margin of the prolapsed tissue.

p. anulus the fibrous ring contained in the skin around the external orifice of the prepuce.

p. calculus top-shaped mass; may act as valve and obstruct preputial orifice.

p. diverticulitis inflammation of the preputial diverticulum in the pig.

P-68: Mare with rupture of the prepubic tendon. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

VetBooks.ir

P-69: Partial preputial eversion in a bull. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

p. diverticulum an evagination of the prepuce such as of the dorsal wall of the preputial cavity of the boar just inside the external preputial orifice. Called also preputial sac.
p. eversion because of injury or infection the skin lining the preputial cavity becomes swollen and edematous and prolapses through the preputial orifice where it is likely to undergo more injury. Commonest in cattle and among them in polled animals which are likely to have a higher incidence of weak preputial muscles and therefore the most dependent pizzles. Called also preputial prolapse.
p. hypoplasia with concurrent smallness of other genitalia occurs with early castration and in intersex specimens.
p. inflammation posthitis.
p. prolapse seen in pigs and may be treated by replacement and use of a purse-string suture, or in more severe cases by preputial anastomosis (above).
ring method of p. amputation a surgical method of treating prepucial prolapse in bulls, using a rigid plastic ring as a framework for ligation.
p. sac see preputial diverticulum (above).
p. stenosis see **phimosis**.
p. varicosities distended veins that often cause local distention of the prepuce in stallions but do not appear to interfere with breeding.

preputiotomy [*pre-pu"she-ot'ə-me*] incision of the prepuce of the penis to relieve phimosis.
preputium [*pre-pu'she-əm*] prepuce.
prepyloric [*pre"pi-lor'ik*] just oral to the pylorus.
prerace testing a procedure for testing a horse's urine or saliva for drugs before the race is run with the objective of excluding the horse if the result is positive. This does not achieve the real objective of avoiding fraudulent betting coups and because the logistics are difficult and expensive, and because postrace testing is still necessary in the same animal, prerace testing is not a common strategy.
prerenal [*pre-re'nəl*] in front of the kidney, used usually in a physiological sense rather than an anatomical one. The most important prerenal mechanism is severe reduction in renal blood flow and therefore glomerular filtration in shock, dehydration and severe hemorrhage.
p. failure failure of the urinary mechanism due to inadequate perfusion of the kidney.
Presa Canario see **Perro de Presa Canario**.
presacral [*pre-sa'krəl*] cranial to the sacrum.
presby- word element. [Gr.] *old age*.
presbyacusia [*pres"be-ə-ku'zhə*] see **presbycusis**.
presbyatrics [*pres-be-at'riks*] geriatrics.
presbycardia [*pres"be-kahr'de-ə*] impairment of cardiac function attributed to aging, with senescent changes in the body and no evidence of other cause of heart disease.
presbycusis, presbyacusia [*pres"bĭ-ku'sis*] progressive, bilateral loss of hearing with advancing age; occurs in several animal species, especially old dogs.
presbyopia [*pres"be-o'pe-ə*] hyperopia; (diminution of near visual acuity) caused by reduced accommodation resulting from decreased elasticity of the lens, which occurs as a normal aging change.
prescription [*prĕ-skrip'shən*] a written directive, as for the compounding or dispensing and administration of drugs, or for other service to a particular patient. Any prescription relating to restricted drugs must be directed to a qualified pharmacist and can be authorized only by a registered veterinarian, dentist or medical practitioner. There are four parts to a drug prescription. The first is the symbol ℞ from the Latin *recipe*, meaning 'take'. This is the superscription. The second part is the inscription, specifying the ingredients and their quantities. The third part is the subscription, which tells the pharmacist how to compound the medicine. The signature is the last part, and it is usually preceded by an S or sig. to represent the Latin *signa*, meaning 'mark'. The signature is where the veterinarian indicates what instructions are to be put on the outside of the package to tell the patient when and how to take the medicine and in what quantities. The pharmacist keeps a file of all the prescriptions he/she fills.
p. drugs drugs limited in their availability so that a prescription is needed to obtain them. Called also restricted substances.
presentation [*pre"zən-ta'shən*] lie; the relationship of the long axis of the fetus to that of the dam. In foals and ruminants the normal presentation of a fetus during parturition is with the forelimbs extended forward so that the hooves are presented first, followed by the head between the forearms, followed by the trunk, abdomen and lastly the hindlimbs extended backward, i.e. anterior presentation. In piglets the usual presentation is the nose first followed by the shoulders with the forelimbs beside the trunk, followed by the hindlimbs extended backward. The nose of puppies and kittens is presented first with the front paws forward under the neck and chin.
anterior p. presentation of the front feet and limbs followed by the fetal head in labor.
breech p. presentation of the fetal buttocks and tail in labor.
funic p. presentation of the umbilical cord in labor.
poll p. the fetus is presented with the forelimbs retained and the neck flexed so that the poll is presented in the cervix.
posterior p. the hindfeet are presented followed by the hindlimbs and hindquarters and tail; a normal variation in dogs and pigs.
transverse p. at birth the fetus is presented at the pelvic inlet with its long axis running across the long axis of the pelvic canal in the dorsotransverse position. It is the back of the fetus that can be palpated. There are no fetal parts with which to effect a correction.
ventral head p. the fetus presents with the head and neck flexed beneath the body. Called also neck flexion.
preservation 1. of food by any means which will inhibit the growth of microorganisms. Includes salting, wet pickling, drying, cold storage, smoking, vacuum packing, heating, gamma-radiation. 2. preservation of specimens for teaching purposes.
preservative [*prə-zur'və-tiv*] a substance added to a product to destroy or inhibit multiplication of microorganisms.
food p. substances added to food for humans; hence they are not poisonous.
wood p. chrome–copper–arsenic, chlorinated naphthalene, creosote; poisonous to most animals. See also **wood preservative**.
preslaughter tenderizing the intravenous injection of a tenderizing agent, usually a proteolytic enzyme, a few minutes before slaughter. The concept is a repugnant one to most people, some consider that the effects are dubious and some animals die of anaphylaxis immediately after the injection.
presomite [*pre-so'mīt*] referring to embryos before the appearance of somites.
presphenoid [*pre-sfe'noid*] the anterior portion of the body of the sphenoid bone (os presphenoidale).
presphygmic preceding the pulse wave.
p. interval, p. period the first phase of ventricular systole, being the period immediately after closure of the atrioventricular valves and lasting until the semilunar valves open.
pressor [*pres'or*] tending to increase blood pressure.
pressor receptor [*pres'or re-sep'tər*] pressoreceptor.
pressoreceptive [*pres"o-re-sep'tiv*] sensitive to stimuli due to vasomotor activity; pressosensitive.
pressoreceptor [*pres"o-re-sep'tər*] a receptor or nerve ending sensitive to stimuli of vasomotor activity.
pressosensitive [*pres"o-sen'sĭ-tiv*] pressoreceptive.
pressure [*presh'ər*] stress or strain, by compression, expansion, pull, thrust or shear.

arterial p. the blood pressure in the arteries.
atmospheric p. the pressure exerted by the atmosphere, about 15 lb per square inch (2.17 kPa) at sea level.
capillary p. the blood pressure in the capillaries.
central venous p. (CVP) see **central** venous pressure.
cerebrospinal p. the pressure of the cerebrospinal fluid, normally 100–150 mmHg.
diastolic p. the lowest pressure recorded in the arterial blood pressure cycle. Represents the minimal pressure in the left ventricle which can maintain its ejection phase. See also **blood pressure**.
p. gauge a device attached to the outlet of gas tanks to measure internal pressure which indicates the quantity of gas remaining.
p. gradient the rate of increase (or decrease) in the magnitude of the pressure being measured.
intracranial p. (ICP) see **intracranial** pressure.
intraocular p. (IOP) the pressure exerted against the outer coats of the eye by its contents; typically reduced in uveitis and elevated in glaucoma.
p. load see **flowload**.
mean circulatory filling p. a measure of the average (arterial and venous) pressure necessary to cause filling of the circulation with blood; it varies with blood volume and is directly proportional to the rate of venous return and thus to cardiac output.
p. natriuresis thought to participate in regulating the volume of extracellular fluid levels when the normal neurohumoral mediators are impaired; the increase in water and sodium ion excretions which occur when blood pressure is elevated because of an increase in the circulating blood volume.
p. necrosis necrosis of tissue caused by exclusion of circulation by external compression, e.g. in prolonged recumbency, or due to too-tight bandage, collar, harness.
negative p. pressure less than that of the atmosphere.
oncotic p. the osmotic pressure of a colloid, including proteins in solution. Usually acts to pull water into the blood; low oncotic pressure may result in fluid accumulation in the tissues (edema).
osmotic p. the potential pressure of a solution directly related to its solute osmolar concentration; it is the maximum pressure developed by osmosis in a solution separated from another by a semipermeable membrane, i.e. the pressure that will just prevent **osmosis** between two such solutions.
partial p. the pressure exerted by a specific gas in a mixture of gases. Because the amount of the gas dissolved in a liquid is proportional to the pressure of the gas on the fluid the concentration of a gas in a fluid is expressed as its partial pressure.
positive p. pressure greater than that of the atmosphere.
pulse p. difference between systolic and diastolic pressures in arteries.

P-70: Pressure necrosis. Pressure sore over the lateral hock.
Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

p. receptors e.g. the blood pressure receptors in the aortic arch and the carotid sinus.
p. sore see **decubital ulcer**.
systolic p. the highest reading in the arterial blood pressure cycle. A reflection of the ejection pressure of left ventricular systole, and the elasticity of the arterial system.
venous p. the blood pressure in the veins. See also **central** venous pressure.
wedge p. intravascular pressure as measured by a **Swan–Ganz catheter** introduced into the pulmonary artery; it permits indirect measurement of the mean left atrial pressure.
p. wrap bandages which apply pressure to underlying tissues; used after trauma to limit the development of edema, and in the management of lymphedema.
pressure points parts of the body subject to pressure when the animal is recumbent, wearing harness or saddlery, or during restraint. Usually bony prominences such as the point of the hock, hip, shoulder, elbow and lateral aspects of limbs. These are predisposed to callus formation, pyoderma and granulomas.
presternal [*pre-ster'nəl*] ventral, or rarely, cranial to the sternum.
p. calcification calcification of originally fat necrotic lesions in the brisket of cattle resulting from repeated trauma caused by lying down or by pressure by feed trough. Called also putty brisket.
presternum [*pre-stur'nəm*] the manubrium; the cranial part of the sternum.
presuppurative [*pre-sup'u-ra"tiv*] preceding suppuration.
presuturing [*pre-soo'chər-ing*] the suturing of skin over a lesion 12 to 24 hours before it is to be surgically removed. This allows for stretching of skin which assists in closure of the defect at the time of surgery.
presymptomatic [*pre"simp-to-mat'ik*] existing before the appearance of clinical signs.
presynaptic [*pre"si-nap'tik*] situated or occurring proximal to a synapse.
presystole [*pre-sis'to-le*] the interval in the cardiac cycle just before systole.
presystolic [*pre"sis-tol'ik*] pertaining to **presystole**.
pretarsal [*pre-tahr'səl*] dorsal to the tarsus.
pretibial [*pre-tib'e-əl*] cranial to the tibia.
prevalence [*prev'ə-ləns*] the total number of cases of a specific disease in existence in a given population at a certain time, i.e. **prevalence**. In a herd, disease prevalence is a function of incidence, duration of disease and rate of loss or removal of affected animals. See also **cross-sectional study**.
instantaneous p. the prevalence at a particular moment. Called also spot prevalence.
period p. the number of cases of a disease which occur during a specified period, e.g. annual, lifetime, as a percentage of the total or average total number of animals at risk during the same period.
point p. as for period prevalence (above) except that the assessment is made at a specific point in time rather than over a period, a rather impractical exercise.
point p. rate the proportion of the animals in a population at a point in time which are affected by the subject disease at that point. Called also instantaneous prevalence.
p. rate the number of patients who have the disease at a particular time, divided by the population at risk of having the disease at that time.
spot p. see instantaneous prevalence (above).
prevalent [*prev'ə-lənt*] widespread occurrence.
prevention [*pre-ven'shən*] in disease control terms includes measures designed to prevent the introduction of a disease into areas where it does not already exist, and improve the resistance of the population and reduce the chances of the infection spreading, when the disease already exists in the population.
preventive [*pre-ven'tiv*] serving to avert the occurrence of; prophylactic.
veterinary p. medicine science aimed at preventing disease in animals. Preventive medicine has been a large part of general practices for many years and is currently expanding the sorts of services that it provides by the inclusion of such items as herd health programs, biosecurity, cytogenetic surveillance, embryo transfer.
veterinary p. screening see **screening** test.

VetBooks.ir

veterinary p. therapeutics the positive aspects of repair of nutritional deficiencies; the provision of therapeutic agents as part of a preventive medicine program. Daily administration of small doses of anthelmintics, treatment of the trypanosomiases are examples.

prevertebral [*pre-vur'tə-brəl*] ventral to a vertebra.

prevesical [*pre-ves'ĭ-kəl*] ventral to the bladder.

previable [*pre-vi'ə-bəl*] before the time at which the fetus is capable of maintaining a separate existence.

p. period the period of fetal life just prior to the time at which the fetus is capable of being viable.

Prevotella [*pre"vo-tel'ə*] a genus of gram-negative anaerobic bacteria previously grouped in the genus *Bacteroides*. Involved in periodontal disease and a cause of dog and cat bite wound infections.

P. melaninogenica isolated from footrot and foot abscesses of cattle. Previously called *Bacteroides melaninogenicus*.

P. ruminicola one of the predominant anaerobic gram-negative bacterial species in ruminal contents.

preweaning [*pre-wēn'ing*] the period just before the young animal is weaned. This includes the neonatal period and is the period during which most deaths occur.

prezygotic [*pre-zi-got'ik*] before a zygote is formed; occurring before completion of fertilization.

priapism [*pri'ə-piz"əm*] persistent abnormal erection of the penis, accompanied by pain and tenderness. It is seen in diseases and injuries of the spinal cord, and may be caused by vesical calculus and certain injuries to the penis.

Pribnow box the sequence of five to 10 bases in the promotor region of *Escherichia coli* genes. It is a variant of a basic sequence TATAATG. Called also the Pribnow-Schaller box. See also **TATA box**.

Pricetrema zalophi a liver fluke found in fur seals in large numbers without causing apparent clinical illness.

prick-eared [*prik*] in dogs, used to describe upright ears, usually with a pointed tip.

pricket a male deer with his first set of horns at 2 years of age.

prickly many sharp spines protrude.

p. black rolypoly ***Sclerolaena*** *muricata*.

p. jack ***Emex australis***.

p. paddymelon ***Cucumis*** *myriocarpus*.

p. pear ***Opuntia*** spp.

p. rolypoly ***Sclerolaena*** *muricata*.

prickly heat miliaria of humans; not a disease known to occur in animals.

PRID progesterone releasing intravaginal device.

pride of California ***Lathyrus*** *splendens*.

prilocaine [*pril'o-kān*] a local anesthetic, used as the hydrochloride salt.

primaquine an antiprotozoal agent used as the phosphate in the treatment of theileriosis, babesiosis, leishmaniasis and trypanosomiasis.

primary [*pri'mar-e*] first; basic.

p. accession the first contact with the veterinarian by an animal for the particular condition or disease incident that is the cause of the visit.

p. ruminant gastrointestinal dysfunction dysfunction intrinsic to the gastrointestinal tract of the ruminant; not secondary to dysfunction in some other organ.

primase [*pri'māz*] a specialized RNA polymerase that synthesizes short stretches of RNA used as primers in DNA replication.

primate [*pri'māt*] an animal belonging to the highest order of mammals, Primates, which includes humans and the nonhuman primates, the apes, monkeys, lemurs, tree-shrews, lorises, aye-ayes, pottos, bush babies and tarsiers. They are characterized by being plantigrade, pentadactyl, by having clavicles, a complete dentition without specialized molars, a voluminous and complicated brain and a supple hand with a thumb that can be approximated to any of the fingers. They have excellent sight and are highly adapted to an arboreal existence, including the possession by some of a prehensile tail.

catarrhine p. member of the parvorder Catarrhini (Old World monkeys).

platyrrhine p. member of the parvorder Platyrrhini (New World monkeys).

prime first grade or best quality.

primer [*prīm'ər*] oligonucleotide which is hydrogen-bonded to the template strand of DNA; required for the replication of DNA by polymerase.

random p. method a method of labeling DNA in vitro.

p. walking an orderly method for sequencing DNA which involves obtaining some sequence, then making an oligonucleotide primer to the end of the sequence obtained and using it as a primer for the next sequencing reaction and repeating this until the whole sequence is determined.

primidone [*prim'ĭ-dōn*] an anticonvulsant related to phenobarbital. Used in dogs to control seizures of epilepsy and encephalitis.

primigravida [*pri"mĭ-gravĭ-də*] an animal pregnant for the first time; gravida I.

primipara [*pri-mip'ə-rə*] unipara; a female which has had one pregnancy that resulted in viable offspring, para I.

primiparity [*pri"mĭ-parĭ-te*] the state of being a primipara.

primitive [*prim'ĭ-tiv*] first in point of time; existing in a simple or early form; showing little evolution.

primordial [*pri-mor'de-əl*] original or primitive; of the simplest and most undeveloped character.

p. germ cell cells which provide the origins of the spermatozoa and the ovum; they originate from the yolk sac endoderm and migrate to the developing gonad.

primordium [*pri-mor'de-əm*] the first beginnings of an organ or part in the developing embryo. Called also anlage.

Prince's plume see ***Stanleya pinnata***.

Prince of Wales feather ***Amaranthus*** *reflexus*.

principle [*prin'sĭ-pəl*] 1. a chemical component. 2. a substance on which certain of the properties of a drug depend.

active p. any constituent of a drug that helps to confer upon it a medicinal property.

print identifying mark left by part of an animal's anatomy. The print left by the nasolabial or nasal plane is used for identification. See also **labiogram**.

prion [*pri'on, pre'on*] a small protein which is believed capable of infecting cells and causing itself to be replicated, even though it contains no nucleic acid. In some way the horizontally acquired prion also alters the folding of the expressed protein to a conformation that is not degraded by the cell and accumulates to cause spongiform encephalopathy. Aspects of this prion theory remain controversial. Prions can be detected in tissues by infective bioassay, animal inoculation, or by Western blot or immunochemistry. Prions cause rare progressive neurodegenerative disorders that affect both humans and/or animals, such as **Creutzfeldt–Jakob disease (CJD)**, **kuru**, **scrapie**, transmissible **mink** encephalopathy, **feline** spongiform encephalopathy, and **bovine spongiform encephalopathy**. They are characterized by a long incubation period and spongiform changes in the brain associated with neuronal loss. See also **spongiform** encephalopathy.

p. protein (PrP^{C}) membrane-anchored glycoprotein with no widely agreed-upon physiological function. Its ability to convert into a self-propagating isoform (PrP^{Sc}) is associated with development of prion diseases.

p. protein (PrP^{Sc}) The protease-resistant pathological isoform of host cellular prion protein (PrP^{C}). Sc initially indicated scrapie but the notation is used for the pathological isoform in all transmissible encephalopathies despite their having differing host specificities.

prism needle [*priz'əm*] has a prism-like or triangular head used for drawing blood.

pritchel a metal tool used to punch nail holes in horseshoes.

privet see ***Ligustrum***.

privileged not generally available; can be used only by selected persons or substances.

p. information information about a client's animals or business to which the veterinarian has access because of his/her professional activities; it is a convention that such information is regarded as confidential. See also **confidentiality**.

p. sites areas of the body that escape immune surveillance, e.g. cornea.

p.r.n. [L.] *pro re nata* (according to circumstances).

Pro proline.

pro- word element. [L., Gr.] *before, in front of, favoring*.

pro-climax [*pro"kli'maks*] in ecological terms the stage reached in an ecosystem when humans intervene to prevent the natural climax

or balance in the ecosystem from developing, e.g. vaccination of a large part of a canine population against distemper achieves a different climax serologically than the natural climax achieved by allowing the disease to develop unrestrained.

pro-drug a compound that, on administration, must undergo chemical conversion by metabolic processes before becoming an active pharmacological agent; a precursor of a drug.

pro-oestrus [*pro-es'trəs*] see **proestrus**.

pro re nata (p.r.n.) [L.] *according to circumstances*.

pro-time see **prothrombin** time test.

proaccelerin [*pro"ak-sel'ər-in*] **clotting** factor V.

proacrosomal granules [*pro"ak-ro-so'məl*] precursors of the acrosomal vesicle in the Golgi complex of the spermatid.

proactinomyces see ***Actinomyces***.

proactivator [*pro-ak'tĭ-va"tər*] a precursor of an activator; a factor that reacts with an enzyme to form an activator.

proatlas [*pro-at'ləs*] a rudimentary vertebra which in some animals lies cranial to the atlas; sometimes seen as an anomaly.

probability [*prob"ə-bil'ĭ-te*] the basis of statistics. The relative frequency of occurrence of a specific event as the outcome of an experiment when the experiment is conducted randomly on very many occasions. The probability of the event occurring is the number of times it did occur divided by the number of times that it could have occurred. Defined as:

$$p = \frac{x}{(x+y)}$$

where p=probability, x=positive outcomes, y=negative outcomes.

conditional p. the probability that event A occurs, given that event B has occurred. Written P(AB).

prior p. estimation of the probability that a particular phenomenon or character will appear before putting the patient to the test, e.g. testing the probable productivity of a patient by testing its forebears.

subjective p. the measure of the assessor's belief in the probability of a proposition being correct.

proband [*pro'band*] propositus.

probang [*pro'bang*] a flexible rod with a ball, tuft or sponge at the end; used to apply medications to or remove matter or biopsy from the esophagus, pharynx or larynx. Instruments used in large animals consist of flexible tubes containing a flexible stilette.

p. gag a wooden rod which is placed across the mouth in cattle, and jammed between the molars and above the tongue. It has a hole transfixing its center through which the probang is passed.

probatocephaly [*pro-bat-o-sef'ə-le*] an inherited, congenital deformity of the head in a calf giving the appearance of a sheep head. Called also sheepshead.

probe [*prōb*] 1. a long, slender instrument for exploring wounds or body cavities or passages. Called also sound. 2. a radiolabeled or enzymatically labeled DNA molecule used in hybridization to detect DNA homologous to the fragment.

cryosurgical p. see **cryoprobe**.

electroejaculation p. a probe containing electrodes which is inserted in the rectum of the male animal and connected to an electrical power source to stimulate the nerves controlling emission and ejaculation of the semen.

freezing p. see **cryosurgery**.

probenecid [*pro-ben'ə-sid*] used in the treatment of gout to promote excretion of uric acid; also used with certain antibiotics such as penicillin G and ampicillin to delay excretion and prolong their action.

probiotic [*pro"bi-ot'ik*] 1. hypothetical substances in the alimentary tract that are believed to aid in establishing the best balance of microorganisms. 2. live organisms, typically *Lactobacilli*, *Bifidobacteria*, and enterococci which, when administered orally to establish in the digestive tract, are believed to be favorable to the health of the host by excluding or reducing the growth of potential pathogenic bacteria by competitive inhibition and production of inhibitory substances. There have been limited studies of efficacy in domestic animals. Called also Direct Fed Microbials.

problem a question to which there is no obvious, immediate answer; a question that requires some work done on it before a solution can be available.

p. knowledge coupler system computer-assisted diagnosis system designed for use in human medicine; based on a special matching algorithm known as pattern recognition.

p. list the list of problems to be overcome in a particular patient; in hospitals using a problem-oriented case management system.

p. name a generally accepted, preferred name for a clinical sign, syndrome or other indicant such as a positive laboratory test, poor work or production performance or poor reproductive result.

p.-oriented case management a system of managing patients based on the recognition of the patient's problems as targets for correction, planning the treatment program to achieve that, and assessing performance in terms of results with each of the problems and with the case overall. It is an excellent teaching procedure but is also helpful in maintaining the correct perspective in the patient's program.

p.-oriented diagnosis a system of diagnosis that starts off with the cardinal sign presented by the patient and proceeds in steps to identify the body system involved, the part of the system affected, the nature of the lesion and the cause of the lesion.

p.-oriented medical record see problem-oriented **medical** record.

p. solving the basis of clinical veterinary (and most other) education; learning diagnosis by practicing resolving clinical problems —the essential problem being 'which disease is most likely to be the cause of the syndrome presented by this patient'.

proboscis [*pro-bos'kis*] elongated, flexible feeding apparatus, formed of the fused mouthparts, in some insects; the eversible hooked attachment organ of acanthocephalans.

Probstmayria a genus of roundworms in the family Kathlaniidae.

P. vivipara a minute worm found in the colon of horses, often in enormous numbers but without apparent pathogenic effect.

procainamide [*pro-kān'ə-mīd*] an antiarrhythmic agent, similar to quinidine, used as the hydrochloride salt in the treatment of cardiac arrhythmias.

procaine [*pro'kān*] a local anesthetic; the hydrochloride salt is used in solution for infiltration, nerve block and spinal anesthesia.

p. penicillin see **penicillin** G.

Procambarus clarkii farmed crustacean; called also red swamp crayfish or crawfish; Louisiana crayfish or crawfish.

procarbazine [*pro-kahr'bə-zēn*] an antineoplastic agent that acts by inhibiting the synthesis of DNA, RNA and protein. See **MOPP**.

procarboxypeptidase [*pro"kahr-bok"se-pep'tĭ-dās*] the inactive precursor (zymogen) of carboxypeptidase, which is converted to the active enzyme by the action of trypsin.

procarcinogen [*pro"kahr-sin'ə-jən*] a chemical substance that becomes carcinogenic only after it is altered by metabolic processes.

procaryote [*pro-kar'e-ōt*] prokaryote.

procedure-based fees [*pro-se'jər*] see **fees**.

procentriole [*pro-sen'tre-ōl*] the immediate precursor of centrioles and ciliary basal bodies.

procercoid [*pro-sur'koid*] the first larval stage in the life cycle of a bothriocephalidean or diphyllobothriidean (=pseudophyllidean) cestode, e.g. *Spirocerca erinacei*. The procercoid is a solid bodied stage with oncospheral hooks carried on the cercomer in the posterior region.

process [*pros'es; pro'ses*] 1. a prominence or projection, as from a bone. 2. a series of operations or events leading to achievement of a specific result; also, to subject to such a series to produce desired changes.

accessory vertebral p. a process that protrudes caudally from the vertebral arch of the thoracic and lumbar vertebrae between the transverse and caudal articular processes and which overlaps the succeeding vertebra in dogs and some other species. Called also processus accessorius.

acromial p. acromion.

alveolar p. the part of the bone in either the maxilla or mandible that surrounds and supports the teeth.

anconeal p. the apical part of the process at the proximal end of the trochlear notch of the ulna.

articular p. one of the pair of processes at each end of a typical vertebrae born on the vertebral arch which articulates with a complementary articular process of an adjacent vertebra. Called also processus articularis cranialis, processus articularis caudalis.

arytenoid cartilage corniculate p. a horn-like process which extends dorsomedially and forms one side of the caudal margin of the entrance to the larynx.

VetBooks.ir

basihyoid lingual p. a median process which projects rostrally from the basihyoid bone into the root of the tongue in the horse and cow.
basilar p. the basilar part of the occipital bone projecting rostrally from the foramen magnum.
caudate p. the elongated right projection of the two processes on the visceral surface of the caudate lobe of the liver.
ciliary p's radially arranged fibroelastic ridges or folds projecting from the inner surface of the crown of the ciliary body; they secrete aqueous humor.
clinoid p. any of the two paired (anterior and posterior) processes of the sphenoid bone; they suspend the diaphragma sellae (like a four-poster bed) that partially separates the underlying pituitary from the brain above. (The human skull occasionally has, in addition, a pair of medial clinoid processes - small elevations on the floor of the hypophyseal fossa.)
condylar p. the articular surface of the mandible with which the lower jaw articulates with the temporal bone at the temporomandibular joint; it consists of a head (*caput mandibulae*) born on a neck (*collum mandibulae*).
coracoid p. 1. a small curved process arising from the supraglenoid tubercle of the scapula that serves as the origin for the coracobrachialis muscle; large in humans, but small in domestic animals. 2. a dorsal, hook-like process at the root of the tuber calcanei of the calcaneus. Called also *processus coracoideus*.
coronoid p. 1. the upper end of the ramus of the mandible that serves for the insertion of the temporal muscle. 2. medial and lateral processes at the distal end of the trochlear notch of the ulna. Called also *processus coronoideus medialis, processus coronoideus lateralis*. See also **coronoid process**.
distal phalangeal extensor p. the process on the dorsal border of the distal phalanx to which the common digital extensor tendon is attached. Called also *processus extensorius*.
ensiform p. xiphoid process.
ethmoid p. a bony projection above and behind the maxillary process of the inferior nasal concha of some species.
frontal p. 1. of the zygomatic bone; the part of the zygomatic bone that extends upward to contribute to the lateral margin of the orbit and which forms a suture with the zygomatic process of the frontal bone (sutura frontozygomatica); conspicuous in species with a postorbital bar, such as most ungulates. 2. a cone-shaped mass of red vascular tissue that lies across the base of the turkey's beak. Called also snood, nasal comb.
frontal bone cornual p. the bony core of the horn which projects from the frontal bone; the process is usually pneumatic because the frontal sinus extends into it.
frontonasal p. an expansive facial process in the embryo that develops into the forehead and upper part of the nose.
lateral nasal p. a process which borders the nasal pit, eventually the nostril, and which is derived from the embryo's frontonasal mesenchyme.
malar p. see zygomatic process of the maxilla (below).
mamillary p. a conspicuous quadrilateral tubercle between the transverse and cranial articular processes on the thoracic and lumbar vertebrae. Most conspicuous in carnivores.
mandibular angular p. a process which protrudes from the ventral caudal angle of the mandible and is conspicuous in carnivores and acts as the attachment for the digastric muscle.
mastoid p. a conical projection at the base of mastoid portion of temporal bone.
medial nasal p. one of the frontal processes derived from frontonasal mesenchyme and forming part of the border of the nasal pits, the future nostrils.
odontoid p. a toothlike cranial projection of the axis that articulates with the atlas and which is the embryologic homologue of the body of the atlas. See also **dens**.
palatine p. medial and lateral palatine processes contribute to the development of the palate and the separation of the oral and nasal cavities.
paracondylar p. a prominent process lateral to the occipital condyle at the caudal extremity of the skull.
pterygoid p. one of the wing-shaped processes of the sphenoid bone.
retroarticular p. a flange of bone which protrudes ventrally from the caudal end of the zygomatic arch; it carries part of the articular surface of the temporomandibular joint on its rostral edge.
spinous p. of vertebra a dorsal median process of a vertebra giving attachment to muscles of the back.
styloid p. a long, pointed projection, particularly a long spine projecting downward from the inferior surface of the temporal bone.
suprahamate p. a flat, caudally directed process on the acromion of the scapular spine of cats and some other species.
tail vertebral hemal p. paired ventral processes of the more cranial tail vertebrae; the coccygeal vessels run between them.
uncinate p. any hooklike process, such as occurs on the cervical vertebrae of some animals, on the lacrimal bone, or on the pancreas of cattle.
urethral p. an extension of the urethra beyond the end of the glans penis in several species. In the horse it is buried in a deep recess (fossa glandis). in the small ruminants it is a thin, loose, wormlike appendage.
xiphoid p. the caudal sternebra, consisting of a rod of bone that typically supports a xiphoid cartilage. Called also xiphoid.
zygomatic p. projections from the frontal or temporal bones and from the maxilla, which articulate with the zygomatic bone. Called also malar process.
processing [*pros'es-ing*] exposure to a set of processes.
digital image p. see **digital image processing**.
feed p. includes mechanical (crushing, crimping) thermal (boiling, exploding) chemical (acid or alkali treatment) and combinations of these.
feedlot p. procedures conducted shortly after introduction of cattle to feedyards that include tagging or branding, deworming and delousing, vaccination and implantation with growth promotants and examination and treatment of any sick animals.
meat p. meat being exposed to any one of a series of curing or preserving processes such as salting, wet pickling, drying, cooking and canning, sausage manufacture, ham curing.
X-ray film p. developing and fixing an exposed X-ray film. Some of this work is now done in automatic machines at higher temperatures to give shorter processing times and requiring less labor.
processus [*pro-ses'əs*] pl. *processus* [L.] process.
p. anconeus non-union ununited anconeal process.
prochlorperazine [*pro"klor-per'ə-zēn*] a phenothiazine derivative; used as a tranquilizer and antiemetic.
prochondral [*pro-kon'drəl*] occurring before the formation of cartilage in embryological development.
procidentia [*pro"sī-den'shə*] a state of prolapse, especially prolapse of the uterus.
procoagulant [*pro"ko-ag'u-lənt*] 1. tending to promote coagulation. 2. a precursor of a natural substance necessary to coagulation of the blood.
procoelous having the cranial surface concave; said of certain vertebrae such as on the centrum of cervical vertebrae of horses and cattle.
procollagen [*pro-kol'ə-jən*] the precursor of collagen, synthesized in osteoblasts and fibroblasts and subsequently converted to form collagen by procollagen peptidase.
p. *N*-peptidase one of the enzymes involved in the conversion of procollagen to collagen. There is inadequate activity of this enzyme in **osteogenesis** imperfecta, **dermatosparaxis**.
proconvertin [*pro"kən-vur'tin*] clotting factor VII.
p. deficiency an autosomal recessive trait that occurs in Beagles, Airedales, Alaskan malamutes, Giant Schnauzers, Scottish Deerhounds and cats, and causes mild to moderate bleeding.
procreation [*pro"kre-a'shən*] the act of begetting or generating.
proctatresia [*prok"tə-tre'zhə*] imperforate anus.
proctectasia [*prok"tek-ta'zhə*] dilatation of the rectum or anus.
proctectomy [*prok-tek'tə-me*] excision of the rectum.
proctitis [*prok-ti'tis*] inflammation of the rectum.
ulcerative p. an early stage in the development of rectal stricture in pigs. See also **rectal** stricture.
proct(o)- word element. [Gr.] *rectum;* see also words beginning *rect(o)-*.
proctocele [*prok'to-sēl*] hernial protrusion of part of the rectum into the vagina; rectocele.
proctoclysis [*prok-tok'li-səs*] slow introduction of large quantities of liquid into the rectum.
proctocolonoscopy [*prok"to-ko"lən-os'kə-pe*] visual inspection of the interior of the rectum and lower colon with a proctoscope or sigmoidoscope.

VetBooks.ir

proctocolpoplasty [*prok"to-sis'to-plas"te*] repair of a rectovaginal fistula.
proctocystotomy [*prok"to-sis-tot'ə-me*] removal of a bladder calculus through the rectum.
proctodeum [*prok"to-de'əm*] 1. the ectodermal depression of the caudal end of the embryo, which becomes the anal canal; called also anal pit. 2. the smallest compartment of the avian cloaca. It contains the bursa of Fabricius.
proctolitis [*prok"to-li'tis*] proctitis.
proctology [*prok-tol'ə-je*] the branch of veterinary medicine concerned with disorders of the rectum and anus.
proctoparalysis [*prok"to-pə-ral'ĭ-sis*] paralysis of the anal and rectal muscles; proctoplegia.
proctopexy [*prok'to-pek"se*] fixation of the rectum to adjacent tissue.
proctoplasty [*prok'to-plas"te*] plastic repair of the rectum and anus.
proctoplegia [*prok"to-ple'jə*] proctoparalysis.
proctoptosis [*prok"top-to'sis, prok"to-to'sis*] prolapse of the rectum.
proctorrhaphy [*prok-tor'ə-fe*] suture of the rectum.
proctorrhea [*prok"to-re'ə*] a mucous discharge from the anus.
proctoscope [*prok'to-skōp*] a speculum or tubular instrument with illumination for inspecting the rectum.
proctoscopy [*prok-tos'kə-pe*] inspection of the rectum with a proctoscope. The examination is usually done prior to rectal surgery or as part of the physical examination of a patient with rectal bleeding, stricture or other signs of a rectal disorder.
proctosigmoiditis [*prok"to-sig"moi-di'tis*] inflammation of the rectum and sigmoid colon.
proctospasm [*prok'to-spaz"əm*] spasm of the rectum.
proctostenosis [*prok"to-stə-no'sis*] stricture of the rectum.
proctostomy [*prok-tos'tə-me*] surgical creation of a permanent artificial opening from the body surface into the rectum.
proctotomy [*prok-tot'ə-me*] incision of the rectum, usually for anal or rectal stricture.
proctovalvotomy [*prok"to-val-vot'ə-me*] incision of the rectal valves.
procumbent [*pro-kum'bənt*] prone; lying on the abdomen. Called also ventral recumbency.
procyonid a member of the family ***Procyonidae***.
Procyonidae a family of animals comprising the ring-tailed cat, cacomistle, raccoon, coati, kinkajou, olingo.
prod a prod to make animals move or move faster. Ranges from a pointed stick to an electric instrument. The electrically powered units may be battery-powered or operate off mains power, most suited to use in a fixed location such as an abattoir, or a portable model with a small generator which is operated by opening and clenching the hand. Invaluable when loading or encouraging downer animals to rise but are brutalizing and cruel if used unnecessarily.
prodromal [*pro-dro'məl*] the stage of premonitory signs presaging the onset of disease or of specific clinical signs such as seizures.
prodrome [*pro'drōm*] a premonitory clinical sign; a clinical sign indicating the onset of a disease.
product endorsement [*prod'əkt*] a public statement declaring the virtues and recommending the use of a product. Discouraged by codes of veterinary ethics other than by the publication of research results.
production [*pro-duk'shən*] 1. the act of producing. 2. the total of things produced.
animal p. see **animal production**.
p. diseases diseases caused by systems of management, especially feeding and the breeding of high-producing strains of animals and birds, in which production exceeds dietary and thermal input. Includes the group of diseases known in veterinary literature as 'metabolic diseases'. They differ from nutritional deficiencies in which it is the nutritional supply which falls short of normal production.
p. efficiency the efficiency of conversion of feedstuffs to animal product. The basis of the cost-efficiency of any animal production undertaking.
p. function the relationship between the input of a single variable and the output of the product.
p. indices specific indices such as live pigs produced per sow per year, intercalving interval, rate of gain of body weight per day in beef cattle, used as benchmarks of productivity.
p. ketosis ketosis as a production disease, one which is produced by animal management; failure of the dietary input to satisfy the demands of the energy output in milk.
p. losses product which is produced but not harvested or sold, e. g. mastitic milk from cows with mastitis.
p. medicine see production diseases (above).
p. program a schedule of activities relating to feeding, breeding and health maintenance aimed at maximizing the profitability of an animal enterprise. Includes the establishment of targets of production in the areas of specific indices of productivity and the monitoring of production. The programs may be computerized so that the entry of data is simplified and analysis of the data automatic and regularly periodic. The establishment of programs and their maintenance by way of modification of practices and strategies to match changes of production efficiency require the participation of **species** specialists. See also **management** factors.
productive [*pro-duk'tiv*] producing or forming. Said especially of (1) an inflammation that produces new tissue or of a cough that brings forth sputum or mucus, and (2) an animal or animal enterprise that has a net excess production which is available to the farmer and produced in a cost-effective operation.
p. life that part of an animal's life during which it is productive.
productivity the amount or quality or value of the output of a food animal. Best measured in terms of the percentage productivity compared with a target based on productivity of peers. It is customary nowadays to state productivity in terms of return on capital invested, or per head of livestock or per hectare or per unit of workforce, and may be for a period, e.g. annual, lifetime, for a specific unit, e.g. farm, the dairy herd on a mixed farm.
p. index includes such items as wool yield per hectare, wins per race starts.
p. marginal value see **marginal** revenue.
proelastase [*pro"e-las'tās*] the inactive (zymogen) precursor of **elastase**, secreted by the pancreas and activated by trypsin in the small intestine.
proencephalus [*pro"ən-sef'ə-ləs*] a fetus with a protrusion of the brain through a frontal fissure.
proenzyme [*pro-en'zīm*] zymogen; an inactive precursor of an enzyme.
proerythroblast [*pro"ə-rith'ro-blast*] the earliest erythrocyte precursor. A large round cell with a large nucleus and small abount of deeply basophilic staining cytoplasm. Called also pronormoblast, rubriblast.
proestrogen [*pro-es'tro-jən*] a substance without estrogenic activity but which is metabolized in the body to active estrogen.
proestrus [*pro-es'trəs*] the period of heightened follicular activity preceding estrus.
profession [*pro-fe'shən*] 1. an avowed, public declaration or statement of intention or purpose. 2. a calling or vocation requiring specialized knowledge, methods and skills, as well as preparation, in an institution of higher learning, in the scholarly, scientific and historical principles underlying such methods and skills. A profession continuously enlarges its body of knowledge, functions autonomously in formulation of policy, and maintains by force of organization or concerted opinion high standards of achievement and conduct. Specifically in this regard it maintains and polices a code of ethics and conducts a professional organization of which a large majority of the profession are members. Members of a profession are committed to continuing study, placing service above personal gain, and are committed to providing practical services vital to human and social welfare.
professional [*pro-fesh'ə-nəl*] 1. pertaining to one's profession or occupation. 2. one whose income is derived from the practice of his/her profession.
professionalism [*pro-fesh'ə-nəl-iz-əm*] the upholding by individuals of the principles, laws, ethics and conventions of their profession.
profibrinolysin [*pro"fi-brĭ-nol'ĭ-sin*] an old term for plasminogen; the precursor of plasmin, which is an active enzyme in the fibrinolytic system.
profilaggrin a structural protein synthesized by cells of the stratum granulosum and a precursor of filaggrin.
profile [*pro'fil*] a simple outline, as of the side view of the body or head; by extension, a graph representing quantitatively a set of characteristics determined by tests. In animals the same purpose may be served by photographing it against a grid background. Profiles are used to determine an animal's conformational

similarity to a standard set by a breed society and, especially in ruminants, as an aid to the diagnosis of diseases of the abdomen.

biochemical p. a panel of tests, usually selected for their ability in the particular species to evaluate the functional capacity of several critical organ systems and general health, but sometimes customized to particular clinical presentations, such as liver profile, renal profile, geriatric profile and others. The 'profile' may literally be the results plotted on individual, parallel numerical scales, producing a pattern similar to a bar graph.

cost–benefit p. a written or graphic description of the costs and production returns of an animal enterprise, set out according to a set of standard indices and parameters so that inter-herd comparisons are facilitated. A standard feature in modern animal health and production programs.

Profilicollis minutus see ***Polymorphus boschadis***.

profilometer [*pro"fil-om'ə-tər*] a device for measuring the shape of a facial profile and expressing the results mathematically. Such an instrument was used extensively at one time as a means of detecting the heterozygotes for inherited achondroplastic dwarfism.

profilometry [*pro"fil-om'ə-tre*] a system for studying disorders of micturition using electromyography and measurement of intraurethral pressures. See also **urethral** pressure profile.

profit the amount by which income exceeds expenditure.

p. sharing profit sharing between a professional and a lay person is illegal in most countries because it is considered to be improper for a nonveterinarian to have any authority over the quality and style of the work of a professional person.

proflavine a constituent of acriflavine, $C_{13}H_{11}N_3$, used as a topical and urinary antiseptic in the form of the hemisulfate salt.

profundus [*pro-fun'dəs*] [L.] *deep*.

Progamotoenia anoplocephalid cestodes found in the bile ducts and intestines of kangaroos, wallabies, wombats.

progastrin [*pro-gas'trin*] an inactive precursor of gastrin.

progenesis [*pro-jen'ĭ-səs*] the maturation of gametes within an organism before it has reached physical and sexual maturity.

progenitor [*pro-jen'ĭ-tər*] ancestor, including parent.

p. cell see stem **cell**.

progeny [*proj'ə-ne*] offspring; descendants.

expected p. difference (EPD) the difference in performance to be expected from future progeny of a sire, compared with that expected from future progeny of the average sire in the same population. EPDs are generally expressed either as a plus or minus difference from the population average, reported in the units of measure of the trait. Incorporates adjustment for environmental and management group effects and genetic trend.

p. testing a test originally based on red cell antigens but increasingly on restriction fragment length polymorphisms (RFLPs), called also DNA fingerprinting. The offspring can have only those blood group antigens possessed by one or both of its parents. Identification of the offspring's antigens makes it possible to exclude some possible sires because they carry antigens not possessed by the subject animal. Similarly, the inheritance of a particular RFLP is directly linked to that found in each parent. Called also parentage determination, parentage exclusion testing.

progestagens [*pro-jes'tə-jənz*] hormones with progesterone-like activity. Called also progestins, gestagens.

progestational [*pro"jəs-ta'shən-əl*] preceding gestation; referring to changes in the endometrium preparatory to implantation of the developing ovum should fertilization occur.

p. agent (hormone) a group of hormones secreted by the corpus luteum and placenta and, in small amounts, by the adrenal cortex, including progesterone, Δ^4-3-ketopregnen-20(α)-ol, and Δ^4-3-ketopregnene-20(β)-ol; agents having progestational activity are also produced synthetically.

progesterone [*pro-jes'tə-rōn*] a steroid sex hormone that is the principal progestational hormone. Used therapeutically in the treatment of threatened abortion in some species, in estrus control in dogs and cats, and occasionally in treatment of some types of skin diseases. During the maturation of the ovum, estrogen, the principal female sex hormone, is produced at a high rate. At ovulation estrogen production is sharply reduced and the follicle is replaced by the corpus luteum of which the main function is to produce progesterone. Unless fertilization takes place, the corpus luteum disappears when it has performed its function. The progesterone produced by the corpus luteum is promptly carried by the blood to the uterus, as was the estrogen that preceded it. Both hormones now work to prepare the uterus for possible conception. In pregnancy, progesterone acts in a way that protects the embryo and fosters growth of the placenta. By decreasing the frequency of uterine contractions it helps to prevent expulsion of the implanted ovum. It also promotes secretory changes in the mucosa of the uterine tubes, thereby helping to provide nutrition for the fertilized ovum as it travels through the tube on its way to the uterus. Another function of progesterone is promotion of the development of the mammary glands in preparation for lactation. Prolactin, from the anterior lobe of the **pituitary** gland, stimulates production of the milk, and progesterone prepares the glands for secretion.

p. assay the estimation of progesterone in milk or blood is used as a **pregnancy** test.

blood p. the concentration of progesterone in the blood (progesteronemia); used as a means of early pregnancy diagnosis in cows and ewes. See also **progesterone**, **pregnancy** tests.

p.-induced lactation see **lactation** induction.

p. milk test assay of progesterone in milk used as a pregnancy test.

p. plasma test the original pregnancy test which survives as the milk progesterone test; used in dogs as a guide in predicting the time of ovulation.

p. releasing intravaginal device (PRID) used as a means of synchronizing estrus in cows and sheep as an aid to structured artificial insemination programs.

progestin [*pro-jes'tin*] originally, the crude hormone of the corpus luteum; it has since been isolated in pure form and is now known as **progesterone**. Certain synthetic and natural progestational agents are called progestins.

progestogen [*pro-jes'to-jən*] progestagen.

proglossis [*pro-glos'is*] the tip of the tongue.

proglottid, proglottis [*pro-glot'id*] one of the segments making up the body of a tapeworm.

prognathia [*pro-na'the-ə*] prognathism.

prognathism [*prog'nə-thiz-əm*] abnormal protrusion of one or both jaws, especially the lower jaw.

prognathous [*prog'nə-thəs*] having a projecting jaw.

prognose [*prog-nōs'*] to give a prognosis.

prognosis [*prog-no'sis*] a forecast of the probable course and outcome of an attack of disease and the prospects of recovery as indicated by the nature of the disease and the clinical signs of the case. In keeping with modern day usage of decision making on the basis of statistics it is now becoming commonplace to give a percentage probability of a successful outcome in terms of survival, and a similar figure for probability for return to full function.

progoitrin an antithyroid substance in the seeds, and to a lesser extent the foliage, of rape and other plants in the family Brassicae. It is a glycoside which is converted to an active oxazolidone by an enzyme also resident in the plant. This substance 1,5-vinyl-2-thiooxazolidone is goitrogenic and inhibits growth.

program, programme a planned course of action, e.g. herd health program, production program.

linear p. a management program used to determine the best mix of ingredients or services to be used in a particular situation to maintain the highest level of productivity or profitability or other similar parameter.

public p. a disease control program available to all members of the public, e.g. rabies control, tuberculosis eradication.

whole farm p. one which takes into account all of the enterprises on a farm and presents a financial accounting of the farm as a whole.

Program for the Assessment of Veterinary Education Equivalence (PAVE) see **American Association of Veterinary State Boards**.

programmed cell death see **apoptosis**.

progranulocyte [*pro-gran'u-lo-sīt"*] promyelocyte.

progravid [*pro-grav'id*] denoting the phase of the endometrium in which it is prepared for pregnancy.

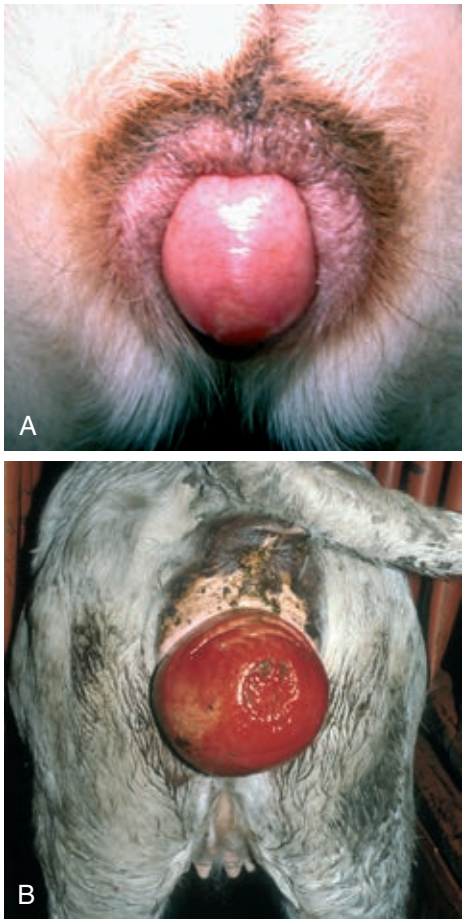
progress notes narrative records kept on changes in the animal's condition and treatment administered. In the problem-oriented **medical** record, it is written in the **SOAP** format.

progressive [*pro-gres'iv*] advancing, increasing in scope and severity.

VetBooks.ir

p. interstitial pneumonia in sheep see **maedi**.
porcine congenital p. ataxia and spastic paresis inherited autosomal recessive disease of swine manifest shortly after birth as a severe lethal neuropathy.
prohemistomiasis [*pro-he-mis'to-mi'ə-sis*] disease caused by infection with *Prohemistomum vivax*; occurs in humans, dogs and cats in Israel, North Africa and Romania.
Prohemistomum vivax a digenetic trematode found in the intestines of cats and dogs.
prohormone [*pro-hor'mōn*] a precursor of a hormone, such as a polypeptide that is cleaved to form a shorter polypeptide hormone, or a steroid that is converted to an active hormone by metabolism.
proinsulin [*pro-in'su-lin*] a precursor of insulin, having low biological activity.
projection [*pro-jek'shən*] throwing forward, e.g. X-ray projection.
somatotopical p. an arrangement by which a picture of the body is represented on a surface, such as projection onto the cerebral cortex of the topography of the body from which the efferent nerve impulses depart or to which afferent impulses come.
central p. law the laws of physics applied to the primary X-ray beam of photons, e.g. the closer the object being X-rayed is to the film the sharper will be its definition.
prokaryocyte [*pro-kar'e-ō-sīt*] prokaryote.
prokaryon [*pro"kar'e-on*] 1. nuclear material scattered in the cytoplasm of the cell, rather than bounded by a nuclear membrane; found in some unicellular organisms, such as bacteria. 2. prokaryote.
prokaryote [*pro-kar'e-ōt*] a unicellular organism lacking a true nucleus and nuclear membrane, having genetic material composed of a single molecule of double-stranded DNA. Prokaryotes with the exception of mycoplasmas have a rigid cell wall. Includes the blue-green algae and bacteria—the Cyanophyceae.
prokinetics [*pro"ki-net'iks*] drugs which enhance the passage of intraluminal contents of the gastrointestinal tract.
prolactin [*pro-lak'tin*] a hormone secreted by the anterior pituitary that promotes the growth of mammary tissue and stimulates and sustains milk production in postpartum mammals, and shows luteotropic activity in certain mammals. Promotes the secretion of milk in the crop of pigeons and doves. Called also lactogenic hormone, luteotropic hormone, LTH and mammotropin. It is identical with luteotropin.
p. inhibitory factor (PIF) probably the catecholamine dopamine, released in the hypothalamus, carried to the anterior pituitary via the hypophysial portal system, and inhibits the secretion of prolactin.
p. releasing factor (PRF) appears to be released from the hypothalamus in a pulsatile fashion and it is the fluctuation in PRF that regulates the circulating concentration of prolactin.
prolamine a globular protein, e.g. zein in corn grain.
prolan an outdated name for chorionic gonadotropin, LH and FSH. Thought originally to be the hormone responsible for the uterine enlargement seen in the Ascheim–Zondek test.
prolapse [*pro-laps'*] 1. literally the falling down, or downward displacement, of a part or viscus. In many instances in animals the prolapse is lateral or even dorsal, e.g. in intervertebral disk prolapse. 2. to undergo such displacement.
anal p. the protrusion of a small amount of mucosa through the anus. Seen especially in puppies and kittens.
cloacal p. occurs in companion birds due to straining caused by endoparasitism, abdominal tumors, egg laying, and displaced sexual behavior, typically directed to human companions.
fat p. see perivaginal **fat** prolapse.
ocular p. anterior displacement of the globe from the orbit; proptosis.
oviduct p. a minor prolapse of oviductal mucosa may stimulate cannibalism in others and the entire oviduct be removed via the cloaca.
parturient bladder p. may follow rupture of the floor of the vagina during parturition in the mare; it can protrude from the vulva.
perivaginal fat p. during a difficult parturition in a fat cow or heifer perivaginal fat is pushed caudally and bursts through the vaginal wall into the vagina.
preputial p. see **preputial** eversion.
penile p. inability to withdraw the penis into the prepuce, other than a paraphimosis. Not to be confused with **phimosis**; paralysis does occur in disease of the spinal cord, e.g. in some cases of rabies.
rectal p., p. of rectum protrusion through the anus of the mucosa only or the complete wall of the rectum. Uncommon in most species but commonplace in the pig because of anatomical weakness in the area, especially in some breeds. The feeding of estrogens exacerbates the tendency as may the occurrence of diarrheal disease.
p. retainer 1. a frame made of strong wire or thin metal rod and shaped like a lattice with obvious apertures for defecation and urination; strapped to the rear end of the cow so that the perineum will not bulge when the animal strains. 2. a bottle-shaped appliance sewn in to the vagina to prevent prolapse of the vagina.
third eyelid gland p. see **cherry eye**.
urethral p. protrusion of urethral mucosa at the end of the penis. Occurs in male dogs, especially English bulldogs.
urinary bladder–vaginal prolapse occurs occasionally in the cow as a complication of vaginal prolapse. The bladder is retrodeviated and the urethra kinked so that urine flow is obstructed.
uterine p. displacement of the uterus so that the cervix is within the vaginal orifice (first-degree prolapse), the cervix is outside the orifice (second-degree prolapse), or the entire uterus is outside the orifice (third-degree prolapse). May be related causally to hypocalcemia in cattle.
vaginal p. 1. in bitches, edematous swelling of vaginal tissue during estrus occasionally results in a protrusion of vaginal mucosa, usually from the ventral vaginal wall but occasionally the entire circumference, at the vulval opening where it may be subject to licking and abrasion until it regresses with the conclusion of estrus. Uncommonly, the urethral opening may be compromised. Properly referred to as a prolapse of vaginal mucosa or vaginal fold prolapse, but frequently and incorrectly called vaginal prolapse or vaginal hypertrophy. Called also estral eversion. 2. in cattle, goats, sheep and rarely bitches, prolapse of the vaginal wall may also contain the urinary bladder or the cervix. Usually occurs during or shortly after parturition.
prolapsus [*pro-lap'səs*] [L.] *prolapse*.
prolepsis [*pro-lep'sis*] recurrence of a paroxysm before the expected time.
prolidase [*pro'lī-dās*] an enzyme that catalyzes the hydrolysis of the imide bond between the amino acids in any dipeptide with proline or hydroxyproline in the C-terminal position. Called also proline dipeptidase.
proliferation [*pro-lif"ə-ra'shən*] the reproduction or multiplication of similar forms, especially of cells.
proliferative [*pro-lif'ər-ə-tiv*] pertaining to or emanating from proliferation.
p. dermatitis see strawberry **footrot**.
p. bowel disease a disease of young ferrets caused by *Lawsonia intracellularis* and characterized by gross thickening of the small intestine and colon. There is acute or chronic diarrhea, weight loss and sometimes neurologic signs of ataxia and muscle tremors. Similar to porcine proliferative enteropathy.
equine p. enteropathy see equine proliferative **enteropathy**.
p. exudative pneumonia of lambs see **enzootic** pneumonia.
p. hemorrhagic enteropathy see porcine proliferative **enteropathy**.
p. ileitis see porcine proliferative **enteropathy**.
p. interstitial pneumonia see **enzootic** pneumonia.
p. kidney disease important disease of salmonids; caused by the myxozoan *Tetracapsuloides bryosalmonae*.
p. optic neuropathy see equine proliferative optic **neuropathy**.
p. phase in uterine activity; called also follicular phase. The lining epithelium of the uterus hypertrophies and becomes congested and edematous.
porcine p. enteropathy see porcine proliferative **enteropathy**.
proligerous producing offspring.
proligestone a long-acting progestin used in estrus control in bitches.
prolinase [*pro'lī-nās*] an enzyme that catalyzes the hydrolysis of dipeptides containing proline or hydroxyproline as *N*-terminal groups. Called also prolyl dipeptidase.
proline [*pro'lēn*] Pro; a cyclic amino acid occurring in proteins; it is a major constituent of collagen.

P-71: (A) Uterine prolapse in a mare. (B) Third-degree uterine prolapse in a postpartum cow with exposure of the caruncles. (A) From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003. (B) From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.



P-72: (A) Vaginal fold prolapse in a bitch. (B) Vaginal prolapse in a cow. (B) From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

prolonged gestation may be inherited, caused by plant toxins or occur sporadically. Commonly, there is absence or developmental abnormality of the fetal adrenal or pituitary glands.
inherited p. g. occurs in several forms in cattle. Pregnancy is prolonged for 3 weeks to 3 months; in one form the fetus is normal except that it is of very great size and can only be delivered by cesarean section. In another the fetus does not develop beyond the 6 month stage and is a cyclops monster with only one eye. In a third there are multiple skeletal deformities and cleft palate.
phytogenous p. g. poisoning by ***Veratrum*** *californicum* or ***Salsola*** *tuberculata*, fescue ergot alkaloids, some *Brassica* spp. cause prolonged gestation.
prolotherapy a form of alternative medicine for the treatment of musculoskeletal disorders in which mildly irritating solutions are injected into ligaments, tendons or joint capsules to cause a mild inflammatory response that stimulated healing. Called also regenerative injection therapy.
prolymphocyte [*pro-lim'fo-sīt*] a cell of the lymphocytic series intermediate between the lymphoblast and lymphocyte.
promastigote [*pro-mas'tĭ-gōt*] one of the morphological stages in the development of certain protozoa, characterized by a free anterior flagellum and the kinetoplast and axoneme at the anterior end of the body. There is no undulating membrane. They are usually found in arthropods and plants.
promazine [*pro'mə-zēn*] a phenothiazine tranquilizer.
promecarb a carbamate pesticide.
promegakaryocyte [*pro-meg"ə-kar'e-o-sīt*] a precursor in the thrombocytic series that is a developmental form intermediate between the megakaryoblast and the megakaryocyte.
promegaloblast [*pro-meg'ə-lo-blast*] the earliest form in the abnormal erythrocyte maturation sequence occurring in vitamin B_{12} and folic acid deficiencies in humans; it corresponds to the proerythroblast or rubriblast, and develops into a megaloblast.
promethazine [*pro-meth'ə-zēn*] a phenothiazine derivative used as an antihistaminic, antiemetic and tranquilizer in the form of the hydrochloride salt.
promethestrol see **methestrol**.
promethium (Pm) [*pro-me'the-əm*] a chemical element, atomic number 61, atomic weight 147. See Table 4.
prometon, prometone a plant hormone herbicide; one of the triazine compounds and capable of causing anorexia, poor weight gain and muscle weakness if there is excessive contact with animals.
prometryne see **prometon**.
prominence [*prom'ĭ-nəns*] a protrusion or projection.
promonocyte [*pro-mon'o-sīt*] a cell of the monocytic series intermediate between the monoblast and monocyte, with coarse chromatin structure and one or two nucleoli.
promontory [*prom'ən-tor"e*] a projecting process or eminence.
middle ear p. a bulge in the medial wall of the middle ear overhanging the cochlea.
sacral p. an obvious prominence in the midline of the ventral surface of the lumbosacral junction, located at the junction of the cranial extremity of the sacrum with its ventral surface.
promotants includes all agents used to increase the rate of body weight gain. Used principally in food animals but also in horses

with a view to increasing muscle mass and physical performance, and in any species to hasten recuperation in animals debilitated by illness. Pharmaceutical preparations are principally anabolic steroids. Husbandry procedures include estrogen and zearalenone implants and dietary supplementation with antibiotics, monensin and, in the case of pigs, copper.

promoter [*pro-mo'tər*] a specific DNA sequence to which RNA polymerase binds and signals where RNA synthesis (transcription) should begin.

internal p. a class of enhancers which are gene-specific sequences that increase transcription.

p. region the non-coding nucleotide sequence at the transcription start region that is characterized by the presence of a number of conserved or consequence sequences.

prompting a stimulus that gets an animal to perform a desired behavior.

promyelocyte [*pro-mi'ə-lo-sīt*] a precursor in the granulocytic series, intermediate between myeloblast and myelocyte, containing a few, as yet undifferentiated, cytoplasmic granules. Called also progranulocyte.

pronate [*pro'nāt*] 1. in humans, to turn the palm downwards or from the body to face the ground; the homologous action in animals; not easily achieved in ungulates, although carried out with facility in most primates, dogs, cats and many animals that can grasp, such as rodents, kangaroos; compare with **supination**. 2. eversion and abduction of the foot, raising the lateral margin, only easily achieved in primates.

pronation [*pro-na'shən*] the act of pronating; the plantar surface of the paw is turned to face backwards, the customary position in animals other than primates.

pronator [*pro-na'tər*] a muscle that pronates an extremity.

prone [*prōn*] lying face downward, or on the ventral surface.

pronephric [*pro-nef'rik*] see **pronephros**.

p. duct a duct reaching from the pronephros to the cloaca.

p. tubules transient tubules of the primitive kidney which are produced in embryos of the lower vertebrates but in the domestic animals are found only in the sheep; they are nonfunctional in other mammals. Connect the pronephros to the pronephric duct.

pronephros [*pro-nef'ros*] pl. *pronephroi* [Gr.] the primordial kidney; nonfunctional in mammals; functional only in amphioxuses and lampreys; an excretory structure or its rudiments developing in the embryo before the mesonephros; its duct is later used by the mesonephros, which arises caudal to it.

pronormoblast [*pro-nor'mo-blast*] rubriblast, proerythroblast.

pronucleus [*pro-noo'kle-əs*] pl. *pronuclei*; the haploid nucleus of a sex cell.

female p. the haploid nucleus of the fully mature ovum which loses its nuclear envelope and liberates its chromosomes to meet the synapsis with those from the male pronucleus.

male p. the nuclear material of the head of a spermatozoon, after it has penetrated the ovum and acquired a pronuclear membrane.

proof reading 3′→5′ exonuclease activity of DNA polymerase that results in the removal of erroneously incorporated nucleotides during DNA replication; responsible for the very high fidelity ($>10^6$) of polymerase.

p. r. site a distinct site of aminoacyl-tRNA synthetases that preferentially recognizes and hydrolyzes mis-acylated tRNA.

pro-otic in front of the ear.

propagation [*prop"ə-ga'shən*] reproduction.

propagule [*prop'ə-gool*] an ecological term; the minimum number of individuals of a species required to colonize an island.

propanediol see **propylene glycol**.

propantheline [*pro-pan'thə-lēn*] an anticholinergic smooth muscle relaxant, used particularly in treating urethral spasm and irritable bowel syndrome.

proparacaine [*(pro-par'ə-kān*] the preferred topical anesthetic for ophthalmic use. Called also proxymetacaine hydrochloride.

proparathyroid hormone (proPTH) [*pro-par"ə-thi'roid hor'mōn*] an intermediate precursor of parathyroid hormone, formed from pre-proparathyroid hormone in the rough endoplasmic reticulum of chief cells.

propatagiectomy [*pro-pə-ta"zhe-ek'tə-me*] surgical removal of part of one of the wing membranes of a bird to prevent it from flying. See also **deflighting**.

propatagium [*pro-pə-ta'zhe-əm*] the web of skin that makes up the wing membrane of birds in front of the elbow and that stretches from shoulder to carpus.

propazine a triazine herbicide. Sprayed pastures may cause poisoning of livestock up to 7 days later. Causes anorexia, weight loss and muscle weakness.

propedeutics [*pro-pə-du'tiks*] preliminary instruction; preparatory teaching.

propentofylline a xanthine derivative glial cell modulator used to improve cognitive function in senile dogs. It acts to improve cerebral blood flow by inhibiting platelet aggregation and thrombus formation.

propepsin pepsinogen; the inactive precursor of pepsin.

proper ligament a fold of peritoneum which unites the ovary to the uterus or the testis to the epididymis.

p. ligament of the ovary a fold of peritoneum in the free edge of the mesometrium between the ovary and the horn of the uterus.

p. ligament of the testis the ligament which binds the tail of the epididymis to the testis.

properdin [*pro'pər-din*] a normal, relatively heat-labile, nonantibody serum protein (a euglobulin) that, in the presence of **complement** component C3 and magnesium ions, is involved in the alternative complement pathway, and acts nonspecifically against gram-negative bacteria and viruses and plays a role in lysis of erythrocytes. It may act in conjunction with complement-fixing **antibody**.

p. pathway alternative complement pathway.

prophage [*pro'fāj*] the latent stage of a **bacteriophage** in a lysogenized bacterium, in which the viral genome is inserted within the bacterial host chromosome, usually at a specific location and is replicated with the chromosome.

propham a herbicide and fungicide used as a seed dressing; has little if any toxicity.

prophase [*pro'fāz*] the first stage of cell replication in either meiosis or mitosis.

prophy [*pro'fe*] in dental terms, prophylaxis; generally refers to the routine scale and polish for maintenance of dental health.

p. cup a deformable rubber cup which flares when applied to a tooth being polished.

p. paste the material used to polish teeth; typically contains an ingredient with abrasive properties (e.g. pumice or silica compounds) of various grades.

prophylactic [*pro"fə-lak'tik*] 1. tending to ward off disease; pertaining to prophylaxis. 2. an agent that tends to ward off disease.

p. antibiotic therapy treatment with antibiotics, beginning just before a surgical procedure, to minimize or prevent development of infection. See also **perioperative**.

p. vaccination vaccination carried out in expectation of the occurrence of the disease.

prophylaxis [*pro"fə-lak'sis*] prevention of disease; preventive treatment.

dental p. scaling and polishing teeth carried out regularly to prevent and control periodontal disease. See also **prophy**.

propiocortin [*pro"pe-o-kor'tən*] precursor protein to ACTH found in the adenohypophyseal pars distalis.

propiolactone [*pro"pe-o-lak'tōn*] a disinfectant with bactericidal, sporicidal, fungicidal and virucidal activities used as a vapor for sterilizing large enclosed spaces. Of limited usefulness because of toxicity and carcinogenic properties.

propiomazine [*pro"pe-o-ma'zēn*] a phenothiazine derivative used as a tranquilizer, usually in combination with methadone.

propionanilide a hormone weedkiller which is likely to be toxic only if massive doses are administered.

propionate [*pro'pe-o-nāt*] any salt of propionic acid. A precursor for glucose in the ruminant.

sodium p. used as a prophylactic against primary ketosis in cows.

Propionibacterium [*pro"pe-on"i-bak-tēr'e-əm*] gram-positive pleomorphic rods which are common skin residents, found also in dairy products and the alimentary tract.

P. acnes activates macrophages, increases proliferation of lymphoblasts, and stimulates resistance to bacterial infection. Used as a bacterial immunostimulant.

propionic acid [*pro"pe-on'ik*] CH_3CH_2COOH, found in chyme and sweat, and one of the products of bacterial fermentation of wood pulp waste; also an important gluconeogenic volatile fatty acid synthesized by the ruminal microflora. Its salts (calcium and

sodium propionate) are used as mold inhibitors in stock feeds and pharmaceuticals, and in topical antifungal preparations.

propionyl CoA [*pro'pe-ə-nəl*] activated intermediate in the utilization of the volatile fatty acid, propionic acid; or end product of the beta-oxidation of odd-carbon chain fatty acids.

propionylpromazine [*pro'pe-ə-nəl-pro'mə-zēn*] a phenothiazine derivative used as a tranquilizer, usually in combination with methadone.

propiopromazine [*pro'pe-ə-pro'mə-zēn*] propionylpromazine.

proplatelets [*pro"plāt'ləts*] elongated strands of megakaryocyte cytoplasm which extend into the bone marrow sinuses; fragmentation produces platelets.

proplexus [*pro"plek'səs*] the choroid plexus of the lateral ventricle of the brain. Called formally: *plexus choroideus ventriculi lateralis*.

propofol [*pro'po-fol*] a rapidly acting, short duration, intravenous hypnotic anesthetic induction agent, which has low excitatory effect. It is harmless when injected into tissues or intra-arterially. The active ingredient is 2,6-di-isopropylphenol.

proportion [*prə-por'shən*] percentage or fraction of a whole. Often expressed also as a rate or ratio by comparison to a total or other population.

p. differences estimating the significance of differences between two proportional morbidities or mortalities.

proportional values expressed as a proportion of the total number of values in a series.

p. morbidity a percentage estimate of the morbidity of a disease in a group. See also proportional **morbidity**.

p. mortality the mortality rate due to a specific disease in a group expressed as a proportion of all of the causes of death in the group. See also **mortality** rate.

propositus [*pro-poz'ĭ-təs*] pl. *propositi* [L.] the original animal presenting a disease or disorder which serves as the basis for a hereditary or genetic study; called also proband.

propoxur a carbamate insecticide used widely on companion animals to control ectoparasites.

propoxycaine [*pro-pok'sĭ-kān*] a local anesthetic with longer action than procaine.

propoxyphene [*pro-pok'sĭ-fēn*] an analgesic used as the hydrochloride and napsylate salts. Called also dextropropoxyphene.

proppy a gait in which the animal's movements are stilted with a lack of flexion of the knees and pasterns; usually used in describing horses.

propranolol [*pro-pran'ə-lol*] a β-adrenoceptor blocking agent, useful in the treatment of cardiac dysrhythmias including paroxysmal tachycardia, atrial flutter and fibrillation.

proprietary medicine [*pro-pri'ə-tar-e*] any chemical, drug or similar preparation used in the treatment of diseases, if such article is protected against free competition as to name, product, composition or process of manufacture by secrecy, patent, trademark or copyright, or by other means.

proprioception [*pro"pre-o-sep'shən*] perception mediated by proprioceptors or proprioceptive tissues.

proprioceptive [*pro"pre-o-sep'tiv*] pertaining to or emanating from proprioceptor.

p. deficit a defect of proprioception in which the animal acts as though it does not know where its feet are (in contrast to a cerebellar defect when the feet do not end up where the animal appears to intend that they should go).

p. positioning positioning of the limbs or head and neck in response to proprioceptive inputs. The basis of postural reflexes.

p. reflex a reflex that is initiated by stimuli arising from some function of the reflex mechanism itself.

proprioceptor [*pro"pre-o-sep'tər*] any of the sensory nerve endings that give information concerning movements and position of the body; they occur chiefly in muscles, tendons and the labyrinth.

proprotein [*pro-pro'tēn*] a protein which is cleaved to form a smaller protein, e.g. proinsulin, the precursor of insulin.

proPTH proparathyroid hormone.

proptometer [*prop-tom'ə-tər*] an instrument for measuring the degree of exophthalmos.

proptosis [*prop-to'sis*] marked exophthalmos (forward displacement of the eye) so that the eyelids are behind the globe equator. An ocular emergency.

propyl [*pro'pəl*] the univalent radical $CH_3CH_2CH_2$, from propane.

p. disulfide the toxic principle in ***Allium*** spp. Called also *n*-propyl disulfide.

propylene glycol [*pro'pə-lēn*] a chemical used industrially as an antifreeze, solvent stabilizer, as a preservative in liquid livestock feeds and pharmaceutically as a vehicle or solvent for medicinal preparations. It is used extensively in food animal medicine as an oral medicament to boost the blood glucose concentration, e.g. in bovine ketosis. Doses that are innocuous to cows can cause ataxia, depression and death in horses. Called also propanediol.

propylene oxide [*pro'pə-lēn*] a gas used to disinfect animal feeds.

propyliodone [*pro"pəl-i'o-dōn*] a radiopaque medium used in bronchography.

propylparaben [*pro"pəl-par'ə-bən*] an antifungal agent used as a preservative in pharmaceuticals. See also **hydroxybenzoate**.

propylthiouracil [*pro"pəl-thi"o-u'rə-sil*] a thyroid inhibitor used in the treatment of hyperthyroidism, but because of severe hematologic toxicity in cats other drugs are preferred.

prorennin [*pro're-nin*] the zymogen (proenzyme) in the gastric glands that is converted to rennin.

prorubricyte [*pro-roo'brĭ-sīt*] in the maturation of erythrocytes, the cell that follows the rubriblast. Called also basophilic normoblast.

Prosarcoptes a genus of mange mites in the family Sarcoptidae.

P. faini, P. pitheci found on monkeys.

prosecretin [*pro"se-kre'tin*] the precursor of secretin.

prosection [*pro-sek'shən*] carefully programmed dissection for demonstration of structure.

prosector [*pro-sek'tər*] one who performs prosection.

p.'s wart infection of the skin of humans by *Mycobacterium tuberculosis* picked up while dissecting infected tissue.

prosencephalic [*pros"ən-sef-al'ik*] pertaining to or emanating from prosencephalon.

p. hypoplasia a congenital malformation in calves; there is a small opening on the surface of the calvaria; the hole connects with a deformed diencephalon which may discharge cerebrospinal fluid.

prosencephalon [*pros"ən-sef'ə-lon*] the telencephalon and diencephalon; known also as the forebrain.

prosencephaly [*pros"ən-sef'ə-le*] fusion of the cerebral hemispheres with a single lateral ventricle.

prosimian member of the order Primate, other than monkeys and apes; includes aye-ayes, bush babies, lemurs, tarsiers, and lorises.

pros(o)- word element. [Gr.] *forward, anterior*.

prosodemic [*pros"o-dem'ik*] passing directly from one animal to another instead of reaching a large number at once, through such means as water supply; said of a disease progressing in that way.

Prosopis [*pro-so'pis*] American plant genus in the legume family Fabaceae, including *P. juliflora* (mesquite), *P. glandulosa* (honey mesquite), algarroba, and kiawe; can cause chronic liver damage in cattle, sheep and goats.

prosoplasia [*pros"o-pla'shə*] 1. abnormal differentiation of tissue. 2. development into a higher state of organization or function.

prosop(o)- word element. [Gr.] *face*.

prosopoplegia [*pros"o-po-ple'jə*] facial paralysis.

prosoposchisis [*pros"o-pos'kĭ-sis*] congenital fissure of the face.

prosopospasm [*pros"o-po-spaz'əm*] spasm of the facial muscles.

prosoposternodymia [*pros"o-po-stər-no-dĭ'-me-ə*] conjoined twins joined face to face and sternum to sternum.

prosopothoracopagus [*pros"o-po-thor"ə-cop'ə-gəs*] twin fetuses fused from the face to the thorax.

prospective [*prə-spek'tiv*] not yet done; in the future.

p. history maintaining a surveillance over a patient in order to accumulate a history of an illness after the initial attack.

p. study see prospective **study**.

p. surveillance an epidemiological strategy of maintaining a watch over a suspected population after an event.

p. trial in a field trial of a preventive or therapeutic regimen the trial can be conducted in a series of consequential or contingent steps with each step contingent on the results in the one preceding it.

prostacyclin (PGI_2) [*pros"tə-si'klin*] an eicosanoid metabolite of arachidonic acid formed by cyclo-oxygenases in the walls of arteries and veins; it is a potent vasodilator and an inhibitor of platelet aggregation. The exogenous form is called **epoprostenol**.

prostaglandin [*pros"tə-glan'din*] a group of naturally occurring, chemically related, long-chain hydroxy fatty acids (eicosanoids) belonging to the prostanoid class of fatty acid derivatives; they stimulate contractility of the uterine and other smooth muscle and may cause constriction or dilation of vascular smooth muscle,

they have the ability to lower blood pressure, regulate acid secretion of the stomach, regulate body temperature and platelet aggregation, and control inflammation and vascular permeability. They also affect the action of certain hormones. First found in semen, they have since been found in cells throughout the body. There are six types, A, B, C, D, E and F, the degree of saturation of the side chain of each being designated by subscripts 1, 2 and 3. The main use of prostaglandins in veterinary medicine is in the treatment and regulation of activity of the female reproductive tract. The F series stimulates myometrial contraction; the E series are myorelaxant. F_2 is luteolytic.

p. $F_{1\alpha}$ promotes platelet aggregation; actively removed from the circulation by the vascular endothelium.

p. I_2 see **prostacyclin**.

p. synthase complex see **cyclo-oxygenase**.

prostanoid [*pros'tə-noid*] having the form of a prostaglandin; a class of eicosanoids that includes prostaglandins, thromboxanes and prostacyclins.

prostate [*pros'tāt*] a gland in the male which surrounds the neck of the bladder and the urethra. It is a diffuse gland in rams and goat bucks, a lobed gland in stallions and dogs and a combination of lobed and diffuse in bulls and boars. The prostate consists of glandular tissue, the ducts from which empty into the prostatic portion of the urethra, and partly of muscular fibers which encircle the urethra. It contributes to the seminal fluid a secretion containing acid phosphatase, citric acid and proteolytic enzymes, which account for the liquefaction of the coagulated semen. The rate of secretion increases greatly during sexual stimulation.

prostatectomy [*pros"tə-tek'tə-me*] surgical removal of the **prostate**.

prostatic [*pros-tat'ik*] pertaining to or emanating from the prostate.

p. abscess occurs in dogs, often as a complication of benign prostatic hypertrophy and squamous metaplasia. Clinical signs are variable, sometimes resembling those of acute prostatitis with fever and systemic illness, or they can be similar to those of chronic prostatitis with straining, dysuria and hematuria.

benign p. hyperplasia diffuse glandular and stromal hyperplasia and hypertrophy of the prostate commonly seen in dogs from middle age, increasing in frequency and degree with advancing age. Castration usually reverses it. Clinical effects include constipation and less often dysuria. Infection can be a complication, causing acute or chronic prostatitis.

p. calculi occur uncommonly in dogs. May originate in the urinary tract, becoming lodged in the prostate, or form within prostatic tissue.

p. cyst may occur in association with benign prostatic hyperplasia or as a separate entity, developing from vestiges of müllerian ducts.

p. fluid the liquid secretion of the prostate, which contributes to semen formation; the third, sperm-free, fraction in a dog semen collection.

p. inflammation see **prostatitis**.

p. massage firm digital pressure and massage of the prostate, applied per rectum, may be performed to increase the amount of cellular material and secretions collected in a urine or prostatic wash sample.

p. neoplasms adenocarcinomas occur infrequently in older dogs, invading locally and metastasizing to sublumbar lymph nodes and lumbar vertebrae.

p. wash placement of a urinary catheter in the prostatic urethra and a flush followed by aspiration of fluid is used to obtain samples for culture and cytology in the diagnosis of prostatic disease in dogs.

prostatitis [*pros"tə-ti'tis*] inflammation of the **prostate**. Occurs mostly in dogs where it may be acute, causing fever, leukocytosis, pain and gait abnormalities, or chronic with dysuria, hematuria and constipation.

prostatocystitis [*pros"tə-to-sis-ti'tis*] inflammation of the neck of the bladder (prostatic urethra) and the bladder cavity. The clinical syndrome is a combination of those of cystitis and prostatitis.

prostatocystotomy [*pros"tə-to-sis-tot'ə-me*] incision of the bladder and prostate.

prostatolith [*pros-tat'o-lith*] see **prostatic** calculi.

prostatolithotomy [*pros"tə-to-li-thot'ə-me*] incision of the prostate for removal of a calculus.

prostatomegaly [*pros"tə-to-meg'ə-le*] hypertrophy of the prostate.

prostatorrhea [*pros"tə-to-re'ə*] catarrhal discharge from the prostate.

prostatotomy [*pros"tə-tot'ə-me*] surgical incision of the prostate.

prostatovesiculitis [*pros"tə-to-və-sik"u-li'tis*] inflammation of the prostate and seminal vesicles.

Prosthenorchis a genus of parasites in the phylum Acanthocephala.

***P. elegans, P. spirula* (syn. *P. sigmoides*)** found in the terminal small intestine, colon and cecum of monkeys. Heavy infestations cause diarrhea, dehydration and death. There are yellow nodules on the serosal surface of the intestine which is swollen. There may be obstruction of the ileocecal valve and perforation of the intestinal wall.

prosthesis [*pros-the'sis*] pl. *prostheses* [Gr.] 1. the replacement of an absent part by an artificial substitute. 2. an artificial substitute for a missing part, such as an eye, leg or tooth, used for functional or cosmetic reasons, or both.

femoral p. see total **hip** replacement.

joint p. the principal example in veterinary surgery is total **hip** replacement.

ocular p. cosmetic but non-functional replacement for the globe. May be fitted within the orbit after enucleation (intraorbital), within the sclera after evisceration of the defective globe (intrascleral), or over the surface of a deformed globe (extrascleral).

skeletal p. not much used in animals, largely because of the great variability in the sizes needed and the small volume required. Human prostheses have been adapted for use in primates.

urethral p. metal or synthetic conduits may be implanted in the treatment of urethral stricture and obstruction in male cats.

prosthetic [*pros-thet'ik*] serving as a substitute; pertaining to prostheses or to prosthetics.

p. implants see **prosthesis, carbon fiber implants**.

prosthetics [*pros-thet'iks*] the field of knowledge relating to prostheses, their design, use, etc.

prosthetist [*pros'thə-tist*] a person skilled in prosthetics and practicing its application.

prosthodontics [*pros"tho-don'tiks*] a specialty in dentistry concerned with the restoration of damaged or missing teeth.

Prosthogonimus [*pros"tho-gon'ĭ-məs*] a genus of flukes (digenetic trematodes) in the family Prosthogonimidae which parasitize birds but are found occasionally in mammals.

P. anatinus found in domestic ducks.

P. cuneatus found in swans.

P. macrorchis, P. ovatus found in the bursa of Fabricius and oviduct of domestic poultry and wild birds.

P. oviformis found in ducks.

P. pellucidus occurs in the bursa of Fabricius, oviduct and posterior intestine of fowl, ducks and wild birds.

prosthokeratoplasty [*pros"tho-ker'ə-to-plas"te*] surgical replacement of a damaged section of cornea by an inert graft.

Prosthorhyncus formosus an acanthocephalan parasite found in the small intestine of domestic fowl and some wild bird species. Has doubtful pathogenicity.

prostration [*pros-tra'shən*] extreme exhaustion, or lack of energy or power.

protactinium (Pa) [*pro"tak-tin'e-əm*] a chemical element, atomic number 91, atomic weight 231. See Table 4.

protamine [*pro'tə-mēn*] any of a class of bsic proteins, soluble in water, not coagulated by heat, and precipitated from aqueous solution by addition of alcohol, found combined with nucleic acids in the sperm of certain fish, and having the property of neutralizing heparin. Protamine sulfate is used as an antidote to heparin overdosage.

p. zinc insulin (PZI) see **insulin**.

protandry, protogyny a state of hermaphroditism in which the male gonad matures before the female gonad.

protean [*pro'te-ən*] changing form or assuming different shapes.

protease [*pro'te-ās*] any proteolytic enzyme.

p.–antiprotease imbalance thought to play a part in the pathogenesis of emphysema by permitting excessive proteolysis, especially of elastin.

fecal p's. originate from the pancreas and include trypsin, chymotrypsin and carboxypeptidases. Proteolytic activity of the feces may be evaluated by tests that measure digestion of gelatin or casein-based substrates.

α_1-p. inhibitor (α_1-PI) a plasma protein normally lost into the gastrointestinal tract; because it is a protease inhibitor it is resistant to degradation. Measurement in feces by immunoassay is used in dogs and cats to assess abnormalities of gastrointestinal

P

protein loss as occurs in inflammatory gastroenteropathies, protein-losing enteropathies, small intestinal bacterial overgrowth, and neoplasia.

protectant, protective [*pro-tek'tənt*] 1. affording defense or immunity. 2. an agent affording defense against harmful influence.

intestinal p. a preparation that given orally provides a protective coating for the intestinal mucosa, and absorbs bacteria and toxins. Kaolin, pectin and activated charcoal are commonly used for this purpose.

protection prevention against injury.

p. tests neutralization tests using serial dilutions of antiserum to protect animals against challenge by a standard dose of microorganism. Also used to describe tests performed to assess the efficacy of a vaccine to prevent disease after experimental challenge with a pathogen.

X-ray p. includes taking X-rays only in designated areas, the use of portable warning signs when radiography is done elsewhere, the wearing of leadlined gloves and aprons by staff working near active apparatus, a red warning light which is switched on when the apparatus is being used. Personnel working near X-ray apparatus should wear dosimeter badges which are checked periodically.

protective [*pro-tek'tiv*] 1. providing protection. 2. substances used to provide protection to tissues.

p. clothing varies with the risk prevailing, e.g. radiation (see X-ray **protection**), waterproof gear for highly infectious diseases, coveralls for normal large animal practice, metal studded gloves for catching aggressive companion animals.

p. substances finely ground, absorbent, insoluble, inert substances that absorb toxins, cover sensitive and damaged tissues with a fine film. Includes starch, kaolin, talc, zinc oxide, zinc stearate. See also intestinal **protectant**.

protein [*pro'tēn*] any large organic compound made from one or more polypeptides, which are chains of **amino** acids joined in a genetically determined order by peptide linkages between the carboxyl group of one amino acid and the amino group of the next. They contain carbon, hydrogen, oxygen and nitrogen and usually sulfur, occasionally phosphorus. Proteins form a large and essential part of the body mass, comprising especially cell membranes, connective tissue, muscles, enzymes, hormones, blood proteins. To maintain this mass the diet must contain a high proportion of protein, especially in growing animals and those recovering from debilitating diseases.

p. A a surface protein of *Staphylococus aureus* which binds to the Fc region of some IgG molecules. Fluorochrome-labeled protein A is used in an indirect immunofluorescence test for detecting bound immunoglobulins.

acid detergent fiber insoluble p. see unavailable protein (below).

authentic p. a recombinant protein with all its naturally occurring properties.

available p. the portion of dietary protein that can be used by the animal.

p. binding a property of many drugs which limits their distribution and availability in the blood, as well as affecting elimination from the body.

p. bumps see **bumps**.

bypass p. see escape protein (below).

p. C a vitamin K-dependent plasma protein with anticoagulant effects, synthesized by the liver and involved in regulation of fibrin clot formation. Decreased plasma concentration may be caused by decreased hepatic or hepatoportal function, vitamin K deficiency, vitamin K deficiency or increased consumption in disseminated intravascular coagulation or sepsis.

p.-calories calories derived from proteins in the diet.

p. calorie malnutrition inadequate protein in the diet leads to impaired cell-mediated immunity, delayed wound healing and loss of lean body mass.

p.–calorie ratio the number of calories provided from protein sources, compared with the total caloric intake; an indication of the level of protein intake.

carrier p. one which, when coupled to a hapten, renders it capable of eliciting an immune response.

chimeric p. see fusion **protein**.

competitive p. binding (CPB) binding proteins occur naturally and have affinity for other substances, for example sex hormone steroid-binding globulin. The property is made use of in the assay of such substances in body fluids and tissues.

complete p. one containing the essential amino acids in the proportion required in the diet.

p. concentrates feeds containing a high concentration of protein, e.g. legume grains and forages, meat meal, fish meal, oil cakes, milling residues including bran, shorts, middlings, brewer's grains.

conjugated p's those in which the protein molecule is united with nonprotein molecules or prosthetic groups, e.g. glycoproteins, lipoproteins and metalloproteins.

urine p.–creatinine ratio (UPC) a quantitative test for urinary excretion of protein. Creatinine, which is excreted as a constant in healthy individuals or those with stable renal disease, is used as a marker to compensate for the wide variation in urine specificy gravity that normally occurs.

crude p. the total nitrogen content of a feed multiplied by 6.25. Includes several obvious errors but is still a close approximation of the protein content.

dietary p. is usually the most expensive part of the diet, except for animals at pasture, and the constituent most likely to be deficient. An excess of protein in the diet in ruminants can cause a sharp rise in alkalinity, due to the release of ammonia, of the ruminal contents causing ruminal atony and indigestion.

digestible p. the crude protein ingested less the protein excreted in the feces. The estimation requires a digestibility trial involving animals, but in feed analysis reports is generated using some percentage of the crude protein value, such as 70 or 72 percent.

p. equivalent said of a feed. The total nitrogen content expressed as protein if it were all in that form. That is the percentage nitrogen in the feed multiplied by the average percentage of nitrogen in plant protein (6.25%).

escape p. the proportion of dietary crude protein that is not digested in the rumen, but escapes intact to the lower tract.

p. excretion t. one that uses ^{51}Cr-labeled protein which measures protein excretion in the feces in cases of protein-losing enteropathy.

external p. see **membrane** proteins.

p.–fibrinogen ratio an indicator of significant changes in fibrinogen concentrations, taking into account dehydration.

fibrous p's characterized by shape, structure and low water solubility; they have a structural role. Examples are **collagen**, **keratin** and **tropomyosin**.

fusion p. in recombinant DNA technology when a foreign gene is inserted into a plasmid vector to interrupt a gene, such as *lac*Z, the mRNA transcript of the recombinant plasmid contains the *lacZ* Shine–Dalgarno sequence and codons of the 5′ end of the *lacZ* gene protein followed by the codons of the foreign gene; the protein expressed is a fusion protein containing a few N-terminal *lac*Z amino acids and the contiguous foreign protein.

p. hydrolysates pharmaceutical preparations used in the treatment of severe, acute protein loss. Available for use orally or parenterally. They are partly digested proteins and contain a mixture of polypeptides, amino acids and other breakdown products. Also included in commercial petfood products specifically forumulated for dogs and cats with food allergies.

link p's. stabilize the aggregates of proteoglycans and hyaluronan in ground substance in supportive tissues forming large bottle-brush-like configurations.

p. microarray an ordered set of small samples of proteins immobilized on a microscope slide or other solid surface that is used to determine protein–protein interactions.

myeloma p. see multiple **myeloma**.

p. nutritional deficiency causes lack of muscle development, and slow growth rate and maturation. In adults there is a low milk production and poor weight gain. In severe states tissue and blood concentrations fall, hypoproteinemic edema may occur, and a degree of immunosuppression could be expected.

omega p. topoisomerase I of *Escherichia coli*.

partial p. one having a content of essential amino acids inadquate for the maintenance of good health. Called also incomplete protein.

peripheral p. any protein located in the membrane but not essential to the reconstitution of that membrane. As opposed to integral membrane proteins.

plasma p's all the proteins present in the blood plasma, including the immunoglobulins. See **plasma** protein.

polyhedrin matrix p. a protein that comprises the major component of occlusion bodies produced by nuclear polyhedrosis virus

and cytoplasmic polyhedrosis virus; the strong polyhedrin promoter is utilized in the expression of recombinant proteins in baculovirus expression systems.

protected p. feedstuffs high in protein that are treated to reduce their amount of digestion by rumen microbes. Treatments include formaldehyde, sodium hydroxide, heating with sulfiteliquor and xylose.

rec A p. an enzyme that binds to DNA and plays an important role in genetic recombination.

p. S a circulating vitamin K-dependent protein with anticoagulant effects.

serum p. proteins in the blood serum, including immunoglobulins, albumin, complement, coagulation factors and enzymes.

p. shock **anaphylaxis** occurring after the intravenous injection of protein.

p.-sparing in times of energy deficiency the animal body may raid protein stores for glucogenic amino acids, thus depleting body stores of proteins. Substances such as acetic acid which can fill the energy deficiency and avoid the protein loss are known as protein-sparing.

p. supplements feeds which contain more than 20% protein.

total p. albumin and all globulins in the blood if measurements are done on plasma. When done on serum, they do not include those consumed in clot formation, mainly fibrinogen. Increased concentration occurs in dehydration, inflammation, lymphoid neoplasia and multiple myeloma. Decreased concentration protein loss or hemodilution.

unavailable p. the insoluble protein fraction, which is unavailable to the animal due to heat damage. Also called acid detergent fiber insoluble crude protein, bound protein, insoluble protein.

urine p. see **proteinuria**.

viral p. proteins encoded by the viral genome.

protein-bound said of a chemical bonding of calcium, iodine, iron, copper and other electrolyte ions in the blood to plasma proteins. The bound electrolyte is not immediately available biologically nor is it as vulnerable to sudden loss.

p.-bound iodine (PBI) test determination of thyroid function by measuring the amount of iodine contained in compounds bound to plasma proteins. It has been largely replaced by radioimmunoassay for the thyroid hormones thyroxine (T_4) and triiodothyronine (T_3).

proteinaceous [*pro"tēn-a'shəs*] pertaining to or of the nature of protein.

proteinase [*pro'tēn-ās*] any enzyme that catalyzes the splitting of interior peptide bonds in a protein; an endopeptidase.

p. resistant protein (prp) a protein which resists digestion by proteinases; the amyloid fibrils in brain tissue of sheep affected with scrapie contain such a prp. Called also protease resistant protein.

proteinemia [*pro"tēn-e'me-ə*] hyperproteinemia.

proteinosis [*pro"tēn-o'sis*] the accumulation of excess protein in the tissues.

proteinuria [*pro"te-nu're-ə*] an excess of serum proteins in the urine; an important indicator of renal disease. It is a constant finding in glomerulonephritis, renal infarction, amyloidosis and nephrosis, but is also common in congestive heart failure and renal ischemia of all kinds. The significance of proteinuria as an indicator of renal disease is greatly enhanced by the presence of renal casts in the urine.

Bence Jones p. see **Bence Jones protein**.

glomerular p. results from increased permeability of the glomerular membrane.

hemorrhagic p. plasma proteins or hemoglobin enter the urine because of inflammation or hemorrhage in the genitourinary tract. Called also inflammatory or postrenal proteinuria.

neonatal p. occurs transiently during the period of intestinal absorption of proteins, some of which are small enough to pass the glomerular membrane Called also postcolostral proteinuria.

postrenal p. see hemorrhagic proteinuria (above).

prerenal p. when plasma concentration of small proteins that pass glomerular filtration is high, the amounts may exceed the capacity of tubules to resorb completely, resulting in proteinuria. Called also overflow and overload.

tubular p. caused by defective renal tubules that do not resorb proteins filtered by the glomerulus.

Proteobacteria a proposed phylum of gram-negative bacteria, although not widely accepted. The largest bacterial clade. Divided into five classes, the *Alphaproteobacteria* (which includes the *Anaplasmataceae, Bartonellaceae, Brucellaceae* and *Rickettsiaceae,* among others), *Betaproteobacteria* (which includes the *Burkholderiales* and *Neisseriales,* among others), *Gammaproteobacteria* (which includes the *Aeromanadaceae, Coxiellaceae, Enterobacteriaceae, Francisellaceae, Legionellaceae, Moraxellaceae, Pasteurellaceae,* and *Vibrionaceae,* among others), *Deltaproteobacteria* (which includes *Lawsonia intracellularis*, among others) and *Epsilonproteobacteria* (which includes the *Helicobacter* and *Campylobacter* species, among others).

Proteocephalus a genus of tapeworms in the order Proteocephalidea.

P. ambloplitis found in cultured fish, especially bass. The parasite affects the gonads and causes sterility. Called also bass tapeworm.

proteoglycan [*pro"te-o-gli'kan*] any of a group of heavily glycosylated glycoproteins found primarily in connective tissue and formed of subunits of glycosaminoglycans (long polysaccharide chains containing amino sugars) linked to a protein core like bristles on a bottle brush. Hydrated proteoglycans form the highly viscous fluid of mucus and the matrix of the intercellular ground substance of connective tissue. Called also mucopolysaccharide.

proteolipid [*pro"te-o-lip'id*] a combination of a peptide or protein with a lipid, having the solubility characteristics of lipids.

proteolysis [*pro"te-ol'i-sis*] the splitting of proteins by hydrolysis of the peptide bonds, with formation of smaller polypeptides.

proteolytic [*pro"te-o-lit'ik*] 1. pertaining to, characterized by, or promoting proteolysis. 2. a proteolytic enzyme.

p. enzyme any protease; includes pepsin from the stomach; trypsin, chymotrypsin, elastase, carboxypeptidase A and B, all from the exocrine pancreas; enteropeptidase, aminopeptidase, dipeptidase, all from the intestinal mucosa; collagenase; cathepsins; proteins of the blood clotting cascade, complement system and apoptosis pathway.

proteome [*pro'te-ōm*] the entire complement of proteins made by a single organism; includes splice variants and post-translational modifications such as glycosylation and phosphorylation.

proteometabolism [*pro"te-o-mə-tab'ə-liz-əm*] the metabolism of protein.

proteomics [*pro"te-o'miks*] the comprehensive analysis of the identity, interactions and locations of proteins within a cell.

proteopeptic [*pro"te-o-pep'tik*] digesting protein.

proteoses [*pro'te-ōs-əs*] a mixture of split products formed by the hydrolysis of protein molecules short of the amino acid stage.

proteroglypha [*pro"tər-og'lif-ə*] members of the proteroglyphous group of elapid snakes, which have short, hollow fangs to deliver their potent venom.

Proteromonas flagellate protozoa found in the intestines of all lizards; not thought to be pathogenic.

Proteus [*pro'te-əs*] a genus of gram-negative, motile bacteria, members of the family *Enterobacteriaceae*, usually found in fecal and other putrefying matter. Also found associated with infections of the external ear and skin and in pyometra and pyelonephritis.

P. mirabilis a common inhabitant of animal fecal material found particularly in infections of the eye, skin, urinary and respiratory tract.

P. morganii a common inhabitant of animal fecal material and a common opportunistic pathogen. Called also *Morganella morganii*.

P. vulgaris found in canine epididymo-orchitis, prostatitis and cystitis.

prothrombin [*pro-throm'bin*] a glycoprotein present in the plasma that is converted into thrombin by extrinsic thromboplastin during the second stage of **blood clotting**; called also clotting factor II.

p. consumption test determines thromboplastin generating capacity, which provides information about the first stage of coagulation. When clotting of a normal blood sample occurs, prothrombin is converted to thrombin, thus there should be little or no prothrombin in the serum after the clot is formed. If, however, there is deficiency of blood coagulation, some of the prothrombin will not be utilized (consumed). Abnormal results of the test are found in deficiencies of the first-stage factors of coagulation (factors VIII and IX), and in the presence of circulating anticoagulants, thrombocytopenia, and any other condition leading to inadequate generation of thromboplastin. Called also serum clot time.

VetBooks.ir

p. converting activity the step in blood coagulation in which factor Xa, together with factor V react with phospholipid in the presence of calcium, activates prothrombin to form thrombin.
p. deficiency see **hypoprothrombinemia**.
p. time (PT) test a functional test that measures the extrinsic and common coagulation pathways. A sensitive indicator of poisoning with antigoagulant rodenticides. The *one-stage* (OSPT) test is performed by measuring the time required for clot formation after tissue extract and calcium are added to citrated plasma. Called also Quick's prothrombin test. A *two-stage* test determines plasma concentrations of prothrombin by finding the dilution of plasma that clots a standard fibrinogen reagent in a set period of time.
prothrombinase [*pro-throm'bin-āse*] thromboplastin; tissue factor, factor III.
prothrombinogenic [*pro-throm"bĭ-no-jen'ik*] promoting the production of prothrombin.
protirelin [*pro-ti'rə-lin*] thyrotropin releasing hormone.
protist [*pro'tist*] any member of the Protista.
Protista [*pro-tis'tə*] a kingdom comprising bacteria, algae, slime molds, fungi and protozoa; it includes all single-celled prokaryotic organisms.
protium [*pro'te-əm*] the mass 1 isotope of hydrogen, symbol ^{1}H; ordinary, or light, hydrogen.
prot(o)- word element. [Gr.] *first*.
protoanemonin [*pro"to-ə-nem'o-nin*] pentadienoic lactone in all members of the plant family Ranunculaceae. In the living plant it is present as an inert glycoside ranunculin. When it is released enzymatically it is irritant, causing erythema and blistering of the skin and mucosae. See also ***Ranunculus***.
protoblast [*pro'to-blast*] 1. a cell with no cell wall; an embryonic cell. 2. a blastomere from which a particular organ or part develops.
protocol [*pro'to-kol*] 1. the original notes made on a necropsy, an experiment, or on a case of disease. 2. a detailed plan for an experiment, a course of treatment, a procedure. Used to describe complex treatment plans for chemotherapy. See **CDP** (2), **CHOP**, **COAP**, **COP**, **DMAC**, **MOPP**, **UW-M**.
special p. (1) a hospital case chart created specially to record observations in cases of a disease that is under examination by members of the staff.
rescue p. (2) chemotherapy protocols used to reinstate remission when a relapse has occurred after a previously successful course of treatment.
protocollagen [*pro"to-kol'ə-jən*] an abnormal form of collagen when the hydroxylation stage of its formation is interrupted.
protodiastole [*pro"to-di-as'to-le*] the beginning of ventricular relaxation, terminating when the semilunar valves close.
protodiastolic [*pro"to-di"ə-stol'ik*] pertaining to early diastole, i.e. immediately following the second heart sound.
protoduodenum [*pro"to-doo"o-de'nəm*] the first or proximal portion of the duodenum, extending from the pylorus to the duodenal papilla.
protofibril [*pro"to-fi'bril*] the first elongated unit appearing in formation of any type of fiber.
protofilament [*pro"to-fil'ə-mənt*] a filament formed by the aggregation of tubulin in the form of microtubules; a stage in the development of the cytoplasmic skeleton.
protogaster [*pro'to-gas"tər*] archenteron.
protogyny [*pro-toj'ĭ-ne*] see **protandry**.
protokylol a sympathomimetic agent with activity similar to isoproterenol. Used as a bronchodilator.
Protolepsis tesselata a species of leech that commonly parasitizes the nasal cavity of aquatic birds.
proton [*pro'ton*] 1. an elementary particle of mass number 1, with a positive charge equal to the negative charge of the electron; a constituent particle of every nucleus, the number of protons in the nucleus of each **atom** of a chemical element being indicated by its atomic number. 2. common synonym for the hydrogen ion, H^+, which consists of only one proton.
p. pump see **H^+,K^+-ATPase**.
p. pump inhibitor a class of drugs that act by irreversibly inhibiting the hydrogen/potassium ATPase enzyme system in gastric parietal cells, thereby reducing gastric acidity. Includes **omeprazole**.
p. density weighted scan in magnetic resonance imaging (MRI), displays the relative proton density between tissues. A longer time delay is used between excitation radiofrequency pulses and the time set to receive the peak echo signal is shorter than for other MRI scans. Fat and fluid are bright, soft tissues and are displayed as various shades of gray, and tendons, ligaments, air and cortical bone are dark.
protoneuron the first neuron in a peripheral reflex arc.
proto-oncogene a gene that can mutate to become an oncogene.
Protophormia terraenovae one of the primary flies in cutaneous **myiasis**.
protophyrinogen oxidase a mitochondrial enzyme.
protoplasm [*pro'to-plaz-əm*] the viscid, translucent colloid material, the essential constituent of the living cell, including cytoplasm and nucleoplasm.
protoplast [*pro'to-plast*] a bacterial or plant cell deprived of its rigid wall but with its plasma membrane intact; the cell is dependent for its integrity on an isotonic or hypertonic medium. In bacteria, specifically refers to gram-positive organisms. See also **spheroplast**.
protoplatelet [*pro'to-plāt'lət*] a stage in the maturation and release of platelets by megakaryocytes consisting of a strip of platelets in the peripheral circulation, which will eventually separate into individual platelets. See also **proplatelet**.
protoporphyria [*pro"to-por-fir'e-ə*] porphyria marked by excessive protoporphyrin in the erythrocytes, plasma and feces. The excess is due to a deficiency of the enzyme ferrochelatase and an increased formation of the protoporphyrin. The disease occurs in cattle and is similar to congenital erythropoietic **porphyria** but less severe with the only clinical abnormality being photosensitive dermatitis. The defect is inherited as a dominant trait.
erythropoietic p. protoporphyria of genetic origin in which the defect in porphyrin metabolism is in the erythropoietic tissue. In the bovine disease the deficiency is of heme synthetase (ferrochelatase).
protoporphyrin [*pro"to-por'fə-rin*] a porphyrin whose iron complex united with protein occurs in hemoglobin, myoglobin and certain respiratory pigments.
p. III combines with 4 moles of iron to form the heme moiety of hemoglobin.
protoporphyrinogen III [*pro"to-por"fə-rin'ə-jən*] a two carboxyl porphyrinogen, precursor of protoporphyrin III.
protoporphyrinuria [*pro"to-por"fə-rĭ-nu're-ə*] protoporphyrin in the urine.
Protospirura [*pro"to-spi-roo'rə*] a genus of spirurid nematodes in the family Spiruridae.
P. bestianum, P. muricola, P. numidia found in the stomach of various felids and rodents.
Protostrongylus [*pro"to-stron'jə-ləs*] a genus of hairlike lungworms found in the bronchioles, alveoli and parenchyma of the lungs of some mammals.
P. boughtoni in cottontail rabbits and hares.
P. brevispiculum, P. davtiani, P. hobmaieri in bighorn sheep.
P. kochi in sheep and goats.
P. oryctolagi in rabbits.
P. pulmonalis in rabbit and hare.
P. rufescens found in sheep, goats and deer.
P. rushi in bighorn sheep.
P. skrjabini in sheep and goats.
P. stilesi in bighorn sheep.
P. sylvilagi in cottontail and jackrabbits.
P. tauricus found in hares.
Prototheca [*pro"to-the'kə*] a genus of achloric algae, possibly a mutant form of *Chlorella*. They are saprophytic organisms that usually occupy freeliving niches in a great variety of places. Very rarely infection may occur in canine and feline skin, bovine mammary gland, canine eye and the canine colon. Systemic infections also occur. Identified species are *P. stagnora*, *P. trispora*, *P. wickerhami*, *P. zopfi*. See also protothecal **enterocolitis**.
protothecosis [*pro"to-the-ko'sis*] granulomatous panuveitis, enterocolitis, mastitis, dermatitis or a systemic spread of infection with the algae ***Prototheca***.
prototroph [*pro'to-trōf*] an organism with the same growth factor requirements as the ancestral strain; said of microbial mutants.
prototype [*pro'to-tīp*] the original type or form that is typical of later individuals or species.
protoveratrine [*pro"to-ver'ə-trēn*] one of the poisons found in the members of the plant genus *Veratrum*. Causes salivation, purgation, vomiting, diuresis, excitement, prostration, convulsions and cardiac arrhythmia.

VetBooks.ir

Protozoa [*pro"to-zo'ə*] a phylum comprising the unicellular eukaryotic organisms; most are freeliving, but some lead commensalistic, mutualistic, saprophytic or parasitic existences. Groups of veterinary interest include apicomplexans, flagellates and amebae. Pathogenic protozoa of animals include: *Acanthamoeba*, *Babesia*, *Balantidium*, *Besnoitia*, *Chilomastix*, *Cochlosoma*, *Cryptobia*, *Cryptosporidium*, *Cystoisospora*, *Dientamoeba*, *Eimeria*, *Encephalitozoon*, *Endolimax*, *Entamoeba*, *Frenkelia*, *Giardia*, *Haemoproteus*, *Hammondia*, *Hartmannella*, *Hepatozoon*, *Hexamita*, *Histomonas*, *Iodamoeba*, *Isospora*, *Klossiella*, *Leishmania*, *Leucocytozoon*, *Naegleria*, *Parahistomonas*, *Pentatrichomonas*, *Plasmodium*, *Sarcocystis*, *Theileria*, *Toxoplasma*, *Trichomonas*, *Tritrichomonas*, *Trypanosoma*, *Tyzzeria* and *Wenyonella* spp.

protozoacide [*pro"to-zo'ə-sīd*] destructive to protozoa; an agent destructive to protozoa.

protozoal [*pro"to-zo'əl*] pertaining to or caused by protozoa.

p. myeloencephalitis see equine protozoal **myeloencephalitis**.

p. hepatitis caused usually by *Toxoplasma*, *Neospora*, *Leishmania*. Rare cases of hepatic coccidiosis are observed but the causative organisms are not identified.

protozoan [*pro"to-zo'ən*] 1. of or pertaining to protozoa. 2. an organism belonging to the Protozoa.

protozoology [*pro"to-zo-ol'ə-je*] the scientific study of protozoa.

protozoon [*pro"to-zo'on*] pl. *protozoa* [Gr.] any member of the Protozoa.

protozoophage [*pro"to-zo'o-fāj*] a cell having phagocytic action on protozoa.

protractor [*pro-trak'tər*] an instrument for extracting foreign bodies from wounds.

protransglutaminase [*pro-tranz"gloo-tam'ĭ-nās*] the inactive precursor (zymogen) of transglutaminase; called also coagulation factor XIII (fibrin stabilizing factor) in the blood coagulation system.

protrusion [*pro-troo'zhən*] extension beyond the usual limits, or above a plane surface.

protryptyline a tricyclic antidepressant.

protuberance [*pro-too'bər-əns*] a projecting part, or prominence.

external occipital p. on the occipital surface of the occipital bone, above the foramen magnum. The ligamentum nuchae is attached to it.

intercornual p. the prominence between the horns of cows.

protuberantia [*pro-too"bər-an'shə*] pl. *protuberantiae* [L.] protuberance.

protyrosinase [*pro-ti-ro'sin-ās*] precursor of tyrosinase, an enzyme critical in the formation of melanin.

proud exuberant.

p. cut see **cut** proud.

p. flesh see proud **flesh**.

proven sire a sire whose genetic credentials have been established by the production performances of his offspring in a properly conducted progeny test.

proventricular [*pro"vən-trik'u-lər*] pertaining to or emanating from the **proventriculus**.

p. dilatation disease a progressive weight loss associated with atony of the crop and proventriculus and atrophy of the gizzard, a nonsuppurative encephalitis and visceral ganglioneuritis. Recent research has identified the association of this disease with viruses in the Bornaviridae family. Called also macaw wasting disease and infiltrative splanchnic neuropathy.

proventriculitis [*pro"vən-trik"u-li'tis*] inflammation of the proventriculus, generally referring to the avian.

proventriculotomy [*pro"vən-trik"u-lot'ə-me*] incision of the proventriculus; performed in large birds, usually for the removal of ingested foreign bodies.

proventriculus [*pro"vən-trik'u-ləs*] (aboral) 1. the elongated, spindle-shaped, glandular stomach of birds. Supplemented by the muscular stomach just distal (aboral) to it. 2. the ruminant **forestomach** divided into three compartments, rumen, reticulum and omasum.

Providencia [*prov"ĭ-den'shə*] a genus of gram-negative, non-lactose-fermenting, urease producing enterobacteria; occasionally isolated from diseased animals. May cause diarrhea and opportunistic infections in dogs and a relatively common cause of disease in reptiles.

P. heimbachae isolated from penguin feces and an aborted bovine fetus.

P. stuartii once suspected as a cause of severe enteritis in newborn calves.

provings [*prōōv'ings*] in homeopathy, the testing of repeated doses of plants substances in healthy individuals.

provirus [*pro-vi'rəs*] the genome of an animal virus integrated into the chromosome of the host cell, and thus transferred to in all of its daughter cells.

provitamin [*pro-vi'tə-min*] a substance, e.g. ergosterol, from which the animal organism can form a vitamin.

p. A see **carotene**.

provocative exposure [*pro-vok'ə-tiv*] see provocative **exposure**.

proximad [*prok'sĭ-mad*] in a proximal direction; proximally.

proximal [*prok'sĭ-məl*] nearest to a point of reference, as to a center or median line or to the point of attachment or origin.

proximalis [*prok"sĭ-ma'lis*] [L.] *proximal*.

proximate [*prok'sĭ-mət*] immediate; nearest.

proximobuccal [*prok"sĭ-mo-buk'əl*] pertaining to the proximal and buccal surfaces of a posterior tooth.

proxymetacaine see **proparacaine**.

prozone [*pro'zōn*] the phenomenon exhibited by some sera, in which agglutination or precipitation occurs at higher dilution ranges, but is not visible at lower dilutions or when undiluted.

PrP^C prion protein, the normal or cellular form.

PrP^{Sc} prion protein, the infectious or scrapie form.

PRPP phosphoribosylpyrophosphate.

PRRS **porcine** reproductive and respiratory syndrome.

PRSL protein renal solute load.

prucalopride a selective 5-HT_4 agonist that stimulates gastric emptying and colonic motility. Has been effective in the treatment of constipation in dogs.

prulaurasin a cyanogenetic glycoside found in the seeds, and to a less extent foliage, of plants in the family Rosaceae.

prunasin a cyanogenetic glycoside found in the seeds, and to a less extent in the foliage, of plants of the Rosaceae family.

Prunus [*proo'nəs*] a genus of trees in the family Rosaceae. The leaves and seeds of these trees contain cyanogenetic glycosides which are potentially poisonous. The fruit pulp appears to quite safe. The glycosides are amygdalin, prunasin, prulaurasin. The following are the known toxic plants—*P. amygdalus* var. *amara* seeds (bitter almond), *P. armeniaca* (apricot), *P. brachybotrya*, *P. caroliniana*, *P. laurocerasus* (cherry laurel), *P. cerasus* (cherry), *P. domestica* (plum), *P. padus* (bird cherry), *P. pennsylvanica* (pincherry), *P. persica* (peach), *P. sellowii*, *P. serotina* (wild black cherry), *P. sphaerocarpa*, *P. virginiana* (chokecherry), *P. virginiana* var. *demissa* (western chokecherry), *P. virginiana* var. *melanocarpa* (western chokecherry).

pruritogenic [*proo"rit-o-jen'ik*] causing pruritus, or itching.

pruritus [*proo-ri'təs*] itching; common in many types of skin disorders, especially allergic inflammation and parasitic infestations. Its presence in animals is inferred because of the presence of scratching, which would be a more accurate description. Pruritus is epidermal in origin and does not occur in deep ulcerations, although they may be painful. It is most intense at mucocutaneous junctions. See also **paresthesia**, **hyperesthesia**.

p. ani intense chronic itching in the anal region. May be caused by perianal dermatitis, intestinal parasitism and anal sac disease in dogs and cats.

cholinergic p. caused by stimulation of afferent cholinergic fibers at the neuroglandular junction of the sweat gland with release of acetylcholine and sweat. There is mast cell degranulation. Called also heat reflex urticaria.

essential p. that occurring without known cause.

symptomatic p. that which occurs secondarily to another condition.

Prussian blue ferric ferrocyanide; a dark blue dye, used to demonstrate ferric iron in tissue sections and in the treatment of chronic thallium poisoning.

prussic acid [*prus'ik*] see **cyanide**.

PRV pseudorabies virus.

Przevalskiana a parasitic fly with a life cycle resembling that of *Hypoderma* spp. Parasitizes goats, sheep, gazelle.

Przewalski's horse a primitive dun-colored pony with a dark dorsal stripe and zebra markings on the legs, 12.1–14 hands high. *Equus ferus przewalski*, an endangered species. Called also Mongolian wild horse.

psammomas [*sam-o'məs*] bodies which occur in meningiomas. They are calcified material within the center of a laminated whorl of elongated fibroblastic cells. See also **acervuli**, **corpora arenacea**.

VetBooks.ir

P-73: Przewalski's horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

psammomatous [*sam-o'mə-təs*] pertaining to a psammoma.
p. meningioma a meningioma in which psammoma bodies occur.
psammona bodies see **corpora** arenacea.
psammosarcoma a sarcoma containing granular material.
Psathyrotes annua North American plant in the family Asteraceae; a highly poisonous plant causing acute or chronic hepatic injury caused by an unidentified hepatoxin. Death may occur in as little as 24 hours. Chronic cases develop jaundice. Called also desert velvet, mealy rosettes.
PSCID primary severe combined immunodeficiency disease. See **combined immune deficiency syndrome**.
PSE 1. pale soft exudative pork. 2. portosystemic encephalopathy.
Pseudallescheria boydii [*sōōd"al-əs-kēr'e-ə*] (syn. *Petriellidium boydii, Allescheria boydi*) perfect state of ***Scedosporium apiospermum***. A saprophytic fungus which causes abortion in cattle, eumycotic mycetoma (pseudoallescheriosis) in dogs and maduromycosis in humans. Previously called *Allescheria boydii* and *Petriellidium boydii*.
pseudallescheriosis [*sōōd"əl-es-kə-ri'o-sis*] infection by *Pseudallescheriaboydii* (syn. *Petriellidium boydii*, *Allescheria boydii*). See eumycotic **mycetoma**.
Pseudamphistomum [*sōōd"am-fis'to-məm*] a digenetic trematode, parasitic in the liver, of the family Opisthorchiidae.
P. truncatum occurs in carnivores and humans and has a life cycle and pathogenicity similar to those of *Opisthorchis* spp.
pseudarthrosis, pseudoarthrosis [*sōōd"ahr-thro'sis*] a pathological entity characterized by a nonosseous union of bone fragments of a fractured bone due to inadequate immobilization leading to existence of the 'false joint' that gives the condition its name.
Pseudaspidodera a genus of roundworms in the family Heterakidae.
P. jnanendre, P. pavonis found in the cecum of peafowl. Do not appear to be pathogenic.
pseud(o)- word element. [Gr.] *false*.
pseudoachondroplastic dysplasia [*sōō"do-a-kon"dro-plas'tik dis-pla'zhə*] see **epiphyseal** dysplasia.
pseudoalbinism [*sōō"do-al'bĭ-niz-əm*] a defect of pigmentation similar to albinism. Most suspected cases of albinism in animals are of pseudoalbinism with pigment in some places, e.g. the eyes. Many equine pseudoalbinos die in utero or have a congenital absence of a gut segment. See also **Chediak–Higashi syndrome**.
flatfish p. claimed to be due to too bright aquarium lights prior to hatching.
pseudoalbino see **albino**.
pseudoallele [*soo"do-ə-lēl'*] one of two or more genes that are seemingly allelic, but which can be shown to have distinctive but closely linked loci.
pseudoanemia [*soo"do-ə-ne'me-ə*] marked pallor with no evidence of anemia.
pseudoaneurysm [*soo"do-an'u-riz-əm*] false aneurysm; differs from a true aneurysm in that its wall does not contain the components of an artery, but consists of fibrous tissue, which usually continues to enlarge, creating a pulsating hematoma.
pseudoankylosis [*soo"do-ang"kə-lo'sis*] a false ankylosis.
pseudoanodontia [*soo"do-an"o-don'shə*] failed eruption rather than absence of teeth. Occurs in gray lethal mice and in Lhasa apso and Shih tzu dogs. See also **anodontia**.
Pseudobilharziella a genus of blood flukes in the family Schistosomatidae. Found in the blood vessels of some anatid birds.
pseudoblackleg [*soo"do-blak'leg*] a disease of cattle caused by *Clostridium septicum* and resembling blackleg clinically but occurring only when precipitated by trauma such as shearing wounds. The disease occurs also in pigs but is a systemic infection by *C. septicum* with a primary lesion in the stomach.
pseudobulbar [*soo"do-bul'bər*] apparently, but not really, due to a lesion of the medulla oblongata.
Pseudocalymma elegans South American plant in the family Bignoniaceae; an unidentified toxin causes staggering, tremor and convulsions followed by death all within a few hours. Called also *Arrabidaea elegans*.
Pseudocaranx dentex finfish in family Carangidae. Called also silver trevally or striped jack.
pseudocarcinomatous hyperplasia [*soo"do-kahr"sĭ-nom'ə-təs hi"pər-pla'zhə*] hyperkeratosis resembling carcinoma.
pseudocartilaginous [*soo"do-kahr"tĭ-laj'ĭ-nəs*] resembling cartilage.
pseudocast [*soo'do-kast*] an accidental formation of urinary sediment resembling a true cast.
pseudocele [*soo'do-sēl*] the 'fifth' ventricle of the brain, the space between the two halves of the septum pellucidum.
pseudocervix [*soo'do-sur'viks*] false or phantom cervix created during examination of the canine reproductive tract, when the dorsomedial fold of the vagina and the lateral walls of the vagina cause a temporary obstruction.
pseudocholinesterase [*soo"do-ko"lin-es'tər-ās*] see **butyrylcholinesterase**.
pseudochorea [*soo"do-kə-re'ə*] a state of general incoordination resembling chorea.
pseudochromhidrosis [*soo"do-kro"mĭ-dro'sis*] discoloration of sweat by surface contaminants, such as pigment-producing bacteria or chemical substances on the skin.
pseudochylothorax [*soo"do-ki"lo-tho'raks*] see **chyloid** effusion.
pseudochylous effusion [*soo"do-ki'ləs*] see **chyloid** effusion.
pseudocoarctation [*soo"do-ko"ahrk-ta'shən*] a condition radiographically resembling coarctation but without compromise of the lumen, as occurs in a congenital anomaly of the aortic arch.
pseudocoele [*soo'do-sēl*] see **pseudocele**.
pseudocolloid [*soo"do-kol'oid*] a mucoid substance sometimes found in ovarian cysts.
pseudocoloboma [*soo"do-kol"o-bo'mə*] a line or scar on the iris resembling a coloboma.
pseudocontinuity [*soo"do-kon"tĭ-nu'ĭ-te*] abnormal healing and regeneration of severed nerve fibers; the space between the cut ends becomes filled with fibrous tissues rather than nerve fibers.
pseudocoprostasis [*soo"do-kop-ros'tə-sis*] constipation caused by matting of haircoat around the anus that impedes passage of feces. Seen in longhaired dogs and cats.
pseudocowpox [*soo"do-kou'poks*] an infectious disease of the skin of teats of cows caused by a paravaccinia virus. Typical lesions commence as erythema, progress to a vesicle, pustule or scab which is shed leaving a horseshoe-shaped ring of small scabs. Persons milking the cows may develop lesions on their hands. Called also milker's nodule.
pseudocoxalgia [*soo"do-kok-sal'jə*] 1. osteochondrosis of the capitular epiphysis of the femur. 2. Legg–Calvé–Perthes disease.
pseudocrisis [*soo'do-kri"sis*] sudden but temporary abatement of febrile signs.
pseudo-Cushing's syndrome see **alopecia** X.
pseudocyesis [*soo"do-si-e'sis*] see false **pregnancy**.
pseudocylindroid [*soo"do-sə-lin'droid*] a shred of mucin in the urine resembling a cylindroid.
pseudocyst [*soo'do-sist*] an abnormal dilated space resembling a cyst but not lined with epithelium, e.g. a retroperitoneal accumulation of urine from a leaking ureter.
pancreatic p. accumulation of pancreatic secretions and cellular debris may occur with recurring episodes of pancreatitis, most commonly in dogs.
perirenal p., perinephritic p. see feline **perirenal** cysts.
salivary p. see salivary **mucocele**.
pseudodiabetes early diabetes.
azotemic p. a glucose intolerance seen in association with azotemia, thought to be due to a peripheral resistance to insulin-mediated uptake of glucose by tissues. Severe hyperglycemia, glucosuria, ketonemia, ketonuria and metabolic acidosis are not features.
Pseudodiscus a genus of intestinal flukes (digenetic trematodes) in the family Paramphistomatidae.
P. collinsi found in the colon of horses.
pseudodistemper [*soo"do-dis-tem'pər*] **tyrosinemia** in mink.

pseudodominant [soo"do-dom'ĭ-nənt] the phenotypic expression of a recessive allele as the reult of a deletion of the dominant allele.
pseudoedema [soo"do-ə-de'mə] a puffy state resembling edema.
pseudoemphysema [soo"do-em"fĭ-ze'mə] a condition resembling emphysema, but due to temporary obstruction of the bronchi.
pseudoenophthalmos [soo"do-en"of-thal'mos] apparent enophthalmos, resulting from a small globe (phthisis or microphthalmos) or swollen eyelids.
pseudo-eosinophil [soo"do-e"o-sin'o-fil] the heterophil of rabbits and guinea pigs with prominent granules.
pseudoephedrine [soo"do-ə-fed'rin] one of the optical isomers of **ephedrine**.
pseudoepitheliomatous hyperplasia [soo"do-ep"ĭ-the"le-o'mə-təs hi"pər-pla'zhə] hyperkeratosis resembling an epithelioma.
pseudoexstrophy [soo"do-ek'strə-fe] a developmental anomaly marked by the characteristic musculoskeletal defects of exstrophy of the bladder, but with no major defect of the urinary tract.
pseudofarcy [soo'do-fahr"se] see **epizootic** lymphangitis.
pseudofilling defects [soo'do-fil'ing] abnormalities of the outline of the urinary bladder as seen on radiographs. They result from external pressure on the wall by colonic fullness, and can be differentiated from filling defects by use of a retrograde cystogram.
pseudo-fowl pest see **Newcastle disease**.
pseudofracture [soo"do-frak'chər] radiological appearance of a thickened periosteum and new bone formation over what looks like an incomplete fracture.
Pseudogaltonia clavata South African plant in the family Liliaceae; contains a cardiac glycoside thought to cause cardiac irregularity, sudden death; called also *P. pechuelli, P. subspicata, Lidneria clavata*, cape hyacinth, Southwest African slangkop.
pseudoganglion [soo"do-gan'gli'on] an enlargement on a nerve resembling a ganglion.
pseudogene [soo"do-jēn] a gene which has lost the ability to encode an expressed protein.
pseudoglanders [soo"do-glan'dərz] see **epizootic** lymphangitis. See also **melioidosis**.
pseudoglandular [soo"do-glan'du-lər] with some of the characteristics of a gland.
pseudoglioma [soo"do-gli-o'mə] any condition mimicking retinoblastoma, e.g. retrolental fibroplasia or exudative retinopathy. Not reported in domestic species.
pseudoglottis [soo"do-glot'is] the aperture between the false vocal cords.
pseudogout [soo'do-gout] deposition of calcium phosphate crystals has been described as a cause of arthritis in dogs.
pseudohematuria [soo"do-he"mə-tu're-ə] the presence in the urine of pigments that impart a pink or red color, but with no detectable hemoglobin or blood cells.
pseudohemophilia [soo"do-he"mo-fil'e-ə] von Willebrand disease.
pseudohepatorenal syndrome [soo"do-hep"ə-to-re'nəl] many disease states in which there are clinical indications of renal and hepatic disease but there is no relationship between the two, e.g. a systemic disease in which the agent causes both hepatic and renal damage.
pseudohermaphrodite [soo"do-hər-maf'ro-dīt] an individual exhibiting pseudohermaphroditism.
pseudohermaphroditism [soo"do-hər-maf'ro-dit-iz"əm] a state in which the gonads are of one sex but one or more contradictions exist in the morphological criteria of sex. In female pseudohermaphroditism, the individual is a genetic and gonadal female with partial masculinization; in male pseudohermaphroditism, the individual is a genetic and gonadal male with incomplete masculinization. Pseudohermaphroditism is not to be confused with hermaphroditism, in which the individual possesses both ovarian and testicular tissue.
pseudohernia [soo"do-hur'ne-ə] an inflamed sac or gland simulating strangulated hernia.
p. inguinalis a mass of cod fat that distends the scrotum and dilates the inguinal canal.
pseudohyperkalemia [soo"do-hi"pər-kə-le'me-ə] artifactual elevations of serum potassium concentrations can be caused by an increased release from platelets during clotting of the sample, delayed separation of serum and cells, hemolysis (especially in horses, cattle and pigs), extreme leukocytosis or use of potassium EDTA.
pseudohyperparathyroidism [soo"do-hi"pər-par"ə-thi'roid-iz-əm] persistent hypercalcemia and hypophosphatemia, due to ectopic secretion of parathyroid hormone (-like) polypeptides or other bone resorbing substances by neoplasms. Lymphosarcoma and apocrine adenocarcinoma of the anal sac in dogs are the most common source. Affected dogs show muscle weakness, anorexia, vomiting, bradycardia, polyuria and polydipsia. Nephrocalcinosis may also occur. The clinical and biochemical abnormalities are reversed if the tumor is removed. See also **hyperparathyroidism**.
pseudohypertrophy [soo"do-hi-pur'trə-fe] increase in size without true hypertrophy.
pseudohypha [soo"do-hi'fə] pl. *pseudohyphae*; a chain of blastoconidia.
pseudohypoaldosteronism [soo"do-hi"po-al-dos'tər-ōn-iz-əm] an unresponsiveness of the distal renal tubule to aldosterone, resulting in severe loss of salt in the urine, despite elevated secretion and urinary excretion of aldosterone. An inherited disorder in humans.
pseudohyponatremia [soo"do-hi"po-nə-tre'me-ə] a condition in which marked increases in serum proteins or lipids decrease the percentage of serum water and therefore sodium.
pseudohypoparathyroidism [soo"do-hi"po-par"ə-thi'roi-diz-əm] a condition in which there are changes characteristic of **hypoparathyroidism** (hypocalcemia and hyperphosphatemia) in association with hyperactive parathyroid glands and increased blood concentrations of parathyroid hormone. It is the result of nonresponsive target cells in bone and kidneys. Not reported in animals.
pseudojaundice [soo"do-jawn'dis] yellowness of the skin due to blood changes and not to liver disease.
pseudojervine one of the toxic alkaloids in *Veratrum* spp. Causes vomiting, purgation, salivation, diuresis, convulsions and death.
pseudokidney [soo"do-kid'ne] in ultrasonography, a contracted stomach or an intussuscepted bowel can be mistaken as a kidney.
Pseudoletia separata caterpillars which appear in massive waves and completely devour crops and pasture. Plants such as kikuyu grass are reputed to be more toxic when they regrow after such decimation. Called also army caterpillars.
pseudoleukemia [soo"do-loo-ke'me-ə] the condition in which there are excessive numbers of lymphocytes in tissues but not in blood. See also **leukosis**. Called also aleukemic leukemia.
pseudolipidosis [soo"do-lip"ĭ-do'sis] the original name for **mannosidosis**. Called also pseudolipidosis with neuronopathy.
pseudolymphoma [soo"do-lim-fo'mə] lesions likely to be mistaken for lymphoma include nodular lymphocytic–plasmacytic lesions of panniculitis, vasculitis, perifolliculitis, nodules created by vaccinations, arthropod stings.
Pseudolynchia [soo"do-linch'e-ə] a genus of flies in the family Hippoboscidae.
P. canariensis, P. capensis, P. lividicolor found on domestic pigeons and some wild birds. Dark brown flies resembling a sheep ked. They transmit *Haemoproteus columbae* of pigeons and *H. lophortyx* of quail.
pseudomalleus [soo"do-mal'e-əs] see **melioidosis**.
pseudomelanosis [soo"do-mel"ə-no'sis] pigmentation of tissues after death by blood pigments.
pseudomembrane [soo"do-mem'brān] a layer of coagulated fibrin, leukocytes and bacteria overlying a badly damaged mucous membrane and giving the appearance of being a viable tissue. Called also false membrane.
pseudomembranous [soo"do-mem'brə-nəs] pertaining to or emanating from pseudomembrane.
p. colitis see pseudomembranous **colitis**.
Pseudomicrodochium suttonii a member of the Fungi Imperfecti associated with phaeohyphomycosis in dogs.
Pseudomonas [soo"do-mo'nəs] a genus of gram-negative, strictly aerobic bacteria, some species of which are pathogenic for plants and vertebrates.
P. aeruginosa a common isolate from wounds, burns and urinary tract infections and from many other accumulations of pus in all species. Also commonly found in otitis externa, fleece rot in sheep, and some cases of bovine mastitis. Its presence may be indicated by a distinctive blue or green color of the pus or infected site.
P. fluorescens a common cause of food spoilage and a frequent isolate from wounds and other contaminated sites in animals.
P. mallei see ***Burkholderia mallei***.
P. pseudomallei see ***Burkholderia pseudomallei***.

VetBooks.ir

P. putida causes septicemia in aquarium fish.

pseudomucin [soo"do-mu'sin] a mucin-like substance found in ovarian cysts.

pseudomucinous [soo"do-mu'sĭ-nəs] pertaining to pseudomucin.

p. cystadenoma an ovarian tumor originating from the celomic epithelium of the ovary. Most often seen in aged nulliparous bitches.

pseudomycetoma [soo"do-mi"sə-to'mə] rare manifestation of infection in the dermis and subcutis with *Microsporum canis*; recorded only in Persian cats.

pseudomycosis [soo"do-mi-ko'sis] cutaneous and subcutaneous lesions ranging from nodules to fungating growths, usually on the lower limbs and abdomen of horses and composed of connective tissue riddled with necrotic tracts containing thick pus and small yellow-white granules. Usually contain a variety of bacteria and a foreign body.

pseudomyotonia [soo"do-mi"o-to'ne-ə] muscle weakness accompanying canine Cushing's syndrome and some primary muscle disorders which can resemble myotonia, clinically and on electromyography.

pseudomyxoma [soo"do-mik-so'mə] a mass of epithelial mucus resembling a myxoma.

p. peritonei the presence in the peritoneal cavity of mucoid material from a ruptured ovarian cyst or a ruptured mucocele.

pseudoneoplasm [soo"do-ne'o-plaz-əm] cutaneous lumps and masses that are not neoplastic; includes cysts, nevi, keratoses, granulomas and pyogranulomas.

pseudoneutropenia [soo"do-noo"tro-pe'ne-ə] a large proportion of neutrophils are in the marginal pool.

pseudoneuritis [soo"do-nŏŏ-ri'tis] a congenital hyperemic condition of the optic papilla in humans.

pseudo-odontoma see **periostitis**.

pseudo-oligodontia [soo"do-ol"ĭ-go-don'shə] the appearance of having less than the correct number of teeth erupted; due to failure of eruption of formed teeth. See also **oligodontia**.

pseudopapilledema [soo"do-pap"il-ə-de'mə] large optic disk mimicking papilledema but typically due to abundant myelination in the dog.

pseudoparalysis [soo"do-pə-ral'i-sis] apparent loss of muscular power without real paralysis.

Pseudopezzia medicaginis a leaf-spotting organism which causes a manifold increase in the concentration of coumestrol in the leaves of alfalfa (lucerne).

pseudophyllidean [soo"do-fi-lid'e-ən] pertaining to tapeworms (cestodes) of the order Pseudophyllidea. Now replaced by two orders: Diphyllobothriidea and Bothriocephalidea. Members within this order usually have a three-host aquatic life cycle. Adult tapeworms are parasitic in the intestines of fish-eating mammals, birds, fish and humans. Lengths of the adults range from 10 to 100 feet.

pseudoplague [soo"do-plāg] see **Newcastle disease**.

pseudopocket see **periodontal** pseudopocket.

pseudopodium [soo"do-po'de-əm] a temporary protrusion of the cytoplasm of an ameba or other motile simple cell, serving for purposes of locomotion or to engulf food.

pseudopolycoria [soo"do-pol"e-kor'e-ə] full-thickness holes in the iris giving the appearance of multiple pupils but lacking a spincter muscle. See **polycoria**.

pseudopolyodontia [soo"do-pol"e-o-don'shə] retention of the deciduous teeth until the permanent teeth have erupted, giving the impression of more than the normal number of teeth. See also **polyodontia**.

pseudopolyp [soo"do-pol'ip] a hypertrophied tab of mucous membrane resembling a polyp, but caused by ulceration surrounding intact mucosa.

pseudopolyposis [soo"do-pol"ĭ-po'sis] numerous pseudopolyps in the colon and rectum, due to longstanding inflammation.

pseudopregnancy [soo"do-preg'nən-se] see false **pregnancy**.

pseudoproptosis [soo"do-prop-to'sis] apparent exophthalmos due to buphthalmos or marked retraction of the eyelids.

pseudopseudohypoparathyroidism [soo"do-soo"do-hi"po-par"ə-thi'roi-diz-əm] an incomplete form of pseudohypoparathyroidism, marked by the same constitutional features but by normal concentrations of calcium and phosphorus in the blood serum.

pseudopterygium [soo"do-tər-ij'e-əm] an adhesion of the conjunctiva to the cornea following inflammation or injury.

pseudoptosis [soo"dop-to'sis, soo"do-to'sis] decrease in the size of the palpebral aperture but not resulting from ptosis.

pseudoptyalism [soo"do-ti'ə-liz-əm] the dribbling of saliva caused by a difficulty in swallowing or paralysis of the lips.

pseudorabies [soo"do-ra'bēz] see **Aujeszky's disease**.

pseudoreaction [soo"do-re-ak'shən] a false or deceptive reaction; in intradermal skin tests, a reaction not due to the specific test substance but to protein in the medium employed in producing the toxin.

pseudorickets [soo"do-rik'ats] see renal secondary **hyperparathyroidism**.

pseudorinderpest [soo"do-rin'dər-pest] see **peste des petits ruminants**.

pseudoringworm [soo"do-ring'wərm] see porcine juvenile pustular psoriasiform **dermatitis**.

pseudoscorpion see **scorpion**.

Pseudostertagia bullosa a roundworm in the family Trichostrongylidae found in the abomasum of sheep, bighorn and Barbary sheep and pronghorn antelope.

pseudotetanus [soo"do-tet'ə-nəs] persistent muscular contractions resembling tetanus but not associated with *Clostridium tetani*.

pseudotrismus [soo"do-tris'məs] inability to completely open the mouth due to causes other than muscular spasm, e.g. in masticatory myositis of dogs.

pseudotruncus arteriosus [soo"do-trung'kəs ahr-tēr"e-o'səs] the most severe form of tetralogy of Fallot.

pseudotuberculosis [soo"do-too-bur"ku-lo'sis] resembles tuberculosis. See also **yersiniosis**.

avian p. a contagious disease of birds, both domestic and wild, caused by *Yersinia pseudotuberculosis* and characterized by an initial, brief septicemia, followed by a bacteremic phase in which there is the development of multiple abscesses and granulomas as in avian tuberculosis. The disease causes major epornithics in populations of canaries, finches, cockatoos, parakeets. Called also canary cholera.

bovine p. see **Johne's disease**.

pseudotumor [soo"do-too'mər] phantom tumor.

p. cerebri cerebral edema and raised intracranial pressure without neurological signs except occasional sixth cranial nerve palsy.

pseudotype phenotypic mixing in retroviruses results in a genome from a parent with a defective envelope, contained within the envelope capsid from a helper retrovirus.

pseudoulcer ulcer-shaped defects seen in the mucosa of the duodenum on radiographs following contrast studies. A change of no significance.

pseudouremia [soo"do-u-re'me-ə] see **azotemia**.

pseudourticaria [soo"do-ur"tĭ-kar'e-ə] see **lumpy skin disease**.

psi 1. the twenty-third letter of the Greek alphabet, Ψ or ψ. 2. pounds per square inch, equivalent to one-seventh of a kilopascal (kPa), the metric measure of pressure.

Psilocaulon genus of South African plants in the family Aizoaceae; have high content of soluble oxalates; cause oxalate poisoning manifested by nephrosis, uremia and urolithiasis. Also contain toxin psilocauline; includes *P. absimile*, *P. rogersiae*. Called also asbos, loogbos, prena vygie, asbosvygie.

Psilocybe [si"lo-si'be] genus of toxic mushrooms; contain an indole alkaloid which causes incoordination, tremor, stumbling, recumbency and hypersensitivity. Includes *P. cubensis*, *P. semilanceata*. Called also mad or magic mushrooms.

psilocybin [si"lo-si'bin] a **hallucinogen** having indole characteristics, isolated from the mushroom *Psilocybe mexicana*.

psilostomatid a member of the family Psilostomatidae of small, globose flukes.

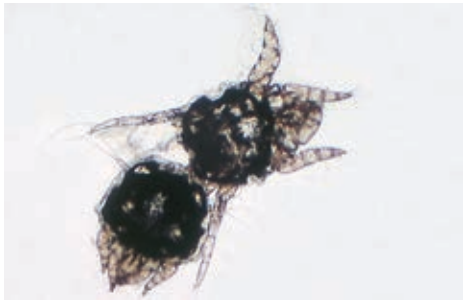
Psilostrophe North American plant genus in the family Asteraceae; contains an unidentified toxin which causes incoordination, coughing, vomiting, emaciation and death. Includes *P. gnaphalodes*, *P. sparsiflora*, *P. tagetina*. Called also paper flowers.

psittaciform [sit'ə-si-form] a bird member of the order Psittaciformes, the parrots and parakeets.

psittacine [sit'ə-sīn] said of birds which are members of the order Psittaciformes, the parrots and parakeets.

p. beak and feather disease occurs predominantly in young birds with their first contour feathers, but sometimes adults with previously normal feathers. There is a loss of contour and down feathers over most of the body, often progressing to complete baldness. The upper and lower beak may also be involved with

P-74: Psittacine beak and feather disease in a sulfur crested cockatoo.



P-75: *Psoroptes cuniculi* mites.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

inflammation, abnormal elongation, uneven wearing and transverse fracture lines. The disease is caused by *Circovirus*.

psittacosis [*sit"ə-ko'sis*] a disease of psittacine birds caused by *Chlamydophila psittaci* and also the zoonotic disease caused by infection with this species; first seen in parrots and later found in other birds and domestic fowl, in which it is called **ornithosis**. It is transmissible to humans. In birds psittacosis is a systemic infection and signs include diarrhea and ocular and nasal discharge. Avian chlamydiosis is a disease notifiable to the OIE (see Table 22).

p.–lymphogranuloma venereum group the family *Chlamydiaceae* of organisms.

psoas [*so'as*] a sublumbar muscle. See Table 13.

p. tubercle a knob on the ventral border of the shaft of the ilium that serves as the insertion for the psoas minor muscle.

psocid a member of the order Psocoptera of book lice.

Psocoptera see **booklice**.

psoitis [*so-i'tis*] inflammation of a psoas muscle or its sheath.

Psoralea [*so-ra'le-ə*] a genus of plants in the legume family Fabaceae; may cause primary photosensitization. Includes *P. argophylla*, *P. tenuiflora*. Called also scurf pea. See also ***Cullen***, **psoralen**.

psoralen [*sor'ə-lən*] a furocoumarin, one of the constituents of certain plants (e.g. *Psoralea corylifolia*) that have the ability to produce primary **photosensitization**; certain perfumes and drugs (e.g. methoxsalen) contain psoralens. See also ***Cullen***.

Psorergates [*sor"ər-ga'tēz*] a genus of parasitic mites in the family Cheyletidae. Called also *Psorobia* spp.

P. bos found on cattle but there is no lesion.

***P. oettlei* (syn. *P. simplex*)** found on laboratory mice and rats.

***P. ovis* (syn. *Psorobia ovis*)** causes a mild pruritus and scaly dermatitis on the body of sheep with some damage to the wool. Called also itch mite.

P. simplex see P. oettlei (above).

psorergatic mange see ***Psorergates ovis***.

psoriasiform [*so"re-as'ĭ-form*] a dermatosis resembling the human skin condition, psoriasis.

p.-lichenoid dermatosis multiple lichenoid, hyperkeratotic papules and plaques begin to appear in young adult English springer spaniel dogs, first on the pinnae, ear canal and inguinal skin and later other areas.

psoriasis [*sə-ri'ə-sis*] a usually chronic, recurrent skin disease in humans marked by discrete macules, papules or patches covered with lamellated silvery scales resulting from an increased turnover of epidermal cells. The cause is multifactorial and poorly understood. There is no equivalent disease in animals.

Psorobia ovis [*so-ro'be-ə*] see ***Psorergates ovis***.

Psorophora [*sə-rof'o-rə*] a genus of mosquitoes; a cause of severe insect worry when in large numbers and may cause deaths of poultry.

Psoroptes [*sə-rop'tēz*] a genus of mange mites in the family Psoroptidae. See **psoroptic mange**.

P. cervinus found on bighorn sheep, wapiti.

P. communis see *Psoroptes ovis* (below).

P. cuniculi found on the ears of rabbit, goat, horse, donkey and mule.

P. equi found on horses. Found also on the donkey and mule.

P. hippotis see *P. cuniculi* (above).

P. natalensis found on the body of cattle (*Bos taurus*, *B. indicus*), Indian water buffalo.

P. ovis causes sheep-scab; found also on cattle and goats.

psoroptic mange [*sə-rop'tik mānj*] a parasitic dermatitis of many species caused by *Psoroptes* spp. mites. They are *P. cervinus* (deer), *P. equi*, *P. natalensis* (cattle and water buffalo) and *P. ovis* (sheep, goats and cattle). The common ear mange mites are *P. cuniculi*. The disease in sheep is serious with much damage to fleece and some deaths. Goats and horses show mostly ear mange with much head shaking but lesions can occur anywhere on the body. In cattle the lesions are widespread and itching is severe. Called also sheep-scab, body mange, ear mange.

PSP phenolsulfonphthalein.

PSP toxins paralytic shellfish poisoning toxins.

PSPB pregnancy specific protein B.

PSS 1. porcine stress syndrome. 2. portosystemic shunt.

psychic [*si'kik*] pertaining to the mind or psyche. See also **psychogenic**.

psych(o)- word element. [Gr.] *mind*.

psychodid a member of the family Psychodidae. The sandflies or owl midges. Includes ***Phlebotomus***.

P-76: Psoroptic mange on the ear of a rabbit showing the typical heavy encrustations.

VetBooks.ir

psychogenic [*si"ko-jen'ik*] having an emotional or psychological origin. Some diseases of animals are considered by some to have a psychogenic origin, e.g. esophagogastric ulcer of pigs, in spite of our limited knowledge of their psychological makeup.

p. alopecia anxiety and excessive grooming in cats can cause loss of hair from barbering and pulling. In a more severe form, injury to the skin occurs and eosinophilic plaques may appear.

p. dermatitis see **acral** lick dermatitis, idiopathic **hyperesthesia** syndrome, **tail** biting, **tail** sucking, **flank** sucking.

p. vomition in cats, may be caused by rapid, overeating as an attention-seeking or compulsive activity.

psychomotor [*si"ko-mo'tər*] pertaining to motor effects of cerebral or psychic activity.

p. epilepsy see psychomotor **seizure**.

psychopathology [*si"ko-pə-thol'ə-je*] the pathology of mental disease. No branch of veterinary medicine deals with this subject.

psychosis [*si-ko'sis*] pl. *psychoses;* any major mental disorder of organic or emotional origin, marked by derangement of the personality and loss of contact with reality, often with delusions, hallucinations or illusions. There is no scientific study of animal psychiatry and no specific psychoses but some well-identified and traumatic vices, e.g. crib-biting, weaving, tail chasing and flank sucking in dogs, are often classified as such. **farrowing** hysteria in sows seems to be the animal disease with the closest approximation to a derangement of personality.

parturient p. of sows see **farrowing** hysteria.

puerperal p. 1. whelping bitches sometimes display frenzied, destructive behavior and aggression. 2. sows, see **farrowing** hysteria.

psychosomatic [*si"ko-so-mat'ik*] pertaining to the interrelations of mind and body; having bodily clinical signs of psychic, emotional or mental origin.

p. disease there are no identified psychosomatic diseases in animals.

psychosurgery [*si"ko-sur'jər-e*] neurosurgery for the purpose of altering behavior. See **olfactory** tractotomy.

Psychotria a South American plant genus of the family Rubiaceae whose root contains emetine, a powerful emetic isoquinoline alkaloid, which is the active ingredient of syrup of ipecac. Poisoning may occur and is manifested by persistent, violent vomiting. Includes *P. ipecacuanha (Cephaelis ipecacuanha), P. acuminata (Cephaelis acuminata)*. Called also ipecac, ipecacuanha.

psychotropic [*si"ko-tro'pik*] capable of modifying mental activity.

p. drugs the important groups in veterinary medicine are the phenothiazine, thioxanthene, butyrophenone and benzodiazepine derivatives.

psychr(o)- word element. [Gr.] *cold*.

psychrometer [*si-krom'ə-tər*] an instrument for measuring the moisture of the atmosphere.

psychrophile [*si'kro-fil*] a psychrophilic organism.

psychrophilic [*si"kro-fil'ik*] fond of cold; said of bacteria that grow best in the cold (40–68°F; 5–20°C).

psychrophore [*si'kro-for*] a double catheter for applying cold, per medium of cold water, to e.g. the urethra.

psychrotherapy [*si"kro-ther'ə-pe*] treatment of disease by applying cold. See also **cryosurgery**.

psyllium [*sil'e-əm*] a fecal softener made from the seeds of the plants *Plantago psyllium*, *P. indica* and *P. ovata.* The mucilloid portion of the seeds of *P. ovata* is used to make psyllium hydrophilic mucilloid which is a bulk aperient to relieve constipation caused by a low residue diet.

PT prothrombin time.

Pt chemical symbol, *platinum.*

pt pint.

PTA plasma thromboplastin antecedent, **clotting** factor XI.

ptaquiloside a norsesquiterpene glucoside of the illudane type; also called aquilide A; a major toxic principle of brackens (*Pteridium* spp.) and rock fern (*Cheilanthes sieberi*); occurs in other ferns including *Histiopteris incisa, Onychium contiguum, Pteris cretica*; causes three distinct syndromes. 1. Bracken fern poisoning, caused by ptaquiloside ingestion in large doses by cattle over a short period (weeks), which depresses bone marrow activity, leading to pancytopenia, evidenced principally as ecchymotic hemorrhages in mucosae and serosae, with terminal septicemia. Severe diarrhea and dysentery or pharyngeal edema may also be terminal events. Called also osteomyelotoxic ptaquiloside poisoning. 2. Enzootic hematuria, caused by ptaquiloside ingestion in small doses over a long period (years), which results in proliferative lesions and neoplasms in and bleeding from the urinary bladder mucosa in cattle, but no effects on bone marrow. 3. Bright blindness, caused by ptaquiloside ingestion over a long period (years); occurs predominantly in hill breeds of sheep in Britain; causes retinal degeneration and blindness. See also bright **blindness.**

ptarmic [*tahr'mik*] causing sneezing.

ptarmus [*tahr'məs*] spasmodic sneezing.

PTC plasma thromboplastin component, **clotting** factor IX, Christmas factor.

Pteridium [*tə-rid'e-əm*] a fern genus in the family Dennstadiaceae. The fern is classified by some authorities as more than one species including: *P. aquilinum*, *P. esculentum* (austral bracken), *P. revolutum* (hairy bracken), and the hybrid *P. esculentum* x *P. revolutum* (*P. yarrabense* northern bracken). Called also *Pteris aquilina*, bracken. It contains ptaquiloside and a thiaminase that both poison domestic animals, and a cyanogenic glycoside that does not. Manifestations of ptaquiloside poisoning of cattle (rarely sheep) vary with dose and duration of intake; see **ptaquiloside**. A thiaminase in bracken causes a clinical syndrome of **thiamine** deficiency in horses. Signs are muscle tremor, incoordination, frequent falling and bradycardia and cardiac irregularity.

pteridophyte a member of the ferns and their allies.

Pteris aquilina ***Pteridium*** *aquilinum*.

Pteroglossus see **toucan**.

Pterolichus a genus of mites in the family Dermoglyphidae.

P. bicaudatus found on the feathers of the South African ostrich.

P. obtusus found on the feathers of fowls.

Pteronia pallens South African plant in the family Asteraceae; contains an unidentified toxin which damages liver and kidneys. Called also Scholtz bush, witbossie, *P. geigeroides*.

Pteronyssus striatus a feather mite found on sparrow, linnet and chaffinch.

Pterophagus a genus of mites in the family Proctophyllodidae.

P. strictus found on the feathers of pigeons.

Pterophyllum a genus of small, highly colored, laterally compressed aquarium fish with thin, trailing fins. Called also angelfish.

Pteropus the genus of fruit bats or flying foxes; see also **bats**.

pteroside a glycoside of pterosins.

pterosin a sesquiterpenoid found in bracken (*Pteridium aquilinum*).

pteroylglutamic acid see **folic acid**.

pterygium [*tə-rij'e-əm*] a wing-like structure, especially an abnormal triangular fold of conjunctival membrane extending over the cornea in the interpalpebral fissue. Seen in primates as a result of excessive sunlight exposure.

pterygoid [*ter'i-goid*] shaped like a wing.

P-77: *Pteridium aquilinum.* By permission from Plumlee K, Clinical Veterinary Toxicology, Mosby, 2004.

p. bone see pterygoid **bone**. See also Table 10.
p. process see pterygoid **process**.
pterygomandibular [ter"ĭ-go-man-dib'u-lər] pertaining to the pterygoid process and the mandible.
pterygomaxillary [ter"ĭ-go-mak'sĭ-lar-e] pertaining to a pterygoid process and the maxilla.
pterygopalatine [ter"ĭ-go-pal'ə-tīn] pertaining to a pterygoid process and the palatine bone.
pterylae [ter"ĭ -le'] tracts on the skin of birds into which feathers are implanted and which establish the pattern of the plumage of that bird for that molt.
pterylosis [ter"ĭ -lo'sis] the distribution of feathers in the pterylae.
PTFE polytetrafluoroethylene.
PTH parathyroid hormone.
PTH-rP parathyroid hormone-related protein.
ptilopody [ti-lip'ə-de] feathering of the foot and toes of birds.
ptilosis [ti-lo'sis] 1. falling out of the eyelashes. 2. the feather coat, total feather covering, of birds.
ptomaine [to'mān] any of an indefinite class of toxic bases, usually considered to be formed by the action of bacterial metabolism on proteins.
p. poisoning a term commonly misapplied to **food** poisoning. Contrary to popular belief, ptomaines are not injurious to the carnivorous or omnivorous digestive systems, which are quite capable of reducing them to harmless substances. Decomposed foods are often responsible for food poisoning, however, because they may harbor certain forms of poison-producing bacteria, especially *Clostridium botulinum*.
ptosed [tōst] affected with ptosis.
ptosis [to'sis] 1. prolapse of an organ or part. 2. paralytic drooping of the upper eyelid.
-ptosis word element. [Gr.] *downward displacement*.
PTS put to sleep; a common euphemism for euthanasia, but also used to describe general anesthesia.
PTT partial thromboplastin time.
PTU propylthiouracil.
ptyalagogue [ti-al'ə-gog] sialagogue.
ptyalectasis [ti"ə-lek'tə-sis] 1. a state of dilatation of a salivary duct. 2. surgical dilatation of a salivary duct.
ptyalin [ti'ə-lin] see **amylase**.
ptyalism [ti'ə-liz-əm] excessive secretion of saliva; seen in rabbits, guinea pigs with malocclusion or heat stress, ruminants poisoned by *Rhizoctonia leguminicola*.
ptyal(o)- word element. [Gr.] *saliva*.
ptyalocele [ti-al'o-sēl] a cystic tumor containing saliva.
ptyalogenic [ti"ə-lo-jen'ik] formed from or by the action of saliva.
ptyalorrhea [ti"ə-lo-re'ə] ptyalism.
Pu chemical symbol, *plutonium*.
pubertal [pu'bər-təl] pertaining to or emanating from puberty.
p. period the period approaching puberty when gonadal function, accessory sex gland function and behavior develop to the point where reproduction is possible.
puberty [pu'bər-te] the time at which reproduction by an individual animal becomes possible for the first time; a term used infrequently in veterinary medicine but there is no other word which can substitute for it.
delayed p. varies widely between species and between breeds; negatively influenced by undernutrition and obesity.
pubescent [pu-bes'ənt] 1. arriving at the age of puberty. 2. covered with down or lanugo.
pubic [pu'bik] pertaining to or lying near the pubis.
p. ligament see Table 12.
pubiotomy [pu"be-ot'ə-me] surgical separation of the pubis lateral to the symphysis.
pubis [pu'bis] pl. *pubes* [L.] the bone beneath the human pubes (pubic hair) and its homolog in other animals; the cranioventral part of the pelvic girdle. See also Table 10. Called also pubic bone.
public health the field of human medicine that is concerned with safeguarding and improving the physical, mental and social well-being of the community as a whole. The role for veterinarians in this service rests especially in the areas of control of zoonotic agents at the level of the farm, food safety and food-borne diseases.
veterinary p. health the part played by veterinarians in human public health, relating chiefly to the recognition and control of zoonotic disease and in food safety.
public programs see public **program**.
PubMed an electronic search engine for accessing the **MEDLINE** database of publications in the National Library of Medicine.
pubocaudal muscles [pu"bo-kaw'dəl] the more caudal of the two parts of the levator ani muscles; origin at the dorsal surface of the pubis; insertion at the ventral surface of the caudal vertebrae.
pubofemoral [pu"bo-fem'ə-rəl] pertaining to the pubis and femur.
puboprostatic [pu"bo-pros-tat'ik] pertaining to the pubis and prostate.
pubovesical [pu"bo-ves'ĭ-kəl] pertaining to the pubis and bladder.
Puccinia graminis a toxic fungus which contains an unidentified toxin and causes salivation and stomatitis and, in severe cases, death of horses.
Pudelpointer a combination of pointer and poodle, this German hunting breed has a short, rough coat of dark liver to autumn leaves color. The tail is docked. Recognized as a breed in Europe.
pudendal [pu-den'dəl] pertaining to the pudendum.
p. block anesthesia produced by blocking the pudendal nerves, accomplished by injection of the local anesthetic into the tuberosity of the ischium.
p. fissure see **rima** pudendi.
internal p. block see internal pudendal **block**.
pudendum [pu-den'dəm] pl. *pudenda* [L.] the external genitalia, especially of the human female (*pudendum femininum*).
pudic [pu'dik] pudendal.
Pueraria lobata a coarse, perennial leguminous vine. Has woody stems but very palatable and nutritious foliage equal in value to alfalfa. Called also kudzu.
puerperal [pu-ur'pər-əl] pertaining to a puerpera or to the puerperium.
p. fever see **mastitis–metritis–agalactia**.
p. laminitis see **laminitis**.
p. metritis infection of the uterus in a puerperal female.
p. tetanus see **tetanus**.
p. tetany see puerperal **tetany**.
puerperalism a morbid condition incident to parturition.
puerperium [pu"ər-pēr'e-əm] the postpartum period or period between parturition and uterine involution.
PUFA polyunsaturated fatty acids.
puff disease [puf] see **anhidrosis**.
puffer [puf'ər] highly venomous fish in the family **Tetraodontidae**. Called also toadfish, balloonfish.
p. fish poison see **tetrodotoxin**.
puffin fish eating, diving sea birds in the genus *Fratercula*, found in northern subarctic regions, typically in colonies on cliff faces. They are black and white with large, brightly colored beaks. There are three species, the Atland puffin (*F. arctica*), horned puffin (*F. corniculata*) and tufted puffin (*F. cirrhata*).
Puffin dog see **Norwegian** Lundehund.
Pug a small (14–18 lb), cobby dog with a large rounded head, prominent eyes, very short nose, and large, deep wrinkles on the forehead and face. The small ears fold over, the tail is curled over the back, and the coat is fine and very short in black, silver, apricot or fawn with a black mask. Called also Mopshond. The breed is predisposed to pigmentary keratitis and proptosis.
pugging see **poach**.
puggle a young **echnida**.
pukatea see ***Laurelia novae-zealandiae***.
pulegone a toxic ketone found in pennyroyal oil. It causes hepatotoxicity in dogs and cats.
Pulex [pu'leks] a genus of fleas, several species of which transmit the microorganism causing bubonic plague in humans.
P. irritans a widely distributed species, known as the human flea, which infests domestic animals as well as humans, and may act as an intermediate host of certain helminths.
P. porcinus the peccary flea.
Puli a medium-sized dog distinguished by its long, wiry haircoat, usually black, gray or white, that forms long, tightly coiled cords, similar to dreadlocks, in adults which obscure the body features. In the USA, dogs may be shown either corded or brushed. The breed was developed for guarding and driving sheep. Called also Hugarian Puli.
pulicicide an agent destructive to fleas.
pull [pŏŏl] to remove a sick animal from a pen in a feedlot for treatment. See also **daily pull and dead records**.

VetBooks.ir

P-78: Puli.

pull rate a daily percentage of the cattle in a feedlot which are pulled out of the feeding pens and relegated to the hospital yards or sent for emergency slaughter.

pull-out suture pattern removable, nonabsorbable, interrupted sutures for apposition of deep tissues. The suture starts on one side of a wound, crosses it at right angles at the deep tissues. Having taken a bite of these tissues it returns to the entry side and emerges at the skin close to the entry. Individual sutures are inserted on both sides in an alternating pattern.

pull theory a theory of wound healing and contraction stating that material within the healing wound contracts and pulls the margins of the wound together.

pull-through [*pool'throo*] a surgical technique for abdominoperineal resection of the rectum. After removal of a segment, the rectum is sutured to the perineal skin, forming a new mucocutaneous junction. Used in the treatment of rectal neoplasms and anal furunculosis.

pullet young, female fowl from heat-weaning at about 4 weeks of age, up to point of lay at about 5 months. In some circles the first laying season is referred to as the pullet year.

p. disease see visceral **gout**.

pullorum disease a disease of birds caused by infection with *Salmonella pullorum* and characterized by moribund and dead birds at hatching time, by dyspnea and diarrhea in older birds and a reduction in egg yield, and reduction in fertility of the eggs in adults. The disease, which has been largely eradicated, is notifiable to the OIE (see Table 22).

pullulation [*pul"u-la'shən*] development by sprouting, or budding.

pulmo [*pool'mo*] pl. *pulmones* [L.] lung.

pulm(o)- word element. [L.] *lung*. See also words beginning pulmon(o)-.

pulmoaortic [*pool"mo-a-or'tik*] pertaining to the lungs and aorta.

pulmonary [*pool'mo-nar"e*] pertaining to the lungs, or to the pulmonary artery. See also **lung**.

p. abscess an abscess within the lung; due either to hematogenous or aerogenous bacterial infection. May cause a syndrome of chronic toxemia, cough, loss of body weight. Careful auscultation may elicit squeaky rales around the lesions. See also **vena** caval thrombosis, **aspiration** pneumonia.

p. acinus basic structural unit of the lung parenchyma; the gas exchange unit, supplied by a single terminal bronchiole and includes branches of the terminal bronchiole, alveolar ducts, alveolar sacs, alveoli and associated blood vessels. A pulmonary lobule consists of many acini.

p. agenesis incompatible with life; found only in fetal or neonatal necropsy specimens.

p. alveolar microlithiasis see **microlithiasis** alveolaris pulmonum.

p. alveolar parenchyma include epithelial cells (pneumonocytes or pneumocytes), alveolar capillary endothelial cells, and interstitial cells (fibroblasts) and alveolar macrophages.

p. alveolar proteinosis a disease of unknown etiology marked by chronic filling of the alveoli with a proteinaceous, lipid-rich, granular material consisting of surfactant and the debris of necrotic cells.

p. arteriopathy see ***Aelurostrongylus***.

p. artery wedge pressure see wedge **pressure**.

p. atelectasis see **atelectasis**.

p. bed the network of capillaries in lung tissue.

p. calcinosis see **microlithiasis** alveolaris pulmonum.

p. calculus see **bronchial** calculus.

p. carcinomatosis see ovine pulmonary adenomatosis (below).

chronic obstructive p. disease (COPD) a disease of mature horses characterized by bronchoconstriction, airway wall thickening and mucus overproduction, due to exposure to dust, fungal spores and an endotoxin-laden barn environment. Occurs in horses with a significant genetic linkage of seven chromosomal regions. It is a well-identified and common syndrome of chronic respiratory disease. Clinical signs include chronic cough, loud abnormal breath sounds, a double expiratory effort and abundant mucopurulent material in the trachea on endoscopic examination. Called also heaves, broken wind.

p. circulation the circulation of blood to and from the lungs. Deoxygenated blood from the right ventricle flows through the right and left pulmonary arteries to the right and left lung. After entering the lungs, the branches subdivide, finally emerging as capillaries which surround the alveoli and release the carbon dioxide in exchange for oxygen. The capillaries unite gradually and assume the characteristics of veins. These veins join to form the pulmonary veins, which return the oxygenated blood to the left atrium. See also **circulatory** system.

p. compliance a measure of the ability of the lung to distend in response to pressure without disruption. Expressed as the unit volume of change in the lung per unit of pressure. Compliance or distensibility of the lung is increased in conditions such as emphysema in which the lung distends more readily, and is decreased in fibrotic conditions in which the lung distends with difficulty. See also **compliance**.

p. congestion caused by engorgement of the pulmonary vascular bed and it may precede pulmonary edema when the intravascular fluid escapes into the parenchyma and the alveoli. There is a loss of air space and the development of respiratory embarrassment.

p. cysts may be congenital or acquired, caused by trauma, parasites (*Paragonimus* spp.), or associated with bronchiectasis. Rarely, metastatic tumors cavitate forming cysts.

p. defense mechanisms include aerodynamic filtration in nasal cavities, sneezing, local nasal antibody, laryngeal and cough reflexes, mucociliary transport mechanisms, alveolar macrophages, systemic and local antibody systems.

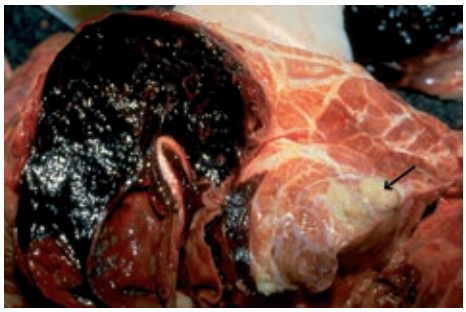
p. embolus obstruction of the pulmonary artery or one of its branches by an embolus. The embolus usually is a blood clot swept into circulation from a large peripheral vein. Signs vary greatly, depending on the extent to which the lung is involved. Simple, uncomplicated embolism produces such cardiopulmonary signs as dyspnea, tachypnea, persistent cough, pleuritic pain and hemoptysis. On rare occasions the cardiopulmonary signs may be acute, occurring suddenly and quickly producing cyanosis and shock. A septic embolus can lead to local pulmonary abscess or an extension to pneumonia as in caudal vena caval syndrome. See also **vena** caval thrombosis, pulmonary abscess (above).

p. eosinophilic granulomatosis a lesion common in heartworm disease; eosinophils and neutrophils surround trapped microfilariae causing nodules as large as 3 inches diameter. May be preceded by lesions of allergic pneumonitis.

exercise-induced p. hemorrhage traces of blood can be found in about 60% of horses after racing. Less than 1% of these bleed from the nostrils, but the syndrome is a cause for poor performance as well as potential premature athletic retirement. A public concern is its visual occurrence and the routine use of medications, such as furosemide, to prevent it. See also **epistaxis**.

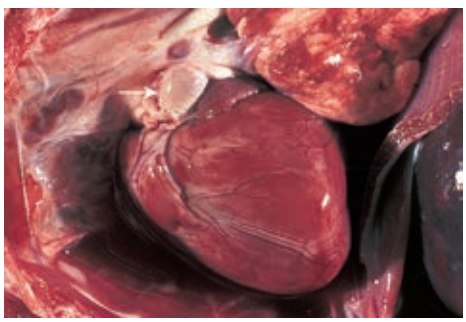
p. function tests tests used to evaluate lung mechanics, gas exchange, pulmonary blood flow and blood acid–base balance. Pulmonary function testing is used to detect emphysema and chronic obstructive bronchitis at an early stage.

p. hemorrhage as distinct from hemothorax, is recognized because of a syndrome of dyspnea, increased lung density radiographically, and hemorrhagic anemia. If a large vessel ruptures into an abscess cavity there is usually a massive hemoptysis and instant death. Frothy blood-stained nasal discharge is an indication of pulmonary edema rather than of pulmonary hemorrhage. See also exercise-induced pulmonary hemorrhage (above).



P-79: Intrapulmonary hemorrhage attributable to erosion of the pulmonary artery by a lung abscess in a cow with caudal vena caval thrombosis. Immediately adjacent to this, purulent material is seen exiting a lung abscess that has been cut open.
From Braun U: Clinical findings and diagnosis of thrombosis of the caudal vena cava in cattle. Vet J 175:118-125, 2008. Elsevier.

p. horse sickness the predominantly pulmonary form of **African** horse sickness.
p. hypertrophic osteoarthropathy see hypertrophic **osteopathy**.
p. hypoplasia a congenital defect resulting in decreased lung development.
p. hypoplasia with anasarca lethal autosomal recessive disorder to Shorthorn and Maine-Anjou cattle manifest with mid-pregnancy fetal loss or dystocia, profound anasarca and death of the full-term calf, and post dystocial sickness or death of the dam.
p. infarction see pulmonary **infarction**, pulmonary embolus (above).
p. infiltrates with eosinophils (PIE) see **PIE syndrome**.
p. malformation includes accessory lungs, pulmonary hypoplasia, pulmonary agenesis, congenital pulmonary cysts, endodermal heteroplasia, respiratory distress syndrome, neonatal maladjustment syndrome, immotile cilia syndrome.
p. mycoses includes aspergillosis, mortierellosis, blastomycosis, cryptococcosis, coccidioidomycosis.
p. neoplasm many types are recorded in all species but the prevalence is very low in food animals. A common site for metastases in companion animals. Characterized clinically by decreased exercise tolerance, progressive dyspnea, chronic cough and emaciation. Most diagnoses result from radiographic examination of the thorax for secondary growths.
overriding p. artery see **overriding** pulmonary artery.
ovine p. adenomatosis chronic progressive pneumonia of mature sheep caused by a retrovirus transmitted by the respiratory route. Sporadic occurrence with geographic clustering. Progressive dyspnea, emaciation and a profuse nasal discharge are the cardinal signs, but coughing is not a feature. The disease is always fatal. It is of great importance if it occurs in flocks that are housed for long periods. Characteristically the extensive lung involvement includes large areas of neoplastic tissue. Called also jaagsiekte, pulmonary adenomatosis.
p. patterns see **alveologram**, **bronchial** pattern.
re-expansion p. edema edema, emphysematous bullae and serosanguinous fluid in the airways with generalized pulmonary capillary endothelial damage; associated with chronic pulmonary collapse and removal of pleural effusions or pneumothorax with rapid re-expansion.
p. rupture traumatic, especially when there is rib fracture, or spontaneous due to coughing and a weak parenchyma. The most common cause of pneumothorax.
summer pasture-associated obstructive p. disease a disease of mature horses characterized by recurrent airway obstruction and so named because it affects grazing horses during the summer months. Pathophysiological characteristics of the disease include airway inflammation, increased airway mucus production and bronchoconstriction.
p. thromboembolic disease thromboembolism causing blockage of large sections of the pulmonary vascular bed will result in at least temporary severe dyspnea. It may also lead to right heart congestive failure, i.e. cor pulmonale.
p. thrombosis see **thromboembolism**.
p. valve any one of the three semilunar cusps or valvulae that individually form the pocket-like structure that guard the orifice between the right ventricle and the pulmonary artery or, similarly, between the left ventricle and aorta.
p. valve stenosis causes right ventricular hypertrophy and a poststenotic dilatation of the pulmonary artery. There is a systolic murmur and thrill on the left side of the chest. A common congenital defect in dogs.
p. vein the large vein (right and left branches) that carries oxygenated blood from the lungs to the left atrium of the heart.
p. wedge pressure see wedge **pressure**.
pulmonic [*pəl-mon'ik*] pulmonary.
p. stenosis a common congenital anomaly in dogs, but rare in other species. Inherited in Beagles, probably in Chihuahuas, English bulldogs and terrier breeds. It may occur in supravalvular, valvular (most common) or subvalvular (infundibular) locations. Characterized by a loud systolic ejection murmur at the left heart base; accompanied by right ventricular hypertophy. Severity of the condition can be assessed by Doppler echo-derived pressure gradient across the pulmonic valve. Correction is accomplished by several surgical techniques and by balloon valvuloplasty.
pulmonitis [*pool"mo-ni'tis*] inflammation of the lung; pneumonitis; pneumonia.
eosinophilic p. an allergic reaction to dying microfilaria in pulmonary capillaries of dogs with heartworm disease.
pulmon(o)- word element. [L.] *lung*. See also words beginning pulm(o)-.
pulmotor an apparatus for forcing oxygen into the lungs, and inducing artificial respiration.
pulp [*pulp*] any soft, juicy animal or vegetable tissues, e.g. citrus pulp.
p. canal root canal.
p. cap pulp of the feather produced inside the calamus by the follicular tissue. The pulp protrudes through the aperture in the wall of the shaft and forms the external pulp caps. Internal pulp caps are formed within the calamus.
p. cavity the pulp chamber and the root canal in a tooth. In the young it is wide, but with age it gradually becomes narrower with deposition of secondary dentin.
p. chamber the cavity at the center of the tooth which contains most of the pulp.
dental p. the sensitive content of the cavity of the tooth carrying its nerve and blood supply.
p. polyp superficial hyperplasia of dental pulp, usually after exposure due to injury such as fracture of a tooth.
red p., splenic p. the dark reddish brown substance filling the interspaces of the splenic sinuses.
tooth p. dental pulp.
white p. sheaths of lymphatic tissue surrounding the arteries of the spleen.
pulpa [*pul'pə*] pl. *pulpae* [L.] pulp.
pulpal [*pul'pəl*] pertaining to pulp, usually dental.
p. axis the direction in which pulp is distributed in a tooth, generally from the apex to the occlusal surface.
p. stones small calcified deposits in the pulp cavity.
pulpalgia [*pəl-pal'je-ə*] pain arising from the dental pulp; toothache.
pulpectomy [*pəl-pek'tə-me*] complete removal of dental pulp.
partial coronal p. a procedure in which some exposed pulp is amputated and the remainder is covered. Sometimes called pulpotomy.
pulpefaction conversion into pulp.



P-80: Pulmonic stenosis in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

P-81: Pulpitis of the left mandibular canine tooth. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

VetBooks.ir

pulpitis [*pəl-pi'tis*] pl. *pulpitides* [L.] inflammation of dental pulp; endodontitis.
pulpotomy [*pəl-pot'ə-me*] partial excision of the pulp in a vital tooth.
pulpy [*pul'pe*] soft; having the consistency of pulp.
p. kidney disease *Clostridium perfringens* (type D) **enterotoxemia**.
pulsatile [*pul'sə-til*] characterized by a rhythmic pulsation.
Pulsatilla vulgaris ***Anemone*** *pulsatilla*.
pulsation chamber [*pəl-sa'shən*] space between the **teat cup** shell and the liner of a milking machine teat cup.
pulsator [*pul'sa-tər*] mechanism in a milking machine which governs the cyclic pressure changes necessary to the function of the machine.
pulse [*puls*] 1. a rhythmic wave. 2. any leguminous seed used in animal feed or human food. Contain about 20% protein.
abdominal p. that over the abdominal aorta.
p. abnormality includes irregularity of timing and amplitude, large or small amplitude, waterhammer pulse, Corrigan's pulse, dropped pulse, pulse deficit, alternating pulse and many others.
alternating p. pulsus alternans; one with regular alteration of weak and strong beats without changes in cycle length.
p. amplitude indicative of arterial blood pressure; estimated on the difference of pressure exerted by the fingers to occlude and then reopen the arterial pulse.
anacrotic p. one in which the ascending limb of the tracing shows a transient drop in amplitude, or a notch.
anadicrotic p. one in which the ascending limb of the tracing shows two small additional waves or notches.
anatricrotic p. one in which the ascending limb of the tracing shows three small additional waves or notches.
arterial p. the wave of pressure generated by the ejection of blood from the left ventricle into the aorta. Although the size (amplitude) of the pulse depends on the volume ejected it is not the blood passing the finger that is palpated, it is only the pressure wave. The pulse is a good indicator of the heart's activity with respect to amplitude, rate and regularity. It may also provide information on the state of the vessel walls and the efficiency of the aortic semilunar valves. It may be palpated in the median, facial, femoral or coccygeal arteries, the preferred site varying with the species and the occasion.
atrial venous p. atriovenous pulse, a cervical pulse having an accentuated 'a' wave during atrial systole, owing to increased force of contraction of the right atrium; a characteristic of atrial hypertrophy and tricuspid stenosis.
B-B shot p. see water-hammer pulse (below).
bigeminal p. one in which two beats occur in rapid succession, the groups of two being separated by a longer interval, usually caused by ventricular bigeminy.
catadicrotic p. see **catadicrotism**.
catatricrotic p. see **catatricrotism**.
p.-chase experiment to study the movement of molecules, cells are incubated with a labeled precursor (pulse) and then replaced with unlabeled precursor (chase). The label can be followed as it is incorporated into newly synthesized compounds and through different cellular compartments. Radioactivity is commonly used as the label.
Corrigan's p. see **Corrigan's pulse**.
p. deficit the difference between the apical pulse (apex beat) and the radial pulse. Obtained by counting apical beats as heard through a stethoscope over the heart and counting the arterial pulse at the same time. A characteristic of several arrhythmias.
dicrotic p. a pulse characterized by two peaks, the second peak occurring in diastole and being an exaggeration of the dicrotic wave.
p. dosing the administration of drugs, usually antibiotics or corticosteroids, in a single, large dose which might be repeated after an interval of days. Thought to have the advantage of high tissue concentrations and fewer of the undesirable side-effects associated with more frequent dosing.
dropped p. arrhythmic pulse.
femoral p. that which is located at the site where the femoral artery passes through the groin in the femoral triangle; the usual site for palpating the pulse in dogs and cats.
fetal p. detector an ultrasound detector based on the Doppler principle used to detect the presence of a living fetus in utero.
funic p. the arterial tide in the umbilical cord.
p. generator the power source for a cardiac pacemaker system, usually powered by a lithium battery. It supplies electrical impulses to the implanted electrodes. See also **pacemaker**.
hard p. one characterized by high tension.
irregular p. caused by cardiac arrhythmia or inadequate ventricular contractions failing to open aortic semilunar valves.
jerky p. see water-hammer pulse (below).
jugular p. 1. in the normal animal, consists of three positive waves in each cardiac cycle, commonly called 'a', 'c' and 'v', with 'a' produced by right atrial contraction, 'c' by the bulging of the tricuspid valve into the right atrium during early ventricular contraction and 'v' by the increase in blood volume in the venae cavae and the right atrium during ventricular systole when the triscuspid valve is closed. Commonly visible in horses and cattle. 2. a large pulse which goes high up the neck when the head is in the normal position, and which is synchronous with the heart cycle and is systolic in time, indicates insufficiency of the right atrioventricular valve.
p. monitor a pulse detector which uses the Doppler principle.
paradoxical p. one that markedly decreases in amplitude during inspiration. Associated with cardiac tamponade.
peripheral p. that palpable in the extremities, e.g. legs, neck and head; the usual sites for measuring the pulse rate.
pistol-shot p. 1. one in which a sharp cracking sound associated with the pulse can be heard through a stethoscope placed over the artery. Occurs where the arteries are subject to sudden distention and collapse as with a water-hammer pulse. 2. sound that can be auscultated over the jugular vein in association with tricuspid insufficiency in cattle that have high mountain altitude sickness.
p. pressure the difference between the systolic and diastolic pressures.
radial p. that felt over the radial artery.
p. rate the number of pulsations per minute palpable in an artery, usually of a limb. The normal rates per minute for the common domestic animal species are: horses, 30-40; young horses up to one year of age, 70–80; cattle, 60–80; young calves, 100–120; sheep and goats, 70–120; pigs (heart rate), 60–70; llama, alpaca 60–90; dogs, 100–130; cats, 110–140; adult fowls 250–300.
p. rhythm regularity of the pulse in time and amplitude.
thready p. one that is very fine and barely perceptible.
p. tracing see **sphygmogram**.
trigeminal p. one with a pause after every third beat.
undulating p. one giving the sensation of successive waves.
vagus p. a slow pulse.
venous p. the pulsation over a vein.
water-hammer p. one in which the artery is suddenly and markedly distended and relaxed. Characteristic of patent ductus arteriosus. Called also Corrigan's, jerky and B-B shot pulse.
wiry p. a small, tense pulse.
irregular p. caused by cardiac arrhythmia or inadequate ventricular contractions failing to open aortic semilunar valves.
PulseNet a national surveillance system in the USA coordinated by the Centers for Disease Control and Prevention that allows state and local public health epidemiologists to compare pulsed-field gel electrophoresis profiles of foodborne disease-causing bacteria

such as *Salmonella, Shigella, Listeria, Campylobacter* and *Escherichia coli* O157:H7 from all USA regions.

pulsed electromagnetic field magnet see **magnetic field therapy**.

pulsion [*pul'shən*] a pushing outward.

pulsus [*pul'səs*] [L.] *pulse*.

p. alternans see alternating **pulse**.

p. bigeminus bigeminal pulse.

p. bisferiens a pulse characterized by two strong systolic peaks separated by a midsystolic dip, most commonly occurring in pure aortic regurgitation and in aortic regurgitation with stenosis.

p. celer a swift, abrupt pulse.

p. differens inequality of the pulse obervable at corresponding sites on either side of the body.

p. paradoxus see paradoxical **pulse**.

p. parvus et tardus a small hard pulse that rises and falls slowly.

p. tardus an abnormally slow pulse.

pultaceous [*pəl-ta'shəs*] like a poultice; pulpy.

pulverization [*pul"vər-ĭ-za'shən*] in dentistry, high-speed burs may be used to remove root fragments that cannot be extracted or are ankylosed.

pulverulent [*pəl-ver'u-lənt*] powdery; dusty.

pulvinar [*pəl-vi'nər*] the posterior medial part of the posterior end of the thalamus.

pulvinus [*pəl-vi'nəs*] cushion, pad.

p. dentalis the dental pad which replaces the upper incisors in the mouth of ruminants.

p. digitalis the digital cushion, a pad of fat, white fibrous and elastic tissue located between the distal phalanx and the sole and frog of the hoof of the horse.

puma see **cougar**.

pumice [*pum'is*] a substance consisting of silicates of aluminum, potassium and sodium; used in dentistry as an abrasive.

p.-stone lung **microlithiasis** alveolaris pulmonum.

pumiced hoof a rough, porous appearance of the hoof in a horse with chronic coronitis.

pump [*pump*] 1. an apparatus for drawing or forcing liquid or gas. 2. to draw or force liquids or gases. 3. a mechanism or structure that mediates active **transport** of ions or molecules across a biological membrane.

blood p. a machine used to propel blood through the tubing of extracorporeal circulation devices.

calcium p. the mechanism of active transport of calcium (Ca^{2+}) across a membrane, as of the sarcoplasmic reticulum of muscle cells, against a concentration gradient; the mechanism is driven by hydrolysis of ATP.

chloride p. an active secretory process at a barrier membrane that facilitates the transfer of chloride ions across the membrane.

Gomco p. standard suction kit including electric motor, pump and collecting jar.

infusion p. an electronic device used to control the administration of intravenous fluids in very small amounts and at a carefully regulated rate over long periods.

insulin p. a device consisting of a syringe filled with a predetermined amount of short-acting insulin, a plastic cannula and a needle, and a pump that periodically delivers the desired amount of insulin. Sometimes used in humans, but of limited application in animals.

ion p. see **Ca^{2+}-ATPase**, **Na,$^{+}$, K^{+}-ATPase**.

p. oxygenator heart–lung machine. See **extracorporeal** circulatory support unit.

proton p. inhibitors see **proton** pump inhibitor.

stomach p. an apparatus used to remove material from the stomach. It consists of a rubber stomach tube to which a bulb syringe is attached. The tube is inserted into the mouth or nose and passed down the esophagus into the stomach. Suction from the syringe brings the contents of the stomach up through the tube. For cattle and horses a reversible metal pump adapted from a yachting bilge pump is most suitable. In small animals, gravity is the usual method of moving fluid into and out of the stomach during lavage.

pumpkin [*pump'kin*] large edible fruit, used extensively as cattle feed and for human consumption, *Cucurbita maxima*.

punch [*punch*] a metal, rodlike instrument with one pointed or cavitied end and one propulsion end to be pushed hard with the palm of the hand or driven with a hammer in order to drive a hole or to excise a small round piece of tissue.

p. biopsy a circular piece of skin excised by a hand driven biopsy punch. See also **Keyes punch**.

dental p. has a slight cavity at the end so that the tooth to be driven will seat into the end and not slip off.

puncta [*punk'tə*] plural form of **punctum**.

p. maxima points on the chest wall where heart sounds are heard best.

punctate [*punk'tāt*] spotted; marked with points or punctures.

punctiform [*punk'tĭ-form*] like a point.

punctograph [*punk'to-graf*] an instrument for radiographic localization of foreign bodies.

punctum [*pungk'təm*] pl. *puncta* [L.] a point or small spot.

imperforate lacrimal p. congenital absence of the lacrimal punctum, usually the inferior punctum. Instead the proximal end of the lacrimal canaliculus is covered by a conjunctival membrane. Occurs most often in dogs, especially Cocker spaniels and a number of toy or miniature breeds where it is manifest as epiphora.

lacrimal p. see **lacrimal** punctum.

nasolacrimal p. see **lacrimal** punctum.

obstructed p. acquired blockage of a congenitally patent lacrimal punctum; may result from foreign bodies, accumulation of debris or inflammation, or cicatrization of the canaliculus or associated conjunctival or eyelid tissues.

puncture [*pungk'chər*] 1. the act of piercing or penetrating with a pointed object or instrument; a wound so made. Wounds of special interest because of their potential seriousness are to the cornea, the sole of the horse's foot and the synovial cavity. 2. surgical puncture of an anatomical tissue to obtain material for clinicopathological examination. Includes **cisternal** puncture, **lumbar** puncture, **spinal** puncture, **sternal** puncture.

puncture vine see ***Tribulus terrestris***.

punishment the use of an undesirable stimulus to modify or prevent an undesirable behavior.

punkies see **biting** midge.

puntilla a short, double-edged, stabbing knife which is plunged into the occipitoatlantal space to sever the medulla oblongata in the **evernazione** method of slaughter.

Puntius [*pun'te-əs*] a genus of fish in the family Cyprinidae, often called spotted barbs. Many are brightly colored and patterned; they are popular as aquarium fish.

PUO pyrexia of unknown origin.

pupa [*pu'pə*] pl. *pupae* [L.] the second stage in the development of an insect, between the larva and the imago. Usually an inactive stage such as a coccoon.

puparium the hard pupal case of the insect pupa.

pupate to proceed to the stage of pupa in an insect life cycle.

pu/pd polyuria/polydipsia.

pupil [*pu'pil*] the aperture in the center of the iris which regulates the amount of light that reaches the retina.

Adie's (tonic) p. see tonic pupil (below).

Argyll Robertson p. one that is miotic and responds to accommodation effort, but not to light.

dilated p. syndrome see **dysautonomia**.

fixed p. a pupil that does not change size on exposure to changes in illumination or (in primates) on convergence or during accommodation.

multiple p's polycoria.

occluded p. a congenital or acquired membrane (usually fibrovascular) that obstructs the pupil.

secluded p. a complete posterior synechia that separates the anterior and posterior chambers of the eye.

spastic p. syndrome anisocoria in cats infected with feline leukemia virus. The degree of anisocoria and even which pupil is smaller can vary greatly over short periods of time. The virus has been observed in the short ciliary nerves and ciliary ganglia of some affected cats.

tonic p. see **pupilloplegia**.

pupilla [*pu-pil'ə*] [L.] *pupil*.

pupillary [*pu'pĭ-lar-e*] pertaining to or emanating from the pupil.

p. aperture the pupil.

p. block an obstruction to the flow of aqueous between the pupillary border of the iris and the anterior lens capsule. Can cause glaucoma.

consensual p. light reflex the reflex constriction of the pupil of a non illuminated eye when light is directed into the fellow eye.

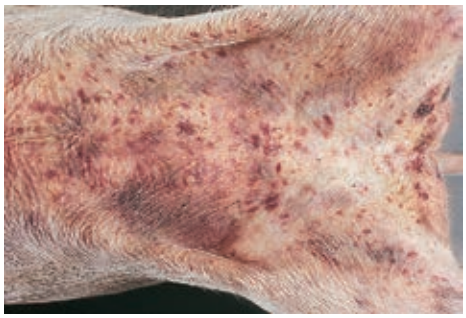
VetBooks.ir

p. constriction see **miosis**.
p. dilation see **mydriasis**.
p. light reflex constriction of a pupil in response to an increase in light intensity. Used to assess in a coarse manner function of the retina, optic nerve, radiation and tract, as well as the oculomotor nerve and the musculature of the iris. Does not verify visual cortical function.
p. membranectomy a surgical technique for resection of a fibrovascular adhesion between the iris and lens capsule formed as a sequela to cataract surgery.
persistent p. membrane (PPM) a congenital and sometimes inherited embryological defect in which remnants of the anterior tunica vasculosa lentis persist beyond birth. Considered pathologic when they persist beyond a few months of age. These are pigmented and sometimes vascular elements that arise from the iris collarette and extend to another region of the collarette (iris-to-iris PPMs) to the cornea (iris-to-cornea PPMs) or to the lens (iris-to-lens PPMs). The latter two forms typically produce an adherent leukoma or cataract, respectively, that can affect vision, while iris-to-iris PPMs are typically of no clinical relevance. Seen most commonly in dogs, particularly Basenjis.
p. zone one of the three regions of the iris. the pupillary zone comprises the innermost region of the iris near the pupillary border. See also **ciliary** zone and **iris** collarette.
pupillatonia [*pu"pil-ə-to'ne-ə*] dilated pupil due to parasympathetic denervation.
pupillodilator 1. a mechanism responsible for dilation of the pupil. 2. a substance having the effect of dilating the pupil.
pupillometer [*pu"pĭ-lom'ə-tər*] an instrument for measuring the diameter of the pupil.
pupillometry [*pu"pĭ-lom'ə-tre*] measurement of the diameter of the pupil of the eye.
pupillomotor [*pu"pĭ-lo-mo'tər*] pertaining to the movement of the pupil. Includes pupilloconstrictor, pupillodilator.
p. pathways the nerves and mediators involved in regulating the size of the pupil.
pupilloplegia [*pu"pĭ-lo-ple'jə*] a dilated or 'tonic' pupil that responds slowly or incompletely to a bright source.
pupilloscopy [*pu"pĭ-los'kə-pe*] skiametry; retinoscopy.
pupillostatometer [*pu-pil"o-stə-tom'ə-tər*] an instrument for measuring the distance between the pupils.
puppy the young of the canine species; usually used up to the age of 12 months.
fading p. syndrome see **fading** kitten/puppy syndrome.
p. pyoderma see **impetigo**.
p. strangles see juvenile **pyoderma**.
purebred progeny derived from at least several generations of animals of the same breed.
p. herds herds (or flocks) composed of purebred animals. Not necessarily registered animals. Distinct from crossbred herds.
p. pedigree pedigree of a purebred animal.
purgation [*pər-ga'shən*] the effect of a purge; catharsis; purging effected by a cathartic medicine.
purgative [*pur'gə-tiv*] 1. a purge or **cathartic** (1); causing bowel evacuation. 2. a cathartic, particularly one stimulating peristaltic action. See also **laxative**.

P-82: Iris-to-iris persistent pupillary membrane in a dog. From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.

purge [*purj*] 1. a purgative medicine or dose. 2. to cause free evacuation of feces. 3. to remove outdated data from a file or other store of data.
p. nut ***Jatropha*** *curcas*.
purging pertaining to purge.
p. ball a bolus given periodically to horses by owners and trainers in the belief that a good clean-out is good for a horse, especially if it is racing poorly. Usually contains aloes; 7 to 14 g (2 to 4 drachms) is the usual dose. Anthraquinone purgatives are more reliable in their action but the procedure is basically empirical and is not recommended by veterinarians. Called also physic ball.
p. nut ***Jatropha*** *curcas*.
purified protein derivative see purified protein derivative of **tuberculin**.
purine [*pu'rēn*] a heterocyclic compound that is the nucleus of the purine bases (or purines) such as adenine and guanine, which occur in DNA and RNA, and xanthine and hypoxanthine. All living cells contain purines as purine nucleotides. They can be synthesized using amino acids, or by salvage of dietary or endogenous nucleotides derived from cell wastage.
low p. diet one with a low content of organ meats, seafood, beans, lentils, peas and spinach; used in the dietary management of xanthine or urate uroliths in dogs.
p. nucleoside phosphorylase a transferase enzyme that acts in the degradation of nucelotides and nucleic acids.
Purkinje [*pər-kin'je*] named after Johannes Evangelist Purkinje, Bohemian anatomist (1787–1869).
P. cell neuronal cell bodies in the middle layer of the cerebellar cortex; characterized by a large, globose body and massive, branching dendrites but a single, slender axon.
P. fiber modified cardiac muscle fibers in the subendothelial tissue, concerned with conducting impulses through the heart.
P's image, P.–Sanson images in a normal eye, reflections of light off the surface of the cornea, anterior lens capsule, and posterior lens capsule. When viewed from different angles, can be used to judge depth of lesions within the eye.
P. network a reticulum of modified muscle fibers in the subendocardial tissue of the cardiac ventricles.
P. neuron see Purkinje cell (above).
puromycin [*pūr"o-mi'sin*] an antibiotic that inhibits protein synthesis. Used in the treatment of protozoal infections and as an antineoplastic agent.
purple cudweed [*pur'pəl*] ***Gnaphalium purpureum***.
purple top ***Verbena*** *bonariensis*.
purpura [*pur'pu-rə*] a hemorrhagic disease characterized by extravasation of blood into the tissues, under the skin and through the mucous membranes, and producing spontaneous ecchymoses and petechiae on the skin. Similar lesions are produced in many specific diseases, e.g. epizootic hemorrhagic disease, bracken poisoning in cattle, and leptospirosis in calves. In immune-mediated purpura there is a defect in the integrity of the vessel wall due to immunological mechanisms, which may also cause a **thrombocytopenia**.
anaphylactoid p. immune-mediated purpura; see also **purpura**.
fibrinolytic p. purpura associated with increased fibrinolytic activity of the blood.
p. hemorrhagica a well-defined disease of horses, occurring sporadically, usually associated with a respiratory tract infection and the result of the deposition of immune complexes in the walls of capillaries resulting in vasculitis and extravasation of blood and plasma. Clinical signs include cold, subcutaneous, edematous swellings, usually about the head and not always symmetrical, mucosal petechiation and high heart rate; affected horses commonly die within a few days. Nonthrombocytopenic.
neonatal p. a severe bleeding disease in piglets a few days old which have ingested colostrum containing antiplatelet antibody from their alloimmune dam. Occurs also in foals for unknown causes and in calves associated with type II bovine viral diarrhea virus infection. See also alloimmune **thrombocytopenia**, **alloimmune** hemolytic anemia of the newborn.
nonthrombocytopenic p. purpura without any decrease in the platelet count of the blood. In such cases the cause of purpura is either abnormal capillary fragility or a clotting factor deficiency.

P-83: Purpura hemorrhagica, (A) side view, (B) front view.



P-84: Thrombocytopenic purpura in a piglet. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

thrombocytopenic p. purpura associated with a decrease in the number of platelets in the blood. See also immune-mediated **thrombocytopenia**.

vascular p. that caused by loss of vascular integrity or function, as seen in vitamin C deficiency (scurvy), diabetes mellitus and hyperadrenocorticism.

purring [*pur'ing*] a physiologically very complicated, semi-automatic, cyclic, controlled respiration involving alternating activity of the diaphragm and intrinsic laryngeal muscles in cats. The frequency of the alternation is about 25 times per second. Each cycle includes three phases of glottal closing, glottal opening with sound produced, further glottal opening with rapid airflow and low resistance at the glottis. Purring occurs when cats are contented, sick or sleeping. It also provides the equivalent of complementary breaths during periods of shallow breathing.

purse-string suture a suture pattern adapted to closing of the end of a hollow viscus or fixing tissue around a tube such as a catheter. Stitches are made into the wall completely surrounding the orifice but without entering the lumen of the viscus. The suture is tightened and tied with the free end of the viscus returned back inside the purse-string.

purslane ***Portulaca*** *oleracea*.

pursuit space the amount of space in a wild animal enclosure which is necessary to provide sufficient space for pursued animals to outrun their aggressors. The amount of space will vary widely depending on the species and on the individuals.

purulence [*pu'roo-lənṣ*] the formation or presence of pus.

purulent [*pu'roo-lənt*] containing or forming pus.

poultry p. synovitis swellings on the feet and in the limb joints causing lameness and spondylitis in fowls and turkeys. Caused by *Staphylococcus aureus*.

puruloid [*pu'roo-loid*] resembling pus.

pus [*pus*] a protein-rich liquid inflammation product made up of cells (leukocytes), a thin fluid (liquor puris) and cellular debris.

blue p. pus with a bluish tint, seen in certain suppurative infections, the color occurring as a result of the presence of an antibiotic pigment (pyocyanin) produced by *Pseudomonas aeruginosa*.

p. in milk indicates complete destruction of the mammary secretory tissue.

push up term applied to that part of the total mixed ration that gets pushed too far for the animal to reach when being floor fed in a feeding alley through the stanchion system. Periodically this is pushed up for access or is removed and fed to heifers.

pushing disease a syndrome of compulsive walking and head pressing in cattle in southern Africa, caused by a number of hepatotoxic agents, especially *Matricaria nigellaefolia*. Called also stootsiekte.

pusly ***Portulaca*** *oleracea*.

puss, pussy term of endearment addressed to a cat. Called also moggy.

pustula [*pus'tu-lə*] pl. *pustulae* [L.] pustule.

pustular [*pus'tu-lər*] pertaining to or of the nature of a pustule; consisting of pustules.

contagious viral p. dermatitis see contagious **ecthyma**.

infantile p. dermatosis see infantile pustular **dermatosis**.

ovine p. dermatitis see contagious **ecthyma**.

subcorneal p. dermatosis see subcorneal pustular **dermatosis**.

superficial p. dermatitis see superficial pustular **dermatitis**.

p. vulvovaginitis see infectious pustular **vulvovaginitis**.

pustulation [*pus"tu-la'shən*] the formation of pustules.

pustule [*pus'tūl*] a small, elevated, circumscribed, pus-containing lesion of the skin or cornea; usually thin-walled and ruptures easily. Cutaneous pustules may be epidermal, intraepidermal or subepidermal. The corneal lesions may be superficial or subcorneal.

pustulosis [*pus"tu-lo'sis*] a condition marked by an eruption of pustules.

sterile eosinophilic p. an acute, pruritic pustular dermatitis of dogs characterized by numerous eosinophils found in the sterile lesions; there is often a peripheral eosinophilia. The cause is unknown.

put down see **euthanasia**.

put-to-sleep see **euthanasia**.

putamen [*pu-ta'mən*] the larger and more lateral part of the lenticular nucleus.

putrefaction [*pu"trə-fak'shən*] enzymatic decomposition of dead tissue by putrefactive bacteria (often saprophytic) with the

VetBooks.ir

production of foul-smelling compounds, such as hydrogen sulfide, ammonia and mercaptans. Called also decomposition, rot.

putrefy [*pu'trə-fi*] to undergo putrefaction.

putrescence [*pu-tres'ans*] the condition of undergoing putrefaction.

putrescine [*pu-tres'in*] a polyamine first found in decaying meat; small quantities occur in most cells.

putrid [*pu'trid*] rotten; putrified.

Putti rasp a bone rasp with a curved, pointed rasp surface at both ends of this handheld metal instrument.

putty a malleable carpenter's material consisting of white lead and linseed oil. It is palatable to cattle and causes lead poisoning.

p. brisket see **presternal** calcification.

PVA polyvinyl alcohol.

PVC premature ventricular contraction.

PVCT posterior vena caval thrombosis.

PVNT predictive value of a negative test.

PVP polyvinylpyrrolidone. Called also povidone.

PVP–I povidone–iodine.

PVPT predictive value of a positive test; the proportion of disease-positive animals among those which test positive.

Px abbreviation for prognosis; used in medical records.

pyarthrosis [*pi"ahr-thro'sis*] suppuration within a joint cavity; acute suppurative arthritis.

pycn(o)- for words beginning thus, see pykn(o)-.

Pycnomonas a subgenus of trypanosomes. Includes *Trypanosoma suis*.

Pycnosorus chrysanthus see ***Craspedia chrysantha***.

pye-dog mongrel dog.

pyelectasis [*pi"ə-lek'tə-sis*] dilatation of the renal pelvis.

pyelitis [*pi"ə-li'tis*] inflammation of the renal pelvis, the outer basin-like portion of the kidney at the attachment of the ureter.

cystic p. pyelitis with formation of multiple submucosal cysts.

p. glandularis the pelvic mucosa is modified to cylindrical epithelium and the formation of glandular acini.

pyel(o)- word element. [Gr.] *renal pelvis*.

pyelocaliectases [*pi"ə-lo-kal"e-ek'tə-ses*] dilatation of the renal pelvis and calices.

pyelocentesis [*pi"ə-lo-sen-te'sis*] aspiration of fluid from the renal pelvis, usually for diagnostic purposes.

pyelocystitis [*pi"ə-lo-sis-ti'tis*] inflammation of the renal pelvis and bladder.

pyelogram [*pi'ə-lo-gram*] the film produced by pyelography.

pyelography [*pi"ə-log'rə-fe*] radiography of the kidney and ureter after injection of a contrast medium, introduced by the intravenous or retrograde method. Preparation of the animal for pyelography includes clearing the intestinal tract of as much fecal material and gas as possible so that there can be adequate visualization of the urinary tract structures. Called also intravenous pyelography (IVP).

retrograde p. radiography of the kidney after introduction of contrast medium through the ureter.

pyelointerstitial [*pi"ə-lo-in"tər-stish'əl*] pertaining to the interstitial tissue of the renal pelvis.

pyelolithotomy [*pi"ə-lo-li-thot'ə-me*] incision of the renal pelvis for removal of calculi.

pyelonephritis [*pi"ə-lo-nə-fri'tis*] inflammation of the kidney and renal pelvis as a result of bacterial infection ascending from the lower urinary tract. Typically, the resulting inflammation produces irregularly-distributed segmental wedges of inflammation radiating out to the cortex from the inflamed pelvis. These foci tend to be more numerous at the poles of the kidney. See also **pyelitis** and **nephritis**.

contagious bovine p. see **contagious** bovine pyelonephritis.

porcine p. see **cystitis-pyelonephritis of sows**.

pyelonephrosis [*pi"ə-lo-nə-fro'sis*] any disease of the kidney and its pelvis.

pyelopathy [*pi"ə-lop'ə-the*] any disease of the renal pelvis.

pyeloplasty [*pi'ə-lo-plas"te*] plastic repair of the renal pelvis.

pyeloplication [*pi"ə-lop"li-ka'shən*] reduction in size of a dilated renal pelvis by surgical infolding of its walls.

pyelostomy [*pi"ə-los'tə-me*] the operation of forming an opening in the renal pelvis for the purpose of temporarily diverting the urine from the ureter.

pyelotomy [*pi"ə-lot'ə-me*] incision of the renal pelvis.

pyelovenous [*pi"ə-lo-ve'nəs*] pertaining to the renal pelvis and renal veins.

pyemesis [*pi-em'ə-sis*] the vomiting of pus.

pyemia [*pi-e'me-ə*] septicemia in which secondary foci of suppuration occur and multiple abscesses are formed.

arterial p. a form due to the dissemination of septic emboli from the heart.

cryptogenic p. that in which the source of infection is in an unidentified tissue.

pyemic [*pi-e'mik*] pertaining to or emanating from pyemia.

p. hepatitis disease caused by *Yersinia pseudotuberculosis* in sheep. Characterized by septicaemia and necrotic foci in liver, spleen and lymph nodes and fibrinohemorrhagic enteritis.

Pyemotes a genus of mites; *P. tritici* (straw-itch mite) and *P. ventricosus* (harvest mite) can cause transitory dermatitis on animals eating infested feeds.

pyencephalus [*pi"en-səf'ə-ləs*] abscess of the brain.

pygal [*pi'gəl*] pertaining to the buttocks.

pygoamorphus [*pi"go-ə-mor'fəs*] asymmetrical conjoined twins, in which the parasite is an amorphous mass attached to the sacral region of the autosite.

pygodidymus [*pi"go-did'i-məs*] a fetus with double hips and pelvis.

pygomelus [*pi-gom'ə-ləs*] a fetus with a supernumerary limb or limbs attached to or near the buttocks.

pygopagus [*pi-gop'ə-gəs*] conjoined twins fused in the sacral region.

pygostyle [*pi'go-stīl*] a bony termination of the vertebral column in birds formed by fusion of the last four to eight vertebrae. Called also plowshare bone or rump post. The tail feathers are attached to its fascia so that it is very important in flight.

pyknic [*pik'nik*] having a short, thick, stocky build.

pykn(o)- word element. [Gr.] *thick, compact, frequent*.

pyknocyte [*pik"no-sīt*] a distorted and contracted, occasionally spiculed erythrocyte.

pyknocytosis [*pik"no-si-to'sis*] conspicuous increase in the number of pyknocytes.

pyknometer [*pik-nom'ə-tər*] an instrument for determining the specific gravity of fluids.

pyknomorphous [*pik"no-mor'fəs*] having the stained portions of the cell body compactly arranged.

pyknosis [*pik-no'sis*] a thickening, especially degeneration of a cell in which the nucleus shrinks in size and the chromatin condenses to a solid, structureless mass or masses.

pyle- [*pīl*] word element. [Gr.] *portal vein*.

pylephlebectasis [*pi"le-flə-bek-ta'sis*] dilatation of the portal vein.

pylephlebitis [*pi"le-flə-bi'tis*] inflammation of the portal vein.

pylethrombophlebitis [*pi"le-throm"bo-flə-bi'tis*] thrombosis and inflammation of the portal vein.

pylethrombosis [*pi"le-throm-bo'sis*] thrombosis of the portal vein.

pylorectomy [*pi"lo-rek'tə-me*] excision of the pylorus.

pyloric [*pi-lor'ik*] pertaining to the pylorus or to the pyloric part of the stomach.

antral p. hypertrophy syndrome a narrowing of the pyloric antrum caused by hypertrophy of the circular smooth muscle and mucosa; occurs most commonly in dogs of small breeds. Obstruction to gastric emptying causes chronic vomiting.

p. antrum the part of the stomach cavity just cranial (oral) to the pylorus.

p. dysfunction the usual effect is to delay gastric emptying. See pyloric **achalasia**, pyloric obstruction (below).

p. gastropathy chronic hypertrophic pyloric **gastropathy**.

p. gland situated in the pyloric region of the stomach and secreting gastrin and mucus. The secretion is slightly alkaline.

p. obstruction may be functional due to spasm or achalasia, or physical due to foreign body, e.g. phytobezoar, or external compression by, e.g. lipoma or fat necrosis or tumor or cicatrical contraction. Clinical signs are vomiting, distress due to gastric dilatation, possibly visible abdominal enlargement. In ruminants gross distention of abdomen, rumen contents running from nose, scant feces. In dogs and cats delayed gastric emptying usually causes vomiting, sometimes characteristically projectile, of undigested food.

p. outflow failure achalasia of the pylorus with obstruction to the flow of ingesta into the intestine; impaction of material in the abomasum follows; pyloric ulcer a common sequel.

p. spasm see pyloric achalasia (above).

p. stenosis, congenital p. hypertrophy usually a congenital lesion in dogs, particularly the brachycephalic breeds, that causes vomiting and poor growth from weaning age. Occasionally hypertrophy of the pyloric sphincter may be acquired.

pylor(o)- word element. [Gr.] *pylorus*.
pylorodiosis dilatation of a pyloric stricture with the fingers during a surgical operation.
pyloroduodenitis [*pi-lor"o-du"o-de-ni'tis*] inflammation of the pyloric and duodenal mucosa.
pylorogastrectomy [*pi-lo"ro-gas-trek'tə-me*] excision of the pylorus and adjacent portion of the stomach.
pyloromyotomy [*pi-lor"o-mi-ot'ə-me*] incision of the longitudinal and circular muscles of the pylorus.
Fredet–Ramstedt p. see **Ramstedt operation**.
pyloroplasty [*pi-lor'o-plas"te*] plastic surgery of the pylorus, especially for pyloric stricture, to provide a larger communication between the stomach and duodenum.
Finney p. enlargement of the pyloric canal by establishment of an inverted U-shaped anastomosis between the stomach and duodenum after longitudinal incision.
Fredet–Ramstedt p. see **Ramstedt operation**.
Heineke–Mikulicz p. enlargement of a pyloric stricture by incising the pylorus longitudinally and suturing the incision transversely.
Y-U antral advancement flap p. an antral flap is created and advanced over the incision through the pylorus.
pyloroscopy [*pi"lor-os'kə-pe*] endoscopic inspection of the pylorus.
pylorospasm [*pi-lor'o-spaz"əm*] spasm of the pylorus or of the pyloric portion of the stomach.
pylorostenosis [*pi-lor"o-stə-no'sis*] pyloric stenosis.
pylorostomy [*pi"lor-os'tə-me*] surgical formation of an opening through the abdominal wall into the stomach near the pylorus.
pylorotomy [*pi"lor-ot'o-me*] incision of the pylorus.
pylorus [*pi-lor'əs*] the distal aperture of the stomach or abomasum, opening into the duodenum. The term pylorus is variously used to mean the pyloric part of the stomach, and the pyloric antrum, canal, opening or sphincter. A ring of muscles, the pyloric sphincter, serves as a 'gate', closing the opening from the stomach to the intestine. It opens periodically, allowing the contents of the stomach to move into the duodenum. See also **pyloric**.
py(o)- word element. [Gr.] *pus*.
pyoarthritis pyarthrosis.
pyocele [*pi'o-sēl*] a collection of pus, as in the scrotum.
pyocephalus [*pi"o-sef'ə-ləs*] the presence of purulent fluid in the cerebral ventricles.
pyochezia [*pi"o-ke'ze-ə*] the presence of pus in the feces.
pyococcus [*pi"o-kok'əs*] a pus-forming coccus.
pyocolpocele [*pi"o-kol'po-sēl*] a vaginal tumor containing pus.
pyocolpos [*pi"o-kol'pos*] pus in the vagina.
pyocyanic [*pi"o-si-an'ik*] pertaining to blue pus, or to *Pseudomonas aeruginosa*.
pyocyanin [*pi"o-si'ə-nin*] a blue-green antibiotic pigment produced by *Pseudomonas aeruginosa*; it gives the color to 'blue pus'.
pyocyins [*pi"o-si'ənz*] antibacterial proteins produced by strains of *Pseudomonas aeruginosa*; used in strain typing.
pyocyst [*pi'o-sist*] a cyst containing pus.
pyoderma [*pi"o-dur'mə*] any purulent skin disease. Includes pustule, pimple, acne, impetigo and furunculosis.
callus p. see **callus** pyoderma.
chin p. varying degrees of folliculitis and furunculosis of the chin and adjacent muzzle and lips; often seen as comedones, papules and pustules and referred to as canine acne in young adults of short-haired breeds. Some cases may be precipitated by local trauma from chew toys or pressure when recumbent. See also canine **acne**.
contagious porcine p. see **contagious** porcine pyoderma.
deep p. bacterial infections involving the dermis and often subcutaneous tissues. There may be systemic illness.
dry p. see zinc-responsive **dermatosis**.
fold p. see fold **dermatitis**.
p. gangrenosum a rare skin disease in dogs of unknown etiology characterized by multiple necrotic, draining crateriform ulcers predominantly over the trunk.
interdigital p. infection of the interdigital skin in dogs; may be associated with trauma, *Demodex canis* infestation, or foreign bodies such as grass seeds.
juvenile p. a sterile, pustular skin disease on the face and head and sometimes ears, anus and prepuce, in one or more puppies of a litter, usually around weaning age. Dachshunds, Golden retrievers and Gordon setters appear to be predisposed. There is often fever, anorexia and lymphadenopathy, particularly of submandibular lymph nodes which may form abscesses and drain, hence the alternative name of puppy strangles. *Staphylococcus* spp. are frequently cultured from affected skin, but the etiology of the disease is unclear. Called also juvenile cellulitis, and juvenile sterile granulomatous dermatitis and lymphadenitis.

P-85: Chin pyoderma in a dog.

mucocutaneous p. erythema and crusting that can progress to erosions, ulcerations and fissures on the lip margins and perioral skin of dogs; German shepherd dogs are predisposed. Nares, eyelids, vulva, prepuce and anus are also sometimes involved.
nasal p. a deep bacterial folliculitis and furunculosis on the dorsum of the nose in dogs, particularly German shepherd dogs, Bull terriers, Collies and Pointers. Trauma may be a factor in the etiology.
perianal p. see **perianal** fistula.
pressure point p. see **pressure points**.
skin-fold p. see fold **dermatitis**.
superficial pustular p. see **impetigo**.
surface p. see acute moist **dermatitis**.
tail fold p. see fold **dermatitis**.
pyodermatitis [*pi"o-dur-me-ti'tis*] pyoderma.
pyodermia [*pi"o-dur'me-ə*] pyoderma.
pyogenesis [*pi"o-jen'ə-sis*] the formation of pus.
pyogenic [*pi"o-jen'ik*] producing pus.
p. dermatitis pyoderma.
p. gingival granuloma a bright red or blue mass on the gum, caused by chronic inflammation. Composed of vascular granulation tissue.
p. spondylitis vertebral osteomyelitis.
pyogranuloma [*pi"o-gran"u-lo'mə*] an inflammatory process in which there is infiltration of polymorphonuclear cells into a more chronic area of inflammation characterized by mononuclear cells, macrophages, lymphocytes and possibly plasma cells.
pyogranuloma idiopathic see idiopathic sterile **granuloma**.

P-86: Juvenile pyoderma in a German shorthaired pointer puppy.

VetBooks.ir

P-87: Mucocutaneous pyoderma.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

P-89: Pyometra in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

pyohemia [*pi"o-he'me-ə*] pyemia.
pyohemothorax [*pi"o-he"mo-thor'aks*] pus and blood in the pleural cavity.
pyohydronephrosis [*pi"o-hi"dro-nə-fro'sis*] the accumulation of pus and urine in the kidney.
pyoid [*pi'oid*] resembling or like pus.
pyolabyrinthitis [*pi"o-lab"ə-rin-thi'tis*] inflammation with suppuration of the labyrinth of the ear.
pyometra [*pi"o-me'trə*] an accumulation of pus within the uterus. In the bitch, it is a distinct disease syndrome associated with cystic endometrial hyperplasia and usually infection by a variety of bacteria, especially *Escherichia coli*, occurring during diestrus. Clinical signs may include abdominal enlargement, purulent vaginal discharge if the cervix is open, polyuria, polydipsia, and a systemic response, which is more severe if the cervix is closed. An immune-mediated glomerulonephritis may also occur. In cattle, pyometra is part of the complex of puerperal metritis, clinical endometritis, and subclinical endometritis, the most common forms of genital diseases in dairy cows that delay the complete regeneration of endometrium and impair reproductive performance. Pyometra is an inflammatory disease, which develops after the first ovulation in the presence of an active luteal tissue. As a result of luteal progesterone production the cervix is closed and mucopurulent or purulent exudate accumulates in the uterine cavity. Diagnosis is by per-rectal palpation and/or transrectal ultrasonography.
stump p. infection in the remaining portion of uterus after ovariohysterectomy.
post-coital p. *Tritrichomonas foetus* veneral infection in cattle is characterized by embryonic and early fetal death and post-coital pyometra.
pyometritis [*pi"o-mə-tri'tis*] purulent inflammation of the uterus. See also **pyometra**.

P-88: Nasal pyoderma.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

pyomyositis [*pi"o-mi"o-si'tis*] purulent myositis characterized by suppurating masses in the muscle.
pyonephritis [*pi"o-nə-fri'tis*] purulent inflammation of the kidney.
pyonephrolithiasis [*pi"o-nef"ro-lĭ-thi'ə-sis*] pus and calculi in the kidney.
pyonephrosis [*pi"o-nə-fro'sis*] suppurative destruction of the renal parenchyma, with total or almost complete loss of kidney function.
pyo-ovarium [*pi"o-o-va're-əm*] an abscess of the ovary.
pyopericarditis [*pi"o-per"ĭ-kahr-di'tis*] purulent pericarditis.
pyopericardium [*pi"o-per"ĭ-kahr'de-əm*] pus in the pericardium.
pyoperitoneum [*pi"o-per"ĭ-to-ne'əm*] pus in the peritoneal cavity.
pyoperitonitis [*pi"o-per"ĭ-to-ni'tis*] purulent inflammation of the peritoneum.
pyophthalmitis [*pi"of-thal-mi'tis*] purulent inflammation of the eye.
pyophysometra [*pi"o-fi"so-me'trə*] pus and gas in the uterus.
pyopneumocholecystitis [*pi"o-noo"mo-ko"lə-sis-ti'tis*] distention of the gallbladder, with the presence of pus and gas.
pyopneumohepatitis [*pi"o-noo"mo-hep"ə-ti'tis*] abscess of the liver with pus and gas in the abscess cavity.
pyopneumopericardium [*pi"o-noo"mo-per"ĭ-kahr'de-əm*] pus and gas in the pericardium.
pyopneumoperitonitis [*pi"o-noo"mo-per"ĭ-to-ni'tis*] peritonitis with the presence of pus and gas.
pyopneumothorax [*pi"o-noo"mo-thor'aks*] pus and air or gas within the pleural cavity.
pyopyelectasis [*pi"o-pi"ə-lek'tə-sis*] dilatation of the renal pelvis with pus.
pyorrhea [*pi"o-re'ə*] periodontitis.
pyosalpingitis [*pi"o-sal"pin-ji'tis*] purulent salpingitis.
pyosalpingo-oophoritis [*pi"o-sal-ping"go-o"of-ə-ri'tis*] purulent inflammation of the uterine tube and ovary.
pyosalpinx [*pi"o-sal'pinks*] an accumulation of pus in a uterine tube.
pyosepticemia [*pi"o-sep"tĭ-se'me-ə*] pyemia and septicemia in the one patient; most common in neonates (pyosepticemia neonatorum).
pyostatic [*pi"o-stat'ik*] arresting suppuration; an agent that arrests suppuration.
pyothorax [*pi"o-tho'raks*] an accumulation of pus in the thorax. Commonly seen in cats, caused by a variety of bacteria, especially *Bacteroides* spp., *Nocardia, Pasteurella, Porphyromonas, Prevotella* and *Staphylococcus.* Large amounts of pleural fluid accumulate. Affected cats frequently show a rapid development of dyspnea and cyanosis, and often die suddenly. See also **empyema**.
pyotraumatic dermatitis [*pi"o-trə-mat'ik dur"mə-ti'tis*] see acute moist **dermatitis**.
pyoureter [*pi"o-u-re'tər*] pus in the ureter.
pyramid [*pir'ə-mid*] a pointed or cone-shaped structure or part.
p. breed structure a standard format for a multiple herd system comprising a breed structure; headed by an open or closed nucleus, a second tier of multiplier herds and a terminal tier of commercial herds which produce the end-product to be marketed. The nucleus, perhaps one herd, produces all of the basic genetic material and supplies breeding stock to the multiplier herds which have the prime role of multiplying the progeny for supply to commercial herds who produce the end product. The entire system is under the control of one organization. Ideally suited to the pig industry.
p. of cerebellum pyramid of vermis.
p. of light a triangular reflection seen upon the tympanic membrane.
malpighian p's renal pyramids.

VetBooks.ir

p's of the medulla oblongata either of two rounded masses, one on either side of the median fissure of the medulla oblongata containing the pyramidal tracts.
renal p's the conical masses constituting the medulla of certain kidneys, the base toward the cortex and culminating at the summit in the renal papilla.
pyramidal [*pĭ-ram'ĭ-dəl*] shaped like a pyramid.
p. disease abnormal growth of the wall of the hoof in the horse in which the vertical midline of the front of the hoof bulges, causing lameness. Caused by fracture of the extensor process of the third phalanx or by low ringbone.
p. nervous system pyramidal-shaped nerve cells in the cerebral cortex and their efferent neurons to skeletal muscles.
p. tracts collections of motor nerve fibers arising in the brain and passing down through the spinal cord to motor cells in the ventral horns.
pyramiding in the shell of captive raised tortoises, the scutes raise up over time and take on a pyramid or tentlike appearance. Generally attributed to secondary nutritional hyperparathyroidism, but excessive dietary protein and low environmental humidity are also believed to cause the condition,
Pyramidocephalus phocarus a cestode parasite found in seals.
pyramis [*pir'ə-mis*] pl. *pyramides* [Gr.] pyramid.
pyran [*pi'ran*] a cyclic compound in which the ring consists of five carbon atoms and one oxygen atom and contains two double bonds.
pyranose [*pir'ə-nōs*] a six-membered ring structure formed by the reaction of the carbonyl group and a hydroxy group of a sugar to form a hemiacetal.
pyrantel [*pĭ-ran'təl*] a broad-spectrum anthelmintic of low toxicity, used as the pamoate and tartrate salts; has extensive use in dogs and cats.
pyrazinamide [*pir"ə-zin'ə-mīd*] an antibacterial agent used for the oral treatment of tuberculosis in humans. Also used in a biochemical test for the identification of mycobacteria.
pyrazines [*pĭ'rə-zēn*] volatile compounds with a strong odor; contribute part of the odor of meat.
pyrazinecarboxamide pyrazinamide.
pyrazolone derivatives [*pir-az'o-lōn*] a group of agents which have analgesic and antipyretic actions. They include phenylbutazone and dipyrone.
pyrectic [*pi-rek'tik*] 1. pertaining to fever; feverish. 2. a fever-inducing agent.
Pyrenean associated with the Pyrenean region in northern Spain.
P. goat France and Spain, dark brown or black with pale belly and feet, dual-purpose goat, longhaired, horned or polled.
P. mountain dog see **Great Pyrenees**.
P. shepherd, sheepdog a herding dog from the Pyrenees Mountains, smaller than others from that region. The height is 15–19 inches and weight 18–32 lb. The thick, long or medium coat is coarse to woolly and most commonly fawn. There are rough-faced and smooth-faced varieties. The tail is docked, naturally very short, or long. Called also 'Pyr shep', Berger des Pyrenees, Pyrenees sheepdog.
pyrethrins [*pi-reth'rinz*] the active insecticidal ingredients of the flowers of the **pyrethrum** plant. Can cause systemic or cutaneous allergic reactions. Are esters of **pyrethrolone** and **cinerolone** with chrysanthemum mono- and dicarboxylic acids.
pyrethroids [*pi-reth'roid*] synthetic substances with activity similar to the naturally occurring pyrethrins. They include cypermethrin, cyhalothrin, deltamethrin, flumethrin, permethrin.
pyrethrolone one of the insecticidal agents in the **pyrethrins**.
pyrethrum [*pi-re'thrəm*] 1. flowers of the plants *Chrysanthemum cinerariaefolium* (syn. *Pyrethrum cinerariaefolium*) and *C. coccineum* (syn. *C. roseum*). 2. the natural insecticidal agents produced from the dried flower heads of *Chrysanthemum* spp. Called also Dalmatian or Persian insect powder. See also **pyrethrins**.
pyretic [*pi-ret'ik*] pertaining to fever.
pyretogenesis [*pi"rə-to-jen'ə-sis*] the origin and causation of fever.
pyretogenous [*pi"rə-toj'ə-nəs*] 1. caused by high fever. 2. pyrogenic.
pyretotherapy [*pi"rə-to-ther'ə-pe*] 1. treatment by artificially increasing the patient's body temperature. 2. the treatment of fever.
pyrexia [*pi-rek'se-ə*] a fever, or febrile condition. Can be said to be present if body temperature exceeds the normal range for the particular age and species: horse 102.0°F (39.0°C), cattle 103.0°F (39.5°C), pig 103.5°F (40.0°C), sheep 104.0°F (40.0°C), goat 105.0°F (40.5°C), llama, alpaca 102.0°F (39.0°C), dog and cat 102.0°F (39.0°C). Called also fever. See also **hyperthermia**.
p.–pruritus–hemorrhage syndrome a silage-associated syndrome in dairy cattle thought to be due to use of a chemical aid in the making of ensilage, possibly via the intervention of a mycotoxin, possibly citrinin. Clinically characterized by widespread pruritic dermatitis, fever and mucosal petechiation.
pyridine [*pir'ĭ-dēn*] 1. a substance derived from coal tar and also from tobacco and various organic materials. Used in industry as a solvent and in the synthesis of organic compounds. 2. any of a group of substances homologous with normal pyridine. The pyridines are serious poisons causing damage to most organs especially nervous and respiratory systems and skin.
pyridostigmine [*pir"ĭ-do-stig'mēn*] a cholinesterase inhibitor; used as the bromide in the treatment of myasthenia gravis and as an antidote to nondepolarizing muscle relaxants, e.g. tubocurarine.
pyridoxal, pyridoxaldehyde [*pir"ĭ-dok'səl*] a natural form of vitamin B_6 found in green plants.
p. phosphate form of vitamin B_6 which is active in the body; a major coenzyme involved in amino acid metabolism; also required for the synthesis of heme and the neurotransmitters dopamine and γ-aminobutyric acid (GABA).
pyridoxamine [*pir"ĭ-doks'ə-mēn*] one of the three natural forms of vitamin B_6.
p. phosphate cofactor involved in the metabolism of amino acids and other related compounds via interconversion with pyridoxal 5′ phosphate (PLP).
pyridoxine one of the forms of vitamin B_6, chiefly used as the hydrochloride salt in the prophylaxis and treatment of vitamin B_6 deficiency. Nutritional deficiency is not known to occur under natural conditions in animals. Called also pyridoxal, adermin.
p. shampoos marketed for use in treating seborrheic skin conditions in dogs.
pyriform [*pir'ĭ-form*] pear-shaped.
p. apparatus pair of triangular structures in the eggs of anoplocephalid tapeworms surrounding the oncosphere.
p. lobe a swelling on the ventral surface of the brain, made up of the combined lateral olfactory gyrus and the hippocampal gyrus.
pyrilamine [*pə-ril'ə-mēn*] an ethylenediamine histamine H_1-receptor antagonist, used topically and systemically in the treatment of allergic disorders. Called also mepyramine.
pyrimethamine [*pir"ĭ-meth'ə-mēn*] a folic acid antagonist used in combination with sulfonamides in the treatment of toxoplasmosis and avian coccidiosis.
pyrimidine [*pə-rim'ĭ-dēn*] an organic compound that is the fundamental form of the pyrimidine bases, including uracil, cytosine and thymine.
pyriminil see **Vacor**.
pyriprole an analog of **fipronil**, used as a spot-on treatment in the control of flea and tick infestation in dogs.
pyriproxyfen an ovicidal and larvicidal carbamate used topically and as a spot-on treatment in the control of fleas on dogs and cats.
pyr(o)- word element. [Gr.] *fire, heat;* (in chemistry) *produced by heating*.
pyrocatechol [*pi"ro-kat'ə-kol*] see **catechol**.
pyrogen [*pi'ro-jən*] an agent that causes fever.
endogenous p. (EP) the mediator of fever, produced by polymorphonuclear leukocytes, monocytes and macrophages.
exogenous p. lipopolysaccharide and other substances produced by pathogenic microorganisms.
pyrogenic reaction [*pi"ro-jen'ik*] one causing fever.
pyroglobulinemia [*pi"ro-glob"u-lin-e'me-ə*] the presence in the blood of an abnormal globulin constituent that is precipitated by heat.
pyroglutamic acid [*pi"ro-gloo-tam'ik*] see **5-oxoproline**.
pyrolysis [*pi-rol'ĭ-sis*] decomposition by heating; said of organic materials.
pyrometer [*pi-rom'ə-tər*] instrument for measuring the intensity of heat when this is beyond the range of the mercury thermometer.
pyronine [*pi'ro-nēn*] a red aniline histological stain.
pyroninophilic [*pi"ro-nin"o-fil'ik*] having an affinity for pyronine.
p. cell contains large quantities of RNA stainable with pyronine. Called also immunoblast.
pyrophosphatase [*pi"ro-fos'fə-tās*] any enzyme that catalyzes the hydrolysis of pyrophosphate linkages, so that one phosphoryl group remains on each of the two products.

VetBooks.ir

inorganic p. an enzyme that splits pyrophosphate into two phosphate ions.

pyrophosphate [*pi"ro-fos'fāt*] any salt of pyrophosphoric (diphosphoric) acid.

pyrophosphoric acid [*pi"ro-fos-for'ik*] a dimer of phosphoric acid, $H_4P_2O_7$. Called also diphosphoric acid.

pyrotic [*pi-rot'ik*] caustic; burning.

pyroxylin [*pi-rok'sə-lin*] a product of the action of a mixture of nitric and sulfuric acids on cotton, consisting chiefly of cellulose tetranitrate; a necessary ingredient of collodion.

pyrrole [*pēr'ol*] a basic, heterocyclic substance with a nitrogen-containing 5-membered ring, obtained by destructive distillation of various animal substances. Critical components in the synthesis of porphyrins.

pyrrolic metabolites [*pĭ-rol'ĭk mə-tab'o-līts*] highly reactive products of hepatic enzymic metabolism of ingested pyrrolizidine alkaloids from plants that bond to cell macromolecules and lead to cell damage. These metabolites persist for long periods in liver and have been used as the basis for diganosis of pyrrolizidine alkaloidosis.

pyrrolidine [*pĭ-rol'ĭ-din*] a simple base obtained from tobacco or prepared from pyrrole. Called also tetrahydropyrrole.

pyrrolizidine [*pĭ-ro-liz'ĭ-dēn*] a specific chemical configuration which is common to a number of naturally occurring compounds called the pyrrolizidine alkaloids. Common plant sources are in the genera *Crotalaria*, *Echium*, *Heliotropium*, *Senecio*.

p. alkaloidosis the disease caused by poisoning with pyrrolizidine alkaloids. The hepatic lesion tends to be chronic and is characterized by necrosis, megalocytosis of hepatocytes due to inhibition of mitosis, biliary ductular, proliferation, vasculitis and perivenous fibrosis. Lesions are most severe in the liver and result in various clinical signs including jaundice, photosensitization and hepatic encephalopathy, and sometimes hemolysis. Some alkaloids cause lung damage characterized by edema, fibrosis, alveolar epithelialization and emphysema. Megalocytosis also occurs in the kidney and there may be extensive nephrosis. Carcinogenesis is a feature in laboratory animals. An incidental pathogenesis is a concurrent chronic copper poisoning causing the disease **toxemic** jaundice.

p. alkaloids alkaloids produced by plants, about half of which are toxic. Toxic alkaloids are usually esters of retronecine or heliotridine and have known specific structural features. Toxic examples include senecionine, jacobine, monocrotaline, spectabiline, heliotrine and lasiocarpine. They often occur in plants as the less toxic N-oxide forms. These can be converted to the toxic free bases by intestinal microbes or liver enzymes. Cause pyrrolizidine alkaloidosis (see above). Common plant sources are in the genera ***Crotalaria***, ***Echium***, ***Heliotropium***, ***Senecio***. See also **pyrrolic metabolites**.

Pyrus malus see ***Malus sylvestris***.

pyruvate [*pi'roo-vāt*] a salt, ester or anion of pyruvic acid. The term is used interchangeably with pyruvic acid. Pyruvate is the end product of glycolysis and may be metabolized in the body anerobically to lactate or after transport into mitochondria to acetyl CoA. In yeast it is metabolized to ethanol.

p. carboxylase an enzyme which catalyzes the conversion of pyruvate to oxaloacetic acid and has a regulatory role in gluconeogenesis.

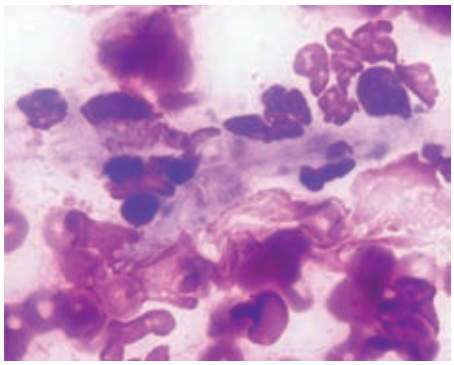
p. dehydrogenase an enzyme actively concerned in the decarboxylation of pyruvate to acetyl CoA and CO_2. A component enzyme of the pyruvate dehydrogenase complex.

p. dehydrogenase complex complex consisting of three enzymes responsible for the conversion of pyruate into acetyl CoA in a decarboxylation reaction. Requires the co-factors thiamine pyrophosphate (TPP), lipoic acid, NAD^+ and FAD.

p. dehydrogenase phosphatase deficiency an inherited autosomal recessive trait in Clumber and Sussex spaniel dogs. A null mutation in pyruvate dehydrogenase phosphatase 1 results in exercise intolerance and post-exercise collapse in affected dogs.

p. kinase (PK) a glycolytic pathway enzyme which catalyzes the formation of pyruvate and one molecule of ATP by the transfer of a phosphate group from phosphoenolpyruvate (PEP) to ADP. A deficiency of the enzyme is inherited as an autsomal recessive trait in humans and occurs also in Beagles, Basenjis and West Highland white terriers and causes a nonspherocytic **anemia**. It also occurs as an autosomal recessive trait in Abyssinian, Somali and some domestic shorthair cats.

p. transaminase see **alanine aminotransferase**.



P-90: Gastric pythiosis in a dog. *Pythium insidiosum* appears as unstained, elongated structures surrounded by inflammatory cells. From Cowell RL, et al, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

pyruvic acid [*pi-roo'vik*] a compound formed in the body in metabolism of carbohydrate; also formed by dry distillation of tartaric acid. Used synonymously with pyruvate.

pyruvic kinase see **pyruvate** kinase.

pythiosis [*pith"e-o'sis*] infection by *Pythium insidiosum*; an uncommon disease of cattle, horses, companion animals and humans. Occurs most often in the southern USA, but has been reported from many other countries in regions with similar climatic conditions and opportunities for exposure to standing water. Usually ulcerative and granulomatous cutaneous lesions that do not invade adjacent muscular tissues, but occasionally occurs as systemic disease.

canine p. most often occurs in large breed dogs as either a gastrointestinal or cutaneous infection, depending on the method of exposure. In the gastrointestinal form, there is a severe, segmental granulomatous enteritis and lymphadenopathy with chronic diarrhea, vomiting, weight loss and depression. In cutaneous and subcutaneous pythiosis there are single or multiple ulcerated and draining nodules and masses.

equine p. see **swamp cancer**.

Pythium insidiosum [*pith'e-əm*] previously called *Hyphomyces destruens*, obsolete synonym *P. destruens*; the cause of pythiosis in dogs, cattle and horses. Previously classified as fungus, but now regarded as members of a new kingdom, Stramenopila.

python large snake, up to 26 ft long, with big, square head, prominent jaws and a distinct neck. Awesome but not venomous. Includes carpet snakes often kept as housepets because of their appetite for rodents which they swallow whole.

ball p. a non-venomous, constricting snake (*Python regius*), the smallest (up to 4 ft) of the pythons; popular as pets because of their small size and docile nature. Curling up into a ball with the head buried in the middle is typical defensive behavior and the source of the name. Called also royal python.

Burmese p. a very large snake (averaging 10–12 ft in length), but they are popular in the pet trade.

carpet p. (*Morelia* spp.) a medium-sized, non-venomous, arboreal snake native to Australia and New Guinea; very popular as pets.

children's p. (*Antaresia childreni*) a small, non-venomous python native to northern Australia; adaptable to captivity, they generally have a placid nature and their small size makes them popular as pets.

diamond p. (*Morela spilota spilota*) a medium-sized snake, native to Australia and New Guinea, with distinctive yellow and black, diamond-shaped markings. Called also diamond snake.

royal p. see ball python (above).

pyuria [*pi-u're-ə*] white blood cells (pus) in the urine. The presence may be obvious or detectable only on microscopic examination and be in the form of leukocytes in casts or rafts. Usually accompanied by bacteria. Contamination from the genital tract is a common cause in voided samples.

PZI protamine zinc insulin.

VetBooks.ir

Q

Q abbreviation for ubiquinone (CoQ).

Q cycle cycle in which electrons are transferred from QH_2 to cytochrome *c* and protons are transported into the mitochondrial intermembrane space via complex III of the electron transport chain.

q symbol for (1) the long arm of a chromosome or (2) the frequency of the rarer allele of a pair.

Q banding a laboratory technique for staining a karyotype with quinacrine dye.

q.d. [L.] *quaque die* (every day); once daily.

Q fever [*ku fe'vər*] (query fever) an infection of most animal species, including humans, and some birds. It is caused by *Coxiella burnetii* and spread by inhalation, especially of inspissated reproductive exudates, and by ticks, and by the ingestion of raw infected milk. The disease is inapparent in most infected animals but can cause abortion in sheep and goats, and probably cattle. Called also Queensland fever. A disease notifiable to the OIE (see Table 22).

QBC 1. quantitative buffy coat. 2. quantitative blood count.

q.h. [L.] *quaque hora* (every hour).

Qi [*che*] in acupuncture terms this is the 'life force'; it is the source of all movement within the body, the protection against invasion of the body, the source of all metabolic activity, provides for the holding of tissues and components in place, maintaining body temperature and for the circulation of nourishment in the bloodstream. See also **Wei qi**.

q.i.d. [L.] *quater in die* (four times a day).

Qinchuan cattle red or yellow Chinese draft cattle with a cervical hump.

q.q.h. [L.] *quaque quarta hora* (every 4 hours).

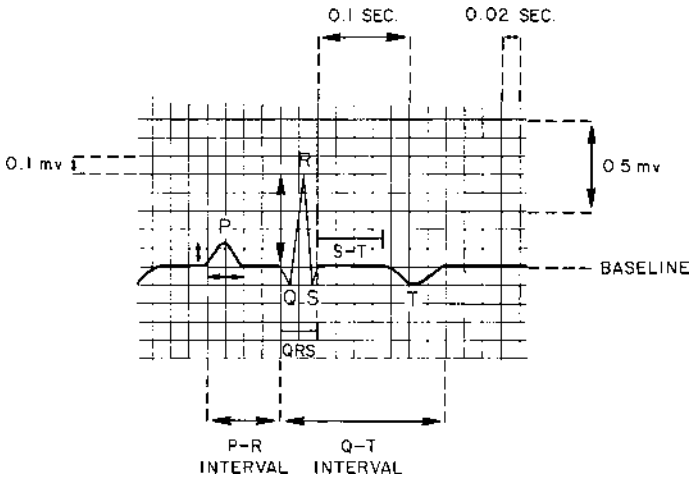
QRS complex, QRS wave a group of waves depicted on an electrocardiogram; it actually consists of three distinct waves created by the passage of the cardiac electrical impulse through the ventricles and occurs at the beginning of each contraction of the ventricles. In a normal **electrocardiogram** the R wave is the most prominent of the three; the Q and S waves may be extremely weak and sometimes are absent.

q.s. [L.] *quantum satis* (a sufficient amount).

qt quart.

QT interval the portion of an electrocardiogram between the onset of the Q wave and the end of the T wave, representing the total time for ventricular depolarization and repolarization.

quack [*kwak*] slang for a person who misrepresents his/her qualifications as a veterinarian, and therefore ability and experience in diagnosis and treatment of animal disease or the effects to be achieved by the treatment. Refers usually to a person without any qualifications who practices in breach of the local veterinary regulations and is liable to a heavy fine as a result.



Q-1: A normal feline lead II P-QRS-T complex.
From Tilley LP, et al, Manual of Canine and Feline Cardiology, 4th Edition. Saunders, 2008.

quackery [*kwak'ər-e*] the practice or methods of a **quack**.

quadrangular [*kwod-rang'gu-lər*] having four angles.

quadrant [*kwod'rənt*] 1. one-quarter of the circumference of a circle. 2. one of four corresponding parts, or quarters, as of the surface of the abdomen or of the field of vision.

quadrate [*kwod'rāt*] square or squared.

quadr(i)- word element. [L.] *four*.

quadriceps [*kwod'rĭ-seps*] having four heads; refers to quadriceps muscle. See also Table 13.

q. reflex see **patellar** reflex.

quadrigemina the corpora quadrigemina.

quadrigeminal [*kwod"rĭ-jem'ĭ-nəl*] fourfold; in four parts; forming a group of four.

quadrilateral [*kwod"rĭ-lat'ər-əl*] having four sides.

quadrilocular [*kwod"ri-lok'u-lər*] having four cavities.

quadripara [*kwod-rip'ə-rə*] a female which has had four pregnancies that resulted in viable offspring; para IV.

quadripartite [*kwod"rĭ-pahr'tīt*] divided into four.

quadriplegia [*kwod"rĭ-ple'jə*] paralysis of all four limbs; tetraplegia. Indicative of spinal cord injury in the upper cervical area. May be acute or gradual in onset depending on the nature of the lesion.

hereditary amblyopia with q. see hereditary **amblyopia** with quadriplegia.

quadrisect [*kwod'rĭ-sekt*] to cut into four parts.

quadritubercular [*kwod"rĭ-too-bur'ku-lər*] having four tubercles or cusps.

quadrivalent [*kwod"rĭ-va'lənt*] having a valence of four.

quadruped [*kwod'roo-pəd*] four-footed; an animal having four feet. See also **biped**, **tetrapod**.

quadruplet [*kwod-roo p'lət*] one of four offspring produced at one birth. Said of species that normally have single births.

quagga an extinct member of the family Equidae which was characterized by stripes like a zebra but only on the head and neck.

quail a small, gallinaceous, insectivorous game bird, gray-brown with black, white and yellow spots. They are poor flyers but migrate long distances annually and reproduce at a high rate. The common species is the common quail, *Coturnix coturnix*. In North America the native quail is the bobwhite (*Colinus virginianus*).

q. bronchitis caused by an adenovirus in captive or freeliving bobwhite quail, manifested by coughing, sneezing, lacrimation and conjunctivitis but usually without nasal discharge. Morbidity is usually 100% in young birds where the mortality may also be high.

q. disease see ulcerative **enteritis**.

qualimeter an early instrument for measuring the penetrating power of X-rays; penetrometer.

qualitative [*kwahl'ĭ-ta"tiv*] pertaining to observations of a categorical nature, e.g. nominal data such as breed, sex, or ordinal, such as sucking calf, weaned calf, heifer, adult cow.

q. data data measured on a categorical scale.

q. trait see qualitative **trait**.

quality purity of contents, care in presentation and finish of a product.

q. of life generally regarded as the balance between pleasant and unpleasant factors and experiences as they apply to an animal's physical and mental state. A term used in discussions of euthanasia or intensive treatment.

protein q. relates to the content and balance of amino acids in the protein. A good quality protein contains the amino acids in the correct proportions required by the specific animal species.

radiographic q. depends on the correct positioning of the subject part, good contrast, clear image due to good detail and absence of artifacts.

VetBooks.ir

quantile [*kwahn'tīl*] division of a total into equal subgroups; includes terciles, quartiles, quintiles, deciles, percentiles.
quantimeter [*kwahn-tim'ə-tər*] an instrument for measuring the quantity of X-rays generated by a Coolidge tube. The first hot-cathode tube.
quantitative [*kwahn'tĭ-ta"tiv*] pertaining to observations of a numerical kind, e.g. 50 kg, 2 m, 24 hands.
q. characters features of animal productivity or performance which can be measured quantitatively.
q. data numerical data.
q. inheritance genetic transmission of phenotypes which are quantitative and continuous.
q. trait see quantitative **trait**.
quantity [*kwahn'tĭ-te*] 1. a characteristic, as of energy or mass, susceptible of precise physical measurement. 2. a measurable amount.
quantivalence **valence** (1).
quantum [*kwahn'təm*] pl. *quanta* [L.] an elemental unit of energy; the amount emitted or absorbed at each step when energy is emitted or absorbed by atoms or molecules.
q. theory radiation and absorption of energy occur in quantities (quanta) which vary in size with the frequency of the radiation.
quarantine [*kwor'ən-tēn, kwahr'ən-tēn*] 1. a place or period of detention of ships or aircraft coming from infected or suspected ports. 2. restrictions placed on entering or leaving premises or regions where a case of communicable disease exists or is suspected.
q. station a government institution which houses animals or people that have to serve out a mandatory period of quarantine because they have come from an infected port or been exposed to, or affected by, one or more exotic diseases.
quarrian see **cockatiel**.
quart (qt) [*kwort*] one-quarter of a gallon or 2 pints. The Imperial quart is 1136.5 mL (1.1365 L) and the American quart is 946 mL (0.946 L).
quartan [*kwor'tən*] 1. recurring in 4-day cycles (every third day). 2. a variety of intermittent fever of which the paroxysms recur on every third day.
quarter [*kwor'tər*] 1. hindquarter. 2. lateral or medial sides of the wall of the hoof of the horse. 3. one of the four individual glands in the udder of a cow.
black q. see **blackleg**.
blind q. a quarter in the udder of a lactating cow that does not produce any milk when the other quarters are doing so. Caused usually by a prior attack of mastitis.
q. crack crack in the lateral or medial wall of the hoof, beginning at the coronet. Usually cause no lameness.
false q. a condition of the horse's hoof in which a serious injury to the coronet causes an overgrowth of horn which overlaps the normal wall.
hoof q. side of the hoof.
q. infection rate percentage of udder quarters at risk in a herd found to be infected with mastitis-causing bacteria by bacteriological examination of quarter samples of milk. May be as low as 10% in herds utilizing a full mastitis control program. See also **mastitis** infection rate.
q. marks designs made in the haircoat of a horse by grooming the hair in a direction the reverse of its normal growth pattern.
plain q's. a horse with fat, rounded hindquarters resembling those of a pig.
q. sheet an item of horse clothing; a lightweight half blanket covering the horse from the girth to the tail.
Quarter horse [*kwor'tər*] an American light horse of compact build and muscular hindquarters, about 15.2 hands high, often chestnut but any solid color. It originated from **Thoroughbred** and **Criollo**. Primarily a cattle horse but also used in short sprint races.
cropout Q. h. foals born to registered Quarter horse parents that have too much white to qualify for registration with the American Quarter Horse Association.
quartile [*kwor'tīl*] one of the values establishing the division of a series of variables into fourths, or the range of items included in such a segment.
quartipara [*kwor-tip'ə-rə*] quadripara.
quasi-species [*quah"ze-spe'sēz*] a term used to describe a cluster (or cloud or swarm) of variant viruses that arise from mutations over time within a viral isolate, even a cloned isolate. Seen particularly with RNA viruses because of the inherently high mutation rate caused by copy errors during replication by RNA-dependent RNA polymerase and the absence of proof-reading in RNA replication.
QUAT quaternary ammonium compound.
quater in die (q.i.d.) [*kwah'ter in de'ə*] [L.] *four times a day*.
quaternary [*kwah'tər-nar"e, kwah-tur'nər-e*] 1. fourth in a series. 2. made up of four elements or groups.
q. ammonium compounds synthetic cationic detergents commonly used as disinfectants. They act against cell wall lipids in bacteria. An example is benzalkonium chloride. Effective in teat dips for mastitis control. Called also QUATs.
q. structure the arrangement of separate polypeptide subunits in the structure of a multimeric protein.
Quebec Jersey see **Canadian** dairy cattle.
Queckenstedt's test [*kwek'ən-shtet"*] when the veins in the neck are compressed on one or both sides there is a rapid rise in the pressure of the cerebrospinal fluid of healthy animals, and this rise quickly disappears when pressure is taken off the neck. But when there is a block in the spinal canal the pressure of the cerebrospinal fluid is affected little or not at all by the maneuver.
queen a mature, entire female cat used for breeding.
Queen Anne's lace *Daucus carota*, ***Ammi majus***.
Queen Anne legs valgus deformity (inward bowing) of the forelegs, seen most commonly in dogs.
queen-of-the-bush ***Pimelea linifolia***.
Queen's delight see ***Stillingia dendata***.

Q-2: (A) Early quarter crack. (B) Quarter crack. (A) From Floyd AE, Mansmann, RA, Equine Podiatry. Saunders, 2008. (B) From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

Q-3: Quarter horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

Q-4: Queensland itch lesions on a horse's skin. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

Q-5: Tail, vulval and hock necrosis in a piglet caused by burns from quicklime used to disinfect the pen floor.

queening parturition in the female cat.
Queensland having some geographical relationship to the state of Queensland, Australia.
Q. blue heeler see **Australian** cattle dog.
Q. fever see **Q fever**.
Q. nut tree see ***Macadamia***.
Queensland itch see equine **allergic** dermatitis. Called also sweet itch.
quena ***Solanum*** *esuriale*.
quench [*kwench*] to put out, extinguish, or suppress; to cool (as hot metal) by immersing in water. In liquid scintillation counting, any process taking place within the sample container which results in a decrease in number or intensity of the light flashes produced, thus lowering the amount of energy recorded.
Quercus [*kwur'kəs*] plants of the northern temperate zone in the family Fagaceae; oaks; vary from shrubs to great trees. Leaves and fruits (acorns) are poisonous because of their content of gallotannins (hydrolysable tannins). Poisoning is manifested by abdominal pain, thirst, frequent urination, ventral edema and lesions of gastritis and nephrosis. Toxic species include *Q. aliena*, *Q. breviloba* (*Q. durandii*), *Q. coccinea*, *Q. cutissima*, *Q. dentata*, *Q. douglesii*, *Q. gambelii*, *Q. garyanna*, *Q. glandulifera* var. *acuteserrata*, *Q. havardii* (shin oak), *Q. incana*, *Q. lobata*, *Q. marilandica*, *Q. petraea*, *Q. prinus*, *Q. robur* (*Q. pedunculata*), *Q. rubra* var. *borealis*, *Q. stellata* (post oak), *Q. variabilis*, *Q. velutina*.
query fever see **Q fever**.
questionnaire a planned set of questions used to collect data. It can be sent to the respondents by mail (when the response rate is poor and the sample of respondees is often biased) or used as the basis of a personal interview. The latter procedure has the advantage of quickly detecting questions that are ambiguous or are couched in terms that will elicit information on the wrong subject. The biggest problem is to keep the size of the questionnaire small enough to avoid exasperating the subjects. It is also desirable to couch the questions so that the responses can be easily categorized and the results computerized.
quick disease [*kwik*] sudden death due to cardiac arrest in poisoning by *Urechites lutea*, *Albizia* spp., *Fadogia* spp., *Galena africana*, *Pavetta* spp. Called also gousiekte.
quick freezing very quick freezing of carcasses of meat by passage through a freezing tunnel beneath jets of liquid nitrogen.
quick of hoof the area of the sensitive laminae; penetrated by a misguided farrier nail to draw blood.
quick prothrombin test see **prothrombin** time test.
quicklime [*kwik'līm*] calcium oxide, called also unslaked lime.
quidding [*kwid'ing*] the disability in horses of dropping food from the mouth while in the process of masticating it. Due usually to stomatitis caused by bad teeth. Paralysis of the tongue has the same effect. See also **cud** dropping.
quiddor a horse affected by **quidding**.
quiescent at rest; latent; the G_0 stage of the cell cycle.
quiet ovulation see silent **estrus**.
quill the shaft of a bird's **feather** (1).
q. suture technique a secure, external method of closing the vulva against prolapse; now obsolete. A vertically placed piece of rubber tubing on either side of the vulva is encircled in a row of four or five horizontal mattress sutures.
Quillaja saponaria [*kwĭ-la'yə*] hardwood tree native to Chile; major source ofr commercial saponins. Quillaja products are fred to swine for odor and ammonia control and appear to reduce the percentage of stillborn piglets when fed to sows in late gestation. The mechanisms for this reduction is unknown.
Quilonia a genus of roundworms in the subfamily Cyathostominae.
Q. africana, Q. ethiopica, Q. uganda found in the African elephant.
Q. renniei, Q. travancra found in the Indian elephant.
quilt suture pattern see **Halsted** suture pattern.
quinacrine [*kwin'ə-krin*] an antimalarial, antiprotozoal and anthelmintic used especially for suppressive therapy of malaria in humans and also in the treatment of giardiasis in dogs. Called also mepacrine.
quinalbarbitone [*kwin"əl-bahr'bĭ-tōn*] see **secobarbital**.
quinaldine used as a fish anesthetic agent.
quinapyramine a drug used in the treatment of trypanosomiasis. A toxic reaction can occur within 2 hours after the administration of a therapeutic dose to cattle; signs include salivation, tremor, dyspnea, incoordination, tachycardia.
quince see ***Cydonia oblonga***.
quinestrol a synthetic, long-acting estrogen.
quinidine [*kwin'ĭ-dēn*] the dextrorotatory isomer of quinine, used in treatment of cardiac arrhythmias. Several salts are used, including the gluconate, sulfate and bisulfate.
quinine [*kwin'in, kwin-ēn', kwi'nīn*] an alkaloid from *Cinchona* spp. plants of South America used in some forms of malaria in humans. Quinine also has analgesic, antipyretic, mild oxytocic, cardiac depressant, and sclerosing properties, and it decreases the excitability of the motor end-plate. It may be the cause of an immune-mediated hemolytic anemia.
q. tree see ***Alstonia*** *constricta*.
quininism [*kwin'ĭ-niz"əm*] cinchonism; poisoning from cinchona bark or its alkaloids. See also ***Alstonia*** *constricta*.
quinoline [*kwin'o-lēn*] a drug used originally as an antimalarial agent. Some of its derivatives are used as antiprotozoal and topical antifungal agents, e.g. quinuronium sulfate, 4-aminoquinoline, di-iodohydroxyquinoline and clioquinol (iodochlorhydroxyquin).
quinolizidine alkaloid includes plant-origin alkaloids causing nervous dysfunction (e.g. sparteine, lupinine, lupanine, hydroxylupanine, spathulatine, thermopsine), and those causing congenital defects (e.g. anagyrine).

VetBooks.ir

quinolones [*kwin'o-lōn*] drugs that have good effect against all species of chicken coccidia but have a bad tendency to generate resistant strains and are now rarely used for that purpose; newer derivatives are used as antibacterials. See also **fluoroquinolone**.
quinupristin/dalfopristin two streptogramin antibiotics that act synergistically in the inhibition of bacterial ribosomal protein synthesis; used in the treatment of serious gram-positive infections, including staphylococcal and vancomycin-resistant enterococcal infections.
quinquevalent [*kwing"kwə-va'lənt*] pentavalent; having a valence of five.
quinsy [*kwin'ze*] peritonsillar abscess.
quint- word element. [L.] *five*.
quintan [*kwin'tan*] recurring every 5 days (every fourth day).
quintuplet [*kwin-tup'lət*] one of five offspring produced at one birth. Used in species that normally have single births.
quinuronium an antiprotozoal agent effective against *Babesia* spp. Has a low margin of safety because of its marked parasympathomimetic effects.
quittor [*kwit'or*] a chronic, suppurative inflammation of the lateral cartilage of the third phalanx of the foot of the horse. Causes lameness and usually the appearance of a discharging sinus at the coronet.
quokka (*Setonyx brachyurus*) a small, nocturnal wallaby that is especially sensitive to nutritional myopathy. Called also Rottnest quokka.
quolls (*Dasyurus* spp.) small, ground dwelling carnivorous marsupials native to Australia and Papua New Guinea. Called also native cat.

Q-6: Quittor in a horse. From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

quota the portion of a whole that belongs to one person. In agriculture it usually refers to a share of a market, e.g. Australia's quota of the USA's beef market or a Canadian dairyman's quota for milk production or a Canadian dairyman's quota for milk production.
q. sampling see quota **sampling**.
quotid (q.d.) [L.] *quotidie* (every day).
quotidian [*kwo-tid'e-ən*] recurring every day.
quotient [*kwo'shənt*] a number obtained by division.
caloric q. the heat evolved (in calories) divided by the oxygen consumed (in milligrams) in a metabolic process.
respiratory q. see **respiratory** quotient.
QX disease infection of Sydney rock oyster caused by the haplosporidium protozoan *Marteilia sydneyi*. See also **marteiliosis**.

R

R symbol, *roentgen*; a symbol used in general chemical formulae to represent an organic radical; Rankine (scale); Réaumur (scale); [L.] *remotum* (far); respiration; *Rickettsia;* right.
r symbol for ring chromosome.
ρ rho, small letter; seventeenth letter in the Greek alphabet. Used to designate correlation coefficient in statistics.
R 1929 see **azaperone**.
R 2028 see **fluanisone**.
R 4749 see **droperidol**.
R banding a technique for staining a karyotype using Giemsa stain; produces effects the reverse of G banding.
R conformational state oxyhemoglobin ('relaxed') conformational form of hemoglobin.
R-CALF Ranchers-Cattlemen Action Legal Fund; an association of cattle breeders, producers and feeders in the US that developed after disagreement with the NCBA (National Cattlemen's Beef Association); strong advocate for US beef.
R-on-T phenomenon a form of ventricular arrhythmia in which the electrocardiographic tracing shows premature ventricular complexes occurring in early diastole. It is believed to lead to ventricular fibrillation in most cases.
RA see rheumatoid **arthritis**, **ragocyte**.
Ra chemical symbol, *radium*.
rabbit [*rab'it*] lagomorph in the family Leporidae. The wild rabbit lives in burrows, is herbivorous and feeds mostly at dawn and dusk. They have great powers of reproduction and have been a serious agricultural pest in some countries. The domestic variety is extensively used in laboratories and there are special varieties for the commercial production of rabbit meat and for pelt and fur production. The genus *Sylvilagus* includes the large number of species and subspecies of cottontail rabbits of North, Central and South America, while European rabbits are members of *Oryctolagus cuniculus*. See also the names of domestic varieties: **Angora** rabbit, **Argenté**, **Belgian** hare, **Beveren**, **Californian**, **Dutch**, **English**, **Flemish giant**, **Havana**, **Himalayan** (2), **Lop**, **Netherland dwarf**, **New Zealand** red, **New Zealand** white, Polish, **Rex** (2), **Russian**, **sable** (2), **Satin**, **Siberian**, **Silver fox**. Other colors include fox, harlequin, lilac, silver, smoke pearl, tan.
brush r. (*Sylvilagus bachmani*) a lagomorph native to western USA.
r. calicivirus disease see **rabbit hemorrhagic disease**.
cottontail r. members of the genus *Sylvilagus*, native to North, Central and South America.
r. fever see **tularemia**.
r. fibroma virus see ***Leporipoxvirus***, Shope rabbit **fibroma**.
laboratory r. some specialized strains have been developed to provide a consistent type of rabbit for experimental work in laboratories. The International Index of Laboratory Animals is a reference source for these strains. The most commonly used variety is the **New Zealand** White.
r. pasteurellosis see rabbit septicemia (below).
r. pox see **rabbitpox**.
pygmy r. (*Brachylagus idahoensis*) a small lagomorph native to western USA where it is an endangered species.
rock r. *Ochotona princeps*; see **pika**.
r. septicemia a disease of rabbits caused by *Pasteurella multocida* and characterized by sudden death preceded by fever, dyspnea and nasal discharge. In mild cases there is nasal catarrh and conjunctivitis. Called also **snuffles** (1).
r. syphilis see **spirochetosis** (2).
r. tick ***Haemaphysalis*** *leporispalustris*.
volcano r. (*Romerolagus diazi*) native to very restricted, high elevation volcanic areas in Mexico, it has a small body and small ears. This is an endangered species.

rabbit hemorrhagic disease (RHD) [*rab'it hem"ə-raj'ik*] a highly fatal, contagious disease of European rabbits (*Oryctolagus cuniculus*) but other rabbit species and other wildlife are not susceptible. Caused by rabbit hemorrhagic disease virus (genus *Lagovirus*, family *Caliciviridae)*; the virus while typical of caliciviruses has not been cultivated. The disease is related to European Brown Hare syndrome but cross-transmission between hares and rabbits of either virus does not occur; spread is by contact, possibly by infected feces, fomites, possibly by spread of carrion by birds, and by recently contaminated insects such as bush flies. After infection rabbits show few clinical signs other than depression and immobility and die after an illness of about 18 hours. Characteristic gross necropsy lesions are enlargement of the liver and spleen and small, focal, pulmonary hemorrhages. There is massive liver necrosis which is believed to be the trigger for disseminated intravascular coagulation. Rabbits less than 6 weeks of age are curiously not susceptible to fatal disease. An effective vaccine is available. A disease notifiable to the OIE (see Table 22). Called also rabbit calicivirus disease, rabbit viral hemorrhagic disease.

rabbitbrush see ***Tetradymia***. Includes spring rabbitbrush (*T. glabrata*).

rabbitpox [*rab'it-poks*] a disease of rabbits caused by a poxvirus in the genus *Orthopoxvirus*. There are typical skin lesions with a systemic illness, ocular and nasal discharge, and a high mortality rate.

rabiate, rabid affected with rabies; pertaining to rabies.

rabid [*rab'id*] affected by rabies.

rabies [*ra'bēz ra'be-ēz*] a highly fatal infection caused by a lyssavirus and producing fatal neurologic disease. Rabies virus has a broad host range, but in wildlife the disease persists primarily in bats, which may be true reservoirs, and in terrestrial carnivores. The causative lyssavirus is transmitted in the saliva and the principal method of infection of domestic animals is by a bite. The prinicpal sources for domestic animal infections are in Europe, the red fox, arctic fox, bats and more recently the exotic Asian raccoon dog (*Nyctereutesprocyonoides*). In North America they are raccoons, striped skunks, red fox, gray fox and bats. Mongoose, jackals and the hyaenas are important sources in Africa and in some countries there is a persistent cycling of infection in wild dogs. In domestic animals, separate furious and dumb (paralytic) forms are described but both commonly occur in the one animal. The syndrome includes an ascending paralysis which may be preceded by a period of mania and aggression and is followed by death. In cattle, bellowing and yawning (voiceless bellowing) occurs and drooling of saliva and pharyngeal paralysis are common in all species. Rabies is one of the most important of the zoonoses because of the inevitably fatal outcome for the infected human. A recombinant vaccinia virus expressing rabies virus glycoprotein G has been used in extensive oral wildlife vaccination campaigns to control rabies in Europe and North America and has been successful in reducing the incidence, especially in Europe, but there are variants of the rabies virus, particularly in skunks, against which the current recombinant vaccina vaccine is ineffective. A disease notifiable to the OIE (see Table 22).

bat r. an infection endemic in bats but at low prevalence. Presence of rabies viral RNA in the saliva of normal bats suggests a subclinical carrier state in some. Bat lyssavirus consists of several genotypes including the widely distributed rabies virus; in Europe, European bat lyssaviruses with two biotypes designated EBLV-1 and EBLV-2; in Africa, Lagos bat virus, Mokola virus and Duvenhage virus; in northern Australia, Australian bat (flying fox) lyssavirus. Rabid bats can transmit the virus to domestic animals and in many countries bats are now the leading cause for administering post-exposure rabies vaccinations to humans.

fixed r. virus see fixed **virus**.

r. inhibiting substance present in the salivary glands and brain tissue of infected animals and may make the tissue nonlethal for mice by the intracerebral route. It does not interfere with detection of rabies antigen by immunofluorescent staining.

non-terrestrial r. bat rabies.

sylvatic r. that form of the disease transmitted by forest-dwelling animals, particularly foxes and wolves.

rabies-like viruses Mokola, Lagos bat, Duvenhage, European and Australian bat lyssaviruses. So called because they cause rabies-like disease in humans and animals.

R-1: Raccoon. (*Procyon lotor*).
Courtesy of CDC.

rabiform [*ra'bĭ-form*] resembling rabies.

raccoon (*Procyon lotor*) a medium-sized procyonid native to North America. They are gray-brown animal with a long, furry tail marked with rings, and a black mask. An important vector for rabies. Called also 'coon'.

r. dog see **coonhound**.

r. poxvirus a poxvirus that causes typical pox lesions in the raccoon.

r. rabies a major wildlife reservoir and source of human exposure in the southeastern USA.

race 1. a class or breed of animals subordinate to species, i.e. a subspecies; a group of animals having certain characteristics in common, because of a common inheritance. 2. a fenced lane just one animal wide leading to a dipping tank, spray dip, branding chute, drafting gate, etc. 3. see **stripe**.

racehorse refers usually to **Thoroughbred** but may also include **Standardbred**, **Trotter**.

racemase [*ra'sə-māz*] an enzyme that catalyzes the stereochemical inversion of an asymmetric carbon atom in an optically active substance, such as L-lactic acid.

racemate [*ra'sə-māt*] a racemic compound.

racemethionine [*rās"ə-mə-thi'o-nēn*] a racemic mixture of D- and L-methionine used as a dietary supplement with lipotropic action.

racemic [*ra-se'mik*] optically inactive, being composed of equal amounts of dextrorotatory and levorotatory isomers.

racemization [*ra"sə-mĭ-za'shən*] the transformation of one-half of the molecules of an optically active compound into molecules that possess exactly the opposite (mirror-image) configuration, with complete loss of rotatory power because of the statistical balance between equal numbers of dextrorotatory and levorotatory molecules.

racemose [*ras'ə-mōs*] shaped like a bunch of grapes.

rachianesthesia [*ra"ke-an"es-the'zhə*] loss of sensation produced by injection of an anesthetic into the spinal canal.

rachicentesis [*ra"ke-sen-te'sis*] puncture into the lumbar spinal canal. See also **spinal** puncture.

rachidial, rachidian [*ra-kid'e-əl*] pertaining to the spine.

rachigraph [*ra'ke-graf*] an instrument for recording the outlines of the spine and back.

rachi(o)- word element. [Gr.] *spine*.

rachiocampsis [*ra"ke-o-kamp'sis*] spinal curvature. See **lordosis**, **kyphosis**, **scoliosis**.

rachiomyelitis [*ra"ke-o-mi"ə-li'tis*] inflammation of the spinal cord.

rachiotomy [*ra"ke-ot'ə-me*] incision of a vertebra or the vertebral column.

rachipagus [*ra-kip'ə-gəs*] conjoined twins joined at the vertebral column.

rachis [*ra'kis*] 1. the vertebral column. 2. the shaft of a feather.

rachischisis [*ra-kis'kĭ-sis*] congenital fissure of the vertebral column.

rachitic [*ra-kit'ik*] pertaining to rickets.

r. rosary the visible enlargements of the costochondral junctions in rickets.

rachitis [*ra-ki'tis*] 1. rickets. 2. inflammatory disease of the vertebral column.

rachitogenic [*rə-kit"o-jen'ik*] causing rickets.

rachitomy [*rə-kit'ə-me*] the surgical or anatomical opening of the spinal canal.

racing contests of speed and endurance with serious biochemical and physiological consequences lessened by adequate training beforehand. See also physical **fitness**, exertional **rhabdomyolysis**, **heat**[1] exhaustion, **pulmonary** hemorrhage, **epistaxis**.

R

r. dogs usually refers to Greyhounds and Whippets, but in some instances may be used to describe the dogs used for endurance sledge racing.
r. injury includes stripping of the tendons of the rear limb by being galloped on, striking the flexor tendons of the forelimb with the toes of the hindlimb (forging or striking), or brushing, (hitting the inside of one lower forelimb by the other). Fractures, tendon ruptures, muscle and tendon sprains are all part of the racing hazard. Fracture or dislocation of cervical vertebrae are an especial hazard in hurdle races and steeplechases.
r. pigeons a variety of pigeons, bred and selected to fly long distances back to their own homes. Races are conducted as time trials with groups of birds being released at specific times and their arrival clocked in.
r. plates lightweight, single-use, horseshoes made of aluminum and with a fullered contact surface; see also **horseshoeing**.
rack a fast, four beat artificial (taught) gait of horses, similar to the running walk and slow gait, but with more up and down movement. Performed by the five-gaited American saddle horse.
Racosperma see ***Acacia***.
ractopamine hydrochloride a beta-agonist approved by the FDA for use in food-producing animals as a growth promotant to improve leanness and muscle development.
rad [*rad*] 1. acronym for *r*adiation *a*bsorbed *d*ose; a superseded, non-SI unit of measurement of the absorbed dose of ionizing radiation. It corresponds to an energy transfer of 100 ergs per gram of any absorbing material (including tissue). The biological effect of 1 rad of radiation varies with the type of radiation. When the dose is in **rem**, all types have the same biological effect. Now replaced by the **gray**. 2. abbreviation for radiograph; used in medical records.
rad. [L.] *radix* (root).
radar tracking an electronic technique used to follow the flight of birds.
raddle See **marking** crayon.
Radfordia [*rad-for'de-ə*] a genus of mites in the family Myobiidae.
R. affinis found on mice.
R. ensifera found on wild and laboratory rats. May cause sufficient pruritus to result in self-trauma.
radiability [*ra"de-ə-bil'ĭ-te*] the property of being readily penetrated by x- or other rays.
radiad [*ra'de-ad*] toward the radius or radial side.
radial [*ra'de-əl*] 1. pertaining to the radius of the forelimb or to the radial aspect of the forelimb as opposed to the ulnar aspect; pertaining to a radius. 2. radiating; spreading outward from a common center.
r. agenesis a common congenital deformity in animals, particularly in cats. The defect may be uni- or bilateral, causing a marked medial deviation of the lower forelimb. Cats with this condition have been selected to form the basis for a variety known as 'Twisty cats'. Their front legs are greatly reduced, sometimes to useless flippers. They are not recognized by most breed registries and concerns about animal welfare makes it illegal to breed them in some jurisdictions.
r. dysplasia a developmental disorder of the radius and ulna in which growth rates differ and deformities of the limb result.
r. hemimelia absence of the radius.
r. paralysis caused by loss of function of the radial nerve. See Table 14. Manifested by loss of function of extensor muscles and impaired sensory perception in the thoracic limb especially over the dorsum of the paw. Lesions at or distal to the level of the elbow result in difficulty in extending the carpus and foot so that weight may be carried on the dorsum of the foot. Lesions above that level, usually associated with injury to the brachial plexus, also cause an inability to actively extend the elbow (dropped elbow) and the animal cannot bear weight on the limb.
radialis [*ra"de-a'lis*] [L.] *radial*.
radiant [*ra'de-ənt*] 1. diverging from a center. 2. emitting rays, as of light or heat.
radiate [*ra'de-āt*] 1. to diverge or spread from a common point. 2. arranged in a radiating manner.
radiathermy [*ra-di"ə-ther'me*] short wave diathermy.
radiatio [*ra-de-a'she-o*] pl. *radiationes* [L.] a radiating structure; a collection of nerve fibers connecting different portions of the brain.

R-2: Radial agenesis in a kitten.
From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.

r. acoustica auditory radiation of the internal capsule in the brain.
radiation [*ra"de-a'shən*] 1. divergence from a common center. 2. a structure made up of diverging elements, especially a tract of the central nervous system made up of diverging fibers. 3. energy carried by waves or a stream of particles. One type is *electromagnetic radiation*, which consists of wave motion of electric and magnetic fields. The *quantum theory* is based on the fact that electromagnetic waves consist of discrete particles, called *photons*, that have an energy inversely proportional to the wavelength of the wave. In order of increasing photon energy and decreasing wavelength, the electromagnetic spectrum is divided into radio waves, infrared light, visible light, ultraviolet light and X-rays. Another type is the radiation emitted by radioactive materials. *Alpha particles* are high-energy helium-4 nuclei consisting of two protons and two neutrons, which are emitted by radioisotopes of heavy elements, such as uranium. *Beta particles* are high-energy electrons, which are emitted by radioisotopes of lighter elements. *Gamma rays* are high-energy photons, which are emitted along with alpha and beta particles and are also emitted alone by metastable radionuclides, such as technetium-99m. Gamma rays have energies in the X-ray region of the spectrum and differ from X-rays only in that they are produced by radioactive decay rather than by X-ray machines. Radiation with enough energy to knock electrons out of atoms and produce ions is called *ionizing radiation*. This includes alpha and beta particles and X-rays and gamma rays.
background r. (3) the inescapable radiation received by the entire population due mostly to cosmic radiation, but also due to naturally occurring radioactive materials in the terrestrial environment and to internal isotopes.
characteristic r. (3) nearly homogeneous radiation produced in the target of the X-ray tube when orbital electrons are knocked out and replaced by electrons from outer shells.
corpuscular r. (3) particles emitted in nuclear disintegration, including alpha and beta particles, protons, neutrons, positrons and deuterons.
r. detection (3) special equipment, including Geiger–Müller tubes and a scintillation crystal, is available to detect radiation which may be accidental, or detect small amounts where this is expected but it needs to be measured in terms of accumulated dose.
electromagnetic r. (3) energy, unassociated with matter, that is transmitted through space by means of waves (electromagnetic waves) traveling in all instances at 3×10^{10} cm or 186,284 miles per second, but ranging in length from 10^{11} cm (electrical waves) to 10^{-12} cm (cosmic rays) and including radio waves, infrared, visible light and ultraviolet, X-rays and gamma rays.
r. exposure (3) means more than the patient being exposed intentionally to an X-ray beam. Technical persons in the vicinity will also be exposed to a much less dangerous but perniciously cumulative load of radiation.

VetBooks.ir

infrared r. (3) the portion of the spectrum of electromagnetic radiation of wavelengths ranging between 0.75 and 1000 μm. See also **infrared**.
r. injury (3) is caused by exposure to radioactive material. High doses cause intense diarrhea and dehydration and extensive skin necrosis. Median doses cause initial anorexia, lethargy and vomiting then normality for several weeks followed by vomiting, nasal discharge, dysentery, recumbency, septicemia and a profound pancytopenia. Death is the most common outcome. Chronic doses cause cataract in a few. Congenital defects occur rarely.
interstitial r. (3) energy emitted by radium or radon inserted directly into the tissue.
ionizing r. (3) high-energy radiation, such as X-rays and gamma-rays which react in a similar manner to produce ion pairs or **ionization**. Gamma-rays are used in the control of growth of tumors and sterilization of food, in which they have some undesirable side-effects, e.g. they destroy the enzymes in meat that cause tenderizing; off-flavors are also a problem.
r. necrosis (3) see **radionecrosis**.
r. physicist (3) the person responsible for the administration of radiation therapy including estimating the dose required for a treatment, arranging for the dose to be delivered and making arrangements for safety of the patient and staff, and disposing of any residual radioactive material. Technical aspects of the work include computer estimations, preparation of isodose curves, preparation of wedge and compensating filters, and calibration of teletherapy equipment.
primary r.(3) radiation emanating from the X-ray tube which is absorbed by the subject or passes on through the subject without any change in photon energy.
r. protection (3) includes proper control of emissions from the x-ray machines, proper protective clothing for staff, keeping unnecessary people out of the way while the tube is actually generating its beam, the wearing and regular examination of a dosimeter and the proper storage of radioactive materials or residues.
pyramidal r. (2) fibers extending from the pyramidal tract to the cortex.
scatter r. (3) the scattering of radiation in all directions as a result of interaction between the beam of the X-ray and the patient. See also **Compton effect**.
secondary r. (3) see scatter radiation (above).
r. sensitivity (3) tissues vary in their sensitivity to the damaging effects of irradiation. The rapidly growing tissues are most susceptible, e.g. the embryo, rapidly growing cancer, gonads, alimentary tract, skin and blood-forming organs.
r. sickness (3) see radiation injury (above).
r. striothalamica (2) a fiber system joining the thalamus and the hypothalamic region.
tegmental r. (2) fibers radiating laterally from the red nucleus (nucleus ruber).
thalamic r. (2) fibers streaming out through the lateral surface of the thalamus, through the internal capsule to the cerebral cortex.
r. therapist (3) a person skilled in **radiotherapy**. See also radiation therapy (below).
ultraviolet r. (3) the portion of the spectrum of electromagnetic radiation of wavelengths ranging between 0.39 and 0.18 μm. See also **ultraviolet** rays.
radiative pertaining to or emanating from radiation.
radical [*rad'ĭ-kəl*] 1. directed to the cause; going to the root or source of a morbid process. 2. a group of atoms that enters into and goes out of chemical combination without change and that forms one of the fundamental constituents of a molecule.
free r. a radical, extremely reactive, and having a very short half-life (10^{-5} s or less in an aqueous solution), which carries an unpaired electron. Important in cell signaling processes and for intracellular killing of bacteria; implicated in cell damage associated with aging and diseases including cancer, atherosclerosis, Parkinson's disease and Alzheimer's disease.
radicle [*rad'ĭ-kəl*] one of the smaller branches of a vessel or nerve.
radicotomy [*rad"ĭ-kot'ə-me*] rhizotomy; division or transection of a nerve root.
radicular [*rə-dik'u-lər*] pertaining to a root or radicle.
radiculitis [*rə-dik"u-li'tis*] inflammation of a spinal nerve root, especially of the portion of the root that lies between the spinal cord and the spinal canal.
radiculoganglionitis [*rə-dik"u-lo-gang"gle-o-ni'tis*] inflammation of the dorsal spinal nerve roots and their ganglia.
radiculomedullary [*rə-dik"u-lo-med'u-lar"e*] affecting the nerve roots and spinal cord.
radiculomeningomyelitis [*rə-dik"u-lo-mə-ning"go-mi"ə-li'tis*] inflammation of the nerve roots, meninges and spinal cord.
radiculomyelopathy [*rə-dik"u-lo-mi"ə-lop'ə-the*] disease of the nerve roots and spinal cord.
degenerative r. slowly progressive in adult German shepherd and other breeds of dogs, characterized clinically by paraparesis and truncal ataxia. Now known to be due to a mutation in the superoxide dismutase 1 (DOD1) gene, and therefore likely to be a canine form of amyotrophic lateral sclerosis. See degenerative **myelopathy**.
radiculoneuritis [*rə-dik"u-lo-n-ri'tis*] inflammation of nerve roots and their attendant peripheral nerves.
radiculoneuropathy [*rə-dik"u-lo-n-rop'ə-the*] disease of the nerve roots and spinal nerves.
radiculopathy [*rə-dik"u-lop'ə-the*] disease of the nerve roots.
spondylotic caudal r. compression of the cauda equina or other nerve roots due to encroachment upon the spinal canal or intervertebral foraminae of the lumbosacral junction by spondylosis, resulting in pain, lower motor neuron dysfunction of the nerves of the hindlimbs and possibly fecal or urinary incontinence. See also **lumbosacral** stenosis.
radiectomy [*ra"de-ek'tə-me*] radectomy.
radii lentis [*ra'de-i*] the lens sutures formed by the union of the ends of the lens fibers on the anterior and posterior aspects of the crystalline lens creating a three-pointed star formation.
radi(o)- word element. [L.] *ray, radiation, emission of radiant energy, radium, radius* (bone of the forearm); affixed to the name of a chemical element to designate a radioactive isotope of that element.
radio-pulse transmitters small electronic devices which give off a small electronic pulse which is reiterated for very long periods, sufficient for a search to be conducted for the beeper. A valuable tool in wildlife studies.
radioactivation analysis see **activation** analysis.
radioactive [*ra"de-o-ak'tiv*] characterized by radioactivity.
r. decay spontaneous decomposition of the nuclei of the atoms of radioactive substances. Measured as the proportion of the atoms in a radionuclide that decompose per unit of time, usually stated as the half-life of that particular isotope.
r. isotope radionuclide. A radioactive **nuclide**, e.g. radioactive iodine or strontium.
r. tracer see radioactive **tracer**.
radioactivity [*ra"de-o-ak-tiv'ĭ-te*] the quality of emitting or the emission of particulate or electromagnetic radiation as a consequence of the decay of the nuclei of unstable elements, a property of all chemical elements of atomic number above 83, and possible of induction in all other known elements. The chemical elements are made up of atoms, each of which consists of a nucleus around which orbits a cloud of negatively charged electrons. The nucleus itself is made up of two kinds of particles: *neutrons*, which have no electrical charge; and *protons*, each of which has a single positive charge. A neutral atom has an equal number of protons and electrons and no electric charge. The *atomic number* of an element is the number of protons in the nucleus of each of its atoms. The *mass number* of an element is the sum of the number of protons and neutrons in the nucleus. All of the atoms of a particular element have the same atomic number, but can have different numbers of neutrons. An *isotope* of a chemical element consists of atoms having the same number of protons, but a different number of neutrons. When an atomic nucleus is unstable it decomposes or decays spontaneously, emitting high-energy particles. The emissions from radioactive decay can consist of electrons (beta particles), or electromagnetic energy in the form of photons, or helium ions (alpha particles). (See also **radiation**.) The process of decay can produce a product that is itself unstable, in which case it too will decay. The process continues until a stable nuclide is finally formed. The radioactivity of a substance can be measured by determining the rate at which atoms decay in a given period of time. The basic unit of measurement of radioactivity is the *becquerel* (Bq), which is equal to 1 disintegration per second. The now outdated but possibly still used unit is the *curie* (Ci), which equals 37 thousand-million disintegrations per second. One-thousandth of a curie is a *millicurie;* one-millionth is a *microcurie.*

These units of measure are used to calculate the dosage of radioactivity administered for various therapeutic procedures in much the same way that units of measure such as the gram and milligram are used to measure dosages of medications. The *half-life* of an element is the time necessary for one-half of a given amount of the isotope to decay. Half-lives can range from thousands of millions of years to fractions of a second. The rate at which atomic decay occurs in a particular isotope cannot be altered by any outside force such as temperature, pressure or chemical reaction. The knowledge of the half-life of a particular isotope is essential to the proper handling of the substance for the protection of the medical staff and the animal receiving some form of radiation therapy.

radioallergosorbent test (RAST) [*ra"de-o-al"ər-go-sor'bənt*] a radioimmunoassay for the detection and measurement of specific IgE antibody to a variety of allergens, using antigen fixed in a solid-phase matrix and radiolabeled anti-IgE antibody.

radioautograph [*ra"de-o-aw'to-graf*] autoradiograph.

radioautography autoradiography.

radiobicipital [*ra"de-o-bi-sip'ĭ-təl*] pertaining to the radius and biceps muscle of the forelimb.

radiobiologist [*ra"de-o-bi-ol'ə-jist*] an expert in radiobiology.

radiobiology [*ra"de-o-bi-ol'ə-je*] the branch of science concerned with effects of light and of ultraviolet and ionizing radiations on living tissue or organisms. See also **radiotherapy**.

radiocardiogram [*ra"de-o-kahr'de-o-gram*] the graphic record produced by radiocardiography.

radiocardiography [*ra"de-o-kahr"de-og'rə-fe*] graphic recording of variation with time of the concentration, in a selected chamber of the heart, of a radioactive isotope, usually injected intravenously.

radiocarpal [*ra"de-o-kahr'pəl*] pertaining to the radius and carpus.

r. joint see **antebrachiocarpal**

radiochemicals radioactive chemicals such as the isotopes [^{125}I] iodohippurate.

radiochemistry [*ra"de-o-kem'is-tre*] the branch of chemistry dealing with radioactive materials.

radiocinematograph see **photofluorography**.

radiocurability responsiveness to treatment with radiotherapy.

radiocurable [*ra"de-o-kūr'ə-bəl*] curable by radiation.

radiocystitis [*ra"de-o-sis-ti'tis*] inflammatory tissue changes in the urinary bladder caused by irradiation. Best called radiation cystitis.

radiodense [*ra'de-o-dens"*] radiopaque.

radiodensity [*ra"de-o-den'sĭ-te*] the property of being relatively resistant to the passage of radiant energy.

radiodermatitis [*ra"de-o-dur"mə-ti'tis*] a cutaneous inflammatory reaction to exposure to biologically effective levels of ionizing radiation; X-ray dermatitis.

radiodiagnosis [*ra"de-o-di"əg-no'sis*] diagnosis by means of X-rays or gamma rays.

radioelectrocardiogram [*ra"de-o-e-lek"tro-kahr'de-o-gram"*] the tracing obtained by radioelectrocardiography.

radioelectrocardiograph [*ra"de-o-ə-lek"tro-kahr'de-o-graf"*] the apparatus used in radioelectrocardiography.

radioelectrocardiography [*ra"de-o-e-lek"tro-kahr"de-og'rə-fe*] the recording of alterations in the electric potential of the heart, with impulses beamed by radio waves from the subject to the recording device by means of a small transmitter attached to the patient.

radioencephalogram [*ra"de-o-ən-sef'ə-lo-gram"*] a curve showing the passage of an injected tracer through the cerebral blood vessels as revealed by an external scintillation counter.

radioencephalography [*ra"de-o-ən-sef"ə-log'rə-fe*] the recording of changes in the electric potential of the brain without direct attachment between the recording apparatus and the subject, the impulses being beamed by radio waves from the subject to the receiver.

radiofrequency current heating [*ra"de-o-fre'kwən-se*] a form of heat therapy in which low-frequency electrical current is passed directly through the tissue being treated, usually skin tumors.

radiogold [*ra'de-o-gōld"*] a radioisotope of gold, especially ^{198}Au, which has a half-life of 2.7 days and emits gamma and beta radiation. See **gold**-198.

radiogram [*ra'de-o-gram"*] radiograph.

radiograph [*ra'de-o-graf"*] the film produced by radiography.

scout r. see **survey** radiograph.

radiographer a **radiological** technologist whose work is the making of diagnostic radiographs. Duties depend on legislative constraints but may include positioning animals for radiological examinations; determining the proper voltage, current and exposure time for each radiograph and adjusting the X-ray equipment; the production of radiographs requested by the veterinarian; developing the X-ray film; and assisting the radiologist in special procedures and in the preparation of radiopaque contrast media.

radiographic [*ra"de-o-graf'ik*] pertaining to or emanating from radiography.

r. contrast agent see **contrast** medium.

r. film digestion test a quantitative test for fecal trypsin in which a strip of X-ray film is incubated in an alkaline suspension of feces. Clearing of the film's gel indicates the prescence of trypsin. Used in the diagnosis of exocrine pancreatic insufficiency.

r. geometry relates to the loss of clarity of the radiographic image as the subject moves further away from the film.

r. interpretation translation of the radiographic image into an explanation of the pathology underlying the abnormalities that are observed.

radiography [*ra"de-o-og'rə-fe*] the making of film records (radiographs) of internal structures of the body by exposure of film specially sensitized to X-rays or gamma rays.

body-section r. a special technique to show in detail images and structures lying in a predetermined plane of tissue, while blurring or eliminating detail in images in other planes; various mechanisms and methods for such radiography have been given various names, e.g. laminagraphy, tomography, etc.

contrast r. the use of means of exaggerating the differences in density of tissues or organs or intraluminal filling defects, usually by the introduction of contrast agents.

digital r. the capture of images in a digital format; see **digital radiography**.

double contrast r. see double **contrast**.

intraoral r. small non-screen film is placed in the mouth and x-rays are directed from outside the mouth. Used to assess alveolar bone and roots of teeth.

mucosal relief r. a technique for revealing any abnormality of the intestinal mucosa, involving injection and evacuation of a barium enema, followed by inflation of the intestine with air under light pressure. The light coating of barium on the inflated intestine in the radiograph reveals clearly even small abnormalities.

neutron r. that in which a narrow beam of neutrons from a nuclear reactor is passed through tissues; especially useful in visualizing bony tissue.

scout r. see **survey** radiograph, **straight** (2).

serial r. the making of several exposures of a particular area at arbitrary intervals.

spot-film r. the making of localized instantaneous radiographic exposures during fluoroscopy.

stress r. positioning to intentionally place stress on structures being radiographed; most commonly used in the diagnosis of spinal disorders such as atlantoaxial instability, cervical spondylomyelopathy (wobbler syndrome) and lumbosacral instability.

radiohumeral [*ra"de-o-hu'mər-əl*] pertaining to the radius and humerus.

radioimaging see **imaging**.

radioimmunity [*ra"de-o-ĭ-mu'nĭ-te*] diminished sensitivity to radiation.

radioimmunoassay (RIA) [*ra"de-o-im"u-no-as'a*] a sensitive assay method used for the measurement of minute quantities of specific antibodies or any antigen, such as hormones or drugs, against which specific antibodies can be raised. An assay for a specific hormone uses a specific antihormone antibody and a radioisotope label.

competitive r. a technique utilizing isotope labeled antigen that competes with unlabeled antigen for binding by a specific antibody. A very sensitive assay, commonly used in detecting trace amounts of drugs.

radioimmunodiffusion [*ra"de-o-im"u-no-dĭ-fu'zhən*] immunodiffusion conducted with radioisotope-labeled antibodies or antigens.

radioimmunoelectrophoresis [*ra"de-o-im"u-no-e-lek"tro-fə-re'sis*] electrophoresis in which a particular antigen is identified by adding the corresponding radio-labeled antibody and subjecting the gel to autoradiography.

radioimmunosorbent test (RIST) [*ra"de-o-im"u-no-sor'bənt*] a radioimmunoassay technique for measuring IgE immunoglobulins in serum, using radiolabeled IgE and anti-IgE bound to an insoluble matrix.

radioiodine [*ra"de-o-i'o-dīn*] any radioactive isotope of **iodine**.

r. therapy see **iodine**-131.

r. uptake t. ^{131}I or ^{125}I are used by oral or intravenous administration as a test of thyroidal function.

radioisotope [*ra"de-o-i'sə-tōp*] a radioactive form of an element. A radioisotope consists of unstable atoms that undergo radioactive decay emitting alpha, beta or gamma radiation. Radioisotopes occur naturally, as in the cases of radium and uranium, or may be created artificially. See also **radionuclide**. Artificial radioisotopes are created by bombarding stable atoms of an element with subatomic particles in a nuclear reactor or in an atom smasher, or cyclotron. When the nucleus of a stable atom is charged by bombarding particles, the atom usually becomes unstable, or radioactive, and is said to be 'labeled' or 'tagged'.

r. organ scanning injection of an isotope and scanning of organs in which the isotope is planned to locate, e.g. radioactive iodine in the thyroid gland.

radiolabeling incorporation of a radioactive element into a compound in order to investigate its metabolism, fate and utilization.

radioligand [*ra"de-o-li'gand*] a radioisotope-labeled substance, e.g. an antigen, used in the quantitative measurement of an unlabelled substance by its binding reaction to a specific antibody or other receptor site.

radiological [*ra"de-o-loj'ĭ-kəl*] pertaining to radiology.

r. diagnosis see radiological **diagnosis**.

mobile r. apparatus X-ray machines that can be moved but are not portable because of their weight. This is imposed because of the large transformer required to achieve the desired output.

portable r. apparatus can be carried because of the small transformer used. However, the exposure time is prolonged and the image is less clear. The machine is easily dismantled.

r. technologist a health care worker who is skilled in the theory and practice of the technical aspects of the use of X-rays and radioisotopes in the diagnosis and treatment of disease. Radiological technologists can specialize in radiography, radiation therapy or nuclear medicine. See also **radiographer**, **radiation** therapist. Called also nuclear medicine technologist.

radiologist [*ra"de-ol'ə-jist*] a specialist in radiology.

radiology [*ra"de-ol'ə-je*] the branch of science dealing with use of X-rays, radioactive substances, and other forms of radiant energy in diagnosis and treatment of disease.

veterinary r. dealing with the diseases of animals by radiological methods.

digital r. see **digital radiography**.

radiolucency [*ra"de-o-loo'sən-se*] the quality of being radiolucent.

radiolucent [*ra"de-o-loo'sənt*] permitting the passage of radiant energy, such as X-ray, yet offering some resistance to it, the representative areas appearing dark on the exposed film.

radiometer [*ra"de-om'ə-tər*] 1. an instrument for estimating X-ray quantity. 2. an instrument in which radiant heat and light may be directly converted into mechanical energy. 3. an instrument for measuring the penetrating power of radiant energy.

radiomimetic [*ra"de-o-mi-met'ik*] producing effects similar to those of ionizing radiations.

radionecrosis, radiation necrosis [*ra"de-o-nə-kro'sis*] tissue destruction due to radiant energy.

radioneuritis [*ra"de-o-n-ri'tis*] neuritis from exposure to radiant energy.

radionuclide [*ra"de-o-noo'klīd*] a radioactive nuclide; one that disintegrates with the emission of corpuscular or electromagnetic radiations. Used in diagnosis for whole body or individual organ scanning. See also **radioactive** isotope, **nuclide**.

radiopacity [*ra"de-o-o-pas'ĭ-te*] the quality or property of obstructing the passage of radiant energy, such as X-ray, the representative areas appearing light or white on the exposed film.

radiopaque [*ra"de-o-pāk'*] not permitting the passage of X-ray, such areas appearing light in color on the X-ray film.

radiopathology [*ra"de-o-pə-thol'ə-je*] the pathology of radiation effects on tissues.

radiopharmaceutical [*ra"de-o-fahr"mə-soo'tĭ-kəl*] a radioactive pharmaceutical used for diagnostic or therapeutic purposes. See also **radionuclide**.

radiophosphorus [*ra"de-o-fos'fə-rəs*] either of two radioactive isotopes of phosphorus, ^{32}P and ^{33}P; the former, a pure beta emitter, has a half-life of 14.3 days and is used in solution or colloidal form in erythrocyte studies and in the treatment of polycythemia vera and chronic leukemia in humans.

radiopotentiation [*ra"de-o-po-ten"she-a'shən*] the action of a drug in enhancing the effects of irradiation.

radioprotective agents chemicals that reduce the effects of radiation on tissues; may be useful in radiotherapy because of the differential concentration between normal and target (tumor) tissues following parenteral administration.

radioresistance [*ra"de-o-re-zis'təns*] resisting the effects of radiation, especially in reference to the treatment of malignancy.

radioresponsive [*ra"de-o-re-spon'siv*] reacting favorably to irradiation.

radioresponsiveness quality of being radioresponsive.

radioscopy [*ra"de-os'kə-pe*] fluoroscopy.

radiosensitivity [*ra"de-o-sen"sĭ-tiv'ĭ-te*] sensitivity, as of the skin, tumor tissue, etc., to radiant energy, such as X-ray or other radiations.

radiosensitization the application of heat therapy as an adjunct to radiotherapy to increase the radiosensitivity of target cells.

radiotelemetry [*ra"de-o-təl-em'ə-tre*] measurement based on data transmitted by radio waves from the subject to the recording apparatus.

radiotherapist [*ra"de-o-ther'ə-pist*] a specialist in radiotherapy.

radiotherapy [*ra"de-o-ther'ə-pe*] the treatment of disease by ionizing radiation. The purpose of radiation therapy is to deliver an optimal dose of either particulate or electromagnetic radiation to a particular area of the body with minimal damage to normal tissues. The source of radiation may be outside the body of the patient (external radiation therapy) or it may be an isotope that has been implanted or instilled into abnormal tissue or a body cavity. Called also radiation therapy. Modern radiation therapy primarily uses high-energy X-rays or gamma rays with peak photon energies above 1 MeV. This is called 'supervoltage' or 'megavoltage' therapy. These high voltages are produced by linear accelerators or by cobalt-60 teletherapy units. Megavoltage radiation is more penetrating than lower energy radiation. It produces less damage to the skin at the entry port, is absorbed less in bone, and is scattered less, thus reducing the exposure to tissues outside the X-ray beam. Low-energy X-rays that do not penetrate are used for treatment of superficial skin lesions. Internal radiation therapy can involve the implantation of sealed radiation sources in or near cancerous tissue. Isotopes, such as radium-226, cesium-137, iridium-192 and iodine-125, are introduced either temporarily or permanently into body tissues (interstitial application) or body cavities (intercavitary application). Permanent sources have a short half-life so that the dose received by the patient is limited. Another form of internal radiation therapy is the administration of radioactive materials into the bloodstream or a body cavity. See also **radiation**, external **beam** therapy, **orthovoltage**, **brachytherapy**.

external beam r. see **teletherapy**.

fractionated r. the full dose is divided and given as a number of separate small treatments.

intraoperative r. the use of radiotherapy during a surgical procedure, usually in the treatment of diffuse neoplasia that cannot be totally removed by surgical methods alone.

supervoltage r., megavoltage r. the use of energy in excess of 500 keV.

radiothermy short-wave diathermy.

radiotoxemia [*ra"de-o-tok-se'me-ə*] toxemia produced by a radioactive substance, or resulting from radiotherapy.

radiotracer [*ra"de-o-tra'sər*] a radioactive tracer.

radiotranslucent radiolucent.

radiotransparent [*ra"de-o-trans-par'ənt*] permitting the passage of X-rays or other forms of radiation. See also **radiolucent**.

radiotropic [*ra"de-o-tro'pik*] influenced by radiation.

radioulnar [*ra"de-o-ul'nər*] pertaining to the radius and ulna.

r. incongruence relative underdevelopment of the radius results in a step defect between the articular surfaces of the radius and ulna which leads to osteoarthritis of the canine elbow.

radish [*rad'ish*] see ***Raphanus***. Includes fodder radish (*R. sativus*), wild radish (*R. raphanistrum*).

radium (Ra) [*ra'de-əm*] a chemical element, atomic number 88, atomic weight, 226. See Table 4. Radium is highly radioactive

R

and is found in uranium minerals. Radium-226 has a half-life of 1622 years. It and its short-lived decay products emit alpha particles, beta particles and gamma rays. One of the decay products, radon-222, is a radioactive gas. In clinical use, radium is contained in a metal container that stops alpha and beta particles and traps radon. Radium is used in the treatment of malignant diseases, particularly those that are readily accessible, for example, tumors of the eye. In the form of needles or pellets, it can be inserted in the tumorous tissue (interstitial implantation) and left in place until its rays penetrate and destroy malignant cells. It can also be used in the form of plaques applied to the diseased tissue. Large amounts of radium are used as a source of **gamma** rays, which are capable of deep penetration of matter. See also **radiotherapy**.

radius [*ra'de-əs*] pl. *radii* [L.] 1. a line radiating from a center, or a circular limit defined by a fixed distance from an established point or center. 2. one of the two long bones of the forearm that extends from the lateral side of the elbow to the medial side of the wrist or carpus. See also Table 10.

r. curvus syndrome see **curvus**.

radix [*ra'diks*] pl. *radices* [L.] root.

radon (Rn) [*ra'don*] a chemical element, atomic number 86, atomic weight 222. See Table 4. Radon is a colorless, gaseous, radioactive element produced by the disintegration of radium.

raffinose [*rafi-nōs*] a crystalline, trisaccharide obtained from cottonseed meal and Australian manna, a substance obtained from a number of eucalypts. Contains dextrose, fructose and galactose. Called also melitose.

Rafinesquia californica toxic plant in the family Asteraceae; causes nitrate–nitrite poisoning; called also California chicory.

rafoxanide [*rə-fok'sə-nid*] a very efficient flukicide which is also effective against *Haemonchus contortus* and *Oestrus ovis*. Available for both oral and injectable administration. There is a good safety margin but poisoning can occur in sheep with heavy doses. There is blindness, with degeneration of the optic nerve, recumbency, polypnea, clonic convulsions and death.

Ragamuffin a breed of cat derived from the **Ragdoll** breed. It has a medium length coat that comes in all colors.

Ragdoll a recently developed breed of cats, derived from Persians, Birmans and Burmese. It is a very large cat with medium to long hair, colored points and blue eyes. When held, it relaxes completely, hence the name.

rage [*rāj*] 1. a state of violent anger. 2. [Fr.] *rabies*.

sham r. an outburst of motor activity resembling the outward manifestations of fear and anger, occurring in decorticated animals and in certain pathological conditions in humans.

r. syndrome a syndrome in dogs of sudden episodes of aggression with no obvious provoking stimuli reported in Springer spaniels and Cocker spaniels. Possibly a type of psychomotor seizure since a similar syndrome in people occurs with lesions of the limbic system or temporal lobe. Because of the unpredictable and dangerous nature of the episodes or rage, euthanasia is usually advised. Called also episodic dyscontrol syndrome.

ragged hips defective conformation in a horse characterized by asymmetry, irregularity or ugly prominence of the ilial tuberosities; caused mostly by fractures of the ilium caused by falling.

ragocyte [*rag'o-sīt*] a cell found in the joints in rheumatoid arthritis; RA cell. Such cells are produced when polymorphonuclear leukocytes ingest aggregated IgG immunoglobulin, rheumatoid factor, fibrin and complement. Rare in dogs.

ragpicker's disease anthrax.

ragweed [*rag'wēd*] see ***Artemisia***, a name sometimes used for ***Senecio*** but more commonly ***Ambrosia elatir***, or *Franseria discolor* (white ragweed).

ragwort [*rag'wərt*] ***Senecio***. Includes marsh ragwort (*S. aquaticus*), Oxford ragwort (*S. squalidus*), tansy ragwort (*S. jacobea*).

rail-out a carcass that has been placed on a special rail in the packing plant so that the USDA inspector can make a more detailed inspection of the carcass without disrupting the flow on the main rail.

railer see **realizer**.

Raillietia [*ri"le-e'she-ə*] a genus of mites in the family Gamasidae.

R. auris found on the ears of cattle.

R. australis found in the ears of wombats.

R. caprae found in the ears of goats.

R-3: *Raillietia auris* from the ear of a cow. From Krametter-Froetscher R, Leschnik M, Hoegler S, Loewenstein M, Baumgartner W: Occurrence of the ear-mite Raillietia auris in cattle in Austria. Vet J 171:186-188, 2006. Elsevier.

R. hopkinsi found on the ears of antelopes.

Raillietiella a genus of pentastomid internal parasites in the class Pentastomida found in ophidians, lacertilians and birds.

Raillietina [*ri"le-ə-ti'nə*] a genus of cyclophyllidean tapeworms containing a very large number of species, many of them uncommon. In the family Davaineidae.

R. cesticillus common in domestic poultry.

R. echinobothrida a common finding in the small intestine of chickens and turkeys.

R. georgiensis found in domestic and wild turkeys.

R. magninumida found in guinea fowl.

R. ransomi found in domestic and wild turkey.

R. tetragona found in the posterior small intestine of many birds including domestic fowls.

R. williamsi found in wild turkey.

railroad disease, railroad sickness see **transit** tetany.

rain rot see **dermatophilosis**.

rain scald a patchy alopecia and pityriasis on the back and croup of horses without any obvious involvement of the epidermis. Caused by persistent heavy rain in summer months and disappears spontaneously when the weather turns dry. **Dermatophilosis** is a much more serious disease with a significant dermatitis.

rainbow lorikeet ***Trichoglossus*** *haematodus*.

Rainey's corpuscles [*ra'ne*] cysts of ***Sarcocystis***.

rainworm see ***Mermis subnigrescens***.

raisin toxicity ingestion of raisins or grapes can cause acute renal failure in dogs due to proximal renal tubular necrosis. As few as one grape per pound body weight is said to be enough to produce clinical signs of vomiting, polydipsia and lethargy within 5 to 6 hr.

rakali an Australian rodent (*Hydromys chrysogaster*) in the family Muridae; adapted for aquatic life with webbed feet and a water repellent coat. They feed on aquatic insects, fish, and crustaceans. Called also water rat.

rake a grooming instrument, used to comb through thick mats in the haircoat of dogs.

rake marks parallel wounds or scars on the skin caused by claws or nails; indicative of animal fighting or attacks.

rakefisk fermented trout, a Scandinavian delicacy, a potent source of botulism in humans.

raking [*ra'king*] of an elephant—see **back** raking.

rakta karabi ***Nerium*** *indicum*.

rale [*rahl*] an abnormal respiratory sound heard in auscultation and indicating some pathological condition. Rales are distinguished as *dry* or *moist*, according to the absence or presence of fluid in the air passages, and are classified according to their site of origin as *bronchial*, *cavernous*, *laryngeal*, *pleural*, *tracheal* and *vesicular* (*crepitant*).

amphoric r. a coarse, musical and tinkling rale due to the splashing of fluid in a cavity connected with a bronchus.

atelectatic r. a nonpathological rale which is dissipated by deep breathing or coughing. Such rales are frequently heard in those who breathe feebly and superficially, when on deep inspiration the moist walls of the unexpanded alveoli are suddenly forced apart by the entering air; after a few deep inspirations such rales become lost.

VetBooks.ir

bubbling r. a moist rale, finer than a subcrepitant rale, heard in bronchitis, in the resolving stage of pneumonia, and over small cavities.
cavernous r. a hollow and metallic rale caused by the alternate expansion and contraction of a pulmonary cavity during respiration.
cellophane r. a dry, crackling chest sound, as heard in interstitial pulmonary emphysema.
clicking r. a small sticky sound heard on inspiration, due to the passage of air through secretions in the smaller bronchi.
consonating r. a clear, ringing sound produced in bronchial tubes that are surrounded by consolidation tissue.
crepitant r. a very fine crackling rale.
dry r. a rale produced by the presence of viscid secretion in the bronchial tubes, or by spastic contraction of the walls of the tubes; it has a whistling, musical or squeaking quality.
gurgling r. a very coarse rale resembling the bursting of large bubbles; in pulmonary edema, heard over large cavities that contain fluid, and in the trachea in the 'death rattle'.
sibilant r. a hissing sound resembling that produced by suddenly separating two oiled surfaces. It is produced by the presence of a viscid secretion in the bronchial tubes or by thickening of the walls of the tubes; heard in asthma and bronchitis.
subcrepitant r. a fine, moist rale associated with fluid in the bronchioles.

ralgro [*ral'gro*] synthetic zearalenol, an estrogen, used commercially as a growth promotant, capable of causing hyperestrogenism.

ram male, entire sheep which has attained sexual maturity at about the age of 6 months.
r. effect introduction of a ram into a flock of non-pregnant ewes in the period between deep anestrus and the commencement of the breeding season tends to advance the onset of estrus and enhances its synchronization; the male effect. Also observed in other species.
r. epididymitis ovine **brucellosis**, caused by *Brucella ovis*.
r. mating harness leather or webbing harness worn around the forequarters and carrying a marking crayon or paint pad on the brisket to mark the rumps of ewes that have been mated.
stud r. pedigree ram used to mate with purebred ewes.
teaser r. vasectomized ram. See also **teaser**.

ram's horn tree see ***Acacia*** *osswaldii*.

ramal [*ra'məl*] pertaining to a ramus.

Ramaria a genus of macrofungi of the class *Basidiomycetes* (*Clavariaceae*). Their fruiting bodies contain an unidentified toxin which causes death in cattle. Signs include salivation, mucosal erosions, ocular lesions and abortion. See also **mal** do eucalipto. Called also fairy clubs, coral fungus.

Rambouillet French fine-woolled, Merino sheep; males are horned, females polled. The most common fine-wool breed in the USA.

rami [*ra'mi*] [L.] plural of *ramus*.
r. communicantes bundles of nerve fibers connecting a sympathetic ganglion to spinal nerve; categorized as gray rami (unmyelinated postganglionic fibers) or white rami (myelinated preganglionic fibers).

ramification [*ram"ĭ-fĭ-ka'shən*] 1. distribution in branches. 2. a branch or set of branches.

ramify [*ram'ĭ-fi*] 1. to branch; to diverge in different directions. 2. to traverse in branches.

ramipril [*rə-mi'pril*] an angiotensin-converting enzyme inhibitor used in the management of heart failure in dogs and cats.

ramisection [*ram"ĭ-sek'shən*] section of the appropriate rami communicantes of the sympathetic nervous system.

ramitis [*ram-i'tis*] inflammation of a ramus.

ramose [*ra'mos*] branching; having many branches.

Ramphastos see **toucan**.

Ramstedt operation [*rahm'shtet*] longitudinal incision through the serosa and sphincter muscles at the pyolorus in order to relax a stenotic or closed-by-spasm sphincter. Called also Fredet–Ramstedt operation. See also **pyloromyotomy**.

ramulus [*ra'mu-ləs*] pl. *ramuli* [L.] a small branch or terminal division.

ramus [*ra'məs*] pl. *rami* [L.] a branch, as of a nerve or artery.
r. communicans pl. *rami communicantes;* a branch connecting two nerves or two arteries.
mandibular r. the vertical extension of each half of the mandible that ends at the coronoid process.

RANA abbreviation for Registered Animal Nursing Auxiliary in the UK. Used as a qualification by persons admitted to its membership.

Rana a genus of amphibians in the family Ranidae. The genus of New World frogs. Includes *R. catesbeiana* (bullfrog), *R. clamitans* (green frog), *R. pipiens* (leopard frog).

Ranavirus a genus in the family *Iridoviridae*; member viruses cause a highly fatal, generalized disease in amphibians, including deaths in frog tadpoles. A disease notifiable to the OIE (see Table 22).

ranch extensive grazing or pastoral farm or holding. See also **range** (2). Called also station, run, selection.
r. cattle brood cows, commercial cattle used for producing young cattle for fattening.

rancid [*ran'sid*] having a musty, rank taste or smell; applied to fats that have undergone decomposition, with the liberation of fatty acids.

rancidity [*ran-sid'ĭ-te*] the state of being rancid.

random [*ran'dəm*] unplanned, without direction or purpose.
r. assignment see **randomization**.
r. mating where each member of the population has an equal opportunity of mating with every member of the opposite sex.
r. numbers a list of numbers obtained by a standard randomization procedure; used commonly to select individual animals from a pack.
r. sample see random **sample**.
r. sampling a procedure for selecting units from a group in such a way that each unit has an equal chance of being selected in the sample.
r. selection selection in such a way as to produce a random **sample**.
r. variable a group or quantity that takes various values, each with varying probabilities.

randomization [*ran"dəm-ĭ-za'shən*] the performance of a function, e.g. selection, in a random manner.

randy budgie syndrome mating behavior seen in caged budgerigars; it includes courtship feeding and regurgitation, attempts to copulate with inanimate objects or humans.

range [*rānj*] 1. the difference between the upper and lower limits of a variable or of a series of values. 2. extensive grazing land which provides seasonal feed supply of pasture comprising grasses and clovers and other legumes supplemented by forbs and browse. 3. a husbandry system where animals are permitted to roam free, within reasonable limits, i.e. they are not confined in corrals, lots, yards, houses, barns, byres and the like. Called also free range. 4. animals maintained as in 3 above, e.g. range cattle. Called also range-reared.
annual r. rangeland on which the principal forage plants are self-perpetuating annual herbaceous species.
arid r. lack of sufficient moisture severely limits growth and production of vegetation. Generally considered that this will occur with less than 10 inches (25 cm) of rain in a temperate climate.
r. cubes large pellets of compacted feed, between a pellet and a log, approximately 1 inch cubed, used to feed animals at pasture. Can be fed on the ground with very little loss.
free r. see (3) (above).
r. of motion the range, measured in degrees of a circle, through which a joint can be extended and flexed. See also range of motion exercises (below).
r. of motion exercises exercises calculated to extend the range of extension and flexion of an impaired joint.
r. paralysis see **Marek's disease**.
r.-reared see range (3 above).
r. stiffness a disease of lambs. See **bluetongue**.

rangiora see ***Brachyglottis repanda***.

rangy a term describing conformation; generally a light frame with long body and legs.

ranikhet disease see **Newcastle disease**.

ranine [*ra'nīn*] pertaining to (1) a frog; (2) a ranula, or to the lower surface of the tongue; (3) the sublingual vein.

ranitidine [*rə-nĭ'tĭ-dēn*] a histamine H_2-blocking agent used in the treatment of gastrointestinal ulceration.

rank [*rangk*] the place in a series occupied by a value when the series has been set in order according to a particular trait, usually size. Called also order statistic.

r. sum test nonparametrical statistical test used to compare two methods by seeing if one method contributes more to the higher ranked values.

Ranke primary complex [*rahng'kə*] in the pathogenesis of tuberculosis is the primary lesion with a similar lesion in the draining lymph node.

ranking arranging units, e.g. cows, in order according to a predetermined criterion e.g. milk production, with the superior unit first in the list.

ransoms ***Allium*** *ursinum*.

ranula [*ran'u-lə*] a cystic enlargement beneath the tongue due to obstruction and dilatation of the sublingual or submaxillary gland. Called also sublingual mucocele.

pancreatic r. a retention cyst of the pancreatic duct.

ranunculin [*rə-nung'ku-lin*] glycosidic precursor for **protoanemonin**; found in *Anemone* spp.

Ranunculus [*rə-nung'ku-ləs*] a very large plant genus of family Ranunculaceae; the buttercups. All of them should be regarded as potentially poisonous. The species listed below have been reported as causing poisoning in animals. They contain protoanemonin glycosides which cause abdominal pain, convulsions, stomatitis, diarrhea. See also **protoanemonin**. *R. abortivus* (small-flowered buttercup), *R. acris* (tall or giant buttercup), *R. bulbosus* (bulbous buttercup), *R. colonorum*, *R. cymbalaria*, *R. ficaria* (lesser celandine), *R. flammula* (spearwort), *R. inundatus*, *R. lingua* (greater spearwort), *R. multifidus*, *R. parviflorus* (small-flowered buttercup), *R. pentandrus*, *R. pumilio*, *R. repens* (creeping buttercup), *R. rivularis* (*R. amphitrichus*, river buttercup), *R. sceleratus* (celery buttercup, cursed crowfoot, poison buttercup), *R. sessiliflorus*, *R. testiculatus* (burr buttercup), *R. undosus*.

Ranvier node [*rahn-vya'*] see **node** of Ranvier.

rapamycin a macrolide compound obtained from *Streptomyces hygroscopicus* used as an immunosuppressant in tissue transplantation.

rape [*rāp*] see ***Brassica*** *napus*.

r. blindness a syndrome in ruminants caused by ingestion of *Brassica napus* leading to behavior indicating impaired vision characterized by compulsive walking and head pressing. Possibly a manifestation of sulfur-associated polioencephalomalacia.

broom r. see ***Orobanche minor***.

swede r. *Brassica napus*.

turnip r. *Brassica rapa* subsp. *campestris*.

rapeseed the seed of Target rape grown specifically for the seed and its oil.

r. meal as oil cake or meal after rapeseed oil is removed this is a high-protein feed supplement used in cattle. It can be goitrogenic because of its content of isothiocyanate but can be detoxified.

Raphanus [*rə-fan'əs*] a plant genus in the family Brassicaceae; contains the poisonous principle *S*-methylcysteine sulfoxide and causes poisoning characterized by hemoglobinuria, jaundice, diarrhea and liver damage.

R. raphanistrum called also jointed charlock, wild radish; can cause sulfur-associated polioencephalomalacia.

R. sativus may contain toxic amounts of nitrate. The culinary radish.

raphe [*ra'fe*] a seam; line of union of the halves of various symmetrical parts.

abdominal r. linea alba.

r. nuclei small group of serotenergic cells in the midline of the brainstem; may be involved in the initiation of sleep.

raphide needle-like microscopic crystals of calcium oxalate found in plants (*Alocasia, Colocasia, Dieffenbachia, Philodendron, Zantedescgia* spp.); produces buccal irritation when plants are chewed.

Rapistrum rugosum member of the plant family Brassicaceae; contains goitrogenic glucosinolates which cause goiter; can cause sulfur-associated polioencephalomalacia. Called also wild turnip, turnip weed.

Rapoport–Luebering cycle see **2,3-bisphosphoglycerate** pathway.

Rappaport's acinus [*rap'ə-port*] the modern and current concept of structural function in the liver is based on this description of the hepatic acinus.

raptor a predator; an animal or bird adapted for capturing prey. Usually limited in its application to birds of prey; includes hawks, eagles, buzzards, harriers, kites, owls and vultures.

rare-earth intensifying screen see rare-earth **intensifying screen**.

rarefaction [*rar"ə-fak'shən*] the condition of being or becoming less dense.

RAS reticular activating system.

Rasa Aragonesa breed of white-faced sheep in Spain.

rash [*rash*] a temporary eruption on the skin.

drug r. dermatitis medicamentosa.

rasp [*rasp*] a flat, round-toothed instrument used to débride the surface of hard materials such as teeth, bones, hooves.

bone r. for trimming rough ends of bone prior to repair of a fracture. See also **Putti rasp**.

hoof r. for fine trimming of hoof while shoeing a horse.

tooth r. used for smoothing teeth in horses. See **filing teeth**.

raspweed, raspwort see ***Haloragis*** *heterophylla*.

RAST radioallergosorbent test.

raster see raster **data** representation.

rat [*rat*] small, furred rodent with pointed snout, long thin and almost hairless tail; members of the family Muridae, subfamily Murinae (Old World rats and mice) and the family Cricetidae, subfamily Sigmodontinae (New World rats and mice) both of the order Rodentia, differing from mice mainly in size. They are omnivorous, nocturnal, do not hibernate and live commensally with humans. Only some of the members of the rat and allied groups are listed below.

r. bite fever ***Streptobacillus*** *moniliformis*.

black r. (*Rattus rattus*) Old World rat infamously associated with the bubonic plague (Black Death), as the host of the rat flea (*Xenopsylla cheopis*), and other zoonotic diseases. Called also house rat, roof rat.

brown r. (*Rattus norvegicus*) Old World rat native to China, but now distributed world-wide. The progenitor of the laboratory rat and most varieties of pet rats. Called also Norway or Norwegian rat.

fancy r. domesticated version of the brown rat (*Rattus norvegicus*) kept as pets. There are many varieties of color and markings. As pets, they are very entertaining and responsive; their housing and dietary requirements are modest, but they can bite and are prone to escape.

kangaroo r. see **potoroo**.

laboratory r. used widely in biomedical research, most are domesticated derivatives of *Rattus norvegicus*. There are now many different strains or lines, each with specific characteristics to make them useful for different purposes. The classical laboratory rat is the albino Wistar rat, all white with pink eyes.

r. leprosy a chronic, largely cutaneous disease of rats caused by *Mycobacterium lepraemurium* and characterized by subcutaneous granuloma and similar involvement of superficial lymph nodes, containing large numbers of acid-fast organisms. The disease has little similarity to nor any relationship with human leprosy. See also feline **leprosy**.

Long–Evans r. laboratory rat, white with brown or black head and shoulders.

pack r. (*Neotoma* spp.) desert dwelling New World rats noted for their tendency to collect assorted materials and objects to include in their nest building. Called also woodrat.

sand r. (*Psammomys obesus*) a small rodent native to North Africa. Studied as an animal model of diabetes mellitus because it is predisposed to developing the disease on normal laboratory diets. Closely related to gerbils.

Sprague–Dawley r. albino laboratory rat.

r. tooth, teeth describes the type of points on surgical instruments with a single point on one side which interlocks with two points on the other side.

water r. 1. see water **vole**. 2. in Australia, a native rodent (*Hydromys chrysogaster*) called **rakali**.

Wistar r. an albino laboratory rat that is all white with pink eyes.

rat-tail syndrome 1. see **sarcocystosis**. 2. an inherited condition in some calves sired by Simmental bulls and from cows with various percentages of Angus breeding.

Rat terrier an American breed of small (10–25 lb), active terrier-type dogs, but also an alternate name for Manchester terrier.

rat-tooth pointed projections (teeth) on the tips of some surgical instruments, particularly forceps, which intermesh when brought together, for grasping tissue with a minimum of trauma or crushing.

ratchet a steplocking device on surgical instruments. As the handles are closed the jaws are also closed and the ratchet holds

them in a locked position. The ratchet consists of a notched bar on each handle, the notches facing and overriding when the handles are closed.

rate [rāt] the frequency with which an event or circumstance occurs per unit of time. The essential feature of a rate is that the numerator is included in the denominator and the time duration is specified.

attack r. the proportion of a population affected by a specific condition during a prescribed, usually short, period of time.

attribute-specific r. the rate of occurrence of a specific attribute.

basal metabolic r. (BMR) an expression of the rate at which oxygen is utilized in a fasting subject at complete rest as a percentage of a value established as normal for such a subject.

birth r. the number of births during one year for the total population (crude birth rate), for the female population (refined birth rate), or for the female population of reproductive age (true birth rate).

case r. morbidity rate.

case fatality r. the number of deaths due to a specific disease as compared with the total number of cases of the disease.

cohort r. the rate of occurrence of e.g. disease in cohorts.

death r. the number of deaths per stated number of animals (1000 or 10 000 or 100 000) in a certain region in a certain time period.

erythrocyte sedimentation r. (ESR) see **erythrocyte** sedimentation rate.

fatality r. the number of deaths caused by a specific circumstance or disease, expressed as the absolute or relative number among individuals encountering the circumstance or having the disease.

five-year survival r. an expression of the number of survivors with no trace of disease 5 years after each has been diagnosed or treated for the same disease.

forced expiratory flow r. (FEF) see maximal expiratory flow rate (below).

glomerular filtration r. (GFR) an expression of the quantity of glomerular filtrate formed each minute in the nephrons of both kidneys, calculated by measuring the clearance of specific substances, e.g. inulin or creatinine.

growth r. rate of increase in body weight per unit of time, e.g. lb/day in beef cattle.

heart r. the number of contractions of the cardiac ventricles per unit of time.

incidence r. describes the probability of a new case occurring during a stated time interval.

infection r. percentage of the population from which a specific infectious pathogen is isolated.

r.-limiting enzymes rate controlling enzymic steps in metabolic pathways. Often allosteric enzymes with allosteric effector sites but can be controlled through substrate availability, product removal or enzyme concentration.

maximal expiratory flow r. (MEFR) the slope of the line connecting the points 200 mL and 1200 mL on the forced expiratory volume curve. See also **pulmonary** function tests.

metabolic r. an expression of the amount of oxygen consumed by the body cells.

morbidity r. the number of cases of a given disease occurring in a specified period per unit of population.

mortality r. death rate; the mortality rate of a disease is the ratio of the number of deaths from a given disease to the total population at risk.

prevalence r. fraction of the population that has the attribute of interest at a point in time where existing and new cases are counted for that period.

reactor r. percentage of reactors in a tested population.

respiration r. the number of movements of the chest wall per unit of time, indicative of inspiration and expiration.

response r. in surveys, the number of completed survey instruments (questionnaires, interview records) divided by the total number of persons approached.

risk r. see **relative** risk.

secondary attack r. number of cases in the outbreak divided by the total number of susceptible animals in the population.

sedimentation r. the rate at which a sediment is deposited in a given volume of solution, especially when subjected to the action of a centrifuge. See also **sedimentation** rate.

specific r. expresses the frequency of a characteristic per unit of the population.

r. standardization adaptation of a rate so that the conditions under which it occurred are comparable with those in which other rates have been estimated. There are several methods, e.g. the equivalent average death rate.

ratel see honey **badger**.

***Rathayibacter* spp.** bacterial species (formerly *Corynebacterium* and *Clavibacter* spp.) that grow in galls caused by grass nematodes (*Anguina* spp.) in the seedheads of some temperate zone pasture grasses, e.g. *Agrostis avenacea, Lolium rigidum, Polypogon monspeliensis*, and produce highly potent toxins (corynetoxins = tunicamycins) which cause sudden death in ruminants.

R. toxicus bacterial species in nematode-induced seedhead galls on *Lolium rigidum*; produces corynetoxins causing **corynetoxicosis**. Previously called *Clavibacter toxicus*, *Corynebacterium toxicus*.

Rathke's pouch, cleft, pocket [raht'kə] a diverticulum from the embryonic buccal cavity from which the anterior pituitary is developed.

R. pouch cyst failure of the ectoderm of Rathke's pouch to differentiate into adenohypophyseal tissue. A cyst fills the space normally occupied by the pituitary gland and the animal is a dwarf with panhypopituitarism.

ratio [ra'she-o] [L.] an expression of the quantity of one substance or entity in relation to that of another; the relationship between two quantities expressed as the quotient of one divided by the other. It differs from a proportion in that the numerator is not included in the denominator. Thus x/(x + y) is a proportion, x:y is a ratio.

A–G r. **albumin**–globulin ratio.

area–incidence r. the number of new cases of a specific disease in a population during a specified time period, divided by the geographic area size in which the observations are made, multiplied by the time elapsed, e.g. cases per hectare per month.

arm r. a figure expressing the relation of the length of the longer arm of a mitotic chromosome to that of the shorter arm.

A/S r. the diameter of the ascending aorta divided by the diameter of the aorta at the sinus of Valsalva; less than 1 in a normal dog. In subaortic stenosis it becomes greater than 1.

cardiothoracic r. the ratio of the transverse diameter of the heart to the internal diameter of the chest at its widest point just anterior to the dome of the diaphragm.

cross r. see **odds** ratio.

fetal death r. the number of fetal deaths divided by the number of live births.

gain r. individual animal's gain/average gain in group × 100.

lecithin–sphingomyelin r. the ratio of lecithin to sphingomyelin in amniotic fluid. See also **lecithin**, **sphingomyelin**.

odds r. see **odds** ratio.

rates r. the ratio between two rates. See **odds** ratio and relative risk ratio (below).

relative risk r. the ratio between the rate (of mortality or some such parameter) in one group of animals and the rate in another group, used as a standard and the comparison expressed as a ratio. See also **relative** risk.

sex r. the number of males in a population per number of females, usually stated as the number of males per 100 females.

S/P ratio secondary-to-primary ratio. An indicator of fleece type in sheep, the greater the ratio the finer the fleece. Coarse-wool sheep have ratios of 3:1 to 4:1; merinos have a ratio of 20:1.

special incidence r's. ratios done specially for indexes that are not part of a regular surveillance system, e.g. a zoonosis incidence ratio which is the ratio of the number of new cases of the disease in the animal reservoir related to the number of people in the human population for the same period.

stillbirth r. the ratio of stillbirths to total births in the population.

trait r. expression of an animal's performance for a particular trait relative to the herd or contemporary group average.

urea excretion r. the ratio of the amount of urea in the urine excreted in one hour to the amount in 100 mL of blood. The normal ratio is 50.

ration [rā'shən] a fixed allowance of total feed for an animal for one day. Usually specifies the individual ingredients and their amounts and the amounts of the specific nutriments such as carbohydrate,

VetBooks.ir

fiber, individual minerals and vitamins. See also **blended rations**, **creep** ration, **cut-and-fit ration balancing**, **feed**, **food**.

r. analysis chemical analysis to determine the proportions of principal nutrients in the feed; no tests of digestibility are included.

balanced r. a ration which has been balanced so that it contains appropriate proportions of the principal nutritional components, that is carbohydrates, protein, fat, minerals and vitamins, for the specific class, including especially age and lactational status, of livestock for which the ration is formulated.

complete r. all of the constituents of a ration fed to a confined animal are mixed together and fed at the one time. It does not require supplementation other than drinking water.

r. formulation the recipe; list and amounts of feed ingredients to be included in a ration.

hot r. ration that has high energy density.

r. sorting practice by some cows of sorting (selectively eating) a total mixed ration so that they do not get the intended balanced ration, a practice that can predispose to indigestion and acidosis. Correct fiber length and total mixing of the ration are critical to minimizing this practice.

total mixed r. see complete ration (above).

rational [*răʹshən-əl*] based upon reason.

r. deductive diagnosis a diagnosis based on rationalization of the signs with pathological and epidemiological principles, as distinct from empirical diagnosis.

ratite a flightless bird in the subclass Paleognathae, characterized by a flat, raft-like sternum, lacking a keel, and strong muscular legs; includes cassowaries, emus, kiwis, ostriches and rheas.

ratsbane ***Dichapetalum*** *toxicarium*.

rattle bush ***Crotalaria*** *burkeana*.

rattlebox ***Sesbania*** *punicea* (purple rattlebox), *S. drummondii*.

rattlebrush ***Sesbania*** *drummondii*.

rattlepod see ***Crotalaria***. Includes gray rattlepod (*C. dissitiflora*), New Holland rattlepod (*C. novae-hollandiae*), streaked rattlepod (*C. pallida*), trefoil rattlepod (*C. medicaginea*), wedge-leaved rattlepod (*C. retusa*).

rattles vernacular for purulent bronchopneumonia in foals with pneumonia caused by *Rhodococcus equi*; name derived from the moist, loud crackles heard on auscultation of the lungs.

rattlesnake [*ratʹəl-snāk*] a venonmous snake of the genera *Crotalus* or *Sisustrus,* both members of the family Viperidae which have hinged fangs. In addition, *Crotalus* spp. have a heat-sensitive pit organ between the eyes and nostrils which help them detect and strike at warm-blooded prey (pit vipers). Rattlesnakes are characterized by the retention of dried skin segments at the end of the tail which give them their ominous rattle when threatened. There are many species and they are the largest of the venomous snakes in the United States, causing most snakebites and related fatalities. The bites cause severe local inflammation with much tissue destruction. They can accurately strike at up to one-third of their body length. Various species occur across the Americas. See also **snake**, **snakebite**.

diamondback r. includes eastern diamondback (*Crotalus adamanteus*) stocky large rattlesnake found in the eastern United States, and western diamondback (*C. atrax*) one of the larger species of rattlesnake common to the arid Southwest United States.

ground r. (*Sistruris* spp.) found in southeastern Canada, eastern and northwestern United States and isolated populations in northern and central Mexico.

lower California r. *C. enyo enyo.*

Massasauga r. *S. catenatus* small stocky rattlesnake found in northeastern United States and eastern Canada.

R-4: Timber rattlesnake (*Crotalus horridus*). Courtesy of CDC/Edward J. Wozniak.

sidewinder r. (*C. cerastes*) found in the sandy deserts of Southwestern United States and Northwest Mexico. A small snake with characteristic elevated scales (horns) above their eyes. So-called because they move by pushing off the ground from two places and throwing their necks forward.

timber r. (*C. horridus*) found in the eastern United States; arguably its location in populous area, its size, long fags and venom yield make this the most dangerous snake in North America.

western r. *C. oreganus.*

rattleweed ***Astragalus*** *diphysus*.

Rattus [*ratʹəs*] genus of rats in the family Muridae; includes *R. norvegicus* (brown rat) and *R. rattus* (black rat). See **rat**.

Rauvolfia a plant genus in the family Apocynaceae; contains reserpine; causes abdominal pain, diarrhea, jaundice, hepatitis; includes *R. serpentina*, *R. tetraphylla* (*R. canescens*), *R. vomitoria.* Also spelled *Rauwolfia*.

RAVC Royal Army Veterinary Corps.

raven's beak the coracoid bone in the bird.

ravuconazole a triazole antifungal drug, derived from fluconazole.

raw in its natural state; uncooked; unaltered.

r. fiber see **fiber**[2].

rawhide untanned cattle hide. Used in manufacture of stiff lariats, hackamores. Stretches and becomes malleable when soaked.

ray [*ra*] a line emanating from a center, as a more or less distinct portion of radiant energy (light or heat), proceeding in a specific direction.

alpha r's (α-r's) high-speed helium nuclei ejected from radioactive substances; they have less penetrating power than beta rays. See also **alpha** particles.

beta r's (β-r's) electrons ejected from radioactive substances with velocities as high as 0.98 of the velocity of light; they have more penetrating power than alpha rays, but less than gamma rays.

digital r. a digit of the foot or paw and corresponding metacarpal or metatarsal bone, regarded as a continuous unit.

gamma r's (γ-r's) electromagnetic radiation of short wavelengths emitted by an atomic nucleus during a nuclear reaction, consisting of high-energy photons, having no mass and no electric charge, and traveling with the speed of light and with great penetrating power. They have very great range in penetrating tissues and cytotoxic effects, especially on nuclei and on tissues which are replicating rapidly. The fetus, bone marrow, blood, liver and gonads are particularly susceptible. See also **radiation** injury, **radiation** therapy.

medullary r. a cortical extension of a bundle of tubules from a renal pyramid.

roentgen r's X-rays.

x-r's see **X-ray**.

razor back a fault in conformation of any modern farm animal; a sharp-ridged backbone produced by long spinous processes of the vertebrae and scant longissimus dorsi muscles.

Rb chemical symbol, *rubidium.*

RBC red blood cells; red blood (cell) count.

RBE relative biological effectiveness; effectiveness of absorbed doses of radiation delivered by different types of radiation. The unit RBE is the **Sievert** which has replaced the **rem**.

RCVS Royal College of Veterinary Surgeons (UK).

Rd see **rutherford**.

RD114 virus an endogenous retrovirus of cats, not associated with disease.

RDA recommended daily (nutritional) allowance.

rDNA recombinant DNA.

RDS respiratory distress syndrome.

rDVM referring veterinarian (Doctor of Veterinary Medicine).

RDW red cell distribution width.

RE reticuloendothelial.

Re chemical symbol, *rhenium.*

reabsorb [*reʺəb-sorbʹ*] to absorb again; to undergo or to subject to reabsorption; to resorb.

reabsorption [*reʺab-sorpʹshən*] 1. the act or process of absorbing again, as the absorption by the kidneys of substances (glucose, proteins, sodium, etc.) already secreted into the renal tubules. 2. resorption.

reach the distance covered with each stride.

react [*re-aktʹ*] 1. to respond to a stimulus. 2. to enter into chemical action.

reactant [*re-akʹtənt*] a substance which takes part in a reaction and is altered by it.

reaction [*re-ak'shən*] 1. opposite action or counteraction; the response of a part to stimulation. 2. the phenomena caused by the action of chemical agents; a chemical process in which one substance is transformed into another substance or substances.
chain r. one which is self-propagating so that the product of each reaction initiates the next; a chemical process in which each time a free radical is destroyed a new one is formed.
coupled r. one in which the free energy released by one chemical reaction drives the other reaction.
cross r. see **cross-reaction**.
dark r. photosynthetic reaction which fixes CO_2 into sugar and which occurs without exposure to light. Called also Calvin cycle.
r. of degeneration the reaction to electrical stimulation of muscles whose nerves have degenerated, consisting of loss of response to a faradic stimulation in a muscle, and to galvanic and faradic stimulation in the nerve.
delayed r. a reaction, such as an allergic reaction, occurring hours to days after exposure to an inducer.
false negative r. an erroneously negative reaction to a test.
false positive r. an erroneously positive reaction to a test.
first set r. see **rejection**.
immune r. 1. **immune** response; see also **immunity**. 2. formation of a papule and areola without development of a vesicle following smallpox vaccination.
lengthening r. reflex elongation of extensor muscles that permits flexion of a limb.
leukemic r., leukemoid r. see **leukemoid**.
r. pattern analysis designed to replace archaic, non-specific descriptions of the reactions of the skin to noxious influences; recommended categories are (1) perivascular dermatitis, (2) interface dermatitis, (3) vasculitis, (4) nodular and diffuse dermatitis, (5) intradermal vesicular and pustular dermatitis, (6) subepidermal vesicular and pustular dermatitis, (7) perifolliculitis, folliculitis and furunculosis, (8) fibrosing dermatitis, (9) panniculitis, (10) atrophic dermatosis, (11) mixed reaction patterns.
second set r. see **rejection**.
r. specificity lack of production of by-products in enzymatic reactions with yields of products being nearly 100%.
Strauss r. development of suppurative peritonitis, localized to the scrotal sac, in the guinea pig after the intraperitoneal injection of material containing *Burkholderia mallei*.
stress r. 1. alarm reaction. 2. gross stress reaction.
r. time the time elapsing between the application of a stimulus and the resulting reaction.
wheal–flare r. a cutaneous sensitivity reaction to skin injury or administration of antigen, due to histamine production and marked by edematous elevation and erythematous flare.
reactive nitrogen species highly reactive chemicals, such as peroxynitrite, containing nitrogen, that react with other molecules, resulting in damaging modifications.
reactive oxygen species highly reactive molecules containing unpaired electrons formed during the normal metabolism of oxygen, including superoxide, hydrogen peroxide and hydroxyl radical; play important roles in cell signaling, but cause cell damage when produced in excess.
reactivation [*re-ak"tĭ-va'shən*] to become active after a period of quiescence or, as in bacterial and viral infections, latency.
multiplicity r. in virology, a population of viruses that has been inactivated, say by irradiation, may when introduced into a cell at high multiplicity of infection, replicate because of complementation between different member viruses in the inactivated population.
reactor an animal that reacts positively to a particular test.
false positive r. an animal that does not have the subject disease but reacts positively to a test for it.
read-through transcription DNA or translation of RNA that proceeds past the point of termination because of the absence of a termination signal.
readiness response see **arousal**.
reading frame the actual codons that are translated (read) during mRNA synthesis. In principle a DNA sequence can be transcribed in any one of three different reading frames, each of which will specify a completely different polypeptide. Usually only one of the three reading frames is transcribed.
open r. f. (ORF) an extended sequence in mRNA that is free of stop codons.
reagent [*re-a'jənt*] a substance used to produce a chemical reaction so as to detect, measure, produce, etc., other substances.
r. strip diagnostic testing based on color changes in a chemically impregnated strip that is dipped into urine or plasma. Typically, there are a number of individual testing pads, each with a different reagent to detect a different analyte, all within a minute or less. Commonly used to test for pH, glucose, protein, bilirubin, heme and nitrite. Less accurate and subject to more interference than other analytical methods, but very convenient for clinical use. Called also dipstick.
reagin [*re'ə-jin*] an old term for immunoglobulin E antibody (IgE).
atopic r. the antibody responsible for hypersensitivity reactions to specific substances with signs of atopy resulting.
reaginic [*re"ə-jin'ik*] pertaining to reagin.
r. antibody immunoglobulin E.
real prevalence a technique of measuring prevalence. It is needed because of the significant errors in estimation of prevalence when the definitive test has high sensitivity but low specificity. When S_e = selectivity, S_p = specificity, the real prevalence (RP) can be estimated from the apparent prevalence (AP) by the formula:

$$RP = \frac{AP + S_p - 1}{S_p + S_e - 1}$$

real time [*rēl'tīm*] a term used to describe the making of electronic observations and the processing of them while the data is being collected rather than later.
real-time scanning see real-time **ultrasonography**.
realgar [*re'al-gahr"*] a naturally occurring deposit of arsenic disulfide, used as a pigment and a potential source of poisoning in animals.
realizer sick or poorly performing cattle that fail to respond to treatment in a feed yard. They may be sent to slaughter after all drug withdrawal periods have passed. They will receive especial inspection attention at the slaughter house. Called also railers.
reamer [*rēm'ər*] an instrument used to enlarge the diameter of a pulp cavity in the practice of endodontics.
reannealing see **renaturation**.
rear[1] hind, as in limb.
rear[2] in a horse, to stand up on its hindlimbs with the spine almost vertical.
rearing to nurture an animal to maturity.
artificial r. the rearing of newborn animals by the use of milk replacer as an artificial diet, and often the provision of an artificial environment with a cloth-lined box and a heat lamp or other heating device. The provision of an appropriate amount of relevant antibodies or a prolonged course of antibiotics is an essential part of the program. The need may be a permanent one because of the death or complete agalactia of the dam, or because management insists on early weaning. It may be temporary if the dam is agalactic for a brief period because of illness.
reasonable veterinarian see reasonable person **principle**.
reassortment see **recombination**.
reata [Span.] *lasso*.
rebreathing bag conductive rubber, reservoir bag in a circle system gas anesthesia machine. It can be used to assist ventilation manually or to completely control respiration in open-chest surgery.
rebreeding the practice of mating the female two or more times during the one estrous period; applicable only to controlled breeding systems, especially artificial insemination of dairy cows. Called also double **mating**.
recall [*re'kawl*] a voluntary action of removing a product from retail or distribution by a manufacturer or distributor to protect the public from products that may cause health problems.
recapitulation theory [*re"kə-pit"u-la'shən*] ontogeny recapitulates phylogeny, e.g. an organism, in the course of its development goes through the same successive stages (in abbreviated form) as did the species in its evolutionary development.
receiving term for getting new cattle into the feedlot with minimal stress. Cattle are placed in pens and offered palatable feed and good access to water. Usually they are allowed to rest overnight and then processed in small groups with as least stress as possible. See also feedlot **processing**.
receiver operating characteristic curve [*re-sēv'ər*] see **ROC curve**.
receptacle of the deferent duct slight terminal enlargement of the avian deferent duct.

R

receptaculum [re"səp-tak'u-ləm] pl. *receptacula* [L.] a vessel or receptacle.
r. chyli cisterna chyli.
receptive field [re-cep'tiv] an area of the body surface over which a single sensory receptor, or its afferent nerve fiber, is capable of sensing stimuli. In some body area, e.g. face, ears, front paws, the sensitive areas are small; over the back they are larger.
receptor [re-sep'tər] 1. a structure on the surface or within a cell that recognizes and binds with specific molecules, producing some effect in the cell, e.g. the cell-surface receptors of immunocompetent cells that recognize antigens, complement components or lymphokines, or those of neurons and target organs that recognize neurotransmitters or hormones; see also **opioid** receptors. 2. a sensory nerve ending that responds to various stimuli, e.g. arterial stretch, baroreceptors, cold, Golgi tendon organs, joint, muscle and tendon, olfactory, retinal, taste and warmth.
r. activation the cell of a sensory receptor responds to a specific energy change in its environment and initiates a corresponding sensory input.
adrenergic r's receptors for epinephrine or norepinephrine, such as those on effector organs innervated by postganglionic adrenergic fibers of the sympathetic nervous system. Classified as α-adrenergic receptors, which are stimulated by norepinephrine, and β-adrenergic receptors, which are stimulated by epinephrine. See also **adrenergic** receptors.
autonomic r's. includes adrenergic and muscarinic receptors.
cholinergic r's receptor sites on effector organs innervated by cholinergic nerve fibers and which respond to the acetylcholine secreted by these fibers. There are two types: **muscarinic** receptors and **nicotinic** receptors.
complement r. a cell-surface receptor capable of binding activated complement components. For example, component C3b is bound to neutrophils, B lymphocytes and macrophages.
dopamine r's. there are dopamine-inhibitory and dopamine-excitatory receptors.
drug r. a component of tissue with which a drug reacts. Classified according to the type of drugs that react with them.
Fc r. bind immunoglobulins via Fc part of the molecule.
histamine r's receptors for histamine, classified as H_1-*receptors*, which produce bronchoconstriction and contraction of the gut and are blocked by antihistamines, such as mepyramine or chlorpheniramine, and H_2-*receptors*, which produce gastric acid secretion and are blocked by H_2-receptor blockers, such as cimetidine.
μ-r. see **opioid** receptors.
muscarinic r. see **muscarinic** receptors.
nicotinic r. see **nicotinic** receptors.
peripheral r. sensory receptors including cutaneous warm and cold, dermoreceptors touch and pain plus receptors in the mucosae.
sensory r. an endorgan at the end of an afferent neuron which is capable of stimulation by a specific change, physical or chemical, in the internal or external environment of the patient.
toll-like r's. a family of transmembrane proteins that differentially recognize pathogen-associated molecular patterns through an extra cellular domain and initiate inflammatory signaling pathways through an intracellular domain; they play a central role in the innate immune response to pathogens.
r. tyrosine kinases a large class of cell-surface receptors with tyrosine-specific protein kinase activity.
receptor adaptation see receptor **adaptation**.
recess [re'ses] a small, empty space or cavity.
costodiaphragmatic r. the largest of the pleural recesses, lying between the diaphragm and the thoracic wall into which the basal border of the lung encroaches during inspiration.
costomediastinal r. a pleural recess between the mediastinum and costal wall into which the ventral border of the lung encroaches during inspiration.
maxillary r. a modified form of maxillary sinus in the dog. It communicates with the ventral nasal meatus.
mesenterico-enteric r. a pouch of the omental bursa.
neurohypophyseal r. the pouch of the third ventricle that protrudes into the stalk of the pituitary gland.
pharyngeal r. a niche at the caudo-dorsal angle of the nasopharynx in ungulates.
pleural r. one of the potential spaces within the thorax where two layers of parietal pleura lie in close apposition. The borders of the lung extend into the pleural recesses during inspiration; pleural effusions fill them.
pyriform r. paired gutters which run beside the anterior projection of the larynx and below the epiglottis, into the esophagus.
supraomental r. formed by the caudal suspensions of the omentum to the rumen and dorsal abdominal walls in the ruminant abdomen.
terminal r. of the kidney tubular extensions of the renal pelvis of horses which receive collecting ducts.
recessive gene [re-ses'iv] a gene which expresses itself in the homozygous state, but not in the presence of the dominant allele.
recessus [re-ses'əs] pl. *recessus* [L.] a recess.
recidivation [re-sid"ĭ-va'shən] the relapse or recurrence of a disease.
recipe [res'ĭ-pe] [L.] 1. take; used at the head of a prescription, indicated by the symbol ℞. 2. a formula for the preparation of a combination of ingredients.
recipient [re-sip'e-ənt] an animal which receives a blood transfusion, or a tissue or organ graft.
reciprocal [re-sip'ro-kəl"] mathematically the reciprocal of x is 1/x. See also **translocation**.
r. crosses matings of two phenotypes in which both the male and the female of both phenotypes are crossed, usually to detect sex linkage.
double r. plot a graphical technique for analyzing enzyme kinetics in which the reciprocal of the reaction rate (1/v) is plotted against the reciprocal of the substrate concentration (1/[S]), producing a linear plot; useful for determining the kinetics of drug antagonisms, but no longer considered reliable for determining kinetic constants because clustering of data at low values of 1/[S] introduces bias. Called also Lineweaver–Burk plot.
reciprocity in terms of international registration of veterinarians refers to the agreement between countries for reciprocal acceptance of each other's qualifications for registration. The members of the European Economic Community have such an agreement. Also used by some states and provinces in North America in reciprocal licensure.
reclamation disease a disease of oat cereal plants which indicates a deficiency of copper in the soil.
recognin any of a group of protein fragments produced from cancer cells that are capable of recognizing specific cells; they include astrocytin and malignin.
recognition [rek"og-nĭ'shən] 1. the act of recognizing or state of being recognized. 2. in immunology, a term used to describe the functional changes occurring in immunologically competent cells on contact with antigen, involving antigen binding with a receptor on the cell surface. Called also antigen recognition.
r. sequence most recognition sequences used by restriction enzymes are palindromes, some enzymes have more than one recognition sequence and some have nonpalindrome recognition sequences and may cut several nucleotides away from the recognition sequence. See also **palindrome**.
r. site see **restriction site**.
recombinant [re-kom'bĭ-nənt] 1. the new cell or individual that derives some of its genetic material from one parent and some from another, genetically different parent. 2. pertaining or relating to such cells or individuals.
r. DNA technology a mixture of technologies developed in the 1970s that include (a) specific cleavage of DNA by restriction endonucleases; (b) nucleic acid hybridization which makes it possible to identify specific sequences of DNA or RNA; (c) DNA cloning whereby a specific DNA fragment is integrated (spliced) into a rapidly replicating, high yielding genetic element (plasmid or virus) so that it can be amplified in bacteria or yeast; (d) DNA sequencing of the nucleotides in a cloned DNA fragment.
recombinase a function of the recA protein in *Escherichia coli* that catalyzes the binding and unwinding of the double strands of DNA that form a synapse during DNA recombination.
recombination [re"kom-bĭ-na'shən] the reunion, in the same or different arrangement, of formerly united elements that have been separated; in genetics, the formation of new gene combinations due to crossing over by homologous chromosomes. Recombination occurs between viruses such as influenza or bluetongue which have segmented genomes. Called also reassortment.
r. frequency the frequency of exchange between two genes on the same chromosome.

VetBooks.ir

recommended daily allowance (RDA) the amount of each nutrient that provides for the animal's nutritional requirements. It is greater than the minimum daily requirement (MDR), allowing for individual variation.

recompression [*re"kəm-presh'ən*] return to normal environmental pressure after exposure to greatly diminished pressure.

recon the smallest unit of genetic material capable of recombination.

reconstruction [*re"kən-struk'shən*] to reassemble or re-form from constituent parts, such as the mathematical process by which an image is assembled from a series of projections in computed **tomography**.

reconstructive surgery surgery to rebuild damaged or lost structure, e.g. rectovaginal fistula.

record [*rek'ord*] a permanent or long-lasting account of something (as on film, in writing, etc.); see also **medical** records.

recorder jar graduated measuring jar at each unit on a milking machine designed to measure the milk yield of each cow during milking.

recovery return to normal after illness or period of devitalization, e.g. anesthesia, surgery.

r. period period after surgery when the patient needs to be closely monitored to ensure that its return to normal is uneventful.

r. room a special room with special monitoring and resuscitation equipment used for monitoring the patient recovering from surgery.

surgical r. the process of healing of a surgical wound and restoration to normal of body functions and systems, e.g. fluid and acid–base balance, that have been disturbed by the original disease or by the surgical procedure.

recrement [*rek'rə-mənt*] saliva, or other secretion, that is reabsorbed into the blood.

recrudescence [*re"kroo-des'ans*] recurrence of clinical signs after temporary abatement; a recrudescence occurs after some days or weeks, a relapse after weeks or months.

recruitment [*re-kr t'mənt*] the gradual increase to a maximum in a reflex when a stimulus of unaltered intensity is prolonged.

collateral r. dilatation of collateral capillaries in the lungs with exercise.

recrystallization in cryosurgery, the conversion of small crystals, produced during the freezing process, to larger ones which are more damaging to cells. Occurs during a slow rewarming phase.

rectal [*rek'təl*] pertaining to the rectum.

r. examination digital (in small animals) or manual examination of the visceral contents of the posterior abdomen by palpation through the rectum for the purposes of diagnosis, in cattle and horses especially of pregnancy. See also **rectum**, **proctoscopy**.

r. fistula see **rectovaginal** fistula.

r. impaction see fecal **impaction**.

r. inflammation see **proctitis**, **rectitis**.

r. massage massage of the accessory sex glands, a method of semen collection in dogs.

r. paralysis occurs especially in cows and mares in late pregnancy. No feces are passed and the rectum is distended with feces, and there is no peristalsis during their manual removal. Dogs may show posterior paresis. Also occurs as part of neurologic disease, for example rabies.

r. polyp see **colorectal** polyp.

r. probe used in pregnancy diagnosis in ewes and in electroejaculation.

R-5: Rectal stricture (pigs).

r. rupture the wall is perforated into the peritoneal cavity. Death occurs quickly as a result of endotoxic shock because of the absorption of enteric toxins through the peritoneum.

r. stricture stenosis of the rectum occurs in dogs, presumably resulting from trauma and anorectal disease, and in pigs following local ulceration caused by infection with *Salmonella* spp. Abnormal abdominal distention, small diameter feces and straining result.

r. tear most common in mares in association with manual rectal examinations. The mucosa is damaged but the wall is not ruptured. Leads to perirectal abscessation and subsequent peritonitis.

r. temperature see rectal **temperature**.

rectectomy [*rek-tek'tə-me*] excision of the rectum.

rectification [*rek"tĭ-fĭ-ka'shən*] 1. the act of making straight, pure, or correct. 2. redistillation of a liquid to purify it.

full wave r. rectification of the power supply to an X-ray tube that makes it possible for the reverse cycle, as well as the forward cycle, of the mains current coming to the tube to be utilized.

half-wave r. rectification of the power supply to an X-ray machine so that the forward phase of the cycle can be utilized and in the reverse phase no current flows across the tube.

radiological r. changing the flow of electrical current from alternating to direct.

self-r. property of an X-ray tube which means that it acts as a valve permitting the flow of current in only one direction, from the cathode to the anode.

surgical r. reconstructive surgery.

rectified [*rek"tĭ-fīd*] refined; made straight.

rectilinear scanner a scintillation crystal probe on an arm that traverses the area to be scanned in a rectilinear pattern. Used to measure the distribution of radionuclide in organs. The output is recorded photographically.

rectitis [*rek-ti'tis*] proctitis; inflammation of the rectum.

rect(o)- word element. [L.] *rectum*. See also words beginning *proct(o)-*.

rectoabdominal [*rek"to-ab-dom'ĭ-nəl*] pertaining to the rectum and abdomen.

rectoanal junction [*rek'to-a'nəl*] the division between rectum and anus marked by the transition of the mucous membrane from one bearing a columnar epithelium to one bearing a stratified squamous epithelium.

rectocele [*rek'to-sēl*] hernial protrusion of part of the rectum into the vagina.

rectocolitis [*rek"to-ko-li'tis*] coloproctitis; inflammation of the rectum and colon.

rectocutaneous [*rek"to-ku-ta'ne-əs*] pertaining to the rectum and the skin.

r. fistula communication between the rectum and the perirectal skin; may be the result of trauma, pelvic fracture, rectal foreign body, pararectal abscess or surgery. Fecal material is discharged through the skin wound.

rectopexy [*rek'to-pek"se*] proctopexy.

rectoplasty [*rek'to-plas"te*] proctoplasty.

rectoscope [*rek'to-skōp*] proctoscope.

rectosigmoid [*rek"to-sig'moid*] the lower portion of the sigmoid colon and the upper portion of the rectum.

rectostomy [*rek-tos'tə-me*] the operation of forming a permanent opening into the rectum for the relief of stricture of the rectum.

rectourethral [*rek"to-u-re'thrəl*] pertaining to or communicating with the rectum and urethra.

rectouterine [*rek"to-u'tər-in*] pertaining to the rectum and uterus.

rectovaginal [*rek"to-vajĭ-nəl*] pertaining to the rectum and vagina.

r. constriction inherited defect in Jersey cattle; fibrous bands cause dystocia and difficulty performing a rectal examination.

r. fistula a common event in mares because of the precipitate nature of the equine birth process. Perforation of the rectovaginal shelf occurs at foaling. The lesion does not extend to include the perineum. Feces accumulate in the rectum and there is a chronic vaginitis. Called also wind-sucking, gill-flirter.

r. tear see **perineal** laceration.

rectovesical [*rek"to-ves'ĭ-kəl*] pertaining to or communicating with the rectum and bladder.

rectovestibular [*rek"to-vəs-tib'u-lər*] pertaining to or communicating with the rectum and the vestibule of the vagina.

rectovulvar [*rek"to-vul'vər*] pertaining to or communicating with the rectum and vulva.

R

rectrices sing. *rectrix* the very long contour feathers coming from the side of the tail. The first rectrix or greater sickle is the longest feather of all in the domestic fowl.
rectrix pl. *retrices* a large tail feather.
rectum [*rek'təm*] the distal (aboral) portion of the large intestine, beginning at the pelvic inlet and ending at the anal canal. The feces, the solid waste products of digestion, are formed in the large intestine and are gradually pushed into the rectum by the muscular action of the intestine. Distention of the rectum by the accumulating feces sets up nerve impulses that indicate to the brain the need to empty the bowels; defecation follows. See also **rectal**.
rectus [*rek'təs*] [L.] *straight*.
r. abdominis muscle see Table 13.2.
ocular r. muscle see Table 13.1F.
r. sheath the sleeve of fascia which surrounds the rectus abdominis muscle and which is derived from the aponeurotic tendons of the other abdominal muscles.
recumbency a clinical term is used to describe an animal that is lying down and usually unable to rise. See also **paralysis**, **downer cow syndrome**.
dorsal r. lying on the back.
lateral r. lying on side.
sternal r. see ventral recumbency (below).
ventral r. sitting up on the brisket with the legs tucked under the body.
recumbent [*re-kum'bənt*] pertaining to **recumbency**.
recuperation [*re-koo"par-a'shən*] recovery of health and strength.
recurrence [*re-kur'əns*] the return of clinical signs soon after a remission.
r. risk in genetics the probability of a particular defect occurring again if the type of mating which produced it is repeated.
recurrent [*re-kur'ənt*] characterized by recurrence at intervals of weeks or months.
r. airway obstruction (RAO) a term combining both chronic obstructive **pulmonary** diseasse (COPD) and summer pasture-associated obstructive **pulmonary** disease (SPAOPD).
r. laryngeal nerve paralysis see **roaring**, **laryngeal** hemiplegia.
recurvation [*re"kər-va'shən*] an upward bending or curvature.
recycled animal wastes poultry manure, litter, feathers and spilt feed processed and fed to cattle; other animal wastes are also used. The dangers are relatively low except that there are occasional devastating outbreaks of botulism or salmonellosis, and there may be a gradual accumulation of residues of substances used as feed supplements in the original species.
Red Angus a breed of beef cattle similar to the Aberdeen Angus in all respects except for its gold-red color.
red blood cell erythrocyte; see also **red cell**.
r. b. c. count see **blood** count.
nucleated r. b. c. the normal erythrocyte in non-mammalian species such as birds, reptiles, amphibians and fish. See also **nucleated** erythrocyte.
red bone marrow see **bone marrow**.
red bug see ***Eutrombicula*** *alfreddugesi*.
Red canary one carrying the **red factor** gene.
red cell erythrocyte; see also **red blood cell**.
r.c. distribution width (RDW) the coefficient of variation in red cell volume distribution, calculated from the mean corpuscular (cell) volume (MCV) and the standard deviation (SD) of the MCV; increased values are indicative of **anisocytosis**.
r. c. pit see **pitting** (2).
red-eared sliders see **sliders**.
red factor a gene responsible for red coloring in canaries, but strong red color is produced by a combination of several interacting genes, plus essential food substances in the diet. Canthaxanthin is fed to obtain the best results.
red foot disease [*red'foot*] lethal defect, similar to epidermolysis bullosa; seen in Scottish blackface and Welsh mountain sheep. Characterized by sloughing of hooves, limb and ear skin, conjunctiva, oral mucosa skin in lambs at 2 to 4 days of age, affects limbs, ears, tongue dorsum and conjunctiva. Separation of hoof horn exposing sensitive laminae is basis for name. Probably inherited.
red gums gingivitis.
red gut syndrome cecal torsion in lambs grazing lush legume pasture in New Zealand characterized by a very short illness, high mortality and a distinctive bright red distended cecum.
red hair syndrome red-brown discoloration of the hair of the paws, flanks and ventral abdomen of dogs receiving low-protein diets.
red-heart bullock bush ***Alectryon*** *oleifolius*.
red-ink plant ***Phytolacca*** *octandra*.
red leg a disease of amphibians caused most commonly by *Aeromonas hydrophila* but other bacteria may be involved; characterized by hemorrhages of the legs and abdomen. There may also be ulceration, swelling and ultimately septicemia, convulsions and death. In captive animals, most often associated with poor husbandry.
red-legged tick see ***Rhipicephalus*** *evertsi*.
red mouth disease septicemic disease of young rainbow trout infected by *Yersinia ruckeri*; manifested by hyperemia and hemorrhagic ulceration of perioral tissues.
red nose see **infectious** bovine rhinotracheitis.
red plague fish **vibriosis**.
Red poll a breed of red, polled dual-purpose cattle.
red rock cod (*Ruboralga jacksoniensis*) one of the Scorpaenidae family of venomous fish; see **scorpion fish**.
red salvia see ***Salvia*** *coccinea*.
red sea bream ***Pagras auratus***.
red sea bream iridoviral disease a disease of red sea bream (*Pagrus major*) and other marine species caused by the red sea bream iridovirus. Infected fish are lethargic and anemic; there is enlargement of the spleen. There is significant mortality in farmed fish. Occurs in Japan and widely in East and Southeast Asia. The disease is notifiable to the OIE (see Table 22).
Red setter see **Irish setter**.
red shank ***Amaranthus*** *cruentus*.
Red Sindhi a red zebu breed of dairy cattle.
red sore disease focal hemorrhagic necrosis accompanied by deep ulceration of the perioral epidermis of some freshwater fish; caused by *Aeromonas hydrophila*.
red spot disease see **epizootic** ulcerative syndrome.
red staining inocybe ***Inocybe*** *patouillardii*.
red-stemmed peavine ***Astragalus*** *emoryanus*.
Red Steppe red breed of dairy cattle derived from Red Friesian. Called also Red Ukranian.
red stomach worm see ***Haemonchus***.
red tail disease see **Taura syndrome**.
Red Ukrainian see **Red Steppe**.
red wings see ***Combretum platypetalum***.
redacted to put into literary form, arrange for publication, revision, editing, rearrangement.
redbag lay term for premature detachment of the placenta from the uterus of mares with its presentation at the vulva without rupturing to release the foal. The term comes from the red velvety surface of the placenta that is the first presentation at the vulva and bulges out looking like a bag.
Redbone coonhound a medium-sized, sturdy dog, with a short, rich red coat, large, pendulous ears and a long, tapered tail. The

R-6: Redbag. Premature placental separation in a pony.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

dog is derived from bloodhounds and foxhounds and originated in the Ozark Mountains of central USA. It is used for tracking bear, mountain lions and raccoons.

redia [re'de-ə] pl. *rediae* [L.] a larval stage of certain trematode parasites, which develops in the body of a snail host and gives rise to daughter rediae, or to cercariae.

redleg see ***Lachnanthes tinctoria***.

rednose see **infectious** bovine rhinotracheitis.

redox [re'doks] oxidation–reduction.

redroot see ***Amaranthus***, ***Lachnanthes tinctoria***.

reduce [re-d s'] 1. to restore to the normal place or relation of parts, as to reduce a fracture. 2. to undergo reduction. 3. to decrease in weight or size.

reduced [re-d st'] said of a fracture which has been exposed to reduction.

reducible [re-doo'sĭ-bəl] permitting of reduction.

reducing agents substances that act as electron contributors in a reduction reaction, e.g. glucose, creatinine, uric acid.

reductant [re-duk'tənt] the electron donor in an oxidation–reduction (redox) reaction.

reductase [re-duk'tās] an enzyme that catalyzes a chemical reduction.

5α-r. an enzyme that catalyzes the irreversible reduction of testosterone to dihydrotestosterone.

hydroxymethyl glutaryl-CoA r. rate limiting enzyme in the synthesis of cholesterol.

reduction [re-duk'shən] 1. the correction of a fracture, luxation or hernia. 2. the addition of hydrogen to a substance, or more generally, the gain of electrons; the opposite of oxidation.

angle of r. in the Ortolani maneuver, the point at which the femoral head returns to the acetabulum.

closed r. the manipulative reduction of a fracture without incision.

r. forceps bone holding forceps used to hold fracture fragments in position during surgery.

open r. reduction of a fracture after incision into the fracture site.

reductionism policy of reducing subjects to its parts in an attempt to simplfy the understanding of the whole. The opposite of holism.

reduplication [re"doo-plĭ-ka'shən] 1. a doubling back. 2. the recurrence of paroxysms of a double type. 3. a developmental anomaly resulting in the doubling of an organ or part, with a connection between them at some point and the excess part usually a mirror image of the other.

heart sound r. see gallop **rhythm**.

reduviid bug [re-du'vĭ-id] a member of the family Reduviidae in the suborder Heteroptera. Called also cone-nose bug, assassin bug or kissing bug. One of the ***Triatoma*** species involved in the transmission of **Chagas' disease**.

redwater [red'waw-tər] red urine; see **hemoglobinuria**, **hematuria**, **myoglobinuria**, **phenothiazine**, **phenolphthalein**, ***Xanthorrhoea***.

r. fever see **babesiosis**.

redwood African redwood; see ***Mansonia altissima***.

redworm see ***Strongylus***.

r. infestation see **strongylosis**.

reed [rēd] abomasum.

reed canary grass ***Phalaris*** *arundinacea*.

Reed–Frost model a simple mathematical model of an outbreak of hypothetical disease; a chain-binomial model, based on the development of an outbreak of disease occurring as a chain of events, each of which is assessable in terms of a binomial equation, suitable for class-room use. See also epidemiological **model**.

Reed–Sternberg cell [rēd' stərn'bərg] giant histiocytic cells, typically multinucleate, which are the common histological characteristic of Hodgkin's disease in humans.

reed sweet grass ***Glyceria*** *maxima*.

reef [rēf] an infolding or tuck of tissue, as a tuck made in plication.

reef knot see **square knot**.

reefing surgery involving taking in a reef of tissue, e.g. in reducing a prolapse of the preputial lining in a bull.

re-entry [re-en'tre] in cardiology, a postulated mechanism by which a premature beat can be coupled to the normal beat.

r. tachyarrhythmia see re-entrant **tachyarrhythmia**.

Rees–Ecker fluid a diluting fluid for use in direct thrombocyte counts; contains sodium citrate, formaldehyde and brilliant cresyl blue.

REF renal erythropoietic factor.

refection [re-fek'shən] recovery; repair. A special use of the word is the function of the cecal and colonic flora to synthesize B vitamins.

refeeding syndrome [re-fēd'ing] metabolic and electrolyte abnormalities that occur with renourishment of previously starved or severely malnourished paatients. Characterized by any or all of hypophosphatemia, hypokalemia hypomagnesemia and glucose intolerance. Most likely to occur when refeeding with total parenteral nutrtion.

reference group the group against which a comparison is being made, e.g. reference sires.

reference interval the range of values that would be found in laboratory data from a group of normal individuals. Called also normals, normal limits, normal range, reference range.

referral the professional etiquette by which a primary accession clinican refers a case to a specialist for further diagnosis and treatment. The case passes out of the care of the first veterinarian for the time being. It is usually returned to him/her when the specialist has concluded with the problem at hand. See also **consultation** (2).

referred pain [re-furd'] see referred **pain**.

referring the act of referral.

refine [re-fin'] to purify or free from foreign matter.

reflection [re-flek'shən] a turning or bending back, such as the folds produced when a membrane passes over the surface of an organ and then passes back to the body wall that it lines.

reflex [re'fleks] a reflected involuntary action or movement; the sum total of any particular automatic response mediated by the nervous system. A reflex is built into the nervous system and does not need the intervention of conscious thought to take effect. In addition a reflex is present at birth and is not learnt, as is a response, although it can be modified by the activity of other parts of the nervous system. For reflexes used in clinical examination of a patient see under individual titles including anal, corneal, crossed extensor, extensor thrust, gastrocnemius, hopping, palpebral, panniculus, patellar, perineal, placing, pupillary, withdrawal.

accommodation r. the coordinated changes that occur when the eye adapts itself for near vision; they are constriction of the pupil (the ciliary reflex), convergence of the eyes and increased convexity of the lens.

r. action an involuntary response to a stimulus conveyed to the nervous system and reflected to the periphery (see also **reflex**).

r. arc the circuit traveled by impulses producing a reflex action: from the receptor organ, through the afferent nerve, nerve center, efferent nerve, to the effector organ.

r. bradycardia bradycardia occurring as a reflex initiated by severe atrial or ventricular stretch.

chain r. a series of reflexes, each serving as a stimulus to the next, making a complete activity.

clasp-knife r. muscle resistance to forced flexion of a joint suddenly decreases; a sign of upper motor neuron deficit.

complete r. one requiring no feedback from the forebrain.

conditioned r. see **conditioned** response.

crossed extensor r. extension of the contralateral limb when a limb is withdrawn in response to pinch or other noxious stimulus, performed with the animal lying on its side. A crossed extensor reflex should not normally be present and is an indication of an upper motor lesion in the affected limb(s).

Cushing's r. a reflex decrease in heart rate and increase in systemic blood pressure that occurs in response to elevations in intracranial pressure.

cutaneous trunci r. see **panniculus** reflex.

r. dyssynergia see detrusor-urethral **dyssynergia**.

fundic r. reflection of light from the ocular fundus, specifically the tapetum if present (tapetal reflex) or the choroid in atapetal individuals.

gastroileal r. increase in ileal motility and opening of the ileocecal valve when food enters the empty stomach.

light r. see **pupillary** light reflex.

menace r. see menace **response**.

nociceptive r. reflexes initiated by painful stimuli.

palatal r. see **swallowing** reflex.

pinnal-pedal the scratching elicited by stroking the pinna of dogs with sarcoptic mange.

rectosphincteric r. relaxation of the anal sphincter which occurs with distention of the rectum and during defecation.

R

stepping r. movements of progression elicited when the animal is held upright and inclined forward with the feet touching a flat surface.
stretch r. reflex contraction of a muscle in response to passive longitudinal stretching.
superficial r. any withdrawal reflex elicited by noxious or tactile stimulation of the skin, cornea or mucous membrane, including the corneal and pharyngeal reflexes.
tapetal r. tapetal reflection of light.
tendon r. a method of testing the patency of reflex arc. The tendon is stretched sharply by tapping it close to its insertion. A positive reaction is a sharp contraction of the muscle of which the tendon is part. The patellar reflex is the best known of these reflexes. Absence indicates a defect in the reflex arc, an exaggerated response suggests an upper motor neuron lesion. Called also myotactic reflex.
tonic r. see **tonic** neck response.
triceps surae r. Achilles reflex.
trigemino-abducens r. a test of the ophthalmic and mandibular divisions of the trigeminal nerve, and the abducens nerve. Light touching of the cornea should result in retraction of the globe and protrusion of the nictitating membrane.
r. walking spinal reflexes can provide support and uncoordinated use of the hindlegs that resembles walking, in dogs with transection of the spinal cord between T13 and L4.
whisker r. pinching the pinna elicits a twitch of the whiskers in cats; used in assessment of depth of anesthesia.

reflexogenic, reflexogenous [*re-flek"so-jen'ik*] producing or increasing reflex action.

reflexograph [*re-flek'so-graf*] an instrument for recording a reflex.

reflexometer [*re"flek-som'ə-tər*] an instrument for measuring the force required to produce myotactic contraction.

reflux [*re'fləks*] a backward or return flow.
esophageal r. reflux of the stomach contents into the esophagus; likely to occur during anesthesia and may be a cause of esophageal strictures. Called also gastroesophageal reflux, peri-operative reflux. See also peptic **esophagitis**.
gastroduodenal r. reflux of duodenal contents, especially bile salts into the stomach; a cause of injury to the gastric mucosa and a possible factor in the genesis of gastric ulceration.
gastroesophageal r. see esophageal reflux (above).
intrarenal urine r. reflux of urine into the renal parenchymal tissue.
peri-operative r. see esophageal reflux (above).
vesicoureteral r., vesicoureteric r. backward flow of urine from the bladder into a ureter.

refractile bodies [*re-frak'til*] see **erythrocyte** refractile bodies.

refractive [*re-frak'tiv*] capacity to refract light.
r. error measure of the degree of ametropia; resulting from altered refraction ('bending') of light by the major refractive structures in the eye (cornea and lens) or due to altered axial globe length and causing a blurred image to fall upon the retina. May occur as hyperopia or myopia (spherical errors) or as astigmatism (cylindrical error).
r. media those components of the eye responsible for bending (refracting) light such that a clear image is formed on the retina. Include the precorneal tear film, cornea, aqueous humor, crystalline lens and vitreous humor.

refractometer [*re"frak-tom'ə-tər*] 1. an instrument for measuring the refractive power of the eye. 2. an instrument for determining the indexes of refraction of various substances. 3. an instrument for measuring the concentration of solutes, e.g. protein in solutions, immunoglobulins in serum, solutes in urine.

refractometry [*re"frak-tom'ə-tre*] the science of measuring by refractometer.

refractory [*re-frak'tə-re*] not readily yielding to treatment.
r. period the period of depolarization and repolarization of the cell membrane after excitation; during the first portion (absolute refractory period), the nerve or muscle fiber cannot respond to a second stimulus, whereas during the relative refractory period, it can respond only to a strong stimulus.
myocardial r. state the myocardium is refractory to stimulation during the action potential period, excitability returning in the repolarization phase; initially there is a period of supernormality.

refracture [*e-frak'chər*] the process of breaking a bone which has previously been fractured, but healed in an unsatisfactory manner, usually with a deformity.

refresh [*re-fresh'*] to freshen or make raw again; to denude a wound of epithelium to enhance tissue repair.

refrigeration [*re-frij"ər-a'shən*] 1. therapeutic application of low temperature. See also induced **hypothermia**. 2. a major part of the preservation of perishable food, biologicals and other materials by chilling or freezing.
r. test see **chylomicron** test.

refugium pl. *refugia* the component of a parasite population which is not exposed when a flock or herd of animals is treated with an anthelmintic, insecticide or acaricide; usually applies to free-living stages of the parasite, but has been applied to hypobiotic nematode larvae.

refusion [*re-fu'zhən*] the temporary removal and subsequent return of blood to the circulation. See also **extracorporeal** circulatory support unit.

regeneration [*re-jen"ər-a'shən*] the natural renewal of a structure, as of a lost tissue or part.
nodular liver r. nodules covering the surface of the liver in patients subjected to persistent or repetitive poisoning, usually by poisonous plants.

regimen [*rej'ĭ-mən*] a strictly regulated scheme of diet, exercise, or other activity designed to achieve certain ends.

regio [*re'je-o*] pl. *regiones* [L.] region.

region [*re'jən*] a general term to designate certain areas on the surface of the body within certain defined boundaries.
abdominal r's nine arbitrary areas into which the ventral surface of the abdomen is divided, including the epigastric, right and left hypochondriac, umbilical, right and left lateral, pubic, right and left inguinal.
lumbar r. the region of the back lying lateral to the lumbar vertebrae.
perineal r. the region over the pelvic outlet, including the anal and urogenital regions.
precordial r. the part of the chest covering the heart.
pubic r. the middle portion of the most caudal region of the abdomen, located caudal to the umbilical region and between the inguinal regions.

regional [*re'jən-əl*] pertaining to a certain region or regions.
r. acceleratory phenomenon permits a number of mineralization foci to commence repair or modeling simultaneously.

register a list kept by an official or legally recognized society; examples are the identification, names and pedigree details of pedigree livestock kept by a breed society or, in veterinary law, a list of names of persons registered as veterinarians or veterinary surgeons under local or national legislation. The latter may be in two categories, practitioners and certified specialists.
supplementary r. when there is a register of accredited herds, registered veterinarians, studbooks, it is common practice to have a supplementary register of persons or animals who do not quite have the required qualifications but are trying to enter the list.

registered something or someone entered in a **register**.

registrar [*rej'is-trahr*] 1. an official keeper of records. 2. in large veterinary teaching hospitals, a staff specialist who acts as head of the relevant clinical unit, e.g. the surgical or medical unit.

registration [*rej"is-tra'shən*] the act of registering.
temporary r. registration to practice under local legislation but for a limited period only. A procedure used to permit a candidate for full registration to obtain some practice experience.

registry [*rej'is-tre*] 1. an office for the maintenance of a register. 2. a central agency for collection of pathological material and related data in a specified field of pathology, so organized that the data can be properly processed and made available for study.

Registry of Comparative Pathology a national resource center for comparative pathology and animal models of human disease, at the (US) **Armed Forces Institute of Pathology (AFIP)**.

regression [*re-gresh'ən*] 1. return to a former or earlier state. 2. subsidence of clinical signs or of a disease process. 3. in biology, the tendency in successive generations toward the mean. 4. the relationship between pairs of random variables; the mean of one variable and its location is influenced by another variable.
r. analysis see regression **analysis**.

VetBooks.ir

r. coefficient is the factor which determines the slope of a regression line; the greater the coefficient the steeper the line.
curvilinear r. when the relationship between two variables is not linear.
linear r. the relationship between two variables is a straight line.
multiple r. an analytical method which determines the relationship between a dependent variable and one or more independent variables.
multiple least squares r. the major method of analysis used to sort through a large number of potential risk factors permitting the examination of one factor while the other factors in the regression equation are held mathematically constant.
regular crossing [*reg'u-lər*] the same cross is made on a regular basis as a breeding program; the object is usually to produce a standard offspring and to benefit from heterosis.
regulated system regulation of a substance in the body; requires a receptor, a regulator and an effector.
regulation [*reg"u-la'shən*] 1. the act of adjusting or state of being adjusted to a certain standard. 2. in biology, the adaptation of form or behavior of an organism to changed conditions. 3. the power of a pregastrula stage to form a whole embryo from a part. 4. the biochemical mechanisms that control the expression of genes.
feedback r. a mechanism for regulating metabolic processes in which the product of a reaction or series of reactions inhibits the activity of an enzyme participating in the reaction or pathway and thus regulates its own production; involves the active and regulatory sites of allosteric enzyme proteins.
regulator [*reg'u-la"tər*] see reducing **valve**.
regulatory proteins [*reg'u-la"tər*] 1. proteins which regulate the contraction of muscle by controlling the interaction of myosin and actin. Calcium is an essential component of this reaction. The two proteins are troponin and **tropomyosin**. 2. special proteins that bind to specific regulatory sequences of DNA and act to switch genes on and off and thereby regulate the transcription of genes.
regulatory site that portion of a protein, usually an enzyme, to which a molecule other than the substrate binds, altering its conformation and causing either an increase or decrease in its activity.
regulatory veterinary authorities governmental authorities of city, county, shire, province, state, national administrations which apply and enforce laws and regulations which control all matters relating to animal health and to animal diseases which are communicable to humans.
regurgitant [*re-gur'jĭ-tənt*] flowing back.
regurgitation [*re-gur"jĭ-ta'shən*] a backward flowing, as the casting up of undigested food, or the backflow of blood through a defective heart valve. In the alimentary canal the regurgitation of food comes from the esophagus, as distinct from vomiting in which the food comes from the stomach. A sign of pyloric obstruction or megaesophagus.
r. cycle see **reticular**^{2} cycle.
neurotic r. regurgitation by budgerigars is a common phenomenon with no physiological explanation and is considered to be an expression of affection.
valvular r. leakage; backflow of blood through the orifices of the heart valves owing to imperfect closing of the valves (valvular insufficiency); named, according to the valve affected, aortic, mitral, pulmonic or tricuspid regurgitation. See also chronic **valvular** heart disease.
regurgitus the material voided in a regurgitation. Includes saliva, ingesta from the esophagus (plus forestomachs in ruminants).
rehabilitation methods of physical therapy have been adapted for use in veterinary patients, particularly dogs and horses, to assist in recovery especially following orthopedic or neurologic surgery, and in the management of sporting animals. Includes such methods as heat, ultrasound, phonophoresis, electro stimulation, hydrotherapy, goniometry, and orthotics. Exercise therapy may utilize specialized equipment, which for dogs may include minitrampolines, sand boxes, treadmills, foam blocks, and stick mazes.
rehmannic acid **lantadene** A.
rehydration [*re"hi-dra'shən*] the restoration of water or fluid content to a body or to a substance that has become dehydrated.
Reich–Nechtow curette a long slim handheld instrument with a slim neck and an upturned, sharp-edged oval cup, 8 mm × 4 mm with a complete bottom, used to collect biopsy samples from the uterine cervical canal.
Reichert's cartilage the dorsal cartilage of the second branchial arch.
Reighardia a genus of pentastomes in the family Porocephalidae and found in the air sacs of gulls and terns.
reimplantation [*re"im-plan-ta'shən*] replacement of tissue or a structure in the site from which it was previously lost or removed.
rein narrow strip of thin leather or other fabric attached to both ends of a bit in a horse's bridle making a loop which passes through the hands of the driver/rider. Used to direct the horse's head and so change its direction.
bearing r. a fixed rein attached to the saddle or backpad and to the bridle to prevent the horse from lowering its head too far.
check r. runs from the bit or the crown of the bridle to the saddle in vehicle harness. Limits the range of movements that the horse can make. Is a fixed but adjustable check and is not under the control of the rider/driver.
neck r. not a piece of harness; is the technique in which the rider moves his/her hands to one side of the horse's neck thus touching the horse with the rein on one side of the neck. The well-schooled horse will move in the other direction.
running r. runs from the rider, through the rings of the bit and back to the girth. For horses in harness is a very powerful restrainer.
side r's. extend on either side from the bit, through rings on a saddle or pad and end with the driver walking beside the horse. Used in training a horse to cart harness.
reindeer (*Rangifer tarandus*) a member of the deer family (Cervidae); the large, wild ruminant of Christmas mythology, a mirror image of the North American caribou except that the latter cannot be domesticated whereas reindeer adapt easily. Large brown animals with a white buttock patch and lower parts, large antlers in both male and female.
reinfection [*re"in-fek'shən*] a second infection by the same agent.
r. syndrome an acute hypersensitivity pulmonary reaction that occurs in immune adult cattle previously infected with *Dictyocaulus viviparous* when they are exposed to large numbers of infective larvae.
reinforcement [*re"in-fors'mənt*] the use of a stimulus to modify an existing form of response. The stimulus may be a reward or a punishment and the reinforcement may correspondingly be positive or negative.
reinforcer the stimulus that provides reinforcement.
second-order r. a conditioned reinforcer; a neutral stimulus is paired with a natural reinforcer thereby acquiring reinforcing properties.
reinfusate [*re"in-fu'zāt*] fluid for reinfusion into the body, usually after being subjected to a treatment process.
reinfusion [*re"in-fu'zhən*] infusion of body fluid that has previously been withdrawn from the same individual, e.g. reinfusion of ascitic fluid after ultrafiltration.
reinnervation [*re"in-ər-va'shən*] the operation of grafting a viable nerve to restore the nerve supply of an organ or paralyzed muscle.
Reinsch test a test for heavy metals in urine, using copper wire or foil in heated hydrochloric acid. If metals are present, they form visible deposits on the copper.
Reiter's disease see periosteal proliferative **polyarthritis**.
reiteration in eukaryotes, multiple copies of certain relatively short nucleotide sequences that are repeated from a few times to millions of times; three classes are defined, single copy, moderately reiterated and highly reiterated; some occur as inverted repeats.
rejection [*re-jek'shən*] the immune reaction of a recipient to a graft, usually an allograph, after transplantation. The recipient recognizes antigens, particularly major histocompatibility complex antigens that are different from self antigens. The rapidity and severity of the graft rejection parallels the degree of antigenic difference between donor and recipient. The primary rejection of a graft, called *first set reaction*, typically begins 6 to 10 days after engraftment and in the case of skin is characterized by an erythematous zone around the graft which subsequently shrinks and is rejected. Rejection is predominantly a cell-mediated immune response, particularly Th1 lymphocytes and activated macrophages. If the same recipient receives a second graft from the same donor the graft is rejected more rapidly and the response is more severe, called a *second set reaction* which is also a cell-mediated response. Lymphocytes from the recipient can be

adoptively transferred to a naive recipient which if also given a graft from the same donor responds with a second set reaction.

r. factors antibodies, particularly IgM but also IgG, directed against antigenic determinants on the Fc region of other immunoglobulins. When the immunoglobulin binds to antigen, changes occur in the folding of the protein of the Fc region such that new, nonself antigenic determinants are exposed and it is to these that rheumatoid factors, i.e. other antibodies, are directed.

reksiekte disease see **stretching disease**.

relapse [*re'laps*] the return of a disease weeks or months after its apparent cessation.

relationship the state that exists when one variable is related to another variable in some way.

direct r. when changes in the value of one of the variables is mirrored by a change in the same direction in the other variable.

relative relates to the condition of one animal when it is considered in connection with another.

r. biological effectiveness (RBE) see **RBE**.

r. frequency the proportion of the total number of observations of a variable which are observations of a particular value.

link r's. a method of analysis of series of values over time. The values for successive time periods are expressed as proportions of the values of the preceding time periods.

r. odds see **odds** ratio.

r. population index a measure of a population based on a sampling technique such as **line** transects which determine the number of animals in a given ecological niche relative to a period of examination, or other parameter.

relatives animals which share common ancestors.

first-degree r. parents, offspring, full-sibs.

second-degree r. grandparents, half-sibs, grandchildren.

relaxant [*re-lak'sənt*] 1. causing relaxation. 2. an agent that causes relaxation.

muscle r. an agent that specifically aids in reducing muscle tension.

relaxin [*re-lak'sin*] a hormone that produces relaxation of the symphysis pubis and dilatation of the cervix uteri in certain animal species including pigs, cattle, dogs and cats. Produced in the corpus luteum of pregnancy. Assay of serum relaxin is used in diagnosing pregnancy after 21 days in dogs.

relaxing factor sarcoplasmic reticulum, a protein synthesized by and contained in the platelets.

release reaction [*re-lēs'*] a reaction which occurs when platelets react with exposed collagen fibers due to injury of a blood vessel; the release reaction causes the release of constituents from the platelets, including histamine, fibrinogen, serotonin, adenine nucleotides and other substances.

release signs in neurological terms, the signs evident when the lower motor neuron is released from the damping effects of the upper motor neuron, e.g. tetany, exaggerated tendon reflexes, crossed extensor reflexes.

releaser device in the milking machine which discharges milk from the vacuum pressure system to atmospheric pressure.

releasing factors hypothalamic hormones that stimulate the secretion of effector hormones in the pituitary, e.g. follicle-stimulating hormone releasing hormone.

relocation syndrome the moderation of inappropriate behavior that occurs when the animal is placed in a different situation or environment. Can be used to provide an opportunity to reinforce appropriate behavior.

REM rapid eye movement. See also **sleep**.

rem acronym for *r*oentgen *e*quivalent *m*an; the amount of any ionizing radiation which has the same biological effect as 1 rad of x-rays; 1 rem = 1 rad × RBE (relative biological effectiveness). Now replaced by the **Sievert** (Sv) SI unit. 1 Sv = 100 rem.

remedy [*rem'ə-de*] anything that cures or palliates disease.

specific r. one that is invariably effective in treatment of a certain condition.

remex pl. *remiges;* one of the large flight feathers of the wing. There are primary and secondary remiges.

remifentanil [*rem"ĭ-fen'tə-nil*] a potent, selective opioid μ-agonist similar to fentanyl, but with an ultra-short duration of action.

remiges see **remex**.

remineralization [*re-min"ər-əl-ĭ-za'shən*] restoration of mineral elements, as of calcium salts to bone.

remission [*re-mish'ən*] diminution or abatement of the clinical signs of a disease; the period during which such diminution occurs.

remittence [*re-mit'əns*] temporary abatement, without actual cessation, of clinical signs.

remittent [*re-mit'ənt*] having periods of abatement and of exacerbation.

remodeling [*re-mod'əl-ing*] a constant, normal process in bone comprising removal–replacement of minute sections of bone without alteration to the visible skeletal volume; may be periosteal or endosteal.

remote at a distance.

r. cause predisposing cause.

r. sensing perceiving or measuring change in physical or chemical parameters from a distance. For example, information obtained about the surface of the earth and the environment from a distance by methods such as aerial photography, radar and satellite imaging.

r. treatment see **injection** collar.

remounts all horses owned by the army to be used for army service.

remuda the group of saddle horses kept on a beef cattle ranch, station, or run.

ren pl. *renes* [L.] kidney.

r. mobilis hypermobile kidney; nephroptosis.

Ren Mai see **Conception Vessel**.

ren shen [*ren*] see **ginseng**.

renal [*re'nəl*] pertaining to the kidney. See also **kidney**.

r. abscess results from infected emboli and infarcts. Usually without localizing signs unless they are very large and palpable, or when they extend into the renal pelvis and cause pyelonephritis.

r. adenoma rare, incidental necropsy finding.

r. agenesis failure of the renal tissue to develop; unilateral agenesis causes compensatory hypertrophy in the single kidney; bilateral is fatal. Commonly accompanies genital tract malformation.

r. artery see Table 9.

avian r. hemorrhage sporadic unexplained disease of turkeys; sudden death is common.

r. biopsy is conducted usually with a biopsy needle introduced percutaneously through the flank. In food animals it is possible to fix the left kidney via a rectal manipulation, but the right kidney can be impossible to reach.

r. calculus see **urolithiasis**.

r. capsular cyst see feline **perirenal** cysts.

r. carcinoma commonest in old male dogs. They are very large, spread locally and metastasize widely.

r. casts see urinary **cast**.

r. clearance tests laboratory tests that determine the ability of the kidney to remove certain substances from the blood. See **clearance** tests.

r. cortical fissures external fissures created by the lobar structure of the large ruminant kidney.

r. cortical hypoplasia see renal dysplasia (below).

r. cortical necrosis results from patchy or complete renal ischemia and is part of the terminal state of many diseases, e.g. severe metritis, grain overload in cattle, azoturia in horses.

r. countercurrent system see **countercurrent**.

r. cyst incidental necropsy finding except for polycystic **kidney** disease. See also feline **perirenal** cysts.

r. cystadenocarcinoma see **dermatofibrosis**.

r. diabetes insipidus see nephrogenic **diabetes insipidus**.

r. dialysis the application of the principles of dialysis for treatment of renal failure (below). See also **hemodialysis** and **peritoneal** dialysis.

r. diverticuli diverticuli of the renal pelvis.

r. dysfunction reduced capacity to excrete metabolic products which accumulate systemically and are detectable clinicopathologically by renal function tests. The early stage of uremia.

R-7: Renal cyst in a bovine kidney.

VetBooks.ir

R-8: Renal infarct in a cow.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

r. dysplasia small, misshapen kidneys at birth. May be caused by intrauterine infection of the fetus by virus, but numerous inherited renal dysplasias occur in dogs. They occur in several breeds and are manifested by signs of chronic renal insufficiency, e.g. polyuria, polydypsia, poor growth and weight gain, pale mucous membranes, and renal secondary osteodystrophia fibrosa, from an early age.
r. ectopia see pelvic **kidney**, horseshoe **kidney**.
r. erythropoietic factor erythropoietin.
r. failure inability of the kidney to maintain normal function. Impairment of kidney function affects most of the body's systems because of its important role in maintaining fluid balance, regulating the electrochemical composition of body fluids, providing constant protection against acid–base imbalance, and controlling blood pressure. See also **kidney**, **IRIS** staging system, **big kidney, little kidney syndrome**.
r. function tests include blood urea nitrogen and serum creatinine estimations, tests of concentrating ability, tests of ability to excrete test substances, e.g. fractional excretion tests, and urinalysis, especially concentrating ability.
r. hilus a fissure on the medial border of the kidney through which arteries, veins and ureter enter.
r. infarct results from embolic or thrombotic occlusion of renal arteries or branches. Clinical signs are those of renal colic initially followed by toxemia if the infarct is infected.
r. insufficiency see renal dysfunction (above).
r. ischemia a significant cause of renal dysfunction and cortical and medullary necrosis. Is usually part of a general state of shock, dehydration and severe toxemia.
r. lobe a large mass of a kidney, comprising the tissue contributing to each pyramid; kidneys may be unilobar (unipyramidal), as in rodents, rabbits, cats, dogs, small ruminants, horses, or multilobar (multipyramidal), as in cattle and pigs.
r. lobule small masses of kidney tissue comprising a medullary ray and its associated nephrons.
r. medullary necrosis necrosis of the renal medulla due to restriction of blood flow in medullary vessels, usually due to venous occlusion.
r. medullary washout see medullary solute **washout**.
r. mineralization see **nephrocalcinosis**.
r. osteodystrophy, r. osteitis fibrosa, r. osteitis fibrosa cystica see renal secondary **hyperparathyroidism**.
r. oxalosis deposition of oxalate crystals in renal tubules of patients poisoned by dietary oxalate, usually in poisonous plants.
r. papillae see renal **papilla**.
r. papillary necrosis necrosis of renal papillae due usually to obstruction to urinary flow or poisoning or dehydration.
r. pelvis the chamber in the kidney into which the collecting tubules discharge urine and from which urine is voided into the ureter.
r. plasma flow the effective rate of blood flow through the kidneys; the determining factor relative to the rate of glomerular filtration.
r. portal system a portal system of birds and, in a less sophisticated form, in most other non-mammalian vertebrates; half to two thirds of the avian blood supply to the kidney comes from the hindlimbs via veins that terminate in peritubular capillaries where it is mixed with arteriolar blood coming from the glomeruli. A renal portal valve may divert the venous flow into alternative routes.
r. rickets see renal secondary **hyperparathyroidism**.
r. shutdown cessation of the excretory function of the kidney; oliguria.
r. tubular casts see urinary **cast**.
r. vein thrombosis commonly associated with renal amyloidosis in dogs.
renaturation the reassembly of a protein or nucleic acid molecule after denaturation.
renculus a small lobe of a kidney such as occurs in whales and other Cetacea; the black porpoise (*Neomeris phocaenoides*) has about 150 per kidney, and the rorquals about 3000. Every renculus is a complete, independent kidney with a cortex, a medulla, a papilla and a calyx of its own. Lobulated kidneys are found in cattle with 25–30 renculi and also in rhinos, otters, bears, elephants (with 8), seals, and sea-lions.
rendering of fat, the melting of the tissue material and collection and solidification of the molten fat.
dry r. separation of edible fat from abattoir residues by dry steam heat and the driving off of water.
wet r. abattoir offal is cooked in vats, the fat skimmed off and the residue dehydrated to meat meal. The alternative is dry **rendering**.
renguerra [Span.] secondary nutritional deficiency of copper. Called also renguerra.
Renibacterium salmoninarum the cause of bacterial kidney disease of salmonid fish. See **bacterial** kidney disease of salmonids.
Renicola a genus of renal flukes (digenetic trematodes) in the family Renicolidae.
R. hayesanniae found in turkeys and eider ducks and may cause sufficient damage to lead to renal failure.
renicolid a member of the family Renicolidae of flukes.
reniform [*ren'ĭ-form*] kidney-shaped.
renin [*re'nin*] a proteolytic enzyme synthesized, stored and secreted by the juxtaglomerular cells of the kidney; it plays a role in regulation of blood pressure by catalyzing the conversion of the plasma glycoprotein angiotensinogen to angiotensin I. This, in turn, is converted to angiotensin II by an enzyme that is present in relatively high concentrations in the lung. Angiotensin II is one of the most potent vasoconstrictors known, and also is a powerful stimulus of aldosterone secretion.
r.–angiotensin system renin, secreted by the juxtaglomerular apparatus, activates the precursor angiotensinogen. This liberates angiotensin I, then angiotensin II, a vasoconstrictor and stimulant to the secretion of aldosterone.
big r. a relatively inactive protein with a higher molecular weight than normal renin, which is activated after exposure to low pH or to proteolytic enzymes.
renin–angiotensin–aldosterone system see **renin**–angiotensin system.
reninism [*re'nin-iz"əm*] a condition marked by overproduction of renin.
primary r. a syndrome of hypertension, hypokalemia, hyperaldosteronism and elevated plasma renin activity, due to proliferation of juxtaglomerular cells.
renipelvic [*ren"ĭ-pel'vik*] pertaining to the pelvis of the kidney.
reniportal pertaining to the portal system of the kidney.
renipuncture surgical incision of the capsule of the kidney.
rennet [*ren'ət*] extract of the abomasal mucosa of the unweaned calf used in curdling milk in the preparation of cheese.
rennin [*ren'in*] an outdated term. See **chymosin**.
renninogen prorennin; the proenzyme in the gastric glands which is converted into rennin.
renogastric [*re"no-gas'trik*] pertaining to the kidney and stomach.
renogram [*re'no-gram*] a graphic record of kidney function produced by externally monitoring the level of radioactivity in the bladder as a radiopharmaceutical agent enters it from the kidney via the ureters.
renography [*re-nog'rə-fe*] radiography of the kidney.
renointestinal [*re"no-in-tes'tĭ-nəl*] pertaining to the kidney and intestine.
renolith see renal **urolith**.
renomegaly enlargement of the kidney.
renopathy any disease of the kidneys; nephropathy.
renoprival [*re"no-pri'vəl*] pertaining to or caused by lack of kidney function.
renotropic [*re"no-tro'pik*] having a special affinity for kidney tissue.
Renshaw cells [*ren'shaw*] interneurons in the central nervous system that provide a regulatory feedback system to control the excitability of motor neurons.

VetBooks.ir

renule an area of the kidney supplied by a branch of the renal artery, usually consisting of three or four medullary pyramids and their corresponding cortical substance.

Reoviridae [*re"o-vir'ĭ-de*] a family of nonenveloped, medium-sized viruses that have a double capsid structure and a segmented double-strand RNA genome. The genera of importance in veterinary medicine are: *Orthoreovirus* (previously *Reovirus*), *Orbivirus*, *Rotavirus* and *Aquareovirus*.

reovirus [*re'o-vi"rəs*] a member of the genus ***Orthoreovirus***.

reoxygenation [*re-ok"sĭ-jə-na'shən*] in radiobiology, the phenomenon in which hypoxic (and thus radioresistant) tumor cells become more exposed to oxygen (and thus more radiosensitive) by coming into closer proximity to capillaries after death and loss of other tumor cells due to previous irradiation.

rep [*rep*] acronym for *r*oentgen *e*quivalent *p*hysical, an unofficial unit of radiation equivalent to the absorption of 93 ergs per gram of water or soft tissue. An equivalent dose of ionizing radiation as that delivered to tissues by 1 roentgen of x-radiation.

repair [*re-pār'*] the physical or mechanical restoration of damaged tissues, especially the replacement of dead or damaged cells in a body tissue or organ by healthy new cells.

plastic r. restoration of anatomical structure by means of tissue transferred from other sites or derived from other individuals, or by other substance.

repeat breeder [*re-pēt'*] said of cows that have no apparent physical abnormality of the reproductive tract and have normal estral cycles but fail to conceive to matings at two or more successive estral periods. Called also FTC (failure to conceive).

repeat units see repeat **DNA**.

repeat visit reminders reminders to clients that their animals should be revaccinated, treated for worms or returned for routine repeat examination.

repeatability [*re-pēt"ə-bil'ĭ-te*] 1. the ability to get similar results at a series of examinations. 2. in genetics a measure of the extent to which an animal's superiority (or inferiority), based on an initial measurement, will be seen in future measurements. Denoted by R. 3. in diagnostic tests, the ability of the test to give consistent results in repeated measurements. See also **precision**.

repeated periodic health care periodic preventive medical measures such as testing for heartworm infection in dogs, brucellosis testing in rams, drenching of young sheep for worms, vaccination of poultry against infectious laryngotracheitis (ILT).

repellent [*re-pel'ənt*] able to repel or drive off; also, an agent that repels. Refers usually to insect repellent.

repeller [*re-pel'ər*] an obstetrical instrument used in large animal obstetrics to repel a fetus during correction of a dystocia, e.g. **Kühn's crutch**. See also **repulsion** (3).

repensol estrogenic coumestan compound found in plants.

reperfusion injury [*re"pər-fu'zhən*] damage to renal blood vessels during periods of hypotension does not become apparent until reperfusion occurs in the recovery stage of the vascular incident.

reperitonealization the regeneration of mesothelium lining the peritoneal cavity, following injury.

replacement [*re-plās'ment*] alternative or back-up groups of animals.

r. flocks flocks of poultry dedicated to the production of eggs for production of day-old chicks, requiring particular attention to the prevention of diseases transmitted vertically through the egg.

r. heifers heifers retained in a herd, or sold to other herds, to replace cows culled for age, low production or disease.

replacement proteins the dietary proteins in milk replacer which need to be of good biological value, contain the essential amino acids and not be denatured in the heat preparation of the feed.

replantation [*re"plan-ta'shən*] restoration of an organ or other body structure to its original site.

replenishment the addition of an appropriate quantity of properly prepared solution containing the correct concentration of chemicals to the developer solutions used in radiography.

replicate to repeat an experiment or an object a number of times.

replication [*rep"lĭ-ka'shən*] 1. a turning back of a part so as to form a duplication. 2. repetition of an experiment to ensure accuracy. 3. the process of duplicating or reproducing, as replication of an exact copy of a polynucleotide strand of DNA or RNA. See also **deoxyribonucleic acid**.

r. bubble seen in electron micrographs of DNA in replicating eukaryotic cells, suggesting bidirectional growth.

conservative r. an invalid hypothetical model for DNA replication in which both strands of the double helix remain together after replication. DNA replication occurs via semiconservative mechanism in which one parental and one nascent strand are produced.

dispersive r. in DNA replication, a hypothetical model in which nucleotides of the parental DNA strand would be randomly scattered along the strands of the newly synthesized DNA, as compared with semiconservative and conservative DNA replication.

r. fork a 'y' shaped structure in replicating DNA, the arms of which are the newly synthesized DNA molecules composed of one parental and one nascent strand and the stem of which is the parental DNA that is progressively unwinding as it is copied.

semiconservative r. a reference to the preservation of one of the original parental DNA strands in each of the two nascent DNA molecules produced following DNA replication.

replicative form [*rep'lĭ-ka"tiv*] a double-stranded intermediate in the replication of DNA or RNA viruses.

replisomes [*rep'lĭ-sōm*] in DNA replication, the final and complete assembly of proteins and enzymes at the replication origin necessary to carry out replication.

repolarization [*re-po"lər-ĭ-za'shən*] the re-establishment of polarity, especially the return of cell membrane potential to resting potential after depolarization.

repopulation 1. introduction of new animals to a farm or part of it after it has been depopulated for health or production reasons. 2. the additional growth of normal cells around a tumor that is being destroyed by irradiation.

Reporyje virus a strain of porcine enterovirus isolated in Czechoslovakia from pigs with porcine viral **encephalomyelitis** (Teschen disease).

repositol medicine in a formulation suitable for a depot injection which will deliver the medication to the vascular system over a prolonged period, e.g. repositol diethylstilbestrol.

repositor [*re-poz'ĭ-tər*] an instrument used in returning displaced organs to the normal position.

representative representative of the population as a whole; e.g. erythrocyte counts of randomly selected samples of a population. See also **random**.

repression [*re-presh'ən*] 1. the act of restraining, inhibiting or suppressing. 2. in molecular genetics, inhibition of gene transcription by a repressor.

enzyme r. interference, usually by the end product of a pathway, with synthesis of the enzymes of that pathway.

repressor [*re-pres'ər*] that which restrains or inhibits; a specific protein molecule coded for by a regulatory gene, which acts to repress the synthesis of a specific protein.

***lac* r.** interacts specifically with the *lac* operator.

repressor-constitutive mutation see repressor-constitutive **mutation**.

reproduction [*re"pro-duk'shən*] 1. the process by which a living entity or organism produces a new individual of the same kind. It may be asexual or sexual. 2. the creation of a similar object or situation; duplication; replication. In sexual reproduction the gonads, or sex glands—the ovaries in the female and the testes in the male—produce the germ cells that unite and grow into a new individual. Reproduction begins when the germ cells unite, the process called fertilization.

asexual r. reproduction without the fusion of germ cells; usually by budding or fission.

cytogenic r. production of a new individual from a single germ cell or zygote.

sexual r. reproduction by the fusion of a female germ cell with a male sexual cell or by the development of an unfertilized egg.

somatic r. production of a new individual from a multicellular fragment by fission or budding.

reproductive [*re"pro-duk'tiv*] subserving or pertaining to reproduction.

r. behavior see **sexual** behavior.

r. cycle in all mammalian species other than humans the reproductive cycle is an **estrus** cycle.

r. efficiency fertility or efficiency in terms of input, e.g. services per conception, bull serving capacity estimates.

r. failure infertility; failure to produce viable offspring; the end-stage of reproductive inefficiency.

r. fitness a pre-mating examination of cows in an intensive herd health program; includes manual examination of genitalia per rectum, cervical sample for microbiological examination, blood sample for locally relevant abortogenic diseases, manual examination of udder, milk cell count and composite bacteriological examination of milk.
r. history computerized or card-based record of individual cow's complete breeding record including all services and identity of donor or naturally mated bull.
r. organs (female) the ovaries, which produce the ova, or eggs; the uterine tubes; the uterus; the vagina, or birth canal; and the vulva, comprising the external genitalia. The udder is a secondary sex character, enclosing the mammary glands.
r. organs (male) the testes, external genitalia and accessory glands that secrete special fluids and the ducts through which these organs and glands are connected to each other and through which the spermatozoa are ejaculated during coitus.
r. performance the productivity of the animal or herd or flock in terms of offspring produced, can be expressed in many ways, e.g. live piglets per litter or per year or per sow-year or per cubic meter of shed space.
r. rate viable, full-term offspring produced per female per year.
r. senescence the end of cyclic reproductive activity in primates; not recognized in domestic animals.
r. system the genital tract plus the endocrinal control systems, especially the hypothalamus, pituitary, gonads and placenta, the products of pregnancy and the mammary glands.
r. tract see reproductive organs (above).
reptilase [*rep'til-ās*] an enzyme from Russell's viper venom used in determining blood clotting time. See **Russell's viper venom** time.
reptiles [*rep'tīl*] terrestrial or aquatic vertebrates which breathe air through lungs and have a skin covering of horny scales. They are poikilothermic, oviparous or ovoviviparous, and, if they have legs they are short and constructed solely for crawling. Includes snakes, reptiles, crocodilians and the chelonians. Members of the class Reptilia.
repulsion [*re-pul'shən*] 1. the act of driving apart or away; a force that tends to drive two bodies apart. 2. in genetics, the occurrence on opposite chromosomes in a double heterozygote of the two mutant alleles of interest. 3. in obstetrics the forcible displacement of the fetus back into the uterus so that limbs or head and neck can be brought into a proper position and a dystocia be relieved. 4. in dentistry, especially in the horse, involves gaining access to the root of the tooth by an external approach and repelling it into the mouth by hammering at its root.
RER rough endoplasmic reticulum
RES reticuloendothelial system.
rescue grass [*res'ku*] ***Bromus catharticus***.
research careful study of a subject with the object of establishing one or more facts.
animal r. the use of animals in a careful study of a subject, which may be related to the health or other welfare of animals of the same or other species, including humans.
comparative medical r. the use of animals in research projects directed at establishing facts of direct value to human health and welfare.
holistic r. see **holistic medicine**.
reductionistic r. see **reductionism**.
resect [*re-sekt'*] to excise part of an organ or other structure.
resection [*re-sek'shən*] excision of a portion of an organ or other structure.
en bloc r. radical resection or amputation.
gastric r. partial gastrectomy.
lateral ear r. a surgical procedure, usually performed in dogs with otitis externa, in which the lateral cartilaginous plate of the vertical portion of the external ear canal is removed, thereby exposing the horizontal canal for drainage and easier application of topical medications. See also **Lacroix operation**, **Zepp operation**.
submucosal r. a procedure in which the mucosa, e.g. of a prolapsed vagina, is stripped from a circumferential segment and the opposing edges sutured so as to take a tuck in the length of the wall of the viscus.
vertical ear canal r. total removal of the vertical portion of the external ear canal. Performed in dogs with chronic otitis externa with severe hyperplasia of the meatal epithelium without involvement of the horizontal canal.
wedge r. removal of a triangular mass of tissue.
resectoscope [*re-sek'to-skōp*] an endoscope with a wide-angle telescope and an electrically activated wire loop for transurethral removal or biopsy of lesions of the bladder, prostate or urethra.
resectoscopy [*re"sək-tos'kə-pe*] resection or biopsy of lesions by means of the resectoscope.
reserpine [*rə-sur'pēn*] an active alkaloid from various species of *Rauwolfia*, used as an antihypertensive, tranquilizer and sedative. Rarely used.
reserve [*re-zerv'*] 1. to hold back for future use. 2. a supply, beyond that ordinarily used, that may be utilized in emergency.
alkali r., alkaline r. the amount of buffer compounds in the blood that are capable of neutralizing acids, such as sodium bicarbonate and proteins. See also **alkali** reserve.
cardiac r. the potential ability of the heart to perform work beyond that necessary under basal conditions. See also **cardiac** reserve.
reservoir [*rez'ər-vwahr*] 1. a storage place or cavity. 2. an alternative host or passive carrier of a pathogenic organism.
r. control control of infection in animal, bird or insect populations which act as reservoirs for infection of domesticated animals.
resident [*rez'ĭ-dənt*] a graduate and licensed veterinarian receiving training in a specialty. A residency training is required as part of the eligibility for most specialty board certifications. See also **Veterinary Internship and Residency Matching Program**.
residual [*re-zid'u-əl*] remaining or left behind.
r. body an amorphous body formed by the separation of the original tail of the spermatid during its metamorphosis to spermatozoon.
r. spray insecticide spray for surfaces. Has a residual effect either because of the ingredient or the vehicle. Aimed at killing the larvae that are still to hatch.
r. urine urine remaining in the bladder after voiding; seen with bladder outlet obstruction and disorders affecting nerves controlling bladder function.
residue a remainder; that which remains after the removal of other substances; in organic chemistry a portion of a molecule that is incorporated into another molecule, e.g. an amino acid residue of a polypeptide. See also unintentional residue (below).
r. avoidance procedures in the handling of chemicals adopted on the farm and in food processing facilities to ensure that human food is not contaminated.
cannery r. cannery wastes used as supplementary feed for cattle in feedlots. Tomato and onion wastes have caused poisoning incidents. Damaged materials, especially those infected with fungi, may cause mycotoxicoses.
chemical food r. chemicals used in agriculture present a real threat to the wholesomeness and safety of animal products if they result in residue contamination of foods. The residues are often harmful to human health and are also the target of some very stringent pure foods legislation. Public concern for the potential for residue occurrence has led to the emergence of organic and other farming systems that avoid chemical use. Mercury in fish, sulfonamides in pig products, iodine in milk and chlorinated hydrocarbons in beef have been some of the notorious examples of environmental and human food chain pollution.
drug r. see **drug** residue.
maximum r. limits (MRL) maximum concentrations of individual chemicals, or groups of chemicals, especially metabolites, and including pharmaceutical and industrial chemicals allowed to be present in commodities or tissues to be used as human or animal feeds, and as defined by the food standard codes of a particular country or state; permissible levels vary with local legislation.
unintentional r. in terms of food hygiene, a residue of a substance given to an animal for purposes other than improving, modifying or preserving its meat. An intentional residue is a legally authorized additive to the food.
resin [*rez'in*] 1. a solid or semisolid, amorphous organic substance of vegetable origin or produced synthetically. True resins are insoluble in water, but are readily dissolved in alcohol, ether and volatile oils. 2. rosin.
acrylic r's products of the polymerization of acrylic or methacrylic acid or their derivatives and used in the fabrication of surgical prostheses and equipment.
anion-exchange r. see **ion-exchange resin**.
cation-exchange r. see **ion-exchange resin**.

VetBooks.ir

cholestyramine r. a synthetic, strongly basic anion-exchange resin in the chloride form which chelates bile salts in the intestine, thus preventing their reabsorption.
composite r. usually a mixture of organic matrix and inorganic filler, used in restorative dentistry.
ipomoea r., jalap r., scammony r. severe cathartics and irritants; little used because of their disastrous effects.
resistance [*re-zis'təns*] 1. opposition, or counteracting force, as opposition of a conductor to passage of electricity or other energy or substance. 2. the natural ability of a normal organism to remain unaffected by noxious agents in its environment. See also **immunity**. 3. ability of a bacterium, virus, helminth or arthropod parasite to survive in the presence of concentrations of a chemical which are normally lethal to similar organisms. Can occur as a result of prolonged growth of the organism in sublethal concentrations of the agent and thus selection of the organisms that have the least innate susceptibility to the agent. Has serious implications for animals as it may result in the lack of a suitable remedy for a disease, and for humans who may experience transfer of a resistant organism from the food supply. In bacteria, the genes for this resistance may be transferable to susceptible strains, thus resulting in spread of resistance. 4. in studies of respiration, an expression of the opposition to flow of air produced by the tissues of the air passages, in terms of pressure per amount of air per unit of time.
drug r. the ability of a microorganism to withstand doses of a drug that are lethal to most members of its species.
multiple r. resistance by a bacterium, helminth or arthropod to more than one type of drug.
peripheral r. resistance to the passage of blood through the small blood vessels, especially the arterioles.
side r. resistance by a helminth or arthropod parasite to a series of chemically related compounds, for example, benzimidazoles or macrocyclic lactones.
transferable r. antimicrobial resistance genes carried by bacteria on plasmids or transposons that can be readily acquired by other strains of the same species, by different species, and sometimes by organisms in different genera. Of considerable import in consideration of the implications of antimicrobial therapy in animal populations and in public health. The full significance is difficult to ascertain.
resistance-determinant segment an accumulation of resistance genes into a localized region of DNA.
resistance inducing factor test a test used to detect viruses; based on the increased resistance to a test virus by a cell culture which has been previously infected with a known virus.
resistive index [*re-zis'tiv*] an indicator of resistance of an organ to perfusion. In ultrasonography, it can be calculated from the peak systolic velocity and the end diastolic velocity of blood flow.
resmethrin a synthetic pyrethroid insecticide used to control fleas and ticks on dogs and cats.
resolution [*rez"o-loo'shən*] 1. subsidence of a pathological state, as the subsidence of an inflammation, or the softening and disappearance of a swelling. 2. perception as separate of two adjacent points; in microscopy, the smallest distance at which two adjacent objects can be distinguished as separate.
resolvent [*re-zol'vənt*] 1. promoting resolution or the dissipation of a pathological growth. 2. an agent that promotes resolution.
resolving power the ability of the eye or of a lens to make small objects that are close together separately visible, thus revealing the structure of an object.
resonance [*rez'o-nəns*] 1. the prolongation and intensification of sound produced by transmission of its vibrations to a cavity, especially such a sound elicited by percussion. Decrease of resonance is called *dullness;* its increase, *flatness.* 2. a vocal sound heard on auscultation.
amphoric r. a sound resembling that produced by blowing over the mouth of an empty bottle.
skodaic r. increased percussion resonance at the upper part of the chest, with flatness below it.
tympanic r. drumlike reverberation of a cavity filled with air.
tympanitic r. the peculiar sound elicited by percussing a tympanitic abdomen.
vesicular r. normal pulmonary resonance.
vocal r. the sound of ordinary speech as heard through the chest wall.
resonant [*rez'o-nənt*] giving an intense, rich sound on percussion; exhibiting resonance.
resonator [*rez'o-na"tər*] 1. an instrument used to intensify sounds. 2. an electric circuit in which oscillations of a certain frequency are set up by oscillations of the same frequency in another circuit.
resorantel a safe, hydroxybenzanilide cestocide highly effective against *Moniezia* and *Thysaniezia* spp. and moderately effective against *Paramphistomum* spp.
resorb [*re-sorb'*] to take up or absorb again; to undergo resorption.
resorcinism [*rə-sor'sĭ-niz"əm*] chronic poisoning by resorcinol, resulting in methemoglobinemia, paralysis and damage to the capillaries, kidneys, heart and nervous system.
resorcinol [*rə-sor'sĭ-nol*] a phenol with bactericidal, fungicidal, keratolytic, exfoliative and antipruritic activity; used especially as a topical keratolytic in the treatment of dermatoses.
resorcylic acid lactones found in plants, e.g. zearalenone, an estrogenic substance found in fungi.
resorption [*re-sorp'shən*] 1. the lysis and assimilation of a substance, as of bone or fetus. 2. reabsorption.
r.–formation sequence while bones are being formed for the first time the sequence is formation followed by resorption and modeling; in remodeling of an existing bone resorption occurs first and is then followed by bone formation.
r. lacuna concavities in bone created by osteoclasts.
r. space a continuous series of resoption lacunae.
tooth r. see **tooth**.
respirable [*rə-spir'ə-bəl*] 1. suitable for respiration. 2. small enough to be inhaled.
respiration [*res"pĭ-ra'shən*] 1. the exchange of oxygen and carbon dioxide between the atmosphere and the body cells, including inspiration and expiration, diffusion of oxygen from the pulmonary alveoli to the blood and of carbon dioxide from the blood to the alveoli, and the transport of oxygen to and carbon dioxide from the body cells. 2. cellular respiration, the metabolic processes by which living cells break down carbohydrates, amino acids and fats to produce energy in the form of ATP (adenosine triphosphate).
abdominal r. inspiration and expiration accomplished mainly by the abdominal muscles and diaphragm. Occurs in acute pleurisy because of pain in the chest and fixation of the thorax, and tick paralysis due to paralysis of the intercostal muscles.
aerobic r. oxidative transformation of certain substrates into secretory products, the released energy being used in the process of assimilation.
anaerobic r. respiration in which energy is released by chemical reactions in which free oxygen takes no part.
artificial r. that maintained by force applied to the body. Called also artificially assisted respiration.
artificially assisted r. see artificial respiration (above).
Biot's r's rapid, deep respirations with abrupt pauses in breathing. See also **Biot's respirations**.
cell r. the processes in the living cell by which organic substances are oxidized and chemical energy is released.
Cheyne–Stokes r. breathing characterized by rhythmic waxing and waning of respiration depth, with regularly recurring apneic periods. See also **Cheyne–Stokes respiration**.
cogwheel r. breathing with jerky inspiration.
controlled r. during general anesthesia using an endotracheal tube with an inflated cuff, the animal's respiration can be controlled completely by compression alternating with relaxation on the rebreathing bag of the breathing circuit. See also intermittent positive-pressure **ventilation**.
costal r. the respiratory movements are mostly carried out by the chest wall.
diaphragmatic r. that performed mainly by the diaphragm.
electrophrenic r. induction of respiration by electric stimulation of the phrenic nerve.
external r. the exchange of gases between the lungs and the blood.
internal r. the exchange of gases between the body cells and the blood.
Kussmaul's r. see **Kussmaul's respiration**.
labored r. see **dyspnea**.
r. monitors machines that monitor respiratory movement and efficiency are most desirable during anesthesia. They include rate monitors, apnea alarms, tidal and minute volume monitoring

R-9: Severe respiratory distress in a cow with atypical pneumonia. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

VetBooks.ir

respirometers, infrared gas analyzers to measure carbon dioxide content of end-tidal air,

paradoxical r. that in which a lung, or a portion of a lung, is deflated during inspiration and inflated during expiration. See also **paradoxical** respiration.

tissue r. internal respiration.

respirator [*res'pĭ-ra"tər*] a device for giving artificial respiration or to assist in pulmonary ventilation. See also **ventilator**.

r. shock circulatory shock due to interference with the flow of blood through the great vessels and chambers of the heart, causing pooling of blood in the veins and the abdominal organs and a resultant vascular collapse. The condition sometimes occurs as a result of increased intrathoracic pressure in patients who are being maintained on a mechanical **ventilator**.

respiratory [*res'pĭ-rə-tor"e*] pertaining to respiration. See also **pulmonary**.

acute r. disease of turkeys see turkey **coryza**.

acute r. distress syndrome a noncardiogenic pulmonary edema characterized by disruption of pulmonary capillary endothelium and accumulation of high-protein edema fluid in the lungs resulting in hypoxemic respiratory failure. May be caused by lung trauma, inhalation injury, shock, pancreatitis, and microbial pneumonia. Sepsis is a common cause in dogs. See also **shock** lung, **atypical interstitial pneumonia**, **neonatal** maladjustment syndrome.

r. arrest sudden complete cessation of respiratory movement.

r. burst of neutrophils the series of biochemical reactions that take place within a neutrophil when a particle is phagocytosed. Important in the host defense mechanisms.

r. centers see respiratory **centers**.

r. chain series of reactions in which electrons are transferred from a donor such as NADH to an acceptor along a chain of carrier proteins with molecular oxygen as the final acceptor; the process generates the proton motive force which drives the production of ATP in oxidative phosphorylation. Called also the electron transport chain.

chronic r. disease see **chronic** respiratory disease.

r. cilia see **cilia**.

r. clearance clearance of inhaled particles from the respiratory system by absorption of finally solubilized material through the respiratory epithelium, passage through the alveolar epithelium at special sites near the alveolar ducts, or to the exterior by a flow of alveolar fluid to the bronchi, a moving sheet of mucus into the bronchioles, up the bronchioles, bronchi and trachea with the assistance of respiratory cilia to the pharynx.

r. control quantitative relationship between oxidative phosphorylation and electron transfer. Traditionally presented as a P/O ratio indicating the number of ATP molecules synthesized per atom of oxygen consumed.

r. control ratio ratio of oxygen uptake in the presence of ADP to that in the absence of ADP. Used as an index of the functional integrity of prepared mitochondria since it is above 10 in good preparation and unity in aged or damaged mitochondria.

r. cycle the cycle of inspiration, expiration, pause of the normal resting cycle depends on sensors in the respiratory system which provide stimuli to initiate the next part of the cycle.

r. dead space see dead **space** (2).

r. depression the rate and/or depth of respiration are insufficient to maintain adequate gas exchange in the lungs; a subjective judgment tending to be superseded, at least during anesthesia, by instrumentation. See **respiration** monitors.

r. depth amplitude of each respiratory movement.

r. difficulty see **dyspnea**.

r. disease pattern may be aerogenous when the pathogen is inhaled or hematogenous when the pathogen is delivered to the lungs in the blood supply.

r. distress syndrome of newborn (RDS) see **hyaline** membrane disease.

dorsal r. group that part of the respiratory center which is located in the dorsal medulla oblongata.

r. exchange ratio the carbon dioxide output divided by the oxygen uptake; see also respiratory quotient (below).

r. failure a life-threatening condition in which respiratory function is inadequate to maintain the body's need for oxygen supply and carbon dioxide removal while at rest; called also acute ventilatory failure. The type of failure varies with the CO_2 content of the blood and may be asphyxial, when there is gasping, dyspneic when there is dyspnea, paralytic when the respiratory movements gradually fade away, tachypneic when the movements are fast and shallow. Called also ventilatory failure.

r. grunting grunting at the peak of each inspiration, or on percussion of the chest wall; indicates pain in the pleura.

r. insufficiency a condition in which respiratory function is inadequate to meet the body's needs when increased physical activity places extra demands on it. Insufficiency occurs as a result of progressive degenerative changes in the alveolar structure and the capillary tissues in the pulmonary bed.

r. noises includes sneezing, snorting, stridor, stertor (snoring), wheezing, roaring, grunting.

r. paralysis see respiratory failure (above). negative intrapleural pressure and increased intra-abdominal pressure during inspiration which promotes venous return and cardiac output.

r. pump negative intrapleural pressure and increased intra-abdominal pressure promoting venous return and cardiac output.

r. quotient (RQ) the ratio of the volume of expired carbon dioxide to the volume of oxygen absorbed by the lungs per unit of time. Called also respiratory exchange ratio (above).

r. rate the number of respirations per minute. Normal rates per minute are: horses 8 to 10; cattle 10 to 30; sheep and pigs 10 to 20; goats 25 to 35; llama, alpaca 10 to 30; dogs 10 to 30; cats 20 to 30.

r. rhythm normally consists of three phase cycles of inspiration, expiration, pause; prolongation of inspiration suggests obstruction of the upper respiratory tract, prolongation of expiration, or a double respiratory effort suggests loss of recoil elasticity of the lungs. See also **Biot's respirations**, **Cheyne–Stokes respiration**.

r. secretion includes samples collected by nasal swab, nasopharyngeal swab, percutaneous tracheobronchial lavage and fiberoptic endoscopic sampling. Assessment is by laboratory examination for cellular content, bacteria, viruses, helminth parasites, fungi.

r. system the group of specialized organs whose specific function is to provide for the transfer of oxygen from the air to the blood and of waste carbon dioxide from the blood to the air. These functions are performed by the tubular and cavernous organs which allow atmospheric air to reach the membranes across which gases are exchanged with the blood. The system includes the organs of the respiratory tract (below) plus the respiratory centers in the medulla. The supportive roles of the nervous system, the muscular, cardiovascular and hemopoietic systems are also essential.

r. tract the organs of the tract include the upper respiratory tract of the nasal cavities, the pharynx, larynx, trachea and bronchi, and the lower respiratory tract comprising the bronchioles and alveoli of the lungs.

r. viruses see Table 21.2.

upper r. tract (URT) comprises the nasal cavities, pharynx and larynx. Some anatomists also include the upper segments of the bronchial tree. Inflammation of the URT is common to all species. It is usually caused by infection, most commonly viral, producing a syndrome of frequent, dry cough, serous or mucoid nasal discharge and pain on manual compression of the laynx, pharynx and trachea. It is a common precursor to more serious disease involving the lower respiratory tract.

respirometer [*res"pĭ-rom'ə-tər*] an instrument for determining the nature of the respiration, including the rate, the volume and the rhythmicity.

RESPITE an interactive computer-based guide to demonstrate the effect of specific management practices on the expected prevalence of swine pneumonia.

respondent an animal that responds to a particular stimulus.
r. behavior reflex responses elicited by stimuli; generally not under voluntary control.
r. conditioning see classical **conditioning**.

response [*re-spons'*] any action or change of condition evoked by a stimulus.
autoimmune r. the immune response in which antibodies or cytotoxic lymphocytes target the body's own tissues.
conditioned r. see **conditioned** response, **conditioning**.
galvanic skin r. the alteration in the electrical resistance of the skin associated with sympathetic nerve discharge.
immune r. specifically altered reactivity of the animal body after exposure to antigen, manifested as antibody-production, cell-mediated immunity, development of hypersensitivity, or as immunological tolerance. Called also immune reaction. See also **immune** response.
maze r. a test of vision for animals. See **obstacle test**.
menace r. approaching the eye rapidly with a finger, hand or other object induces a blink. A test of vision. If the menace response is absent, but papillary light response is present and the animal is blind, this suggests a lesion within the prosencephalon contralateral to the side of the deficit.
operant r. behavior that is modifiable by its consequences.
placing r. see **placing** reflex.
r. rate see response **rate**.
r. substitution a training technique in which an animal is trained to perform on cue an appropriate behavior in a situation in which it has been performing an unacceptable behavior. When the unacceptable behaviour is imminent, the animal is distracted by being prompted to perform the acceptable behavior pattern.
triple r. (of Lewis) a physiological reaction of the skin to stroking with a blunt instrument: first a red line develops at the site of stroking, owing to the release of histamine or a histamine-like substance, then a flare develops around the red line, and lastly a wheal is formed as a result of local edema.
unconditioned r. an unlearned response, i.e. one that occurs naturally. See also **conditioning**.

responsible ownership the motto for the companion animal owner of this decade. Includes avoidance of cruelty and discomfort, preservation of the animal's dignity, prevention of disease, optimum nutrition and shelter and some consideration for what are the animal's pleasures. It also includes the avoidance of nuisance to other animals and people.

responsive diagnoses a diagnosis couched in terms of what the disease responds to, implying the at least partial involvement of the risk factor in the causation, e.g. copper-responsive achromotrichia, selenium-responsive infertility.

rest [*rest*] 1. repose after exertion. 2. a fragment of embryonic tissue retained within the adult organism.

restenosis [*re"stə-no'sis*] recurrent stenosis, especially of a cardiac valve after surgical correction of the primary condition.

restibrachium the inferior peduncle of the cerebellum.

restiform [*res'tĭ-form*] shaped like a rope.

resting pertaining to or having the characteristics of a **rest** (1).
limb r. posture adopted when the standing animal rests its weight on three limbs and allows the other to relax. The relaxed limb is said to be being rested.
r. line basophilic lines in the cement in bones. The lines are smooth and level and indicate that the previous activity in the bone was formative.
r. membrane potential see resting **potential**.

restis the caudal peduncle of the cerebellum.

restlessness a state manifested by increased motor activity, constant walking, vocalizing, lying down and getting up. May be caused by psychological factors, e.g. separation from young, or by pain, or deprivation of water.

Reston virus an Ebola-like virus isolated in Reston, Virginia from monkeys imported from Asia. It has not been shown to be pathogenic for humans.

restoration 1. induction of a return to a previous state, as a return to health or replacement of a part to normal position. 2. partial or complete reconstruction of a body part, or the device used in its place.
dental r. see restorative **dentistry**.

restorative 1. promoting a return to health or to consciousness. 2. a remedy that aids in restoring health, vigor or consciousness.

restraint [*re-strānt'*] control of an animal so that it can be examined or treated.
r. bag see **feline** restraint bag.
r. cage see squeeze **cage**.
chemical r. tranquilizers, sedatives and anesthetics are used depending on the wildness of the animal. See also **blow dart**.
diversionary r. use of various techniques to distract the animal and permit minimal physical restraint, usually used on horses. Examples are tapping or rubbing the head, using a blindfold, pressure on a skin fold, holding an ear, applying a chain shank over the bridge of the nose and use of a war bridle.
oral r. the use of a mouth speculum, gag or wedge to permit examination and the carrying out of procedures in the mouth without danger of being bitten.
physical r. includes everything from halters to casting harness for horses, from hog-holders to dog-catchers.
tail r. in cattle, holding the tail strongly over the back provides some control. See also **tailing**.

restricted substances substances which because of the danger that would arise if the substances were released for uncontrolled use are available to the public only on the order of a veterinarian, or a medical or dental practitioner.

restriction digest a unique family of DNA fragments produced by digestion of a given DNA molecule by a particular restriction enzyme; usually visualized by agarose gel electrophoresis and ethidium bromide or other fluorescent stains.

restriction endonuclease one of over 200 enzymes isolated from bacteria that cleave any DNA molecule at specific sites which are usually palindromes of 4 to 10 or so nucleotides to yield a collection of restriction DNA fragments that can be separated, usually by electrophoresis in agarose or polyacrylamide gels, and which are highly characteristic for a particular DNA template. They evolved as a defense mechanism for bacteria , which modify their own DNA by methylation to block restriction fragmentation function whereas any foreign DNA that enters the cell is cut (restricted). Called also restriction-modification enzyme. See also **restriction map**.

restriction fragment length polymorphism (RFLP) when the restriction endonuclease DNA fragment patterns of organisms of the same type or species are compared minor differences in the patterns are observed which are produced by gain or loss of restriction sites or by insertion or deletion of DNA to make a particular fragment larger or smaller. Where a large amount of DNA, such as all the chromosomal DNA from a cell, is digested with a restriction enzyme and separated on an agarose gel, the fragments can be transferred to a nylon membrane (Southern blot) and probed with a particular probe, usually based on DNA-DNA hybridization to specific sequences. The pattern so obtained is unique to a particular individual. Called also restriction endonuclease DNA fingerprints. See also **parentage** testing.

restriction map for a DNA molecule, is constructed for a particular restriction endonuclease by ordering the fragments left to right in the DNA molecule. By convention, frgaments are labeled in order of decreasing size, (e.g. ABCDEF for six fragments), but the actual order in the genome may be DCBAFE.

restriction mapping the ordering, left to right, of the set of DNA fragments of a DNA molecule produced by a particular restriction enzyme.

restriction site the specific nucleotide site recognized by restriction endonuclease. Called also restriction endonuclease site.
r. s. bank see **polycloning site**.

restrictive cardiomyopathy see restrictive **cardiomyopathy**.

resurrection plant see ***Bryophyllum pinnatum***.

resuscitation [*re-sus"ĭ-ta'shən*] restoration to life or consciousness of an animal apparently dead or dying, or whose respirations have ceased. See also artificial **respiration**.
cardiopulmonary r. (CPR) an emergency technique used in cardiac arrest to re-establish heart and lung function until more advanced life support is available. See also **cardiopulmonary** resuscitation.
cerebral r. treatment to counteract the cerebral edema resulting from low cerebral blood flow and hypoxia that occurs during cardiopulmonary resuscitation.

VetBooks.ir

r. equipment inludes cardiac defibrillator, laryngoscope, endotracheal tubes, tracheotomy tubes, plus the stimulants and the administration sets needed in an emergency.

resuscitator [*re-sus'ĭ-ta"tər*] an apparatus for initiating respiration in animals whose breathing has stopped.

retained kept in an original position when dehiscence or movement to another location is more appropriate.

r. cartilage core see retained enchondral **cartilage** cores.

r. corpus luteum the corpus luteum is not resorbed at the appropriate time in the reproductive cycle and the animal remains anestral.

r. fetal membranes see retained **placenta**.

r. meconium see **meconium** ileus.

r. placenta see retained **placenta**.

r. testicle failure of the testicle(s) to migrate out of the peritoneal cavity, through the inguinal ring and into the scrotum before the animal reaches puberty. The retention may be uni- or bilateral.

retained ownership cow calf producers who retain ownership of their cattle through to slaughter and bear the costs through the feeding period. Usually fed in custom feedlots.

retainer [*re-ta'nər*] a regular periodic payment made to a veterinarian in order to ensure that his/her services will be available if a particular need arises.

retama see ***Parkinsonia aculeata***.

Retama retam North African plant in family Fabaceae; contains alkaloids anagyrine, cytisine; cause abortion, incoordination, tremor, milk taint in camels. Called also r'tem.

retch [*rech*] vomiting movements without the production of regurgitus.

retching [*rech'ing*] an unproductive effort to vomit.

rete [*re'te*] pl. *retia* [L.] a network or meshwork, especially of blood vessels.

arterial r., r. arteriosum an anastomotic network of minute arteries, just before they become capillaries.

articular r. a network of anastomosing blood vessels in or around a joint.

blood vessel r. visible networks of vessels; see also rete mirabile (below).

r. carpi dorsale a network of small vessels over the dorsal aspect of the carpus in the horse.

r. malpighii the innermost stratum of epidermis.

r. mirabile pl. *retia mirabilia* [L.] a vascular network formed by division of an artery or vein into many smaller vessels that reunite into a single vessel, such as the carotid rete mirabile (epidural rete) at the base of the brain of ruminants. Cetacea have retia flanking their vertebral column and extending to the intercostal vessels; retia are also found in sloths, ant-eaters and some lemurs, in all of which they seem to serve a heat-regulating function.

r. mirabile ophthalmicum a small arterial network in the orbit of ruminants.

r. pegs inward projections of the epidermis into the dermis, as seen histologically in vertical sections.

r. ridge marked undulations of the dermoepidermal junction; not a feature of normal skin in animals except in certain areas such as the footpads and planum nasale of carnivores.

r. testis the network of channels formed in the mediastinum of the testis at the termination of the straight seminiferous tubules.

r. tubules a network composed of tubules, e.g. seminiferous tubules.

r. vasculosa networks of vessels as in the lungs.

r. venosum an anastomotic network of small veins.

retention [*re-ten'shən*] the process of holding back or keeping in a position, such as persistence in the body of material normally excreted. See also **retained**.

renal r. cysts these are acquired and result from scarring and obstruction of tubules in chronic renal disease.

gastric r. syndrome the inability of the stomach to evacuate its contents within the normal physiologic time. Occurs in dogs, and less often cats; may be the result of outflow obstruction by lesions, compression or objects, such as hairballs, or abnormalities of motility. Characterized by vomiting of undigested food long after the time of ingestion.

urine r. accumulation of urine within the bladder because of inability to urinate.

reticular[1] [*rə-tik'u-lər*] resembling a net.

r. activating system (RAS) the system of cells of the reticular formation of the medulla oblongata that receive collaterals from the ascending sensory pathways and project to higher centers; they control the overall degree of central nervous system activity, including wakefulness, attentiveness and sleep. Called also ascending reticular formation.

ascending r. formation see reticular activating system (above).

r. cells stellate cells that form the reticular fibers of connective tissue; they form the supporting framework of bone marrow, lymph nodes, lymphatic nodules, spleen and tonsils.

r. colliquation, epidermal r. degeneration severe intracellular edema of epidermal cells, characterized by the degeneration of cells to form reticulated septa separating lobules of fluid.

descending r. system a diffuse motor control mechanism which descends from the midbrain to lower motor neurons in the brainstem and spinal cord.

r. dysgenesis a congenital error in stem cell numbers in the bone marrow; a rare cause of anemia.

r. formation see ascending reticular formation, reticular activating system (above).

medullary r. formation see ascending reticular formation (above).

r. tissue, reticulated tissue connective tissue composed predominantly of reticulum cells and reticular fibers.

reticular[2] [*rə-tik'u-lər*] pertaining to or emanating from the reticulum.

r. cycle the reticular contraction which terminates in regurgitation. Called also regurgitation cycle.

r. foreign body sharp, ferrous objects causing traumatic reticuloperitonitis, flakes of lead paint.

r. groove the first part of the gastric **groove** extending from the cardia to the reticulo-omasal orifice.

r. groove malfunction damage to the ruminal branches of the vagus nerve, or a foreign body lodged in the groove, causes a variety of malfunctions including vomiting when an eructation cycle occurs in the rumen, and failure of the reticulo-omasal orifice to open and allow onward movement of ruminal contents during a ruminal mixing cycle.

r. grunt a grunt audible on tracheal auscultation which occurs at each reticular contraction; an uncommon observation because the inflammation caused by reticular penetration, and therefore theoretically the grunt, is a potent cause of complete reticuloruminal atony.

r. papillomas not uncommon, especially in the esophageal groove where they interfere with normal ruminal cycles and may cause chronic bloat or vagus indigestion.

r. retention pellet dense, heavy pellet designed to be taken orally and to lodge, by virtue of its weight, in the reticulum.

reticulate body in the replicative intracellular form of members of the *Chlamydiales*.

reticulated reticular.

reticulation [*rə-tik"u-la'shən*] the formation or presence of a network.

radiographic r. network appearance of the film; caused, for example, by hot developer and cold fixer, sometimes by weak fixer solution.

reticulin [*rə-tik'u-lin*] a scleroprotein present in the connective fibers of reticular tissue, closely related to collagen in composition.

reticulitis [*rə-tik"u-li'tis*] inflammation of reticulum. Is rare except in specific disease entities. See also **traumatic** reticuloperitonitis.

reticulocerebellar tract [*rə-tik'u-lo-ser"ə-bel'ər*] one of the tracts in the reticular formation.

reticulocyte [*rə-tik'u-lo-sīt"*] a stage of erythrocyte maturation following the metarubricyte (normoblast) and before the mature erythrocyte, showing a basophilic reticulum (residual RNA) under vital staining. Depending on the species, presence in peripheral blood usually indicates increased erythropoiesis. Called also polychromatophilic erythrocyte, as viewed in Wright-Giemsa stained blood films.

aggregate r. immature reticulocyte with large aggregates of reticulum.

corrected r. percentage (CRP) percentage reticulocytes (×hematocrit ÷ normal hematocrit); a measure of reticulocyte numbers adjusted for the degree of anemia.

r. count performed on blood mixed with a supravital stain such as new methylene blue or brilliant cresyl blue. A useful indicator of increased erythropoiesis in dogs and cats, less so in cattle. Reticulocytes are rarely found in horses because erythrocyte

VetBooks.ir

maturation is confined to the marrow space. The slow maturation and presence of aggregate and puncatate reticulocytes in cats permits separate counts of both forms.

r. production index (RPI) corrects the reticulocyte count, taking into account the presence of anemia and the presence of shift reticulocytes producing a more accurate indicator of red cell production.

punctate r. a more mature stage than aggregate reticulocyte (above); contains only small (punctate) aggregates of ribosomes. Seen most often in cats because of slower maturation.

r. response the release of reticulocytes in response to erythropoietin or administration of specific therapy for anemia, e.g. a deficiency of iron or folic acid. A reticulocyte response does not develop until the anemia is marked in cattle and not at all in horses.

shift r., stimulated r. with intense stimulation of erythropoiesis there is premature release of reticulocytes from the bone marrow into peripheral blood. These are larger and contain more reticulum than normal reticulocytes.

reticulocytopenia [rə-tik"u-lo-si"to-pe'ne-ə] a deficiency of reticulocytes in the peripheral blood.

reticulocytosis [rə-tik"u-lo-si-to'sis] an excess of reticulocytes in the peripheral blood. See also **reticulocyte** response.

reticuloendothelial system [rə-tik"u-lo-en"do-the'le-əl] a term that encompasses the monocyte–macrophage or mononuclear phagocytic system and also includes reticulum cells. It consists of a population of cells called macrophages, which are of bone marrow origin and are widely distributed throughout the body. Immature macrophages or monocytes make up about 5% of peripheral blood leukocytes. Mature macrophages are found in connective tissue (histiocytes), lining hepatic sinusoids (Kupffer cells), in the lung (alveolar macrophages), brain (microglia) and skin (Langerhans cells). They are also found in the spleen, lymph nodes and bone marrow. The major roles of these cells include: phagocytosis, antigen-processing and trapping, regulation of immune responses and the secretion of several biologically important factors such as interleukin 1, lysozyme, plasminogen activator and complement components. The macrophages of the **spleen** possess the ability to dispose of disintegrated erythrocytes. They do not, however, destroy hemoglobin, which is liberated in the process. Kupffer cells, together with the cells of the general connective tissue and bone marrow, are capable of transforming into bile pigment the hemoglobin released by disintegrated erythrocytes.

reticuloendotheliosis [rə-tik"u-lo-en"do-the-le-o'sis] a superseded term for neoplasia of hemopoietic precursors. See also blast form of **erythremic myelosis**.

avian r. a group of diseases of poultry caused by the REV group of retroviruses, and includes a chronic neoplastic disease of turkeys and chickens, a runting disease in chickens accidentally injected with the virus, and possibly an acute reticulum cell neoplasia. The chronic neoplasia is manifested by nodular tumors in visceral organs.

feline r. see **erythremic myelosis**, **myeloproliferative** disease.

leukemic r. leukemia marked by splenomegaly and by an abundance of large, mononuclear abnormal cells with numerous, irregular cytoplasmic projections that give them a flagellated or hairy appearance in the bone marrow, spleen, liver and peripheral blood; called also hairy-cell leukemia.

reticuloendothelium [rə-tik"u-lo-en"do-the'le-əm] the tissue of the reticuloendothelial system.

reticulohistiocytoma [re-tik"u-lo-his"te-o-si-to'mə] a granulomatous aggregation of lipid-laden histiocytes and multinucleated giant cells.

reticulo-omasal orifice [re-tik"u-lo-o-ma'səl] aperture in the gastric groove as it passes from the reticulum into the omasum. Obstruction by a foreign body causes ruminal distention and hypermotility and the passage of small amounts of feces. See also **vagus** indigestion.

r.-o. sphincter achalasia part of the vagus indigestion pathogenesis; causes accumulation of ingesta in the reticulorumen. Called also anterior functional stenosis.

reticulopenia [rə-tik"u-lo-pe'ne-ə] reticulocytopenia.

reticuloperitonitis [rə-tik"u-lo-per"i-tə-ni'tis] see **traumatic** reticuloperitonitis.

reticulopodium [rə-tik"u-lo-po'de-əm] a threadlike, branching pseudopodium.

reticuloruminal contractions [rə-tik"u-lo-roo'mĭ-nəl] contractions occur in two types, primary and secondary. Primary contraction cycles commence with a double reticular contraction, the second accompanied by a contraction of the anterior dorsal sac of the rumen; next comes a contraction of the ventral sac of the rumen which completes the cycle. The frequency of the cycle in the normal animal depends on the volume and physical characteristics of the contents of the reticulorumen. Secondary cycles follow primary cycles mostly when the patient is feeding; usually they commence in the caudal sacs and terminate in eructation.

reticulosarcoma [rə-tik"u-lo-sahr-ko'mə] malignant lymphoma, histiocytic or undifferentiated.

reticulosis [rə-tik"u-lo'sis] an abnormal increase in cells derived from or related to the monocyte macrophage.

familial histiocytic r., histiocytic medullary r. see malignant **histiocytosis**.

inflammatory r. see granulomatous **meningoencephalomyelitis**.

pagetoid r. a lymphoproliferative disease of the skin in dogs; it may be a variant of mycosis fungoides. There are erythematous plaques, ulcers and vesicles on the oral mucosa and footpads.

reticulospinal tract [rə-tik"u-lo-spi'nəl] spinal cord tract originating in the reticular formation in the brainstem and impinging on motor fibers arising in the spinal cord.

reticulum [rə-tik'u-ləm] pl. *reticula* [L.] 1. a small network, especially a protoplasmic network in cells. 2. reticular tissue. 3. the smallest, most cranial compartment of the compound stomach of ruminants, lined with mucous membrane folded into a hexagonal pattern. Called also honeycomb. It communicates cranially with the esophagus and caudally with the rumen.

r. (1) cell see **reticular**[1] cells.

r. (1) cell leukemia see malignant **histiocytosis**.

r. (1) cell sarcoma see cutaneous **lymphosarcoma**.

endoplasmic r. (1) an ultramicroscopic organelle of nearly all higher plant and animal cells, consisting of a system of membrane-bound cavities in the cytoplasm, occurring in two types: granular or *rough*-surfaced (RER), bearing large numbers of ribosomes on its outer surface, and concerned mainly with protein production, and agranular or *smooth*-surfaced (SER), concerned with lipid and glycogen synthesis and cholesterol metabolism. See also sarcoplasmic endoplasm (below).

granular r. (1) rough-surfaced endoplasmic reticulum.

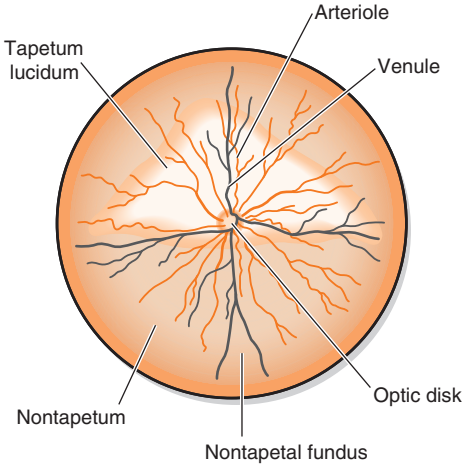
sarcoplasmic r. (1) a form of agranular reticulum in the sarcoplasm of striated muscle, comprising a system of smooth-surfaced tubules surrounding each myofibril.

transmissible r. (1) cell tumor see canine transmissible **venereal** tumor.

transmissible venereal r. (1) cell tumor see canine transmissible **venereal** tumor.

retiform [re'tĭ-form] reticular.

retina [ret'ĭ-nə] the innermost of the three tunics of the eye, surrounding the vitreous body in the ocular fundus, and continuous posteriorly with the optic nerve and anteriorly with the ciliary body. The retina is composed of two embryologically distinct parts: a neurosensory part that is sensitive to light, and the retinal epithelium immediately outer to the neurosensory retina. The



R-10: Retina of the dog. From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

neurosensory retina is composed of nine layers, three of which are cellular - the light-sensitive rods and cones in the outer nuclear layer, the bipolar, Muller and amacrine cells in the inner nuclear layer, and the innermost ganglion cells whose axons form the optic nerve. See also **rod** (2) and **cone** (4).

silent r. syndrome obsolete term; replaced by sudden acquired **retinal** degeneration.

retinaculum [*ret"ĭ-nak'u-ləm*] pl. *retinacula* [L.] 1. a structure that retains an organ or tissue in place. 2. an instrument for retracting tissues during surgery.

carpal r. an ambiguous term if used without qualification. If applied to a superficial transverse ligament passing obliquely across the palmar aspect of the carpus, completing the carpal tunnel, it is more properly known as the *flexor retinaculum* or, if applied to the superficial sheet of fibrous tissue loosely anchoring the extensor tendons to the dorsal surface of the carpus, then it is better known as the *extensor retinaculum*.

hock r. one of three transverse ligamentous bands across the dorsal aspect of the hock, holding the digital extensor tendons in place (the proximal, middle and distal extensor retinacula).

r. morgagni a ridge formed by the coming together of segments of the ileocecal valve. Called also frenulum of ileocecal valve.

patellar r. medial and lateral patellar ligaments.

r. tendinum a tendinous restraining structure, such as an annular ligament.

retinal [*ret'ĭ-nəl*] 1. pertaining to the retina. 2. the aldehyde of retinol, having vitamin A activity. One isomer (11-*cis*-retinal) combines with the photoreceptor pigment in the retinal rods (scotopsin) to form rhodopsin (or visual purple); another, all-*trans*-retinal, or visual yellow, results from the bleaching of rhodopsin by light, in which the 11-*cis*-form is converted to the all-*trans*-form. Retinal also combines with opsins in the retinal cones to form the pigments responsible for color vision.

central progressive r. atrophy (CPRA) used to describe a diverse group of canine retinal diseases characterized by an increasing accumulation of funduscopically visible brown spots in the central tapetal fundus, associated with retinal degeneration in the latter stages. Advancing knowledge suggests this is a group of diseases with highly variable etiology but exerting their effect principally on the retinal pigment epithelium. Therefore, the term retinal pigment epithelial dystrophy (RPED). Likely causes include genetic, vitamin E/selenium deficiency, and potentially hyperlipidemia. Day vision is affected first, followed by impairment, but not always blindness, in any situation.

r. degeneration deterioration of retinal function (typically with anatomic changes) leading to blindness if complete. Characterized by reduced vision, mydriasis, tapetal hyper-reflectivity (in tapetal animals), retinal vascular attenution (in angiotic retinae) and a mottled funduscopic appearance due to pigment migration (in melanotic animals). Can be due to a large variety of inflammatory and noninflammatory causes. See also progressive retinal atrophy (below), bright **blindness**, **taurine** deficiency, **retinopathy**, and sudden acquired retinal degeneration (below).

r. detachment see retinal **detachment**.

R-11: Multifocal retinal dysplasia in an English springer spaniel. From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.

r. dialysis, r. disinsertion separation of the sensory retinal layers from the retinal pigment epithelium and tearing of the neurosensory retina away from the ciliary body at the ora ciliaris retinae. When complete, results in the neurosensory retina being draped over the optic nerve head.

r. dysplasia anomalous development of the retina. May be congenital or occur in the immediate postnatal period during which retinal development continues in many species. May be inherited, or occur as a result of intraocular inflammation due to viral infections such as feline panleukopenia, bluetongue, bovine virus diarrhea and canine herpesvirus during this embryologically critical period.

r. ganglion cell layer the layer of the retina which contains ganglion cell bodies.

r. hemorrhages occur in association with many systemic diseases, such as hypertension, hyperviscosity, vasculitis and coagulopathies, as well as local retinitis.

inner r. nuclear layer the layer of the retina which contains the cell bodies of bipolar, amacrine and Muller cells.

light-induced r. degeneration a phototoxic degeneration caused by excessive exposure to continuous light. Most frequently described in laboratory rodents when normal light:dark cycle equipment fails or is not installed.

r. nerve fiber layer retinal layer of axonal processes of the ganglion cells as they approach the optic papilla where they exit the eye as the optic nerve.

r. nuclear layer see inner retinal nuclear layer (above) and outer retinal nuclear layer (below).

outer r. nuclear layer the layer of the retina which contains the cell nuclei of the photoreceptor cells.

r. photoreceptor layer the retinal layer which contains the inner and outer segments (modified neuronal processes) of the rod and cone photoreceptors. Called also the visual cell layer or rod and cone layer. The photoreceptor nuclei lie in a more inner layer named the outer nuclear layer.

r. pigment epithelium a single layer of flat to polygonal cells that form the outermost of the ten retinal layers and the only non-neurosensory layer. Has multiple functions including nutrition and physical support of the outer neurosensory retina, contribution to the blood-retinal barrier, recycling of 'bleached' photopigments bleached during the conversion of light to electrical energy by the sensory retina, phagocytosis of photoreceptor outer segments and reduction of light scatter (when melanotic).

r. plexiform layers those retinal layers which consist of a network of cell processes of adjacent retinal cells; the inner plexiform layer lies between the ganglion cell and inner nuclear layer; the outer plexiform layer lies between the inner and outer nuclear layers.

progressive r. atrophy (PRA) a group of inherited, degenerative diseases of the retina, occurring most commonly in dogs but also in many other species characterized by progressive, noninflammatory degeneration (if retinal development is complete prior to deterioration) or dysplasia (if deterioration begins prior to retinal maturity) of the retina. Specific features, such as age of onset, pattern of degeneration, ultrastructural and biochemical changes, and gene affected vary among the many breeds in which the disease is found. Night blindness followed by a loss of day vision are clinical signs common to most. There may also be an associated cataract formation. See also central progressive retinal atrophy (above), **cone** dysplasia, **rod**–cone dysplasia. Called also progressive retinal degeneration.

progressive r. degeneration (PRD) see progressive retinal atrophy (above).

r. separation see retinal **detachment**.

sudden acquired r. degeneration (SARD) a peracute, acquired, permanent and complete photoreceptor degeneration of mature dogs in which the funduscopic appearance is unchanged for 6-8 weeks after blindness occurs. In a majority of patients, signs consistent with hyperadrenocorticism are noted; these may be simultaneous with or ocur within a few weeks prior to or after the onset of blindenss and are typically transient. The cause is unknown.

retinene an ocular pigment derived from vitamin A and formed by the bleaching action of light on rhodopsin. It occurs in two forms: retinene$_1$ is **retinal** (2), and retinene$_2$ is **dehydroretinal**.

retinitis [*ret"ĭ-ni'tis*] inflammation of the retina. Occurs in association with many viral infections, particularly canine distemper, scrapie, classical swine fever (hog cholera) and rabies. Typically also

VetBooks.ir

causes inflammation of the neighboring choroid and so is termed retinochoroiditis.

r. pigmentosa a group of diseases in humans, frequently hereditary, marked by progressive retinal atrophy, attenuation of retinal vessels, and clumping of the pigment, with contraction of the field of vision. The veterinary equivalent is sometimes considered to the group of retinal degenerations collectively known as progressive **retinal** atrophy.

retinoblastoma [*ret"ĭ-no-blas-to'mə*] a tumor arising from retinal cells. Rarely if ever described in non-human animals.

retinochoroiditis [*ret"ĭ-no-kor-oi-di'tis*] inflammation of the retina and choroid with retinal inflammation being the predominant or initial sign. Compare with .**chorioretinitis**.

retinoic acid [*ret"ĭ-no'ik*] form of vitamin A containing a carboxylic acid group, derived from retinal. See **tretinoin**.

retinoid [*ret'ĭ-noid*] 1. resembling the retina. 2. any derivative of the compound retinol.

retinol [*ret'ĭ-nol*] vitamin A_1; the alcohol form of vitamin A found in mammals, which is reversibly dehydrogenated by enzymatic action into its aldehyde, **retinal** (2).

retinomalacia [*ret"ĭ-no-mə-la'shə*] softening of the retina.

retinopapillitis [*ret"ĭ-no-pap"ĭ-li'tis*] inflammation of retina and optic disk (papilla).

retinopathy [*ret"ĭ-nop'ə-the*] any noninflammatory disease of the retina.

diabetic r. retinal manifestations of diabetes mellitus, including microaneurysms and punctate exudates, occur in dogs but are often obscured by cataract formation.

hypertensive r. that associated with hypertension; seen in dogs and cats. There is sudden loss of vision, retinal hemorrhages and detachment, and sometimes glaucoma.

nutritional r. may occur with deficiency of vitamin A or E, or **taurine**.

senile r. retinal thinning, cyst formation, atrophy and fibrosis occur in aged dogs and horses.

toxic r. see bright **blindness**.

retinopexy [*ret'ĭ-no-pek"se*] a procedure utilizing laser or cryotherapy to cause adhesion of the retina and underlying choroid. Can be done to correct, prevent or limit progression of retinal detachment.

retinoschisis [*ret"ĭ-nos'kĭ-sis*] splitting of the retina.

retinoscope [*ret'ĭ-no-skōp"*] skiascope; an instrument used in retinoscopy.

retinoscopy [*ret"ĭ-nos'kə-pe*] an objective method of investigating, diagnosing and evaluating refractive errors of the eye, by projection of a beam of light into the eye and comparison of the movement of the illuminated area on the retina surface and of the refraction by the eye of the emergent rays. Called also pupilloscopy, shadow test, skiametry and skiascopy.

retinosis [*ret"ĭ-no'sis*] any degenerative, noninflammatory condition of the retina.

retinotopic [*ret"ĭ-no-top'ik*] relating to the organization of the visual pathways and visual area of the brain.

retinyl ester [*ret'ĭ-nəl*] esters of retinol, the alcohol form of vitamin A.

retort a globular, long-necked vessel used in distillation.

Retortamonas [*re"tor-tam'o-nas*] a genus of nonpathogenic, pyriform, protozoan parasites in the family Retortamonadidae (Sarcomastigophora).

R. caviae found in the cecum of guinea pigs.

R. cuniculi found in the cecum of rabbits.

R. intestinalis found in humans and nondomesticated primates.

R. ovis found in sheep.

retothelium [*re"to-the'le-əm*] the layer of cells covering a reticular tissue.

retractile [*re-trak'til*] capable of being drawn back.

retraction [*re-trak'shən*] the act of drawing back, or condition of being drawn back.

retractor 1. an instrument for holding open the edges of a wound or edges of a fissure such as the eyelids. 2. a muscle that retracts.

flexible r. a simple surgical instrument made of metal, usually copper, and shaped like a simple spatula or tongue-depressor. It can be bent into any shape so as to get into tricky sites to hold back tissues. Usually bent into a hook shape.

Weitlaner r. see **Weitlaner retractor**.

retrieval basket [*re-tre'vəl*] an instrument used with endoscopy which permits removal of small, round and smooth foreign bodies, usually from the gastrointestinal tract.

retriever a type of hunting dog used for recovering the shot bird, often from water; includes the specific breeds, Chesapeake Bay, Curly-coated, Flat-coated, Golden and Labrador retrievers, and Wire-haired pointing griffon, but various spaniels may also perform retrieving duties in the field.

retr(o)- word element. [L.] *behind, backward*.

retroaction [*ret"ro-ak'shən*] action in a reversed direction; reaction.

retroauricular [*ret"ro-aw-rik'u-lər*] behind the auricle of the ear.

retrobulbar [*ret"ro-bul'bər*] 1. behind the pons. 2. behind the eye.

r. block see retrobulbar **block**.

r. neuropathy see ***Dryopteris***.

retrocecal [*ret"ro-se'kəl*] behind the cecum.

retrocervical [*ret"ro-sur'vĭ-kəl*] behind the cervix uteri.

retrocession [*ret"ro-sesh'ən*] a going backward; backward displacement.

retrocochlear [*ret"ro-kok'le-ər*] 1. behind the cochlea. 2. denoting the eighth cranial nerve and cerebellopontine angle as opposed to the cochlea.

retrocolic [*ret"ro-kol'ik*] behind the colon.

retrocollic [*ret"ro-kol'ik*] pertaining to the dorsum of the neck; nuchal.

retrocursive [*ret"ro-kur'siv*] marked by stepping backward.

retrodeviation [*ret"ro-de"ve-a'shən*] a general term including retroversion, retroflexion, retroposition, etc.

retrodisplacement [*ret"ro-dis-plās'mənt*] backward or posterior displacement.

retroesophageal [*ret"ro-ə-sof"ə-je'əl*] behind the esophagus.

r. right subclavian artery a vascular anomaly resulting in constriction of the esophagus in the newborn. See also vascular **ring**.

retroflexion [*ret"ro-flek'shən*] the bending of an organ so that its top is turned backward.

retrogasserian [*ret"ro-gə-sēr'e-ən*] pertaining to the sensory (dorsal) root of the trigeminal (gasserian) ganglion.

retrognathia [*ret"ro-nath'e-ə*] underdevelopment of the maxilla and/or mandible.

retrognathism [*ret"ro-nath'iz-əm*] a state of being affected by retrognathia.

retrograde [*ret'ro-grād*] going backward; retracting a former course; catabolic.

retrogression [*ret"ro-gresh'ən*] degeneration; deterioration; regression; return to an earlier, less complex condition.

retroinsular [*ret"ro-in'sə-lər*] behind the insula of the cerebral cortex.

retrolective data harvested from records already collected, usually for another purpose.

retrolental [*ret"ro-len'təl*] behind the lens of the eye.

r. fibroplasia a retinopathy of humans caused by exposure to high concentrations of oxygen at a young age; cats have been used as an experimental model of this disease.

retrolingual [*ret"ro-ling'gwəl*] behind the tongue.

retromammary [*ret"ro-mam'ər-e*] behind the mammary gland.

retromandibular [*ret"ro-man-dib'u-lər*] behind the lower jaw.

retromastoid [*ret"ro-mas'toid*] behind the mastoid process.

retromingent urinating backwards, e.g. cats, other Felidae, elephants. Such an undignified posture for these kings of beasts, perhaps accounting for their nocturnal proclivities.

retromorphosis [*ret"ro-mor-fo'sis*] retrograde metamorphosis.

retronasal [*ret"ro-na'zəl*] pertaining to the back part of the nose.

retro-ocular [*ret"ro-ok'u-lər*] behind the eye; more commonly called retrobulbar.

retro-orbital bleeding [*ret"ro-or'bĭ-təl*] a common method of obtaining blood from small rodents from the retro-orbital venous sinus/plexus via a thin pipette or capillary tube inserted through the medial canthus.

retroparotid [*ret"ro-pə-rot'id*] behind the parotid gland.

retroperistalsis [*ret"ro-per"ĭ-stawl'sis*] reverse peristalsis.

retroperitoneal [*ret"ro-per"ĭ-to-ne'əl*] behind or external or superficial to the peritoneum, especially the parietal peritoneum.

r. abscess characterized by fever and toxemia, chronic or intermittent colic in horses, weight loss and a positive paracentesis sample. See also **pelvic** abscess and **mesenteric** abscess.

r. perirenal cyst see feline **perirenal** cysts.

r. space see **retroperitoneum**.

VetBooks.ir

retroperitoneum [*ret"ro-per"ĭ-to-ne'am*] the retroperitoneal space; the space between the parietal peritoneum and the abdominal or pelvic wall.

retroperitonitis [*ret"ro-per"ĭ-to-ni'tis*] inflammation in the retroperitoneal space. In animals, occurs most often in association with migrating foreign bodies, particularly grass awns, and in bitches following spaying.

retropharyngeal [*ret"ro-fə-rin'je-əl*] behind the pharynx.

r. abscess see **pharyngeal** abscess.

r. lymph node abscess see **pharyngeal** abscess.

r. lymph node enlargement enlargement causes interference with respiration and swallowing. The principal sign is snoring. In large animals the glands are palpable via the oral cavity or inspected by fiberoptoscopic viewing. See also **pharyngeal** lymphadenopathy.

r. lymph nodes lymph nodes in the tissues in the dorsum of the pharynx.

r. lymphadenopathy see **pharyngeal** lymphadenopathy.

retropharyngitis [*ret"ro-far"in-ji'tis*] inflammation of posterior part of the pharynx.

retroplasia [*ret"ro-pla'zhə*] retrograde metaplasia; degeneration of a tissue or cell into a more primitive type. Called also anaplasia.

retropneumoperitoneography a radiograph taken of the abdomen after the injection of air or carbon dioxide into the retroperitoneal space to give better contrast.

retroposed [*ret'ro-pōzd*] displaced backward.

retroposition [*ret"ro-pə-zish'ən*] backward displacement.

retropulsion [*ret"ro-pul'shən*] a driving back, as of the fetal head during correction of a dystocia; performed manually or with a crutch during pauses between contractions and straining efforts.

retrorsine [*ret'ror-sin*] a pyrrolizidine alkaloid in *Crotalaria* spp.

retrospective [*ret"ro-spek'tiv*] said of data already collected or of events that have already occurred. Hence a retrospective **study** is a study of past events, in contradistinction to a prospective study.

retrotarsal [*ret"ro-tahr'səl*] behind the tarsal plate of the eyelid.

retrotransposon, retroposon [*ret"ro-tranz-po'zon*] a mobile sequence of DNA that transposes via a RNA intermediate.

retrouterine [*ret"ro-u'tər-in*] behind the uterus.

retroversion [*ret"ro-vur'zhən*] a turning backwards; as in surgically created deviation of the penis in the creation of a teaser bull.

retrovesical [*ret"ro-ves'ĭ-kəl*] behind the urinary bladder.

Retroviridae [*ret"ro-vir'ĭ-de*] a family of enveloped viruses, about 100 nm diameter with an icosahedral capsid enclosing the single-stranded RNA genome which is diploid, i.e. two copies per virion. There are two subfamilies: *Othoretrovirinae* and *Spumaretrovirinae*. See also the genera, ***Alpharetrovirus***, ***Betaretrovirus***, ***Gammaretrovirus***, ***Deltaretrovirus***, ***Epsilonretrovirus***, ***Lentivirus***, ***Spumavirus***.

retrovirus [*ret'ro-vi"rəs*] a member of the family ***Retroviridae***.

defective r. a virus unable to replicate independently; commonly the result of loss of part of the envelope gene when leukosis viruses acquire an oncogene. Propagation is achieved by coinfection with a leukosis virus able to provide the envelope for the defective virus.

endogenous r. one transmitted in germ-line DNA from an infected parent to offspring.

exogenous r. one transmitted horizontally.

rapidly transforming r. characterized by rapid tumor formation attributable to the v-*onc* gene which they carry.

slowly transforming r. weakly oncogencic after a long incubation period. They do not carry the v-*onc* gene.

Retzius striae [*ret'ze-oos*] incremental growth lines found in normal enamel of teeth.

revascularization [*re-vas"ku-lər-ĭ-za'shən*] the restoration of an adequate blood supply to a part by means of a blood vessel graft, as in aortocoronary bypass.

reverberation [*re-vur"ba-ra'shən*] an artifact in ultrasound imaging resulting from the production of spurious echoes which are caused by reflections at the skin–transducer interface or by bone or gas. See also **comet-tail**.

Reverchonia arenaria North American plant in the family Euphorbiaceae; contains an unidentified toxin which causes chronic liver damage.

Reverdin [*rĕ-ver-dă'*] pertaining to the Swiss surgeon, Jacques Louis Reverdin.

R's continuous suture see **lock-stitch suture pattern**.

R's needle a surgical needle with an eye that can be opened by means of a slide.

reversal [*re-vur'səl*] a turning or change in the opposite direction.

r. band band separating the osteoid seam in developing bone from the remaining osteoid tissue.

r. line basophilic cement lines in bone that are wavy rather than smooth and are an indication that the previous cellular activity at the site was resorptive. See also **resting** line.

reverse cholesterol transport process by which cholesterol is transported by high density lipoprotein from the peripheral tissues back to the liver for excretion from the body.

reverse genetics in contrast to classical genetics, which starts with identifying a phenotype and proceeds to find the genetic basis of the trait, reverse genetics targets particular gene(s), using methods such as antisense nucleic acids and site-directed mutagenesis, and observing the effects on the phenotype.

reverse T_3 [*re-vərs'*] 3,3′,5′-tri-iodothyronine, a product of deiodination of thyroxine with few biologic effects. Concentrations increase in nonthyroidal illness resulting in a decreased concentrations of T_4 and T_3. See **euthyroid** sick syndrome.

reverse transcriptase see reverse **transcriptase**.

reverse zoonosis infections transmitted from humans to animals.

reversed marker mirror images of letters and numbers for marking X-ray films that are to be viewed from the reverse.

reversed title for purposes of sorting data the titles of items are often set out in reversed form, e.g. brucellosis, bovine for bovine brucellosis.

reversion [*re-vur'zhən*] 1. a returning to a previous condition; regression. 2. in genetics, inheritance from some remote ancestor of a character that has not been manifest for several generations.

revulsant revulsive.

revulsion [*re-vul'shən*] the drawing of blood from one part to another, as in counterirritation; the diminution of morbid action in any part of the body by irritation in another.

revulsive 1. causing revulsion. 2. an agent causing revulsion; a counterirritant.

reward a specific, intuitive drive in all animals; utilized in most animal training systems.

rewarming the restoration of normal body temperature in the management of cases of hypothermia. Several methods are used: (1) passive, which relies on retention of basal heat, (2) active, which employs a heat source externally or internally ('core') with lavage, irrigation, dialysis or extracorporeal blood heating.

Rex 1. breeds of cats derived from several mutants with a short, wavy or curly haircoat, including the whiskers. The breeds have a very distinctive body silouette with long, thin legs, thin body and very large ears. Many colors are recognized and there are several strains, each named after the origin of one of founding mutants, e.g. Cornish rex, Devon rex. The unusual coat has been linked with a specific genetic trait and virtually any variety of cat can be 'rexed'. Sometimes called 'Poodle cats'. The breed is affected by hereditary hypotrichosis. The Devon rex is affected by a hereditary myopathy. See also **Selkirk rex**. 2. a type of rabbit with short guard hairs in their coats which do not protrude above the level of their undercoat, producing a short, plush coat. As in cats, this characteristic can be produced in many different colored varieties or breeds. The Castor Rex was the original variety introduced into the USA. It was a chestnut-brown agouti color. Other varieties are 'rexed' versions of the normal breeds. Variation can also be found in the character of the coat. The rough-coated varieties are the Astrex, which have a wavy coat, and the Oppossum coat, which have curly guard hairs.

Reynaud body nodular proliferations of Schwann cells; common finding in normal horses.

Reynold's number a dimensionless number allotted empirically to the circumstances in which turbulence occurs in fluids flowing through vessels. It takes into account the velocity of the flow, the diameter of the vessel, and the density and viscosity of the fluid. Used to explain the development of heart murmurs as the potential for turbulent flow increases as velocity of flow increases and/or viscosity and density decrease. A sudden increase or decrease in stream bed diameter also increases the

VetBooks.ir

likelihood of turbulent flow.

$$\text{Reynold's number} = \frac{\text{radius} \times \text{velocity} \times \text{density}}{\text{viscosity}}$$

Rf chemical symbol, *rutherfordium;* rheumatoid factor.
RFFIT rapid fluorescent focus inhibition test for rabies.
RFLP restriction fragment length polymorphism.
Rg chemical symbol, *roentgenium*.
RH releasing hormone.
Rh chemical symbol, *rhodium*.
Rhabdias a genus of nematodes which cause verminous pneumonia in reptiles and amphibians; they may also be found in their body cavities. Includes *R. fuscovenosa*.
rhabditic dermatitis [*rab-dit'ik*] see pelodera **dermatitis**.
rhabditiform esophagus [*rab-dit'ĭ-form*] an anterior esophagus shaped like a club connecting through a narrow neck (isthmus) to a bulbous posterior part (corpus); all free-living nematodes have an esophagus of this type.
Rhabditis [*rab-di'tis*] a genus of minute nematodes found mostly in damp earth but they may temporarily invade damaged skin; members of the family Rhabditidae.
R. axei not recorded as pathogenic.
R. bovis causes bovine parasitic otitis and secondary myiasis.
R. clavopapillata, *R. macrocerca* found as a contaminant on the hair of dogs and monkeys.
R. gingivalis found in a granuloma of the gum in a horse. See also ***Halicephalobus gingivalis***, ***Micronema delatrix***.
R. strongyloides see ***Pelodera strongyloides***.
rhabd(o)- word element. [Gr.] *rod, rod-shaped*.
rhabdoid [*rab'doid*] resembling a rod; rod-shaped.
rhabdomyoblastoma [*rab"do-mi"o-blas-to'mə*] rhabdomyosarcoma.
rhabdomyolysis [*rab"do-mi-ol'ĭ-sis*] disintegration of striated muscle fibers with excretion of myoglobin in the urine.
equine r. exertional rhabdomyolysis (below).
exertional r. common in horses where it is characterized by episodes of muscle cramping, stiffness of gait, sweating, exercise intolerance, reluctance to move and muscle-cell damage that develop after mild to moderate exercise. It can result in recumbency and immobility. Also occurs in sheep and cattle after violent physical exercise, in racing greyhounds and as capture or transport myopathy in deer and other wildlife. Called also recurrent exertional myopathy, transient exertional myopathy, azoturia (rarely), Monday morning disease, tying up syndrome, capture myopathy. See also equine polysaccharide storage **myopathy**, atypical **myopathy**.
hypoxic r. see exertional rhabdomyolysis (above).
rhabdomyoma [*rab"do-mi-o'mə*] a tumor containing striated muscle fibers.
rhabdomyomatosis [*rab"do-mi"o-mə-to'sis*] a non-neoplastic, nodular glycogenic infiltration of myocardial cells, seen in guinea pigs.
rhabdomyosarcoma [*rab"do-mi"o-sahr-ko'mə*] a highly malignant tumor arising in striated muscle or in embryonal mesenchymal cells, and exhibiting differentiation along rhabdomyoblastic lines, including but not limited to the presence of cells with recognizable cross striations.
rhabdosarcoma [*rab"do-sahr-ko'mə*] rhabdomyosarcoma.
Rhabdoviridae [*rab"do-vir'ĭ-de*] a family in the order *Mononegavirales* that are bullet-shaped, enveloped viruses with a single-strand negative sense RNA genome and a helical nucleocapsid. Three genera, members of which cause disease in animals are *Vesiculovirus*, which contains vesicular stomatitis virus, *Lyssavirus*, which contains rabies virus, *Ephemerovirus*, which contains bovine ephemeral fever virus and *Norvirhabdovirus*, which contains the fish rhabdoviruses that cause viral hemorrhagic septicemia, infectious hemopoietic necrosis, spring viremia of carp.
rhabdovirus [*rab'do-vi"rəs*] a member of the family ***Rhabdoviridae***.
rhachi- for words beginning thus, see those beginning *rachi-*.
Rhadinovirus a genus in the *Gammaherpesvirinae* subfamily, members of which cause disease in humans (Kaposi's sarcoma), chimpanzees and baboons.
rhagades [*rag'ə-dēz*] fissures, cracks or fine scars in the skin, especially such lesions around the mouth or other regions subjected to frequent movement.
Rhamnus [*ram'nəs*] a genus of small trees in the family Rhamnaceae, known as buckthorns, all of which contain glycosides from which anthraquinone, a purgative, can be prepared. Includes *R. cathartica* (common or purging buckthorn), *R. frangula* (*Frangula alnus*, alder buckthorn), *R. purshiana* (cascara buckthorn).
rhamphotheca beak, as borne by birds; made of hard keratinized epidermis.
rhaphe raphe.
Rhaponticum repens a thistle in the plant family Asteraceae; one cause of equine **nigropallidal encephalomalacia**. Called also *Acroptilon repens*, *Centaurea repens*, Russian knapweed, creeping knapweed, hard heads, hardhead thistle, blue weed, Russian centaurea.
Rhazya stricta an African plant in the family Apocynaceae; poisons sheep. Called also harmal.
RHDV rabbit hemorrhagic disease virus.
rhea a large, flightless, ostrich-like bird found in South America. See also **ratite**.
rhegma [*reg'mə*] a rupture, rent or fracture.
rhegmatogenous [*reg"mə-toj'ə-nəs*] arising from a rhegma or tear in rhegmatogenous detachment of the retina where a retinal tear permits vitreous to dissect between the neurosensory retina and the retinal pigment epithelium.
rhenium (Re) [*re'ne-əm*] a chemical element, atomic number 75, atomic weight 186.2. See Table 4.
rheo- word element. [Gr.] *electric current, flow* (as of fluids).
rheobase [*re'o-bās*] the minimum electric current necessary to produce stimulation.
rheology [*re-ol'ə-je*] the science of the deformation and flow of matter, such as the flow of blood through the heart and blood vessels.
rheostosis [*re"os-to'sis*] a condition of hyperostosis marked by the presence of streaks in the bones; melorheostosis.
rheotaxis [*re"o-tak'sis*] orientation of an organism in a stream of liquid, with its long axis parallel with the direction of flow, designated negative (moving in the same direction) or positive (moving in the opposite direction).
rhestocythemia the occurrence of broken-down erythrocytes in the blood; obsolete.
rheum [*r m*] any watery or catarrhal discharge.
Rheum rhaponticum culinary rhubarb, member of plant family Polygonaceae; the leaves can cause oxalate poisoning if fed in large amounts. Called also *Rheum* x *hybridum*, rhubarb.
rheumarthritis rheumatoid arthritis.
rheumatic [*roo-mat'ik*] pertaining to or affected with rheumatism.
rheumatoid [*roo'mə-toid*] resembling rheumatism.
r. arthritis see rheumatoid **arthritis**.
r. factor antibodies, particularly IgM but also IgG, that are directed against antigenic determinants on the Fc region of other immunoglobulins. When the immunoglobulin binds to antigen, changes occur in the folding of the protein of the Fc region such that new, 'non-self' antigenic determinants are exposed and it is to these that rheumatoid factors, i.e. other antibodies, are directed.
rheumatoid-like arthritis rare disease in mostly toy and small breeds of dogs characterized by episodes of anorexia, depression, fever, generalized or shifting lameness and periarticular swelling.
rhexis [*rek'sis*] the rupture of a blood vessel or of an organ.
rhinal [*ri'nəl*] pertaining to the nose.
rhinalgia [*ri-nal'jə*] pain in the nose.
Rhinanthus a northern hemisphere plant genus in the family Scrophulariaceae, the members of which contain sufficient toxic cardiac glycosides to cause poisoning but are not recorded as having caused clinical illness in animals. Called also yellow rattle.
rhinencephalon [*ri"nən-sef'ə-lon*] 1. the part of the brain once thought to be concerned entirely with olfactory mechanisms, including olfactory nerves, bulbs, tracts and subsequent connections (all olfactory in function) and the limbic system (not primarily olfactory in function); homologous with olfactory portions of the brain in lower animals. 2. one of the parts of the embryonic telencephalon.
rhinesthesia the sense of smell.
rhinion [*rin'e-on*] the lower end of the suture between the nasal bones.
rhinitis [*ri-ni'tis*] inflammation of the mucous membrane of the nose. It may be mild and chronic, or acute. There are signs of

wheezing, sneezing and respiratory stertor at all levels. There is a strong nasal discharge which may be serous to purulent.
allergic r., anaphylactic r. any allergic reaction of the nasal mucosa, occurring perennially (nonseasonal allergic rhinitis) or seasonally.
atrophic r. see **atrophic** rhinitis.
bovine atopic r. see **enzootic** nasal granuloma.
catarrhal r. the common form of rhinitis with a transitory catarrhal discharge.
familial allergic r. a rarely recorded disease of cattle.
fibrinous r. rhinitis with development of a false membrane.
hypertrophic r. that with thickening and swelling of the mucous membrane.
inclusion body r. see **inclusion** body rhinitis.
membranous r. chronic rhinitis with a membranous exudate.
necrotic r. see **necrotic** rhinitis.
parasitic r. see ***Pneumonyssoides caninum***.
polypous r. chronic rhinitis associated with polyps in the nasal cavity.
pseudomembranous r. coagulated discharge clings to the mucosa like a membrane but can be peeled off without leaving a mucosal lesion.
purulent r. chronic rhinitis with formation of pus.
vasomotor r. 1. nonallergic rhinitis in which transient changes in vascular tone and permeability (with the same symptoms of allergic rhinitis). 2. any condition of allergic or nonallergic rhinitis, as opposed to infectious rhinitis.
rhino horn the radiographic appearance of calcified periosteum stripped caudal to a femoral fracture.
rhin(o)- word element. [Gr.] *nose, noselike structure*.
rhinoantritis [*ri"no-ən-tri'tis*] inflammation of the nasal cavity and maxillary sinus.
rhinocanthectomy [*ri"no-kan-thek'tə-me*] rhinommectomy; excision of the medial canthus of the eye.
rhinoceros an odd-toed ungulate in the family Rhinocerotidae of the order Perissodactyla, with a massive size, thick, armourplate-like skin and one or two horns low down in the middle of the face. They are herbivorous, partly nocturnal, unpredictable and aggressive. Includes *Diceros bicornis* (black rhino), *Ceratotherium simum* (white rhino), *Dicerorhinus sumatrensis* (Sumatran rhino) and *Rhinoceros unicornis* (Indian or one-horned rhino).
rhinocheiloplasty [*ri"no-ki'lo-plas"te*] plastic surgery of the nose and lip.
Rhinocladiella [*ri"no-klad"e-el'ə*] a genus of fungi responsible for chromomycosis.
rhinocleisis obstruction of the nasal passage.
rhinodacryolith a concretion in the nasolacrimal duct.
Rhinoestrus [*ri-nes'trəs*] a genus of flies, resembling *Oestrus* spp., and obligate parasites of *Equus* spp.
R. purpureus larvae parasitize larynx and nasal sinuses of Equidae. Called also Russian gad fly.
rhinogenous [*ri-noj'ə-nəs*] arising in the nose.
rhinograph [*ri"no-graf*] a contrast radiograph of the nasal cavity.
rhinolaryngitis [*ri"no-lar"in-ji'tis*] inflammation of the mucosa of the nose and larynx.
rhinolaryngoscope [*ri"no-lə-ring'gə-skōp*] a long, rigid instrument with a lamp at the tip and a built-in optical system enabling the operator to view the interior of the upper respiratory tract. Largely replaced by the fiber-endoscope.
rhinolaryngoscopy [*ri'no-lar"ing-gos'kə-pe*] the technique of use of the rhinolaryngoscope.
rhinolith [*ri'no-lith*] a nasal calculus. See **rhinolithiasis**.
rhinolithiasis [*ri"no-li-thi'ə-sis*] a condition associated with formation of rhinoliths. Occurs in avian species, particularly the African grey parrot; formed from mucous and debris within the nasal cavity. Birds show nasal discharge and swelling, facial discomfort and sneezing.
rhinologist [*ri-nol'ə-jist*] a specialist in rhinology.
rhinology [*ri-nol'ə-je*] the sum of knowledge about the nose and its diseases.
rhinomanometer [*ri"no-mə-nom'ə-tər*] a manometer used in rhinomanometry.
rhinomanometry [*ri"no-mə-nom'ə-tre*] measurement of the air flow and pressure within the nose during respiration; nasal resistance or obstruction can be calculated from the figures obtained.
rhinometer [*ri-nom'ə-tər*] an instrument for measuring the nose or its cavities.
rhinommectomy [*ri"no-mek'tə-me*] excision of the medial canthus of the eye.
rhinomycosis [*ri"no-mi-ko'sis*] fungal infection of the nasal mucosa.
rhinonecrosis [*ri"no-nə-kro'sis*] necrosis of the nasal bones.
Rhinonyssus a genus of mites which parasitize birds without being important pests.
R. rhinolethrum found in ducks and geese.
rhinopathy [*ri-nop'ə-the*] any disease of the nose.
rhinopharyngitis [*ri"no-far"in-ji'tis*] inflammation of the nasopharynx.
rhinophore a nasal cannula to facilitate breathing.
rhinophycomycosis [*ri"no-fi"ko-mi-ko'sis*] a fungal disease of humans caused by *Entomophora coronata*, marked by formation of large polyps in the subcutaneous tissues of the nose and paranasal sinuses; orbital involvement and unilateral blindness may follow. Cerebral involvement is common.
rhinoplasty [*ri'no-plas"te*] plastic surgery of the nose.
rhinopneumonitis [*ri"no-noo"mo-ni'tis*] inflammation of the mucosae of the nasal cavities and the lungs.
equine viral r. see **equine** viral rhinopneumonitis.
rhinopolypus [*ri"no-pol'i-pəs*] a nasal polyp.
rhinorrhagia [*ri"no-ra'ja*] nosebleed; see **epistaxis**.
rhinorrhea [*ri"no-re'ə*] the free discharge of a thin nasal mucus.
cerebrospinal r. discharge of cerebrospinal fluid through the nose, usually due to skull fracture.
rhinosalpingitis [*ri"no-sal-pin-ji'tis*] inflammation of the mucosa of the nose and eustachian (pharyngotympanic, auditory) tube.
rhinoscope [*ri'no-skōp*] a speculum or rigid endoscope used for examination of the nasal cavity.
rhinoscopy [*ri-nos'kə-pe*] examination of the nose with a speculum, through either the anterior nares or the nasopharynx.
rhinosinusitis [*ri"no-si"nəs-itis*] inflammation of the nasal cavity and sinuses. Common in cats, sometimes initiated by infection with feline herpesvirus-1 (rhinotracheitis virus), but complicated by secondary bacterial and mycoplasma infections. There is chronic nasal discharge, stertor, and sneezing. With chronicity, there is lysis of turbinates and involvement of the middle ear.
rhinosporidiosis [*ri"no-spor-id"e-o'sis*] disease caused by *Rhinosporidium seeberi*, mainly in Africa and Asia, marked by granulomatous rhinitis with large polyps on the mucosa of the posterior nares of horses, dogs and cattle. The organisms, originally thought to be fungi, but now classified in the class *Mesomycetozoea*, can be found in the polyps. They cause interference with respiration and noisy breathing.
Rhinosporidium seeberi [*ri"no-spor-id'e-əm se'bər-i*] a eukaryotic genus in the class *Mesomycetozoea* that causes **rhinosporidiosis** of horses and cattle.
rhinotomy [*ri-not'ə-me*] incision into the nose.
rhinotracheitis [*ri"no-tra"ke-i'tis*] a combined inflammation of the mucosae of the nasal cavities and the trachea, the sort of lesion encountered in viral infections of the upper respiratory tract or in cattle maintained in a dusty environment such as a feedlot.
canine viral r. see **kennel cough**.
dust r. steers in a feedlot fed on a finely chopped ration develop a syndrome of cough, nasal and ocular discharge but without signs of fever or toxemia.
feline viral r. (FVR) an acute upper respiratory infection of cats, caused by feline herpesvirus. Sneezing, coughing, ocular and nasal discharges, and often chemosis, keratitis and corneal ulceration are the main signs. Occasionally there is fatal pneumonia or generalized infection in young kittens. Most cats recovered from infection become lifelong carriers of the virus, with shedding precipitated by stress. See also **feline** viral respiratory disease complex.
infectious bovine r. (IBR) see **infectious** bovine rhinotracheitis.
turkey r. see **turkey** rhinotracheitis.
rhinotracheitis virus see feline viral **rhinotracheitis**, **infectious** bovine rhinotracheitis.
Rhinovirus [*ri'no-vi"rəs*] a genus in the family ***Picornaviridae***. Rhinoviruses cause common colds in humans and a similar disease in cattle.
rhinovirus [*ri'no-vi"rəs*] a member of the genus *Rhinovirus*.
bovine r. some isolates cause nasal discharge, cough, dyspnea and fever; others appear to be non-pathogenic.

VetBooks.ir

R-12: *Rhipicephalus sanguineus* male (left) and female (right).
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

VetBooks.ir

Rhipicentor a genus of ticks in the family Ixodidae that resemble *Dermacentor* spp.
R. bicorinis, R. nuttalli found on a wide range of wild and domesticated animals.
Rhipicephalus [*ri"pĭ-sef'ə-ləs*] a genus of ticks in the family Ixodidae.
R. appendiculatus a three-host tick found on most animal species. Called also brown ear tick. Transmits *Theileria parva*, *Babesia* spp. and other protozoan and viral diseases including Nairobi sheep disease and louping ill. It is the principal vector of East Coast fever.
R. ayrei transmits *Theileria parva*.
R. bursa transmits *Babesia*, *Theileria*, *Anaplasma*, *Rickettsia*, *Anaplasma*, *Coxiella* spp.
R. capensis a three-host tick, parasitic on cattle; transmits East Coast fever.
R. evertsi a two-host tick; transmits *Theileria*, *Babesia*, *Borrelia*, *Rickettsia* spp. Called also red-legged tick.
R. jeanelli transmits *Theileria parva*.
R. neavei transmits *Theileria parva*.
R. pulchellus transmits Nairobi sheep disease virus and *Theileria parva*.
R. sanguineus a three-host tick, mainly a parasite of dogs but occurs on all species of mammals and birds. It transmits *Anaplasma*, *Babesia*, *Borrelia*, *Coxiella*, *Pasteurella* and *Rickettsia* spp.
R. simus a three-host tick that transmits *Theileria parva*.
R. (Boophilus) annulatus a one-host tick which transmits *Babesia bigemina*. Called also North American tick.
R. (Boophilus) calcaratus a tick that transmits *Anaplasma marginale*, *Babesia bigemina* and *B. berbera*.
R. (Boophilus) decoloratus a one-host tick that transmits *Anaplasma marginale*, *Babesia bigemina*, *B. ovis*, *B. trautmanni* and *Borrelia theileri*.
R. (Boophilus) microplus a one-host tick that transmits *Anaplasma marginale*, *Babesia bovis*, *B. bigemina* and *Coxiella burnetti*.
rhiz(o)- word element. [Gr.] *root*.
Rhizoctonia leguminicola [*ri-zok-to'ne-ə*] a fungus of clover hay which causes profuse salivation, lacrimation, lameness, frequent urination, bloat and diarrhea in sheep, cattle and horses. The toxic agent is slaframine, an indolizidine alkaloid. Also produces swainsonine.
rhizoid [*ri'zoid*] resembling a root; said of hyphae produced by fungi which infiltrate the substrate.
rhizolysis [*ri-zol'ə-sis*] interruption of spinal nerve roots by coagulation with radiofrequency waves.
rhizome [*ri'zōm*] an underground plant stem that develops roots and produces leaf-bearing shoots above ground from nodes along its length, e.g. in bracken, *Sorghum halepense*.
rhizomelic [*ri-zo-mel'ik*] pertaining to the hips and shoulders (the roots of the limbs).

R-13: Cow with a fairly large number of attached *Rhipicephalus (Boophilus) annulatus* ticks.
From Bowman DD. Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

R-14: Rhodesian ridgeback showing the characteristic ridge.

rhizomeningomyelitis [*ri"zo-mə-ning"go-mi"ə-li'tis*] radiculomeningomyelitis; inflammation of the nerve roots, meninges and spinal cord.
Rhizomucor [*ri"zo-mu'kor*] a genus of fungi in the order *Mucorales*. See **mucormycosis**.
rhizoneure a nerve cell forming a nerve root.
Rhizopoda [*ri-zop'ə-də*] a class of protozoa of the phylum Sarcomastigophora, having pseudopodia and including the amebae.
rhizopodium [*ri"zo-po'de-əm*] pl. *rhizopodia* [Gr.] a filamentous pseudopodium, characterized by branching and anastomosis of the branches.
Rhizopus [*ri'zo-pəs*] a genus of fungi involved in opportunistic infections. Members of order *Mucorales* of the class *Zygomycetes*. One of its species *R. microsporus* is commonly found in gastric ulcers of pigs but it is thought that there is no etiological relationship. It also acts as a secondary invader in lesions of rumenitis initiated by lactic acid in carbohydrate engorgement in cattle. It is thought to cause bovine abortion.
rhizotomy [*ri-zot'ə-me*] division or transection of a nerve root, either within the spinal canal or outside it.
rho seventeenth letter in the Greek alphabet, P or ρ.
rhodamine [*ro'də-mēn*] a dye used in fluorescent staining techniques and fluorescence **microscopy**. It emits red light.
Rhode Island red a deep red-brown, dual-purpose poultry breed which lays a deep brown egg. It has a single comb, with clean yellow legs.
Rhodes grass see ***Chloris***.
Rhodesian ridgeback a large, very muscular dog with a short, light to red wheaten coat. The distinctive feature of the breed is a band (ridge) of hair over the spine, between the neck and hips, in which the hairs grow in the reverse direction. Called also African lion hound. The breed is predisposed to dermoid sinuses associated with the ridge.
Rhodesian sleeping sickness see ***Trypanosoma*** *rhodesiense*.
Rhodesian tick fever East Coast fever.
rhodium (Rh) [*ro'de-əm*] a chemical element, atomic number 45, atomic weight 102.905. See Table 4.
Rhodnius prolixus [*rod'ne-əs*] a very important triatomine bug (vector) of trypanosomiasis. Member of the insect family Reduviidae of assassin or kissing bugs.
rhod(o)- word element. [Gr.] *red*.
Rhodococcus equi [*ro"do-kok'əs*] gram-positive coccobacillus; causes corynebacterial pneumonia and abscesses in foals and cervical lymphadenitis in pigs. It can also cause abscessation in cattle and has been associated with suppurative infections in cats and

in immunocompromised humans. Previously called *Corynebacterium equi*. See also **rattles**.

***R. equi* pneumonia** a sporadically occurring pneumonia, endemic on some farms, of young foals caused by *Rhodococcus equi*. Characterized by fever, dyspnea, cough, grossly abnormal breath sounds with lack of nasal discharge, ill-thrift and diarrhea in some cases and death in most unless vigorously treated with antimicrobials. Called also rhodococcal pneumonia.

Rhododendron [*ro"də-den'drən*] plant genus in the family Ericaceae; contains grayanotoxin (andromedotoxin) which causes a syndrome of repeated swallowing, bloat, vomiting, abdominal pain and frequent defecation. The course is short and the outcome may be death from aspiration pneumonia, cardiac dysfunction or complete recovery. Called also azalea. The list of toxic plants includes *R. albiflorum*, *R. arboreum*, *R. campanulatum*, *R. cinnabarinum*, *R. indicum*, *R. macrophyllum* (*R. californicum*, California rose bay), *R. maximum* (great laurel), *R. molle, R. occidentale* (western azalea), *R. ponticum* (horticultural rhododendron).

rhodogenesis [*ro"do-jen'ə-sis*] regeneration of retinal rhodopsin after its bleaching by light.

Rhodomyrtus macrocarpa northern Australian plant in the family Myrtaceae; fruit causes permanent blindness and paralysis; called also finger cherry.

rhodophylaxis [*ro"do-fi-lak'sis*] supposed property of the retinal epithelium of facilitating rhodogenesis.

rhodopsin [*ro-dop'sin*] visual purple: a photosensitive purple-red chromoprotein in the retinal rods that is bleached to visual yellow (all-*trans*-retinal) by light, thereby stimulating retinal sensory endings. Lack of rhodopsin results in **night blindness**. Vitamin A is the primary source of rhodopsin.

Rhodotorula [*ro"do-tor'u-lə*] an imperfect yeast with several species, present in the environment and feces, a skin contaminant and occasional secondary infection of skin lesions, a contributor to the inflammatory response in parasitic otitis in cattle and an occasional cause of bovine mastitis.

rhoeadine an alkaloid in the red poppy (*Papaver rhoeas*) which can cause signs similar to those of opium poisoning.

rhombencephalon [*rom"ben-sef'ə-lon*] 1. the hindbrain, including the medulla oblongata, pons and cerebellum. 2. the most caudal of the three primary vesicles formed in embryonic development of the brain, which later divides into the metencephalon and the myelencephalon.

rhombic lip one of a pair of folds which develops to form the roof of the fourth ventricle.

rhombocoele [*rom'bo-sēl*] the terminal expansion of the canal of the spinal cord.

rhomboid [*rom'boid*] shaped like a rectangle that has been skewed to one side so that the angles are oblique.

Rhombosolea tapirina a genus of finfish in the family Pleuronectidae; a righteye flounder, native to southern Australia and New Zealand. Called also greenback flounder.

rhompa grass a *Phalaris* spp. hybrid grass.

rhonchus [*rong'kəs*] pl. *rhonchi* [L.] a rattling in the throat; also, a dry, coarse rale in the bronchial tubes, due to a partial obstruction. Suggests the presence of chronic inflammation accompanied by presence of small amounts of tenacious exudate.

rhubarb [*roo'bahrb*] see ***Rheum rhaponticum***.

Rhus plant genus in family Anacardiaceae; contains urushiols that cause dermatitis. Includes *Toxicodendron* spp.

rhythm [*rith'əm*] a measured movement; the recurrence of an action or function at regular intervals.

alpha r. a uniform rhythm of waves in the normal electroencephalogram.

beta r. a rhythm in the electroencephalogram consisting of waves smaller than those of the alpha rhythm, having an average frequency of 25 per second, typical during periods of intense activity of the nervous system. See also **electroencephalography**.

biological r's the cyclic changes that occur in physiological processes of living organisms; called also biorhythms. These rhythms are so persistent throughout the living kingdom that they probably should be considered a fundamental characteristic of life, as are growth, reproduction, metabolism and irritability. Many of the physiological rhythms occur in animals about every 24 hours (circadian rhythm). Examples include the peaks and troughs that are manifested in body temperature, vital signs, brain function and muscular activity. Biochemical analyses of urine, blood enzymes and plasma serum also have demonstrated rhythmic fluctuations in a 24-hour period. It has long been believed that the cyclic changes observed in plants and animals were totally in response to environmental changes and, as such, were exogenous or of external origin. This hypothesis is now being rejected by some chronobiologists who hold that the biological rhythms are intrinsic to the organisms, and that the organisms possess their own physiological mechanism for keeping time. This mechanism has been called the 'biological clock'.

R-15: Electrocardiogram showing normal sinus rhythm in a dog. From Darke P, Bonagura JD, Kelly DF, Color Atlas of Veterinary Cardiology. Mosby, 1995.

circadian r. see **circadian** rhythm.

circamensual r. that which occurs in cycles of about one month (30 days).

circannual r. the recurrence of a phenomenon in cycles of about one year.

circaseptan r. that which occurs in cycles of about 7 days (one week).

coupled r. heartbeats occurring in pairs, the second beat of the pair usually being a ventricular premature beat.

escape r. a heart rhythm initiated by lower centers when the sinoatrial node fails to initiate impulses, its rhythmicity is depressed, or its impulses are completely blocked.

gallop r. an auscultatory finding of three or four heart sounds, the extra sounds by convention being in diastole and related to atrial contraction (fourth sound, presystolic gallop), to early rapid filling of a ventricle with an altered ventricular compliance (protodiastolic gallop), or to concurrence of atrial contraction and ventricular early rapid filling (summation gallop).

idioventricular r. a series of ventricular escape complexes occuring at a regular rate.

infradian r. the regular recurrence in cycles of more than 24 hours, as certain biological activities which occur at such intervals, regardless of conditions of illumination.

nodal r. heart rhythm initiated in the specialized junctional tissue, i.e. the atrioventricular node and the main (His) bundle.

nyctohemeral r. a day and night rhythm.

pendulum r. alternation in the rhythm of the heart sounds in which the diastolic sound is equal in time, character and loudness to the systolic sound, the beat of the heart resembling the tick of a watch.

sinus r. normal heart rhythm originating in the sinoatrial node.

ultradian r. the regular recurrence in cycles of less than 24 hours, as certain biological activities which occur at such intervals, regardless of conditions of illumination.

ventricular r. the ventricular contractions which occur in cases of complete heart block.

rhythmic cycling hormone release pulsatile release of hormones like cortisol.

rhythmicity [*rith-mis'i-te*] in cardiology, the ability to beat, or the state of beating, rhythmically without external stimuli.

rhytidectomy [*rit"i-dek'tə-me*] excision of skin for elimination of wrinkles.

rhytidoplasty [*rit'i-do-plas"te*] plastic surgery for the elimination of wrinkles or skin folds, as around the face or vulva of some dogs.

rhytidosis [*rit"i-do'sis*] a wrinkling, as of the cornea.

RI reference interval.

RIA radioimmunoassay.

rib [*rib*] any one of the paired, curved, flattened or cylindrical bones, extending from the thoracic vertebrae to the ventral aspect of the trunk, forming the major part of the thoracic skeleton, and consisting of a dorsal bony part and a ventral cartilaginous part that may or may not articulate with the sternum. Typically 13 pairs in the dog, cat and ruminants, 18 pairs in horses and 14 or 15 pairs in the pig. Called also costa. See Table 10.

abdominal r's. ribs embedded within the ventral abdominal wall as occurs in some reptiles. Called also gastralia.

VetBooks.ir

asternal r's a rib whose ventral end does not meet the sternum. See also false ribs (below). Called also *costae asternales*, *costae spuriae*.
cervical r. a supernumerary rib arising from a cervical vertebra; they are rudimentary and of frequent occurence in birds.
r. contractor a strongly built device for pulling ribs together following retraction for surgical access to the thoracic cavity.
false r's the caudal ribs, not attached directly to the sternum but are attached to each other's sternal cartilage to form the costal arch. Called also *costae spuriae*.
floating r. a rib whose distal extremity is unattached to either an adjacent rib or to the sternum; usually the most caudal one or two, except in birds where the first two pairs of ribs may be free. There is usually one pair in dogs, cats and rabbits; 2 pairs in humans; none in the horse and ruminants and pigs, although occasionally the pig does sport one pair. Called also *costae fluctuantes*.
r. retractor heavy duty surgical instrument for separating ribs to allow surgeon better access to thoracic contents. See **finochietto rib spreader**.
slipping r. one whose attaching cartilage is repeatedly dislocated.
sternal r. true ribs articulating with the sternum. Called also true ribs, *costae verae*, *costae sternales*.
true r's the ribs attached to both vertebrae and sternum.
vertebral r's floating ribs.
vertebrocostal r's the false ribs that contribute to the costal arch.
vertebrosternal r's true ribs.

ribavirin [*ri"bə-vi'rin*] a broad-spectrum, non-interferon inducing, antiviral nucleoside.

ribbed-up see **well ribbed-up**.

ribbon malleable retractor [*rib'ən*] a surgical instrument made of malleable metal which can be molded to different shapes to assist in holding back tissues.

ribbons in harness horse terminology, reins.

ribbonwood see ***Idiospermum australiense***.

Ribeiroia a genus of alimentary tract flukes (digenetic trematodes) in the family Cathaemasiidae; found in fowl, domestic ducks and geese in which they cause proventricular inflammation and ulceration.
R. ondatrae found in fish-eating birds, chicken and geese.

riboflavin, riboflavine [*ri"bo-fla"vin*] vitamin B_2, a component of FAD and FMN, which are coenzymes or prosthetic groups for certain enzymes (flavoproteins) that catalyze many oxidation–reduction reactions. Called also vitamin G, lactoflavin.
r. kinase an enzyme (a phosphotransferase) that catalyzes the conversion of free riboflavin and ATP to flavin mononucleotide (FMN) and ADP. Called also flavokinase.
r. nutritional deficiency causes conjunctivitis with corneal vascularization, dermatitis, glossitis and muscular weakness. Occurs rarely in dogs, but not a natural deficiency in farm mammals. In birds it causes a fall in egg production, decreased hatchability, **curled toe paralysis** and poor growth.

ribonuclease [*ri"bo-noo'kle-ās*] an enzyme that catalyzes the breakdown of ribonucleic acid.

ribonucleic acid (RNA) [*ri"bo-noo-kle'ik*] **nucleic acids** present in all living cells which are particularly involved in cellular protein synthesis and replace DNA as a carrier of genetic information in some viruses. RNA is similar in composition to DNA with two exceptions: the sugar in RNA is ribose (in DNA it is deoxyribose) and in RNA the pyrimidine uracil replaces the thymidine of DNA. The structure of RNA varies from helical to uncoiled linear strands of varying lengths, depending on the number of nucleotides forming the strand. This variance in structure is evident in the different types of RNA. For example, *transfer RNA* (tRNA) contains only about 75 nucleotides, while some mRNAs may contain thousands of nucleotides. *Messenger RNA (mRNA)* receives its name from its function of carrying the genetic code from DNA in the nucleus of the cell to the cytoplasm, where proteins are synthesized. The transfer of the genetic code from DNA to mRNA is called transcription. Molecules of mRNA migrate to the cytoplasm and bind to ribosomes, to form polyribosomes. RNA moves along the ribosomes and its information content as codons (three nucleotides) is translated into a particular sequence of amino acids, i.e. a protein or polypeptide. Stop codons, UAA, UAG and UGA, terminate translation of mRNA. *Transfer RNA (tRNA)* called also soluble RNA, brings about the transfer of specific amino acid molecules to the growing protein molecules during the synthesis of proteins. Each of the 20 common amino acids found in protein molecules has a corresponding type of tRNA. Thus, a specific tRNA carries the appropriate amino acid to its appropriate place in the nascent chain of the protein molecule being synthesized. tRNA has a triplet of nucleotides called the anticodon which is able, by base pairing to the codon triplet in mRNA as it moves along the ribosomes, to place the amino acids in the specific order characteristic of the particular protein. See also t**RNA**. *Ribosomal RNA (rRNA)* is so called because it is found as a major structural component of ribosomes are the cytoplasmic organelle required for linking of amino acids into protein molecules. Large amounts of RNA are also found in the nucleus of cells. One class of nuclear RNA, called *heterogeneous RNA* (hnRNA), represents primary RNA transcripts, i.e. before processing including splicing of introns, to form mRNA. A second class of nuclear RNA is called *small nuclear RNA* (snRNA) one species of which, called *small nuclear ribonucleoprotein* (snRNP), is believed to play an important role in the processing of hnRNA to mRNA. In the splicing reaction RNA itself acts as an 'enzyme' in that it is able to cut and religate other RNA molecules.

ribonucleoprotein particles [*ri"bo-noo"kle-o-pro'tēn*] small stable RNA species found in the nucleus, cytoplasm and mitochondria with one or more protein subunits attached; implicated in a variety of functions including: RNA trimming, splicing, transport, translation control and protein export.

ribonucleoside [*ri"bo-noo'kle-o-sīd*] a nucleoside in which the purine or pyrimidine base is combined with ribose.

ribonucleotide [*ri"bo-noo'kle-o-tīd*] a nucleotide in which the purine or pyrimidine base is combined with ribose.

ribose [*ri'bōs*] 5-carbon sugar present in ribonucleic acid (RNA).

60S ribosomal particle the largest of the two (40S and 60S) ribosome RNA structures of eukaryotes that is itself composed of one copy of the 28S, 5.8S, and 55 rRNA; the entire complex ribosome structure is called 80S ribosome. Also includes 70 to 80 proteins. The corresponding particle of prokaryotes is the 50S ribosomal particle.

ribosome [*ri'bo-sōm*] ribonucleoprotein particles concerned with protein synthesis; they consist of two, one large and one small, reversibly dissociable units (called also 50S and 30S subunits in prokaryotes and 60S and 40S subunits in eukaryotes) that are found either bound to cell membranes, particularly rough endoplasmic reticulum, or free in the cytoplasm. They may occur singly or in clusters, called polyribosomes or polysomes, which are ribosomes linked by mRNA and are actively engaged in protein synthesis.
r. binding site a nucleotide sequence near the 5′ terminus of mRNA required for binding of mRNA to the small ribosomal subunit. Called also Shine–Dalgarno sequence.

ribostamycin an aminoglycoside antibiotic isolated from *Streptomyces ribosifidicus* with activity similar to gentamicin. It is effective against *Prototheca* spp.

ribosyl [*ri'bo-səl*] a glycosyl radical formed from ribose.

ribozyme [*ri'bo-zīm"*] enzyme whose catalytic function is carried out by an RNA subunit; of the four known classes, three carry out self processing reactions while the fourth, ribonuclease P (RNase P), is a true catalyst; discovered in the context of RNA splicing.

rice [*rīs*] a cereal not used much for animal feed for socioeconomic reasons. The grain also has a low protein content but is otherwise suitable for animal use. Milling by-products are available. Called also *Oryza sativa*.

rice-flower, riceflower common name for some plants in the genus *Pimelea*. Includes desert or spiked rice-flower (*P. trichostachya*), flax-leaf rice-flower (*P. linifolia*), scanty rice-flower (*P. pauciflora*), small-headed rice-flower (*P. microcephala*), smooth rice-flower (*P. glauca*).

Richards bone holding forceps [*rich'ərdz*] a surgical instrument with curved jaws designed to grasp bones during orthopedic surgery.

Richards bone plating kit [*rich'ərdz*] a kit which contains a wide range of plates, plate bender, compression device, screws, wrench, screwdriver, bone clamp, hammer, power drill, drills, drill guide and rack, and pin cutter.

richweed see ***Eupatorium rugosum***.

ricin [*ri'sin*] a lectin or toxalbumin consisting of two peptide chains linked by a disulfide bridge in the seeds of the castor oil plant

(*Ricinus communis*), inhalation or ingestion of which causes superficial inflammation of the respiratory mucosa with hemorrhages into the lungs, or gastroenteritis, liver necrosis and sometimes convulsions.

Ricinus communis toxic plant in the Euphorbiaceae family; seeds contain ricin which causes gastroenteritis, liver necrosis and sometimes convulsions when eaten. Called also castor oil plant, castor bean, palma christi.

rickets [*rik'əts*] 1. bone disease of young growing animals caused by a nutritional deficiency of vitamin D, or of older animals caused by phosphorus deficiency: the latter condition is more properly called osteomalacia (see adult rickets below). In the growing animal there is failure of mineralization of primary spongiosa distal to the growth plate of long bones, preventing endochondral ossification. Affected bones are shorter than normal with relatively wide epiphyses and abnormally thick growth plates. The animals are lame and dentition is delayed. Costochondral junctions are expanded (see rachitic **rosary**). 2. a term applied erroneously to the posterior paresis and paralysis caused in cattle by eating cycad plants in Australia.

adult r. osteomalacia; usually caused by phosphorus deficiency in adults, sometimes by vitamin D deficiency.

fetal r. see **achondroplasia**.

hypervitaminosis D r. rickets.

inherited r. affected piglets are normal at birth but develop rickets indistinguishable from classical rickets. There is a defect in calcium absorption.

renal r. see renal secondary **hyperparathyroidism**.

renal hypophosphatemic r. inherited as an X-linked dominant trait in children and mice; characterized by hypophosphatemia and normocalcemia due to failure of phosphate resorption in renal tubules, and skeletal deformities. Called also vitamin-resistant rickets.

vitamin D-resistant r. a condition almost indistinguishable from ordinary rickets clinically but resistant to unusually large doses of vitamin D; it is often familial but may occur sporadically. In hypophosphatemic vitamin D-resistant rickets, hypophosphatemia is the main characteristic, while in hypocalcemic vitamin D-resistant rickets, the serum concentration of phosphate is within normal limits or nearly so, and the concentration of calcium is abnormally low.

Rickettsia [*ri-ket'se-ə*] a genus of small, rod-shaped, round to pleomorphic bacteria in the order *Rickettsiales*. They are gram-negative, and cultivable only in living tissues. Transmitted by lice and ticks, they cause disease in humans and domestic animals but are also found in the cytoplasm of cells of lice, fleas, ticks and mites, which may act as reservoirs and vectors. See also ***Ehrlichia*** and ***Coxiella***.

R. akari causes rickettsial pox in humans, mice and rats.

R. australis causes Queensland tick typhus in humans, small marsupials, rats.

R. canadensis causes new typhus in humans and rabbits.

R. conjunctivae see ***Chlamydophila pecorum***.

R. conorii causes boutonneuse fever in humans and dogs and small feral mammals.

R. felis more closely related to the spotted fever group of rickettsiae than the typhus group. Transmitted by cat fleas to humans, causing rash, headaches and neurological signs. The disease in humans has been called a flea-borne form of typhus, flea-borne spotted fever, and cat typhus. Cats seem important only as carriers of the vector and their close contact with humans.

R. ovina see ***Ehrlichia ovina***.

R. parkeri infects humans and dogs.

R. phagocytophila see ***Anaplasma phagocytophila***.

R. prowazeki causes epidemic typhus in humans and possibly cattle, sheep and goats.

R. rickettsii causes spotted fever in humans and many feral animals, especially rodents and in dogs and birds. See also **Rocky Mountain spotted fever**.

R. ruminantium see ***Ehrlichia ruminantium***.

R. rupricaprae see ***Mycoplasma conjunctivae***.

R. sibirica causes Siberian tick typhus in humans and many feral mammals, especially rodents.

R. tsutsugamushi see ***Orientia tsutsugamushi***.

R. typhi causes murine typhus in humans and the brown rat.

rickettsia pl. *rickettsiae*; an organism in the order *Rickettsiales*.

Rickettsiaceae [*ri-ket"se-a'se-e*] a family of bacteria in the order *Rickettsiales*. Includes the genera *Rickettsia* and *Orientia*.

rickettsial [*ri-ket'se-əl*] pertaining to or caused by rickettsiae.

r. fish disease caused by rickettsia-like organisms; most often asymptomatic in teleosts; characterized by granular, blue inclusions in epithelial cells of the gills. Similar bodies are found in the digestive glands of molluscs and crustaceans. More generalized infections sometimes cause ill-defined syndromes in crustaceans. Called sometimes epitheliocystis. See also **piscirickettsiosis**.

rickettsial interference phenomenon (RIP) the protection of an experimental animal against an injection of virulent rickettsiae by a large dose of a low virulence strain.

Rickettsiales [*ri-ket"se-a'lēz*] an order of bacteria containing the families *Rickettsiaceae* and *Anaplasmataceae*. Small, obligately intracellular, gram-negative coccobacillary bacteria parasitizing host cells as a source of ATP. They are found in wild mammals, ticks, lice and trematodes and are transmitted by arachnid or insect bites or by ingestion of trematodes. Generally replicate within erythrocytes, leukocytes or endothelial cells.

rickettsialpox [*ri-ket"se-əl-poks"*] a febrile disease of humans marked by a vesiculopapular eruption, clinically resembling chickenpox, caused by *Rickettsia akari* and transmitted from mice by mites. Called also Kew Gardens spotted fever.

rickettsicidal [*ri-ket"si-si'dəl*] destructive to rickettsiae.

rickettsiosis [*ri-ket"se-o'sis*] disease caused by infection with rickettsiae. Includes disease now more commonly called ehrlichiosis.

canine r. see canine **ehrlichiosis**.

rida see **scrapie**.

ride 1. control and direct a horse while mounted on it. 2. lane cut through a wood.

r. work to ride a horse for the purpose of training it for a race.

Rideal–Walker coefficient [*rid'e-əl wawk'ər*] a measure of the efficiency of a disinfectant compared with that of phenol. Called also phenol coefficient.

ridge [*rij*] a linear projection or projecting structure; a crest.

dental r. any linear elevation on the crown of a tooth. See **lophodont**.

healing r. an indurated ridge that normally forms deep to the skin along the length of a healing wound.

interureteric r. a fold of mucous membrane extending across the bladder between the ureteric orifices.

mammary r. milk line; an ectodermal thickening in early embryos, along which the mammary glands subsequently develop.

mesonephric r. the more lateral portion of the urogenital ridge of the embryo, giving rise to the mesonephros.

palatine r. a number of transverse ridges across the hard palate in some animals.

urogenital r. a longitudinal ridge in the embryo, lateral to the mesentery.

ridgling [*rij'ling*] cryptorchid; usually said of a horse.

riding school covers a wide range of establishments catering to the pleasure horse trade. Includes schools for the training of dressage horses, schools for dressage riders and more importantly, schools for training horse and rider units, and establishments of all degrees of quality including those that rent horses to people for an hour's pleasure.

Riedeliella graciliflora South American plant in the legume family Fabaceae; contains an unidentified toxin which causes generalized hemorrhages and liver and kidney damage.

Riegel's pulse [*re'gəl*] a pulse that is smaller in amplitude during exspiration.

Riemerella [*re"-mər-el'ə*] a genus of gram-negative, facultatively anaerobic, rod-shaped bacteria that cause disease in birds.

R. anatipestifer causes an acute or chronic septicemic disease in ducks and other birds characterized by fibrinous pericarditis, perihepatitis, air sacculitis, caseous salpingitis and arthritis. Called also new duck disease, infectious serositis and goose influenza. Previously called *Pasteurella anatipestifer* and *Moraxella anatipestifer*.

R. columbina associated with respiratory disease in pigeons.

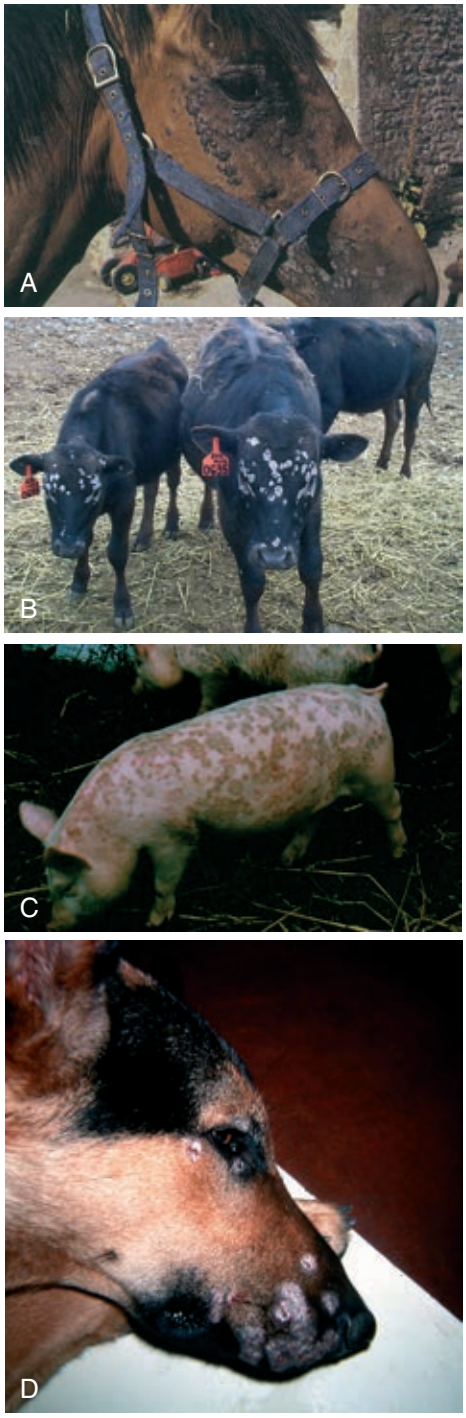
Riesenschnauzer Giant schnauzer.

R

RIF resistance-inducing factor.
R. test resistance-inducing factor test for the assay of avian leukosis viruses.
R. virus a virus that has the effect of increasing the resistance of an experimental animal or cell culture to infection by another related virus.
rifabutin [*rif″ə-bu′tin*] a semi-synthetic antibiotic derived from rifamycin with activity against mycobacteria.
rifampicin [*rif′am-pĭ-sin*] see **rifampin**.
rifampin [*rif-am′pin*] (USAN); a derivative of rifamycin; an antibacterial and antifungal agent used in the treatment of mycobacterial infections, actinomycosis and histoplasmosis. Called also rifampicin (INN).
rifamycin [*rif″ə-mi′sin*] a family of antibiotics produced in cultures of *Streptomyces mediterranei*. Effective against gram-positive cocci and gram-negative bacilli and mycobacteria including *Mycobacterium tuberculosis*.
Rift Valley fever [*rift′ val′e*] an acute infectious febrile disease of humans, cattle and sheep caused by a *Phlebovirus* and spread by biting insects, especially mosquitoes. Epizootics occur in high rainfall periods. Clinically there is high fever, incoordination and sudden death. Abortion is a common accompaniment. The necropsy findings include extensive hepatic necrosis. Initially reported in the Rift Valley in Kenya but is now epizootic throughout sub-Saharan Africa and has recently extended to Egypt, Madagascar, Mauritania and the Arabian peninsula. It has great potential for spread to other countries and is of concern because it is an important zoonosis. A disease notifiable to the OIE (see Table 22).
rig see **cryptorchid**.
right abomasal displacement see right **abomasal** displacement.
right aortic arch a condition in which the fourth aortic arch on the right hand side may persist from the embryonic state instead of the left, causing a syndrome of persistent right **aortic** arch.
right colon displacement causes colic in horses; the right colon is displaced anteriorly between the cecum and the right body wall so that the pelvic flexure reaches the diaphragm.
righting reflex, response a postural reaction that turns a falling animal's body in space so that its paws or feet are pointed at the ground or, less traumatically, returns the animal to sternal recumbency after being placed on its back or side; the animal may be blindfolded or in a darkened room to remove visual responses. A normal reaction is dependent on normal vestibular, visual and proprioceptive functions.
rights of animals see **animal** rights.
rigid lamb disease see **enzootic** muscular dystrophy, **Akabane virus** disease.
rigidity [*ri-jid′ĭ-te*] inflexibility or stiffness.
alpha r. rigidity which remains after transection of the spinal cord and is due to the hyperactivity of the alpha motor neurons.
clasp-knife r. increased tension in the extensor of a joint when it is passively flexed, giving way suddenly on exertion of further pressure; seen especially in upper motor neuron disease.
cogwheel r. tension in a muscle that gives way in little jerks when the muscle is passively stretched.
decerebrate r. rigid extension of the limbs as a result of decerebration; also occurs as a result of lesions in the upper brainstem.
extensor r. see upper **motor neuron**.
gamma r. see decerebrate rigidity (above).
lead-pipe r. posture adopted when the rigidity of the limb is maintained equally throughout the passive flexion.
r. reflex the state of immobility generated in female animals, especially those in estrus, when they make physical contact with a male.
rigor [*rig′or*] a subjective sensation of feeling cold, accompanied by muscle tremor, characteristic of the increment stage of fever. Because of its subjectivity it is not a term that can be used in animal medicine.
r. complexes formed when actin and myosin bond together strongly in the absence of ATP; occurs in rigor mortis.
r. mortis the stiffening of a dead body accompanying depletion of adenosine triphosphate in the muscle fibers.
rima [*ri′mə*] pl. *rimae* [L.] a cleft or crack.
r. cornealis the groove in the scleral margin into which the rim of the cornea fits.
r. glottidis the kite-shaped opening between the true vocal folds and between the vocal processes of the arytenoid cartilages.
r. oris the opening of the mouth.
r. palpebrarum palpebral fissure.
r. pudendi the space between the labia of the vulva; called also pudendal fissure, rima vulvae.
r. vestibuli the entrance to a cavity from a vestibule, especially that of the larynx.
r. vulvae r. pudendi (above).
rimantadine [*ri-man′tə-dēn*] a synthetic antiviral agent with activity against RNA viruses.
rimula [*rim′u-lə*] pl. *rimulae* [L.] a minute fissure, as of the spinal cord or brain.
rinderpest [*rin′dər-pest*] a highly contagious disease of ruminants caused by paramyxovirus (genus *Morbillivirus*) occurring currently or historically in Asia, Middle East and tropical Africa. It is characterized by high fever, focal erosive lesions in the mouth and throughout the alimentary tract, by severe diarrhea and a high fatality rate and by necrotic stomatitis, esophagitis, ulcerative and hemorrhagic enterocolitis and massive necrosis of lymphocytes in Peyer's patches, lymph nodes and spleen. Slaughter and vaccination has led to a continuous decline in prevalence and the disease is now eradicated. Called also cattle plague. See also **peste des petits ruminants**, **Jembrana disease**. A disease notifiable to the OIE (see Table 22).
ring [*ring*] 1. any annular or circular organ, structure or area. 2. in chemistry, a collection of atoms united in a continuous or closed chain.
abdominal r. (external) a slit-like or oval opening in the aponeurosis of the external abdominal oblique muscle for the spermatic cord or round ligament. Called also superficial inguinal ring, *anulus inguinalis superficialis*.
abdominal r. (internal) an aperture in the transverse fascia, caudal to the last muscle fibers of the internal abdominal oblique muscle; the caudo-lateral border is formed by the inguinal ligament; it forms the entrance to the inguinal canal that serves for transmission of the spermatic cord or round ligament. Called also deep inguinal ring, *anulus inguinalis profundus*.
Bandl's r. see **Bandl's rings**.
r. cell an immature granulocyte, intermediate between the myelocyte and metamyelocyte, found in the bone marrow of rats. There is a 'hole' in the nucleus.
ciliary r. the orbicularis ciliaris or posterior part of the ciliary body; a continuation of the choroid and retina.
conjunctival r. anulus conjunctivae.
constriction r. a contracted area of the uterus, where the resistance of the uterine contents is slight, as over a depression in the contour of the fetus, or below the presenting part.
deep inguinal r. an aperture in the transverse fascia for the spermatic cord or the round ligament. See abdominal ring (above).
femoral r. the abdominal opening of the femoral canal through which the femoral nerve and blood vessels pass from the peritoneal cavity to the limb.
inguinal r. see abdominal ring (above).
pancreatic r. the ring in the pancreas that accommodates the portal vein.
r. precipitin test see **precipitin** reaction.
preputial r. the thickened band of skin at the distal reflection of the preputial fold (the internal sleeve of the prepuce of the horse). Called also *anulus preputialis*.
retraction r. the demarcation between the upper, contracting portion of the uterus in normal parturition and the lower, dilating part.
retraction r. (pathological) a complication of prolonged labor marked by failure of relaxation of the circular fibers at the internal opening of the cervix, obstructing delivery of the fetus.
Schwalbe's r. see **Schwalbe's ring**.
stallion r. a rubber ring fitted over the glans penis of the stallion which discourages erection and masturbation.
superficial inguinal r. a fissure-like opening in the aponeurosis of the external abdominal oblique muscle for the spermatic cord or the round ligament. Called also *anulus inguinalis superficialis*.
r. test see **Ascoli test**.
tympanic r. the bony ring forming part of the temporal bone at birth and developing into the tympanic plate. Called also *anulus tympanicus*.

VetBooks.ir

umbilical r. the orifice in the linea alba of the abdominal wall of the fetus for transmission of the umbilical vein and arteries; in young animals it is relatively nearer to the pubis, but gradually shifts cranially to near the center of the abdomen. In the adult, it is closed with its position indicated by the umbilicus or navel. Called also *anulus umbilicalis*.
r. vaccination vaccination of all animals in a zone around an area in which the subject disease occurs. A preventive strategy that contains the infected population so that the eradication team has a finite target.
vascular r. any of a number of congenital anomalies of the aortic arch and its branches, the vessels forming a ring about the trachea and esophagus that cause varying degrees of compression, vomiting and esophageal dilatation. See also persistent right **aortic arch**.
ring-eyes see **walleye** (4).
ring-in said of a racehorse; means not the horse referred to but one criminally substituted for it with the intention of defrauding.
ring of ossicles a circlet of 2-20 or more bony overlapping plates which serve as reinforcement in the sclera, near the corneoscleral junction in the eyes of birds, some reptiles and many primitive vertebrates; in owls they are concave. Called also scleral ring, *anulus ossicularis sclerae*.
ring-tailed characterized by a tail that is banded with black rings.
r. cat an arboreal, nocturnal, squirrel-like animal, *Bassariscus astutus*, in the family Procyonidae. Has a banded black and white tail. Closely related to the cacomistle.
ringbinden aberrant myofibrils that wrap themselves around an existing muscle fiber in a tight spiral. Occur most commonly in muscles affected by neurogenic atrophy.
ringbone [*ring'bōn*] osteoarthritis or periostitis of the first or second phalanx of a limb of a horse. Causes lameness and in the later stages swelling of the pastern due to the development of exostoses.
Ringer's solution a sterile solution of sodium chloride, potassium chloride and calcium chloride in purified water, a physiological salt solution for topical use. See also **lactated Ringer's solution**.
ringing removal of a circle of wool from around the prepuce at crutching time to reduce the chance of soiling with urine and subsequent cutaneous myiasis.
ringtail a disease of mice, rats and hamsters; caused by low humidity and high temperatures in the environment. The tail swells and becomes annulated as a result of constrictions along its length. It eventually becomes gangrenous and drops off. The feet may also be swollen and reddened.
ringwomb [*ring'w m*] a disease of the ewe characterized by failure of the cervix to relax so that there is no evidence of impending parturition. Many full-term fetuses die in utero.
ringworm [*ring'wərm*] an infection of the superficial layers of the skin and the hair fibers with one of a group of dermatophytic fungi. Some of the fungi are obligate parasites of animals, others have the same relationship with humans, and some are freeliving in the soil and only invade animal skins in unusual circumstances. See also **tinea**. The common species are **Trichophyton** *verrucosum* in cattle, *T. equinum* in horses; in dogs and cats the infections are **Microsporum** *canis*, *M. gypseum* and *T. mentagrophytes*. In sheep and goats the infection is usually *T. verrucosum* and in pigs *M. nanum*. The infection is very superficial and does almost no injury to animals but efforts are usually made to prevent its spread because it is highly infectious, including for humans. In companion animals this zoonotic aspect is very important in management of cases. Called also dermatophytosis. See also **club lamb fungus**, ***Microsporum***, ***Trichophyton***.
honeycomb r. see **favus**.
sylvatic r. ringworm in domestic animals transmitted from wild animals.
rinsing wash the brief washing stage between developing an X-ray film and fixing it.
RIP rickettsial interference phenomenon.
ripening said of meat. See **curing**.
RIS rabies inhibiting substance.
Risdon wiring technique use of a wire twisted around teeth to support rostral jaw fractures.
rising said of age, means just before, e.g. rising 7 years means 6 years nearly 7 years old.



R-16: (A) Ringworm lesions in a horse. (B) Ringworm in calves caused by *Trichophyton verrucosum*. (C) Ringworm in a pig caused by *Trichophyton* spp. (D) Ringworm lesions in a dog caused by *Microsporum canis*. (A) From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders. 2003.

difficulty r. having to make a number of attempts, or requiring assistance or improvement in the footing before being able to rise; a stage in the development of spinal cord compression, or a sequel to injury to peripheral, e.g. sciatic or obturator, nerves.
risk [*risk*] the chance of an unfavorable event occurring.
acceptable r. risk for which the benefits rank larger than the potential hazards.
at r. that part of a total population which is subject to the disease being reviewed, e.g. only milking cows are at risk to bovine parturient hypocalcemia (milk fever), only grazing cows to enzootic nasal granuloma.

VetBooks.ir

attribute r. risk factor that is an intrinsic characteristic of the individual, for example age or breed.
attributable r. risk in the group exposed to a risk factor minus the risk in the group not exposed to that risk factor.
r. aversion reluctance to take risks.
exposure r. factor that is in the environment of the individual or group, for example type of housing or management practices.
r. factor an attribute or exposure which increases the probability of occurrence of a disease or other outcome.
multiple r. situations in which more than one risk factor for a disease is present and their combined presence contributes to an increased risk.
population attributable r. the proportion of all cases of a disease that are attributable to an exposure or risk, the proportion of disease in a population eliminated if that exposure were eliminated or prevented.
r. ratio the ratio of two risks.
relative r. the ratio of the disease incidence rate in animals exposed to an hypothesized cause to the incidence rate in animals not exposed. A measure of the strength of association commonly used in epidemiological studies. Broadly the strength of association with a relative risk of less than 1.5 as weak whereas it has strength at ratios greater than 3. Called also risk ratio.
specified r. materials a term used in the USA to denote tissues that can be infected with the agent of bovine spongiform encephalopathy (BSE), namely brain and spinal cord, spinal ganglia, retina, and terminal small intestine. Banned from inclusion in any feed stuff.
surgical r. an animal that has poor general health and must be assessed as a poor survival risk to undergo major surgery or anesthesia.
RIST radioimmunosorbent test.
ristocetin [*ris"to-se'tin*] an antibiotic produced by cultures of the actinomycete *Nocardia lurida*. Too toxic to be used as an antimicrobial, it is used in the assessment of platelet function.
risus [*ri'səs*] [L.] *laughter*.
r. sardonicus a grinning expression produced by spasm of the facial muscles, typical of tetanus in humans. The term is also applied to dogs with tetanus in which the lips are drawn back by muscle spasms.
Rivanol precipitation test a serological test to detect IgG, and particularly IgG1, antibodies against *Brucella* spp. because treatment of the sera with rivanol before testing precipitates the IgM.
river blindness a seriously debilitating human infection by the filarial parasite ***Onchocerca volvulus***, transmitted by blackfly (*Simulium* spp.), which results in debilitating skin disease and blindness (river blindness). The disease has high incidence in Africa and South and Central America. Control of onchocercasis is by community-based treatment with ivermectin.
river poison ***Excoecaria agallocha***, ***Gastrolobium forrestii***.
Rivina humilis toxic plant in the family Phytolaccaceae; an unidentified toxin causes milk taint; called also coral or turkey berry.
Rivinus' incisure a defect in the upper tympanic part of the temporal bone, filled by the upper portion of the tympanic membrane.
riziform [*riz'ĭ-form*] resembling grains of rice.
Rn chemical symbol, *radon*.
RNA ribonucleic acid.
RNA interference (RNAi) a system within living cells that helps control which genes are active and their degree of activity. Two named types of small RNA molecules, microRNA (miRNA) and small interfering RNA (siRNA), are central to RNA interference. These small RNAs bind to specific other RNAs and either increase or decrease their activity, for example by preventing a messenger RNA from being translated into a protein. RNAi protects cells against 'parasitic nucleic acids' such as viruses and transposons and plays an essential role in embryogensis and gene expression in general. See **microRNA** and **gene silencing**.
microRNA (miRNA) small RNAs containing 21 to 33 nucleotides that associated with multiple proteins in a RNA-induced silencing complex (RISC) that repress transcription of specific target mRNA by hybridizing to its 3′ untranslated region.
RNA primer a sequence of about 10 nucleotides long copied from DNA by RNA primase and required for the priming of the synthesis of each Okazaki fragment during DNA replication.
secondary structure RNA folding of single-stranded RNA molecules which arises from intramolecular base pairing.
small cytoplasmic RNA (scRNA) small (7S; 129 nucleotides) RNA molecules found in the cytosol and rough endoplasmic reticulum associated with proteins that are involved in specific selection and transport of other proteins.
small nuclear RNA (snRNA) a general term for many diferent kinds of small RNA molecules found in the nucleus of a cell that include as examples species involved in splicing of introns from mRNA and in RNA interference.
RNA viruses viruses that have a ribonucleic acid genome, which may be as a single stranded RNA, which may be positive or negative sense, a single molecule or segmented; in at some families the RNA genome is double-stranded and segmented.
RNase ribonuclease.
RNP see **ribonucleoprotein**.
R/O abbreviation for rule out; used in medical records.
roach back a defect in conformation, most commonly in the horse, which does not affect performance but is unattractive esthetically. The dorsal spinous processes of the caudal thoracic and lumbar vertebrae protrude excessively giving the animal a convex topline. Called also kyphosis.
road related to animals on roadways.
r. accidents results in traumatic injuries because of collisions with vehicles, falling on uneven or slippery surfaces.
r. founder traumatic **laminitis**.
r.-kill surveys used to estimate the population density of wildlife species in an area.
roan a coat color consisting of a relatively uniform mixture of white and colored hairs, giving a 'silvered' hue; self-describing colors are red-roan, blue-roan, chestnut roan.
roaring [*ror'ing*] the stertor in respiration caused by air passing through a stenosed larynx. The commonest cause is laryngeal hemiplegia in the horse. The disease is incompatible with fast exercise. The cause of the basic lesion, degeneration of fibers in the left recurrent laryngeal nerve, is unknown. See also **laryngeal** hemiplegia.
r. burr surgical instrument used to evert the mucosal lining of the lateral ventricle in the horse in the operation for laryngeal hemiplegia—ventriculectomy; the lining is then excised. Strawberry type has a rough surface reminiscent of the surface of that fruit. French type has a surface covered with small hooks.
roast beef plant ***Iris foetidissima***.
roaster a young fowl for eating; weighs 5–7 lb at 6 months of age.
robenidine [*ro-ben'ĭ-dēn*] a guanidine derivative used at one time as an anticoccidial in poultry. Limited used now because of the rapid development of resistance to it by protozoa.
Robert–Jones bandage see Robert–Jones **bandage**.
Robertsonian translocation see Robertsonian **translocation**.
robin [*ro'bin*] 1. (*Erithacus rubecula*), a small brown passerine bird of Europe in the family turdidae (thrushes and chats); common name also given to related birds in North America, including *Turdus migratorius* (American robin), or to similar but unrelated birds in Australia and New Zealand in the family Eosaltridae allied to flycatchers and whistlers. 2. a phytotoxin in the plant ***Robinia pseudoacacia***.
Robinia pseudoacacia [*ro-bin'e-ə*] toxic tree in the legume family Fabaceae; the seeds and bark contain robin, a toxalbumin which causes purging and tongue paresis-dysphagia in horses. Called also black locust, black acacia, false acacia, locust tree.
Robinson sling see pelvic limb **sling**.
Robson–Heggers biopsy see Robson–Heggers **biopsy**.
robust [*ro-bust'*] 1. strong and healthy. 2. in statistical terminology said of methods of analysis that are insensitive to non-normality of data distribution.
ROC curve acronym for receiver operating characteristic curve. A graphical method of assessing the characteristic of a diagnostic test.
Rochalimaea [*ro"kə-li-me'ə*] a group of bacteria now classified in the genus *Bartonella*.
Rochester-Carmalt forceps scissor-type, ratchet handle, hemostatic forceps with longitudinal grooves on the blade faces with cross-hatching at the tip.
Rochester–Pean forceps scissor-action hemostat forceps with ratcheted handles, long blades with deep transverse grooves, straight or curved.
rock lobster see ***Panulirus***.
rock phosphate a mined mineral used as a fertilizer and as a dietary phosphorus supplement for animals. Some deposits of the mineral contain high concentrations of fluorine and its use as a

R-17: Rochester-Carmalt forceps.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2011.

feed supplement leads to poisoning in the livestock. See also **fluorosis**.

rock salt salt in large crystalline masses, mined from extensive underground deposits. Used commonly as salt licks on pasture.

rocket included in the common name for a number of plants in the family Brassicaceae (Cruciferae). Includes London rocket (*Sisymbrium irio*), yellow rocket (*Barbarea vulgaris*).

rocket electrophoresis see rocket **immunoelectrophoresis**.

Rocky Mountain bee plant see ***Cleome serrulata***.

Rocky Mountain spotted fever [*rok'e moun'tan*] an infectious disease of small mammals, dogs and humans. It occurs mainly in certain areas within the USA. Called also tick fever, and it is also known by various names according to the geographic area. Rocky Mountain spotted fever belongs to a group of insect-borne fevers caused by rickettsiae, which attack endothelium. The species, *Rickettsia rickettsii*, responsible for Rocky Mountain spotted fever is transmitted from rodent by various ticks, mainly the brown dog tick (*Rhipicephalus sanguineus*). The clinical signs associated with infection in dogs are fever, lethargy, anorexia, joint pain, edema, lymphadenopathy and neurologic signs. A thrombocytopenia also occurs. Kennel epizootics have been recorded.

Rocky Mountain wood tick see ***Dermacentor*** *andersoni*.

rocuronium [*ro"ku-ro'ne-um*] a steroidal nondepolarizing neuromuscular blocker.

rod [*rod*] 1. a straight, slim mass of substance. 2. one of two photoreceptor cell types found in the retina. Important for motion detection and vision in relatively dim ambient light. See also **cone** (4).

r.–cone dysplasia an inherited defect in many species, particularly dogs, in which the retina fails to mature completely and normally. Manifests clinically as impairment of night vision, then day vision starting at an early age. There are differences in the ultrastructural and biochemical features in each breed, but generally rods are more severely affected than cones. Differentiated from progressive retinal atrophy or degeneration in which the retina develops normally and then degenerates once mature.

olfactory r. the slender apical portion of an olfactory bipolar neuron, a modified dendrite extending to the surface of the epithelium.

rodent [*ro'dənt*] a member of the order Rodentia, characterized by their dental formula and continuously growing incisors. Includes rats and mice and allied species, the squirrels, beavers, gophers, porcupines and their related species.

r. bot see ***Cuterebra***.

r. ulcer see **eosinophilic** ulcer.

rodenticide [*ro-den'ti-sīd*] 1. destructive to rodents. 2. an agent destructive to rodents. They are all toxic to animals and are a common cause of poisoning. The common ones are anticoagulants, bromethalin, cholecalciferol, strychnine and zinc phosphide. Although most rodenticide substances are selected because of their relatively low toxicity for domestic animals, they can all cause toxicities if used carelessly.

Rodentocaulus ondatrae a nematode parasite in the family Angiostrongylidae, found in the pulmonary artery of rodents.

rodeo a sporting event in which riders compete for points in contests related to buckjump riding, bull riding, calf roping.

roe eggs of fish, still in the fish.

Roe terrier see **Miniature pinscher**.

Roeckl's granuloma nodular lesion of unknown cause occurring principally in the skin and skeletal muscles but also in other organs in European cattle. There are usually multiple lesions which are up to 5 cm in diameter. Called also nodular necrosis.

Roeder forceps see **Backhaus towel clamp**.

roentgen (R) [*rent'gən*] a superseded international unit of X- or γ-radiation; it is the quantity of X- or γ-radiation such that the associated corpuscular emission per 0.001293 g of air produces, in air, ions carrying 1 electrostatic unit of electrical charge of either sign. Now replaced by coulomb/kg (C/kg); see **coulomb**. 1 R = 2.58×10^{-4} C/kg; 1 C/kg = 3876 R.

r. equivalent man (rem) see **rem**.

r. equivalent physical (rep) see **rep**.

r. ray X-ray.

roentgenium (Rg) a chemical element, atomic number 111, atomic weight 280. See Table 4.

roentgenkymogram the film obtained by roentgenkymography.

roentgenkymography a technique of graphically recording the movements of an organ on a single X-ray film.

roentgenogram see **radiograph**.

roentgenograph [*rent'gən-o-graf*] see **radiograph**.

roentgenography [*rent"gən-og'rə-fe*] see **radiography**.

roentgenologist [*rent"gən-ol'ə-jist*] radiologist.

roentgenology [*rent"gən-ol'ə-je*] see **radiology**.

roentgenoscope [*rent-gen'o-skōp*] a term not now used; a fluoroscope; an apparatus for examining the body by means of the fluorescent screen excited by X-rays.

roentgenoscopy [*rent"gən-os'kə-pe*] see **fluoroscopy**.

roentgenotherapy see **radiotherapy**.

Roepera see ***Zygophyllum***.

Rolando's fissure see Rolando's **fissure**.

rolitetracycline [*ro-lĭ-tet"rə-si'klin*] a semisynthetic, broad-spectrum tetracycline antibiotic.

rolled said of grain rolled into flat plates by passing through flat rollers, e.g. rolled oats. Improves digestibility at the cost of the processing. See also **cracked**.

Roller [*rōl'ər*] a breed of canaries bred solely for their distinctive voice. It is soft with long, intricate rolls or tours. Color is variable. A number of different song passages are recognized; in exhibitions are judged on their songs.

roller harness of a wide leather band that encircles the horse at the girth place, behind the elbows. Good models have stuffed pads that fit on either side of the dorsal spine and keep pressure off it. Can be used for decoration, for anchoring check-reins when breaking into harness and for keeping a rug, quarter sheet and other horse garments in place.

rolling involuntary rolling in animals; an important sign of abdominal pain or of disease of the vestibular apparatus. In the latter it is accompanied by persistent head rotation. Passive rolling is a therapeutic manipulation for the correction of torsion of the uterus in mares and ruminants. The animal is cast, laid on its back and swung sharply from side to side, sometimes with one hand or rod in the rectum attempting to retard any movement of the fetus. The objective is to rotate the dam's body around an immobilized fetus and uterus. Also used as a method for correction of left-displacement of the abomasum in cattle.

r. average see moving **average**.

r. disease a nervous system disease of mice caused by *Mycoplasma neurolyticum*.

r. mean see moving **average**.

r. skin syndrome see idiopathic **hyperesthesia** syndrome.

rolling circle replication a description of the replication of circular DNA molecules in which linear daughter DNA molecules that contain repeated DNA sequences called concatemers are produced from the parent; the concatemers are cleaved to form unit length genomes which themselves circularize.

R-18: Romagna beef bull.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

R

R-19: Romanov sheep. From Sambraus HH, Livestock Breeds. Mosby, 1992.

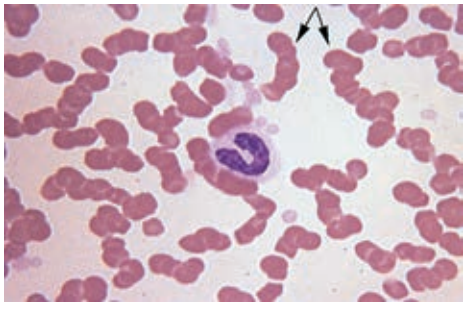
ROM range of motion, pertaining to a joint.
Romagna a gray to white breed of beef cattle originating in Italy. Called also Romagnola.
Romagnola see **Romagna**.
roman-nosed the lateral view of the face of a horse or sheep that has a convex silhouette.
Romanov a breed of sheep maintained for their carpetwool and pelt. Gray with black head and legs, white face stripe and feet. May be horned or polled.
Romanowsky stains [*ro"mə-nof'ske*] a group of eosin–methylene blue stains generally used for blood smears, protozoa and bacteria. Includes Giemsa, Wright and Leishman stains.
romerillo ***Baccharis*** *cordifolia*.
romifidine an α_2-adrenergic agonist used for analgesia and sedation, used mainly in horses.
Romney Marsh [*rom'ne mahrsh*] English longwool-type meat sheep; polled, 33 micron wool, prized as fat lamb mother, used extensively in development of carpetwool breeds. Called also Kent Marsh.
R. M. disease see **struck**.
Romney sheep see **Romney Marsh**.
Rompun a proprietary name for **xylazine**.
Romulea rosea* var. *australia toxic genus of plants in the family Iridaceae; small, onion-like plant with a mauve flower, pineapple-like fruit and a deeply situated bulb. A very persistent weed causing much loss of productivity in the pasture. Is also a common cause of intestinal obstruction with phytobezoars produced from the fibrous leaves. Causes infertility and abortion (romulosis) and incoordination (autumn staggers) in sheep. Involvement of the leaf fungus *Drechslera biseptata* (*Helminthosporium biseptatum*) in toxicity is doubtful. Called also onion grass. Includes *R. bulbocodium*, *R. longifolia* (*R. bulbocordium*, *R. rosea*).
romulosis infertility and abortion in sheep caused by ***Romulea rosea***.
rongeur [*raw-zhur'*] [Fr.] an instrument for cutting tissue, particularly bone; also for cracking gross deposits of dental calculus.
bone r. a multijointed, springloaded, plier-like instrument used to break off pieces of bone. The opposing surfaces of the blades have sharp-edged, scooped out surfaces like a curette.
ronidazole [*ro-nid'ə-zōl*] a nitroimidazole derivative, similar to metronidazole. Used in the treatment of histomoniasis and swine dysentery. Prohibited in some countries.
Roniviridae a virus family in the order *Nicovirales* that are enveloped, bacilliform-shaped, about 150-200 nm x 40-60 nm with a nucleocapsid that has helical symmetry; member viruses include *Okavirus* that infects crustaceans, mostly prawns.

R-20: Romney Marsh sheep.

ronnel [*ron'əl*] see **fenchlorphos**.
roodles a hybrid name used to describe dogs produced from crossing Rottweilers and Poodles. Not a recognized breed.
roofing felt contains lead compounds and may be a cause of poisoning.
rooing process of removing the fleece from the sheep by hand plucking the wool in sheep that naturally shed their fleece in the spring. See also **shearing**.
room [*r m*] a place in a building enclosed and set apart for occupancy or for the performance of certain procedures.
operating r. one especially equipped for the performance of surgical operations. Called also operating theater.
recovery r. a hospital unit adjoining operating rooms, with special provisions for the care of animals recovering from surgery. For large animals, it must be designed and equipped to minimize the risk of injury to the animal as it regains consciousness and returns to its feet, while permitting close, but safe, supervision by nursing staff. Closed circuit television is commonly utilized for this purpose.
rooster entire, sexually mature, male fowl, more than about 5 months old.
root [*r t*] 1. the descending and usually subterranean part of a plant. 2. that portion of an organ, such as a tooth, hair or nail, that is buried in the tissues, or by which it arises from another structure, or the part of a nerve that is adjacent to the center to which it is connected, e.g. root of neck, root of tail.
dorsal r. the sensory division of each spinal nerve, attached centrally to the spinal cord and joining peripherally with the ventral root to form nerve before it emerges from the intervertebral foramen.
internal r. sheath connective tissue sheath around the hair follicle; this part of the sheath extends only to the opening of sebaceous glands into the follicle. See also root sheath cuticle (below).
hair r. the part of the hair buried in the hair follicle.
mesenteric r. the small area of attachment of the mesentery to the dorsal abdominal wall at about the level of the first lumbar vertebrae. It encloses the vessels and nerves that supply the intestine.
motor r. ventral root.
nerve r's the series of paired bundles of nerve fibers which emerge at each side of the spinal cord, termed dorsal (or posterior) or ventral (or anterior) according to their position. A series of dorsal and ventral roots join to form a spinal nerve. Certain cranial nerves, e.g. the trigeminal, also have nerve roots.
penis r. the attachment of the penis by two crura to the lateral parts of the ischial arch.
r. planing see root **planing**.
sensory r. dorsal root.
r. signature referred pain down a limb, causing lameness or intermittent lifting of the limb, resulting from irritation of the spinal nerve, usually by an extruded intervertebral disk.
r. sheath cuticle single layer of cornified cells of the hair follicle interdigitating with the cornified cells of the hair cuticle.
tongue r. caudal part of the tongue attached to the hyoid bone, soft palate and pharynx.
ventral r. the motor division of each spinal nerve, attached centrally to the spinal cord and joining peripherally with the dorsal root to form the nerve before it emerges from the intervertebral foramen.
root canal that part of the dental pulp cavity extending from the pulp chamber to the apical foramen. Called also pulp canal.
calcified r. c. restriction of the diameter of the root canal due to calicification; seen in older animals.
r. c. therapy see **endodontics**.
rootlets [*r t'lət*] attachments of the basal bodies of cells to their cytoplasm.
roots inclusive term for underground parts of plants used as animal feed. Includes turnips, swedes, beets, mangels.
ROP record of performance, a series of programs for recording milk yield in cows, egg production in fowls and rate of gain in meat producing animals.
rope burn skin abrasion caused by the heat of friction by a rope on the skin; caused by entanglement in a rope or poor casting technique.
roped poultry see **New York dressed poultry**.
roping lassooing with a rope. See also **lasso**.
ropivacaine [*ro-piv'ə-kān*] a long-acting aminoamide local anesthetic agent, similar to bupivacaine.
roquefortine tremorgenic mycotoxin produced by *Penicillium roqueforti*.

VetBooks.ir

roridin [*ro'ri-din*] a macrocyclic trichothecene mycotoxin produced by *Stachybotrys atra*. Includes roridin A(1), roridin E(2).
ROS reactive oxygen species.
rosamycin rosaramicin.
rosaniline [*ro-zan'i-lin*] a substance from coal tar, the basis of various dyes and stains, including gentian violet, crystal violet and fuchsine.
rosaramicin [*ro"zə-rə-mi'sin*] a macrolide antibiotic produced in cultures of *Micomonospora rosaria* and effective against gram-positive and some gram-negative bacteria.
rosary [*ro'zə-re*] a structure resembling a string of beads.
rachitic r. a succession of beadlike prominences along the costal cartilages seen in juvenile **rickets**.
rose bengal a fluorescein compound used as a pink dye, in a liver function test, and as a coloring agent in feed. It is also used topically in the eye to detecting dead or devitalized corneal and conjuctival epithelial cells.
r. b. test an oldfashioned field plate test for brucellosis in serum. The dye was used to mark the antigen and make its clumping visible. Suitable only as a screening test.
rose chafer see ***Macrodactylus subspinosus***.
rose grower's disease sporotrichosis.
Rose–Waaler test a passive hemagglutination test for rheumatoid factor in the serum.
roseate cockatoo see **galah**.
Roseneath terrier an early name for the West Highland white terrier.
Rosenthal fiber [*ro'zən-tahl*] irregularly shaped, hyaline, eosinophilic structures formed within astrocytes; a feature of Alexander's disease of dogs.
Roseolovirus [*ro"ze-o'lo-vi"rəs*] a genus in the *Betaherpesvirinae*. It contains human herpesvirus 6 and 7.
rosette [*ro-zet'*] any structure or formation resembling a rose, such as (1) the clusters of polymorphonuclear leukocytes around a globule of lipid nuclear material, as observed in the test for disseminated lupus erythematosus, or (2) a figure formed by the chromosomes in an early stage of mitosis.
r. of Furstenberg the white ridges of mucous membrane that radiate from the internal orifice of the teat of ruminants.
r. inhibition test used to detect the presence of 'early pregnancy factor' but has problems of application and limited usefulness.
true r. a clustering of cells, e.g. neuroblasts, around a hollow central lumen, as in human retinoblastomas.
rosewood ***Alectryon*** *oleifolius*.
rosin [*roz'in*] the solid resin obtained from species of *Pinus*, a genus of trees; used in preparation of ointments and plasters.
rosoxacin [*ro-soks'ə-sin*] a quinolone antibiotic, similar to naladixic acid, used to treat urinary tract infections. Called also acrosoxacin.
Ross River encephalitis see Ross River **encephalitis**.
Ross test a test which uses sodium nitroprusside in the detection of ketone bodies in urine and milk.
rostellum [*ros-tel'əm*] apical projection of the scolex of a tapeworm, which may or may not bear hooks.
rostr- prefix meaning nose.
rostrad [*ros'trad*] 1. toward a rostrum; nearer the rostrum in relation to a specific point of reference. 2. cephalad.
rostral 1. pertaining to or resembling a rostrum; having a rostrum or beak. 2. situated toward a rostrum or toward the beak, i.e. toward the front of the head.
r. colliculus see midbrain **colliculus**.
r. salivatory nucleus see salivatory **nucleus**.
rostrate [*ros'trāt*] beaked.
rostrum [*ros'trəm*] pl. *rostra* [L.] 1. a beak-shaped process. 2. the most anterior part of the body.
nasal r. snout; apex of the nostrils and upper lip.
rot [*rot*] decay.
rotameter [*ro-tam'ə-tər*] see **flowmeter**.
rotated turned around; pivoted.
r. tibia see rotated **tibia**.
rotation [*ro-ta'shən*] a state of having been pivoted around an axis. See also **torsion**, **rotational**.
r. fork an obstetrical instrument used in mares and cows. A 3 ft long rod with a crossbar handle and a two-pronged fork at the other end. The prongs have eyelets to which cord or canvas hobbles are attached. Two presenting limbs are threaded through these and the instrument pushed into the uterus to the body. Rotation of the bar handle helps to rotate the calf or foal, or uterus if it is closely applied. See also **Cammerer rotation fork**.
pedal r. see **pedal** bone rotation.
r. programs alternation of crops (crop rotation), of grazing of pastures (paddock or field rotation), of bulls or rams running with breeding females (bull rotation), of anticoccidial agents to poultry or anthelmintics to sheep to avoid the development of resistance to the medication by the target organism. Rotational **grazing** of pastures is beneficial to pasture growth when livestock concentration is high, and aids in the control of helminth parasites by interrupting their life cycles.
rotational characterized by **rotation**.
rotator an obstetrical instrument used in cows and mares. See **rotation** fork.
Rotavirus [*ro'tə-vi"rəs*] a genus in the family *Reoviridae*, members of which cause diarrhea in the young of many species, including avian, but particularly calves, foals, piglets and lambs, particularly in conditions of poor hygiene, crowding and failure of maternal antibody transfer. The morbidity rate is usually very high but death losses are not heavy provided the hydration of the animals is maintained. There is some degree of species specificity, but interspecies transmission is common.
rotenone [*ro'tə-nōn*] a compound derived from the root and rhizomes of derris (*Derris elliptica*) and lonchocarpus (*Lonchocarpus utilis*). Used as an insecticide and as an acaricide, mainly on dogs, cats, cattle, birds and fish. Toxic to pigs, causing incoordination, tremor, recumbency and terminal respiratory paralysis.
Rothera's test [*roth'ər-ah*] a test for the presence of ketone bodies, diacetic acid and acetone in urine. May also be applied to milk.
rotifer see ***Brachionus plicatilis***.
Rotterdam tuberculin a bovine purified protein derivative tuberculin used in testing cattle for tuberculosis. Contains 1 mg/mL of tuberculoprotein.
Rottnest quokka see **quokka**.
Rottweiler a large, very powerfully built dog with massive, broad head, small pendant ears and short docked tail. The short coat is black with tan markings on the face, chest and legs. The breed is predisposed to osteochondrosis, diabetes mellitus, sesamoiditis, leukoencephalomyelopathy and neuroaxonal dystrophy.
rotula 1. the patella. 2. any disklike bony process. 3. a lozenge or troche.
rotular patellar.
rotund tick see ***Ixodes*** *kingi*.
Rouen a beautifully colored and marked duck used for eating, but has dark flesh which is unpopular. Head and upper neck green (drake) or brown (female), then a white band, followed by a rich brown breast; the rest of the body feathers are green to black.
rough-bearded grass see ***Echinopogon***.
roughage [*ruf'əj*] coarse, bulky feeds, essential to the diets of ruminants and horses, but largely indigestible if fed to species other than ruminants and horses. High in fiber, low in digestible carbohydrates and proteins. Includes hay, pasture, ensilage, which promote peristalsis by their bulk. Material that is too indigestible, e.g. straw, may cause impaction of the rumen or the cecum and colon in horses. See also **fiber**[2].
poor quality r. corn or sorghum plant tops, cut when very mature, grass hay where the grass has been allowed to seed and the leaves to dry out. All have high fiber, low protein and low energy.



R-21: Marked rouleaux in a normal equine blood film. A neutrophilic band cell is also present. Hendrix CM, Sirois M, Laboratory Procedures for Veterinary Technicians, 5th Edition. Mosby, 2007.

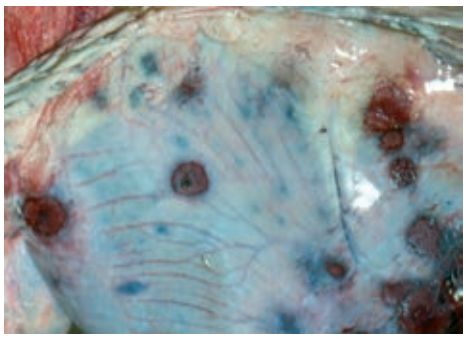
R

rouleau [roo-lo'] pl. *rouleaux* [Fr.] a roll of red blood cells resembling a pile of coins.
r. formation occurs when there is increased fibrinogen concentration or other changes in plasma proteins; common in horses and cats. It will disappear when blood is diluted with saline.
round heart disease a familial dilated cardiomyopathy of turkeys characterized by sudden death due to cardiac arrest; associated with a deficiency of the plasma protein, α_1-antitrypsin. Liver lesions may be prominent when right ventricular failure is present. Most common in inbred, broadbreasted, white turkeys. Called also spontaneous cardiomyopathy, cardiohepatic syndrome. Round heart disease in chickens is a rarely observed acute cardiac failure due to myocardial degeneration in chickens at 4-8 months of age. It is a different disease from that of turkeys.
round ligament 1. the ligament of the head of the femur which extends from the fovea capitis of the femoral head to the acetabular fossa. Rupture usually accompanies dislocation of the hip. 2. the remnant of the fetal umbilical vein in the adult. 3. the remnant of the umbilical artery as it forms the cranial boundary to the lateral ligament of the bladder of the adult. 4. the remnant of the gubernaculum in the adult male or female.
round-up see **muster**.
roundworm [round'wərm] any of the parasitic, unsegmented, cylindrical in cross-section, elongated in shape, nematode worms which invade principally the gastrointestinal tract, but also most other organs of the body. Almost any organ can be involved. Comprises the phylum Nematoda.
large r. in swine called *Ascaris suum*.
raccoon r. ***Baylisascaris*** *procyonis*.
roup any disease of poultry manifested by signs of coryza and involvement of the nasal chambers. See also avian **trichomoniasis**.
nutritional r. see **vitamin A**.
Rous sarcoma a spindle-cell sarcoma of chickens which is transplantable, metastasizes freely and usually fatal within a short time. It is caused by the Rous sarcoma virus, a retrovirus, which occurs in several serotypes and is transferable to rabbits, mice, rats, hamsters and primates as well as chickens.
roxa ***Palicourea*** *marcgravii*.
roxarsone [rok-sahr'sōn] an organic arsenical compound used as a growth promotant and coccidiostat in swine and poultry. Called also 4-hydroxy-3-nitrophenylarsonic acid. See also organic **arsenical**.
roxinha ***Palicourea*** *marcgravii*.
roxithromycin a macrolide antibiotic; a semi-synthetic derivative of erythromycin.
roxona ***Palicourea*** *marcgravii*.
Royal College of Veterinary Surgeons (RCVS) regulatory body for the veterinary profession in the UK. It registers veterinary surgeons and veterinary nurses to practice and it maintains practice standards.
Royal Society for the Prevention of Cruelty to Animals (RSPCA) an international organization, originating in the UK, and dedicated to the promotion of the humane use of animals by humans. Although its principal target is the prevention of cruelty by the institution of deterrent litigation it also provides animal shelters and ambulances, conducts education programs and in general promotes the positive aspects of animal welfare. See also **Society for the Prevention of Cruelty of Animals.**
RPED retinal pigment epithelial dystrophy.
RPI reticulocyte production index.
RPF renal plasma flow.
rpm revolutions per minute.
RQ respiratory quotient.
-rrhage, -rrhagia word element. [Gr.] *excessive flow*.
-rrhagia see -rrhage.
-rrhaphy word element. [Gr.] *seam, suture;* surgical repair of.
-rrhea word element. [Gr.] *profuse flow*.
-rrhexis word element. [Gr.] *rupture of a vessel or organ*.
-rrhoea see -rrhea.
rRNA ribosomal RNA. See **ribonucleic acid**.
RSHP renal secondary hyperparathyroidism.
RSPCA Royal Society for the Prevention of Cruelty to Animals.
rT_3 reverse tri-iodothyronine.
RT-PCR reverse transcriptase-polymerase chain reaction. See **PCR**[1].
RTA renal tubular acidosis.
r'tem see ***Retama retam***.
RTG abbreviation for ready to go; used in medical records.
Ru chemical symbol, *ruthenium*.
rub friction rub, an auscultatory sound caused by the rubbing together of two serous surfaces.
pericardial r. a scraping or grating noise heard with the heartbeat, usually a to-and-fro sound, associated with an inflamed pericardium.
pleural r., pleuritic r. a rub produced by friction between the visceral and costal pleurae.
Rubarth's disease [roo'bahrt] infectious canine hepatitis.
rubber-band ligation [rub'ər] surgical removal of horns, tails, scrotums and contents by the application of rubber ligatures so that the ligated portion sloughs away after several days. Called also Barron ligation, elastration. The same technique is sometimes applied maliciously to a noisy or annoying animal without the owner's knowledge. This is a serious trespass and therefore actionable. The animal usually shows no evidence of pain and the sadism is unsuspected until the ligated part is gangrenous. When the ligature is placed around the neck attention is drawn to the area by a weeping discharge down the neck. Accidental ligation can happen to captive animals in zoos and the like when they are thrown feed parcels fastened with rubber bands.
rubber jaw, rubber nose [rub'ər] see renal secondary **hyperparathyroidism**.
rubber puppy syndrome, rubber kitten syndrome [rub'ər] see **Ehlers–Danlos syndrome**.
rubber ring castration [rub'ər] see **elastrator**.
rubber tree [rub'ər] see ***Calotropis procera***.
rubber vine [rub'ər] see ***Cryptostegia grandiflora***.
rubberweed see ***Hymenoxys***; include bitter rubberweed (*H. odorata*), Colorado rubberweed (*H. richardsonii*, called also pingue).
rubefacient [roo"bə-fa'shənt] 1. reddening the skin. 2. an agent that reddens the skin.
rubella [roo-bel'ə] see ***Rubivirus***.
rubeola [roo-be'o-lə] human measles; can assume epidemic proportions in primate colonies with a syndrome of exanthematous rash on the body, rhinitis, conjunctivitis and in some interstitial giant-cell pneumonia.
rubeosis [roo"be-o'sis] redness.
r. iridis pathognomonic change in chronic iritis (anterior uveitis) characterized by formation of a fibrovascular membrane over the anterior surface of the iris.
ruber [roo'bər] [L.] *red*.
rubescent [roo-bes'ənt] growing red; reddish.
rubidium (Rb) [roo-bid'e-əm] a chemical element, atomic number 37, atomic weight 85.47. See Table 4.
rubidomycin [roo-bid'o-mi"sin] see **daunorubicin**.
rubijervine one of the toxic principles in the plant *Veratrum album*.
Rubin nerve block see Rubin nerve **block**.
Rubivirus a genus in the family *Togaviridae* that includes rubella (German measles) virus of humans which also infects nonhuman primates. Not arthropod borne.
rubor [roo'bor] [L.] *redness;* one of the cardinal signs of inflammation.
rubratoxin [roo'brətok"sin] a series of two mycotoxins produced by the fungus *Penicillium rubrum.* Chronic exposure to these toxins causes extensive liver damage with much of the organ being completely destroyed. *P. purpurogenum* produces similar toxins.
rubriblast [roo'brĭ-blast] the earliest cells recognized in the erythroid maturation process. They are large with a round nucleus, slightly coarse chromatin and nucleoli, and a small amount of basophilic cytoplasm. With maturation, they progress to the prorubricyte. Called also proerythroblast, pronormoblast.
rubric [roo'bric] red; specifically, pertaining to the red nucleus.
rubricyte [roo'brĭ-sīt] a stage in the maturation of erythrocytes between the prorubricyte and the metarubricyte. Called also polychromatic normoblast or erythroblast.
basophilic r. an early stage in cellular maturation of the rubricyte; characterized by a homogeneous basophilic cytoplasm and clumped chromatin.
early polychromatophilic r. an intermediate stage in maturation of the rubricyte; the cytoplasm is basophilic to slightly eosinophilic.

late polychromatophilic r. the final stage in maturation of the rubricyte, followed by the metarubricyte.
rubrospinal [roo"bro-spi'nəl] pertaining to the red nucleus and the spinal cord.
r. tract spinal cord motor tract emanating from the red nucleus.
rubrothalamic [roo"bro-thə-lam'ik] pertaining to the red nucleus and the thalamus.
rubrum [L.] red.
Rubulavirus [roo'bu-lə-vi"rəs] a genus in the subfamily *Paramyxovirinae*. Causes a neurological and reproductive syndrome in pigs called the porcine **blue eye** disease, endemic to Mexico.
Ruby spaniel see **Cavalier King Charles spaniel**.
Rudbeckia genus of North American plants in family Asteraceae; contain an unidentified toxin which causes incoordination, abdominal pain, diarrhea; includes *R. hirta* (black-eyed Susan), *R. laciniata* (golden glow, thimble weed, cone flower), *R. occidentalis* (western cone flower).
ruddy cyanosis mucosal congestion combined with cyanosis.
rudiment [roo'dĭ-mənt] 1. primordium. 2. an organ or part that has failed to realize its potential function.
rudimentary [roo"dĭ-men'tə-re] 1. imperfectly developed. 2. vestigial.
rudimentum [roo"dĭ-men'təm] rudiment; the first indication of a structure in the course of its embryonic development.
rue [roo] *Ruta graveolens*; also a common name used for plants from different species, including African rue, turkish rue (***Peganum harmala***), goat's rue (***Galega officinalis***), meadow rue (***Thalictrum***), Mexican rue (***Peganum mexicana***), Texas desert rue (***Thamnosma texana***).
ruffed grouse a forest species of game birds; called also *Bonasa umbellus*.
ruffled border see brush **border**.
rufous [roo'fəs] red.
rufus red.
rug horse gear used to cover and protect from the weather from the root of the neck to the tail.
New Zealand r. canvas, waterproof rug with breast strap and leg straps that pass inside the thighs and anchor the rug behind.
ruga [roo'gə] pl. *rugae* [L.] a ridge or fold.
rugae palatal [roo'je] transverse ridges of hard palate mucosa shaped so as facilitate the movement of food backwards towards the pharynx.
Rugopharynx gastrointestinal nematode found in free-living macropods.
R. australis found in free-living macropods.
R. rosemariae gastrointestinal nematodes found embedded in nodules in the saccular stomachs of kangaroos.
rugoscopy the study of the patterns of the grooves and ridges (rugae) of the palate to identify individual patterns.
rugose [roo'gōs] marked by ridges; wrinkled.
rugosity [roo-gos'ĭ-te] 1. the condition of being rugose. 2. a fold, wrinkle or ruga.
rule of ones 1 mL of fresh blood per 1 lb body weight will increase a patient's packed cell volume (PCV) by 1%, as long as there is no continuing loss.

R-22: Palatal rugae in a dog.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

rule of 20 a checklist of 20 parameters important in the care of critically ill patients.
rule of six a mnemonic for aging horses: in each arcade, a foal has two incisors from 6 days to 6 weeks of age, four incisors from 6 weeks to 6 months of age, and six incisors over 6 months of age.
rule-out exclusion that reduces the number of possible diagnoses under investigation.
rumen [roo'mən] pl. *rumens, rumina;* the largest of the compartments of the forestomach of ruminant animals that serves as a fermentating vat. It is lined by a keratinized epithelium bearing numerous absorptive papillae; it is partly subdivided by folds (pillars). These include dorsal and ventral sacs and a caudodorsal blind sac and a caudoventral blind sac. It communicates directly with the reticulum cranially and has no other exit. It covers most of the floor of the abdomen on the left in the nonpregnant animal and in animals not affected by left displacement of the abomasum. Caudally it may reach the brim of the pelvis and is palpable rectally.
L-shaped r. a chronically distended rumen which extends from the left abdomen to fill the right half as well.
r. collapse see **ruminal** collapse.
r. mat the lower or solid layer of rumen ingesta, below the gas but above the slurry and liquid.
primary r. cycle see **reticuloruminal contractions**.
r. transplant see **cud** transfer.
rumen-degradable proteins those digested by ruminal microflora; there is no other simple way of categorizing them with respect to digestibility; some are digestible by ruminant microflora, others less so. Protein in rumen microbes that subsequently pass through the rumen are highly digestible and an important source of metabolizable protein capable of supplying all of the protein required by cows producing up to approximately 10000 lb of milk per lactation.
rumen-undegradable proteins important for providing for protein requirements of high producing dairy cows as only about half of the dietary protein of ruminants is provided by microbial protein from ruminal organisms. Diet components high in rumen undigested proteins include fish meal, meat and bone meal, feather meal, blood meal, corn gluten mean, distillers dried grains and brewers. Other methods of producing rumen undegradable proteins that will pass through to the abomasum and are then readily digestible include heating or the addition of formaldehyde. However, high ruminant undegradable protein sources that are commercially available may present an amino acid profile that is inferior to microbial protein. See so called escape **protein**, protected **protein**. Called also bypass protein.
rumenal ruminal.
rumenitis [roo"mə-ni'tis] inflammation of the rumen commonly caused by carbohydrate engorgement. Also a result of ingestion of irritating substances such as crude oil or oil products. The lesions can be classified as necrobacillary, necrotizing.
barley beef r. lesions of rumenitis found at necropsy in calves fed heavy barley diets.
rumenoreticular contractions combining the names of the rumen and reticulum has become an increasingly popular convention, acknowledging the preeminence of functionality over structure; the movements of the combined organs include a biphasic reticular contraction followed by a contraction of the dorsal ruminal sac, followed by a contraction of the ventral sac, then a repetition of the cycle.



R-23: Necrotizing, mycotic rumenitis in a steer following carbohydrate engorgement.

R

rumenostomy [roo"mə-not'ə-me] creation of a permanent or semipermanent ruminal fistula. Suturing the ruminal wall to the skin and incising the rumen is the most permanent. Insertion of a bloatwhistle or a screw device that approximates the skin and ruminal mucosa are sufficient for temporary relief of persistent bloat or distention due to other causes.

rumenotomy surgical opening of the rumen through the left upper flank for the purpose of examining the reticulum, rumen or esophageal groove or for emptying the rumen.

r. shroud a large **drape** used to cover exposed skin around a rumenotomy incision.

rumensin see **monensin**.

Rumex plant genus of the Polygonaceae family; dock and sorrel plants which contain oxalate but are unpalatable and are rarely recorded as causes of poisoning. Includes *R. acetosa* (sorrel), *R. acetosella* (*R. angiocarpus,* dock sorrel), *R. brownii* (swamp dock), *R. conglomeratus* (clustered dock), *R. crispus* (curly dock), *R. venosus* (veined dock), *R. vesicarius* (red or ruby dock). See also soluble **oxalate** poisoning.

ruminal [roo'mĭ-nəl] pertaining to the **rumen**.

r. acidosis see ruminal pH (below).

r. atony cessation of normal rhythmic contractions for more than 2 minutes. Caused by many factors including peritonitis, ruminal acidity or alkalinity. Recognized by palpation or auscultation in the left flank. Called also ruminal stasis.

r. collapse collapse of ruminal function, e.g. resulting from complete anorexia, severe toxemia for several days; complete atony, shrunken, collapsed rumen, little content other than fluid.

r. contractions see **reticuloruminal contractions**.

r. cycles see **reticuloruminal contractions**.

r. distention due to froth, free gas, fluid or feed. In the early stages rumen cycles are increased in rate and intensity. In the very last stages there is ruminal atony. See also ruminal tympany (below), **vagus** indigestion, **pyloric** obstruction, **carbohydrate engorgement**.

r. drinkers calves fed milk or milk replacer in which reticular groove closure is incomplete so that much milk leaks into the rumen where it ferments causing a disabling indigestion. A problem particularly in veal calves. Characterized by reduced appetitie, pica, ruminal acidosis, ruminal tympany and maldigestion, clay-like feces, alopecia, reduced growth rate and enhanced mortality.

r. fill dry matter capacity; the limitation on intake of the animal.

r. flora see rumen **flora**.

r. flora reconstitution see **cud** transfer.

r. flukes see **paramphistomiasis**.

foul smelling r. contents putrefaction of ruminal contents, especially protein, in an atonic and defaunated rumen and in ruminal drinkers.

r. hyperkeratosis occurs in calves nutritionally deficient in vitamin A.

r. hypermotility rumen cycles occur almost continuously, at least faster than the normal high level of two cycles per minute. See **vagus** indigestion.

r. impaction dense packing of rumen with indigestible roughage, accompanied by ruminal hypomotility. Dietary error causing slight increase in ruminal acidity or alkalinity. Called also indigestion.

r. indigestion the clinical syndrome associated with ruminal atony. Includes low food intake, rumen atony, reduced fecal output.

r. inflammation see **rumenitis**.

r. movements see **reticuloruminal** contractions.

r. necrobacillosis infection of the rumen wall by *Fusobacterium necrophorum*, usually secondarily to rumenitis after carbohydrate engorgement. Commonly a precursor of liver necrobacillosis.

r. overload see **carbohydrate engorgement**.

r. parakeratosis significant lesion in ruminants fed high concentrate rations; characterized by black, club- or tongue-like papillae which tend to stick together in clumps.

r. pH the normal pH of 7.0 can fall as low as 5.5 to 6.5 in moderate acidosis caused by carbohydrate engorgement, 5 to 6 in acute engorgement, and 4 to 5 in the peracute disease.

primary r. tympany intrinsic to reticuloruminal dysfunction; not secondary to traumatic reticulitis, esophageal obstruction.

r. protozoa absent see **defaunate**.

R-24: Ruminal tympany in an 11-month-old calf caused by compression of the esophagus by swelling in the ventral neck due to thymic lymphoma.
From Braun U, Hauser B, Meyer S, Feller B: Cattle with thymic lymphoma and haematoma of the ventral neck: A comparison of findings. Vet J 174:344-350, 2007. Elsevier.

r. rotation partial rotation about the long anteroposterior axis has caused chronic tympany.

secondary r. contraction occurs after the primary ruminal cycles during feeding and terminate with eructation. See also **reticuloruminal contractions**.

r. sounds the sounds which accompany normal ruminal movements in normal cows and are audible over the left upper flank. The sounds referable to the first movement in the cycle resembles water gurgling over a gravel bed, the second sound has a booming quality like distant thunder.

r. squamous-cell carcinoma rarely occurs in the rumen and may obstruct the esophageal cardia causing chronic ruminal tympany.

r. stasis complete absence of ruminal movement indicated by no audible sounds and no palpable ruminal movements during a 2 minute auscultation.

r. tympany distention of the rumen with gas. In cattle affected by eating too much wet legume—so-called clover bloat—the gas may be mixed with fluid phase to cause stable froth and the animal is unable to eructate and dies of asphyxia. Free gas bloat is due to physical obstruction of the esophagus by a foreign body, or by pressure from outside, or failure of the esophageal groove reflex, or acute atony of ruminal musculature as in anaphylaxis. Called also bloat.

r. ulceration an uncommon lesion due usually to bacterial or fungal infection of a primary erosive lesion or chemical rumenitis; clinically inapparent unless leakage or rupture causes peritonitis.

r. villous atrophy encountered in weanling ruminants on low fiber diets, e.g. pelleted feed. Causes no apparent impairment of digestion.

r. zoospores motile fungal bodies, chemotactically attracted to soluble carbohydrate and may represent 8% of the total ruminal biomass in animals on high fiber diets. Their role in digestion is unsure but they do form rhizoids which penetrate plant tissue.

ruminant [roo'mĭ-nənt] 1. member of the mammalian suborder Ruminantia. 2. an animal that has a stomach with four complete compartments, and that characteristically regurgitates partially digested, macerated food from the rumen and masticates it when at rest.

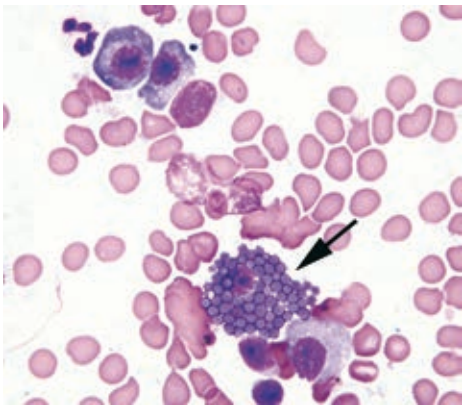
r. stomach a misnomer when used in the plural, the ruminant stomach includes the three forestomach compartments (reticulum, rumen, and omasum) and concludes with the abomasum.

rumination [roo"mĭ-na'shən] includes regurgitation, remastication, ensalivation and reswallowing. The regurgitation of fluid reticular contents occurs as a result of a positive lowering of intrathoracic pressure, the arrival of a ruminal contraction at the cardial sphincter at the appropriate time, relaxation of the cardia and reverse peristalsis in the lower esophagus. The regurgitus is compressed at the back of the tongue and the fluid immediately reswallowed. The solid material is chewed for about a minute and reswallowed. The cycle is then ready to recommence. Rumination requires a positive approach by the cow and it is easily dissuaded by fright or food. Called also chewing the cud, cudding.

Ruminobacter amylophilus one of the most common anaerobic gram-negative bacterial species in ruminal contents.

Ruminococcus [roo"mĭ-no-kok'əs] ruminal bacteria which participate in bacterial fermentation of ingested plant material; includes *R. albus*, *R. flavefaciens*.

ruminoreticulum [roo"mĭ-no-rə-tik'u-ləm] the rumen and reticulum as a unit.



R-25: Lymph node aspirate containing small lymphocytes, plasma cells, and one Mott cell with numerous Russell bodies (arrow). From Cowell RL, et al, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

rump [*rump*] the gluteal region; the region around the pelvis, hindquarters, buttocks.
goose r. a very steep slope to the back over the pelvis.
rump post see **pygostyle**.
rumpy 1. overendowed with buttocks. 2. a variety of manx cat without any coccygeal vertebrae.
rumpyriser a variety of **Manx** cat with a few coccygeal vertebrae.
runch poisoning by ***Sinapis*** *arvensis*.
runners a defective gait in foxhounds in which affected animals are unable to gallop or jump fences.
running fits see canine **hysteria**, psychomotor **seizure**.
running out said of a horse that is not stabled but running at pasture.
running walk a four-beat horse gait faster than a walk and slower than a rack. Said to be a trot in front and a walk behind.
runt [*runt*] 1. small, stunted, weak; an undersized offspring. See also **intrauterine** growth retardation. 2. a growing pig that has grown poorly and is undersized in relation to its age. Usually the result of chronic disease or malnutrition.
r. disease disease produced by immunologically competent cells in a foreign host that is unable to reject them, resulting in gross retardation of host development and in death. Classically observed in neonatal mice given bone marrow or leukocytes from an adult, genetically different strain of mice; a form of **graft-versus-host disease**.
r. deformity syndrome see **infectious** hypodermal and hematopoietic necrosis of farmed shrimp.
runting syndrome a condition which occurs in newborn pigs infected often with porcine parvovirus during gestation. The piglets do not thrive, suffer thymic atrophy and die at the age of 2 to 12 months.
Runyon classification [*run'yən*] an older system of classification of **mycobacteria**, based on growth rate, morphology of colonies and pigmentation.
RUPs rumen undegradable proteins.
rupture [*rup'chər*] 1. tearing or disruption of tissue. 2. hernia. For details of individual diseases see under each organ, e.g. abomasal, aortic, atrial, cecal, intestinal, rectal, gastric, ventricular, vesical, esophageal, ligamentous, individual ligaments (e.g. cruciate, round, Achilles) urethral, hepatic, splenic, egg yolk.
rush [*rush*] 1. peristaltic rush; a powerful wave of contractile activity that travels very long distances down the small intestine, caused by intense irritation or unusual distention. 2. commonly, plants in the sedge genus ***Juncus***, including blue or hard rush (*J. inflexus*), joint-leaf rush (*J. holoschoenus*), soft rush (*J. effusus*).
mat r. (2) see ***Lomandra longifolia***.
Rush pin internal splinting pin of stainless steel and vitallium that is semicircular in cross-section and has a pointed tip with a bevel edge. When properly placed in the intramedullary cavity of a long bone, it provides three-point fixation under spring-loaded tension.
rushes aquatic plants; called also bulrush. See ***Juncus***.
Ruskin forceps heavy duty, double action, spring-loaded handle with two chisel-shaped blades approximating each other. The standard bone forcep.
Ruskin rongeur similar to **Ruskin forceps** except that the blades are excavated spoon-shaped, classical rongeur blades.
Russell bodies [*rus'əl*] globular plasma cell inclusions composed of aggregates of immunoglobulin.
Russell terrier see **Parson Russell terrier**.
Russell's viper venom [*rus'əl*] the venom of Russell's viper (*Vipera russelli*), which acts in vitro as an instrinsic thromboplastin and is useful in defining deficiencies of blood clotting factor X.
R. viper venom time (RVVT) a one-stage prothrombin time test, used to distinguish between deficiency of factor VII and factor X. Called also Stypven time.
Russian associated in some way with Russia.
R. blue a breed of cats with short, dense, silver-tipped blue-colored coat and vivid green eyes.
R. black terrier see **Black Russian terrier**.
R. heavy draft heavy draft or milk Russian horse, usually chestnut, also brown or bay.
R. rabbit a breed of white domestic rabbit with black extremities.
R. trotter light horse bred by mating Orlov horse and American trotters; all coat colors.
R. wolfhound see **Borzoi**.
Russian forceps tissue handling forceps with broad, spoon-shaped tips, serrated around the edge.
Russian spring–summer encephalitis see Russian spring–summer **encephalitis**.
rust [*rust*] 1. see **velvet** disease. 2. a bacterial disease of the shell in turtles. See also **shell rot**.
rut [*rut*] the period of increased sexual activity occurring in the autumn (fall) in some male mammals, especially deer and elephants. It is accompanied by increased testicular activity, especially spermatogenesis, and in deer by shedding of the antlers and a marked increase in vocalizing and aggression. The vocalizing is a distinctive deep roar known as 'the rut'. The aggressive actions have the effect of keeping attending females close and competing males at a distance.
Ruta graveolens [*roo'tə*] a plant in the family Rutaceae; contains furanocoumarins and may cause primary photosensitization. Called also rue, herb-of-grace.
rutabaga ***Brassica*** *napobrassica*.
ruthenium (Ru) [*roo-thē'ne-əm*] a chemical element, atomic number 44, atomic weight 101.07. See Table 4.
rutherford (Rd) [*ruth'ər-ford*] a unit of radioactive disintegration, representing one million disintegrations per second. The term is no longer used having been replaced by **curie** which is also now superseded by **becquerel**.
rutherfordium (Rf) a chemical element, atomic number 104, atomic weight 261. See Table 4.
ruttling a rough wheezing sound made by guinea pigs; sometimes it is associated with pneumonia, but may occur in normal animals.
RV residual volume.
RVH right ventricular hypertrophy.
RVVT Russell's viper venom time.
Rx, ℞ recipe; used as a heading for a prescription.
rye [*ri*] the cereal plant *Secale cereale*, and its nutritious seed. May be infected with ***Claviceps*** *purpurea* and cause poisoning.
r. ergot see rye **ergot**[1].
ryegrass highly productive pasture grasses including Wimmera or annual ryegrass (*Lolium rigidum*), Italian ryegrass (*L. multiflorum*) and perennial ryegrass (*L. perenne*).
short rotation r. ***Secale cereale*** var. *rosen*.
r. staggers see ryegrass **staggers**.
Ryeland a breed of English polled, short-woolled, meat sheep.
ryodoraku a specific form of acupuncture developed by the Japanese; ryodo points are very close to or at the site of acupuncture points. Ryodoraku lines are comparable to acupuncture meridians.

S

VetBooks.ir

S chemical symbol, *sulfur;* symbol for *siemens* and *svedberg;* [L.] *semis* (half); sight; [L.] *signa* (mark); [L.] *sinister* (left).

S phase see cell **cycle**.

S_1 first **heart sound**.

S_2 second **heart sound**.

S_3 third **heart sound**.

S_4 fourth **heart sound**.

Σ sigma, capital letter; eighteenth letter in the Greek alphabet. A mathematical symbol for sum.

σ sigma, small letter; eighteenth letter in the Greek alphabet. A mathematical symbol for standard deviation.

S-A, SA sinoatrial.

S-T segment the portion of an electrocardiogram between the end of the QRS complex and the beginning of the T wave. It represents the period of slow repolarization of the ventricles.

S1-mapping a method for mapping precursor or mature mRNA to particular DNA sequences using the enzyme S1-nuclease.

SA node see **sinoatrial**.

Saanen a breed of all-white, although cream is acceptable, dairy goat with prick ears and always polled.

Sabin–Feldmann dye test [*sa'bin feld'mən*] a test which detects serum antibody against *Toxoplasma gondii*. In the presence of antibodies, live organisms are not stained with methylene blue. Called also methylene blue dye binding test.

sable 1. a coat color pattern with black-tipped hairs on a light background. Seen in the German shepherd dog. 2. breed of fur rabbit; see **American sable**.

Sabouraud's dextrose agar [*sah-boo-ro'*] see Sabouraud's dextrose **agar**.

sabulous [*sab'u-ləs*] gritty or sandy.

saburra [*sə-bur'ə*] sordes; foulness of the mouth or stomach.

saburral [*sə-bur'əl*] pertaining to saburra.

SAC Scottish Agricultural College.

SAC Veterinary Science Division Reports SAC Veterinary Science Division Reports monthly reports of major diseases encountered in the 8 veterinary diagnostic laboratories in Scotland; reported in the Veterinary Record.

sac [*sak*] a pouch; a baglike organ or structure. See also **conjunctival** sac.

air s. 1. alveolar sac. 2. one of the large air-filled diverticula of the respiratory system of birds. See also **air sacs**.

allantoic s. see **allantois**.

alveolar s's the spaces into which the alveolar ducts open distally, and with which the alveoli communicate.

anal s. see **anal sacs**.

endolymphatic s. the blind, flattened cerebral end of the endolymphatic duct.

heart s. the pericardium.

hernial s. the peritoneal pouch that encloses a herniated viscus or mesentery.

lacrimal s. see **lacrimal** sac.

paranal s. see **anal sacs**.

pleural s. the pleura-lined cavity which contains the lung.

ruminal s. one of the dorsal and ventral sacs of the rumen which are themselves further subdivided to create a caudodorsal sac and a caudoventral sac. Formerly called *saccus dorsalis, saccus ventralis, saccus cecus caudodorsalis, saccus cecue caudoventralis*, respectively.

yolk s. the extraembryonic membrane connected with the midgut; in vertebrates other than true mammals, it contains a yolk mass. See also **yolk sac**.

sacahuiste, sacahuista ***Nolina*** *texana*, *N. microcarpa*.

saccade [*sə-kād'*] small, rapid, involuntary, jerky movements of both eyes simultaneously, such as occur in humans while reading and all animals when focusing attention on a fixed object during head movements.

saccadic [*sə-kad'ik*] characterized by saccades.

saccate [*sak'āt*] 1. shaped like a sac. 2. contained in a sac.

saccharated iron, saccharated ferric oxide a brown powder, soluble in water, used as a hematinic. Given by intramuscular injection to newborn piglets. See also **iron** poisoning.

saccharide [*sak'ə-rīd*] one of a series of carbohydrates, including the sugars; they are divided into monosaccharides, disaccharides, trisaccharides and polysaccharides according to the number of saccharide groups present.

sacchariferous containing sugar.

saccharogalactorrhea secretion of milk containing an excess of sugar.

saccharogenic capable of producing a sugar.

saccharolytic [*sak"ə-ro-lit'ik*] capable of splitting up sugar.

saccharometabolic [*sak"ə-ro-met"ə-bol'ik*] pertaining to the metabolism of sugar.

saccharometabolism [*sak"ə-ro-mə-tab'o-liz-əm*] the metabolism of sugar.

Saccharomyces farciminosum [*sak"ə-ro-mi'sēz*] see ***Histoplasma capsulatum*** var *farciminosum*.

Saccharomycopsis guttulatus [*sak"ə-ro-mi-kop'sis*] see ***Cyniclomyces guttulatus***.

saccharum [*sak'ə-rəm*] [L.] *sugar* (especially sucrose).

sacciform [*sak'sĭ-form*] shaped like a bag or sac.

Saccostrea glomerata farmed bivalve; called also Sydney rock oyster.

saccular [*sak'u-lər*] pertaining to or resembling a sac.

s. stage lung growth about the midpoint of fetal development when the lung volume increases markedly due to saccule development; subdivision of the saccules into alveoli commences.

sacculated [*sak'u-lāt"əd*] containing saccules.

sacculation [*sak"u-la'shən*] 1. a saccule, or pouch. 2. the quality of being sacculated. 3. the formation of pouches.

large intestinal s. see **haustrum**.

saccule [*sak'ūl*] 1. a little bag or sac; a small, pouchlike cavity. 2. the smaller of the two divisions of the membranous labyrinth of the vestibule, which communicates with the cochlear duct by way of the ductus reuniens.

laryngeal s. the pouch-like cul-de-sac of the laryngeal ventricle especially when of large size. Former terminologies distinguished between the entrance to the laryngeal ventricle and this, its pouch-like extension. The current NAV makes no such distinction. The entrance in most species lies between the vocal and the vestibular folds. In pigs the ventricle lies between the two parts of the vocal ligament and there is no sac in the cat nor in ruminants. Called also *ventriculus laryngis*.

sacculectomy surgical removal of saccular structures.

anal s. performed in dogs with anal sac disease. It is also the basis for descenting of skunks and ferrets. There are a number of different procedures described, many of which are modifications intended to enable the surgeon to more easily visualize and handle the structures.

sacculitis [*sak"u-li'tis*] inflammation of a saccule, e.g. **airsacculitis**, anal sacculitis.

sacculus [*sak'u-ləs*] pl. *sacculi* [L.] a saccule.

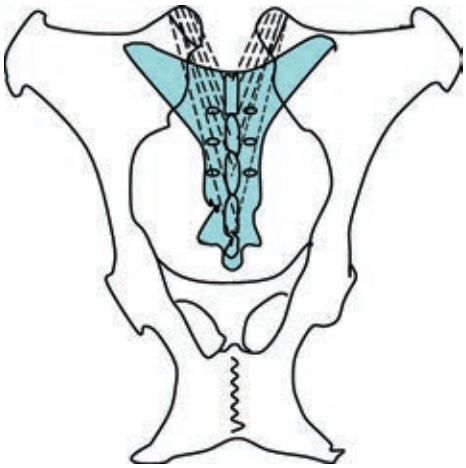
s. laryngis see laryngeal **saccule**.

saccus [*sak'əs*] pl. *sacci* [L.] a sac.

s. cecus the blind sac of a viscus such as the fundus of the stomach in the horse.

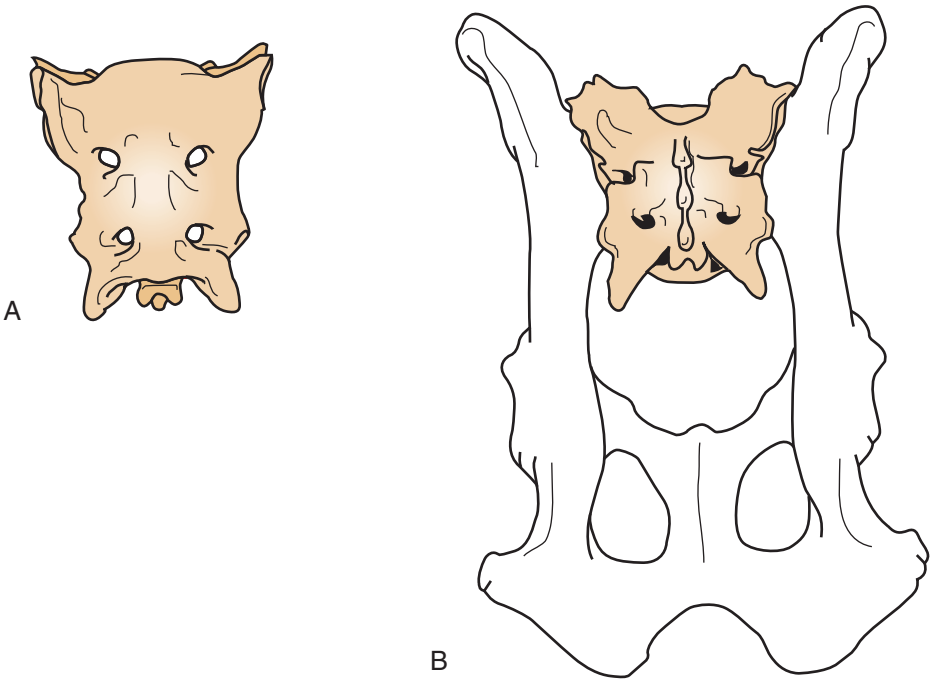
s. hypophysialis an outgrowth of ectoderm coming directly from the roof of the stomodeum in the embryo; it comes into contact with a downgrowth from the forebrain and is later transformed into the anterior lobe of the pituitary.

sacrad [*sa'krad*] toward the sacrum.



S-1: Schematic dorsal view of an equine pelvis showing position of sacrum and short dorsal sacroiliac ligament (hatched lines) which runs from the tuber sacrale to the sacral spinous processes. From Goff LM, Jeffcott LB, Jasiewicz J, McGowan CM: Structural and biomechanical aspects of equine sacroiliac joint function and their relationship to clinical disease. Vet J 176:281-293, 2008. Elsevier.

sacral [*sa'krəl*] pertaining to the sacrum.
s. dysgensis see **sacrocaudal** agenesis.
sacralgia [*sa-kral'jə*] pain in the sacrum.
sacralization [*sa"krəl-ĭ-za'shən*] anomalous fusion of the last lumbar vertebra with the first segment of the sacrum.
sacrectomy [*sa-krek'tə-me*] excision or resection of the sacrum.
sacred bamboo see ***Nandina domestica***.
Sacred cat of Burma see **Birman**.
sacr(o)- word element. [L.] *sacrum*.
sacrocaudal pertaining to the sacrum and the tail.
s. agenesis, s. dysgenesis abnormal development of the vertebrae in the area; seen most commonly in Manx cats, where it is inherited as a autosomal dominant trait, and dogs naturally tailless, e.g. Old English sheepdogs, British bulldogs and others. It is often associated with abnormalities of innervation to the anus, urinary bladder and sometimes hindlegs and tail.
s. fusion an anomalous union between the sacrum and coccygeal vertebrae.
s. joint the joint between the sacrum and the tail.
s. luxation a relatively common traumatic injury in dogs and cats, caused by traction on the tail. Neurological deficits result from hemorrhage, edema and avulsion of nerve roots in the terminal spinal cord. There may be urinary and fecal incontinence, posterior paresis and paralysis of the tail.
sacrococcygeal [*sa"kro-kok-sij'e-əl*] see **sacrocaudal**.
sacroiliac [*sa"kro-il'e-ak*] pertaining to the sacrum and the ilium, or the joint between these two bones, or to the part of the back where these bones meet on both sides of the back.
s. joint see Table 11.
sacroiliitis [*sa"kro-il"e-i'tis*] inflammation of the sacroiliac joint.
sacrolumbar [*sa"kro-lum'bər, -bahr*] pertaining to the sacrum and lumbar vertebra; the loins.
sacropelvic [*sa"kro-pel'vik*] pertaining to the pelvis and sacrum.
sacrosciatic [*sa"kro-si-at'ik*] pertaining to the sacrum and ischium.
sacrospinal [*sa"kro-spi'nəl*] pertaining to the sacrum and vertebral column.
sacrotuberous ligament [*sa"kro-too'bər-əs*] see Table 12.
sacrouterine [*sa"kro-u'tər-in*] pertaining to the sacrum and uterus.
sacrovertebral [*sa"kro-vur'tə-brəl*] pertaining to the sacrum and vertebrae.
sacrum [*sa'krəm*] the triangular-shaped bone between the lumbar and coccygeal vertebrae; formed usually of five fused vertebrae (four in pigs, three in dogs) that are wedged between the two hip bones. See also Table 10.
SAD rabies vaccine Street–Alabama–Dufferin strain of attenuated rabies vaccine.
saddle [*sad'əl*] 1. the back region over the thoracic vertebrae. 2. a coat color marking in dogs, usually black, located over the back. Seen in Beagles. 3. a piece of harness for either riding or draft.
s. thrombus see saddle **thrombus**, **aortic** embolism.
s. scab see **equine** staphylococcal dermatitis.
s. sore, s. gall a pressure sore caused by bad riding technique or more commonly a badly fitting or poorly stuffed saddle.
Saddleback see **Wessex saddleback**.
saddlepatch disease see **columnaris disease**.
safe light red, yellow or orange light for use in photographic darkroom used for developing X-ray film; should comply with the specifications of the type of filter being used and the screen-film combination.
safety avoidance of occupational, iatrogenic or personal injury.
drug s. freedom from undesirable side-effects; increases with specificity and selectivity of a drug. See also safety index (below).
s. index maximum tolerated dose/recommended dose, the doses being expressed in similar terms, e.g. mg/lb, mg/kg.
radiological s. routine the specific routine to be followed in an X-ray room to ensure minimal risk to all parties.
restraint s. proper use of appropriate restraint procedure when dealing with any animal.
s. specifications specifications laid down by a local government authority about the construction and equipment to be used in a radiological facility.



S-2: Canine sacrum. A, Ventral view. B, Dorsal view. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

safety pin appearance the appearance of *Clostridium perfringens* spores in fecal examinations; the open end represents the remains of the vegetative cell.

Saffan a steroidal preparation containing two pregnanediones (**alfaxalone** and **alfadolone** acetate) and used for the induction of anesthesia. Induces short-term anesthesia immediately when administered intravenously. Called also CT 1341.

safflower meal [saf'low-ər] ground cake made of decorticated residue of seeds of *Carthamus tinctorius*, rich in linoleic acid. A modest protein dietary supplement deficient in methionine and lysine. Called also kurdee.

saffron see ***Colchicum autumnale***.

sage [sāj] common name for plants in the genus ***Salvia***.
poison s. ***Isotropis*** *atropurpurea*.
s. sickness unspecified poisoning by *Artemisia* spp.
Texas sage *Salvia texana*.

sagebrush common name for plants in the genus ***Artemisia***; includes big sagebrush (*A. tridentata*), sand sagebrush (*A. filifolia*).

sagging crop see pendulous **crop**.

sagging posture comprises drooping ears, head hung low, tail down (unkinked in the case of pigs), lackluster facial expression.

sagittal [saj'ĭ-təl] 1. shaped like an arrow. 2. situated in the direction of the sagittal suture; said of a plane or section parallel to the median plane of the body.

sago palm [sa'go] *Metroxylon sagu*, the usual source of sago in the Pacific region; misleading common name given to the cycad ***Cycas*** *revoluta*, which is not a palm.

sago spleen [sa'go] the white pulp (lymphoid follicular tissue) of the spleen is enlarged and protrudes from the capsular and cut surfaces like grains of sago. Occurs in amyloidosis and splenic lymphoma.

Sahelian emanating from or pertaining to Sahel, the region south of the Sahara desert in Central Africa.
S. goat many varieties of this dual-purpose breed in North West Africa.

Sahiwal a reddish-dun zebu type breed of dairy cattle. Usually has white markings.

SAIDS simian acquired immune deficiency syndrome.

sail sign the thymus, seen as a triangular structure in the left, cranial mediastinum on ventrodorsal radiographs of the thorax in young dogs.

Saint Bernard, St. Bernard a very large (110–200 lb) dog with massive, broad head, medium-sized ears lying close to the head, and a long tail. There are two varieties, the most familiar (rough) has a long, thick coat, while the smooth variety has a shorter coat, lying close to the body. The breed is predisposed to osteogenic sarcoma, ectropion, entropion, hip dysplasia, osteochondrosis, hemophilia and congestive cardiomyopathy.

St. George disease see ***Pimelea***.

St. Hubert hound see **Bloodhound**.

St. John's wort see ***Hypericum***.

St. Louis encephalitis see St. Louis **encephalitis**.

St. Lucia grass ***Brachiaria*** *brizantha*.

saki (*Pithecia* spp.) a small, longhaired, bushy-tailed, New World monkey.

sal [sal] [L.] *salt*.

salamander [sal"ə-man'dər] lizard-like amphibians in the order Caudata; they may be aquatic, semi-aquatic or terrestial, often depending on their life stage. They are capable of regenerating lost body parts, and in order to escape predators will shed their tail, which later regrows. Neoteny, the maintenance of larval characteristics throughout life, is a common phenomenon in these animals. Popular as pets. See also **newts**.
s. poisoning dogs and cats mouthing salamanders may become distressed with excessive salivation, muscular weakness and incoordination and rarely convulsions.

Sala's cells star-shaped cells of connective tissue in the fibers that form the sensory nerve endings situated in the pericardium.

salbutamol [sal-bu'tə-mol] see **albuterol**.

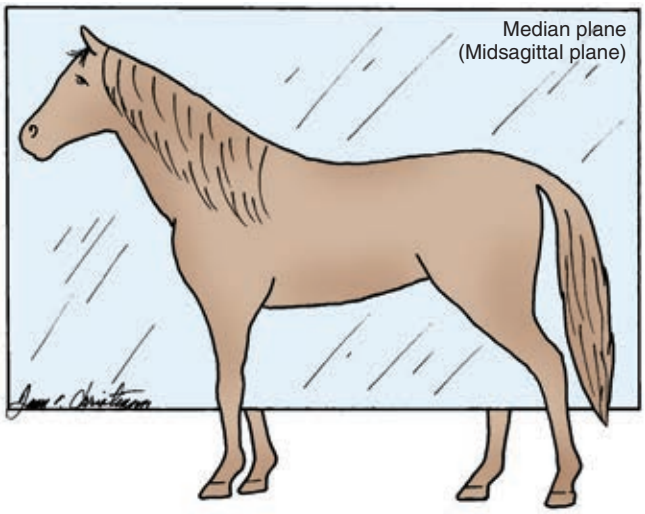
Salers mahogany red, dual-purpose French cattle.

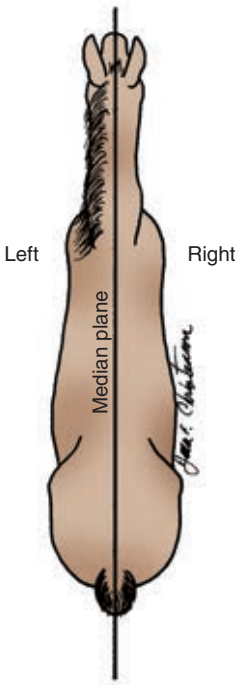
salicyl-sulfonic acid test [sal"ĭ-səl-səl-fon'ik] precipitation of protein in a urine sample by a 20% aqueous solution of salicyl-sulfonic acid. Placing the urine over a layer of reagent in a test tube results in the formation of a white ring where the two solutions meet, indicating that protein is present.

salicylamide [sal"ĭ-səl-am'īd] an amide of salicylic acid; used as an analgesic; toxic in cats.

salicylanilides [sal"ĭ-səl-an'ĭ-līd] a group of anthelmintics which exert their action by uncoupling mitochondrial reactions which are critical to electron transport and associated phosphorylation in the metabolic system of the parasite. Bind to plasma proteins and persist for several weeks. They are effective against cestodes and trematodes but generally not nematodes. Some are active against *Haemonchus contortus*, e.g. rafoxanide and closantel.

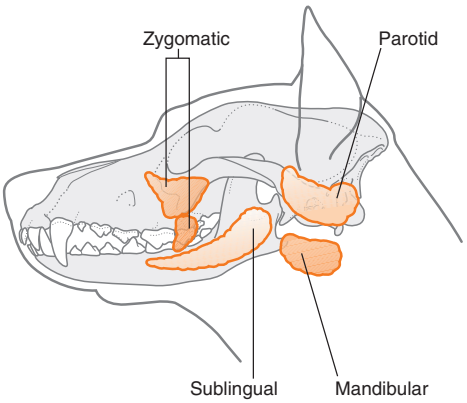
salicylate [sal"ĭ-sil'āt, sə-lis'ə-lāt] any salt or ester of salicylic acid. The salicylates used as drugs for their analgesic, antipyretic and anti-inflammatory effects include aspirin (acetylsalicylic acid, ASA), methyl salicylate and sodium salicylate. Low dosages of salicylates are used primarily for the relief of mild-to-moderate pain or fever. The mechanism of most of the effects of aspirin





S-3: The sagittal plane.
Christenson DE, Veterinary Medical Terminology. Saunders, 2008.

S-4: Saint Bernard (shorthaired).



S-5: Salivary glands in the dog.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

and other salicylates is inhibition of prostaglandin synthesis, thus blocking pyretic and inflammatory processes that are mediated by prostaglandins. Aspirin also prolongs the bleeding time through its effects on platelets owing to both inhibition of prostaglandin synthesis and acetylation of platelet structures. Salicylates also cause ulceration and hemorrhagic lesions of the gastric mucosa; the same mechanisms involved in the anti-inflammatory effects increase the production of stomach acid, decrease the secretion of protective mucus and increase bleeding. See also **aspirin** poisoning.

salicylazosulfapyridine [*sal"ĭ-sil-az"o-sul"fə-pir'ĭ-dēn*] see **sulfasalazine**.

salicylic acid [*sal'ĭ-sil'ik*] *o*-hydroxybenzoic acid; used as a keratolytic. See also **salicylate**.

salicylism [*sal'ĭ-sil"iz-əm*] toxic signs caused by salicylic acid.

saline [*sa'lēn, sa'līn*] salty; of the nature of a salt.

hypertonic s. therapy an alternate to the expensive and time consuming continuous intravenous infusion of isotonic solution for treatment of endotoxic shock, hemorrhagic shock and the rehydration of hypovolemia, particularly in farm animals. Consists of the rapid intravenous injection of hypertonic saline followed by oral rehydration fluids.

hypertonic s. a solution contining 1–23.4% NaCl.

s. solution a solution of salt (sodium chloride) in purified water. Physiological saline solution is a 0.9% solution of sodium chloride and water and is isotonic, i.e. of the same osmotic pressure as blood serum.

s. water poisoning see **sodium** chloride poisoning.

s. waters waters from surface running mineral springs, water obtained from natural underground storages in artesian and subartesian bores.

Whittingham's s. a phosphate-buffered saline used to store fertilized embryos.

salinomycin [*sal"in-o-mi'sin*] an ionophore coccidiostat and growth promotant with a broad spectrum of efficiency and closely related to **monensin** and **lasalocid**.

s.–tiamulin poisoning fed concurrently or close together to pigs enhances the myonecrotic effect of salinomycin.

saliuresis diuresis due to high electrolyte excretion; e.g. the feeding of additional salt as a prevention against urolithiasis in sheep and cattle acts in this way. Some useful salt or osmotic diuretics may have to be administered parenterally because of poor absorption.

saliva [*sə-li'və*] the enzyme-containing secretion of the salivary glands.

s. tests tests conducted on the saliva of horses competing in races or show events to detect the presence of drugs used to affect the horse's performance.

salivant [*sal'ĭ-vənt*] causing flow of saliva.

Salivaria [*sal"ĭ-var'e-ə*] the **anterior** station group of trypanosomes which transmit the protozoa with their mouthparts.

salivarian [*sal"ĭ-var'e-ən*] said of trypanosomes, such as *Duttonella*, *Nannomonas*, *Pycnomonas* and *Trypanosoma*. These trypanosomes are passed to the recipient in the saliva of the tsetse fly (*Glossina* spp.). See also ***Salivaria***.

salivary [*sal'ĭ-var-e*] pertaining to the saliva.

s. amylase an α-amylase, ptyalin, initiates digestion of starch and glycogen in the mouth. Dogs, cats and horses appear not to secrete the enzyme.

s. calculus sialolith. See salivary **calculus**.

s. duct atresia a congenital absence of lumen in the duct; causes distention then atrophy of the gland.

s. duct dilatation see **ranula**.

s. ducts excretory ducts that carry the saliva from the glands to the mouth cavity.

salivary gland [*sal'ĭ-var-e*] any of the glands around the mouth that secrete saliva. The major ones are the three pairs known as the parotid, mandibular or submandibular and sublingual glands. There are other smaller salivary glands within the cheeks, e.g. zygomatic gland, and in the tongue.

s. g. inflammation see **sialoadenitis**, **parotiditis**.

s. g. squamous metaplasia of the interlobular duct of the salivary gland is a feature of hypovitaminosis A.

salivation [*sal"ĭ-va'shən*] 1. the secretion of saliva. 2. ptyalism.

excessive s. may be caused by slaframine toxicosis from the fungus *Rhizoctonia leguminocola*, by foreign bodies or painful lesions in the mouth. To be distinguished from drooling of saliva because of failure to swallow.

s. inhibitor antisialagogue; examples are atropine and glycopyrrolate.

salivon a functional salivary unit consisting of several acini and their related ducts and tubules.

sallenders a localized chronic dermatitis in front of the hock of heavy draft horses. The cause is unknown. The lesion is scabby, alopecic, with thick, hardened skin.

salmeterol [*sal-met'ər-ol*] a long-acting β_2-agonist used in inhalation therapy for inflammatory airway disease.

Salmincola a genus of parasitic crustaceans which attach to the gills of salmonid fish and cause obstruction of respiration and blood loss resulting in delayed sexual maturity, reduced growth rate and some mortality. Includes *S. edwardsi* and *S. salmonicola* (gill lice).

Salmo genus of salmon and trout in the family Salmonidae, many of them farmed. Includes *S. trutta* (brown trout), *S. salar* (Atlantic salmon).

salmon the common name for fish in the family Salmonidae; many species are in the genera *Salmo* and *Oncorhyncus*.

Atlantic s. ***Salmo*** *salar*.

Chinook s. *Oncorhynchus tshawytscha*.

chum s. *Oncorhynchus keta*.

coho s. *Oncorhynchus kisutch*.

s. louse *Lepeophtherius salmonis*.

pink s. *Oncorhynchus gorbuscha*.

s. poisoning, s. disease a disease of dogs and other canids caused by eating raw salmon or other fish containing encysted metacercariae of the fluke *Nanophyetus salmincola*, which is the vector for ***Neorickettsia*** *helminthoeca*. It occurs only in the Pacific Northwest of the USA. The disease in dogs is characterized by fever, ocular discharge and edema of the eyelids, followed by vomiting, then diarrhea and later severe dysentery and death in untreated cases. See also **Elokomin fluke fever**.

sockeye s. *Oncorhynchus nerka*.

Salmonella [*sal"mo-nel'ə*] a genus of gram-negative, non-lactose fermenting, medium-sized, rod-shaped, bacteria, members of the family *Enterobacteriaceae*, most species having flagella and pili. The genus contains three species which have been divided into seven subgroups and a very large number of serotypes. Most

VetBooks.ir

species pathogenic for warm-blooded animals are in subgroup I (*S. enterica*). Subgroups IIIa (*S. salamae*) and IIIb (*S. arizonae*) include some species occasionally pathogenic for animals and birds. The salmonella include the typhoid–paratyphoid bacilli and bacteria usually pathogenic for lower animals but which are often transmitted to humans. They cause **salmonellosis** which has a number of manifestations and some are specific causes of abortion. Although serotypes are not recognized as species, the serotype names are often written as though they are species names.

S. abortusequi causes abortion in horses.

S. abortusovis, S. montevideo cause abortion in sheep. A disease notifiable to the OIE (see Table 22).

S. arizonae the name applied to subgroup IIIa, these organisms cause severe enteritis and septicemia in chicks and turkey poults. Now classified as *S. enterica* subsp. *arizonae*.

S. bovismorbificans causes enteritis in cattle and horses.

***S. choleraesuis* biotype Kunzendorf** causes septicemic and enteric salmonellosis of swine. Called the hog cholera bacillus because of the similarity of the clinical diseases.

S. dublin causes septicemia, meningitis, enteritis and abortion in cattle and abortion in sheep.

S. enteriditis a common cause of gastroenteritis in humans. Recorded also in most domestic animal species and fowl.

S. gallinarum causes **fowl** typhoid.

S. heidelberg an occasional isolate in horses.

S. pullorum causes **pullorum disease**.

standard *S. pullorum* strains contains only small amounts of the 12_2 antigen relative to the O 12_3 antigen. In variant strains the reverse is the case. Polyvalent antigen is thus preferable for serological testing.

S. typhimurium the causative agent of mouse typhoid and of food poisoning in humans. Causes outbreaks of enteritis in most species, often related to rodent infestation. The cause of fowl paratyphoid. Clinical disease is commonly manifest with severe diarrhea and dehydration but sub-clinical infection and intestinal carriage is common, particularly in swine and poultry where contaminated food products are a public health risk. Clonal epidemic strains can arise to produce disease in both animals and humans as occurred with DT104 in the 1990s and early 2000s. One cause of nosocomial infections in horses in veterinary school hospitals. The causative agent of mouse typhoid and fowl paratyphoid. Intestinal carriage is common in cold-blood pets.

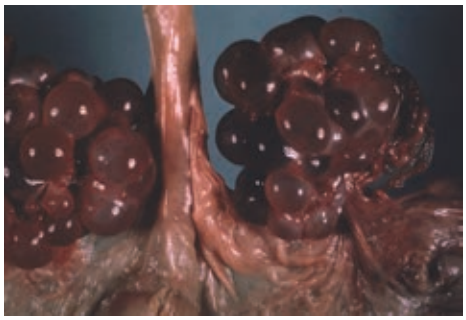
S. typhisuis an uncommon isolate in pigs.

salmonellosis [*sal"mo-nəl-o'sis*] a highly contagious disease of all animal species caused by ***Salmonella***. *Salmonella* serovars differ in the range of hosts they can infect and in the nature of disease that may result. Some can infect a wide range of hosts and are termed ubiquitous, others are very restricted in their host range, causing severe disease in only one host. Depending on the serovar and host, salmonellosis may be manifest by septicemia, and acute or chronic enteritis. Abortion is a common accompaniment, particularly in food animals and horses. Localization may occur in almost any organ. It is a rare occurrence in companion animals. Called also paratyphoid. Certain serovars are transmissible to humans and salmonellosis is an important zoonosis, with special implications for veterinarians involved in food hygiene.

salmonid a member of the fish family Salmonidae. Includes salmon, trout, char.

salpingectomy [*sal"pin-jek'tə-me*] excision of a uterine tube.

S-6: Red discoloration of ears and snout with septicemic salmonellosis.



S-7: Avian salpingitis as a result of *Salmonella* infection.
From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2004.

salpingemphraxis [*sal"pin-jəm-frak'sis*] obstruction of a pharyngotympanic (eustachian) tube.

salpingian [*sal-pin'je-ən*] pertaining to the auditory or the uterine tube.

salpingitis [*sal"pin-ji'tis*] 1. inflammation of the oviduct (uterine tube). 2. inflammation of a pharyngotympanic (eustachian) tube.
mural s. pachysalpingitis.
parenchymatous s. pachysalpingitis.

salping(o)- word element. [Gr.] *tube* (eustachian tube or uterine tube).

salpingocele [*sal-ping'go-sēl*] hernial protrusion of a uterine tube.

salpingocyesis development of the embryo within a uterine tube; tubal pregnancy.

salpingography [*sal"ping-gog'rə-fe*] radiography of the uterine tubes after intrauterine injection of a radiopaque medium.

salpingolithiasis the presence of calcareous deposits in the wall of the uterine tubes.

salpingolysis [*sal"ping-gol'ĭ-sis*] surgical separation of adhesions involving the uterine tubes.

salpingo-oophorectomy [*sal-ping"go-o-of"ə-rek'tə-me*] excision of a uterine tube and ovary.

salpingo-oophoritis [*sal-ping"go-o-of"ə-ri'tis*] inflammation of a uterine tube and ovary.

salpingo-oophorocele [*sal-ping"go-o-of'ə-ro-sēl*] hernia of a uterine tube and ovary.

salpingopexy [*sal-ping'go-pek"se*] fixation of a uterine tube.

salpingopharyngeal [*sal-ping"go-fə-rin'je-əl*] pertaining to the auditory tube and the pharynx.

salpingoplasty [*sal-ping'go-plas"te*] plastic repair of a uterine tube.

salpingostomy [*sal"ping-gos'tə-me*] 1. formation of an opening or fistula into a uterine tube for the purpose of drainage. 2. surgical restoration of the patency of a uterine tube.

salpingotomy [*sal"ping-got'ə-me*] surgical incision of a uterine tube.

salpinx [*sal'pinks*] 1. a uterine tube. 2. an auditory tube.

salsa ***Ipomoea asarifolia***.

Salsola plant genus in the family Chenopodiaceae; contains soluble oxalates and causes oxalate poisoning characterized by nephrosis, urolithiasis; includes *S. barbata*, *S. australia* (*S. kali* tumbleweed, soft roly-poly, Russian thistle).

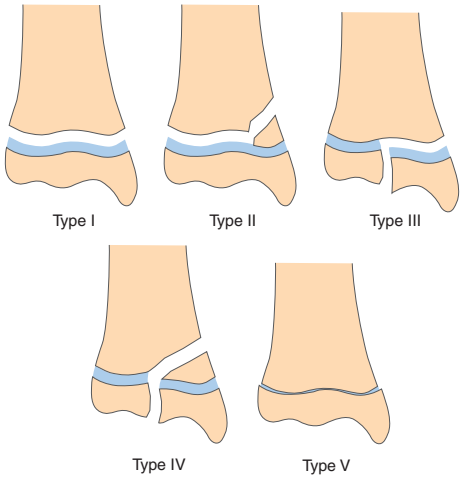
S. tuberculatiformis*, *S. tuberculata* var. *tomentosa poisoning of sheep with this South African plant causes prolongation of gestation, enlargement of the fetus and dystocia. Syndrome called grootlamsiekte. Called also *S. tuberculata* var. *tomentosa*.

SALT see skin-associated **lymphoid** tissues.

salt [*sawlt*] 1. any compound of a base and an acid. 2. *salts*, a saline purgative. See also **sodium** chloride.
bile s's salts of the bile acids and their glycine or taurine conjugates which are formed in the liver and secreted in the bile (primary bile salts) or produced in the small intestine by the action of bacteria on primary bile salts (secondary bile salts). They are powerful detergents which activate lipases and break down fat globules, enabling fats to be digested and absorbed.
s. brine strong solution of common salt used to pickle meat and other human foods. Sodium chloride is the biggest component but large quantities of nitrate are usually present and represent a greater toxicity hazard than does the salt.
buffer s. a salt in the blood that is able to absorb slight excesses of acid or alkali with little or no change in the hydrogen ion concentration.
common s. see **sodium** chloride.

VetBooks.ir

s. gland a salt excreting gland of seabirds, some reptiles such as sea snakes, some crocodiles, marine iguanas, and some fish that enables the drinking of sea-water. The gland ducts discharge in various places depending on the species, such as the nose, conjunctival sac or tongue.
s. hunger common in circumstances in which animals are derived of any salt; manifested by leather chewing, earth eating, coat licking and urine drinking.
s. lick 1. naturally occurring deposit of salt in the form of a shallow pan that wild and domestic animals can share by licking. 2. a prepared mixture of salt with other minerals added, the composition varying with the local nutritional deficiency. The cattle or sheep are encouraged to lick by the taste of the salt and serendipitously acquire the other minerals. May be loose and put out in containers covered against the weather or formed into blocks that resist rain erosion and are fitted into holders fixed to buildings or free-standing in the pasture. See also **mineral**–salt mixture.
Rochelle s. potassium sodium tartrate, a cathartic.
s. sick see **copper** nutritional deficiency.
smelling s's aromatic ammonium carbonate, a stimulant and restorative.
s. tolerant capable of surviving in a high concentration of salt, e.g. some bacteria, including staphylococci.
salt-losing crisis vomiting, dehydration, hypotension and sudden death due to very large sodium losses from the body. It may be seen in abnormal losses of sodium into the urine (as in adrenocortical insufficiency or one of the forms of salt-losing **nephritis**) or in large extrarenal sodium losses, usually from the gastrointestinal tract.
salt sickness dual copper and cobalt deficiency.
salt-stored ovum penetration assay a test of the ability of spermatozoa in a semen sample to attach to and penetrate the zona pellucida of ova. Salt storage in NH_4SO_4 enables eggs from abattoir-collected ovaries to be used for several months.
salt water couch ***Paspalum*** *distichum*.
saltation [*sal-ta'shən*] 1. the action of leaping, as in louping ill or the dancing of porcine myotonia congenita. 2. conduction along myelinated nerves. 3. in genetics, an abrupt variation in species; a mutation.
saltatory [*sal'tə-tor"e*] pertaining to or emanating from saltation.
s. conduction the leaping action transfer of electric potential from node of Ranvier to node of Ranvier along a medullated nerve fiber instead of a steady flow along the length of the nerve.
saltbush a widespread forage or browse plant on extensive range in Australian arid zones. Called also **Atriplex** spp. Strictly a maintenance feed.
annual s. *Atriplex muelleri*.
barrier s. see ***Enchylaena tomentosa***.
four wing s. *Atriplex canescens*.
ruby s. see ***Enchylaena tomentosa***.
salted meats meats cured for preservation by the addition of salt to the external surface. The salt draws out water by osmosis. Plain salting is not a very sophisticated procedure and most commercial curing has at least nitrate in the curing mixture. See also **bacon curing**.
Salter classification [*sawl'tər*] a system for classifying fractures, fracture-separations, and separations of the physis into five types. They are: *Salter type I*—a separation line through the epiphyseal plate only; *Salter type II*—a partial separation of the epiphyseal plate and fracture into the metaphyseal bone; *Salter type III*—a partial separation of the epiphyseal plate and a fracture through the epiphysis; *Salter type IV*—a fracture through the metaphysis, across the epiphyseal plate and through the epiphysis; *Salter type V*—a crushing or compression injury to the epiphyseal plate. Called also Salter–Harris classification.
Salter–Harris classification see **Salter classification**.
salting [*sawl'ting*] (of cattle) a term used in the USA where placement site of salt on a range area is moved so as to attract cattle to the new placement area; also used to move cattle from mountain grazing.
salting out [*sawl'ting out*] the separation of protein fractions in the serum or plasma by precipitation using increasing concentrations of neutral salts.
saltpeter, saltpetre potassium nitrate.
salubrious [*sə-loo'bre-əs*] conducive to health; wholesome.



S-8: Salter-Harris classification of physeal fractures.
From Fossum TW, Small Animal Surgery, 3rd Edition. Mosby, 2007.

S-9: Salter I fracture of the distal tibia in a cat.
From Seaman JA, Simpson AM: Tibial fractures. Clin Tech Sm Anim Pract 19:151-167, 2004. Elsevier.

Saluki a medium-sized, very fine, graceful dog with a fine, silky coat that is flat on the body, but forms slight 'feathers' on the legs, ears, tail, and sometimes thighs and shoulders. There is also a smooth variety, which has no feathering. A sight-hunting, desert dog, believed to be the oldest known breed of domesticated dog. Called also Gazelle hound, Persian greyhound.
saluresis [*sal"u-re'sis*] excretion of sodium and chloride in the urine.
saluretic [*sal"u-ret'ik*] 1. pertaining to saluresis. 2. an agent that promotes saluresis.
salutary [*sal'u-tar"e*] healthful.
salvage pathways energy-saving re-utilization of preformed constituents, often purine and pyrimidine compounds that would otherwise be lost to degradation.
salvage statistics [*sal'vəj*] see salvage **statistics**.
Salvation Jane ***Echium*** *plantagineum*.
salve [*sav*] ointment.
Salvelinus genus of farmed finfish in family Salmonidae. Includes *S. fontinalis* (brook trout, splake), *S. namaycush* (splake, lake trout).
Salvia [*sal've-ə*] a genus of the plant family Lamiaceae.
S. coccinea an unidentified toxin causes abortion, diarrhea, recumbency. Called also *S. lineata*, red salvia, blood sage.
S. reflexa has a high nitrate content and causes nitrate–nitrite poisoning in ruminants. Called also mintweed.
Samanea saman a tropical tree in the family Mimosaceae; pods contain an unidentified toxin that has caused an azoturia-like syndrome in mares. Called also *Pithecolobium saman*, rain tree, guango, zamang.
samarium (Sm) [*sə-mar'e-əm*] a chemical element, atomic number 62, atomic weight 150.35. See Table 4.
sambar (*Rusa unicolor*) a large deer, native to South and Southeast Asia and introduced in the USA, Australia and New Zealand. They are a dark color with white under that tile and have antlers of three or four tines.

S

S-10: Samoyed.

Sambucus [*sam-boo'kus*] coarse bushes, members of the family Sambucaceae; contains toxic oil which causes diarrhea; sometimes also causes cyanide poisoning. Called also elder. Includes *S. canadensis*, *S. ebulus* (danewort, dwarf elder), *S. nigra* (common elder), *S. pubens*.

SAMe *S*-adenosylmethionine.

samore trypanosomiasis; called also nagana.

Samoyed a medium-sized dog characterized by a very thick, straight, white or cream-colored coat that stands out from the body, with brown eyes and black-rimmed eyelids and lip margins. It is said to have a 'smiling expression'. The ears are erect and the tail, with profuse haircoat, is curled over the back. The breed is predisposed to hemophilia, congenital heart defects and familial renal disease.

sample [*sam'pəl*] 1. a specimen of fluid, blood or tissue collected for analysis on the assumption that it represents the composition of the whole. 2. for statistical purposes a small collection of individual units taken from the population which is under investigation on the assumption that they represent the characteristics of the entire population.

EPSEM s. acronym for 'equal opportunity of selection method'.

grab s. 1. sample of greasy wool taken at random by a special machine from each bale on the sale floor. Buyers price the bale on the basis of the appearance of the grab sample and the objective measurements. 2. term also used for random (grab) sampling of other materials, such as grain, feed, etc.

multi-stage random s. with very large populations it may be desirable to arrange the data into groups on one criterion, e.g. address by area of postcode, and to select randomly from within this group, then select from within this sample to obtain randomly a representative number of specimens, such as dogs of each age group.

random s. the selection from a population of the units which are to constitute the sample of that population is made in such a way that each unit of the population has an equal chance of being selected. Called also simple random sample.

simple random s. see random sample (above).

stratified random s. the data is arranged into subsets or strata based on the possession of certain characteristics which are common to the members of the subset. The selection of units to comprise the sample of the parent population is arranged so that the proportional representation of each subset in the final sample fits a prearranged schedule.

volunteer s. sample donated by interested parties; a biased sample because it does not represent all sections of the population. Called also self-selection.

sampling [*sam'pling*] the process of selecting a sample.

area s. dividing the population into equal areas and randomly selecting from among the areas.

cluster s. when the population to be sampled exists in clusters, e.g. herds, sampling can be done by random selection between the herds. This assumes that each cluster is a homogeneous group.

s. fraction ratio of the number of units in the population to the number of units in the population.

s. frame the names of the component parts of the population from which the sample is to be collected.

quota s. the sections of the population, e.g. milking cows, dry cows, yearlings, calves are represented in the sample in the same proportion as they exist in the population.

stratified s. a simple random selection is performed in each stratum of those created in order to permit a different sampling percentage to be used in each stratum.

systematic s. the sampling is random but the samples are drawn systematically, say every third unit, the first unit also being chosen randomly.

two-stage s. an example of multi-stage sampling. The first sampling is of large groups, e.g. herds, then a second-stage sampling is carried out within herds, e.g. sire families, with possibly a third stage, of individual cows within the sire families.

s. units individual members of a population. It is often difficult to define exactly what is a unit because of the design of the study.

s. variation the variation that occurs between samples of the one population. A measure of the random error of the sampling technique used.

San Joaquin Valley fever the primary form of **coccidioidomycosis**.

San Miguel sea lion virus disease a disease of sea lions, caused by a calicivirus, genus *Vesivirus*, that is transmissible to swine in which it causes a disease indistinguishable from vesicular exanthema of swine. Vesicular lesions of the skin and mucosae, abortion, pneumonia and encephalitis are associated with the infection in sea lions. Related viruses have been recovered from other pinniped species.

sanative [*san'ə-tiv*] curative; healing. Said of trypanocidal drugs used between long courses of more popular drugs in order to avoid the development of resistance to those drugs by the trypanosomes.

sanatory [*san'ə-tor"e*] salubrious.

Sancassania berlessei a mite of stored products occasionally infests sheep.

sand [*sand*] 1. material occurring in fine, gritty particles loose in the body. 2. geological sand is ingested by animals, especially horses, grazing on very sandy soil. The animals may take in large amounts and this accumulates in the large sacs of the alimentary tract, the reticulum of the cow and the cecum and colon in horses. Sand or dust storms, or volcanic dust fallout may produce a similar, acute situation.

s. colic see sand **colic**.

s. enteritis acute sand ingestion may cause enteritis with severe, sometimes fatal diarrhea. See also **enteritis**.

s. rash irritation and weeping of the toe webbing in racing Greyhounds causing lameness. Caused usually by racing in sand.

s. toe Greyhounds racing in sand suffer impaction of sand under the coronary band, causing lameness, mostly in the inner and outer toes of the hind paws.

uterine s. see **uterine** sand.

sand twin leaf ***Zygophyllum*** *ammophilum*.

sandbags small sacks containing sand used to support an anesthetized animal in dorsal recumbency and prevent it from rolling sideways during anesthesia or surgery.

sandbath, sand roll a stall covered with deep sand used for horses to roll in after exercise.

sandcrack [*sand'krak*] vertical cracks in the hoof that commence at the coronet and run parallel to the horn tubules and towards the toe. Are serious defects because they indicate an injury to the coronet and a possible extension to the sole.

sandfly [*sand'fli*] *Phlebotomus* spp. *Culicoides*, *Simulium* and *Austrosimulium* spp. are also called sandflies in some countries. Called also owl midges.

s. zieria ***Zieria*** *smithii*.

S-11: Sandcrack in horse's hoof.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

Sander a genus of fish in the family Percidae, commonly called **pike-perch**.

Sandhoff's disease [zahnd'hof] see GM_2**gangliosidosis**.

sandplain woody pear ***Xylomelum*** *angustifolium*.

sandwort see ***Arenaria serpyllifolia***.

Sanfilippo's III-D syndrome [san-fĭ-lip'o] a human disease similar to *N*-**acetyl-glucosamine-6-acetyl-glucosamine-6-sulfatase** deficiency in Nubian goats.

Sanga a type of draft cattle with a small cervicothoracic hump and long horns, originating in eastern and southern Africa. It includes many varieties.

Sanga Nguni cattle a breed of *Bos indicus* cattle in which testicular hypoplasia is recognized as being inherited.

Sanger–Coulson method a method of sequencing DNA; called also dideoxy or chain termination method. It involves the use of 2′3′ dideoxynucleoside triphosphates (dd NTPs) which lack a 3′-hydroxyl group.

sangui- word element. [L.] *blood.*

sanguifacient [sang"gwi-fa'shənt] forming blood.

sanguinarine [sang"gwĭ-na'rēn] one of the isoquinoline alkaloids found in ***Chelidonium majus*** and *Argemone* spp.

sanguine [sang'gwin] abounding in blood.

sanguineous [sang-gwin'e-əs] bloody; abounding in blood.

Sanguinicola a genus of the family Sanguinicolidae, digenetic flukes of the vascular system of freshwater and marine fish.

S. inermis, S. klamanthensis found in cyprinid and salmonid fish in which it is a serious pathogen, especially in cultured carp and trout. The gills and kidneys are affected most and mortality may be high.

sanguinolent [sang-gwin'ə-lənt] of a bloody tinge.

sanguinopurulent [sang"gwĭ-no-pu'roo-lənt] containing both blood and pus.

sanguis [sang'gwis] [L.] *blood*.

sanguivorous [sang-gwiv'ə-rəs] blood-eating; said of female mosquitoes that prefer blood to other nutrients.

Sanhe named after Mongolian district.

S. cattle Chinese meat and draft cattle, red and white or black and white; originated from local breeds plus Simmental or Friesian.

S. horse riding and draft light horse, all coat colors.

sanies [sa'ne-ēz] a fetid ichorous discharge containing serum, pus and blood.

sanitarian [san"ĭ-tar'e-ən] one skilled in sanitation and public health science.

sanitary [san'ĭ-tar"e] promoting or pertaining to health.

s. trap container located between the air system and the milk system in a milking machine designed to trap fluids which would otherwise pass from one to the other.

sanitation [san"ĭ-ta'shən] the establishment of conditions favorable to health, especially with respect to infectious diseases. Includes disposal of infective materials, especially carcasses, discharges and excrement, application of disinfectants and general cleaning to make disinfection effective, isolation of infective animals and improvement in ventilation of buildings, improving feeding and watering arrangements to avoid fecal and urinary contamination of food and water.

sanitization [san"ĭ-tĭ-za'shən] the process of making or the quality of being made sanitary.

sanitize [san'ĭ-tīz] to clean and sterilize.

sanitizer a sanitizing product capable of cleaning and disinfecting; usually a formulation containing a disinfectant and a detergent.

Santa Gertrudis a red, beef breed, originated in southern USA by crossbreeding Shorthorn and Brahman cattle.

Santorini's duct, duct of Santorini [sahn"to-re'ne] see accessory pancreatic **duct**.

Sao_2 symbol for percentage of available hemoglobin that is saturated with oxygen. See **blood gas analysis**.

SAP serum alkaline phosphatase.

saperconazole a triazole antifungal agent.

saphena [sə-fe'nə] the small saphenous or the great saphenous vein.

saphenous [sə-fe'nəs] pertaining to or associated with a saphenous vein; applied to certain arteries, nerves, etc. See also Tables 9, 14 and 15.

s. nerve block see saphenous nerve **block**.

Sapium sebiferum member of plant family Euphorbiaceae; contains an unidentified toxin which causes nephrosis and diarrhea. Called also *Stillingia sebifera*, *Triadica sebifera*, Chinese tallow tree, Chinese tallow wood.

sapo [sa'po] [L.] *soap*; a compound of fatty acids with an alkali.

saponaceous [sa"po-na'shəs] soapy; of soap-like feel or quality.

Saponaria [sa"po-nar'e-ə] genus of the plant family Caryophyllaceae; contain toxic saponins which cause diarrhea. Includes *S. officinalis*, *S. vaccaria*. Called also cow cockle, soapwort, hedge pink, bouncing bet.

saponifiable [sə-pon"ĭ-fi'ə-bəl] capable of being made into soap.

saponification [sə-pon"ĭ-fĭ-ka'shən] conversion of an oil or fat into a soap by combination with an alkali. In chemistry, the term now denotes the hydrolysis of an ester by an alkali, resulting in the production of a free alcohol and an alkali salt of the ester acid.

saponin [sap'o-nin] a group of glycosides widely distributed in the plant world and characterized by (1) their property of forming durable foam when their watery solutions are shaken; this property may have importance in some plants in the development of frothy bloat in ruminants; (2) their ability to lyse erythrocytes even in high dilutions; and (3) their having the compound sapogenin as their aglycones.

lithogenic s's saponins in panicoid grasses (*Panicum*, *Brachiaria*), *Agave lecheguilla*, *Narthecium ossifragum*, *Tribulus terrestris* are probably responsible for causing crystal-associated cholangiohepatopathy and subsequent secondary photosensitization; this is suspected as the cause of photosensitization associated with other plants. Called also steroidal saponin.

steroidal s. see lithogenic saponins (above).

sapophore [sap'o-for] the group of atoms in the molecule of a compound that gives the substance its characteristic taste.

sapremia septicemia caused by a saprophytic organism.

sapr(o)- word element. [Gr.] *rotten, putrid, decay, decayed material*.

saprocyclozoonoses a disease with features of both the **saprozoonosis** and **cyclozoonosis**, e.g. tick paralysis.

Saprolegnia [sap"ro-leg'ne-ə] common cause of fungal dermatitis in fish and fungal infection of fish eggs. There are white/gray, cotton-type growths on the skin and in some internal organs.

saprolegniasis infection of fish with the fungus *Saprolegnia* spp. Causes typical 'cotton wool' mat type lesions on the skin. All ages including eggs are affected.

saprophagous feeding on dead or decaying organic matter.

saprophyte [sap'ro-fīt] any organism, such as a bacterium, capable of living in inanimate media, but usually used to describe microorganisms that normally live freely in the environment.

saprophytic [sap"ro-fit'ik] pertaining to saprophyte.

saprozoic [sap"ro-zo'ik] living on decayed organic matter; said of animals, especially protozoa.

saprozoonosis [sap"ro-zo-on'ə-sis] diseases transmissible from an abiotic environment, such as soil, water, decaying plants, or animal corpses.

sarafloxacin a fluoroquinolone antibiotic; withdrawn from use.

saralasin [sər-al'ə-sin] a competitive angiotensin II antagonist.

Sarcina [sahr'sĭ-nə] a genus of anaerobic, gas-producing bacteria in the family *Clostridiaceae*.

S.-like bacteria are observed in the abomasal wall and contents of a high proportion of milk-fed lambs, kids and calves that have died with abomasitis and abomasal bloat.

sarc(o)- word element. [Gr.] *flesh*.

sarcoarthrosis [sahr'ko-ahr-thro'sis] a joint without bone to bone contact, e.g. between scapula and thorax in quadrupeds. Called also fleshy joint, synsarcosis.

Sarcobatus vermiculatus North American member of the plant family Polygonaceae; contains soluble oxalates which can cause oxalate poisoning. Called also greasewood.

sarcoblast [sahr'ko-blast] a primitive cell that develops into a muscle cell. Called also myoblast.

sarcocele [sahr'ko-sēl] any fleshy swelling or tumor of the testis.

sarcocyst [sahr'ko-sist] any member of, or any cyst formed by *Sarcocystis* spp.

Sarcocystis [sahr"ko-sis-to'sis] a genus of parasitic protozoa in the family Sarcocystidae. The definitive hosts are domestic and wild carnivores in which they appear as a form of **coccidiosis**. Birds and reptiles are also infected (depending on the species). It appears to be part of any prey-predator system, e.g. snake, rat, owl, mice, etc. The effects of their intermediate stages are manifested as the disease **sarcocystosis**.

S. arieticanis has a dog-sheep cycle.

VetBooks.ir

S. bertrami has a dog-horse cycle and produces cysts in muscles but without clinical disease.
S. cervi cysts found in deer.
S. cruzi has a dog (and other feral canids)-cattle cycle; causes fever, anorexia, anemia and weight loss in cattle but the microscopic cysts found in dogs are not pathogenic. See also **sarcocystosis**.
S. cuniculi cysts found in wild and domesticated rabbits but without apparent pathogenicity in rabbits. It has a cat-rabbit cycle and the macroscopic cysts in cats are pathogenic.
S. fayeri has a dog-horse cycle but appears not to be pathogenic to the horse.
S. fusiformis has a cat-buffalo cycle but appears not to be pathogenic in the water buffalo.
S. gigantea has a cat-sheep cycle; the cysts in sheep are very large and visible with the naked eye but are not pathogenic.
S. hemionilatrantis has dog or coyote-mule deer cycle and the disease in young deer may be fatal.
S. hirsuta **(syn.** *S. bovifelis***)** has a cat-cattle cycle and is not pathogenic in cattle.
S. hominis has a human-cattle cycle, the enteric infection in humans causing diarrhea, and the cysts in the muscles of cattle having no observable effect.
S. kortei the definitive host is unknown, the intermediate host is the rhesus monkey but the cysts in its muscles appear to cause no disability.
S. levinei has a dog-buffalo cycle but causes no illness.
S. lindemanni humans are the intermediate host but the final host is unknown.
S. medusiformis has a cat-sheep cycle.
S. miescheriana has a dog (raccoon, wolf)-pig cycle but no known pathogenicity.
S. moulei has a cat-goat cycle.
S. muris has a cat-mouse, rat, vole, etc., cycle but the cysts are not pathogenic.
S. nesbitti rhesus monkeys are the intermediate hosts but the muscle cysts are clinically silent. The final host has not been identified.
S. neurona causes equine protozoal **myeloencephalitis**.
S. orientalis goats are the intermediate host but are unaffected. Dogs are probably the final host.
S. rileyi cysts occur in the muscles of many species of domestic and wild birds without appearing to cause any ill-effects.
S. tenella has a dog (coyote, fox)-sheep cycle and causes mortality in lambs if the infection is a heavy one.

sarcocystosis [*sahr"ko-sis-to'sis*] a common infection in all food animal species caused by the intermediate stage of the protozoan parasite *Sarcocystis* spp. The sporocyst stages are passed in the dog or cat or other species. Clinically the disease is manifested by emaciation, lameness, hypersalivation, loss of tail switch, anemia and abortion. Subclinical infections with the intermediate stage of cysts in muscles is very common for all species. The common sites are the esophageal, cardiac and lingual muscles. Abnormally there are localizations in brain, uterus and lungs. Called also rat-tail syndrome, Dalmeny disease. See also **sarcosporidiosis**.

sarcode homeopathic remedies prepared from healthy organ tissue. See also **nosode**, **glandular** therapy.

Sarcodina [*sahr"ko-di'nə*] a group of Protozoa in the phylum Sarcomastigophora, including all the amebae, both freeliving and parasitic, characterized by the ability to produce pseudopodia during most of the life cycle; flagella, when present, develop only during the early stages.

S-12: Esophageal muscle with thick-walled sarcocyst of *Sarcocystis hirsuta*.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

sarcoid [*sahr'koid*] 1. tuberculoid; characterized by noncaseating epithelioid cell tubercles. 2. pertaining to or resembling sarcoidosis. 3. sarcoidosis. See also **equine** sarcoid.

sarcoidal pertaining to or of the nature of sarcoid.

s. granulomatous disease a sterile, sarcoidal granulomatous dermatitis in dogs characterized by multiple cutaneous plaques, nodules or papules, non-pruritic, not painful, mostly on the neck and trunk.

sarcoidosis [*sahr"koi-do'sis*] a rare, multisystemic, noncaseating, granulomatous and lymphoplasmacytic disease of horses characterized by scaly, crusting dermatitis with alopecia extending to a generalized exfoliative dermatitis, followed by wasting, anorexia and exercise intolerance.

sarcolemma [*sahr"ko-lem'ə*] the delicate plasma membrane covering every striated muscle fiber.

Sarcolobus globosus a plant of Asian origin in the family Asclepiadaceae. Its fruits are recorded as causing incoordination, tremor, paralysis and death in a cat. Called also banok, kundur laut, pitis pitis.

sarcoma [*sahr-ko'mə*] a malignant neoplasm derived from cells derived from mesenchymal tissue such as connective tissue, bone, cartilage, muscle, vascular or lymphoid tissue. These malignancies metastasize more often via the blood than do carcinomas. The different types of sarcomas are named after the specific tissue they affect: fibrosarcoma—in fibrous connective tissue; lymphosarcoma—in lymphoid tissues; osteosarcoma—in bone; chondrosarcoma—in cartilage; rhabdosarcoma—in muscle; liposarcoma—in fat cells.

feline post-traumatic s. malignant intraocular neoplasm seen in cats within months to years following a penetrating injury to the eye, especially with lens capsule rupture. Frequently invades local structures in the orbit or brain.

feline vaccine-associated s. a rare malignancy in cats occurring in sites typically used for the injection of vaccines. They are rapidly growing, highly invasive sarcomas most common under the cervical-interscapular region or thigh skin. Treatment by surgical resection, radiation therapy and/or chemotherapy may not be successful. A causal relationship with rabies and feline leukemia virus vaccines has been found. Called also feline injection site sarcoma.

giant cell s. a malignant form of giant cell tumor of bone.

infectious s. see canine transmissible **venereal** tumor.

mast cell s. see **mast cell** tumor.

melanocytic s. melanoma with spindloid configuration of cells.

osteogenic s. see **osteosarcoma**.

post-traumatic s. see feline post-traumatic sarcoma (above).

reticulum cell s. an old term for a form of malignant lymphoma, histiocytic lymphosarcoma, in which the dominant cell type is thought to be derived from histiocytic or macrophage origin. There is increasing evidence, however, that this neoplasm arises from transformed lymphocytes or immunoblasts.

Rous s. see **Rous sarcoma**.

soft-tissue s. collective term for the group of pleiomorphic spindle-cell sarcomas whose morphology varies from neurofibromatous to hemangiosarcomatous to undifferentiated spindle-cell sarcoma, sometimes all in the one growth. They are routinely graded on histological features for prognostic purposes.

spindle-cell s. soft-tissue sarcoma (above).

Sticker's s. see canine transmissible **venereal** tumor.

transmissible venereal s. see canine transmissible **venereal** tumor.

s. virus see **feline** sarcoma virus.

Sarcomastigophora [*sahr"ko-mas"ti-gof'ə-rə*] a phylum in the kingdom Protista; includes the two main subphyla Mastigophora and Sarcodina.

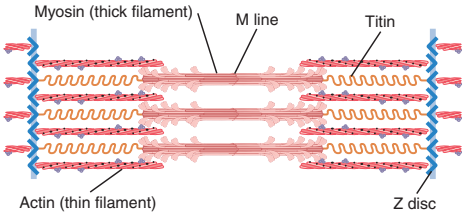
sarcomatoid resembling a sarcoma.

sarcomatosis [*sahr"ko-mə-to'sis*] a condition characterized by development of many sarcomas.

sarcomatous [*sahr-ko'mə-təs*] pertaining to or of the nature of a sarcoma.

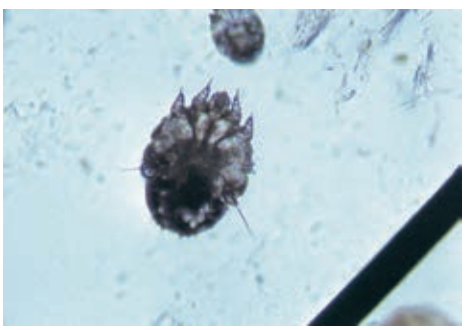
sarcomere [*sahr'ko-mēr*] the contractile unit of a myofibril; sarcomeres are repeating units, delimited by the Z bands along the length of the myofibril. See also **A band**.

sarcomphalocele a fleshy tumor of the umbilicus.



S-13: Organization of proteins in a sarcomere. From Hall J, Guyton and Hall Textbook of Medical Physiology, 12th Edition. Saunders, 2010.

Sarcophaga [*sahr-kof'ə-gə*] a genus of flesh flies in the family Sarcophagidae that deposit their larvae in wounds or sores.
S. carnaria, S. dux, S. fuscicauda, S. haemorrhoidalis the only clinical difference between these species appears to be their geographical distribution.
sarcophagid pertaining to *Sarcophaga* spp.
sarcoplasm [*sahr'ko-plaz"əm*] the interfibrillary matter of striated muscle.
sarcoplasmic [*sahr"ko-plaz'mik*] pertaining to or emanating from sarcoplasm.
s. organelles include a number of organelles associated with sarcoplasm.
sarcoplast [*sahr'ko-plast*] an interstitial cell of a muscle, itself capable of being transformed into a muscle.
sarcopoietic [*sahr"ko-poi-et'ik*] forming muscle.
Sarcopterinus a genus of mites in the family Myobiidae.
S. nidulans found in the feather follicles of pigeons and other birds.
S. pilirostris found in the skin on the head of the sparrow.
Sarcoptes [*sahr-kop'tēz*] a widely distributed genus of mites in the family Sarcoptidae which causes **sarcoptic mange**. Their nomenclature is confused but the most widely used system of nomenclature is *Sarcoptes scabiei* var. *canis*, var. *suis*, var. *equi*, var. *ovis*, var. *bovis*, etc.
S. tapiri potentially pathogenic for tapirs.
sarcoptic mange [*sahr-kop'tik*] an intensely pruritic dermatitis caused by the acarid mite *Sarcoptes scabiei*. Although there is some species specificity with subspecies of the mite this is not complete. An almost universal infestation in pig herds except those derived by Specific Pathogen Free techniques or those where infestation has been controlled with avermectins. A problem in pig herds kept under organic label requirements. Lesions commence as erythema and small red papules. Extensive self-trauma leads to loss of hair and secondary infection. In long-standing cases, debilitation is also common. The lesions are usually widespread but are most easily seen on the abdominal skin and inside the thighs. In dogs, the elbows, hocks and pinnae are most commonly affected. Besides the common infections in domestic species the disease occurs frequently in captive and freeliving primates, monkeys, rodents, canids and ungulates. Called also red mange, fox mange. See also **scabies**. In ferrets, the lesions may be generalized, as in other species, or predominantly on the feet; commonly called **footrot**.
sarcosis [*sahr-ko'sis*] abnormal increase of flesh.
Sarcosporidia [*sahr"ko-spor-id'e-ə*] see ***Sarcocystis***.
sarcosporidiasis [*sahr"ko-spor"i-di'ə-sis*] see **sarcocystosis**.
sarcosporidiosis [*sahr"ko-spor-id"e-o'sis*] the condition observed at meat inspection in which lesions caused by *Sarcocystis* spp. are observed. See also **sarcocystosis**.



S-14: *Sarcoptes scabiei* var. *canis*. From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

S-15: Early sarcoptic mange in a piglet.

S-16: Sarcoptic mange in a dog.

Sarcostemma a South African and Australian genus of the plant family Asclepiadaceae; contain glycosides (sarcovimisides) which cause incoordination, tremor, recumbency and convulsions in sheep. Includes *S. australe*, *S. brevipedicellatum*, *S. viminale*. Called also caustic vine, caustic creeper or caustic bush.
sarcostosis ossification of fleshy tissue.
sarcotubules [*sahr"ko-too'būlz*] the membrane-limited structures of the sarcoplasm, forming a canalicular network around each myofibril.
sarcous [*sahr'kəs*] pertaining to flesh or muscle tissue.
SARD sudden acquired **retinal** degeneration.
sarmazenil a partial antagonist of benzodiazepine receptors; used in animals to reverse the effects of benzodiazepines and enable a rapid recovery.
Sarot needle holder long-handled, standard type needle holder with diamond-shaped grooving on blade faces.
Sarothamnos see ***Halogeton glomeratus***.
SARS severe acute respiratory syndrome.
Sartwellia flaveriae North American plant in the Asteraceae family; contains an unidentified toxin which causes nephrosis, liver damage, ascites, hydrothorax.
SAS subaortic stenosis.
Saskatoon serviceberry see ***Amelanchier alnifolia***.

S-17: Sarcoptic mange (footrot) in a ferret.

VetBooks.ir

sassafras [*sas'ə-fras*] an extract from the roots of *Sassafras albidum* or certain species of *Ocotea*. the oil is used topically as a rubifacient and may be toxic if ingested.

SAT serum agglutination test.

sat. saturated.

satellite [*sat'ə-līt*] 1. in genetics, a knob of chromatin connected by a stalk to the short arm of certain chromosomes. 2. a minor, or attendant, lesion situated near a large one. 3. a vein that closely accompanies an artery. 4. exhibiting satellitism.

s. cell cells present in nervous and muscle tissue, whose numbers diminish with age, which are involved in repair when damage occurs. They are capable of migration, reorientation, can proliferate, form myoblasts and myotubes, and form long cytoplasmic tails that act as tethers when they migrate.

s. DNA see **deoxyribonucleic acid**.

satellitism [*sat'ə-li-tiz-əm*] the phenomenon in which certain bacterial species grow much better in the immediate vicinity of colonies of other unrelated species, owing to the production of an essential nutrient or cofactor by the latter species.

satellitosis [*sat"ə-li-to'sis*] accumulation of neuroglial cells about neurons; seen when neurons are damaged.

satiation full satisfaction of desire to eat and drink.

satiety [*sə-ti'ə-te*] being in a state of satiation; in experimental animals used with reference to eating and drinking.

s. center located in the ventromedial hypothalamic nucleus. Lesions may cause hyperphagia with obesity or anorexia with cachexia. See also **adiposogenital dystrophy**.

Satin rabbit a commercial breed of rabbit with a satin-like texture and sheen to the coat. The numerous varieties differ only in color.

Satinsky vena cava clamp scissor-action, ratchet handles, long, thin double-curved blades. Tangential occlusion clamp.

satratoxins [*sa'trə-tok"sin*] the toxins produced by ***Stachybotrys atra***. Classified as C, D, F, G, H depending on their chromatographic mobility.

saturated [*sach'ə-rāt-əd*] 1. denoting an organic compound that has only single bonds between carbon atoms and is therefore less reactive than one with double bonds, e.g. saturated fatty acids. 2. holding all of a solute that can be held in solution by the solvent (saturated solution).

s. fatty acids see **fatty acid**.

saturation [*sach"ə-ra'shən*] the state of being saturated, or the act of saturating.

s. kinetics point of high initial concentration of substrate after which the rate of reaction is independent of further increases in initial substrate concentration, and the enzyme is saturated with substrate.

oxygen s. the amount of oxygen bound to hemoglobin in the blood expressed as a percentage of the maximal binding capacity.

oxygen s. curve graphical representation describing the relationship (usually curvilinear) between fraction of oxygen-binding sites (of a protein) that have oxygen bound to them and the partial pressure (concentration) of free oxygen.

saturnine [*sat'ər-nīn*] pertaining to lead, the poisonous metal.

saturnism [*sat'ər-niz-əm*] lead poisoning; plumbism.

saucerization [*saw"sər-ĭ-za'shən*] the excavation of tissue to form a shallow shelving depression, usually performed to facilitate drainage from infected areas of bone.

Sauerbruch retractor simple handheld retractor with a broad blade turned down at right angles at the end. Used for short-term exposure of abdominal cavity.

sausage boot a stuffed leather roll worn above the coronet by a horse. Used to prevent pressure by the shoe on the elbow when the horse is lying down, which may cause a shoe boil.

sausage casing the tube used to stuff with sausage meat; some are synthetic. Small intestine is used as edible casing.

savaging severe trauma by biting. Said of horses savaging people, sows and bitches savaging litters.

SAVC South African Veterinary Council.

saw [*saw*] multi-toothed cutting instrument.

chain s. see **Pearson saw**.

Stryker s. see **Stryker saw**.

surgical s. modeled on carpentry tools but made of sterilizable materials; used for cutting cartilage and bone.

wire s. very tough, braided steel wire used in obstetrics to cut through muscles and bone. Tends to clog up in skin and with viscera. Needs to be used with a protective fetotome to avoid injury to the vagina and uterus. See also **Gigli wire saw**.

w. saw introducer 1. may be a long, 3 feet, blunt needle with an eye at the introduced end. Used to thread wire saw through the tube of an embryotome. 2. a heavy metal bean-shaped plaque, size of a hand palm, with two holes; used to carry the end of the wire saw through the uterus, around the object to be removed, and out again through the vagina. The two ends of the saw are then threaded into the tubes of the embryotome.

saw palmetto [*saw pal-met'o*] *Serenoa repens*; a small palm growing mainly in coastal areas of southeastern USA. The fruit contains high concentrations of fatty acids and phytosterols. Extracts are used in alternative medicine to treat urinary tract infections and benign prostatic hyperplasia in men, but effectiveness in dogs hasn't been demonstrated.

sawdust used as litter for chickens and bedding for horses and dairy cows. Sawdust made from treated timber may cause pentachlorophenol and other wood preservative poisoning. Sawdust and wood shaving bedding can be a risk factor for *Klebsiella* spp. mastitis in dairy cows. Fungi growing in sawdust litter in poultry houses may cause poisoning in the birds. See also ***Entandrophragma cylindricum***, ***Juglans nigra***.

sawdust liver an abattoir term used to identify livers in which the external surface has the appearance of having been dusted with sawdust; multiple foci of nonsuppurative necrosis with leukocytic infiltration. The cause is not known.

sawfly member of the insect family Pergidae. Includes *Arge pullata* (Denmark), *Lophyrotoma interrupta* (Australia), *Perreyia lepida* (South America). The larvae of these leaf-eating insects collect in piles under the trees they infest; cattle eat them avidly and develop acute hepatitis due to the ingestion of **lophyrotomin** in the larvae.

birch s. see ***Arge pullata***.

sawhorse stance see sawhorse **posture**.

saxitoxin [*sak'sĭ-tok"sin*] neurotoxic tetrahydropurine of the paralytic **shellfish** poisoning (PSP) toxin group from poisonous mussels, clams and plankton; a sodium channel blocker with the same mode of action as **tetrodotoxin**; originates in some toxic **dinoflagellates** and in some **Anabaena** spp.

Saxon, Saxony popular strain of Australian Merino fine or superfine woolled sheep.

Sayre elevator [*sa'ər*] double-ended, handheld instrument with one rongeur type end and one curved blade; designed for lifting periosteum off bone during surgery.

Sb chemical symbol, *antimony* (L. *stibium*).

SBE sporadic bovine **encephalomyelitis**.

SBO specified bovine **offal**.

Sc chemical symbol, *scandium*.

sc subcutaneously.

s.c. in medical records, an abbreviation for subcutaneous.

scab [*skab*] 1. a crust composed of coagulated serum, blood, pus and skin debris covering a skin lesion. 2. used colloquially to mean **psoroptic mange**.

scabbard trachea congenital lateral compression of the trachea; seen in horses.

scabby cat disease see feline miliary **dermatitis**.

scabby mouth see contagious **ecthyma**.

scabicide [*ska'bĭ-sīd*] 1. lethal to *Sarcoptes scabiei*. 2. an agent lethal to *Sarcoptes scabiei*.

scabies [*ska'bēz*] infestation by mites of the genus *Sarcoptes*. See also **sarcoptic mange**.

feline s. see **notoedric mange**.

s. incognito a variant of sarcoptic mange in dogs in which mites are difficult or impossible to recover in skin scrapings, presumably because of the extensive grooming and generally high level of skin hygiene that lacks only the use of a scabicide. Also there are usually only a few mites present once an immunity develops. Further infection may cause a hypersensitivity but the mites present will still be in small numbers.

Norwegian s. a variety characterized by immense numbers of mites and marked scaling of the skin. Seen in immunocompromised patients.

scabietic [*ska"be-et'ik*] pertaining to scabies.

Scabiosa succisa European plant in the family Dipsaceae. Contains an unidentified toxin which has caused severe irritation of the oral mucosa in cattle. Called also *Succisa pratensis*, devil's bit.

VetBooks.ir

S-18: Scald in a horse.

scad transitory lameness in sheep, reputed to follow frosty conditions and to be a dermatitis caused by cold injury.

scala [*ska'lə*] pl. *scalae* [L.] a ladder-like structure, applied especially to various passages of the cochlea.

s. media synonymous with the cochlear duct, but more often used in descriptions of the bony labyrinth, whereas the cochlear duct is employed in descriptions of the membranous labyrinth for the space in the cochlea between the vestibular (Reissner's) membrane and the basilar membrane.

s. tympani the perilymph-filled space on the lower or basilar surface of the cochlear duct within the cochlea.

s. vestibuli the perilymph-filled space on the upper or cupular surface of the cochlear duct within the cochlea.

scalar [*ska'lər*] in electrocardiography, a single magnitude value of a recorded electrical potential, expressed in millivolts.

scald [*skawld*] 1. a burn caused by a hot liquid or a hot, moist vapor; to burn in such fashion. 2. see benign **footrot**. 3. alopecia, pityriasis and hair loss over the rump of the horse without dermatitis; occurs in warm wet weather when the skin is wet continuously for long periods.

milk s. see **milk** scald.

sheep s. see **interdigital** dermatitis.

scalded skin syndrome a disease of human skin mirrored closely by a lesion in Greyhounds from which pure cultures of *Staphylococcus aureus* can be isolated. The lesions commence as large, thin-walled bullae along the dorsum of the neck and trunk which cause erection of a patch of hair. Rupture of the bullae leads to loss of hair and scab formation. See also **sore**.

scalding plunging of pig or poultry carcasses into very hot water to facilitate scraping and dehairing and plucking. Chicken scalding water is 130°F for broilers (larger birds higher) applied for 1–2 minutes. Modern pig abattoirs use steam at 144–147°F for about 3 minutes. This avoids overheating the carcasses.

scale [*skāl*] 1. a thin flake or compacted platelike body, as of cornified epithelial cells. 2. a scheme or device by which some property may be measured (as hardness, weight, linear dimension). See also **Celsius scale**, **centigrade**, **Farenheit scale**, **kelvin** scale. 3. to remove encrustations or other material from a surface, as from the enamel of teeth.

absolute s. a temperature scale with zero at the absolute zero of temperature.

Baumé s. measures the density of solutions, expressed whether they are heavier or lighter than water. Expressed as B°, Be°, or Bé°. Used to mark hydrometers.

Celsius s. see **Celsius** scale.

coma s. a method of assessing neurological injuries resulting from trauma. The modified **Glasgow coma Score** developed for use in dogs and cats assigns points for motor activity, brain stem reflexes and level of consciousness.

contrast s. the range of densities or contrasts on a radiograph.

Fahrenheit s. see **Fahrenheit** scale.

French s. see **French gauge**.

s. rot a necrotizing dermatitis of snakes manifested by multiple, small cutaneous ulcers. May be caused by poor husbandry or diet.

scalene muscle [*ska'lēn*] see Table 13.1I.

scalenectomy [*ska"lə-nek'tə-me*] resection of a scalene muscle. See Table 13.1I.

scaler [*ska'lər*] a manual or mechanical instrument used to remove deposits from the surface of teeth. See also **tartar** scraper.

rotary s. an air-driven scaler with a rotating bur; carries risk of injury to gingiva and less used than ultrasonic scalers.

S-19: Jacquette tartar scalers.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

sonic s. one with a tip that vibrates at low frequencies between 3000 and 9000 cycles per second.

ultrasonic s. the scaling tip, which vibrates at high frequency, is cooled by water. There are several types, including magnetostrictive and piezoelectric, which differ in the mechanisms producing the vibrations. Cleaning occurs by cavitation. Popular in veterinary dentistry.

scales dry, flaky exfoliations of the skin without any discontinuity of its surface.

scaling [*skāl'ing*] 1. removal of tartar from teeth. See also **ultrasonic** tooth scaling, **tartar** scraper. 2. in statistical terms the changing of the scale on which a variable is measured, usually to match the scaling of another lot of data and simplify comparison.

scallop bivalve molluscs in the family Pectinidae. There are several hundred species worldwide, but the main ones harvested commercially are the Japanese scallop (*Pecten yessoensis*), great Atlantic scallop (*P. maximus*) and giant or sea scallop (*Placopecten magellanicus*).

scalpel [*skal'pəl*] small surgical knife. The traditional fixed blade model usually has a convex edge. Modern instruments have detachable blades in a great variety of shapes. There are other more sophisticated cutting instruments such as the argon plasma scalpel, the carbon dioxide laser scalpel, the electrosurgical scalpel and the high-energy scalpel.

scaly [*ska'le*] skin condition characterized by scales; scalelike.

s. face, s. leg see ***Cnemidocoptes*** *pilae*.

scan [*skan*] an image produced using a moving detector or a sweeping beam of radiation, as in scintiscanning, B-mode ultrasonography or computed tomography.

s. generator the basic mechanism in a scanning electron microscope, moving the beam across the specimen.

static s. in ultrasonography, a static image built up by movement of the transducer sequentially over the body. Now largely replaced by real-time **ultrasonography**.

scandium (Sc) [*skan'de-əm*] a chemical element, atomic number 21, atomic weight 44.956. See Table 4.

scanning [*skan'ing*] close visual, electronic or radiographical examination of a small area or of different isolated areas of the body.

electronic s. one of the two forms of electronic microscopy. See also transmission electronic **microscope**; useful for ascertaining spatial relationships.

radioisotope s. production of a two-dimensional record of the gamma rays emitted by a radioactive isotope concentrated in a specific organ or tissue of the body, such as brain, kidney or thyroid gland.

S-20: Scalpel handles – #3, #4 and #8. Each handle size has a blade seat of a different size to accommodate a detachable blade.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

VetBooks.ir

e. scanning one of the two forms of electronic microscopy. See also transmission electronic **microscope**; useful for ascertaining spatial relationships.

total body s. utilization of computed **tomography** (CT) to examine a cross-section of the entire body. The CT scanner produces an image of tissue density in a complete cross-section of the part of the body being scanned. For the most part total body scanning does not require the injection of a radiopaque substance, nor is there a need for use of a radioactive material to produce a record of the findings. However, contrast is used in some areas, particularly the skull, as it enhances the image. The total body scanner is particularly useful in visualizing organs in the retroperitoneal space, for example, the pancreas, liver, spleen and ovaries, the abdominal section of the aorta, and in viewing the spine and skull.

scanography [*skan-og'rə-fe*] a method of making radiographs by the use of a narrow slit beneath the tube, so that, as the X-ray tube moves over the target, all the rays of the central beam pass through the part being radiographed at the same angle.

scansorial of or pertaining to climbing, as in animals or birds with body structure or feet adapted for climbing.

scant feces small, hard feces are passed infrequently; occur in dehydration, reduced feed intake, alimentary tract stasis.

scapha [*ska'fə*] pl. *scaphae* [L.] the hollow inside the peripheral part of the ear flap that leads into the tubular concha.

scaphoid [*skaf'oid*] 1. shaped like a boat. 2. radial carpal bone. See Table 10.

scaphoiditis [*skaf"oi-di'tis*] inflammation of the scaphoid bone.

scapula [*skap'u-lə*] pl. *scapulae* [L.] the flat triangular bone at the proximal end of the forelimb which contributes to the shoulder joint; the shoulder blade. See also Table 10.

flying s. dorsal scapula displacement due to bilaeral rupture of the *serratus ventralis* muscles in cattle; believed a result of nutritional myodegeneration due to selenium deficiency.

winged s. see **angel wings**.

scapular [*skap'u-lər*] pertaining to the scapula.

scapulectomy [*skap"u-lek'tə-me*] excision or resection of the scapula.

scapulohumeral [*skap"u-lo-hu'mər-əl*] pertaining to the scapula and humerus.

s. joint shoulder joint.

scapulopexy [*skap'u-lo-pek"se*] surgical fixation of the scapula.

scapulothoracic [*skap"u-lo-thə-ras'ik*] pertaining to the scapula and thorax.

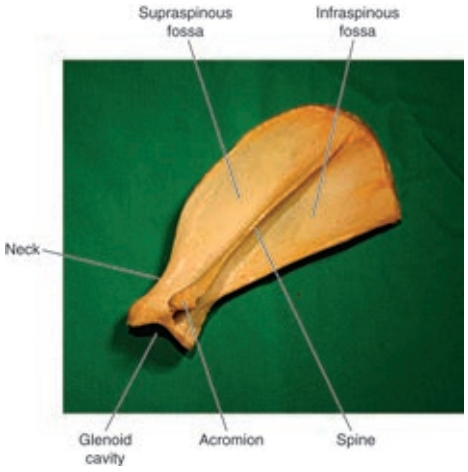
scar [*skahr*] cicatrix; a mark remaining after the healing of a wound, such as one caused by injury, illness or surgery.

constricting s. contraction of scar tissue causing constriction of vascular channel or hollow viscus.

honorable s. in judging dogs, scars resulting from injuries suffered as a result of work are permissible and do not detract from the dog's features.

hypertrophic s. an overabundance of connective tissue in a wound, identified by history of traumatized wound, infection and histological examination reveals hairs, foreign body, pockets of infection.

s. tissue a dense mass of granulation tissue.



S-21: Scapula of the dog. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

scarification [*skar"ĭ-fĭ-ka'shən*] production in the skin of many small superficial scratches or punctures, as for introduction of vaccine. Erroneously used to mean scarring.

scarificator [*skar'ĭ-fĭ-ka"tər*] scarifier.

scarifier [*skar'ĭ-fi"ər*] an instrument with many sharp points, used in scarification.

scarlet pimpernel [*skahr'lət*] ***Anagallis*** *arvensis*.

scarlet red an azo dye used for demonstrating sex chromatin, basic protein and connective tissue in histology, and as a stimulant to healing in wounds. Called also Biebrich scarlet.

scarlet runner ***Phaseolus*** *vulgaris*.

Scarpa's membrane [*skahr'pah*] see **tympanic** membrane (secondary).

Scatchard equation [*skach'ərd*] describes the affinity of binding of a ligand and receptor, such as antigen binding by antibody.

scatemia alimentary toxemia in which the chemical poisons are absorbed through the intestine.

scatology [*skah-tol'ə-je*] study and analysis of feces, as for diagnostic purposes.

scatoscopy [*skə-tos'kə-pe*] examination of the feces.

scatter [*skat'ər*] 1. the diffusion or deviation of X-rays produced by a medium through which the rays pass. 2. the distribution of two variables in relation to each other, e.g. the numbers of a population in terms of time, place or any other variable.

back s. backward diffusion of X-rays.

scattergram [*skat'ər-gram*] a graph in which the values found in a statistical study are represented by disconnected, individual symbols.

scattering [*skat'ər-ing*] a change in the direction of motion of a photon or subatomic particle as the result of a collision or interaction.

scavenging of anesthetic. See **anesthetic** scavenging.

SCC squamous cell carcinoma.

SCCS self-contained-cleaning-system in an abattoir.

Scedosporium apiospermum [*se-do-spor'e-əm*] the imperfect state of *Pseudallescheria boydii*; a fungus associated with bovine and equine abortion, bovine mastitis and nasal infections in horses and companion animals.

Sceletium African plant genus in the family Aizoaceae; contain soluble oxalates which cause nephrosis, uremia and urolithiasis.

scenario building predicting the future by assuming a series of alternative possibilities, as opposed to predicting the future solely on the basis of extrapolated mathematical data.

scent a distinctive, agreeable odor. Animals secrete them from sweat and sebaceous glands and special scent glands. See also **pheromone**.

s. gland impaction the secretion in the gland becomes inspissated and forms an irritating foreign body.

s. hound see **hound**.

scented thorn ***Acacia*** *nilotica* subsp. *kraussiana*.

Schalm classification a morphological classification system for anemias based on the erythrocyte indexes of MCV and MCHC.

Schapendoes a medium sized dog with a long, thick, slightly wavy coat in any color, forming a top knot, mustache and beard. The tail is long and feathered. Called also Dutch sheepdog.

schechita see **shechita**.

Schefflera actinophylla Australian tree in Araliaceae family; leaves cause stomatitis, salivation, vomiting, diarrhea in dogs which ingest them. Called also umbrella tree.

schema [*ske'mə*] a plan, outline or arrangement.

Schiff–Sherrington syndrome extensor hypertonia of the thoracic limbs and paraplegia resulting from acute, severe, compressive lesions of the thoracolumbar spinal cord that remove the inhibitory effects of neurons in the lumbar spinal cord. Seen in dogs, usually caused by trauma or herniated intervertebral disk.

Schilling count [*shil'ing*] a differential leukocyte count in which the neutrophils are divided into blasts, progranulocytes, myelocytes, metamyelocytes, bands, and mature segmented cells. Called also nuclear index. The terms 'left shift', and 'right shift' are based on this classification of neutrophils by age.

Schilling test [*shil'ing*] see **vitamin B_{12}** absorption test.

Schimmelbusch mask [*shim'əl-boosh"*] a wire frame over which a cloth is spread and an inhalant anesthetic added.

schindylesis [*skin"də-le'sis*] an articulation in which a thin plate of one bone is received into a cleft in another, as in the articulation of the perpendicular plate of the ethmoid bone with the vomer; a tongue-and-groove joint.

Schinus [shi'nəs] a genus in the plant family Anacardiaceae. Contain urushiols and have caused gastroenteritis and contact dermatitis in birds, pigs, cattle and dogs. Includes *S. molle* (pepperina), *S. terabinthifolius* (Brazilian pepper tree).

Schiotz tonometer [she-ets'] see indentation **tonometer**.

Schipperke a small, lively dog with cobby build and thick, medium-length coat, usually black but may be another whole color, that forms a ruff around the neck and 'coulottes' on the back of the thighs. The head has a foxy appearance with pointed, erect ears. The tail is docked to a short length. Called also Belgian barge dog. The breed is affected by mucopolysaccharidosis type IIIB.

Schirmer tear test (STT) [shir'mər] a measure of aqueous tear production used in the diagnosis of keratoconjunctivitis sicca. A standardized strip of filter paper is inserted into the ventrolateral conjunctival sac, projecting over the lower eyelid. The length of paper wet after a specified period of time is measured and compared with normals for the species being tested. The Schirmer tear test-I is performed without prior corneal surface anesthesia and measures basal and reflex tearing. The Schirmer tear test-II is performed following corneal surface anesthesia and measures basal tearing only.

schist(o)- word element. [Gr.] *cleft, split.*

Schistocephalus a genus of tapeworms in the family Diphyllobothriidae.

S. solidus adults found in the intestine of birds and can cause mortality in ducks. Intermediate stages in cyprinid fishes cause marked swelling of the abdomen.

schistocephalus a fetus with a cleft head.

schistocormus [shis"-, skis"to-kor'məs] a fetus with a cleft trunk.

schistocyte [shis'-, skis'to-sīt] schizocyte.

schistocytosis [shis"-, skis"to-si-to'sis] schizocytosis.

schistoglossia cleft (bifid) tongue.

schistomelus [shis-, skis-tom'ə-ləs] a fetus with a cleft limb.

schistometer an instrument for measuring the aperture between the vocal cords.

Schistosoma [shis-, skis-tom'ə-ləs] a genus of elongated dioecious digenetic trematodes which inhabit blood vessels of the host. The eggs are found in the wall of the bladder, uterus and urethra. Includes *S. bovis* (ruminants), *S. curassoni* (ruminants), *S. haematobium* (humans), *S. incognitum* (pigs, dogs), *S. indicum* (ruminants, horses), *S. intercalatum* (humans, ruminants, horses), *S. japonicum* (humans, many other species), *S. magrebowiei* (ruminants, zebra), *S. lieperi* (wild artiodactyls), *S. mansoni* (humans, wild animals), *S. mattheei* (most species), *S. mekongi* (humans, dogs), *S. nasalis* (ruminants, horses), *S. rodhaini* (dogs, rodents), *S. spindale* (ruminants, dogs), *S. suis* (see *S. incognitum*).

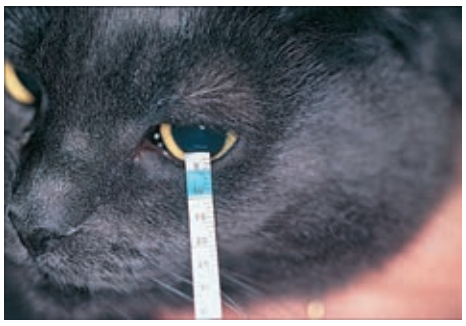
schistosoma reflexus [shis"-, skis"to-so'mə] see **schistomus**, s. reflexus.

Schistosomatium [shis"-, skis"to-so-ma'she-əm] a genus of flukes in the family Schistosomatidae. Found in rodents.

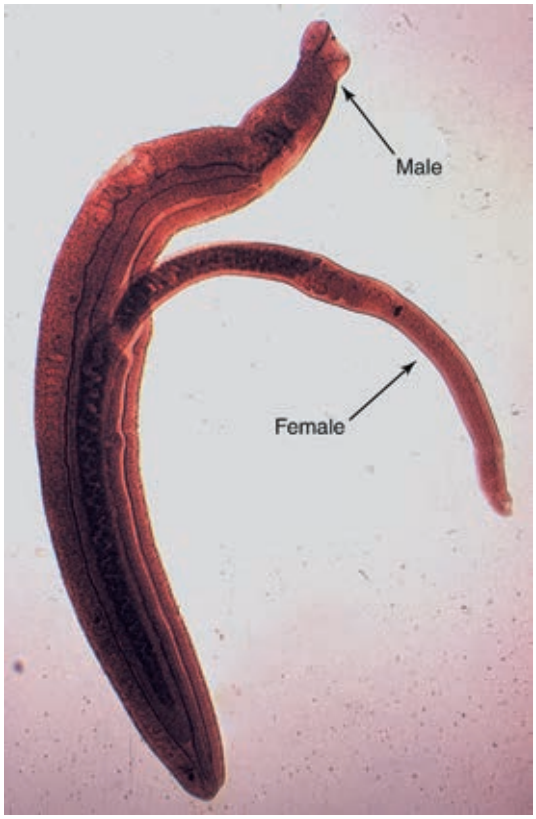
S. douthitti occurs in mesenteric veins and may cause dermatitis.

schistosome [shis'-, skis'to-sōm] a member of the family Schistosomatidae. Includes the genera *Austrobilharzia*, *Bilharziella*, *Bivitellobilharzia*, *Dendritobilharzia*, *Gigantobilharzia*, *Heterobilharzia*, *Ornithobilharzia*, *Pseudobilharziella*, *Schistosoma*, *Schistosomatium*, *Trichobilharzia*.

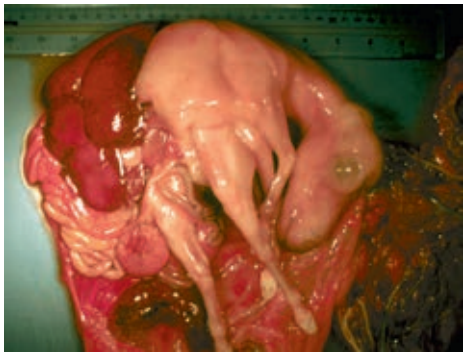
s. dermatitis a disease of humans caused by invasion of the skin by the cercariae of non-human schistosomes, especially avian ones. Called also clam-digger's itch, swimmer's itch, rice-paddy itch, swamp itch.



S-22: Schirmer tear test being performed in a cat.
From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.



S-23: *Schistosoma manson.*
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.



S-24: Schistosomus reflexus in an aborted fetus.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

schistosomiasis [shis"-, skis"to-so-mi'ə-sis] the disease caused by the trematode *Schistosoma* spp. The commonest syndrome is one of hemorrhagic enteritis, anemia and emaciation with many affected animals dying after an illness of several months. Necropsy lesions include distended mesenteric vessels filled with flukes, hemorrhagic enteritis with granuloma formation in some cases. Granulomatous lesions occur in the liver in an hepatic form of the disease. Nasal schistosomiasis, caused by *Schistosoma nasalis,* is characterized by nasal discharge, snoring and dyspnea. *S. haematobium* causes hematuria. Human infestation with cercariae causes swimmer's itch, swamp itch. The term is also applied to the disease in dogs caused by ***Heterobilharzia americana***, a trematode closely related to *Schistosoma*.

schistosomicide [shis"-, skis"to-so'mĭ-sīd] an agent that destroys schistosomes.

schistosomus [shis"-, skis"to-so'məs] a fetus with a cleft abdomen.

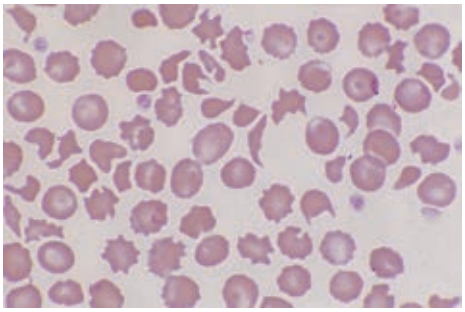
s. reflexus the lateral edges of the somatic disk in the developing embryo curve upwards instead of downwards. The viscera float free in the amnion, the head and tail are curved up towards each other. The fetus creates a dystocia with the free-floating viscera, or the four limbs and the head all together, presenting in the cervical canal.

schistothorax congenital fissure of the chest or sternum.

schizaxon [skiz-ak'son] an axon that divides into two nearly equal branches.

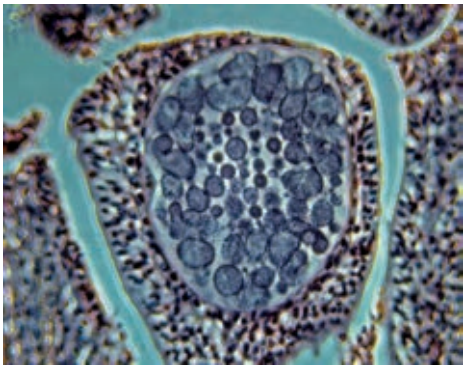
S

VetBooks.ir



S-25: Numerous schizocytes and a helmet-shaped cell in this blood smear from a dog with stenosis of the pulmonic valve.
From Cowell RL, et al, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

schiz(o)- word element. [Gr.] *divided, division*.
schizocyte [*skiz'o-sit*] an erythrocyte fragment, resulting from intravascular shearing forces, as in disseminated intravascular coagulopathy, caval syndrome and vascular neoplasms. Also seen in liver disease, heart failure, glomerulonephropathy, and other conditions. Called also schistocyte.
schizocytosis [*skiz"o-si-to'sis*] the accumulation of schizocytes in the blood.
schizodemes parasites with mitochondrial DNA of similar characteristics.
schizogenesis [*skiz"o-jen'ə-sis*] reproduction by fission.
schizogony [*skĭ-zog'ə-ne*] an asexual reproductive stage of an apicomplexan parasite (sporozoite stage) by multiple binary fission within cells in the body of the host, giving rise to merozoites.
schizogyria [*skiz"o-ji're-ə*] a condition in which the cerebral convolutions have wedge-shaped cracks.
schizont [*skiz'ont*] the asexual reproductive stage in the development of the *Eimeria* spp. and in many other coccidians, e.g. *Toxoplasma* spp. in the cat, following the sporozoite and trophozoite stages.
giant s's. up to 300 µm diameter in sheep and goats, as part of the life cycle of *Eimeria* spp.
schizonychia [*skiz"o-nik'e-ə*] splitting of the nails or claws.
schizotrichia [*skiz"o-trik'e-ə*] splitting of the hairs at the ends.
Schizotrypanum [*skiz"o-trip'ə-nəm*] see ***Trypanosoma***.
Schlatter–Osgood disease see **Osgood–Schlatter disease**.
Schlemm's canal [*shlem*] a circular venous canal at the junction of the sclera and cornea that receives aqueous humor draining from the anterior chamber. Called also scleral venous sinus, *sinus venosus sclerae*.
Schlesinger's test [*shla'sing-ər*] a test for the presence of urobilinogen in urine, determined by a color change after the addition of zinc sulfate.
Schmauch bodies see Heinz **body**.
Schmidt's syndrome [*shmit*] see **polyglandular** syndrome.
Schmidt's test [*shmit*] a test for the detection of bilirubin in feces based on the development of a pink color in a fecal sample after the addition of mercuric chloride.
Schmidt–Waldmann vaccine an early named foot-and-mouth disease vaccine composed of inactivated virus and adjuvant.
Schmieden's suture a technique for closing incisions of the intestinal wall, it is a continuous inverting suture through all three layers of the wall and which is then buried by a second layer of sutures.



S-26: *Eimeria bovis* schizont in an intestinal epithelial cell of a calf.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

Schmorl's disease [*shmorl*] 1. in humans, herniation of the nucleus pulposus of the intervertebral disk. 2. *Fusobacterium necrophorum* infection in rabbits. See **necrobacillosis** (2).
Schmorl's node [*shmorl*] an irregular or hemispherical bone defect in the cranial or caudal margin of the body of a vertebra into which the nucleus pulposus of the intervertebral disk herniates.
Schnauzer a dog with hard, wiry, black or salt-and-pepper colored coat that is short on the body but longer on the legs and face, where it forms the characteristic eyebrows, mustache and chin whiskers. The small, v-shaped ears are set high and fold over except in countries where ear-cropping is practiced. The tail is docked to a short length. There are three varieties of Schnauzers, not closely related in origin and each regarded as a separate breed, similar in appearance but varying in size. The *miniature* (12–14 inches tall) is classed as a terrier while the *standard* (17–20 inches tall) and *giant* (23–27 inches tall) are classed as working dogs in the USA. The miniature Schnauzer is predisposed to congenital cataracts, progressive retinal atrophy and Schnauzer **comedo** syndrome.
schnoodles a hybrid name used to describe dogs produced from crossing Schnauzers and Poodles. Not a recognized breed.
schochet see **shochet**.
Schoengastia see harvest **mite**.
Schoenocaulon officinalis a member of the Liliaceae family; the plant source of veratrine for pharmaceutical use.
Schoenus genus of the plant family Cyperaceae; two Australian species contain the toxin galegine; causes fatal pulmonary edema and hydrothorax in sheep when eaten in quantity. Includes *S. asperocarpus*, *S. rigens*. Called also poison sedge.
Scholtz bush see ***Pteronia pallens***.
schomer see **shomer**.
school to train a horse in dressage or Greyhounds to perform on the racetrack. See also **riding school**.
schooling see **school**.
schrock ***Sorghum vulgare***.
Schroeder–Thomas splint see Schroeder–Thomas **splint**.
Schultz–Dale reaction, test [*shoolts' dāl'*] an experimental in vitro test for hypersensitivity in which a strip of smooth muscle is removed from a sensitized animal and exposed to specific antigen, resulting in contraction.
Schwalbe's ring a circular ridge composed of collagenous fibers marking the peripheral termination of Descemet's membrane. Called also Schwalbe's line.
Schwann cell [*shvahn*] any of the large nucleated cells whose cell membrane spirally enwraps the axons of myelinated peripheral neurons supplying the myelin sheath between two nodes of Ranvier.
schwannoma [*shwah-no'mə*] a neoplasm originating from Schwann cells (of the myelin sheath). Most occur in the skin, but they are also found in nerve trunks and roots. The Schwann cell is also a component of neurofibromas. Called also neurilemmoma.
cardiac s. single or multiple round or nodular masses on the epicardial surface or within the myocardium.
granular cell s. see **granular** cell tumor.
Schweinepest [Ger.] *hog cholera*; now called classical swine fever.
Schweinsberger disease pyrrolizidine alkalosis caused by the ingestion of *Senecio* spp.
schwitzkrankheit *Hyalomma* toxicosis. See **sweating** sickness.
sciage [*se-ahzh'*] [Fr.] a sawing movement in massage.
sciascopy see **retinoscopy**.
sciatic [*si-at'ik*] pertaining to the ischium.
s. nerve a large nerve extending from the lumbosacral plexus down the thigh, with branches throughout the lower leg and foot. It is the widest nerve of the body and one of the longest. See also Table 14.
s. nerve degeneration occurs during parturition in cows due to passage of a large fetus through the pelvic canal causing pressure and subsequent degeneration of one or both sciatic nerves leading to posterior paresis or paralysis.
s. nerve paralysis injury to the sciatic nerve, commonly during difficult parturition in heifers, causes weakness or paralysis of one hindleg and the animal is recumbent. See also maternal obstetric **paralysis**.
SCID severe combined immunodeficiency. See **combined immune deficiency syndrome disease**.
scientific method the process of extending knowledge by forming a hypothesis based on observations and epidemiological patterns,

VetBooks.ir

S-27: Sciatic nerve paralysis from improper site of intramuscular injection.

S-28: Thyroid scintigraphy in a cat showing normal uptake in the thyroid lobes and sallivary glands.
From Broome MR: Thyroid scintigraphy in hyperthyroidism. Clin Tech Sm Anim Pract 21:10-16, 2006. Elsevier.

which is then tested on a subset of the total population, then generalizing the results to the appropriate population through the process of inductive logic. Before implementation of the hypotheses they should be tested by studies planned on the basis that the hypothesis will be proved or denied. Peer review of theories and results are an essential component.

scientific parsimony see **Occam's razor**.

Scilla [*sil'ə*] see ***Drimia***, ***Urginea***.

scillerin A cardiac glycoside found in *Scilla maritima*.

scilliroside [*sil'ir-o-sīd*] cardiac glucoside in *Drimia maritima*.

scintigram [*sin'tĭ-gram*] an image produced by scintigraphy.

scintigraphy [*sin-tig'rə-fe*] the production of two-dimensional images of the distribution of radioactivity in tissues after the internal administration of a radiopharmaceutical imaging agent, the images being obtained by a scintillation camera.

scintillation [*sin"tĭ-la'shən*] 1. the emission of sparks. 2. a particle emitted in disintegration of a radioactive element.

s. camera a stationary device that records a photographic image of the distribution of radioactivity of an organ after the administration of a radionuclide. A sequence of photographs records the uptake and the distribution of the radionuclide.

s. counter see scintillation **counter**.

scintiphotography [*sin"tĭ-fo-tog'rə-fe*] scintigraphy.

scintiscan [*sin'tĭ-skan*] a two-dimensional representation (map) of the gamma rays emitted by a radioisotope, revealing its concentration in a specific organ or tissue.

scintiscanner [*sin"tĭ-skan'ər*] the system of equipment used to make a scintiscan.

scirrh(o)- word element. [Gr.] *hard*.

scirrhoid [*skir'oid*] resembling scirrhous carcinoma.

scirrhous [*skir'əs*] hard or indurated.

s. carcinoma carcinoma with a hard structure owing to the formation of dense connective tissue in the stroma (desmoplasia).

s. cord enlargement of the stump of the spermatic cord, common only in pigs and horses, and usually obvious within a few weeks of castration. The swelling may cause lameness, is painful and may be accompanied by systemic signs of fever and toxemia. The lesion is a mass of fibrous tissue interspersed with small abscess cavities and sinus tracts.

scissors [*siz'ərz*] cutting instruments consisting of two blades pivoted centrally. The blades are closed and material cut by closing the handles. In cutting tissue the preferred technique is to hold the blades in a firmly half-closed position and to push the instrument along the grain of the tissues.

bandage s. designed for cutting tight bandages on patients without cutting the patient. Have one blade with a knob at the point for slipping under the bandage. See also **Knowles scissors** and **Lister scissors**.

barber s. sharp-pointed scissors with a finger lever on one of the finger grips. Designed for hand cutting a limited area of hair.

blunt-sharp s. see standard surgical scissors (below).

corneal section s. small, with angled blades designed specifically for sectioning cornea in ophthalmic microsurgery. See also **Castroviejo** ophthalmic instruments.

dissection s. used for separating tissues. See **Mayo scissors**, **Metzenbaum scissors**.

iris s. small, 3–4 inches long with sharp points, for ophthalmic surgery.

plaster s. robust for the cutting of **plaster** casts. See **plaster** shears, **Seutin shears**.

standard surgical s. have one narrow sharp-pointed and one wide, blunt-pointed blade. Called also blunt-sharp scissors.

stitch s., suture s. for stitch removal; have a hook-shaped point on one blade to hook under the stitch before cutting it with the opposing blade.

tenotomy s. small, 4 inches long with narrow blades and rounded tips for ophthalmic surgery. A popular version is called Stevens tenotomy scissors.

thoracic s. very long, up to 14 inches, scissors for reaching deeply located tissues. See **Nelson scissors**.

toenail s. for trimming claws and beaks. May be guillotine or scissors style; see **White scissors**.

uterine s. 9 inches long with long handles and short jaws. See **Mayo scissors**.

wire suture s. short, strong construction with very short, sharp-pointed, angled blades.

scissura pl. *scissurae* [L.] an incisure; a splitting.

sclera [*sklēr'ə*] pl. *sclerae* [L.] the tough, white, fibrous outer coat of the eye occupying the posterior 4/5 of the globe and continuous anteriorly with the cornea. The scleral stroma is banded by loose connective tissue the lamina fusca internally and episclera externally.

s. inflammation see **scleritis**.

scleradenitis [*sklēr"ad-ə-ni'tis*] inflammation and hardening of a gland.

scleral [*sklēr'əl*] pertaining to sclera.

s. ectasia see **sclerectasia**.

s. fixation sutures suture material placed into the episclera (Tenon's capsule) posterior to the corneoscleral limbus for immobilizing and controlling the position of the globe during ocular surgery.

sclerectasia [*sklēr"ək-ta'zhə*] a regional thinning of the sclera resulting in outward bulging sometimes with associated **staphyloma**. Part of the **Collie** eye anomaly symdrome.

S-29: Tenotomy scissors.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

VetBooks.ir

S-30: Scleral hemorrhage in a calf.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

VetBooks.ir

sclerectoiridectomy [*sklə-rek"to-ir"ĭ-dek'tə-me*] excision of part of the sclera and of the iris for glaucoma. Not done in veterinary glaucomas.
sclerectoiridodialysis [*sklə-rek"to-ir"ĭ-do-di-al'ĭ-sis*] sclerectomy and iridodialysis for glaucoma. Not done in veterinary glaucomas.
sclerectomy [*sklə-rek'tə-me*] 1. excision of part of the sclera. 2. removal of sclerosed parts of the middle ear after otitis media.
sclerema [*sklə-re'mə*] induration of the subcutaneous fat.
scleriritomy [*sklēr"ĭ-rit'ə-me*] incision of the sclera and iris in anterior staphyloma.
scleritis [*sklə-ri'tis*] inflammation of the sclera. Often categorized as superficial (**episcleritis**) or deep (true scleritis).
anterior s. inflammation of the sclera anterior to the equator of the globe and therefore typically visible behind the corneoscleral limbus.
necrotizing s. a rare form of scleral inflammation of dogs in which the sclera becomes necrotic, malacic and thinned. May lead to globe rupture.
nodular s. see nodular granulomatous **episcleritis**.
posterior s. inflammation of the sclera posterior to the equator of the globe and therefore typically not externally visible. Evident as periocular inflammation, sometimes with exophthalmos and sometimes chorioretinitis.
scler(o)- word element. [Gr.] *hard, sclera.*
scleroblastema [*sklēr"o-blas-te'mə*] the embryonic tissue from which bone is formed.
Scleroblitum atriplicinum toxic plant in the family Chenopodiaceae; causes oxalate poisoning manifested by nephrosis, uremia, urolithiasis. Called also *Chenopodium atriplicinum*, lamb's tongue.
sclerochoroiditis [*sklēr"o-ko"roi-di'tis*] inflammation of the sclera and choroid.
sclerocornea [*sklēr"o-kor'ne-ə*] the sclera and cornea regarded as one; sometimes called corneosclera..
Scleroderma genus of toxic macrofungi; toadstools containing an unidentified toxin causing vomiting, tenesmus. Includes *S. aurantium*, *S. citrinum*, *S. flavidum*.
scleroderma [*sklēr"o-dur'mə*] chronic hardening and shrinking of the connective tissues of any organ of the body, including the skin, heart, esophagus, kidney and lung. The skin may be thickened, hard and rigid, and pigmented patches may occur.
canine localized s. sclerotic linear plaques on the trunk and limbs of dogs. Called also morphea.
sclerogenous [*sklə-roj'ə-nəs*] producing sclerosis or a hard tissue or material.
scleroiritis [*sklēr"o-i-ri'tis*] inflammation of the sclera and iris.
sclerokeratectomy excision of a portion of cornea and sclera.
sclerokeratitis [*sklēr"o-ker"ə-ti'tis*] inflammation of the sclera and cornea.
Sclerolaena Australian genus of plants in family Chenopodiaceae; contain soluble oxalates which cause nephrosis, uremia, urolithiasis. Include *S. anisacanthoides* (yellow burr), *S. calcarata* (red or copper burr), *S. muricata* (prickly rolypoly).
scleroma [*sklə-ro'mə*] a hardened patch or induration of skin or mucous membrane.
scleromalacia [*sklēr"o-mə-la'shə*] degeneration and softening of the sclera, usually due to collagenolytic enzyme production.
scleronyxis [*sklēr"o-nik'sis*] surgical puncture of the sclera.
sclero-oophoritis [*sklēr"o-o-of"ə-ri'tis*] sclerosing inflammation of the ovary.
sclerophthalmia [*sklēr"of-thal'me-ə*] encroachment of the sclera upon the cornea so that only a portion of the axial cornea remains clear.
scleroplasty plastic repair of the sclera.
scleroprotein [*sklēr"o-pro'tēn*] a simple protein characterized by its insolubility and its fibrous structure; it usually serves a supportive or protective function in the body.
sclerosant [*sklə-ro'sənt*] sclerosing agent.
sclerose [*sklə-rōs'*] to become, or cause to become, hardened.
sclerosing agents [*sklə-rōs'ing*] used to create scar tissue and obliterate a lumen or fix a moving part. Called also internal blister, e.g. ethanolamine oleate, sodium iodide.
sclerosis [*sklə-ro'sis*] an induration or hardening, especially hardening of a part from chronic inflammation and in disease of the interstitial substance. The term is used chiefly for such a hardening of the intestine in the dog, hardening of the nervous system due to hyperplasia of the connective tissue or for hardening of the blood vessels.
arteriolar s. arteriolosclerosis.
lenticular s. see nuclear sclerosis (below).
nuclear s. increased density of the central lens seen as normal feature of aging in all animals but most notable in dogs. Causes a gray-blue central haze within the lens which can be mistaken for cataract formation, but which does not cause blindness or prevent funduscopic examination.
scleroskeleton [*sklēr"o-skel'ə-ton*] the part of the bony skeleton formed by ossification in ligaments, fasciae and tendons.
sclerostenosis [*sklēr"o-stə-no'sis*] induration or hardening combined with contraction.
sclerostomy [*sklə-ros'tə-me*] surgical creation of an opening through the sclera for the relief of glaucoma. Not performed in veterinary species.
sclerotherapy [*sklēr"o-ther'ə-pe*] the injection of sclerosing agents.
sclerothrix abnormal hardness and dryness of the haircoat.
sclerotica [*sklə-rot'ĭ-kə*] [L.] *sclera.*
Sclerotinia sclerotiorum [*sklēr"o-tin'e-ə*] fungal pathogen of commercial celery which is toxic when infested with the fungus.
sclerotitis [*sklēr"o-ti'tis*] scleritis.
sclerotium [*sklə-ro'she-əm*] pl. *sclerotia*; a hard blackish mass of mycelia formed during the resting phase by certain fungi, as *Claviceps purpurea*.
sclerotome [*sklēr'o-tōm*] 1. an instrument used in incision of the sclera. 2. the area of a bone innervated from a single spinal segment. 3. one of the paired segmented masses of mesenchymal tissue, separated from the ventromedial part of a somite, which develop into vertebrae and ribs.
sclerotomy [*sklə-rot'ə-me*] surgical incision of the sclera.
anterior s. the opening of the anterior chamber of the eye, chiefly done for treatment of human glaucoma. Not done in veterinary glaucoma.
posterior s. an opening made into the vitreous through the sclera, as for repair of detachment of the retina or the removal of a foreign body.
sclerous [*sklēr'əs*] hard; indurated.
s. tissues the cartilaginous, fibrous and osseous tissues.
scoke *Portulaca americana*.
Scolecobasidium genus of fungi in the family *Dematiaceae* which are a cause of phaeohyphomycosis Some are now classified as *Ochroconis*.
S. humicola recovered from cats, a tortoise and fish. Now classified as *Ochroconis humicola*.
S. tshawytschae a cause of disease in fish.

S-31: Ergot sclerotia in some seed of a seed head of basin wildrye (*Elymus cinereus*).

S

S-32: Scoliosis in a newborn foal.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

scolex [*sko'leks*] pl. *scoleces* [Gr.] the attachment organ of a tapeworm, generally considered the anterior, or cephalic, end.
scoli(o)- word element. [Gr.] *crooked, twisted*.
scoliokyphosis [*sko"le-o-ki-fo'sis*] combined lateral (scoliosis) and ventral (kyphosis) curvatures of the spine.
scoliorachitic [*sko"le-o-rə-kit'ik*] affected with scoliosis and rickets.
scoliosiometry [*sko"le-o-se-om'ə-tre*] measurement of spinal curvature.
scoliosis [*sko"le-o'sis*] lateral deviation in the normally straight vertical line of the spine; it may or may not include rotation or deformity of the vertebrae.
Scolopendra [*sko"lo-pen'drə*] a genus of arthropods in the class Myriapoda. Called also centipede (Chilopoda). They have poison claws used to stun prey and can cause a painful bite to an animal.
S. gigantea a large tropical centipede credited as being able to kill a human.
scooting a form of behavior limited largely to dogs and occasionally cats. Sliding along on the ground while sitting on the perineal area and with the hindlimbs extended forwards. Caused usually by any irritation in the perineal area, chiefly anal sac irritation.
scopolamine [*sko-pol'ə-mēn*] an anticholinergic alkaloid derived from various plants, used as the hydrobromide in parasympathetic blockade and as a central nervous system depressant.
Scopulariopsis [*skop"u-lar"e-op'sis*] a fungus causing hyalohyphomycosis.
S. brevicaulis an uncommon cause of ringworm in cattle.
-scopy word element. [Gr.] *examination of*.
scoracratia fecal incontinence.
scorbutic [*skor-bu'tik*] pertaining to scurvy.
scorbutigenic [*skor-bu"tī-jen'ik*] causing scurvy.
scorbutus [*skor-bu'təs*] [L.] *scurvy*.
score [*skor*] a rating, usually expressed numerically, based on specific achievement or the degree to which certain qualities are manifest. See also **body condition score**, **condition** scoring, **Injury Severity Score**.
linear s. for somatic cell counts in milk (SCCs) convert SCC logarithmically from cells per milliliter to a linear score from 0–9. The linear score has a straight line, inverse relationship with milk yield. An increase of one in the linear score is associated with a 400-pound decrease in lactation milk yield or a 1.5 pound drop in daily yield.
trauma s. a numerical assessment of injuries suffered as a result of trauma. Several systems are used, including the Glasgow Coma Scale and the Revised Trauma Score. See also coma **scale**.
vertebral heart s. (VHS) see vertebral **heart** score.
scorpion [*skor'pe-ən*] eight-legged, venomous arthropod of varying sizes but all possessing massive claws at the head and a flexible, segmented tail, which is carried in a characteristic forward curve over the back and has a sting in it. Stings by most of the >1,000 species have only local effects, but some have cause serious systemic effects. There are several species, including *Tityus*, *Centruroides*, *Androctonus*.
book s's. arachnids in many families and genera in the order Pseudoscorpionida. Called also false scorpions, pseudoscorpions.
false s's. see book scorpions (above).
scorpionfish highly venomous fish in the family Scorpaenidae; includes bullrout, lionfish, stonefish and firefish, all capable of administering a very painful sting from their spines. Although colorful and unusual in appearance with their covering of spines and spiny fins, most would be called 'ugly', but some are seen to be attractive and are kept as aquarium fish.
Scotch collie see **Collie**.
Scotch cramp see Scottie **cramp**.
Scotchcast see **fiberglass cast**.
scot(o)- word element. [Gr.] *darkness*.
scotochromogen [*sko"to-kro"mo-jən*] a microorganism whose pigmentation develops in the dark, used particularly in the classification of mycobacteria.
scotochromogenic [*sko"to-kro"mo-jen'ik*] producing scotochromogen.
scotopsin [*sko-top'sin*] the protein moiety in the retinal rods that combines with 11-*cis*-retinal to form rhodopsin.
Scottish blackface a breed of carpetwool and meat sheep with a black or pied face. From northern England and Scotland. See also **blackfaced sheep**.
Scottish deerhound a very large (75–110 lb; 28–32 inches tall) dog with medium length, ragged, usually dark gray hair, long neck and quite long tail. The coat forms a 'mane' on the neck. The head is relatively small and elongated with small, pendant ears. Said to resemble a very large, thick boned, roughcoated Greyhound. In the UK, called simply Deerhound. The breed is predisposed to osteosarcomas, gastric dilatation-volvulus and cardiomyopathy.
Scottish fancy an old, ornamental breed of canaries, popular in Victorian times. It is a long, slim bird, with a characteristic posture. The body is curved, head thrust forward and tail carried under the perch, forming the shape of a crescent moon.
Scottish fold a breed of cats all of which trace their parentage to a mutant Scottish farm cat. Their distinctive feature is the forward and downward folding of ear cartilages that becomes apparent as kittens mature. This is inherited as a dominant trait which when homozygous is associated with multiple cartilaginous and bony malformations. To avoid these defects, Scottish fold cats are bred to normal eared cats and about half the offspring are otherwise normal cats with the fold.
Scottish osteodystrophy the cartilaginous and bony malformations associated with the **Scottish fold** trait in cats.
Scottish terrier a small (18–22 lb), thickset dog with short legs. The coat is hard and wiry, trimmed to a short length on the body but allowed to be full and longer on the legs, under the body, and over the eyes and around the muzzle where it forms a beard. It may be black, wheaten or brindled. The head is long and the ears sharply pointed and erect. The tail is docked to a medium length and carried upright. Called also 'diehard', Aberdeen terrier, and most often, Scottie. The breed is affected by Scottie cramp, craniomandibular osteopathy, cystinuria, vacuolar hepatopathy, von Willebrand disease and atopic dermatitis.
Scottie cramp see Scottie **cramp**.
scour, scours 1. the chemical and physical cleaning of fleece wool. 2. diarrhea.
dietetic s. see dietary **diarrhea**.
grower pig s. see **nonspecific** colitis.
peat s. see secondary nutritional **copper** deficiency.
s. weed see ***Sisyrinchium***.
white s. diarrhea in newborn animals on a milk diet. The name is usually used with reference to dietary diarrhea in which no bacteria or virus is etiologically involved.
s. worm includes the genera *Trichostrongylus*, *Ostertagia*, *Cooperia* and *Nematodirus* spp.
scouring characterized by **scour**.
s. disease a colloquial name for secondary nutritional **copper** deficiency.

S-33: Scottish blackface sheep.

S

S-34: Scottish terrier.

SCPK serum creatine kinase.
scr scruple.
scraper see **tartar** scraper.
scrapie [*skra'pe*] an infectious, non-febrile, chronic, fatal disease of sheep and goats transmitted primarily by contact with infected sheep and from environmental contamination. There is a very long incubation period of at least 2 years. Characterized by clinical signs of pruritus, behavioral change, abnormalities of gait, wasting, recumbency and a long illness of about 6 months. The oldest recognized transmissible spongiform encephalopathy, caused by prion infection. Susceptibility to scrapie is genetically determined and control programs are developed to select scrapie resistant sheep. A disease notifiable to the OIE (see Table 22).
s. agent see **prion**.
s.-associated fibrils large amyloid-like aggregrates of the abnormal isoform of the prion protein PrP^{Sc} found in the central nervous system of humans and animals with transmissible spongiform encephalopathies.
atypical s. a non-contagious, sporadic degenerative brrain condition affecting very small numbers of older sheep in many countries, including some that are regarded as free of classical scrapie..
s. eradication programs most countries with scrapie have established scrapie eradication or scrapie monitoring schemes based on genotyping. These are driven by concerns for public health. The BSE epidemic of the early 1990s, the connection between BSE and variant Creutzfeldt-Jakob disease (vCJD) in humans, and the experiments showing oral transmission of BSE to sheep, giving rise to scrapie-like symptoms, have raised the possibility that BSE might exist in sheep posing a further risk to human health. Accordingly, the 2003 EU-Directive No 1915/2003 directs every member state to establish a breeding program based on scrapie resistance. Most countries have programs that have marked similarities and have both voluntary and compulsory aspects. Examples are the National Scrapie Plan in the UK, a voluntary breeding program that genotypes both ewes and rams in a flock and encourages breeding practices which will increase the frequency of resistant scrapie alleles and eradicate susceptible ones. The UK also has a Compulsory Scrapie Flocks Scheme where flocks with confirmed scrapie cases on their farms will either have their sheep flocks genotype tested so that those animals more susceptible to disease can be identified and removed or the whole flock slaughtered and disposed of. The equivalent in the USA is the USDA Genetics Based Flock Clean-Up and Monitoring Plan.
s. eyelid test the presence of the scrapie agent in lymphoid tissue allows its detection in the lymphoid tissue of the third eyelid in live sheep. This is in contrast to the BSE agent in cattle which does not occur in lymphoid tissue and for which there is no ante mortem test.
s. genotyping susceptibility to scrapie is associated with polymorphisms in the ovine prion protein (PrP) gene at codons 136, 154 and 171. Genotyping can establish resistant sheep and genotype testing for susceptibility to scrapie is a key element of the scrapie eradication program.
scraping removal of superficial layers of skin after scalding of pig carcasses.
scratch test [*skrach*] a test for hypersensitivity in which a minute amount of the substance in question is inserted in small scratches made in the skin. A positive reaction is swelling and reddening at the site within 30 minutes. Used in allergy testing and in testing for tuberculosis. In animals, intradermal testing is used more commonly. See also **skin** test.
scratches [*skrach'əz*] 1. excoriations caused accidentally or during rubbing to ease pruritus. 2. excoriations across the back of the pastern in a horse with the early stages of **greasy heel**. These are very painful and are the cause of the severe lameness evident at this stage of the disease.
scratching 1. the common motor response to pruritus in dogs and cats. It frequently causes more severe injury and secondary infection to the skin. 2. withdrawing a horse or Greyhound from a race after it has finally accepted. 3. a rodeo term for when a horse's sides are raked with spurs.
screen [*skrēn*] 1. in radiology and diagnostic imaging, a framework or agent used as a shield or protector. 2. to examine. See **screening**.
fast s. permits big reduction in exposure to X-ray beam.
s. film prepared to be used with intensifying screens. The standard film and marketed as being of standard, fast or ultrafast speeds.
rare-earth s. see rare-earth **intensifying screen**.
screening [*skrēn'ing*] 1. examination of a large sample of animals in a population in order to detect the presence of disease or to ascertain the prevalence of certain diseases, such as tuberculosis or diabetes mellitus. 2. in diagnostic tests the use of a test which has a high sensitivity but often only a moderate specificity. Usually this is a quick and cheap test which is followed by a more expensive but more accurate test carried out on the positive reactors to the screening test. 3. fluoroscopy or image intensification (Great Britain).
biochemical s. using biochemical tests for purposes of detecting the presence of a disease.
multiphasic s., multiple s. simultaneous examination of a population for several different diseases.
preventive s. screening of a population with a preventive medical program in prospect.
s. test any test, e.g. tuberculin, brucellosis tests, used to screen a population.
screw [*skroo*] 1. a mechanical device for fixing one object to another, characterized by a spiral ridge cut on the external surface of a cylindrical rod of decreasing diameter towards its point. This is a male screw. In a female screw the screw is cut on the inside of a cylindrical cavity. 2. a colloquial term for a worn out or inferior horse.
AISF bone s. see buttress thread bone screw (below).
buttress thread bone s. the thread is not a simple V as in the standard thread but has one side of the groove at right angles to the direction of the screw and the other side at a 45° angle. Called also AISF, Howmett compression, Richards–Bechtol.
cancellous bone s. has a coarse thread; threaded to only the first third of the length of the screw.
cortical s. threaded the full length of the screw; fine thread to hold in dense bone.
Howmett compression bone s. see buttress thread bone screw (above).
lag bone s. used as a compressing unit between two fragments with the first half of the screw near the point threaded, with the diameter of the ridges greater than that of the unthreaded half near the head. As the ridged part of the screw bites in the walls of the drill hole in the distal fragment, the unthreaded part is free

S-35: Scrapie.

VetBooks.ir

S-36: Carpal radiograph demonstrating transphyseal bridging using a 'single screw' technique.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal, Saunders, 2008.

to move within the drill hole in the proximal fragment, thus compressing the two pieces of bone together.

Richards–Bechtol bone s. see buttress thread bone screw (above).

standard bone s. with a V thread the full length of the screw, with a single slot, cruciate or Phillips head.

transfixation s. orthopedic screw used to reattach bone fragments to a solid skeletal part. The proximal part near the head is not threaded and needs to be of a smaller diameter than the threaded portion nearer the tip.

screw-neck twisting of the neck causing rotation of the head. Called also torticollis.

screw-tail inherited tail formation in some breeds of dogs with naturally short tails, e.g. British bulldog, in which there are usually multiple malformations of the coccygeal vertebrae producing a curled or otherwise distorted, stumpy tail. Called also ingrown tail.

s. dermatitis irritation and sometimes significant secondary infection occurring in the skin fold surrounding the base of a screw-tail. See also fold **dermatitis**.

screw-worm [*skroo'wərm*] the larvae of ***Callitroga***, ***Chrysomya*** *bezziana* and ***Passeromyia***.

s. myiasis invasion of normal skin wounds by maggots of ***Callitroga***, ***Chrysomya*** *bezziana* and ***Passeromyia*** flies. Large masses of tissue may be destroyed and the case fatality rate approximates 100%. All animal species including humans are susceptible. A disease notifiable to the OIE (see Table 22).

New world s.-w. *Cochliomyia hominivorax*.

Old world s.-w. *Chrysomya bezziana*.

scRNA small cytoplasmic RNA.

scrobic *Paspalum scrobiculatum*; toxic when infested with *Claviceps paspali*.

scrobiculate [*skro-bik'u-lāt*] marked with pits.

Scrophularia aquatica European member of plant family Scrophulariaceae. Probably contain toxic cardiac glycosides; causes excitement, tachypnea, pupillary dilatation, oral mucosal congestion and ulceration, dysuria and profuse diarrhea. Called also water figwort, water betony.

scrotal [*skro'təl*] pertaining to the scrotum.

S-37: Larvae of a screw-worm fly, *Cochliomyia hominivorax*.
Hendrix CM, Robinson, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

s. abscess usually the result of infection at the time of castration and absence of drainage from the site. May be accompanied by extensive local cellulitis.

s. anomalies include aplasia, congenital cleft and bifurcation.

s. circumference an essential part of the examination of a ruminant male for breeding soundness. A special tape is used and the measurement taken at the point of greatest diameter of the scrotum and contents—usually within the range of 13.5–16 inches is considered normal for adult bulls.

s. fat fat accumulates in the scrotum of most fat males; it is most obvious in castrates.

scrotectomy [*skro-tek'tə-me*] excision of part of the scrotum.

scrotitis [*skro-ti'tis*] inflammation of the scrotum.

scrotocele scrotal hernia.

scrotoplasty [*skro'to-plas"te*] plastic reconstruction of the scrotum.

scrotum [*skro'təm*] the pouch that contains the testes and their accessory organs. It is composed of skin, the dartos, fascia and the parietal layer of tunica vaginalis.

scrub 1. low trees and bushes. Called also browse. Edible enough for livestock to graze them especially when more conventional feed is short. Lopping of this material for feeding is a husbandry practice in some arid zones. Lends itself to indigestion in ruminants because of its indigestibility, especially if it is the main article of diet. 2. to cleanse by vigorous scrubbing with a brush. See also surgical scrub (below).

s. animal one from grade parents, non-descript and not showing the predominant characteristics of any breed. Generally used only with agricultural animals.

s. kurrajong ***Pimelea*** *microcephala, P. pauciflora*.

s.-up see scrub (2).

s. suit the outer, protective clothing worn by operating room personnel. Usually specially prepared within the hospital's sterilizing facility to minimize contamination in the surgical suite.

surgical s. the ritualistic presurgical preparation of hands and arms by surgeons and their assistants. Includes thorough, vigorous and systematic cleaning with a brush of all skin surfaces. Persons prepared in this manner are then considered 'scrubbed-up', ready to take part in the surgical procedure, and are not allowed to touch any nonsterile surfaces.

s. tick see ***Ixodes*** *holocyclus*.

scrubbed-up see surgical **scrub**.

scruple [*skroo'pəl*] a unit of weight of the apothecaries' system, equal to 20 grains; the equivalent of 1.296 g.

scur vestigial frontal horn at the normal site in an animal expected to be polled. It is not attached to the skull and there may or may not be an associated bony protuberance beneath it. The animal is not acceptable as being genetically polled.

scurf loose, dry scales on the haircoat and skin. May be a sign of dry skin or associated with a variety of skin diseases. See also **pityriasis**.

scurvy [*skur've*] the disease caused by a nutritional deficiency of **ascorbic acd** (vitamin C).

s. rickets see hypertrophic **osteodystrophy**.

scute [*skūt*] any squama or scalelike structure, especially one of the thick epidermal plates on the head of snakes, or the shell of a tortoise.

scutiform [*sku'tĭ-form*] shaped like a shield.

Scutigera see **johnny hairy-legs**.

scutulum [*sku'tu-ləm*] pl. *scutula* [L.] one of the disk- or saucer-like crusts characteristic of **favus**.

scutum [*sku'təm*] 1. scute. 2. a protective covering or shield, e.g. a chitinous plate in the exoskeleton of hard-bodied ticks. 3. a pressure pad that serves as a bearing surface for tendons as they bend around a prominence. The horse digit bears three scuta over the fetlock, pastern and coffin joints for the passage of the deep digital flexor tendon.

scybalous [*sib'ə-ləs*] of the nature of a scybalum.

scybalum [*sib'ə-ləm*] pl. *scybala* [Gr.] a hard mass of fecal matter in the intestine.

scyphoid shaped like a cup or goblet.

Scyphozoa [*si"fo-zo'ə*] the class of true jellyfish; in the phylum Cnidaria.

SD 1. streptodornase. 2. sorbitol dehydrogenase. 3. skin dose. 4. standard deviation.

SDA specific dynamic action.

SDH sorbitol dehydrogenase.

VetBooks.ir

SDS–PAGE sodium dodecyl sulfate–polyacrylamide gel electrophoresis, a method for separating proteins by molecular weight.
SE standard error.
Se chemical symbol, *selenium*.
SEA Sheltie eye anomaly; see **Collie** eye anomaly.
sea said of denizens of the ocean. Called also marine.
s. cage netting enclosure anchored to the sea bed or to buoys in which cultivated fish for human consumption are kept captive and fed special diets.
s. canary see ***beluga*** whale.
s. snakes members of the family Hydrophiidae, venomous snakes, inhabiting the sea, with paddle-shaped tails. Unlikely to bite unless pressed.
s. wasp see box ***jellyfish***.
s. water if natural sea water is not available a substitute can be used: sodium chloride—27.2; magnesium chloride—3.8; magnesium sulfate—1.6; calcium sulfate—1.3; potassium sulfate—0.9; calcium carbonate and magnesium bromide—each 0.1, all in g/L.
sea lion member of the family Otariidae, identifiable by having external ears. There are several genera including *Otaria*, the southern sea lion. *Zalophus*, the Californian sea lion and *Eumetopius*, Steller's sea lion. Popular as performing animals in aquaria and exhibits.
s. virus see **San Miguel sea lion virus disease**.
seahorse (*Hippocampus* spp.) bizarre aquarium fish with a snout, a skin covered with bony rings and a prehensile tail; the male has a brood pouch on the belly into which the female deposits her eggs. Popular as an aquarium pet.
seal 1. a marine mammal; member of the suborder Pinnipedia. There are two major groups, the earless seals (family Phocidae) including many species, and the eared seals (family Otariidae) including sea lions and fur seals. They are carnivorous and have four flippers which enable them to move on land and to swim. 2. a very dark brown coat color of cats, seen in brown (or sable) Burmese and on the extremities of seal-point Siamese and Colorpoint cats.
elephant s. there are two species in the genus *Mirounga*; characterized by the male's large proboscis. The southern elephant seal (*M. leonina*) the largest pinned, up to 20 ft long and 9000 lb, native to Antarctica and sub-Antarctic islands, and the northern elephant seal (*M. angustirostris*) which is somewhat smaller and native to the Pacific coast of North America.
harbor s., harbour s. the common seal, 5–6 ft long, up to 300 lb body weight, and a good performer in captive aquatic shows. Called also *Phoca vitulina*.
s. pox see **sealpox**.
seal-point see **points**.
sealant [*se'lənt*] see **bone** sealant.
sealer [*se'lər*] in meat hygiene terms, see **shomer**.
sealion see **sea lion**.
sealpox poxvirus disease characterized by multiple raised nodules on the head and neck of harbor seals and sea lions; caused by a virus in the genus *Parapoxvirus*.
Sealyham terrier a small (23–24 lb), stocky dog with short legs and a harsh, wiry coat that is predominantly white, but may have lemon, brown, blue or badger pied markings on the head and ears. The coat is trimmed to a short length on the body but forms thick feathers on the legs and body and a beard with bushy 'eyebrows'. The breed is predisposed to atopic dermatitis, lens luxation and retinal dysplasia.
searcher [*sərch'ər*] 1. an instrument (a sound) used in examining the bladder for calculi; called also stone searcher. 2. a farrier's tool for excavating a small hole in the sole of the hoof in a search for a puncture site. Has a slightly curved blade with a sharp cutting hook at the end. Resembles a hoof knife but the blade is much narrower.
season see **estrus**.
seasonal [*se'zən-əl*] pertaining to season of the year.
s. air flow patterns the changes in the patterns of air flow which occur in animal housing which are ventilated by natural means, according to the seasonal variation in the environmental temperature.
s. anestrus see anestrus.
s. calvers cattle herds in which the mating is arranged so that the cows calve at a particular season of the year.
s. herds see seasonal calvers (above).
seaweed [*se'wēd*] sea plants harvested for livestock feed; claimed to be a rich source of minerals and vitamins. When fed to laying hens may discolor yolks.
sebaceous [*sə-ba'shəs*] pertaining to or secreting sebum.
s. adenitis 1. inflammation of the sebaceous gland. 2. an uncommon, idiopathic skin disease, believed to be a cell-mediated autoimmune disease, in which there are abnormalities of keratinization and sebaceous secretions and ultimately destruction of sebaceous glands. Occurs in many breeds of dogs and rarely cats; inherited as an autosomal recessive trait in Standard Poodles and Akitas. Characterized by hyperkeratosis, dry and brittle hairs, dry adherent scales and follicular casts, and eventually alopecia.
s. adenoma occur in all species, but are particularly common in the skin of aged dogs and cats. Usually benign, they appear as solitary or multiple cauliflower- or wart-like growths in any location, but especially on the head.
s. cyst see sebaceous **cyst**.
s. epithelioma basal cell tumor with sebaceous differentiation.
s. gland holocrine glands in the skin that secrete sebum usually through the hair follicles. They vary in size and activity between species and location. In dogs, large sebaceous glands are located on the dorsum of the tail (see **tail** gland) and at mucocutaneous junctions. In cats, large glands are located also on the dorsum of the tail, on the lip margins and under the chin (see **submental** organ).
s. gland secretion abnormality includes sebolith, seborrhea.
s. secretion see **sebum**.
supracaudal s. gland see **supracaudal organ**.
Sebekia a pentastome, the larvae of which occur in fish and the adults in crocodiles.
sebiferous, sebiparous secreting or producing a fatty substance.
sebolith a calculus in a sebaceous gland.
seborgium (Sg) a chemical element, atomic number 106, atomic weight 271. See Table 4.
seborrhea [*seb"o-re'ə*] an abnormal secretion from the sebaceous glands, often associated with abnormalities of keratinization. The clinical features vary from dandruff to the formation of greasy scales and crusts with accompanying inflammation. See also seborrheic **dermatitis**.
congenital s. occurs in several dog breeds as scaling skin at birth and progressively worsening seborrhea oleosa with advancing age. Called also dirty-puppy syndrome.
ear margin s. see ear margin **dermatosis**.
idiopathic s., primary s. that caused by endocrine- or lipid-related metabolic abnormalities; may have an inherited basis.
s. oleosa moist, oily seborrhea with the formation of yellow-brown crusts. See also **exudative** epidermitis.
primary s. an inherited disorder of keratinization recognized in several breeds, particularly Cocker spaniels, English springer spaniel, West Highland white terrier and Chinese shar pei. Clinical signs may appear at a young age and worsen with advancing age. There is often ceruminous otitis externa and secondary bacterial and *Malassezia* infections are common. Reported occasionally in Persian cats. In horses, it usually occurs as seborrhea of the mane and tail, rarely as a generalized disease.
secondary s. that associated with a wide variety of unrelated diseases including parasitism, pyoderma, hypersensitivity reactions and autoimmune skin disease.
s. sicca dry, scaly seborrheic dermatitis.
seborrheic [*seb"o-re'ik*] affected with or of the nature of seborrhoea.

S-38: Sebaceous adenoma.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

S-39: Canine primary seborrhea. Generalized alopecia and lichenification affecting the entire cutaneous surface area.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

s. dermatitis see seborrheic **dermatitis**.
s. disease see **seborrhea**.
s. keratosis see seborrheic **keratosis**.
s. plaque chronic, erythematous, scaly skin plaque which is associated with staphylococcal hypersensitivity.
seborrheid a seborrheic eruption.
sebotropic [*seb"o-tro'pik*] having an affinity for or a stimulating effect on sebaceous glands; promoting the excretion of sebum.
sebum [*se'bəm*] the oily secretion of the sebaceous glands, whose ducts open into the hair follicles. It is composed of fat and epithelial debris from the cells of the malpighian layer, and it lubricates the skin. It is also secreted by the tarsal glands of the eyelids.
sec second.
Secale cereale [*se-ka'le*] cereal rye. Grown mainly as a grain crop for animal feed, production of rye bread and rye whisky. The crop may be infected with ***Claviceps*** *purpurea*.
secobarbital [*se"ko-bahr'bĭ-təl*] a short- to intermediate-acting oxybarbiturate, used for sedation and anesthesia. Called also quinalbarbitone.
secodont [*se'ko-dont*] bladelike teeth with sharp cutting edges that produce a shearing action as seen in the carnassials of the cat and dog.
second (s, sec) [*sek'ənd*] the SI unit of time.
second cross progeny of a mating between a halfbred and a purebred of one of the parents.
second cuts short pieces of fleece wool resulting from the shearer cutting over the same area twice.
second cutting said of hay made from a field which has already been cut for hay in the current summer. Does not have the weeds and old growth of the first cutting hay. Alfalfa in irrigated and warm areas may have 3 or 4 cuttings.
second gas effect low solubility of nitrous oxide and the concentrating effect in alveoli increases the rate of anesthesia onset when used in combination with another gas, such as halothane or isoflurane.
second messenger molecule transferring a signal from cell surface receptors to other effector molecules within the cell to produce a response; participates in signal transduction pathways.
second-order reactions the rate of product formation either depends directly on the product of the concentrations of two substrates (as in condensation reactions) or the square of the concentration of a single substrate (as in dimerization reactions).
second-set reaction, phenomenon see **rejection**.
secondary [*sek'ən-dar"e*] derived from another condition, the primary condition.
secrecy see **confidentiality**.
secreta [*se-kre'tə*] [L.] *secretion products*.
secretagogue [*se-krēt'ə-gog*] 1. causing a flow of secretion. 2. an agent that stimulates secretion.
secrete [*se-krēt'*] to synthesize and release a substance.
secretin [*se-kre'tin*] a hormone secreted by the mucosa of the duodenum and jejunum when acid chyme enters the intestine; carried by the blood, it stimulates the secretion of pancreatic juice and, to a lesser extent, bile and intestinal secretion.
s. test an examination of the gastric and duodenal contents after intravenous administration of exogenous secretin; useful in the diagnosis of disorders affecting pancreatic exocrine function, for example, pancreatitis and neoplastic disease.
secretinase a substance in the serum that inactivates secretin.
secretion [*se-kre'shən*] 1. the cellular process of elaborating a specific product. This activity may range from separating a specific substance of the blood to the elaboration of a new chemical substance. 2. any substance produced by secretion. One example is the fatty substance produced by the sebaceous glands to lubricate the skin. Saliva, produced by the salivary glands, and gastric juice, secreted by specialized glands of the stomach, are both used in digestion. The secretions of the endocrine glands include various hormones and are important in the overall regulation of body processes. Secretion of milk is an essential physiological activity in all mammals. Secretion of tears in animals has a simple protectory function and has no overriding emotional involvement. 3. categories of secretion include **apocrone**, **holocrine**, **merocrine**, **sebaceous**, **serous**serous.
secretoinhibitory [*se-kre"to-in-hibĭ-tor"e*] inhibiting secretion; antisecretory.
secretome all of the gene products that are secreted from a cell.
secretomotor [*se-kre"to-mo'tər*] stimulating secretion; said of nerves.
secretory [*se-kre'tə-re, se'krə-tor"e*] pertaining to secretion.
s. cells the specialized cells in a secretory gland that perform the secretory function.
s. component a component of secretory IgA (sIgA) which originates as part of the polymeric immunoglobulin receptor which is synthesized by epithelial cells. Following binding of IgA and translocation to the lumen, the receptor is cleaved and the polypeptide that remains bound to sIgA is secretory component.
s. diarrhea see secretory **diarrhea**.
s. endpieces see **adenomere**.
s. granules intracellular granules composed of secretory proteins after their conversion by the Golgi apparatus.
s. IgA (sIgA) an immunoglobulin of the IgA class which when secreted into some body secretions, e.g. saliva, respiratory secretions, milk and colostrum, in the process acquiring the bound secretory component that converts it to sIgA, where it is responsible for local immunity. See also **immunoglobulin**.
sectio [*sek'she-o*] pl. *sectiones* [L.] section.
section [*sek'shən*] 1. an act of cutting. 2. a cut surface. 3. a segment or subdivision of an organ.
abdominal s. laparotomy; incision of the abdominal wall.
cesarean s. delivery of a fetus by incision through the abdominal wall and uterus; see also **cesarean section**.
dorsal s. a section through the body passing at right angles to the median plane, dividing the body into dorsal and ventral parts.
frontal s. see dorsal section (above).
frozen s. a specimen cut by microtome from tissue that has been frozen; see also **frozen** section.
perineal s. external urethrotomy.
sagittal s. a section through the body coinciding with the sagittal suture, thus dividing the body into right and left halves.
serial s's histological sections of a specimen made in consecutive order and so arranged for the purpose of microscopic examination.
trial s. the gradual transverse cutting of a tissue or structure, usually to ascertain its composition or to limit the incision to only one component, e.g. scar tissue surrounding a nerve.
sectioning preparation of sections from fixed and embedded blocks of tissue by thin shaving with a microtome.
sections thin shavings of fixed and embedded blocks of tissue, collected by biopsy or at necropsy examination, for histological or pathological microscopy.
-sectomy surgical removal of.
sectorial [*sek-tor'e-əl*] cutting; said of teeth, particularly **carnassial teeth**.
secundigravida [*sə-kun"dĭ-gravĭ-də*] a female pregnant the second time; gravida II.
secundines [*sek'ən-dēnz, se-kun'dēnz*] afterbirth; the placenta and the membranes expelled after parturition.
secundipara [*se"kən-dip'ə-rə*] a female which has had two pregnancies that resulted in viable offspring; para II.
sed rate sedimentation rate.
sedamine a poisonous alkaloid in the plant *Sedum acre*.
sedation [*sə-da'shən*] 1. the allaying of irritability or excitement, especially by administration of a sedative. 2. the state so induced.
s. points in acupuncture used to decrease energy in a specific organ or a meridian.

sedative [sed'ə-tiv] 1. allaying irritabiliy and excitement. 2. an agent that calms nervousness, irritability and excitement. In general, sedatives depress the central nervous system and tend to cause lassitude and reduced mental activity. They may be classified, according to the organ most affected, as cardiac, gastric, etc. The degree of relaxation produced varies with the kind of sedative, the dose, the means of administration, and the mental state of the patient. By causing relaxation, a sedative may help an animal go to sleep, but it does not 'put it to sleep', a dangerous lay euphemism for euthanasia. Medicines that induce sleep are known as hypnotics. A drug may act as a sedative in small amounts and as a hypnotic in large amounts.

sedentary [sed'ən-tar"e] of inactive habits; pertaining to a fat, castrated or confined animal.

sedge numerous aquatic plants including *Carex vulpina*, *Schoenus* spp.

sediment [sed'ĭ-mənt] a deposit, often a precipitate, that develops spontaneously.

s. activity test a test of ruminal function based on the speed with which the sediment in a sample of rumen fluid floats to the top, an indication that it has been digested.

sedimentation [sed"ĭ-mən-ta'shən] the settling out of sediment.

s. rate the rate at which a sediment is deposited in a given volume of solution, especially when subjected to the action of a centrifuge. The **erythrocyte** sedimentation rate is the rate at which erythrocytes settle out of unclotted blood. Abbreviated sed. rate or ESR. The test is based on the fact that inflammatory processes cause an alteration in blood proteins, resulting in aggregation of the red cells, which makes them heavier and more likely to fall rapidly when placed in a special vertical test tube. Normal ranges vary according to the type of tube used, each type being of a different size, and with the species, horse erythrocytes falling faster than those of other species.

sedridine a toxic alkaloid in the plant *Sedum acre*.

Sedum acre a plant in the family Crassulaceae. Contains the toxic alkaloids sedamine and sedredine but there is no record of poisoning in animals by the plant.

seed [sēd] 1. the mature ovule of a flowering plant. 2. semen. 3. a small cylindrical shell of gold or other suitable material, used in application of radiation therapy. 4. to inoculate a culture medium with microorganisms.

s. dressing chemicals mixed with seed grain to prevent infestion with insects and rodents and infection by fungi. Most are poisonous to animals and deaths may occur if the grain is not used as seed and is put back into the animal feed chain. The amount of feed in a collection of seed is usually very large and the probability is that it would be fed without dilution which would reduce its toxicity. Grain or grain products are also used as bait for birds, or to repel birds and to poison snails and other garden pests and all of them may be accessible to animals.

s. mixtures mixtures of small grass and cereal seeds used as feed for companion birds. Some of the seeds used are the millets, chopped oat groats, canary grass (*Phalaris* spp.) seed, sunflower seed, hemp seed, rape seed.

plantago s., plantain s., psyllium s. cleaned, dried ripe seed of species of *Plantago*; used as a cathartic.

radon s. a small sealed container for radon, for insertion into the tissues of the body in radiotherapy.

seeding the plaques of hard tissue in the subcutaneous tissue in the floor of the udder of some recently calved cows. The milk is normal and the plaques disappear within a few days, sooner if they are massaged and hot fomented. Called also caking.

seedy cut belly tissue in a pig carcass, including mammary gland, which is streaked with melanin.

seedy toe a defect in the wall of the hoof of the horse, seen best from the sole. The inner part of the wall is crumbly and soft and is easily picked out. The defect extends up behind the wall sometimes as far as the coronet. Called also hollow wall, dystrophia ungulae.

seeing practice the activity in which an undergraduate veterinary student accompanies a practicing veterinarian and receives in-service training. In some countries this is a formal arrangement in which the practitioners are associates of the University Veterinary School.

seeker a probe or sound; a long thin rod used to probe the opening or a tract or a cavity in order to determine its direction, source or depth.

S-40: Seedy toe in a horse's hoof.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

seeterwort ***Helleborus*** *foetidus*.

segment [seg'mənt] a demarcated portion of a whole.

bronchopulmonary s. one of the smaller subdivisions of the lobe of a lung, sometimes separated from others by a connective tissue septum and supplied by its own branch of the bronchus leading to the particular lobe.

hepatic s's subdivisions of the hepatic lobes based on arterial and biliary supply and venous drainage.

segmental [səg-men'təl] pertaining to a segment or to segmentation. See also segmental **aplasia**, **axonopathy**, **cerebellar** atrophy, **myelitis**.

segmentation [seg"mən-ta'shən] 1. division into similar parts. 2. cleavage.

intestinal s. periodic constriction of segments of intestine without movement backwards or forwards; a mixing rather than a propulsive movement; the movements are reflex and can be initiated by intrinsic nerves in the wall of the small intestine.

segmenter [seg'mən-tər] a segmented **neutrophil**.

segregation [seg"rə-ga'shən] the separation of allelic genes during meiosis as homologous chromosomes begin to migrate toward opposite poles of the cell, so that eventually the members of each pair of allelic genes go to separate gametes.

adjacent s. during meiosis adjacent centromeres segregate together.

alternate s. when diagonally opposite centromeres segregate together.

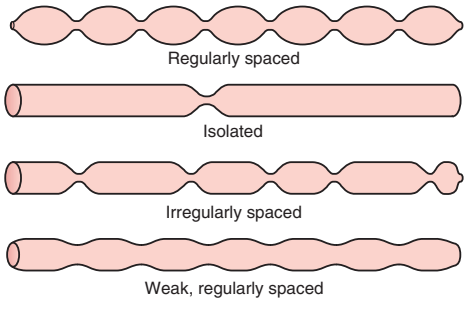
segregator [seg'rə-ga'ətər] an instrument for obtaining the urine from the ureter of each kidney separately.

Segugio Italiano a medium-size, lightly built hunting dog with an elongated, narrow head, deep chest and thin tail which is carried high. The coat is black and tan of any shade, with white markings. There are two varieties: coarsehaired and shorthaired. Called also Italian hound.

seismotherapy treatment of disease by mechanical vibration.

Seitz filter a filter made of compressed asbestos fibers used in microbiological work to sterilize fluids such as serum and to filter off bacteria but permit the passage of viruses.

seizure [se'zhər] 1. the sudden attack or recurrence of a disease. 2. a paroxysmal transient disturbance of nervous system function resulting from uncontrolled electrical discharges from neurons within the prosencephalon. In animals, seizures may be obvious if the neuronal discharges affect regions of the brain that control



S-41: Segmentation movements of the small intestine.
From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

VetBooks.ir

motor activity, consciousness, behavior, emotion, vision or hearing. Such signs include episodic impairment or loss of consciousness, abnormal motor phenomena (also known as convulsions), psychic or sensory disturbances or perturbation of the autonomic nervous system. In humans, non-convulsive seizures occasionally also occur in which electrical discharges occur with no obvious external signs. In both animals and people, several classification schemes have been used to describe seizure types, which include generalized, partial and psychomotor forms, amongst others.

audiogenic s. a seizure brought on by sound.

cluster s's more than one seizure occurring within a 24-hour period.

flybiting s. see psychomotor seizure (below).

focal s. one restricted to a particular region of the brain; signs correspond to the area affected, e.g. motor activity of an isolated area or limb. Focal seizures may be either simple, if no disturbance of consciousness is noted, or complex, if motor signs are accompanied by a disturbance of consciousness. Focal seizures may also undergo secondary generalization during which the electrical disturbance spreads to involve the entire prosencephalon. Called also partial seizures, petit-mal seizures.

generalized s. a seizure involving the entire prosencephalon from its onset. During a generalized seizure there are no clinical signs indicating an origin or focus and there is a loss of or disturbance of consciousness. Generalized seizures are divided into those with motor signs (generalized tonic seizures, generalized clonic seizures, generalized tonic-clonic seizures, atonic seizures) and those with loss of consciousness only (absence seizures).

generalized tonic-clonic s. one with no localizing signs. Commonly involves several phases: aura, pre-ictal phase, ictus, and post-ictal phase. During the ictus there is loss of consciousness, generalized muscular activity, excessive salivation, chewing activity, opisthotonos, running movements, and often urination and defecation. The post-ictal phase may last from several minutes to hours or even days, during which signs of prosencephalic disturbance continue, with signs including blindness, manic behavior and behavioral changes. Generalized tonic-clonic seizures are the most common type of seizure in dogs and cats. Called also grand mal seizures.

grand mal s. see generalized tonic-clonic seizure (above).

jacksonian s. see **jacksonian seizures**.

marching s. see **jacksonian seizures**.

partial s. see focal seizure (above).

petit mal s. a mild, very brief generalized seizure. See also focal seizure (above), **petit mal**.

photogenic s. a seizure brought on by light.

psychomotor s. motor seizures accompanied by behavioral changes but without apparent impairment of consciousness. A common manifestation in dogs, commonly referred to as flybiting seizures; involves biting motions, accompanied by apparent visual hallucinations. The animal appears to be 'snapping' at an invisible object. Other phenomena may include hallucinations, salivation, pupillary dilatation, mastication, fecal and urinary excretion, and wild running. Such seizures may be seen in dogs with lesions in the pyriform lobe or hippocampus and from poisoning with agenized flour (canine **hysteria**). They have also been suggested to have an origin in the temporal lobe due to the relatively common occurrence of visual and auditory hallucinations reported by human patients with temporal lobe epilepsy. Called also running fits.

tetanic s. see **tetany**.

s. threshold the level of stimulation at which a seizure is precipitated.

tonic s. one in which the muscles are rigid.

tonic–clonic s. alternating tonic (rigid muscles) and clonic (jerking of muscles) phases; a grand mal seizure.

selamectin a macrocyclic lactone parasiticide, one of the avermectins effective against internal and external parasites with sustained absorption when used topically in dogs and cats.

Seldinger technique is employed to safely insert over-the-wire catheters, probes, electrodes, etc. into vessels. A needle is inserted first, then a guidewire is passed through and the needle removed. The catheter is then passed over the wire

selectins [*sə-lek'tin*] a large family of membrane proteins that bind oligosaccharides on other cells tightly and specifically, and are involved in signal transduction across the plasma membrane.

selection [*sə-lek'shən*] 1. choosing the individual units to be included in a sample. See also **random** selection. 2. choosing the animals to be retained for breeding purposes; genetic selection.

artificial s. selection based on human decisions.

s. coefficient proportionate reduction in the average genetic contribution made by a specific genotype, relative to the contribution made by another genotype. Denoted by s.

s. criteria the animal characteristic which is used in a selection program.

s. differential a measure of the gain achieved by selection; the phenotypic superiority of selected individuals, compared to the population from which they were selected.

family s. selection of individuals to be used in a breeding program based on the merits of sibs or half sibs.

s. index a single overall estimate of the patient's true breeding value obtained from as many sources of information as are available.

individual s. selection on the results of performance testing of the subject.

s. intensity the superiority of the individuals selected for breeding, relative to the population from which they were selected.

s. limit the situation in which the entire population is homozygous for the same set of favorable genes; called also selection plateau.

s./mutation balance when the rate of removal of a gene from the population by selection equals the rate at which mutations occur.

natural s. selection occurring in nature, without any human intervention, direct or indirect.

s. plateau see **selection** limit.

s. program the method used to select individuals from a population to be used for breeding. Usually includes nomination of the characters to be selected, the optimum size of the population in which the program is to operate, the intensity of selection available, the accuracy of the selection procedures, lengths of the generations in the species, the target rate of response.

selective [*sə-lek'tiv*] the use of procedures on selected animals contrasted with blanket application to all members of the group.

selectivity [*sə-lek-tiv'ĭ-te*] 1. the accuracy of a test in identifying animals that have the disease which is under investigation; the number of false positives to the test will be low in a selective test. 2. in pharmacology, the degree to which a dose of a drug produces the desired effect in relation to adverse effects.

selector plant see **indicator** plants.

selegiline [*sə-lej'ə-lēn*] see **L-deprenyl**.

selenates injectable forms of selenium; examples are sodium selenate and slow release barium selenate.

seleniferous [*se"lə-nif'ər-us*] rich in selenium.

selenite broth an enrichment broth for the growth of salmonellae.

selenium (Se) [*sə-le'ne-əm*] a chemical element, atomic number 34, atomic weight 78.96. See Table 4. It is an essential mineral nutrient and a very potent poison.

s.-75 (^{75}Se) a radioisotope of selenium having a half-life of 120 days and a principal gamma ray photon energy of 265 keV; used in the radiopharmaceutical selenomethionine.

s. accumulator plants see **accumulator plants**.

s. converter plants see **converter plants**.

s. food supplements include selenomethionine, sodium selenite, sodium selenate, selenium yeast or protein- or amino acid chelated forms.

s. indicator plants see **indicator** plants.

s.-induced infection resistance selenium deficiency in the diet may increase the patient's susceptibility to infection.

s. nutritional deficiency there are well-defined diseases caused by selenium deficiency and poorly defined selenium responsive diseases. A nutritional deficiency of vitamin E has many of the same effects of selenium deficiency and it is often difficult to separate the two. Selenium deficiency is associated with impaired immune function and the prevalence of disease problems such as mastitis and post-partum reproductive disorders in dairy herds can be reduced in selenium deficient herds by selenium supplementation. See also **enzootic** muscular dystrophy, **mulberry heart disease**, **hepatosis** dietetica, **iron** poisoning, **weaner** illthrift.

s. poisoning can occur on pasture growing on selenium rich soil, especially if there are selenium indicator plants growing in it. Also when selenium supplementation is carried out carelessly and

S-42: Coronary separation caused by selenium poisoning. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

there is accidental access to poisonous amounts. Acute poisoning features diarrhea, dyspnea and death. So-called 'blind staggers' in North America, once erroneously attributed to selenium poisoning. is now known to result mostly from sulfur-associated polioencephalomalacia. Chronic poisoning produces a syndrome of stiff gait, loss of haircoat and separation, perhaps sloughing, of the hooves. Called also alkali disease.

s.-responsive diseases diseases such as reproductive inefficiency and illthrift in sheep and cattle respond in some situations to dietary supplementation with selenium but the diseases are not proven to be caused by nutritional deficiency of the element.

s. sulfide, s. disulfide a commonly used keratolytic in medicated shampoos employed in the treatment of skin disease in dogs and cats.

s. weed see ***Neptunia amplexicaulis***.

seleno-DL-methionine selenium-containing amino acid. A common source of selenium in the diet.

selenocompounds organic compounds containing selenium; found in plants and providing the medium by which selenium poisoning occurs via the ingestion of unpolluted plants.

selenodont [*sə-le'no-dont*] said of the occlusive surfaces of cheek teeth which have crescent shapes, a characteristic of even-toed ungulates.

Selenomonas ruminantium [*se"le-no-mo'nas*] bacterial resident of the rumen; participates in fermentation, and hence digestion, of plant ingesta.

selenosis [*se"le-no'sis*] see **selenium** poisoning.

self [*self*] a term used to denote an animal's own antigenic constituents, in contrast to 'not-self', denoting foreign antigenic constituents. The 'self' constituents do not normally elicit an immune response, i.e. there is self-tolerance, whereas the antigens which are 'not-self' do elicit an immune response. In the process of lymphocyte maturation, self reactive lymphocytes, particularly T lymphocytes within the thymus, are eliminated. The breakdown of self-tolerance by a number of mechanisms is the basis for autoimmune diseases. See also **immunity**.

self-antigen [*self-an'ti-jən*] any constituent of the body's own tissues capable of stimulating autoimmunity. See also **immunity**.

self-colored whole-colored.

self-contained cleaning system an abattoir cleaning unit containing all of the necessary functions including cleaning, application of live steam or a disinfectant.

self-cure a phenomenon in sheep in which a hypersensitivity to an adult worm load develops and the worms are discharged. The hypersensitivity is induced by a second larval infestation. The apparent cure of the sheep is misleading in the assessment of a control program.

self-feeder a feed container from which animals can take feed at will, but which is protected against weather, and wastage by scattering is minimal. Carbohydrate engorgement can occur if the livestock are not used to the system and eat too much grain. Dogs on such a system may overeat and become obese.

self-limited [*self-lim'it-əd*] limited by its own peculiarities, and not by outside influence; said of a disease that runs a definite limited course and resolves itself without intervention.

self-mutilation the animal damages itself by biting or by violent and persistent scratching or rubbing, e.g. cattle with pseudorabies, sheep with pseudorabies. A degree of injury beyond self-trauma.

self-nursing see **self-sucking**.

self-recognition see **self**.

self-replicating elements include plasmids, episomes and transposons.

self-selection a circumstance in which the allocation of units of a population to one or other of two groups which are to be compared is done by the units, e.g. the sick animals in one group, the not-sick in the other. See also volunteer **sample**.

self-sucking a vice in which a female animal sucks her own milk. Seen in cows, bitches and queens.

self-tolerance [*self-tol'ər-əns*] immunological tolerance to self-antigens.

self-trauma self-inflicted injury, usually to the skin caused by an animal's response to pruritus. Depending on the species, this may be scratching, biting, rubbing or rolling. See also **scratching** (1).

Selkirk rex a new breed of cat derived from a cat with a dominant mutation that produces curly hair. The breed is medium to large, heavy boned and can have short or long hair in any color.

sella [*sel'ə*] pl. *sellae* [L.] a saddle-shaped depression.

empty s. a syndrome in which the pituitary fossa appears to be empty but the pituitary gland is present in a flattened form.

s. turcica a depression on the upper surface of the sphenoid bone, lodging the pituitary gland.

Sellick maneuver [*sel'ik*] compression of the esophagus against the cricoid cartilage to occlude the esophageal lumen and avoid regurgitation during induction of anesthesia.

selodont teeth that have crescent-shaped cusps.

SEM 1. scanning electron microscope. 2. standard error of the mean.

semduramicin a fermentation product of *Actinomadura roseorufa* used for the prevention of coccidiosis in chickens.

semeiography a description of the clinical signs of a disease.

semeiology [*se"me-ol'ə-je*] symptoms or signs of disease.

semeiotic [*se"me-ot'ik*] 1. pertaining to clinical signs. 2. pathognomonic.

semen [*se'mən*] fluid discharged at ejaculation in the male, consisting of spermatozoa in their nutrient plasma, secretions from the prostate, seminal vesicles and various other glands, epithelial cells and minor constituents.

s. collection for artificial insemination or laboratory evaluation or examination in a clinicopathological sense. Done by artificial vagina, electroejaculation, genital massage or chemical means.

s. concentration the number of spermatozoa per mL in the ejaculate.

s. diluent there are a number of suitable diluents with some preference being given to one or other of them in each species. There are also different diluters for chilled liquid semen as distinct from frozen semen. Most diluters are based on biological fluids such as whole or skim milk, buttermilk, cream and egg yolk. The general cryoprotectant for freezing is glycerol. Called also semen extender.

s. extender see **semen** diluent (above).

frozen s. semen stored in liquid nitrogen at −196°C (−321°F).

s. non-sperm portion see **semen** pre-sperm fraction (below).

s. pre-sperm fraction the accessory gland fluid emitted at the beginning of ejaculation.

s. samples part of an ejaculate collected for laboratory examination.

s. sperm-rich fraction the portion of the ejaculate containing most of the spermatozoa.

s. stones concretions of amorphous cellular debris and clumps of nuclear material found in seminal vesicles of bulls.

s. storage chilled bull semen stored at 5°C can be stored and used for 5 days; frozen bull semen (−79°C using dry ice or −196°C using liquid nitrogen) can be stored and used successfully for up to 10 years, with only a small drop in fertility after 40 years.

semi- word element. [L.] *half*.

semiarid said of regions of the earth which have dry climates but not as dry as those of arid climates.

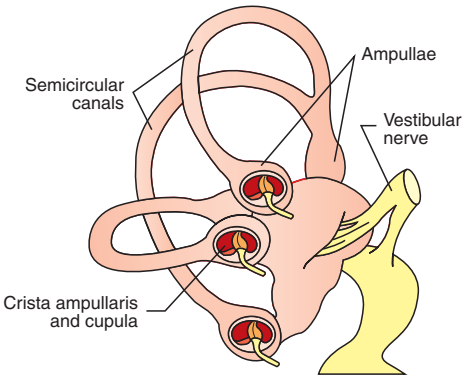
semicanal [*sem"e-kə-nal'*] a trench or furrow open at one side.

semicircular shaped like a half-circle.

s. canals the passages in the inner ear, in the bony labyrinth concerned with the sense of balance, especially the detection of movement. Each ear has three semicircular canals (anterior, lateral and posterior) situated approximately at right angles to each other. They contain the semicircular ducts.

s. ducts the membranous tubes housed within the semicircular canals.They have enlarged portions at one end, called ampullae, which contain nerve endings, and which are filled with fluid. The semicircular ducts respond to movement of the head. When

VetBooks.ir



S-43: Semicircular canals of the ear, showing locations of ampullae. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

the head changes position, the fluid in the duct that lies in the plane of movement also moves but, because of its inertia, the fluid flow lags behind the head movement. Thus the fluid presses against the delicate hairs of the nerves in the ampulla, and these nerves then register the fact that the head is turning in such a direction. It is the fluid movement in the semicircular ducts that causes the feeling of dizziness or vertigo after spinning. When the spinning stops, the fluid in the horizontal canal continues to move for a moment in the direction of the spin, giving a temporary false reading that the head is turning in the other direction. Motion sickness is caused by the unusual and erratic motions of the head in an airplane, car or ship, and the resulting stimulation of the semicircular ducts. Many animals, even fish, can experience motion sickness.

semicoma [*sem"e-ko'mə*] a stupor from which the animal may be aroused.

semiconsciousness see **semicoma**.

semiflexion [*sem"e-flek'shən*] the position of a limb midway between flexion and extension; the act of bringing to such a position.

semihairlessness an autosomal recessive trait in Hereford and polled Hereford cattle; affected calves are born with a thin, curly haircoat and some fail to thrive.

semilunar [*sem"e-loo'nər*] shaped like a half-moon or crescent.

s. valve valve guarding the exists from the aorta and pulmonary trunk from where they leave the cardiac ventricles.

s. valve anomaly abnormal development causes an irregular central perforation of the valve and the signs of valvular stenosis.

seminal [*sem'ĭ-nəl*] emanating from or pertaining to **semen**.

s. colliculus see seminal **colliculus**.

s. fluid some of the fluid originates in the testis but most is contributed by the various sex glands, the amount and the composition from each gland varying between species.

s. glands see seminal **vesicle**.

s. peritonitis peritonitis caused by rupture of the vagina by the stallion during mating, or of the cow's uterus by the inseminator; causes a low-grade, chronic peritonitis in the caudal abdomen.

s. plasma the liquid supernatant after sedimentation or centrifugation of semen.

s. vesicle see seminal **vesicle**.

s. vesiculitis inflammation or infection of the seminal vesicles or vesicular glands in the male. Called also vesicular adenitis.

semination [*sem"ĭ-na'shən*] insemination.

seminiferous [*sem"ĭ-nif'ər-əs*] producing or carrying semen.

s. tubule develop as hollow tubes in the testis after birth, from solid gonadal cores.

seminin a proteolytic enzyme of human semen.

seminoma [*sem"ĭ-no'mə*] tumor of the testis thought to arise from basal spermatogonia. They are common in older dogs and occur often in cryptorchid testes. Seminomas also occur in the male of other domestic species.

seminoperitoneum see **seminal** peritonitis.

seminuria [*se'mĭ-nu're-ə*] discharge of semen in the urine.

semipermeable [*sem"e-pur'me-ə-bəl*] permitting passage only of certain molecules; said of a membrane.

semiplacenta diffusa see adventitial **placentation**.

semiquantitative [*sem"e-kwahn'tĭ-ta"tiv*] yielding an approximation of the quantity or amount of a substance; falling short of a quantitative result.

semis (ss.) [*se'mis*] [L.] *half*.

semisulcus [*sem"e-sul'kəs*] a depression that, with an adjoining one, forms a sulcus.

semisupination [*sem"e-soo"pĭ-na'shən*] a position halfway toward supination.

semisynthetic [*sem"e-sin-thet'ik*] produced by chemical manipulation of naturally occurring substances.

semitendinosus muscle see Table 13.4.

Semitic fat-tailed sheep see **Near East fat-tailed**.

Semkin forceps thumb-operated, very fine-pointed, tissue forceps for pediatric work.

Semliki forest virus [*sem-le'ke*] an alphavirus associated with illness in humans and other animals in Africa.

Sendai virus a paramyxovirus that causes a highly contagious disease of the respiratory tract of mice in which there is pneumonia and a high mortality rate in the young. It also infects rats but is usually subclinical.

Senecio [*sə-ne'she-o*] a widespread genus of the Asteraceae family. The genus contains more than 1200 species of which at least 25 are known to be poisonous. Some of them are listed here; the toxins are a group of pyrrolizidine alkaloids which cause seneciosis hepatic injury, and the dummy syndrome, jaundice, emaciation and photosensitization; includes *S. abyssinicus*, *S. alpinus*, *S. biligulatus*, *S. bipinnatisectus* (Australian fireweed), *S. braziliensis*, *S. brigalowensis* (*S. lautus*), *S. burchelii*, *S. cineraria* (*Jacobaea maritima*, dusty miller), *S. cisplatinus*, *S. cunninghamii*, *S. desfontainei*, *S. desiderabilis*, *S. erraticus*, *S. glabellus* (*Packera glabella*), *S. harvieanus*, *S. heterotrichus*, *S. integerrimus*, *S. integrifolius* (fleawort), *S. isatideus* (Dan's cabbage), *S. jacobaea* (*Jacobaea vulgaris*, ragwort, tansy ragwort), *S. latifolius*, *S. linearifolius* (*S. australis*, fireweed), *S. longilobus* (woolly groundsel), *S. madagascariensis* (*S. lautus*, fireweed), *S. magnificus* (tall yellowtop), *S. moorei*, *S. oxyphyllus*, *S. plattensis* (*Packera plattensis*), *S. pterophorus* (African daisy), *S. quadridentatus* (cotton fireweed), *S. raphanifolius* (gantho metho), *S. retrorsus* (ragwort), *S. riddellii* (Riddell's groundsel), *S. ruwenzoriensis*, *S. sanguisorbae* (*Packera sanguisorbae*), *S. scleratus*, *S. selloi*, *S. spartioides* (broom groundsel), *S. spathulatus*, *S. squalidus* (Oxford ragwort), *S. tweediei*, *S. vernalis*, *S. vulgaris* (groundsel).

senecionine hepatoxic pyrrolizidine alkaloid found in *Senecio* spp. and *Crotalaria* spp.

seneciosis [*sə-ne"she-o'sis*] acute or chronic hepatic insufficiency caused by the ingestion of pyrrolizidine alkaloids in ***Senecio***. Characterized by a syndrome of jaundice and central nervous system derangement and possible photosensitization. Most outbreaks occur in animals on pasture but housed animals fed hay that is contaminated by the foliage or seeds can be affected. Called also Molteno disease, Pictou disease, Schweinsberger disease, Winton disease.

senescence [*se-nes'ans*] depression of body functions as part of the process of growing old.

senile [*se'nīl*] pertaining to old age; manifesting senility.

Senkobo disease see **mycotic** dermatitis.

Senn retractor a handheld instrument with a curled, three-pronged claw at one end and a right-angled, single blade at the other. Suitable for short-term displacement of soft tissue.

Senna [*sen'ə*] plant genus in the legume family Caesalpiniaceae; contain anthraquinone glycosides which cause diarrhea; an unidentified toxin in some causes muscle necrosis of striated muscles leading to myoglobinuria and sudden death. Includes *S. floribunda*, *S. obtusifolia* (sicklepod), *S. occidentale* (coffee senna, wild coffee), *S. roemeriana*. All previously classified in the genus *Cassia*.

senna [*sen'ə*] 1. common name for some plants in the genera ***Senna*** and ***Cassia***. Includes senna or coffee bean (*S. occidentalis*), smooth

S-44: Senn rake retractor. From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

S

senna (*S. floribunda*), twin-leaf senna (*S. roemeriana*). 2. the dried leaflets of *Cassia acutiflora*; used in a syrup, fluid extract or compound powder as a cathartic.

Sennenhund the type of working dogs known as Swiss mountain dogs with four regional types generally recognized as separate breeds although not in all countries. Includes **Greater Swiss mountain dog**, **Bernese mountain dog**, **Entlebucher mountain dog** and the **Appenzeller**. Of varying sizes, all have a characteristic tricolor coat.

sensation [*sen-sa'shən*] an impression produced by impulses conveyed by an afferent nerve to the sensorium. Includes cold, distention, hunger, itch, pain, taste of various kinds, thermal, thirst, tickle, touch, warmth and some psychological and emotional experiences which animals obviously experience but cannot describe. See also **sense**.

s. disturbance cutaneous sensation errors include paresthesia, hyperesthesia, anesthesia. See also **blindness**, **deafness**.

sense [*sens*] a faculty by which the conditions or properties of things are perceived. Hunger, thirst, malaise and pain are varieties of sense; a sense of equilibrium or of well-being (euphoria) and other senses are also distinguished. The five major senses comprise **vision**, **hearing**, **smell** (2), **taste** and **touch** (1). The operation of all senses involves the reception of stimuli by sense organs. Each sense organ is sensitive to a particular kind of stimulus. The eyes are sensitive to light; the ears, to sound; the olfactory organs of the nose, to odor; and the taste buds of the tongue, to taste. Various sense organs of the skin and other tissues are sensitive to touch, pain, temperature and other sensations. On receiving stimuli, the sense organ translates them into nerve impulses that are transmitted along the sensory nerves to the brain. In the cerebral cortex, the impulses are interpreted, or perceived, as sensations. The brain associates them with other information, acts upon them, and stores them as memory. See also **sensation**.

common chemical s. mediated by the trigeminal nerve from chemical sense organs in the conjunctival sac and in the nasal and buccal cavities.

cutaneous s. skin senses including touch, pressure, pain, heat and cold.

s. organs 1. the organs of special sense including eye, olfactory organ, gustatory organs. 2. all organs containing sensory receptors.

special s's the five senses including feeling, hearing, seeing, smelling, tasting.

s. strand see **coding strand**.

sensibility [*sen"sĭ-bil'ĭ-te*] susceptibility of feeling; ability to feel or perceive.

deep s. the sensibility of deep tissue (muscle, tendon, etc.) to pressure, pain and movement.

epicritic s. the sensibility to gentle stimulations permitting fine discriminations of touch and temperature, localized in the skin.

proprioceptive s. the sensibility afforded by receptors in muscles, joints and other parts, by which one is made aware of their position and state.

protopathic s. the sensibility to strong stimulations of pain and temperature; it is low in degree and poorly localized, existing in the skin and in the viscera, and acting as a defensive agency against pathological changes in the tissues.

somatesthetic s. proprioceptive sensibility.

splanchnesthetic s. the sensibility to stimuli received by splanchnic receptors.

sensible [*sen'sĭ-bəl*] perceptible to the senses; capable of sensation.

sensitive [*sen'sĭ-tiv*] 1. able to receive or respond to stimuli. 2. unusually responsive to stimulation, or responding quickly and acutely.

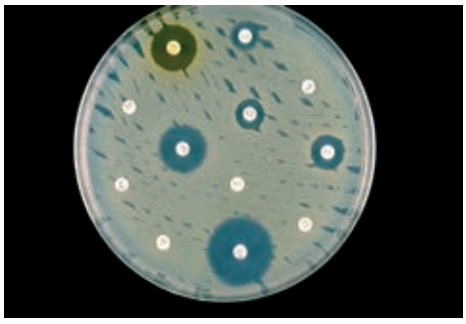
s. vessel syndrome temporary engorgement of conjunctival blood vessels in the absence of disease. Seen most commonly in small dogs and cats.

sensitive plant ***Mimosa*** *pudica*.

giant s.p. ***Mimosa*** *invisa*.

sensitivity [*sen"sĭ-tiv'ĭ-te*] the state or quality of being sensitive.

antibiotic s., antimicrobial s. the degree of susceptibility of a bacterial isolate to individual antibiotics. Measured by growth in liquid culture media with serial dilutions of the antimicrobial, or on agar plates as measured by the width of the zone of growth inhibition around a disk impregnated with the antimicrobial.



S-45: Agar plate antibiotic sensitivity test.

bacterial s. see antibiotic sensitivity (above).

contact s. see contact **hypersensitivity**.

diagnostic test s. the probability that a test will correctly identify the patients which are infected or have a specified non-infectious condition. A fundamental parameter for all diagnostic tests. A sensitive test will pick up the minutest quantity of antibody or other agent in a biological fluid. There are times when this is a desirable characteristic but the loss of specificity that usually accompanies the high sensitivity, needs to be taken into account. See also **specificity**.

light s. see **photosensitization**.

radioimmunoassay s. the smallest amount of hormone which the assay can accurately detect above a zero amount.

sensitization [*sen"sĭ-tĭ-za'shən*] a state in which the body is sensitized to particular stimuli, e.g. (1) certain individuals exposed to some antigens by a particular route elicit an immune response which may be antibody-mediated, particularly IgE, or cell-mediated, which sensitizes them such that subsequent exposure to the same antigen elicits an allergic response; said especially of such exposure resulting in a hypersensitivity reaction. (2) The coating of cells with antibody as a preparatory step to some detectable reaction such as their lysis if complement is added. (3) The preparation of a tissue or organ by one hormone so that it will respond functionally to the action of another.

active s. the sensitization that results from the injection, ingestion or inhalation, of antigen into the animal. See also active **immunity**, active **immunization**.

passive s. that which results when blood serum from a sensitized animal is injected into a normal animal. See also passive **immunity**, passive **immunization**.

protein s. that bodily state in which the individual is sensitive or hypersusceptible to some foreign protein, so that when there is absorption of that protein a typical allergic reaction is set up.

sensitized [*sen'sĭ-tīzd*] rendered sensitive.

s. cells see sensitization (2).

sensitizer [*sen'sĭ-ti"zər*] see **antigen**.

sensitogen allogen.

sensomobile moving in response to a stimulus.

sensomotor [*sen"so-mo'tər*] sensorimotor.

sensor [*sen'sər*] a device, usually electronic, which detects a variable quantity and measures and converts the measurement into a signal to be recorded elsewhere.

sensorial [*sen-sor'e-əl*] pertaining to the sensorium.

sensorimotor [*sen"sə-re-mo'tər*] both sensory and motor.

s. plegia loss of sensory and motor function caudal to the level of a spinal cord injury.

sensorineural [*sen"sə-re-noor'əl*] of or pertaining to a sensory nerve or sensory mechanism, as sensorineural deafness.

sensorium [*sən-sor'e-əm*] 1. the part of the cerebral cortex that receives and coordinates all the impulses sent to individual nerve centers. 2. the state of an individual as regards consciousness or mental awareness.

s. commune the part of the cerebral cortex that receives and coordinates all the impulses sent to individual nerve centers. Includes auditory, gustatory, olfactory, somatosensory and visual centers.

sensory [*sen'sə-re*] pertaining to sensation.

s. input produced by sensory organs and transmitted by afferent nerve fibers to the central nervous system. See also **sense**.

s. perceptivity the ability to perceive, to feel. Tests for this in animals are based on the assumption that the observer can differentiate between a reflex response and a central perception.

VetBooks.ir

sentient [*sen'she-ənt*] able to feel; sensitive.
s. being the name proposed by animal activists for pets and other animals. It implies that animals have a human-like capacity for thinking, feeling, and understanding. Its use could have implications in animal law.
sentinel [*sen'tĭ-nəl*] a recording mechanism, such as an animal, a farm or a veterinarian, posted explicitly to record a possible occurrence or series of occurrences in a prospective surveillance program. For example, periodic serological surveillance of sentinel herds and flocks is a common strategy for monitoring the incursion or spread of a disease.
s. loop a distended loop of small intestine associated with acute pancreatitis; visible in abdominal X-rays.
sentry dog one trained for guard duty, particularly as used by the military for patrolling perimeter fences.
separation anxiety [*sep"ə-ra'shən*] see separation **anxiety**.
separation from group [*sep"ə-ra'shən*] sick animals, frightened animals may separate themselves from the group.
sepsis [*sep'sis*] the presence in the blood or other tissues of pathogenic microorganisms or their toxins; the condition associated with such presence. See also **toxemia**, **bacteremia**.
puerperal s. sepsis occurring after parturition. See also **mastitis–metritis–agalactia**.
septa [*sep'tə*] plural of *septum*.
septal [*sep'təl*] pertaining to a septum.
s. defect see **ventricular** septal defect, **aortic septal defect**, **atrial** septal defect.
septan recurring on the seventh day (every 6 days).
septate [*sep'tāt*] divided by a septum or septa.
septectomy [*səp-tek'tə-me*] excision of part of the nasal septum.
septic [*sep'tik*] pertaining to sepsis.
s. fever is fever associated with infection either as local abscess or cellulitis or as a septicemia or bacteremia. The infective agent may be a bacteria, virus, fungus, protozoa or even algae.
s. mastitis mastitis characterized by the presence of bacteria in the milk.
s. shock see **toxemic** shock.
septicaemic septicemic.
septicemia [*sep"tĭ-se'me-ə*] systemic disease associated with the presence and persistence of pathogenic microorganisms and their toxins in the blood. The resulting syndrome is a combination of the signs of toxemia and hyperthermia, i.e. fever, mucosal and conjunctival petechiation and evidence of localization in joints, eyes, meninges, heart valves. Proof is by positive blood culture or smear. See also specific infections, e.g. **anthrax**, **pasteurellosis**, **colibacillosis**. Called also blood poisoning.
bacterial hemorrhagic s. includes many bacterial diseases of fish, e.g. vibriosis, but usually restricted to systemic infection by opportunists such as *Aeromonas hydrophila*, *Pseudomonas* spp.
cryptogenic s. septicemia in which the focus of infection is not evident during life.
enteric s. an important disease in catfish aquaculture; hemorrhages and white focal lesions occur on the skin and in the liver and there is hemorrhagic enteritis; in another form, there is a septic meningitis. Caused by *Edwardsiella ictaluri*.
foal s. rapidly fatal septicemia of the newborn foal caused by *Actinobacillus equuli*, *Escherichia coli*, *Klebsiella pneumoniae*, *Pseudomonas aeruginosa*, *Staphylococcus aureus*, β-*hemolytic streptococcus*.
hemorrhagic s. septicemia characterized by marked petechiation on mucosae and serosae. Also used as a specific name for septicemic pasteurellosis in cattle; see **hemorrhagic** septicemia.
puerperal s. that in which the focus of infection is a lesion of the mucous membrane received during parturition.
puppy s. puppies normal at birth, weaken and die after the first 24 hours. The usual causes are infection by hemolytic streptococci, *Escherichia coli* and *Brucella canis*.
septicemic [*sep"tĭ-se'mik*] emanating from or pertaining to septicemia. See also septicemic **colibacillosis**, **leptospirosis**, **listeriosis**, **pasteurellosis**, **salmonellosis**.
s. cutaneous ulcerative disease (SCUD) disease of reptiles and amphibians associated with poor nutrition and husbandry. Caused by *Citrobacter freundii* and characterized by skin or shell ulceration, hemorrhage, paralysis, and multifocal necrosis of internal organs.
septicophlebitis septicemic inflammation of veins.
septicopyemia [*sep"tĭ-ko-pi-e'me-ə*] septicemia with pyemia.
septomarginal [*sep"to-mahr'jĭ-nəl*] pertaining to the margin of a septum.
s. trabeculae the moderator bands that stretch from the ventricular septum to the opposite wall of the ventricle. They are partly muscular and partly tendinous and function not so much 'to moderate', but to convey electrical impulses to the muscle of the opposite wall, thereby short-circuiting the long route via the apex of the heart. Called formally *trabecula septomarginalis dextra* and *trabeculae septomarginales sinistrae* .
septonasal [*sep"to-na'zəl*] pertaining to the nasal septum.
septoplasty [*sep'to-plas"te*] surgical reconstruction of the nasal septum.
septostomy [*sep-tos'tə-me*] surgical creation of an opening in a septum.
septotomy [*sep-tot'ə-me*] incision of the nasal septum.
septula testis [*sep'tu-lə*] septa of connective tissue and plain muscle in the testis, subdividing it into lobules.
septulum [*sep'tu-ləm*] pl. *septula* [L.] a small separating wall or partition.
septum [*sep'təm*] pl. *septa* [L.] a wall or partition dividing a body space or cavity. Some septa are membranous, some are composed of bone, and some of cartilage. They are usually named according to their location.
atrioventricular s. the part of the membranous portion of the interventricular septum between the left ventricle and the right atrium.
bulbar s. a septum, formed by merging of the bulbar cushions, divides the bulbus cordis into aortic and pulmonary outflows.
cystic s. pellucidum an embryonic malformation resulting in the formation of a fluid-filled cavity in the septum between the two lateral ventricles, instead of the normal glial raphe.
horizontal s. in the avian body cavity there is no diaphragm but the body cavity is divided into three compartments; the horizontal septum is one of the divider organs; thin and membranous for the most part, the septum forms the ventral boundary of paired cavities containing the lungs.
interalveolar s. the bony partition between adjacent tooth sockets.
interatrial s. the partition separating the right and left atria of the heart.
interlobar s. a septum that converts an organ into lobes.
intermuscular s. fascial septum separating muscle masses.
interorbital s. bony partition between the large orbital cavities of birds.
interventricular s. the partition separating the right and left ventricles of the heart. See also **ventricular** septum.
s. lucidum septum pellucidum (below).
median s. membranous partition in the ventral median fissure of the spinal cord.
oblique s. a partition which divides the lower part of the bird's body cavity; the part of the cavity cranial to this septum contains the thoracic air sacs and the thoracic parts of the cervical and clavicular air sacs. The part of the body cavity caudal to this septum contains heart, liver, spleen, gastrointestinal, urinary and reproductive tracts and abdominal air sacs.
orbital s. a fold which detaches from the periorbital fascia at the orbital rim, and which leads into the tarsi, the thickened margins of the eyelids.
s. pellucidum, pellucid s. the triangular double membrane separating the anterior horns of the lateral ventricles of the brain. Called also septum lucidum, telencephalic septum.
pharyngeal s. a transitory partition between the mouth and pharynx in the embryo.
s. primum a septum in the embryonic heart, dividing the primitive atrium into right and left chambers.
rectovaginal s. the membranous partition between the rectum and vagina.
rectovesical s. a membranous partition separating the rectum from the prostate and urinary bladder.
s. secundum develops during embryonic life to contribute to the formation of the foramen ovale between the cardiac atria.
spiral s. the arterial partition between aorta and pulmonary trunk, formed by the fusion of the truncal, bulbar and aorticopulmonary septa of the great vessels attached to the embryonic heart.
telencephalic s. see septum pellucidum (above).
s. transversum a major contributor to the development of the diaphragm and the liver.

truncal s. a partition which develops from truncal cushions within the truncus arteriosus and contributes to the separation of cardiac outflow into pulmonary and systemic circulations.
urorectal s. a septum which divides the urinary passages from the hindgut in the embryo by horizontally partitioning the cloaca.
septuplet [*sep-tup'lət*] one of seven offspring produced at one birth.
sequel [*se'kwəl*] sequela.
sequela [*sə-kwel'ə*] pl. *sequelae* [L.] a morbid condition following or occurring as a consequence of another condition or event.
sequence [*se'kwəns*] the order in which monomers occur in polymeric molecules; the order of amino acids in a polypeptide chain or of nucleotides in nucleic acid.
autonomously replicating s. usually plasmids that replicate independently of chromosomal DNA.
coding s's sections of DNA which code for the amino acids of a protein.
consensus s. a sequence of nucleotides that is always present in a large set of independently determined sequences. See also **box**.
enhancer s. in DNA transcription, an upstream *cis*-acting DNA sequence that enhances expression of a particular gene and forms part of a complex array of upstream sequences that control gene expression.
expressed s's transcribed genes as detected by cDNA sequences.
intervening s. see **intron**.
palindromic s. see **palindrome**.
signal s. hydrophobic amino acid sequences at the amino terminus of secretory or integrated membrane proteins that direct the protein to cell membranes, particularly endoplasmic reticulum where the proteins are modified, e.g. glycosylated, and the signal sequence is removed prior to secretion or integration of the protein into the lumen of the endoplasmic reticulum. Called also signal peptide.
sequencing see **DNA** sequencing.
sequential characterized by a regular sequence of additions or modifications.
sequester [*se-kwes'tər*] to detach or separate abnormally a small portion from the whole.
sequestrant [*se-kwes'trənt*] a sequestering agent, as, for example, cholestyramine resin which binds bile acids in the intestine, thus preventing their absorption.
sequestration [*se"kwəs-tra'shən*] 1. abnormal separation of a part from a whole, as a portion of a bone by a pathological process, or a portion of the circulating blood in a specific part occurring naturally or produced by application of a tourniquet. 2. isolation of a patient.
feline corneal s. see **corneal** sequestrum.
pulmonary s. loss of connection of lung tissue with the bronchial tree and the pulmonary veins.
sequestrectomy [*se"kwəs-trek'tə-me*] excision of a sequestrum.
sequestrum [*se-kwes'trəm*] pl. *sequestra* [L.] a piece of dead tissue that has become separated during the process of necrosis from sound tissue; refers usually to bone, but occurs also in cornea and lung.
feline corneal s. see **corneal** sequestrum.
lung s. a critical feature in the epidemiology of contagious bovine pleuropneumonia; the sequestrum provides a long-term source of the causative bacteria.
sequoiosis [*se"kwoi-o'sis*] a hypersensitivity pneumonitis of humans caused by inhalation of *Corphium* and *Pullularia* species in moldy redwood bark.
SER smooth endoplasmic reticulum.
Ser serine.
sera [*se'rə*] plural of *serum*.
seradella see ***Ornithopus sativus***.
serendipity happy finding of an unexpected object or solution while searching for something else.
Sereny test a test of the invasiveness of a bacterium. The organism is inoculated into the conjunctival sac of a guinea pig; invasiveness is measured by the occurrence of a keratoconjunctivitis within 24 hours. Used particularly for strains of *Escherichia coli* and *Listeria monocytogenes*.
serial [*se're-əl*] part of a series.
s. homology see serial **homology**.
series [*sēr'ēz*] a group or succession of events, objects or substances arranged in regular order or forming a kind of chain; in electricity, parts of a circuit connected successively end to end to form a single path for the current.
erythrocytic s. the succession of developing cells that ultimately culminates in the erythrocyte. The morphologically distinguishable forms are rubriblast (proerythroblast), prorubricyte (basophilic normoblast), rubricyte (polychromatophilic normoblast), metarubricyte (orthochromatic normoblast), polychromatophilic erythrocyte (reticulocyte) and erythrocyte.
granulocytic s. the succession of developing cells that ultimately culminates in mature granulocytes (neutrophils, eosinophils, or basophils). The morphologically distinguishable forms are myeloblast, promyelocyte (progranulocyte), myelocyte, metamyelocyte, band granulocyte and segmented granulocyte. Stem cells are committed to become either neutrophils or eosinophils before the myelocyte stage. This may also be true for basophils.
lymphocytic s. the succession of developing cells that ultimately culminates in mature lymphocytes. The morphologically distinguishable forms are lymphoblast, prolymphocyte and lymphocyte.
monocytic s. the succession of developing cells that ultimately culminates in the monocyte. The morphologically distinguishable forms are monoblast, promonoblast and monocyte.
thrombocytic s. the succession of developing cells that ultimately culminates in platelets (thrombocytes). The morphologically distinct cell types are megakaryoblast, promegakaryocyte and megakaryocyte, which fragment to form platelets.
Serin finch small passeriform bird, the origin of the domestic canary. Called also *Serinus canaria*.
serine (Ser) [*sēr'ēn*] a naturally occurring amino acid.
Serinus a genus of the bird family Fringillidae.
S. canaria a small, stocky, seed-eating cage bird with a short conical bill. Called also canary, **Serin finch**. Popular breeds are **Gloster fancy**, yorkshire, norwich, **Border fancy**, **lizard**, **Belgianfancy** and **Roller**. They are noted for their crisp, bell-like tone combined with warbles and trills.
Seriola farmed finfish genus in the family Carangidae known as amberjacks. Includes *S. lalandi* (yellowtail amberjacks), *S. quinqueradiata* (Japanese amberjack).
serocolitis inflammation of the serous coat of the colon.
seroconversion [*sēr"o-kən-vur'zhən*] the development of antibodies to an infectious organism in response to natural infection or to the administration of a vaccine.
seroculture [*sēr'o-kul"chər*] a bacterial culture on blood serum.
serodiagnosis [*sēr"o-di"əg-no'sis*] diagnosis of disease based on serum reactions.
seroenteritis [*sēr"o-en"tə-ri'tis*] inflammation of the serous coat of the intestine.
seroepidemiology [*se"ro-ep"i-de"me-ol'ə-je*] a system of epidemiological surveillance and examination based on mass and serial testing of sera of samples of the animal populations.
serofibrinous [*sēr"o-fi'brin-əs*] marked by both a serous exudate and precipitation of fibrin.
serological [*sēr"o-loj'i-kəl*] pertaining to or emanating from **serology**.
s. test one involving examination of blood serum usually for antibody.
serologist [*sēr-ol'ə-jist*] a specialist in serology. An old term for immunologist.
serology [*sēr-ol'ə-je*] the detection of antigen–antibody reactions *in vitro*.
serolysin a lysin of the blood serum.
seroma [*sēr-o'mə*] a collection of serum in the body, producing a tumor-like mass.
seromembranous [*sēr"o-mem'brə-nəs*] pertaining to or composed of serous membrane.
seromucoid glands [*sēr"o-mu'koid*] glands which secrete mucus and serous fluid; these glands occur in the skin of the muzzle and lip of ruminants and the skin of the snout and lip, and the caudomedial aspects of the carpus, of the pig.
seromucous [*sēr"o-mu'kəs*] both serous and mucous.
seromuscular [*sēr"o-mus'ku-lər*] pertaining to the serous and muscular coats of the intestine.
s. suture a suture placed across the serosa and muscular layers, but not the mucosa, of the bowel. Used in the closure of enterotomy incisions.
seronegative [*sēr"o-neg'ə-tiv*] showing a negative serum reaction; i.e. an animal with no detectable serum antibodies to a specified microorganism.

VetBooks.ir

seropositive [sēr"o-poz'ĭ-tiv] showing positive results on serological examination, i.e. an animal with detectable serum antibodies to a particular microorganism.
seroprognosis [sēr"o-prog-no'sis] prognosis of disease based on serum reactions.
seroprophylaxis [sēr"o-pro"fə-lak'sis] the injection of immune serum for protective purposes.
seropurulent [sēr"o-pu'roo-lənt] both serous and purulent.
seropus [sēr'o-pus"] serum mingled with pus.
seroreaction [sēr"o-re-ak'shən] any reaction taking place in serum, or as a result of the action of a serum.
seroresistant [sēr"o-re-zis'tənt] showing a seropositive reaction to a pathogen after treatment.
serosa [sēr-o'sə, sēr-o'zə] any serous membrane.
serosanguineous [sēr"o-sang-gwin'e-əs] composed of serum and blood.
seroserous [sēr"o-sēr'əs] pertaining to two serous surfaces.
serositis [sēr"o-si'tis] inflammation of a serous membrane.
s.–arthritis of sheep and goats see **caprine** arthritis–encephalitis.
transmissible s. see sporadic bovine **encephalomyelitis**.
serosity [sēr-os'ĭ-te] the quality of serous fluids.
serosurvey [sēr"o-sur'va] a screening test of the serum of animals at risk to provide data about specific diseases.
serosynovitis [sēr"o-sin"o-vi'tis] synovitis with effusion of serum.
serotherapy [sēr"o-ther'ə-pe] the treatment of infectious disease by the injection of serum from immune animals.
serotonergic [ser"o-tōn-ur'jik] serotoninergic.
serotonin [ser"o-to'nin] a hormone and neurotransmitter, 5-hydroxytryptamine (5-HT), found in many tissues, including blood platelets, intestinal mucosa, pineal body and central nervous system; it has many physiological properties, including inhibition of gastric secretion, stimulation of smooth muscles and production of vasoconstriction.
selective s. reuptake inhibitors (SSRIs) a group of compounds inhibiting serotonin reuptake in presynaptic neurons of the central nervous system; used in the treatment of mental disorders.
s. syndrome an excess of serotonin, brought about by treatment with drugs or combination of drugs that increase serotonin and serotonin activity, including monoamine oxidase inhibitors, selective serotonin reuptake inhibitors, opioids, tricyclic antidepressants and some herbs; a serotonin toxicty.
serotoninergic [ser"o-to"nin-ur'jik] pertaining to neurons that release serotonin as a neurotransmitter, as those of the raphe nuclei of the brainstem, or that secrete serotonin as a hormone.
serotype [sēr'o-tīp"] the type of a microorganism determined by its constituent antigens based on one of several different antibody–antigen reactions, or a taxonomic subdivision based thereon.
serous [sēr'əs] 1. pertaining to serum; thin and watery, like serum. 2. producing or containing serum.
s. atrophy see serous **atrophy**.
s. cells one of the two kinds of cells in the acinar portions of salivary glands. Contain secretory granules the precursors of salivary amylase. Their secretion is serous and of low specific gravity.
s. membrane see serous **membrane**.
s. membrane inflammation see **serositis**.
s. ovarian inclusion cysts may be mistaken for cystic follicles but play no part in ovarian activity.
serovaccination [sēr"o-vak"sĭ-na'shən] injection of serum combined with bacterial vaccination to produce passive and active immunity. See **serum**-virus simultaneous immunization.
serow (*Capricornis* spp.), medium-sized, East Asian goat-antelopes in the subfamily Caprinae.
serpiginous [sər-pij'ĭ-nəs] creeping from part to part; having a wavy border like a snake.
Serpulina previously a genus of bacteria in the order *Spirochaetaceae*. Several species were previously in the genus *Treponema*. Now called ***Brachyspira***.
serrated [ser'āt-ed] having a sawlike edge or border.
Serratia [sə-ra'she-ə] gram-negative, flagellated rods, members of the family *Enterobacteriaceae*, found commonly in water, soil and food and only occasionally in pathological specimens. *S. marcescens* and *S. liquefaciens* are rare causes of bovine mastitis.
S. rubidaea a nonpathogen sometimes used as a marker because of the red colonies it produces.
serration [sə-ra'shən] 1. the state of being serrated. 2. a serrated structure or formation.
Serratospiculum a genus of air sac nematodes infecting falcons.
Sertoli cell [ser-to'le] any of the elongated cells in the tubules of the testes to which the spermatids become attached; they provide support, protection and, apparently, nutrition until the spermatids are transformed into mature spermatozoa.
ovarian S. c. tumor Sertoli–Leydig tumor of an atopic ovary in a bitch, commonly associated with cystic endometrial hyperplasia.
testicular S. c. tumor occurs most commonly in dogs, particularly in retained testicles. Production of estrogen may cause feminization in which the dog is attractive to other males with reduced libido, feminine distribution of body fat, symmetrical alopecia, atrophy of the penis, increased size of the mammary glands and prepuce, and prostatic enlargement. Rarely there is depression of bone marrow activity with anemia, thrombocytopenia and granulocytopenia.
serum [sēr'əm] pl. *sera, serums* [L.] the clear portion of any animal or plant fluid that remains after the solid elements have been separated out. The term usually refers to blood serum, the clear, straw-colored, liquid portion of the plasma that does not contain fibrinogen or blood cells, and remains fluid after clotting of blood. Blood serum from animals whose bodies have built up antibodies is called antiserum or immune serum. Inoculation with such an antiserum provides temporary, or passive, immunity against the disease.
s. albumin mastitis test a high concentration of serum albumin in milk indicates the presence of mastitis in the quarter.
antilymphocyte s. see **antilymphocyte serum**.
s. breaks in classical swine fever (hog cholera) vaccination when a serum-simultaneous vaccination program is not effective and it is assumed that the hyperimmune serum was ineffective. A dated method of immunization.
s. clot time see **prothrombin** consumption test.
s. enzymes enzymes of individual tissues are released into the blood when the tissue is damaged or when there is much activity in it. The concentrations are used as a measure of activity or injury.
s.-fast bacteria that are resistant to the effects of serum.
s. glutamic–oxaloacetic transaminase (SGOT) see **aspartate aminotransferase**.
s. glutamic–pyruvic transaminase (SGPT) see **alanine aminotransferase**.
immune s. serum from an immunized animal, containing specific antibody or antibodies.
s. osmolality a measure of the number of dissolved particles per unit of water in serum. See also serum **osmolality**.
pooled s. the mixed serum from a number of animals.
s. protein see serum **protein**.
s. sickness a group of immediate or antibody-mediated hypersensitivity reactions (also referred to as type III hypersensitivities) that includes Arthus reaction, serum sickness and immune complex diseases. The pathogenesis involves formation of antibody–antigen complexes in the walls of small blood vessels; the complexes fix complement and cause necrosis and thrombus formation. There is infiltration of polymorphonuclear cells from which lysosomal enzymes are released.
s. thymic factor a nonapeptide produced by the thymic epithelium that is involved in development of T-cell differentiating.
s.-virus simultaneous immunization an outdated method of vaccination, most popular at one time in the vaccination of pigs against classical swine fever (hog cholera). Live virus and antiserum to the virus were injected into the patient simultaneously; breakdowns in the system were frequent, leading to severe outbreaks of the target disease.
serumal [sēr-oo'məl] pertaining to or formed from serum.
service 1. mating; the physical act of natural mating. 2. in terms of the delivery of services to animals includes surgical, pathological, clinicopathological, dispensary, radiological, anesthesiology services.
s. boots padded boots worn by mares during mating to prevent them injuring the stallion by kicking.
s. collar a broad leather pad worn over the withers by mares during mating to prevent the stallion injuring them by biting.
hold to s. an animal that has successfully conceived following natural mating or artificial insemination and does not return to heat.
s. hobbles worn by mares during mating to prevent them kicking the stallion.

VetBooks.ir

s. period in a controlled mating program the period during which the males are left in with the breeding females, or during which inseminations are carried out.

services per conception a measure of the fertility of a herd; the number of services required to effect a pregnancy.

serving see **mating**.

serving capacity test supplementary to a physical examination of a male's genitalia and of semen, the testing of a male's capacity to mate with several females during a set test period.

sesamoid [*ses'ə-moid*] 1. denoting a small nodular bone embedded in a tendon or joint capsule. 2. a sesamoid bone. See Table 10.

carpal s. bone a small sesamoid in the tendon of the abductor pollicis longus muscle of the dog.

ectopic s. bone an anatomically inexact, and no longer used, name for ununited anconeal process.

metacarpal s. proximal sesamoid bone. See Table 10.

sesamoiditis [*ses"ə-moi-di'tis*] ischemic disease of the proximal sesamoid bones in horses. Characterized by lameness, pain on deep pressure, heat and pain of the suspensory ligament.

Sesbania plant genus in the legume family Fabaceae. Annual herbaceous plants with a confused terminology but similar in their toxicity. Contain galactomannan, a toxic gum which causes diarrhea. Includes *S. cannabina*, *S. drummondii* (*S. cavanillesi*), *S. longifolia*, *S. punicea* (red or purple sesbania), *S. vesicaria* (*S. platycarpa*). Called also *Glottidium* spp., *Daubentonia* spp., rattlepod, bagpod, coffee bean, rattlebox, rattlebrush, poison bean, and many others.

sesbania plants in the genus ***Sesbania***.

red s., purple s. *Sesbania punicea*.

sesqui- word element. [L.] *one and one-half*.

sesquiterpene common group of plant poisons, e.g. ipomeanols, ngaiones, sporidesmin, furanoid sesquiterpenes, sesquiterpene lactones.

s. lactones plant poisons found in *Geigeria*, *Hymenoxys*, *Helenium* spp., *Iphenia aucheri*, *Parthenium hysterophorus*.

Sessea brasiliensis South American plant in the family Solanaceae; causes serious losses in livestock. Poisoning characterized by hypothermia, bradycardia, incoordination, convulsions and severe liver injury. The toxic agent is thought to be a polypeptide.

sessile [*ses'il*] not pedunculated; attached by a broad base.

s. wart without pedicle.

set-fast 1. see **tying-up syndrome**. 2. the area of superficial skin gangrene that develops on an acute saddle pressure sore on a horse's back.

seta [*se'tə*] a bristle. Called also chaeta.

setaceous [*se-ta'shəs*] bristle-like.

Setaria[1] [*se-tar'e-ə*] a genus of filarioid worms in the family Onchocercidae found usually in the peritoneal cavity of ungulates. They cause no apparent clinical illness unless they invade abnormal tissues such as the central nervous system.

S. altaica found in the deer *Cervus canadensis asiaticus*.

S. cervi found in deer and possibly buffalo. Possibly also in the spinal cord of deer causing spinal nematodiasis.

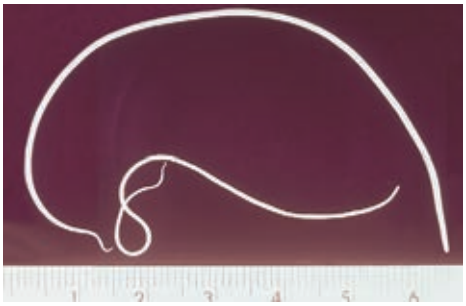
S. congolensis found in pigs.

S. cornuta found in antelope.

S. digitata found in cattle, buffalo. May also occur in the urinary bladder in these species and in the central nervous system of sheep, goats and horses. Causes **cerebrospinal** nematodiasis.

S. equina found in horses and in the eyes, scrotum, pleural cavity and lungs as well as the peritoneal cavity. Found also in the eyes of cattle.

S. labiato-papillosa found in cattle, deer, giraffe, antelope.



S-46: *Setaria spp.*, the abdominal worm of cattle.
From Hendrix CM, Robinson, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.
From Hendrix CM, Robinson, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

S. marshalli found in sheep.

S. tundrae found in reindeer.

S. yehi found in deer, moose, caribou, bison.

Setaria[2] genus in the grass family Poaceae. Several cultivars are used commercially as pasture grasses; some have a high oxalate content. Acute intoxication in cattle causes hyocalcemia and nephrosis subsequently. Long-term ingestion in horses causes nutritional secondary hyperparathyroidism. Includes *S. glauca*, *S. incrassata* (*S. porphyrantha*), *S. italica* (*Panicum italicum*, foxtail millet, red panic), *S. sphacelata* (*S. anceps*, *S. trinervia*).

S. lutescens is a grass with bristly seedheads and causes a traumatic stomatitis in cattle and horses. The lesions contain obvious plant fibers. Called also yellow bristle grass.

seton [*se'ton*] 1. a thin woven fabric wick, 6 × 0.25 inch, used as a primitive vaccination technique by dipping the seton in a bowl of 'vaccine', e.g. pleural exudate from a case of contagious bovine pneumonia. 2. a thread of gauze or other suture material threaded through tissue and used to keep a wound open.

Setosphaeria rostrata the telomorph of the fungus *Exserohilum rostratum*.

setter a type of gundog characterized by hunting behavior in which it pursues game by scent then freezes ('sets') to indicate it has found the quarry rather than chasing or flushing it out. Includes **English setter**, **Gordon setter**, **Irish setter**, **Irish red and white setter**.

setterwort ***Helleborus*** *foetidus*.

setting 1. said of meat while it is cooling after slaughter and the processes of rigor mortis are precipitating the protein in the muscle fibers. 2. a clutch of eggs to set under a broody hen—usually 13 eggs.

'setting sun' phenomenon ventrolateral strabismus associated with hydrocephalus and lesions of the midbrain.

settled lay term for an animal that has become pregnant. Generally applied to agricultural animals.

Seutin shears heavy duty shears for cutting plaster cast. Blades are angled to one side so that bottom, bulb-pointed blade can be inserted under plaster without the handles getting in the way.

severe a clinical qualifier that describes a disease that is so severe that it dominates all other activities.

s. combined immune deficiency disease (SCID) (syndrome) see **combined immune deficiency syndrome (disease)**.

severe acute respiratory syndrome (SARS) an often fatal flu-like respiratory disease of humans caused by the SARS coronavirus in which symptoms invariably include fever above 38°C and may include myalgia, lethargy, gastrointestinal symptoms, cough, sore throat and other non-specific symptoms. The virus originates in bats, notably wild Chinese horseshoe bats (*Rhinolophus sinicus*), and is amplified through intermediate hosts such as caged palm civets in live animal markets in Southern China prior to infection of humans and perhaps other animals.

severity-of-disease scoring system a modification of the **APACHE system**, for use in dogs.

sevoflurane [*se"vo-floo'rān*] a halogenated ether inhalation anesthetic with rapid induction and short recovery periods.

sewage [*soo'əj*] human sewage is utilized for animal husbandry purposes as a fertilizer for pastures in some countries. It may be in the form of crude sewage or as the sediment in settling tanks. It may cause cadmium or lead poisoning, or spread infectious disease, e.g. salmonellosis, and is the major risk factor for beef measles.

crude s. has caused goiter in the calves of cows grazing the pasture and is a risk for a number of diseases such as salmonellosis, cysticercosis.

s. sludge the sediment of sewage collected in settling tanks.

sewejaartjie [Af.] ***Helichrysum*** *argyrosphaerum*.

sex [*seks*] 1. the fundamental distinction, found in most species of animals and plants, based on the type of gametes produced by the individual or the category to which the individual fits on the basis of that criterion. Ova, or macrogametes, are produced by the female, and spermatozoa, or microgametes, are produced by the male. The union of these distinctive germ cells results in the production of a new individual in sexual reproduction. 2. to determine the sex of an animal.

s. cell see germ **cell, gamete**.

s. chromatin the persistent mass of chromatin situated at the periphery of the nucleus in cells of normal females; it is the material of the inactivated sex chromosome. Called also Barr body.

VetBooks.ir

chromosomal s. sex as determined by the presence of the XX (female) or the XY (male) genotype in somatic cells, without regard to phenotypic manifestations. Called also genetic sex.
s. cycle 1. the physiological changes recurring regularly in the reproductive organs of female mammals when pregnancy does not supervene. 2. the period of sexual reproduction in an organism that also reproduces asexually.
s. chromosomes see sex **chromosomes**.
s. determination 1. the change in the fetus to a male or female configuration; the process by which the sex of an organism is fixed, associated, in animals, with the presence or absence of the Y chromosome. 2. diagnosis of the sex of the fetus before birth performed by examination of fetal fluids obtained by amniocentesis.
s. determining region of Y a single gene responsible for determining the sex of an animal.
s. drive see **libido**.
endocrinological s. the phenotypic manifestations of sex determined by endocrine influences, such as mammary development, etc.
genetic s. chromosomal sex.
s. glands in the male includes the prostate, seminal vesicles, ampullae and bulbourethral glands.
gonadal s. the sex as determined on the basis of the gonadal tissue present (ovarian or testicular).
s. hormones glandular secretions involved in the regulation of sexual functions. The principal sex hormone in the male is **testosterone**, produced by the testes. In the female the principal sex hormones are the estrogens and **progesterone**, produced by the ovaries. These hormones influence the secondary sex characters, such as the shape and contour of the body and head, mammary development and the pitch of the voice. The male hormones stimulate production of spermatozoa, and the female hormones control ovulation, pregnancy and the estral cycle.
sex-linkage includes X-linked (much the most common) and Y-linked loci.
sex-linked inheritance see sex-linkage (above).
morphological s. sex determined on the basis of the morphology of the external genitals.
neutrophil s. lobe see **drumstick** lobe.
nuclear s. the sex as determined on the basis of the presence or absence of sex chromatin in somatic cells, its presence normally indicating the XX (female) genotype, and its absence the XY (male) genotype.
s. parity see sex ratio (below).
s. pheromone see **pheromone**.
s. ratio proportion of female to male births.
s. reversal the sexual condition of animals in which gonadal sex and chromosomal sex are dissimilar.
s. steroids steroidal compounds acting as hormones in reproductive processes; the principal ones are estrogen, progesterone, testosterone.
sex-associated said of diseases that are predisposed to or affected in their severity by the sex of the patient.
sex-conditioned sex-influenced.
sex-cord stromal tumor ovarian tumors of granulosa and thecal cells and their luteinized forms.
sex-influenced [*seks-in'floo-ənst*] denoting an autosomal trait that is expressed differently, either in frequency or degree, in males and females.
sex-limited [*seks-lim'it-əd*] affecting individuals of one sex only.
sex-linked [*seks'linkt*] determined by a gene located on a sex chromosome. Although a trait may be X-linked or Y-linked, virtually all clinically significant sex-linked traits are transmitted by genes located on the X chromosome; therefore, the terms sex-linked and X-linked are used synonymously. See also sex-linked **gene**.
sexing determination of the sex; usually referable to immature animals or birds. Usually carried out on day-old chickens by examining inside the vent for small eminences. Up to 1000 chickens can be sexed per hour with 98% accuracy. New technologies use computer scans of wing feather lengths to differentiate the sexes.
automatic s. may be possible when identification or separation of the sexes occurs automatically, e.g. by the occurrence of breeds of fowl that indicate their sex by the color pattern of their feathers, or by a genetically engineered lethal gene in a sex chromosome. Called also autosexing. See also **Z-linked sexing**.
embryo s. technology used to determine the gender of an embryo in the laboratory before its transfer; based on the presence or absence of the Y chromosome in a sample of cells.
probe s. use of a probe inserted into the cloaca of snakes to see if it will enter one of the inverted hemipenes of a male. The distance entered is much greater than that possible in the cloaca of a female.
semen s. process of separation of X-bearing and Y-bearing spermatozoa in the ejaculate in order to produce inseminates that are directed to the production of the desired sex of the offspring; presently available commercially for a variety of production animals (swine and cattle).
sextan recurring on the sixth day (every 5 days).
sexual [*sek'shoo-əl*] pertaining to sex.
s. behavior includes masturbation, courtship, mating, estral display.
s. cycle estral cycle.
s. differentiation identification of the sex of a patient is done usually by an examination of external genitalia; preparation and examination of a karyotype is the preferred laboratory method.
s. dimorphism differences in structure or physical characteristics between males and females of the same species, e.g. horns in some breeds of sheep, feather coat color in many species of birds.
s. intercourse see **mating**.
s. maturity the age at which an animal reaches the peak reproductive performance; in the male is maximum sperm production, in the female is the ability to get pregnant and carry to term. Occurs at different ages in different species and in different breeds.
s. receptivity behavioral changes in female animals at the time of estrus; involves acceptance of male efforts at copulation and, in some species, actively seeking the male.
s. rest circumstances in which no sexual intercourse takes place.
Seymour Jones disinfection method a method used in the disinfection of hides. Consists of immersion in a solution of 1:5000 solution of bichloride of mercury plus 1% formic acid for 24 hours.
Sézary syndrome an exfoliative erythroderma due to cutaneous infiltration of reticular lymphocytes, with alopecia, edema and hyperkeratosis; believed to be a variant of **mycosis** fungoides. This condition of humans is similar to the epidermotropic form of cutaneous lymphoma which occurs in dogs. The Sézary cell is a characteristic cerebriform lymphocyte which occurs in the dermis and blood of patients with Sézary syndrome. It has a distinctive markedly convoluted nuclear membrane.
SG specific gravity.
Sg chemical symbol, *seborgium*.
SGOT serum glutamic–oxaloacetic transaminase; see **aspartate aminotransferase**.
SGPT serum glutamic–pyruvic transaminase; see **alanine aminotransferase**.
SGPV sheep and goat pox virus.
SH sulfhydryl.
shackle a bar 2.5 ft long with an iron loop at either end, used in restraint of large pigs. A chain is threaded through the loops and around the lower hindlimbs of the pig. When the chain is pulled the pig is stretched and is cast with the limbs held wide apart. A similar device is used in the abattoir to lift the live pig before it is slaughtered and scalded.
shackling see **shackle**.
shadow-casting [*shad"o-kast'ing*] application of a coating of gold, chromium, or other metal for the purpose of increasing contrast and thereby the visibility of ultramicroscopic specimens under the electron microscope. The heavy metal is evaporated under vacuum and deposited on the surface of the specimen.
shadow cell [*shad'o*] one that appears in a section only as an outline. Called also ghost cell.
shadow roll [*shad'o*] a thick roll of material, usually sheepskin, worn on the nose band of a bridle while racing to avoid having the horse shy at a shadow on the ground.
shadow test [*shad'o*] see **retinoscopy**.
shadowgram the shades of gray at the edge of an image on a radiograph. They are the features that the expert can interpret; they define the silhouette of the object being imaged.
shaft [*shaft*] a long slender part, such as the portion of a long bone (the diaphysis) between the wider ends or extremities, the shaft of a hair and the central shaft (or rachis) of a feather.

S

shafty said of wool in which the staples are long, wide and thick.
shaggy heart [*shag'e*] see **cor** villosum.
shaker calf syndrome inherited degenerative disease of spinal cord in Hereford and Holstein–Friesian cattle characterized by neonatal tremor, paresis, spastic gait, aphonia, terminal spastic paraplegia.
shaker dog disease a syndrome of generalized muscle tremors, hypermetria and occasionally seizures, aggravated by excitement or handling, seen most often in young, mature dogs of the West Highland white and Maltese breeds, but sporadically in many small breeds. The cause is unknown but an acquired immunological disease involving cells that metabolize tyrosine to produce neurotransmitting substances has been proposed. Called also generalized tremor syndrome, idiopathic cerebellitis, little white dog shaker disease.
shaker foals a disease of young foals, toxicoinfectious form of botulism, characterized by progressive muscular weakness, inability to stand and gross muscle tremor if lifted. The foal is bright and alert but dies in about 72 hours.
shaker lambs see **border disease**.
shaker pigs see **congenital tremor syndrome**.
shaking pup a term used to describe the severe tremors observed in very young English springer spaniel puppies affected with X-linked **hypomyelinogenesis**.
sham drinking [*sham*] the phenomenon of an animal constantly playing with its drinking water but drinking little. A common sign in a horse with colic.
sham feeding [*sham*] intake of food by an animal with a surgically created esophageal fistula that prevents the ingested food from reaching the stomach. Used in studies of physiological and psychological mechanisms of hunger and feeding behavior.
sham urination [*sham*] most apparent in horses which stretch out to urinate, males relax the penis but urine is not passed; common sign in subacute colic. There is no grunting or straining to pass urine as there is in urethral obstruction.
shampoo a cleaning agent, usually liquid, for hair; usually consists of a detergent and perfume. Some, usually referred to as medicated shampoos, contain therapeutic substances such as parasiticides, antimicrobials, ketatolytic agents, and antiseborrheic compounds such as selenium sulfide.
shank [*shangk*] 1. the tibia or shin; a leg-like part. In the dog fancy, shank refers to the hindlimb between the hip and stifle. 2. the lead part of a halter.
shankings wool, usually containing hair fibers, from below the knees and hocks.
shaping [*shāp'ing*] a learning technique using gradual approximations to the desired response with reward at each step.
Shar pei a medium-sized, compact dog with distinctive, loose skin that forms many deep wrinkles over the entire body, particularly on the large head, which has been compared to the look of a hippopotamus. The ears are small and the small eyes are almost hidden in the skin folds. The oral mucosa is colored lavender to dark bluish-black. The 'meatmouth' type has deeply wrinkled skin and a heavily padded muzzle, whereas these features are less accentuated in the 'traditional' type. There are two types of coat; one is very short and harsh, the other is slightly longer and brushy. The breed is predisposed to a variety of skin disorders and entropion, all associated with the skin folds, familial Shar pei **fever**, and familial renal **amyloidosis**.
share-farm a common form of farm lease arrangement; the landowner leases the grazing and cropping rights to his land, natural resources and usually facilities including house, hay shed, milking parlor, in return for a share in the income of the enterprise.
sharemilking the unit is contracted to a person or firm to milk and manage the herd and farm for a share of the milk income.
Sharlea a type of sheep, called after a locality in Australia where they were developed by the Sharlea Sheep Society. The sheep are superfine Merinos with an average fiber diameter of less than 17 microns. The sheep are kept indoors at all times and are usually clad in nylon coats to minimize contamination of the wool that is used in the manufacture of superior garment fabrics.
sharp freezers freezing chambers for meat preservation which operate at lower temperatures than the average freezer, i.e. at 0°F (−18°C).
Sharpey's fibers [*shahr'pe*] see **Sharpey's fibers**.

S-47: Shar pei.

sharps 1. needles, scalpel blades, broken ampoules; anything in a hospital or clinic that can cause injury to those involved in their disposal. 2. see **calkins**.
s. container (1) container where sharps can be placed for safe disposal; required by law in most jurisdictions.
Shasta River crud equine monocytic **ehrlichiosis**.
Shattenfroh method a method for disinfecting hides; the hides are soaked in a solution of 2% hydrochloric acid and 10% sodium chloride for 48 hours.
shaver [*sha'vər*] an instrument used in arthroscopic procedures for the rapid debridement of tissues such as diseased articular cartilage.
shavings curly wafers of wood produced when trimming wood with a plane; used as bedding for livestock. See also **sawdust**.
SHBG sex hormone-binding globulin.
shear [*shēr*] 1. to remove the fleece of a sheep. 2. pressure on a mass in such a way that planes within it are pressured to move in a direction parallel to the pressure. Any movement is proportional to the distance from the plane at which movement occurs.
s. injury injury to tissues caused by shear pressure. See **shearing** injuries (2).
s. stress the stress to which a tissue is subjected by a shear force without injury actually occurring.
shearer person whose occupation is shearing sheep.
shearing mechanical removal of the sheep's fleece. A traumatic event in the sheep's annual calendar. A time for the transmission of diseases between sheep, e.g. mycotic dermatitis, caseous lymphadenitis, infection with environmental infections, e.g. gas gangrene, tetanus, and for exposure to inclement weather without the protection of a fleece. Chemical shearing, the shedding of the fleece after administration of a chemical agent, is in the very early stages of exploration. Cyclophosphamide and **mimosine** have been used experimentally but there is no commercially available system. Automatic shearing done by robots is perhaps a little closer. Breeding of sheep which shed their fleece annually is always a good cause for a research program. The Wiltshire horned breed does this to a varying degree.
s. board open area in a shearing shed on which the sheep are restrained while they are shorn.
s. hypothermia see **hypothermia**.
s. injuries 1. injuries inflicted to a sheep during shearing and by the shearing machine. Lacerations are frequent but cause little damage if they do not become infected. They appear to cause no discomfort and heal very quickly. The serious injuries are the removal of teats in ewes, damage to the prepuce and removal of the tip of the vulva. The last two lead to deviation of the stream of urine, fouling of the nearby fleece and increased risk of blowfly strike. 2. injuries in which there is the application of a shearing force tending to cause local deformity or displacement; usually involve the carpus or tarsus in small animals hit by motor vehicles. There is extensive loss of soft tissues and bone, with exposure of the joint.
shearmouth occlusal surfaces of the molars are worn at sharp angles of 60–75° so that the teeth pass each other like the blades of a pair of shears. Most common in horses.
shears cutting instruments for the removal of wool—sheep shears, or for trimming the hooves of sheep and goats—hoof shears.
hoof s. a rugged pair of shears like secateurs but with sharp-pointed blades. The spring in the handle keeps the blades open and pressing the handles shut operates the shears.

VetBooks.ir

plaster s. see **plaster** shears.
sheep s. 1. hand shears are sharp-pointed, with wide blades and have a spring at the handle which opens the blades. They have to be closed to cut the wool. 2. mechanical or power shears are driven by a rotating, flexible shaft converting to a reciprocating movement of a cutter in a comb at right angles to the shearer's hand; the cutter and comb comprise the handpiece.
sheath [*shēth*] 1. a tubular case or envelope. 2. vernacular for prepuce. 3. a tubular instrument used to protect endoscopic instruments when placed through the body wall or joint. Sheaths also provide access for the passage of instruments, and the ingress and egress of fluids or gases as required for an endoscopic procedure.
arachnoid s. the delicate membrane between the pial sheath and the dural sheath of the optic nerve.
carotid s. a portion of the cervical fascia enclosing the carotid artery, internal jugular vein, and vagus or vagosympathetic nerve.
carpal tendon s's sheaths to the tendons of the muscles which course over the carpus.
crural s. femoral sheath.
dural s. the external investment of the optic nerve.
external r. sheath epithelial layer acting as a sheath to the root a hair; continuous with the germinal matrix at the base of the developing follicle.
femoral s. the fascial sheath of the femoral vessels.
Henle's s. the endoneurium, especially the delicate continuation around the terminal branches of nerve fibers.
lamellar s. the perineurium.
medullary s., myelin s. the sheath surrounding the axon of myelinated nerve cells, consisting of concentric layers of myelin formed in the peripheral nervous system by the plasma membrane of Schwann cells, and in the central nervous system by the plasma membrane of oligodendrocytes. It is interrupted at intervals along the length of the axon by gaps known as *nodes of Ranvier*. Myelin is an electrical insulator that serves to speed the conduction of nerve impulses.
pial s. the innermost of the three sheaths of the optic nerve.
root s. the epidermal layer of a hair follicle.
s. of Schwann neurilemma.
synovial s. a synovial membrane sleeve through which a tendon moves; found commonly where a tendon passes over a joint.
sheath rot see **enzootic** balanoposthitis.
Sheather's flotation method a method for examining feces for the presence of worm eggs or larvae by mixing with a saturated solution of sodium chloride or sugar and collecting a sample from the top of a column for microscopic examination.
shechita, shehita the Jewish method of ritual slaughter in which the animal is killed by one stroke of a very sharp knife across the throat, completely severing the trachea, carotid arteries and jugular veins. Called also schechita.
shed rural building used for agricultural pursuits.
s. hands miscellaneous workers in a shearing shed at shearing time, i.e. persons other than the shearers, wool classers.
commodity s. a three-sided, roofed building that allows easy front loader access, where **commodities** are individually stored on a farm.
s. lambing a system of indoor lambing for ewes which normally run at pasture so that the lambs have protection against the inclemency of the weather and where close observation can be maintained over every ewe. The ewes are brought in when they are individually on the point of lambing and moved out as soon as the ewe–lamb bond is established and the lamb is vigorous, usually 24 hours.
shearing s. contains a shearing 'board' supplied with a number of 'stands' which are locations for shearing machines. The sheep are shorn on the 'board' and are pushed out through small doors down chutes into counting pens where they are held until a sufficient group is accumulated. In the shed the sheep to be shorn are held in catching pens. The shed is usually large enough to hold several hundred sheep overnight so that there will be some dry sheep for the morning. The shorn wool is classed and packed into bales in the shed which is usually high off the ground; the droppings fall through the slatted floor.
s. sheet standard recording medium for dairy cow reproductive data—a structured cardboard poster pinned on the wall of the milking shed. Replaced in some sheds by a computer terminal.
shedding 1. exfoliation of entire skin, called also ecdysis, exuviate. 2. falling out of haircoat. 3. putting animals into a shed. 4. excretion of an infectious agent from the body of an infected host.
s. agent an agent, e.g. a wild animal, shedding an infectious agent.
Sheena's gold *Duranta repens*.
sheep member of the species *Ovis aries*. They are classified into several types including Merino, shortwool meat breeds, longwool, carpetwool, fat-tail, wool-shedding, Karakul. All domesticated types are characterized by a wool fleece.
Bighorn s. see **Bighorn sheep**.
carpetwool s. includes **Blackfaced mountain**, **Carpetmaster**, **Drysdale**, **Elliottdale** and **Tukidale**.
Dall s. see **Dall sheep**.
s. dip see **dip**.
dual-purpose s. breeds generated to provide meat and wool. Include **Charollaise**, **Corriedeale**, **Cormo**, **Dormer**, **Gromark**, **Perendale**, **Polwarth**, **Zenith**.
easy-care s. see **easy-care sheep**.
fat-tailed s. see **fat-tailed sheep**.
s.–goat hybrid mating and fertilization can be achieved but the fetus dies early or is aborted.
heafed s. sheep such as Herdwicks and Swaledales in the UK that graze the same area of unfenced hill area without shepherding, year after year, and teach this behavior to their lambs. Also called hefted sheep.
light s. sheep light in condition off subsistence range and destined to go to irrigated pasture or into a feedlot for fattening.
meat s. includes English Longwool breeds (see under wool sheep below) and shortwool or Downs sheep, e.g. **Southdown**, **Suffolk**, **Hampshire**, **Oxford down**, **Dorset horn**, **Poll Dorset**, **Ryeland**, **Shropshire** and **Charollaise**, **Cheviot**, **Clun Forest**, **Colbred**, **Columbia**, **Coopworth**, **Dormer**, **Dorper**, many indigenous fat-tailed and fat-rumped breeds, **Finnish-Landrace**, **North Ronaldsay**, **Wensleydale**.
s. pox see **sheeppox**.
s.-scab see **psoroptic mange**.
wool s. includes **Australian** Merino (including a wide range of strains and types especially **Booroola** and **Comeback**), **Cormo**, **Corriedale**, **Polwarth**, **Sharlea**, **American Rambouillet** and **English Longwools** such as **Lincoln**, **Leicester**, **Border Leicester**, **Cheviot**, **Coopworth**, **Romney Marsh**.
sheep-associated bovine malignant catarrah virus see **malignant catarrhal fever**.
sheepdog any of various breeds of dogs produced to help manage sheep flocks. Three general types, the herding breeds that bring sheep to the operator, e.g. Border collie, the huntaway breeds that move sheep ahead, e.g. kelpie, and the guarding types that protect the flock from predators, e.g. Komondor. See also **shepherd dogs**.
sheepkill ***Kalmia*** *angustifolia*.
sheeppox a highly contagious, generalized disease of sheep caused by a poxvirus in the genus *Capripoxvirus* and characterized by the presence of typical pox lesions on the unwoolled skin, especially under the tail. Most adults recover. A much more lethal, generalized disease that resembles smallpox in its pathogenicity occurs in lambs with many dying and showing lesions in the bowel and respiratory system. Endemic and major impacts on small ruminant production in Africa (north of the equator), the Middle East, Turkey and Greece, Central Asia and the Indian subcontinent. A disease notifiable to the OIE (see Table 22).
sheepshead see **probatocephaly**.
shell disease 1. pitting of the shell of crustaceans initially due to a chitinoclastic *Vibrio* spp. 2. proliferative disease of oysters caused by the fungus *Ostracoblabe implexa*. There are black malformations on the inside of shells.
shell gland the secretory portion of the avian oviduct where the calcareous shell of the egg is deposited. Called also the (avian) uterus.
shell rot softening and ulceration of the carapace and plastron of softshell turtles caused by the bacteria *Beneckea chitinovora*. Called also rust, ulcerative shell disease.
shellfish an aquatic animal having a shell; includes molluscs, e.g. oyster, and crustaceans, e.g. shrimp, lobster.
paralytic s. poisoning (PSP) syndrome of flaccid paralysis after ingestion of bivalve molluscs whose tissues have accumulated

S

tetrahydroxypurine toxins from some marine **dinoflagellates**; syndrome identical with **tetrodotoxin** poisoning. See also **saxitoxin**.

shellgrit crushed shells of marine crustaceans; mined on ocean beaches where the animals are prolific. Used in rations for birds, especially domesticated cage birds.

shelly thin, hollow, brittle.

shelter medicine a developing specialty in veterinary medicine dealing with the requirements of veterinary services in animal shelters, including study and research on the welfare and quality of life of animals in shelters, sheltering systems, preventive medicine and the management of health problems that occur in such environments.

Sheltie a common name for the Shetland sheepdog.

s. eye anomaly (SEA) see **Collie** eye anomaly.

s. syndrome see **epidermolysis** bullosa.

***Sheng* cycle** within the **Five Element theory** of traditional Chinese medicine, this is the creative, engendering, productive or generating cycle in which each of the elements creates the element to its right in a clockwise direction. Fire promotes Earth, Earth promotes Metal, Metal promotes Water, Water promotes Wood, and Wood promotes Fire, forming a cycle. See also **Ke cycle**.

shepherd dogs any of several dog breeds used in working sheep (sheepdogs), but most commonly applied to the German shepherd dog. See also **sheepdog**.

shepherd's hook explorer a handheld instrument used to detect subgingival cavities and calculus, and to detect erosive lesions of the tooth surface.

Sherman bone plate [*shur'mən*] the plate is narrowed in the spaces between the screw holes so that it has approximately the same strength at every point.

Shetland pony miniature or dwarf Scottish pony, most commonly black and dark brown, but can be any color, including broken colors; 9.2–10.2 hands high. Its most common use is as a child's pony, as depicted in Norman Thelwell's fabulous cartoons.

Shetland sheep ancient breed of small, agile, hardy sheep on the Shetland Islands. There are a wide variety of fleece colors and markings and the wool is desired by hand-spinners.

Shetland sheepdog a small (13–16 inches tall), alert dog with abundant, medium-length haircoat that forms a thick 'mane' around the neck. It may be black and white, black and tan, blue merle, sable or tricolor (black, tan and white). The head is long, narrow and flat in profile with small ears that fold over at the tips. The dog looks like a Collie in miniature. The breed is predisposed to Collie eye anomaly, retinal atrophy, hemophilia, nasal solar dermatitis and iris heterochromia. Called also sheltie, shelty.

Shiba Inu an ancient breed, it is the smallest (17–23 lb) of the Japanese native dogs, it was bred as a hunting dog. A medium-sized, muscular dog with a thick coat in red, sesame or black and tan, all with specified areas of white or cream, mainly on the ventrum. Called also Japanese shiba inu and just Shiba.

shift [*shift*] a change or deviation.

antigenic s. see **antigenic** shift.

chloride s. see **chloride** shift.

degenerative left s. an increase in immature neutrophilic granulocytes, in excess of mature cells of the series, with a normal or increased white blood cell count. A poor prognostic sign, indicating an inability of the bone marrow to respond adequately to infection.

frame s. see frame shift **mutation**.

s. to the left an alteration in the distribution of leukocytes in the peripheral blood in which there is an increase in the numbers of immature neutrophils, primarily band forms but metamyelocytes or more immature cells may also be present; usually in response to an infection. See also degenerative left shift (above).

s. red cell see **macroreticulocyte**.

s. to the right an alteration in the distribution of leukocytes in the peripheral blood in which there is an increased number of mature neutrophils but no immature cells are present.

shiga-like toxins toxins resembling those of *Shigella dysenteriae* Type 1 produced by Shiga-toxin producing *Escherichia coli* (STEC), an emerging group of food-borne pathogens originating in ruminants. The principal virulence factors in the pathogenesis of human infections with these organisms, STEC strains elaborate two potent phage-encoded cytotoxins called Shiga toxins (Stx1 and Stx2). They bind to, and damage, endothelial cells in the intestine, kidney and brain. Lethal to Vero tissue-culture cells and also called verotoxins.

Shigella [*shĭ-gel'ə*] a genus of gram-negative rods in the family *Enterobacteriaceae*. There are four subgroups or species and, although phylogenically not distinct from *Escherichia coli*, they continue to be treated as separate species because of extensive historical usage. The type species, *S. dysenteriae*, causes bacillary dysentery in humans and nonhuman primates. Other animals are resistant to infection, but organisms have been isolated from dogs without clinical signs.

shigella pl. *shigellae*. See ***Escherichia coli*** Shigella and **Shigella**.

shigellosis [*shĭ'gəl-o'sis*] see ***Actinobacillus equuli*** septicemia in foals.

Shih tzu a small (9–16 lb), lively dog with a very short muzzle, broad, round head, large prominent eyes and short ears. The coat is long, straight and flowing in a variety of colors with a white blaze on the face and a white tip on the tail. Called also Chrysanthemum-faced dog. The breed is predisposed to cleft palate and a familial renal cortical hypoplasia.

shin [*shin*] in horses, the large metacarpal and metatarsal bones, especially the dorsal surface.

bucked s's see sore shins (below).

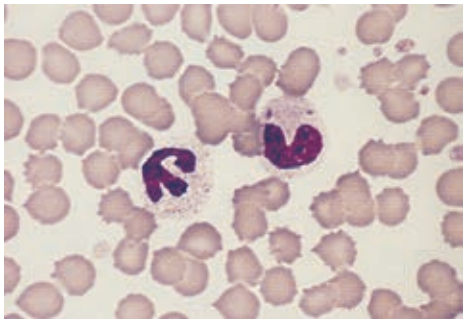
sore s's periostitis of the shins seen most commonly in 2- and 3-year-old thoroughbreds in hard training, mostly in the forelimbs. The horse is lame and worsens with work. In severe cases an enlargement is visible.

Shine–Dalgarno sequence part of the leader sequence preceding the start codon of mRNA that is AGGAGGU or a variant thereof that binds the mRNA to a complementary sequence in the 16S component of rRNA so that translation of the mRNA can proceed.

shingle tick see ***Dermacentor albipictus***.

S-49: Shetland sheep.

S-48: Shetland Pony. From Sambraus HH, Livestock Breeds. Mosby, 1992.



S-50: Canine blood smear showing a shift to the left with a segmented neutrophil (left) with toxic vacuolation and a metamyelocyte (right) with two Döhle bodies. From Willard MD, Tvedten H, Turnwald, GH, Small Animal Clinical Diagnosis by Laboratory Methods, 3rd Edition. Saunders, 1999.

VetBooks.ir

S-51: Shire horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

shipping 1. movement of any livestock to packing plant or feedlot; usually refers to long distance transport by rail. 2. slang phrase for sale to market or packing plant for immediate slaughter. The choice for the outcome in a damaged animal may be to treat or ship.
s. fever see **bovine** respiratory disease; **equine** influenza.
shippon a stable used for the housing of farm animals.
Shire a massive English draft-horse, 17–18 hands high, bay, brown, black, gray, white markings commonly with dark colors; long feather on legs.
Shirley drain surgical drain; see **drain**.
Shirodkar technique a surgical procedure for the correction of cervical incompetence in the mare. Uses a strap of fascia lata buried under the mucosa.
shiver [*shiv'ər*] involuntary shaking of the body, as with cold. It is caused by contraction or twitching of the muscles, and is a physiological method of heat production in all animals.
shivering [*shiv'ər-ing*] see **shiver**, **stringhalt**.
shivers condition of unknown cause in horses characterized by muscle tremors and hyperflexion of the hind limbs and tail seen when the horse is forced to move backwards or to the side, or when the hind foot is lifted, which causes problems in shoeing. The condition is frequently progressive and debilitating.
shochet the operant slaughterer in the Jewish method.
shock [*shok*] a condition of acute peripheral circulatory failure due to derangement of circulatory control or loss of circulating fluid. It is marked by hypotension, coldness of the skin and tachycardia.
allergic s. see **anaphylactic** shock.
s. bodies hyaline globules composed of fibrin degradation products which act as microthrombi and cause hemorrhage and necrosis.
burn s. the loss and redistribution of fluid, electrolytes and plasma protein, increased blood viscosity and increased peripheral resistance that follow a severe burn contribute to shock.
cardiogenic s. classically associated with acute myocardial infarction in humans; in animals may be caused by intrinsic congestive heart failure, cardiac depression caused by anesthetic overdosage or other drugs with negative inotropism, rarely, thromboembolism.
distributive s. see vasogenic shock (below).
electric s. see **electrical** injuries.
electroplectic s. electric shock. See also electrical **stunner**.
endotoxic s. caused by endotoxins, especially *Escherichia coli*. See also **toxemic** shock.
s. gut animals in shock develop changes in the gut including congestion and hemorrhage into the lumen.
hypovolemic s. shock due to reduced blood volume as a result of water deprivation, fluid loss due to diarrhea, vomiting, extensive burns, intestinal obstruction, whole blood loss.
insulin s. a condition of circulatory insufficiency resulting from overdosage with insulin, which causes too sudden reduction of blood glucose. It is marked by tremor, weakness, convulsions and collapse.
irreversible s. shock which has reached the stage where irreparable damage has been done to tissues, e.g. liver, kidneys and treatment will not salvage the patient although it might prolong life for a long time.
s. lung animals in shock due to massive burns, septicemia, disseminated intravascular coagulation (DIC), acute viral or bacterial pneumonias or trauma develop an acute respiratory distress syndrome. The pulmonary lesion is a nonspecific acute or subacute interstitial pneumonia.
nervous s. a temporary cessation of function in nervous tissue caused by an acute insult such as trauma without the part having been directly or detectably damaged. The loss of function is only temporary, usually for a few minutes but it may last for several hours. There may be residual signs due to direct damage when the shock passes. Stunning by a lightning stroke is an example.
obstructive s. circulatory failure caused by physical obstruction, e.g. cardiac tamponade or pulmonary embolism.
s. organs those organs, specific to each animal species, which respond to allergens circulating in the blood.
septic s. see **toxemic** shock.
spinal s. flaccid paralysis up and down the body from the site of a severe spinal cord lesion. Accompanied by a fall in skin temperature, vasodilatation and sweating. Signs disappear within an hour or two. There may be residual signs due to physical injury to tissue. Species variation exists with spinal shock. In humans, signs may persist for several days, whilst in smaller vertebrates signs occur for only minutes following the initial injury.
toxic s. see **toxemic** shock.
vasogenic s., vasculogenic s. shock exists because of the severe reduction in effective circulating blood volume caused by sequestration of blood and other fluids in the vascular system and their withdrawal from the circulating blood. Is the classical shock of traumatic injury, burns, uterine prolapse, extensive surgery.
shoe [*shoo*] a foot covering; see **horseshoe**.
s. covers protective coverings for shoes worn by surgical personnel working in a sterile environment in order to minimize contamination.
shoeing the application of metal shoes; a universal practice in horses. Hot shoeing with shoes made by the local blacksmith has been superseded by machine made shoes fitted cold—cold shoeing. In draft cattle small shoes are applied to each claw. See also **horseshoeing**.
cold s. fitting a horseshoe without heating it in a forge and shaping it exactly to the foot.
s. injury includes paring too much sole, exposing sensitive laminae, nailprick of sensitive laminae, and paring too much lateral wall, causing bleeding at the white line.
Shohl's solution an alkalzing solution containing citrate; previously used to correct electrolyte imbalance in the treatment of renal tubular acidosis.
shomer slaughterer's assistant and stamper of the carcass in the Jewish ritual slaughter procedure.
Shope [*shōp*] named after Richard E. Shope (1901-1966), American virologist.
S. fibroma see Shope rabbit **fibroma**.
S. papilloma caused by a papilloma virus and manifested by gray to black, tall, thin, horny structures on the skin of wild rabbits. The lesions may be on the head, neck, shoulders, abdomen and inside the thighs. The disease is transmissible.
short-bowel syndrome any of the malabsorption conditions resulting from massive resection or congenital absence of the small bowel, the degree and kind of malabsorption depending on the site and extent of the missing segment; it is characterized by intractable diarrhea, steatorrhea and malnutrition.
short-coupled the animal has a short coupling and therefore a compact, usually well-muscled trunk; a prized conformation in a working horse.
short feed see **short keep**.
short hair syndrome a disease of Yorkshire and Australian silky terriers in which the normal, long coat is replaced by a shorter coat with no abnormality in the appearance of the skin. The cause is unknown.
short keep said of steers in a feedlot when they are expected to be fattened for 140 days or less. Called also short feed.
short-tailed a group of breeds of sheep characterized by naturally short tails. It includes the Heath and Marsh breeds of Europe, many Indian and Pakistani breeds, and others of the Indian subcontinent.
short-term behavior patterns behavior patterns which occur for short periods only, e.g. sunset and sunrise eating times, nocturnal estrus display, evening running in feedlot steers and other daily, or at shorter time intervals, activities have a considerable effect on productivity and disease wastage.

S-52: Shorthorn dual-purpose cow.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

short thermal test subcutaneous injection of tuberculin in an animal with tuberculosis results in an abrupt hyperthermia 6–8 hours later. Occasional cows die of what appears to be an anaphylactic reaction.

short-woolled a class of sheep with short fleece wool, e.g. Southdown, Ryeland, Dorset Horn, the Downs breeds.

Shorthorn a breed of red, red-roan, white, red and white, roan and white dual-purpose cattle. Polled varieties exist. Also Dairy Shorthorn, Australian Illawarra Shorthorn, Beef Shorthorn, Milking Shorthorn.

shorts see **pollard**.

shot 1. lead shot; may be eaten by aquatic birds or raptors in sufficient amounts to cause **lead**[1] poisoning. 2. vernacular for injection.

shotgun hunting firearm discharging mostly round lead shot over a wide area. Associated with lead poisoning in ducks that eat the failed shot, pitch poisoning in animals that eat the residues of clay pigeons at shooting ranges, and sometimes wounds in dogs that have the misfortune to be in the line of fire.

s. injuries typically occur in hunting dogs. Depending on the distance from the gun, the wounds range from extensive with much tissue damage to minor, almost undetectable, with the shot becoming imbedded in soft tissue.

s. pharmacy using a number of medicines to treat an animal because of uncertainty in the diagnosis. Called also polypharmacy.

s. procedure cloning DNA fragments in a random manner for a clone library from which fragments can later be selected.

shotty eruption [*shot'e*] round, cystic papules around the tailhead and buttocks of pigs. The lesions are in sweat glands and are thought to be caused by *Eimeria fusca*, a protozoan parasite.

shoulder [*shōl'dər*] the region around the large joint between the humerus and the scapula. The shoulder is a shallow ball-and-socket joint, similar to the hip joint.

s. blade scapula.

s. flexion a fetal postural cause of dystocia; flexion of the shoulder joint results in the affected forelimb, it may be bilateral, is lying back beside the sternum; the shoulder joint prevents entry of the fetus into the pelvic canal.

s. joint the simplest name for the humeral joints. Formally called articulatio humeni.

s. luxation uncommon in most species. Occurs most frequently in dogs and cats associated with trauma.

point of the s. the point over the greater tubercle of the humerus.

slipped s. see **suprascapular** paralysis.

s. tick see ***Ixodes*** *scapularis*.

shovel beak a disease of young chickens up to 8 weeks old characterized by deformity of the beak and caused by feeding on dry mash. There may be secondary infection with *Fusobacterium necrophorum*.

shrew a very small, insectivorous mammal in the family Soricidae. It has a pointed nose, moderately long tail and a very savage disposition.

tree s. primitive arboreal mammal that some taxonomists place with the primates. Like squirrels in shape and size. Called also *Tupaia* spp.

s. virus a rhabdovirus with some antigenic relationship to rabies virus.

shrimp freshwater crustaceans commonly farmed. See *Artemia*, *Penaeus*.

sky blue s. disease see **blue shell syndrome**.

shrink in carcasses loss of weight of carcass, due to loss of fluids, from time of slaughter to sale.

shrinkage [*shring'kəj*] 1. a characteristic of freshly killed meat. Weight loss occurs because of evaporation of moisture from cut surfaces. Humidity of the chilling chamber determines how much shrinkage there is. 2. loss of body weight when live animals are exposed to bad weather, deprivation of feed and water, transportation or mixing with another group.

Shropshire a type of English **Downs sheep**. It has short wool, and is used mainly for meat; it has a black-brown face and legs.

shuffling gait short, uncertain steps, with minimal flexion and toes dragging.

shunt [*shunt*] 1. to turn to one side; to divert; to bypass. 2. a passage or anastomosis between two natural channels, especially between blood vessels. Such structures may be formed physiologically (e.g. to bypass a thrombosis), or they may be structural anomalies. 3. a surgical anastomosis.

arteriovenous (A-V) s. a U-shaped or straight tube inserted between an artery and a vein (usually between the radial artery and cephalic vein), bypassing the capillary network; commonly done to allow repeated access to the arterial system for the purpose of **hemodialysis**.

cardiovascular s. an abnormality of the blood flow between the sides of the heart or between the systemic and pulmonary circulation. The direction of the flow is determined by the pressure and the outflow resistance. See left-to-right shunt (below) and right-to-left shunt (below).

left-to-right s. diversion of blood from the left side of the heart to the right side, or from the systemic to the pulmonary circulation through an anomalous opening such as a septal defect or tetralogy of Fallot.

LeVeen s. a device whose purpose is to remove excess ascitic fluid from the peritoneal cavity and return it to the venous system. Called also peritoneal-venous shunt.

peritoneal-venous s. see LeVeen shunt (above).

pleuroperitoneal s. a catheter placed to transfer pleural fluid into the peritoneal cavity; requires manual pumping.

portacaval s., postcaval s. see **portosystemic** shunt.

reversed s. right-to-left shunt.

right-to-left s. diversion of blood from the right side of the heart to the left side or from the pulmonary to the systemic circulation through an anomalous opening such as septal defect or patent ductus arteriosus.

ventriculoperitoneal s. a surgical procedure used in the treatment of hydrocephalus.

shunted blood blood that has not been fully exposed to the oxygenation and carbon dioxide removal systems.

***Shu* points** see **association points**.

shuttle [*shut'əl*] the transport of electrons or organic groups across biological membranes.

s. system means of transfer of reducing equivalents as NADH and H+ from the cytosol to mitochondria. The two main systems are: α-glycerophosphate shuttle and malate-aspartate shuttle.

shuttle pin [*shut'əl*] a pin for internal fixation of a fractured long bone. See also **Leighton pin**.

shuttle programs [*shut'əl*] programs for providing coccidiostats to poultry and avoiding breakdowns as a consequence because of the development of resistance to the agent. The coccidiostat is changed during the course of a feeding program to one batch of chickens.

Shwartzman phenomenon, Shwartzman reaction [*shwahrts'mən*] a reaction to a second dose of bacterial endotoxin. It may be a local tissue reaction characterized by thrombosis, infarction and hemorrhagic necrosis, or generalized with disseminated intravascular coagulation and bilateral renal cortical necrosis. Called also Shwartzman-Sanarelli reaction.

shy timid.

s. breeder difficult to get pregnant because of timid disposition and disinclination to copulate.

s. feeder fussy, finicky eater; difficult to get to eat a full feed.

shying taking fright easily; said of horses that are startled easily and inclined to take a great leap sideways or to bolt with little provocation.

Si chemical symbol, *silicon*.

SI units the units of measurement generally accepted for all scientific and technical uses. Together they make up the International System of Units. The abbreviation SI, from the French *Système*

VetBooks.ir

International d'Unités, is used in all languages. There are seven base SI units, defined by specified physical measurements and two supplementary units. Units are derived for any other physical quantities by multiplication and division of the base and supplementary units. The derived units with special names are shown in Table 1. SI is a *coherent* system. This means that units are always combined without conversion factors. The derived unit of velocity is the meter per second (m/s); the derived unit of volume is the cubic meter (m^3). If you know that pressure is force per unit area, then you know that the SI unit of pressure (the pascal) is the unit of force divided by the unit of area and is therefore equal to 1 newton per square meter. The metric prefixes can be attached to any unit in order to make a unit of a more convenient size. The symbol for the prefix is attached to the symbol for the unit, e.g. nanometer (nm) = 10^{-9}m. The units of mass are specified in terms of the gram, e.g. microgram (μg) = 10^{-9}kg. Only one prefix is used with a unit. The use of units such as the millimicrometer is no longer acceptable. When a unit is raised to a power, the power applies to the prefix as well, e.g. a cubic millimeter (mm^3) = $10^{-9}m^3$. When a prefix is used with a ratio unit, it should be in the numerator rather than in the denominator, e.g. kilometers/second (km/s) rather than meters/millisecond (m/ms). Only prefixes denoting powers of 10^3 are normally used. Hecto-, deka-, deci- and centi- are usually attached only to the metric system units, gram, meter and liter. Owing to the force of tradition, one noncoherent unit, the liter, equal to 10^{-3} m^3 or 1 dm^3, is generally accepted for use with SI. The internationally accepted abbreviation for liter is the letter l; however, this can be confused with the numeral 1 in typescript. For this reason, the capital letter L is used. The symbols for all other SI units begin with a capital letter if the unit is named after a person and with a lower case letter otherwise. The name of a unit is never capitalized.

Siadenovirus a genus in the family *Adenoviridae* that contains viruses isolated from birds and frogs.

SIADH syndrome of inappropriate secretion of antidiuretic hormone.

sialadenitis [si"əl-ad"ə-ni'tis] inflammation of a salivary gland.

sialadenosis [si"əl-ad"ə-no'sis] noninflammatory swelling of the salivary glands.

sialagogue [si-al'ə-gog] an agent that stimulates the flow of saliva.

sialectasia [si"əl-ek-ta'zhə] dilatation of a salivary duct.

sialic [si-al'ik] 1. pertaining to saliva. 2. pertaining to sialic acid.

sialic acid [si-al'ik] nine carbon monosaccharide acetylated derivative of neuraminic acid; a generic term for *N*- and *O*-substituted neuraminic acids.

sialine [si'ə-lin] pertaining to the saliva.

sialismus [si"əl-iz'məs] ptyalism.

sialisosis see **mucolipidosis**.

sialitis [si"ə-li'tis] inflammation of a salivary gland or duct; in guinea pigs may be caused by a cytomegalovirus.

sial(o)- word element. [Gr.] *saliva, salivary glands*.

sialoadenectomy [si"ə-lo-ad"ə-nek'tə-me] excision of a salivary gland.

sialoadenitis [si"ə-lo-ad"ə-ni'tis] inflammation of a salivary gland.

sialoadenotomy [si"ə-lo-ad"ə-not'ə-me] incision of a salivary gland.

sialoaerophagia [si"ə-lo-ār-of'ə-je] the swallowing of saliva and air.

sialoangiectasis [si"ə-lo-an"je-ek'tə-sis] dilatation of a salivary duct.

sialoangiitis [si"ə-lo-an"je-i'tis] inflammation of a salivary duct.

sialoangiography [si"ə-lo-an"je-og'rə-fe] radiography of the ducts of the salivary glands after injection of radiopaque material.

sialocele [si'ə-lo-sēl"] a salivary cyst; see salivary **mucocele**.

sialodacryoadenitis [si"ə-lo-dak"re-o-ad"ə-ni'tis] severe, transient inflammation of the salivary and ophthalmic glands in suckling rats caused by a coronavirus. Affected animals have exophthalmos, swelling of the face and neck and red pigmentation around the eyes due to porphyrins excreted in the tears. There may be a secondary conjunctivitis and keratitis.

sialodentitis inflammation of salivary glands.

sialodochitis [si"ə-lo-do-ki'tis] inflammation of a salivary duct.

sialodochoplasty [si"ə-lo-do'ko-plas"te] plastic repair of a salivary duct.

sialoductitis [si"ə-lo-dək-ti'tis] sialoangiitis.

sialogen an agent that induces salivation.

sialogenous [si"ə-loj'ə-nəs] producing saliva.

sialogogue [si-al'o-gog] sialagogue.

sialogram [si-al'o-gram] a film obtained by sialography.

sialography [si"ə-log'rə-fe] radiographic demonstration of the salivary ducts by means of the injection of substances opaque to X-rays.

sialolith [si-al'o-lith] a salivary calculus.

sialolithiasis [si"ə-lo-lĭ-thi'ə-sis] the formation of salivary calculi.

sialolithotomy [si"ə-lo-lĭ-thot'ə-me] excision of a salivary calculus.

sialometaplasia [si"ə-lo-met"ə-pla'zhə] an uncommon disease of the mandibular salivary glands in dogs. There is swelling, severe retropharyngeal pain, dysphagia and vomiting.

sialomucin [si"ə-lo-mu'sin] heterogeneous group of mucopolysaccharides containing sialic acid having functions both as anti-adhesive agents and as adhesion receptors.

sialoprotein [si"ə-lo-pro'tēn] glycoproteins containing sialic acid.

sialorrhea [si"ə-lo-re'ə] ptyalism.

sialoschesis [si"ə-los'kə-sis] suppression of secretion of saliva.

sialosis [si"ə-lo'sis] 1. the flow of saliva. 2. ptyalism.

sialostenosis [si"ə-lo-stə-no'sis] stenosis of a salivary duct.

sialosyrinx [si"ə-lo-si'rinks] 1. salivary fistula. 2. a syringe for washing out the salivary ducts, or a drainage tube for the salivary ducts.

siamang (*Symphalangus syndactylus*) largest of the gibbons, native to Southeast Asia; noted for its large gular sac which is inflated with air to amplify their vocalizations, called songs.

Siamese cat a medium-sized, svelte breed of domestic cats with blue eyes, and short hair with a distinctive pattern of pigmentation. Due to the presence of a color-limiting gene, the body is lightly pigmented while the face, ears, tail and legs are more intensely colored. The distribution corresponds to differences in skin temperature so that only in cooler areas is pigmentation fully developed. Several color varieties exist including seal-point (dark brown), blue, lilac, chocolate, red, tabby, cream and tortie. Siamese are also renowned for their loud, often demanding, manner of vocalizing. The breed is affected by mucopolysaccharidosis and sphingomyelinosis.

S. c. disease once used to refer to nutritional secondary **hyperparathyroidism** because of the prevalence of that disease in this breed, probably exaggerated by the popularity of the breed.

Siamese fighting fish ***Betta splendens***.

Siamese twins see Siamese **twins**.

sib [sib] 1. a blood relative; one of a group of animals all descended from a common ancestor. 2. sibling.

half-s. see half **sibling**.

s. mating brother mated to sister.

Siberian 1. a handsome breed of rabbits with distinctive rollback or blanket fur which looks as though it has been shorn. Its color can be black, blue, brown or lilac; its weight is about 6 lb. 2. a breed of medium to large sized cat, rare outside Russia, with a long, triple coat in any color.

Siberian husky a medium-sized (35–60 lb), muscular dog with a medium length, thick, double coat in a variety of colors and often dark markings on the head. The prominent ears are erect and the eyes are blue or brown, often not the same, and frequently show iris heterochromia. The tail is fox brush shape and usually carried over the back. Called also Arctic husky. The breed is predisposed to corneal dystrophy, cataracts and congenital laryngeal paralysis.

sibilant [sib'ĭ-lənt] shrill, whistling or hissing.

sibling [sib'ling] any of two or more offspring of the same parents; a brother or sister.

half s. animals with only one parent in common, i.e. the same sire or dam.

sibship [sib'ship] a group of animals born of the same parents.

siccant [sik'ənt] 1. drying; removing moisture. 2. an agent that produces drying.

siccus [sik'əs] [L.] *dry*.

Sicilian ass an Italian donkey, almost black, with pale muzzle and belly. Can be gray.

sick [sik] not in good health; ill; afflicted with disease.

s. sinus syndrome (SSS) a complex cardiac arrhythmia manifested as severe sinus bradycardia alone, sinus bradycardia alternating with tachycardia, or sinus bradycardia with atrioventricular block.

sickle cell a crescentic or sickle-shaped erythrocyte. In humans, the abnormal shape is caused by a structural hemoglobinopathy. Sickle cells are found in normal members of the family Cervidae (deer).

sickle hocks the hock joint has too acute an angle and the foot is carried too far forward and the metatarsus is not vertical but is inclined forward distally. It is a serious defect because of the likelihood of arthrosis in the joint.

VetBooks.ir

sickle shin deformity of the tibia and fibula in osteoporotic primates, accompanied by pathological fractures, paraplegia and kyphosis.
sickled erythrocyte see **sickle cell**.
sicklepod ***Senna obtusifolia***.
sickling [sik'ling] the development of sickle cells in the blood.
sickness [sik'nis] the role assumed by ill humans; not a term applicable to animals.
SID single intradermal test for tuberculosis.
side [sīd] to one side.
s. bar see **siderod**.
s. effect see side **effect**.
s. lines a means of restraining a horse which can also be used for casting. A 60 ft cotton rope is knotted so that there is a fixed loop in the center. This is placed over the head and seated on the shoulder and the two ends passed between the forelimbs. Each rope end is passed around a hind pastern and brought back to the shoulder loop. Pulling one of the legs up so that the hoof just reaches the ground is used as restraint to prevent the horse rearing. Pulling both legs forward causes the horse to fall.
side chain commonly referred to as −R; group that confers specific identity to compounds, particularly amino acids.
side-to-side anastomosis a method for establishing continuity between two blood vessels or segments of gut, whose ends have been closed. The resultant opening is wider than an end-to-end anastomosis.
sidebone [sīd'bōn] ossification of the alar cartilages of the third phalanx of the foot of horses. Attention is usually drawn to the disease by lameness but it is possible for the lesion to be far-advanced and the gait to be normal. There may be obvious enlargement at the site and the cartilages can be felt to have lost their flexibility.
Sideranthus North American plants in the family Asteraceae; includes *S. grindeloides*; facultative accumulators of selenium and can cause poisoning by selenocompounds which cause alopecia, lameness, laminitis, hoof deformity, diarrhea. Called also ironweed.
sider(o)- word element. [Gr.] *iron*.
sideroblast [sid'ər-o-blast"] a nucleated erythrocyte containing iron granules in its cytoplasm.
siderocalcinosis deposition of iron salts with calcium in tissues, principally blood vessels. Seen in the cerebral arteries of aged horses. Called iron ring.
siderochrome siderophore.
siderocyte [sid'ər-o-sīt"] a red blood cell containing iron-positive, focal basophilic stippling, *siderotic inclusions*. Seen in dogs with lead poisoning and types of hemolytic anemia.
siderod rod attached at one end to the headstall and at the other end to a roller or surcingle; it prevents a horse from biting at a hindlimb.
siderofibrosis [sid"ər-o-fi-bro'sis] fibrosis associated with deposits of iron.
sideroleukocyte [sid"ər-o-loo'ko-sīt] a neutrophil or macrophage containing hemosiderin; associated with intracellular hemolytic anemia.
s. test staining a smear of concentrated leukocytes with potassium ferrocyanide to demonstrate hemosiderin and ferritin. In the past, used as a general test for equine infectious anemia.
sideropenia [sid"ər-o-pe'ne-ə] deficiency of iron in the body or blood.
siderophil [sid'ər-o-fil"] 1. siderophilous. 2. a siderophilous cell or tissue.
siderophilin [sid"ər-of'i-lin] transferrin.

S-53: Bones from horse with sidebone.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

siderophilous [sid"ər-of'i-ləs] tending to absorb iron.
siderophore [sid'ər-o-for"] a macrophage containing hemosiderin.
siderosis [sid"ər-o'sis] 1. a form of **pneumoconiosis** due to the inhalation of iron or other metallic particles. 2. excess of iron in the blood. 3. the deposit of iron in the tissues.
hepatic s. the deposit of an abnormal quantity of iron in the liver.
urinary s. the presence of hemosiderin granules in the urine; hemosiderinuria.
siderotic [sid"ər-ot'ik] emanating from or pertaining to siderosis.
s. nodule see **Gamma–Gandy body**.
s. pigmentation of neurons situated close to contusions and hemorrhages; caused by encrustation of the cells by basophilic complexes of iron, calcium and phosphorus.
sidewheel see **pace**.
sidewinder [se'mənz] see **rattlesnake.**
siemens (S) [se'mənz] the SI unit of conductivity, equal to one reciprocal ohm (Ω^{-1}). Called also mho.
Sievert (Sv) [se'vərt] the SI unit of radiation absorbed dose equivalent, defined as that producing the same biological effect in a specified tissue as 1 gray of high-energy X-rays. 1 sievert equals 100 rem.
sig. [L.] *signa* (mark); see **signa**.
sIgA secretory immunoglobulin A (IgA).
Sigesbeckia orientalis plant member of family Asteraceae; can cause nitrate–nitrite poisoning.
Siggaard-Andersen nomogram a nomogram used to determine the base excess concentration of a blood sample from its pH and Pco_2 values.
sigh [si] complementary breathing cycles characterized by a quick, deep inspiration followed by a slower expiration; probably a compensatory mechanism to counter poor ventilation.
sight [sīt] 1. the act or faculty of **vision**, involving the eye itself, the optic nerve, optic tracts, optic radiations, and occipital (visual) cortex of the brain. 2. a thing seen.
s. hound see **hound**.
sigma the eighteenth letter in the Greek alphabet, Σ or σ; the former frequently denotes a standard deviation, the latter is used in mathematics for the sum of the values of the term nominated.
sigmoid [sig'moid] shaped like the letter C or S.
s. colon the distal part of the colon of some species, such as humans, shaped like an S, from the level of the iliac crest to the rectum.
s. curve an S-shaped curve of the relationship between two variables.
s. flexure of the penis situated in the bull's penis dorsal and caudal to the scrotal neck.
sigmoidal kinetics property of allosteric enzymes which are usually multisubunit enzymes with multiple active sites. Exhibit cooperativity in substrate binding and regulation of their activity by other effector molecules.
sign [sīn] any objective evidence of disease or dysfunction recognizable by the veterinarian. Symptoms, the subjective sensations experienced by human patients, are not definable in veterinary medicine and the term has no application to veterinarians.
cardinal s's of greatest significance to the veterinarian; establishing the identity of the illness. Shown in abnormalities of the temperature, pulse and respiration. **Key sign** is a more appropriate expression for the important signs in a particular case on which the clinician will base his or her diagnosis.
presenting s's the signs or group of signs about which the client complains or from which relief is sought.
withdrawal s's those following sudden abstinence from a drug on which a patient is dependent.
sign test a nonparametric statistical test based on the comparison of the signs of the differences between paired values.
signa [sig'nə] [L.] *mark, write*; abbreviated sig. in prescriptions, followed by the **signature**.
signal 1. audible or visible indications to animals in behavioral conditioning. Many signals have had long-term use in the animal world and are used worldwide. Whoa and Getup, Heel and Sit are common examples. Getawayback is perhaps more colloquial. Many sheepdogs are trained to react to whistles and performing animals are usually trained to react to gestures with the hand. 2. electrochemical communication in the body; transfer of information from cell to cell and within cells.
s. peptidase an integral membrane protein located on the luminal surface of the endoplasmic reticulum that cleaves the signal peptide and frees the protein for folding and export.

VetBooks.ir

s. peptide short peptide sequence, usually at the *N*-terminal of proteins, that binds to the signal recognition particle and directs the ribosome to the endoplasmic reticulum; the peptide sequence that targets newly synthesized proteins to the correct subcellular organelles. Normally removed from the mature protein by signal peptidase. See also signal **sequence**.

s. recognition particle (SRP) a particle composed of six different proteins and one small (7S) RNA that binds to the signal peptide as it emerges from the ribosome, temporarily halting the synthesis of the protein while the complex is transported to the endoplasmic reticulum where the SRP recognizes and docks to a docking protein located on the cytoplasmic surface followed by the transfer of the ribosome to a ribosome receptor on the membrane; the SRP and its docking protein are released from the ribosome and translation resumes.

s. transduction process by which cells transduce one type of signal into another via intracellular signal transduction pathways involving enzymes and second messengers.

s. transduction proteins proteins which may be a protein kinase, an ion channel forming protein (as in nerve cells), or a protein that undergoes some energy dependent change in which the energy is supplied by the hydrolysis of a higher energy compound such as guanosine triphosphate.

signal grass ***Brachiaria*** *brizantha*, *B. decumbens*.

signal sequence see signal **sequence**.

signal-to-noise ratio the ratio of a specific response, e.g. counts per minutes (cpm) from a radiolabeled substance, to the background cpm; the latter is substracted from the former to give the value of the specific response.

signaling molecules [*sig'nəl-ing*] substances synthesized by cells for purposes of extracellular communication between cells.

signalment [*sig'nəl-mənt*] that part of the veterinary medical history dealing with the animal's age, sex and breed.

signature [*sig'nə-chər*] that part of a drug prescription that gives directions to be followed by the patient in its use.

root s. see **root** signature.

significance the quality of an assessment about the relationship between two or more values of a variable. Significance is achieved if the relationship is more common than would be achieved by a random selection.

significant [*sig-nif'ĭ-kənt*] said of an experimental result when it is greater than would be expected by chance. The degree of the significance can be expressed as a percentage, given the likely probability of the results occurring.

s. digit the number of decimal places for which the result is accurate.

Sigurdsson vaccine a vaccine composed of killed ***Mycobacterium*** *avium* subspecies *paratuberculosis* organisms historically used in the prevention of Johne's disease in sheep.

Sikh slaughter a method in which conscious sheep and goats are decapitated by a single blow of a special sword; used in India. Provided a special sword is used buffalo can be dealt with in the same way. Called also Jakta method.

silage the major compopnent of feeds for dairy cattle because of potentially lower harvest and storage nutrient losses and greater flexibility in feed harvesting. Green feed harvested and stored with high moisture and preserved by packing to remove oxygen and encouraging primary anaerobic fermentation to a sufficient level of acetic acid to keep a low pH. Good ensilage keeps well for several years and has high nutritive value and palatability. Some silage adjuvants (acids) or inoculants (for example *Lactobacillus bucheri*) are available to encourage proper fermentation. Stored in upright sealed silos; in silage bunkers or as large piles on a concrete raft, in both cases covered with heavy mil plastic and weighed down by tires; or in large plastic tubes (tube silage) or as round bales wrapped in plastic (bale silage, wrapped silage). Called also ensilage. See also **pyrexia**-pruritus-hemorrhage syndrome.

s. density term for compactness of silage, indicative of degree of packing and elimination of oxygen.

s. disease see **listeriosis**.

s. eye see **listeriosis**.

s. fermentation profile laboratory analysis of fermentatiion quality. Usually measures the pH, titratable acidity, moisture, ammonium nitrogen; and lactic, acetic, proprionic and butyric volatile fatty acids. Lactic acid should be the predominant VFA. Excessive acetic, proprionic or butyric acid and ethanol indicate poor fermentation and poor quality silage. Excessive butyric acid can result in dietary ketosis.

s. packing eliminates oxygen and determines silage density. Usually done with a heavy tractor in bunker silos and influenced by filling time for the bunk, packing time, weight of tractor, and particularly by forage moisture content and cut particle size (fiber length). Poorly packed silage is at greater risk for abnormal fermentation and is less stable with storage.

s. pH good silage quality is related to a rapid and sustained fall in pH during early anaerobic fermentation. Corn silage should have a pH of 3.5–4.2 and grass silage should be 4–4.8. High pH increases the risk for growth of *Listeria* spp. and high pH with a high moisture content clostridial fermentation and proteolysis.

s. poisoning. 1. overfeeding on silage may cause indigestion. Usually the result of a heavy feeding program and a shortage of hay so that the roughage supply is entirely silage. 2. a silage containing more than the usual proportion of butyric acid may predispose to ketosis. 3. silage containing a thriving population of *Listeria monocytogenes* may cause that disease when fed out.

Silastic [*sĭ-las'tik*] trademark for polymeric silicone substances having the properties of rubber; it is biologically inert and used in surgical prostheses, and Silastic tubing is used for temporary implants in tissue, e.g. for suprapalpebral irrigation of the conjunctival sac.

sildenafil [*sil-den'ə-fil"*] a phosphodiesterase-5 inhibitor used mainly for erectile dysfunction in humans, but its activity as an arteriolar dilator in pulmonary vasculature is utilized in the treatment of pulmonary hypertension in humans and dogs.

silent [*si'lənt*] produces no audible sound.

s. estrus see silent heat (below).

s. heat the behavior pattern in which the animal gives no behavioral signals that an ovarian follicle is maturing and rupturing although it is doing so or has just done so. Called also silent estrus.

s. lung breath sounds absent on auscultation; occurs over collapsed lung or lung shielded by fluid, pus, solid tissue.

Siley tracheostomy tube a cuffed tube with removable inner cannula.

silhouette [*sil"ə-wet'*] outline of a figure. The sharpness of the silhouette is a function of the shape, size and density of the object. This is most marked in radiography.

basketball-shaped s. the enlarged cardiac outline seen in the dorsal–ventral view of the thorax in a dog with chronic pericardial effusion.

s. sign produced when two fluid densities are contiguous and the individual outline of each is lost. Commonly used in the evaluation of chest problems.

silica [*sil'ĭ-kə*] silicon dioxide, a compound occurring naturally as quartz and in other forms. A common constituent of urinary calculi in agricultural animals, a rare occurrence in dogs.

s. calculi see silica **urolith**.

s. gel commonly used in the laboratory as a desiccant; has been used topically on dogs and cats for flea control.

silicate [*sil'ĭ-kāt*] a salt of any of the silicic acids.

siliceous [*sĭ-lish'əs*] relating to or made of silica or a silicate.

silicon (Si) [*sil'ĭ-kon*] a chemical element, atomic number 14, atomic weight 28.086. See Table 4. See also **silica**.

silicone [*sil'ĭ-kon*] any organic compound in which all or part of the carbon has been replaced by silicon. Silicones are applied to glassware used for administering blood transfusions or for collecting blood for laboratory tests based on whole blood, and are important industrial lubricants.

silicosis [*sil"ĭ-ko'sis*] deposits of inert dust in the lungs of animals; very rare because of lack of exposure of animals to such a polluted environment.

silk [*silk*] continuous, protein filament produced by the larvae of *Bombyx mori*, the white silkworm moth. Used as a **suture** material.

Silkie a bantam with white, curly feathers, a prominent crest of feathers, rose comb and a black skin and legs.

Silky terrier a small (8–10 lb), blue or gray with tan, silky-haired dog, larger but resembling a Yorkshire terrier. Called also Australian silky terrier, Sydney silky terrier.

silo an airtight and insect-proof container used to store agricultural products and to make ensilage. May be made of concrete, rarely of brick, or of glass-lined steel or be a hole dug in the

ground, or two parallel barricades lined with plastic. Those used for grain storage need only to be insect-proof and airtight. Those used for ensilage making need also to be resistant to the corrosive effect of the acids produced during anaerobic fermentation. See also **ensilage**.

s. gas nitrogen dioxide.

silo-filler's disease pulmonary inflammation of humans, often with acute pulmonary edema, due to inhalation of the irritant gases (especially oxides of nitrogen) which collect in recently filled silos. Often quoted as a disease similar to atypical interstitial pneumonia of cattle.

Silpha genus of the family of Silphidae of carrion beetles which infest pigeon droppings. Their larval maggots may invade the skin of live squabs.

SILS *S*ingle *I*ncision *L*aparascopic *S*urgery. A technique by which laparoscopic surgery can be performed through a single small incision.

silver (Ag) [*sil'vər*] 1. a chemical element, atomic number 47, atomic weight 107.870. See Table 4. It is used in medicine for its caustic, astringent and antiseptic effects. Experimental poisoning with silver salts causes myopathy. 2. a coat color in dogs, foxes.

s. grass ***Aristida*** *contorta*.

s. halide any of the silver salts with halogens including bromine, chlorine, iodine used in photographic emulsion.

s. iodide soluble silver salt used in cloud seeding but presents no toxicological risk to local grazing cattle.

s. nitrate colorless or white crystals, used as a caustic and local anti-infective.

s. nitrate (toughened) a mixture of silver nitrate with hydrochloric acid, sodium chloride or potassium nitrate, occurring as white crystalline masses molded into pencils or cones, called caustic pencils; a convenient means of applying silver nitrate locally. Called also lunar caustic.

s. protein silver made colloidal by the presence of, or combination with, protein; an active germicide with a local irritant and astringent effect.

s. weed see ***Potentilla anserina***.

silver dollar spots subcutaneous edematous patches up to 10 cm diameter and 1 cm thick on the skin of some horses with dourine, occurring particularly over the ribs. Present for 3–7 days and pathognomonic for the disease, but do not occur in all cases. See **dourine**.

Silver fox a medium-sized (9–10 lb), commerical breed of rabbits with long, coarse black fur with silver ticking that stands out from the body.

Silver rabbit small (5–6 lb), well-fleshed rabbit with a black, brown or fawn coat with silvering of the tips of the hair. See also **Silver fox**, another breed with a similar hair coat.

silver trevally *Pseudocaranx dentex*.

silverling see ***Baccharis***.

Silverman's needle [*sil'vər-mən*] an instrument for taking tissue specimens. See also **Franklin–Silverman biopsy needle**.

silvex a weedkiller, warranted to be safe for animals at the concentrations used to spray plants. Poisoning can be produced experimentally. Characterized by depression, anorexia, weakness especially of the hindquarters. May cause an increase in nitrate content of plants and lead to nitrite poisoning in ruminants. Use of this compound has been discontinued.

Silybum marianum [*sil'ĭ-bəm*] plant member of the family Asteraceae; has a very high feed value but a high nitrate content. May cause nitrate–nitrite poisoning in ruminants. Its potent extract, **silymarin**, has found uses in herbal medicine. Called also *Carduus marianus*, variegated thistle, milk thistle, bull thistle, St. Mary's thistle.

silymarin a mixture of three compounds, silibinin, silydianin and silychristine, extracted from milk thistle, *Silybum marianum*; thought to have an hepatoprotective effect and used in herbal medicine to treat liver disease.

Simarouba amara a tree in the plant family Simaroubaceae; unidentified toxin in wood shavings has caused stomatitis and dermatitis in dogs. Called also bitter damsoe, caixeta, marupa.

simazine [*si'mə-zēn*] a triazine weedkiller that is toxic if livestock are allowed access shortly after the plants have been sprayed. Signs of toxicity include staggering in sheep and colic in horses.

Simbu virus group antigenically related viruses in the Bunyamwera virus group in the *Bunyavirus* genus; includes Akabane virus.

simethicone [*sĭ-meth'ĭ-kōn*] an antiflatulent substance consisting of a mixture of dimethyl polysiloxanes and silica gel. Called also activated dimethicone.

Simford an Australian breed of beef cattle produced by crossing animals of Hereford and Simmental breeds.

simian [*sim'e-ən*] 1. member of the suborder *Anthropoidea* that includes the monkeys and apes; called also 'higher primates'. 2. ape-like.

s. acquired immune deficiency syndrome (SAIDS) a retrovirus-induced immune deficiency, similar to human acquired immune deficiency syndrome (AIDS).

s. exogenous type D retrovirus see simian acquired immune deficiency syndrome (above).

s. hemorrhagic fever a highly fatal disease of macaques, caused by an arterivirus. It is characterized by edema, hemorrhages and diarrhea.

similars see **law** of similars.

Simmental dual-purpose Swiss cattle, reddish dun or yellow and white in color. There are many varieties throughout Europe. Black Simmental is a black variant.

S. hereditary thrombopathy see hereditary **thrombocytopathy**.

Simmonds' disease [*zim'əndz*] panhypopituitarism in which cachexia is a prominent feature; called also pituitary cachexia. It follows the destruction of the pituitary gland by surgery, infection, injury or tumor.

Simmondsia chinensis a shrub in the plant family Simmondsiaceae; oil is extracted from its fruit; the meal resulting from oil extraction if fed to breeder chickens interferes with normal maturation of oviducts causing complete absence of egg production. Called also jojoba, goat nut, pig nut.

Simondsia paradoxa member of the nematode family Thelaziidae. A thick white stomach worm of pigs. Causes chronic gastritis but unlikely to have any effect except perhaps to reduce growth rate.

Simonsiella muelleri gram-negative bacteria that form very long, flat filaments (up to 1 mm in length). Common, nonpathogenic inhabitant of mouths of animals.

simplexin diterpenoid daphnane ester responsible for toxic effects of *Pimelea* spp.

Simplexvirus [*sim'pleks-vi"rəs*] a genus in the subfamily *Alphaherpesvirinae* which includes human herpes simplex viruses 1 and 2 and bovine herpesvirus 2.

simuland characteristic of a real life system.

simular characteristic of a simulation model.

simulation [*sim"u-la'shən*] 1. imitation of a system such as an ecological or farming system by a series of mathematical formulae. 2. the act of running a model. 3. the imitation of one disease by another.

s. model mathematical models of dynamic processes which include combinations of mathematical and logical processes. They are generally used to compare several solutions to a problem.

simulid see ***Simulium***.

Simulium [*si-mu'le-əm*] a genus of insects in the family Simuliidae causing insect worry with livestock. Cutaneous lesions may include vesicles and wart-like papules, and edema and petechiation of thin-skinned, ventral areas. Poultry may be affected by anemia. The species also transmits a number of animal diseases including the viruses of vesicular stomatitis and eastern equine encephalomyelitis, the protozoa, *Leucocytozoon* and *Haemoproteus* spp., and are intermediate parasites for some *Onchocerca* spp. Called also black fly, buffalo gnat. There are a large number of species distinguished largely by their geographic

S-54: Simmental dairy cow.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

distribution: *S. arcticum*, *S. callidum*, *S. columbaczense*, *S. damnosum*, *S. erythrocephalum*, *S. indicum*, *S. metallicum*, *S. neavei*, *S. ochraceum*, *S. ornatum*, *S. pecuarum*, *S. rugglesi*, *S. venustum*.

SIMV synchronized intermittent mandatory ventilation.

sinalbin [*sin-al'bin*] the glycoside in the seeds of white mustard (*Sinapis alba*) which is converted to isopropyl isothiocyanate and sinapine sulfate which can cause gastroenteritis manifested by abdominal pain and diarrhea.

sinapine sulfate one of the toxic agents produced by the metabolism of sinalbin, a glycoside in mustard seed.

Sinapis [*sin'ə-pis*] plant genus in the family Brassicaceae. The mustards. Cause poisoning due to sinalbin, sinigrin, mustard oil glucosinolates concentrated in the seeds, poisoning manifested by abdominal pain and diarrhea. Foliage can also cause nitrate–nitrite poisoning. Includes *S. alba* (white mustard, commercial mustard *Brassica hirta*), *S. arvensis* (*B. kaber*, wild mustard, charlock—a common weed of cultivation).

sinciput [*sin'sĭ-pət*] the upper and front part of the head.

Sinclair miniature swine developed in Minnesota, USA, specifically for the purpose of research.

sinew [*sin'u*] a tendon.

Singapura a native cat of Singapore; a small cat with a short sepia-colored coat with dark brown ticking. The eyes are hazel, green or yellow.

singeing flash application of flame to remove residual, esthetically unattractive hairs from poultry and pig carcasses.

Singer–Nicolson membrane model major current model of membrane structure. Incorporates a fluid mosaic structure whose major features include a discontinuous lipid bilayer composed predominantly of phospholipids, and proteins (often glycoproteins) that are integral to the structure, and peripheral proteins that are not essential to reassembly of a functional membrane.

Singhfilaria hayesi a tissue-dwelling nematode found in tissues around the crop and trachea of quail, turkeys in USA.

single-blind study see **blinding**.

single-foot a fast, four-beat walking gait, short of a trot. Only one foot is on the ground at a time. See also broken **amble**.

singultus [*sing-gul'təs*] hiccup.

sinigrin [*sin'ĭ-grin*] a toxic glycoside in the seed of *Sinapis nigra* (black mustard). Converted by the enzyme myrosin to allylisothiocyanate, the volatile oil of mustard.

sinister [*sĭ-nis'tər*] [L.] *left;* on the left side.

sinistrad [*sĭ-nis'trad*] to or toward the left.

sinistral [*sin'is-trəl*] pertaining to the left side.

sinistr(o)- word element. [L.] *left, left side*.

sinistrocardia [*sin"is-tro-kahr'de-ə*] levocardia.

sinistrocerebral [*sin"is-tro-ser'ə-brəl*] situated in the left hemisphere of the brain.

sinistrogyration [*sin"is-tro-ji-ra'shən*] a turning to the left.

sinistrotorsion [*sin"is-tro-tor'shən*] a twisting toward the left, as of the eye.

sinker syndrome a severe form of **laminitis** in horses; refers to rotation downward of the distal phalanx seen on radiographs. See also **pedal** bone rotation. Called also fatal sinker syndrome.

sinoatrial (S-A, SA) [*si"no-a'tre-əl*] pertaining to the sinus venosus and the atrium of the heart or to the sinoatrial node.

s. block an absence of a discharge from the sinoatrial node. The heart is regular unless there is an underlying atrial arrhythmia. Considered to be within the limits of normality provided it disappears with exercise.

s. node a collection of atypical muscle fibers and nerve endings in the wall of the right atrium, adjacent to the sulcus terminalis, where the rhythm of cardiac contraction is usually established; therefore also referred to as the pacemaker of the heart. Called also sinoatrial bundle, Keith's node, Keith–Flack node.

sinography [*si-nog'rə-fe*] radiography of a sinus tract using a contrast medium.

Sinostrongylus see ***Caballonema***.

sinuotomy sinusotomy.

sinuous [*sin'u-əs*] bending in and out; winding.

sinus [*si'nəs*] 1. a recess, cavity, or channel, as (a) one in bone or (b) a dilated, valveless channel for venous blood. 2. an abnormal channel or fistula, permitting escape of pus. In common, unqualified usage, the word sinus refers to any of the cavities in the skull that are connected with the nasal cavity—the paranasal sinuses.

anal s's furrows, with pouchlike recesses at their distal ends, separating the rectal columns; called also anal crypts.

basilar s. a dural venous sinus which runs on the floor of the cranial cavity and out through the foramen magnum.

blood s. see **blood sinus**.

carotid s. the slightly dilated portion of the internal carotid artery found near the subdivision of the common carotid into its two main branches and which contains baroreceptors.

cavernous s. an irregularly shaped venous channel between the layers of dura mater of the brain, one on either side of the body of the sphenoid bone and communicating across the midline. Several cranial nerves and, when present, the rete mirabile, course through this sinus.

cavernous s. syndrome syndrome characterized by deficits in more than one of the cranial nerves that traverse the cavernous sinus at the base of the cranial vault: cranial nerve III (oculomotor), IV (trochlear), VI (abducens), and the first two branches of cranial nerve V (trigeminal). Clinical signs include ophthalmoplegia, mydriasis, ptosis and partial loss of sensation around the face. Vision is usually spared.

cerebral s. one of the ventricles of the brain.

cervical s. a temporary depression in the neck of the embryo containing the branchial arches.

circular s. the venous channel encircling the pituitary gland, formed by the two cavernous sinuses and the anterior and posterior intercavernous sinuses.

conchal s. cavity of the conchal bone.

coronary s. the terminal portion of the great cardiac vein, which lies in the cardiac sulcus between the left atrium and ventricle, and finally empties into the right atrium.

dermoid s., dermal s. see **dermoid** sinus.

dorsal sagittal s. a large dural venous sinus located within the falx cerebri.

dura mater venous s. large channels for venous blood forming an anastomosing system between the layers of the dura mater of the brain.

ethmoidal s. that paranasal sinus consisting of the ethmoidal cells collectively, and communicating with the nasal meatuses.

facial s. see **malar** abscess.

frontal s. one of the paired paranasal sinuses in the frontal bone, each communicating with the middle meatus of the ipsilateral nasal cavity.

hair s. see sinus **hair**.

infraorbital s. 1. an air-filled recess in the head of birds which lies lateral to the nasal cavity into which it opens. 2. the cutaneous pouch below the eye of sheep and some other ruminants. Called also *sinus infraorbitali*.

intercavernous s. channels connecting the two cavernous sinuses, one passing anterior and the other posterior to the stalk of the pituitary gland.

interdigitalis s. the cutaneous pouch that lies between the claws of sheep and some other ruminants and whose wall contains apocrine glands, and whose duct discharges onto the skin just above the coronets; it serves as a trail gland. Called also *sinus interdigitalis*.

lymphatic s. irregular, tortuous spaces within lymphoid tissues through which lymph flows.

maxillary s. one of the paired paranasal sinuses in the body of the maxilla on either side, opening into the middle meatus of the ipsilateral nasal cavity. In the horse it is divided into two compartments that communicate independently with the nasal chambers. All other sinuses of the horse communicate with the nasal chambers via the caudal maxillary sinus.

nasal s. see paranasal sinuses (below).

s. nerve a branch of the glossopharyngeal nerve; carries the afferent fibers of the stretch receptors in the wall of the carotid sinus.

s. node see **sinoatrial** node.

occipital s. a venous sinus between the layers of dura mater, passing along the midline of the cerebellum.

paranasal s's mucosa-lined air cavities in bones of the skull, communicating with the nasal cavity and including ethmoidal, frontal, maxillary and sphenoidal sinuses.

petrosal s. (inferior) a venous channel arising from the cavernous sinus and draining into the internal jugular vein.

petrosal s. (superior) one arising from the cavernous sinus and draining into the transverse sinus of the dura mater.

S

prostatic s. the dorsolateral recess between the seminal colliculus and the wall of the urethra.
pulmonary trunk s. any one of the three dilations of the pulmonary trunk at its origin from the right ventricle, adjacent to each of the cusps of the pulmonary valve.
red pulp s. vascular storage in the spleen into which capillaries empty.
s. reflex arc afferent fibers are in the sinus nerve; these connect with the cardioinhibitory and vasomotor centers which control blood pressure and heart rate via sympathetic fibers to blood vessels; provides a route for the sinus reflex which relates pressure in the carotid sinus to the performance of the circulatory system.
renal s. a recess in the substance of the kidney, free from renal parenchyma that is occupied by the renal pelvis, calices, vessels, nerves and fat.
sagittal s. (inferior) a small venous sinus of the dura mater of large animals found between the cerebral hemispheres and opening into the straight sinus.
sagittal s. (superior) a venous sinus of the dura mater that courses between the cerebral hemispheres and ends in the confluence of sinuses.
scleral venous s. see **Schlemm's canal**.
sigmoid s. a venous sinus of the dura mater on either side, continuous with the straight sinus and draining into the internal jugular vein of the same side.
sphenoidal s. one of the paired paranasal sinuses in the body of the sphenoid bone of some species. In the horse it communicates with the nasal cavity via the frontal and caudal maxillary sinuses.
sphenoparietal s. one of the venous sinuses of the dura mater, emptying into the cavernous sinus.
splenic s. dilated venous channels in the substance of the spleen. See also red pulp sinus (above).
straight s. a venous sinus of the dura mater formed by junction of the great cerebral vein and inferior sagittal sinus, and ending in the confluence of sinuses.
suture s. caused by the presence of a suture; due to epithelial ingrowth into a skin suture tract, or infection around a buried suture.
tarsal s. a space between the calcaneus and talus.
tentorial s. straight sinus.
tonsillar s. the single opening of a compound follicle of a tonsil, as occurs in the palatine tonsil of cattle.
transverse dura mater s. a large venous sinus that runs in the attached border of the cerebellar tentorium on either side of the skull.
transverse pericardial s. a passage within the pericardial sac, between the aorta and pulmonary trunk cranioventrally, and the left atrium and cranial vena cava dorsally.
tympanic s. a deep recess on the medial wall of the middle ear.
urachal s. an anomalous closure of the urachal canal in the newborn in which the opening at the umbilicus remains open. The bladder is normal. It is the cause of persistent infection and swelling at the umbilicus in the young animal and may lead to cystitis and pyelonephritis.
urethral s a small cavity in the glans penis of the horse, above the urethral process; as a recess of the fossa glandis it is usually filled with a small mass (the so-called 'bean') of inspissated smegma.
urogenital s. an elongated sac formed by division of the cloaca in the early embryo, which ultimately forms most of the vestibule, urethra and vagina in the female, and some of the urethra in the male.
uterine s. venous channels in the wall of the uterus in pregnancy.
uteroplacental s. blood spaces between the placenta and uterine sinuses.
s. venarum a smooth-walled chamber which makes up the greater part of the right atrium, lying between the orifices of the great veins.
venous s., s. venosus 1. the common venous receptacle in the heart of the early embryo that receives blood from the umbilical and vitelline veins and from the body via the ducts of Cuvier. 2. sinus of venae cavae.
vertebral s. a continuation of part of the common occipital vein in birds; it emerges from the foramen magnum and accompanies the vertebral vein.

sinusitis [*si"nəs-i'tis*] inflammation of one or more of the paranasal sinuses, often occurring during an upper respiratory infection, by extension from the nasal cavity. Sinusitis also may be a complication of tooth infection, allergy or certain infectious diseases. It is commonest in horses and cats, in cattle it is usually a complication of dehorning, and in dogs it often results from intranasal foreign bodies. In its chronic form it is characterized by a continuous or intermittent discharge of pus through the nostril on the affected side or through a sinus to the exterior. The face may be swollen and painful. See also **sinus**.
infectious s. of turkeys caused by *Mycoplasma gallisepticum* and characterized by swelling of the infraorbital sinuses which are filled with thick pus. Some cases also have airsacculitis and conjunctivitis.
sinusography sinography.
sinusoid [*si'nə-soid*] 1. resembling a sinus. 2. a form of terminal blood channel consisting of a large, irregular, anastomosing vessel, having a lining of reticuloendothelium but little or no adventitia. Sinusoids are found in the liver, adrenal glands, heart, parathyroid glands, carotid bodies, spleen, hemolymph glands and pancreas.
sinusotomy [*si"nə-sot'ə-me*] incision of a sinus.
sipauba see ***Thiloa glaucocarpa***.
siphon [*si'fən*] 1. a bent tube with arms of unequal length, for drawing liquid from a higher to a lower level by force of atmospheric pressure. 2. to draw liquid by means of a siphon.
Siphona see ***Haematobia***.
siphonage [*si'fon-əj*] the use of the siphon, as in gastric lavage or in draining the bladder.
Siphonaptera [*si"fo-nap'tər-ə*] the order of fleas.
sire male parent.
confirmed s. one that has been proven to have good fertility.
s. evaluation in farm animals, the estimation of the breeding value of a male by **progeny** testing.
s.-family average the average performance of the half-sib family of which the individual is a member.
s. line characteristics contributed to the offspring of a cross mating by the sire.
terminal s. one used in a crossbreeding system where both male and female progeny are marketed.
s. verification verifying that a stated sire is indeed a parent by the use of a paternity testing technique.
sirenian aquatic herbivorous mammal member of the order Sirenia; includes the sea-cow (now extinct), manatee and dugong.
sirenomelus [*si"rən-om'ə-ləs*] a fetus with fused legs and no feet.
sires of dams pathway breeding pattern for selecting sires who will be expected to produce good dams.
sires of sires pathway breeding pattern for selecting sires who will be expected to produce good sires.
siresine a type of harness worn over the forequarters by rams and as a headstall in bulls in mating groups. The harness carries a crayon on the brisket or under the chin in bulls so that females which are mounted by the male are marked by the crayon. Different colored crayons are used to identify females mated over a particular period of time or by individual males. This identifies the sire when more than one male is in the group.
SIRM see **sterile** insect release method.
SIRS systemic inflammatory response syndrome.
-sis word element. [Gr.] *state, condition*.
sisomicin [*sis"o-mi'sin*] an aminoglycoside antibiotic similar to gentamicin produced by cultures of *Micromonospora inyoensis*. Called also sisomycin, sissomicin.
Sistrunk scissors [*sis'trənk*] short dissecting scissors.
Sisymbrium irio a plant in the family Brassicaceae capable of causing severe gastroenteritis and sulfur-associated polioencephalomalacia in cattle. Called also London rocket.
Sisyrinchium plant genus in the Iridaceae family, suspected to contain a cardiac glucoside which causes violent diarrhea in livestock. Includes *S. iridifolium*, *S. micranthum*, *S. platense*. Called also scour weed, yellow rush lily.
sit-fast see **set-fast**.
sitatunga (*Tragelaphus spekii*) a medium-sized semi-aquatic African antelope with spreading feet adapted to marshy ground. Called also marshbuck.
sitiology, sitology the science of food and nourishment.
sitotherapy treatment by food; dietotherapy.

VetBooks.ir

S-55: Siresine harness.

sitotropism [*si-tot'ro-piz-əm*] tropism in response to the influence of food.

situs [*si'təs*] pl. *situs* [L.] site or position.

s. inversus total or partial transposition of the body organs to the side opposite the normal.

s. solitus normal position of the thoracic and abdominal organs.

Sium plant genus in the family Apiaceae; contain an unidentified toxin which causes several syndromes: (1) abdominal pain and diarrhea, (2) tremor, convulsions, bloat, bradycardia, (3) taints milk; includes *S. angustifolium* (cow-cress, fool's watercress), *S. latifolium* (water parsnip), *S. suave* (*S. cicutaefolium*).

six-minute walk test an assessment of a dog's ability to undertake daily activities.

six tooth in sheep, a 3 year old with all six permanent incisor teeth erupted.

size a criterion of growth other than height and weight; a combination of height, depth, width and weight. A large animal is tall but deep and wide in proportion; all of its dimensions are large.

Sjögren syndrome [*shur'gren*] a symptom complex marked by keratoconjunctivitis sicca and xerostomia often occurring in association with other inflammatory disorders such as immune-mediated arthritis and systemic lupus erythematosus. Reported in dogs.

SK streptokinase.

skatole [*skat'ōl*] a derivative of tryptophan formed in the putrefaction of proteins which contributes to the characteristic odor of the feces.

skatoxyl [*skə-tok'sil*] an oxidation product of skatole formed in the large intestine in certain diseases and excreted in the urine.

skeletal [*skel'ə-təl*] pertaining to the skeleton. See also skeletal **muscle**.

s. remodeling the continuous dynamic process of resorption of some parts of the bony skeleton and mineralization of others.

s. scurvy see hypertrophic **osteodystrophy**.

s. system the body's framework of bones and associated cartilages; see also **skeleton**.

s. tissue the bony, ligamentous, fibrous and cartilaginous tissue forming the supporting framework of the animal body.

skeletal patterning [*skel'ə-təl*] development of the limb primordia, pairs of limb buds, or other skeletal primordia, in the correct relationship to each other and to surrounding structures.

skeletization [*skel"ə-tĭ-za'shən*] 1. extreme emaciation. 2. removal of soft parts from the skeleton.

skeletogenous [*skel"ə-toj'ə-nəs*] producing skeletal structures or tissues.

skeleton [*skel'ə-tən*] the stiff, hardened tissues forming the supporting framework of an animal body.

appendicular s. the bones of the limbs.

axial s. the skull, spine, ribs and sternum.

visceral s. 1. the skeleton that forms part of an organ such as the os penis or os cordis. 2. (rare) the bony framework that protects the viscera, such as the sternum, ribs or pelvis.

s. weed see ***Lygodesmia***.

skeocytosis the presence of immature forms of leukocytes in the blood; shift to the left.

skewbald a horse coat color of mostly white with some large, irregular patches of any other color than black.

skewed curve of a usually unimodal distribution with one tail drawn out more than the other and the median will lie above or below the mean.

skewer wood see ***Euonymus europaeus***.

ski jump in X-rays, an appearance of enlarged caudal epiphyses of cervical vertebrae, which may encroach on the vertebral canal, causing compression of the spinal cord.

skia- word element. [Gr.] *shadow* (especially as produced by X-rays).

skiagraph radiograph.

skiametry [*ski-am'ə-tre*] see **retinoscopy**.

skiascope [*ski'ə-skōp*] an instrument which measures the refractive status of the eye.

skim milk the residue from whole milk after the cream has been skimmed off. In today's usage it is the residue after the butterfat is removed.

s. m. extender skim milk used as a diluent for semen. See also semen **extender**.

s. m. powder dehydrated skim milk used extensively as a milk replacer provided it is not too expensive. A high-protein supplement but deficient in vitamins A and D both of which will have been extracted with the butterfat.

skin [*skin*] the outer covering and largest organ of the body. It is made up of two layers (dermis and epidermis) that are developmentally and functionally distinct. It serves as a protective barrier against microorganisms, helps shield delicate tissues underneath from mechanical and other injuries, insulates against heat and cold, and helps eliminate body wastes. It guards against ultraviolet radiation by producing a protective pigment and it helps produce vitamin D. Its sense receptors detect pain, cold, heat, touch and pressure. The skin consists of an outer cellular, avascular epidermis, and an inner fibrous corium (dermis, true skin) resting upon a hypodermis of fat and panniculus muscle. See also **cutaneous**, **epidermal**, **epidermis**.

s. appendages see **hair**, **claw**, **hoof**, **horn**, **chestnut** (1), **ergot**^{2}, **dewclaw**, **comb**, **wattle**, **spur** (3), **pad**, **footpad**, **beak**, **feather** (1), **cere**, **scale**, **fin**, **antler**, **bristle** (1), **wool**, **mohair**, **cashmere**, **Angora**.

s.-associated lymphoid tissues (SALT) see skin-associated **lymphoid** tissue.

autoimmune s. disease see **autoimmune**, **pemphigus**, **lupus erythematosus**.

s. biopsy removal of a small section of skin for histopathological examination. See also **Keyes punch**.

s. cancer lay term that includes any epithelial neoplasm of skin, either benign or malignant.

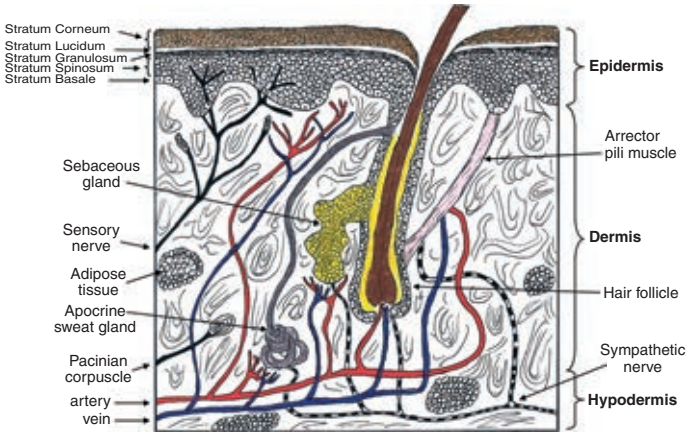
congenital absence of s. see **epitheliogenesis** imperfecta.

s. depigmentation see **hypopigmentation**.

s. emphysema see subcutaneous **emphysema**.

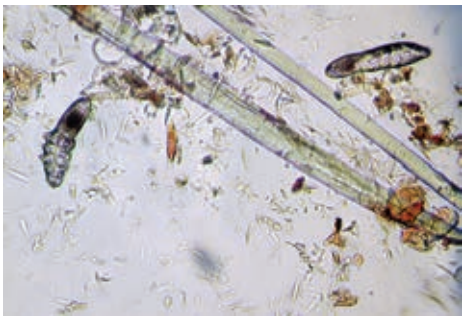
s. fold thickness a measure of obesity in humans but not a valid indicator in dogs or cats as the skin lifts off the subcutaneous tissue.

s. fungal infection see **dermatomycosis**, **dermatophytosis**.



S-56: Structure of mammalian skin.
From Mills PC, Cross SE: Transdermal drug delivery: Basic principles for the veterinarian Vet J 172:218-233, 2006. Elsevier.

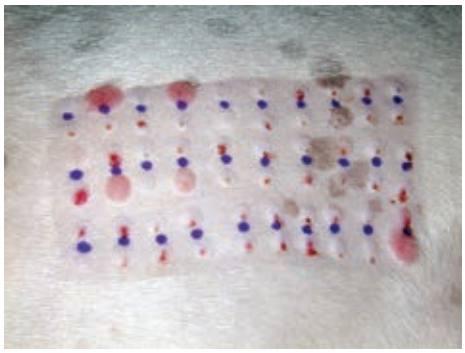
VetBooks.ir



S-57: *Demodex* mites in a skin scraping (10x).
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

s. gangrene death of tissue and usually involves dermis, epidermis and subcutaneous tissue, e.g. severe saddle galls, heat burns, chemical burns, *Claviceps purpurea* poisoning. The affected area is cold and bluish in color. This changes to black and the area begins to lift at the edges and to dry out.
s. inflammation see **dermatitis**.
s. leukosis occurs in **Marek's disease**. Called also cutaneous **lymphosarcoma**.
s. receptor cutaneous sensory endorgans.
s. resiliency test see skin tenting test (below).
s. scraping a scraping of the superficial elements of the skin for laboratory examination for parasitic and fungal elements.
s. tag see fibrovascular **papilloma**.
s. tension lines see **tension** line.
s. tenting test a fold of skin is picked up and then quickly let go. The amount that it will stretch is an indication of its extensibility. The speed with which it returns to a normal position is determined by the degree of hydration of the skin and subcutaneous tissue and the amount of fat in the subcutaneous tissue, e.g. in an animal that is 10–12% dehydrated the skin fold will not disappear until 20–45 seconds have elapsed.
s. test application or intradermal injection of a substance to the skin to test the body's reaction to it. Such a test detects an animal's sensitivity to such allergens as dust and pollen, or to preparations of microorganisms believed to be the cause of a disorder. There are several types of skin tests, including the patch test, the scratch test, and the intradermal test.
skink member of the very large and diverse family (Scincidae) of lizards. Tthey have an elongated body and long tails; some species have no limbs. Popular as pets. The blue-tongued skink (*Tiliqua scincoides*) is called the blue-tongued lizard in Australia where it is commonly kept as a pet.
Skinner box [*skin'ər*] an experimental enclosure for testing animal conditioning, in which the subject animal performs (e.g. presses a bar or lever) to obtain a reward. See also instrumental **conditioning**.
skippers larvae of *Piophila casei*, the cheese or ham fly. The larvae skip around on the cheese that they inhabit in a quite repulsive way.
Skirrow's medium a blood agar base suitable for growing *Campylobacter fetus* and *Brucella* spp.

S-58: Tenting of the skin due to dehydration.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.



S-59: Intradermal allergy skin test.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

skirt abattoir term for diaphragm.
skirtings untidy pieces of inferior quality wool from the edges of a fleece. They are removed and sold separately.
Sklar forceps rack a flat plate with stand-up pins. The hemostats are laid on the plate with the finger grips over two of the pins and the blades positioned between two others. Suitable for compact, tidy transport and storage of large numbers of hemostats.
skler(o)- for words beginning thus, see those beginning *scler(o)*-.
skot(o)- for words beginning thus, see those beginning *scot(o)*-.
Skrjabinagia a genus of worms in the subfamily Ostertagiinae and the family Trichostrongylidae.
S. boevi found in the large and small intestines of water buffalo.
S. dagestanica found in the small intestine of sheep.
S. kolchida found in the abomasum of deer.
S. lyrata ***Ostertagia*** *lyrata*.
S. popovi found in the small intestine of sheep.
Skrjabinema a genus of nematodes in the family Oxyuridae. They inhabit the ceca of ruminants.
S. africana found in steinbock in Africa.
S. alata found in sheep.
S. caprae found in goats.
S. ovis found in sheep, goat and antelope.
S. tarandi found in reindeer and caribou.
Skrjabingylus a genus of worms in the metastrongyloid family Skrjabingylidae found in the nasal sinuses of their hosts.
S. chitwoodorum found in skunks.
S. magnus found in skunks.
S. nasicola found in nasal sinuses of mink, polecat and fox.
S. petrowi found in pine marten.
Skrjabinoptera phrynosome a physalopterid roundworm found in the stomach of lizards.
Skrjabinotrema ovis a digenetic trematode in the family Hasstilesiidae, found in the small intestine of sheep.
skull [*skul*] the bony framework of the head consisting of two parts, the cranium and the facial section. The cranium is the domed top, back and sides of the skull that protects the brain. It is made up mostly of a roof of flat membrane bones united by sutures in the young, plus a series of cartilage bones at the base (occipital, sphenoid). Paranasal sinuses variably excavate the membrane bones. The facial bones are mostly membrane bones and serve to support the dental arcades and the respiratory passages of the head.
s. bones the bones of the skull are the basisphenoid, ethmoid, frontal, incisive, interparietal, lacrimal, nasal, occipital, nasal conchal, palatine, parietal, presphenoid, pterygoid, sphenoid, temporal, vomer and zygomatic. Most of these are paired although a few are single. Although the three ear ossicles on each side are found within the temporal bone, they are usually not included as members of the skull bones. Neither is the mandible nor the hyoid bones (see separate entries for these bones).
brachycephalic s. short, broad skull.
dolicocephalic s. long, narrow skull.
mesaticephalic s. a medium skull in terms of width and length.
skunk a musteline mammal of the subfamily Mephitinae. The best-known animal in this group is the striped skunk *Mephitis mephitis*, a cat-size, mostly nocturnal, burrowing animal with a beautiful black coat and two longitudinal white stripes that run into the tail. It can also eject a powerfully pungent foul-smelling liquid up to 10 feet through the air. An important vector for rabies.

VetBooks.ir

S-60: Skunk (*Mephitis mephitis*). Courtesy of CDC.

s. cabbage see ***Lysichiton americanus***, ***Symplocarpus foetidus***, ***Veratrum*** *californicum*.
s. descenting see **descenting**.
s. rabies skunks are an important reservoir host of rabies in North America where they are a common source of rabies in cattle.
skunkweed ***Croton*** *texensis*.
Skye terrier a small (25 lb) dog with a distinctive appearance—the body is very long (the total length is specified in the breed standard as 41 inches) and the legs are very short (height 10 inches). The long, gray, fawn, cream or black coat is flat and straight, covering the face. There are prick- or drop-eared types. The breed is affected by an inherited laryngeal hypoplasia.
skyline view tangential radiographic view of any structure; taken to provide more information than the standard projections. Used to examine the trochlear groove of the stifle in dogs and carpal slab fractures in horses.
slack loose; not taut.
s. cap a can of meat with one of the ends bulging slightly indicating the beginnings of a blown can.
Slackia heliotrinireducens a coccoid gram-positive anaerobic ruminal organism thought to detoxify pyrrolizidine alkaloids in the rumen of sheep.
slaframine [*slaf'rə-mēn*] the sialagogic toxin in the fungus *Rhizoctonia leguminicola*.
slag vitreous residue after removal of metal in a smelting process.
basic s. a by-product of the smelting industry, basic slag is used as a fertilizer. Animals pastured on recently heavily dressed fields may be affected by colic, diarrhea and posterior paresis. The specific cause of the poisoning is not known.
slaked lime unslaked lime (calcium oxide) to which water has been added. Called also calcium hydroxide. See also **lime** water.
slangkop [Af.] Afrikaans meaning 'snake-head'; South African common name for several plants in the genus *Drimia (Urginea)*, but also in *Ornithoglossum* and *Pseudogaltonia*, with newly-emerged flowerheads the resemble snakes rearing up from the ground. Includes berg slangkop (*D. depressa*), Cape slangkop (*O. viride*), Natal slangkop (*D. macrocentra*), Southwest Africa slangkop (*P. clavata*), Transvaal slangkop (*D. sanguinea*).
slap test see **laryngeal** adductory reflex.
slatted floor wooden, plastic or metal floors with narrow gaps between slats to permit discharge of feces and urine to the external environment, e.g. in a shearing shed, or into a cesspit, the common construction on farms in the northern hemisphere. They are labor-saving but can cause serious damage to feet and limbs if not constructed carefully.
slaughter 1. the killing of animals for the preparation of meat for human consumption. Many methods are used. See also **emergency** slaughter, **captive bolt pistol**, **carbon dioxide** anesthesia, **Jewish slaughter**, **Muslim slaughter**, **pithing**, **puntilla**, **shechita**, **Sikh slaughter**. 2. destruction of animals because they are diseased, e.g. in test-and-slaughter programs.
casualty s. see **emergency** slaughter.
Danish s. data system a detailed system for keeping data on slaughter and meat inspection of pigs in Denmark. Based on tattooing of all pigs and a code for meat inspection findings with all information stored on a computer system.
s. hall, s. floor the part of an abattoir in which the slaughtering is conducted.
selective s. slaughter and disposal of infected animals as a tool in the eradication of disease. Those slaughtered may be infected or be positive reactors or in-contact animals.
s. spleen enlargement and congestion of the spleen with hemorrhages under the capsule which occur in some slaughter methods.
stunning–bleeding s. stunning either with a hammer or by electric shock followed by shackling and lifting, then by opening of the jugular vein.
slaughterhouse abattoir.
s. data data on lesions found in carcasses at abattoir.
SLE systemic lupus erythematosus.
sleep [*slēp*] a period of rest during which volition and consciousness are in partial or complete abeyance and the bodily functions partially suspended; a behavioral state marked by characteristic immobile posture and diminished but readily reversible sensitivity to external stimuli.
s. deprivation caused in animals by constant stimulation, e.g. preventing them from lying down, is followed by a compensatory period of prolonged sleep whenever the opportunity arises.
s. disorders see **narcolepsy**, **cataplexy**.
put to s. a common euphemism for euthanasia.
rapid eye movement (REM) s. that type of sleep characterized by low voltage but fast electroencephalographic activity and little muscular activity except of the ocular muscles. Believed to be the critical or necessary component of sleep. Called also 'sleep of the body' and paradoxical sleep. Called also REM.
sleeper foal syndrome newborn foals with severe toxemia or dehydration or anemia characterized by recumbency, sagging posture, lack of interest in food or the dam, listlessness to the point of coma.
sleeper syndrome see **hemophilosis**.
sleeping beauty ***Oxalis*** *acetosella*.
sleeping disease narcolepsy.
s. d. syndrome disease affecting freshwater farmed fish, mainly rainbow trout; characterized by lethargy and immobility; caused by *Salmonid alphavirus* probably identical to the pancreatic disease virus.
sleeping sickness any disease characterized by drowsiness or somnolence. See also **pregnancy** toxemia (1) of ewes, equine viral **encephalomyelitis**, ***Cryptobia*** *cyprini*, **trypanosomiasis**.
sleepy characterized by **sleep**.
s. foal disease see ***Actinobacillus*** *equuli* septicemia.
s. staggers see hepatic **encephalopathy**.
sleepygrass [*sle'pe-gras*] see ***Stipa*** *robusta*.
sleeve dog another name for the Pekingese dog.
slender ice plant ***Mesembryanthemum*** *nodiflorum*.
slender lamb poison ***Isotropis*** *juncea*.
slicker brush see **carder**.
slide [*slīd*] a piece of glass or other transparent substance on which material is placed for examination under the microscope.
acetate tape s. see **acetate** tape slide.
s. culture technique a rapid method of preparing fungal colonies for examination and identification.
sliders aquatic turtles, *Trachemys scripta*, commonly kept as pets, especially the subspecies, red-eared slider (*T. scripta elegans*). Called also pond sliders, pond turtles.
sliding filament model mechanism proposed for muscle contraction where myosin head groups of the thick filaments move along the interdigitated actin of the thin filaments, sliding past them and thereby shortening the sarcomere.
slime balls form in which the cercariae of *Dicrocoelium dendriticum* are discharged from the intermediate host snail's lung; cercariae become infective only if the next intermediate stage, the ant, ingests the slime ball.
Slims **Belgian** fancy canary.
slimy skin disease a disease of aquarium fish caused by the flagellated protozoan *Costia necatrix* and characterized by a copious exudate on the skin of mucous and epithelial debris. Called also costiasis.
sling [*sling*] suspensory for supporting a part.
body s. canvas and metal sling for support of the abdomen with breastplate and breeching to prevent the horse slipping out forwards or backwards, and lifted from the ground by a block and tackle carried on an overhead beam or similar support. Used in horses; not a practicable proposition in cattle.

VetBooks.ir

leg s. for the support of a limb in a bovine. For a front leg the rope is looped around the pastern, thrown over an overhead beam, back under the sternum behind the elbow on the same side, then back over the beam. For a hindleg the rope begins as a loop around the pastern, goes over an overhead support, back inside the thigh on the same side, half-hitched around the tibia and held by a helper. In both the leg is lifted off the ground to the required position and the rope tightened to create the sling.
90/90 s. wrapping is applied to maintain the tarsus and stifle in 90-degree flexion; used to prevent contracture of the quadriceps after fracture repair.
pelvic limb s. the metatarsus is suspended by tape from a band of gauze and tape around the animal's abdomen. Used in small animals to prevent weight bearing on the limb, but not primarily for stabilization. Called also Robinson sling.
preputial s. a many-tailed bandage around the body with an aperture for the preputial orifice.
s. procedure a strip of fascia lata or synthetic material passed around the base of the tail or implanted in perianal tissue have been used in the treatment of fecal incontinence.
tail s. a half-hitch is applied to the tail hairs, ensuring that the tissue part is omitted. The rope can be used to support the hindquarters of a horse but not cattle. The technique can be used in cattle as an aid, e.g. to keep the tail out of the way while correcting a dystocia; the rope is tied around the cow's neck.
udder s. a canvas bag with four strategically placed holes for the teats and supported by a harness over the hindquarters anchored to a neck collar to prevent it falling off the back. Not a particularly helpful device because of variation in the size of the vessel to be accommodated.
Velpeau s. a gauze wrapping around the thorax and forelimb with the elbow fully flexed and the carpus touching the opposite shoulder. Used in dogs to prevent weight-bearing following surgery, luxation of the shoulder or fracture of the scapula.

slink calves, slinks unborn calves retrieved at the abattoir. Their meat, slink veal, is not authorized for consumption in most countries. Their skins are valuable because they are so fine and clean.
slinkweed see ***Gutierrezia*** *microcephala*.
slip [*slip*] see **hoof** block.
slip knot [*slip not*] one in which the second and subsequent throws can still be snugged down to the surface. The knot is secured with a square knot for the last two throws.
slipe unscoured fell-mongered wool.
slipped 1. aborted. 2. dislocated or out of place in a more general sense.
s. claw flexion of the posterior claw in canaries so the dorsal surface becomes weight-bearing. May be caused by riboflavin deficiency.
s. disk see slipped **disk**.
s. epiphysis see **epiphysiolysis**.
s. shoulder see **suprascapular** paralysis.
s. stifle see **patellar** luxation.
s. tendon see **perosis**.
slipper foot see **laminitis**.
slit lamp biomicroscopy see slit **lamp**.
slitter see **teat** slitter.
sliver in wool processing a continuous band of carded and combed wool which has not yet been twisted into yarn.
slobbering see **drooling**.

S-61: Velpeau sling. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

slobbers [*slob'ərz*] 1. moist dermatitis, or wet dewlap of rabbits; caused by continuous wetting of the dewlap due to poorly placed watering devices. 2. ***Rhizoctonia leguminicola*** (slaframine) poisoning in cattle.
slope [*slōp*] in statistical terms the slope of a line depicting the relationship of two variables is the gradient of the line or the regression coefficient of the relationship. A positive slope implies that increasing one variable will increase the other.
slope culture see slant **culture**.
sloth member of the order Edentata of anteaters. A shaggy-haired, multicolored arboreal animal remarkable for its immobility and slowness of movement when it does move. It spends much time hanging by its paws in a belly-up, face-up position. There are several genera including the three-toed sloth (*Bradypus tridactylus*) and the two-toed sloth (*Choloepus didactylus*).
slough [*sluf*] 1. a mass of dead tissue in, or cast out from, living tissue. 2. to shed or cast off.
anesthetic s. the iatrogenic slough caused by the injection of a necrotizing anesthetic solution subcutaneously in mistake for an intravenous injection. The common sites are over the anterior aspect of the forearm in small animals and over the jugular furrow in large animals.
epidermal s. occurs in captive cetaceans when the salinity of the pool water is insufficient.
Sloughi a medium-sized, lean, racy dog with a long, flat head, flat ears, a long, thin tail and a short, fine coat in sable or fawn. Called also Arabian greyhound.
Slovakian rough haired pointer developed from the German wire-haired pointers, Weimaraners and Cesky Fousek, this medium sized dog has features of all three. The gray-brown to silver, rough coat is distinctive. A recognized breed in the UK and Europe.
slow reduced speed of action or reaction.
s. death factor see **algal** poisoning.
s.-milking cows cows that require more than 6 minutes to milk right out; the average is 4 minutes. Caused by a too-small sphincter orifice at the tip of the teat.
s. virus infections somewhat imprecise term for persistent virus infections characterized by a very prolonged incubation period and a prolonged, slowly progressive clinical course. Originally applied to the lentivirus diseases maedi and visna of sheep in Iceland and also to sheep scrapie, a prion disease.
slow-reacting substance (SRS or SRS-A) a mixture of leukotrienes secreted by mast cells released in the anaphylactic reaction that induces slow, prolonged contraction of certain smooth muscles due to the release and action of histamine; thought to be important in, for example, bronchoconstriction of asthma.
sludge a suspension of solid or semisolid particles in a fluid.
activated s. a method of dealing with sewage and abattoir effluent. Consists of an aeration tank in which biologically active, previously sedimented sludge is mixed with incoming effluent and agitated in the presence of an ample supply of air.
sludging [*sluj'ing*] settling out of solid particles from solution.
s. of blood intravascular agglutination of erythrocytes into irregular masses, interfering with circulation of blood.
slug [*slug*] the garden pest *Agriolimax meticulatus*; may attract snail poison to a hitherto carefree garden and lead to metaldehyde poisoning in companion animals and may also harbor encysted larvae of *Syngamus trachea.*
slundhru ***Kalanchoe*** *integra*.
slurry [*slur'e*] solids in suspension. Used as a method of feeding pigs—slurry is pumped through fixed lines and delivered to troughs by hoses equipped with gasoline pump fittings. Used also as a means of disposing of feces and urine from cesspits under animal accommodation or trap tanks attached to milking sheds. Disposal can be onto pasture, but this creates poisoning hazards with respect to heavy metals and transmission of disease such as salmonellosis or Johne's disease. More commonly local regulations require that it be treated as is human sewerage.
sly syndrome [*sli*] human mucopolysaccharidosis, analogous to β-glucuronidase deficiency mucopolysaccharidosis in experimental dogs.
Sm chemical symbol, *samarium.*
small buffalo grass ***Panicum*** *coloratum*.
small golden tip ***Goodia*** *medicagenea*.
small hive beetle *Aethina tumida* feeds on live brood and honey, the excrement contaminates the honey, causing fermentation, and its

VetBooks.ir

burrowing damages the wax comb. A disease notifiable to the OIE (see Table 22).

Small Munsterlander pointer a medium-sized (35–45 lb) gun dog with a medium length, flat coat of white with brown patches. The ears lie flat, similar to spaniels and the tail is long with feathering. Called Kleiner Munsterlander in Canada.

smallpox [*smawl'poks*] see **variola**.

smartweed see ***Persicaria***, ***Polygonum***.

SMCA monochloroacetate.

SMCO *S*-methylcysteine sulfoxide.

smear [*smēr*] a specimen for microscopic study, the material being spread thinly across the slide with a swab or loop, or with the edge of another slide, e.g. blood smear, for differential white cell count, or the detection of trypanosomes; fecal smears for the detection of motile stages (trophozoites) of protozoa, such as *Giardia*, worm eggs, oocysts or cysts.

impression s. one made by pressing the slide against tissue, usually the surface of a neoplasm or the cut surface of a tissue specimen. Called also touch prep.

blood s. see **blood** film.

SMEDI group enteroviruses in three subgroups A, B and C. Found in pigs and cause a shortfall in live pigs, a high incidence of stillbirth and mummification and a high rate of piglet mortality. SMEDI group of diseases are also causatively linked to porcine parvovirus.

smegma [*smeg'mə*] the secretion of sebaceous glands, especially the cheesy secretion, consisting principally of desquamated epithelial cells, found chiefly within the prepuce.

smell [*smel*] 1. an odor. 2. the sense that enables an animal to perceive odors. The sense of smell depends on the stimulation of sense organs in the nose by small particles carried in inhaled air. It is important not only for the detection of odors, but also for the enjoyment of food. Flavor is a blend of taste and smell. Taste registers only four qualities: salt, sour, bitter and sweet; other qualities of flavor depend on smell. The organs of smell are small patches of special (olfactory) cells in the nasal mucosa. One patch is located in each of the two main compartments of the back of the nose. The olfactory cells are connected to the brain by the first cranial (olfactory) nerve.

abnormal s. see **odor**, **taint**.

organ of s. includes the olfactory sense organs, olfactory nerves, and the nerve cells of the olfactory bulb of the brain.

smelt small marine finfish in the family Osmeridae.

Smith–Baskerville medium a selective medium for the growth of *Bordetella bronchiseptica*.

Smith–Petersen nail [*smith'-pa'tər-sen*] a flanged nail for fixing the head of the femur in fracture of the femoral neck.

smoke [*smōk*] 1. a coat color of cats that consists of white hairs with black or blue tips. The intensity of the tip color varies on different parts of the body so that the face and back are very strongly colored. 2. a color variety of longhaired cats with orange or copper-colored eyes and a blue or black smoke coat color.

s. bombs after ignition may contaminate pasture with phosphorus.

s. injury injury caused by exposure to a fire where there is a great deal of smoke, especially one confined in a building. Animals are likely to suffer smoke injury to the respiratory system as well as effects from toxins, such as carbon monoxide. Pulmonary edema, increased mucosal secretions with decreased clearance, and secondary infection occur.

smoking a method of preserving meat or fish (most commonly bacon) which preserves the food's natural color and flavor. The food is pickled in salt first and then smoked in a smoke house, using special woods for special flavous, for about 3 days.

smolt young salmon on its way downriver en route to the sea; covered with distinctive silvery scales.

smoltification an internal metabolic process which enables a fish to adapt from fresh to sea water with a minimum of stress; characteristic of anadromousalmonid fish.

smothering death by asphyxiation. Occurs where poultry are carelessly herded into a corner where they cannot escape and where they are piled four or five birds deep; they will die of asphyxia very quickly. See also **crowding**.

SMSV San Miguel sea lion virus.

smudge cell a ruptured leukocyte, seen in a blood smear.

smudge patterns the pattern of feces smeared on the buttocks of calves with diarrhea; thought to have diagnostic significance.

smut [*smut*] a group of fungal infections of the seedheads of cereals. Infected grain fed to livestock may be poisonous.

barley s. *Ustilago hordei* thought to cause infertility and stillbirths.

wheat s. *Tilletia tritici* thought to cause glomerulonephritis in pigs.

Sn chemical symbol, *tin* (L. *stannum*).

snail [*snāl*] gastropod mollusc with a spiral, coiled shell. Some species of snails act as intermediate hosts for flukes and are thus of veterinary importance.

s. bait see **metaldehyde**, **methiocarb**.

mud s. ***Lymnaea*** *truncatula*.

snake [*snāk*] a limbless reptile; many species are poisonous. See also **milksnake** and **kingsnake**.

black s's. (*Pseudechis spp.*) highly venomous Australian elapids; the venom causes coagulopathy, neurotoxicity and hemolysis. Depending on the area, it is one of the more common causes of snake bites in companion animals in Australia. Includes the red-bellied black snake (*P. porphyriacus*) and mulga snake, which is also called King brown snake (*P. australlis*).

blind s. see **typhlopid**.

brown s's. (*Pseudonaja* spp.) Australian elapids whose venom contains powerful neutoxins and procoagulants; the most common cause of snake bite envenomation in Australia. Called also gwarder.

brown tree s. (*Boiga irregularis*) a mildly venomous, arboreal snake, 3–4 ft long. An invasive species that decimated native fauna population after accidental introduction to Guam after World War II. Called also brown cat snake.

carpet s. see carpet **python**.

Clarence River s. (*Tropidechis carinatus*) a banded, olive green Australian snake with a yellow belly and rough scales. Has a very powerful neurotoxic venom. Called also rough-scaled snake.

copperhead s. (*Agkistrodon contortrix*; North American copperhead) adults are 2–3 feet long; color varies from red to tan with darker hour-glass bands. Found mainly in mountainous areas in wet wooded areas and swamps. Not commonly aggressive. Also, *Austrelaps* spp. (Australian copperhead).

coral s. small, highly venomous snakes in the family Elapidae with three New World species in the genus *Micrurus* found in wooded, sandy or marshy areas of the southern USA. They are characterized by very colorful bands of red, black and yellow or white often confused with similarly colored, non-venomous king snakes. The red bands touch the yellow bands in the venomous coral snake. The powerful neurotoxin causes respiratory paralysis.

corn s. (*Elaphe guttata*) a medium sized, non-venomous North American snake; very popular as pets, especially for beginners, because of their docile nature and they are easy to breed and maintain in captivity.

cottonmouth s. (*Agkistrodon piscivorus*) frequently found in or around water in eastern and central USA and South America. Average 3–4 feet long with a variable color pattern; the back of adults is dark tan, brown, or nearly black with darker crossbands. Aggressive when threatened. Called also water moccasins.

diamond s. see diamond **python**.

garter s. *Thamnophis* spp. widely distributed small, colubrid snakes with variable color patterns; considered harmless, but there have been reports of allergic reactions to the saliva, which may contain a mild neurotoxin. Widely kept as pets.

gopher s. (*Pituophis*) spp. non-venomous North American colubrid snakes; in some habitats, sometimes mistaken for rattlesnakes. Sometimes kept as pets. Called also bullsnake.

king s. see **kingsnake**.

king brown s. see black snakes (above).

mangrove s. (*Boiga dendrophila*) a large, mildly venomous snake of southeast Asia; black with transverse yellow bands. Called also gold-ringed cat snake.

tiger s. (*Notechis* spp.) venomous Australian elapids often, but not reliably, distinguished by creamy yellow transverse stripes. Envenomation, characterized by paralysis, coagulopathy and muscle damage, occurs in animals, particularly dogs and cats, and humans.

tree s. a number of colubrid snakes that lead an arboreal existence and practice falling from trees with their body spread out, earning the name of flying snake.

VetBooks.ir

s. venom see **snakebite**.
worm s. a burrowing, nonvenomous snake with vestigal eyes in the family Typhlopidae; about 10 inches long and looks like a polished, scaly worm. Called also worm snake.

snakebite injury caused by the mouthparts of a snake. (1) Cobra-type snakes inject a neurotoxin in their venom causing pupillary dilatation, excitement, convulsions and death due to asphyxia. (2) Adder-type snake venom contains also an agent that causes local swelling and necrosis. If the animal survives the neurotoxin, the part sloughs. (3) Other fractions in some venoms include hemolytic, cardiotoxic, coagulant and anticoagulant fractions. See also ***Demansia**textilis* and tiger **snake.**

snakeroot [*snāk'*] see ***Eupatorium** rugosum*.

snake's head see ***Fritillaria meleagris***, **slangkop**.

snakeweed see ***Gutierrezia** microcephala*.

snap [*snap*] a short, sharp sound.
s. joint a type of hinge-joint that typically moves abruptly from a central unstable, close-packed position where its collateral ligaments are under tension to one of greater mobility and thence, snapping to an extreme position near the limit of its range as occurs in the equine elbow joint and equine hock.
opening s. a short, sharp, high-pitched click occurring in early diastole caused by opening of the mitral cusps, a characteristic sound in mitral stenosis.

snapper [*snap'ər*] ***Pagrus auratus***.

snare [*snār*] an entrapping loop.
cable s. see **hog**[1] holder.
obstetrical s. a looped cord for slipping over the head of a fetus to provide traction on the neck. Applied over the nape and through the mouth, not around the neck.
pig s. see **hog**[1] holder.
polyp s. an instrument used to grasp and excise a polyp.
surgical s. a wire loop for removing polyps and other pedunculated growths by cutting them off at the base.

snatch removal of a newborn animal from the dam before it has an opportunity to suck. The objective is to rear it independently and free of colostrum-borne infection or of colostral antibodies.

SND standardized normal deviation.

sneeze [*snēz*] 1. an involuntary, sudden, violent, and audible expulsion of air through the mouth and nose. 2. to expel air in such a manner. Sneezing is usually caused by the irritation of sensitive nerve endings in the mucous membrane that lines the nose. Allergies, drafts of cold air, and even bright light can produce sneezing. It is a predominant sign in inclusion body rhinitis in piglets, atrophic rhinitis in older pigs, and feline rhinotracheitis.
s. counts number of sneezes per pig per minute. Used as an indicator of the presence or absence of upper respiratory disease in a piggery—greater than 0.33 sneezes per pig per minute accepted as an indication of rhinitis in pigs.
reverse s. sporadic, brief periods of noisy, labored inspiratory effort seen in dogs that are otherwise normal. Postnasal drip, nasopharyngeal spasm, and entrapment of the epiglottis have been suggested as causes.

sneezeweed [*snēz'wēd*] see ***Helenium***. Includes American or bitter sneezewood (*H. amarum*), orange sneezeweed (*H. hoopesii*), smallhead sneezeweed (*H. microcephalum*).

sneezing sudden, reflex, noisy expiration through the nasal cavities; prominent sign in cases of rhinitis.

SNF solids-not-fat; a comment on the composition of milk.

sniffer dog one trained to detect the presence of specified materials, usually drugs or explosives, by smell. The dogs can be of any breed. Called also detection dogs.

snip a white mark on the muzzle extending into one nostril.

SNOMED Systematized Nomenclature of Medicine. A coding system for medical terms introduced by the College of American Pathologists in 1975. Later known as SNOMED RT (Related Terms). Now incorporated in **SNOMED-CT**.

SNOMED CT Systematized Nomenclature of Medicine - Clinical Terms. A system of clinical terminology formed by the convergence of SNOMED RT and the National Health Service (UK) Clinical Terms (Read Codes). The USA standard for the exchange of electronic health information. Owned by the International Health Terminology Standards Development Organisation, (IHTSDO) which is responsible for ongoing maintenance, development, quality assurance, and distribution; licensed for use in more than 50 countries.

S-62: Pig snout.

snood see frontal **process** (2).

Snook hook a surgical instrument with a curved, button tip used to retrieve a horn of the uterus when performing ovariohysterectomy in dogs and cats.

snoring an involuntary, deep guttural sound emanating from the pharynx and soft palate on inspiration or expiration; often intermittent depending on posture of the head. May indicate a chronic, obstructive lesion of pharynx.
s. disease is an enzootic rhinitis of cattle caused by *Helminthosporium* spp.

snort a forceful expulsion of air through the nostrils as in a sneeze, but a snort is a voluntary act, sneezing is involuntary. Used by horses and cattle as a device to intimidate potential predators.

snorter dwarf an achondroplastic dwarf with stertorous respiration due to distortion of nasal passages. See achondroplastic **dwarfism**.

snotsiekte [Af.] see **malignant catarrhal fever**.

snout [*snout*] the upper lip and the apex of the nose, especially of the pig. Called also rostrum. Has a specialized skin to survive the rigors of rooting, is supported by a separate bone (the os rostri), and also has a few sensory hairs.
s. rubbing a vice of pigs characterized by rubbing the snout into the flank until a friction sore develops.

SNOVET Systematized Nomenclature of Veterinary Medicine. A controlled vocabulary based on the second edition of SNOMED (Systematized Nomenclature of Medicine), first published by the AVMA in 1985, replacing the Standard Nomenclature of Veterinary Diseases and Operations (SNVDO).

snow [*sno*] a freezing or frozen mixture consisting of discrete particles or crystals.
carbon dioxide s. the solid formed by rapid evaporation of liquid carbon dioxide, giving a temperature of about −110°F (−79°C); used locally in various skin conditions. See also **carbon dioxide** snow.
s. leopard see snow **leopard**.
s. nose see nasal **depigmentation**.

snow-on-the-mountain ***Euphorbia** marginata*.

snowflakes small patches of gray or white hair acquired after birth. Skin color is unchanged. See also **achromotrichia**, **vitiligo**.

Snowshoe a recently recognized cat breed; it is a medium- to large-sized cat with blue eyes, and coat color similar to a sealpoint or bluepoint Siamese, but with a white nose, chin, and ventral midline, and white boots on all feet.

snowshoe hare virus one of the California serotype bunyaviruses isolated in Canada from the snowshoe hare. It is a cause of equine viral encephalomyelitis.

SNP single nucleotide polymorphism

snRNA small nuclear **ribonucleic acid** (RNA).

snRNP small nuclear ribonucleoprotein. See also **ribonucleic acid**.

snuffles [*snuf'əlz*] 1. an upper respiratory tract disease of rabbits caused by bacterial infection, including *Pasteurella multocida*, *Bordetella bronchiseptica*, *Staphylococcus* and *Pseudomonas* spp., and characterized by serous and then purulent discharge from the nostrils and eyes which cakes the insides of the forepaws. The rabbit also sneezes and coughs. Pneumonia is a common sequel. 2. chronic rhinitis and sinusitis in cats. Sometimes called chronic snuffles syndrome.
summer s. is an acute rhinitis of cows characterized by sneezing, purulent nasal discharge, dyspnea. It occurs when pasture is in flower and is thought to be allergic. May be the initial stage of enzootic nasal granuloma.

snuffling a bubbling sound from the nasal cavities; an indication of inflammation and the presence of fluid exudate.

VetBooks.ir

SNVDO Standard Nomenclature of Veterinary Diseases and Operations.

SOAP acronym for *s*ubjective data, *o*bjective data, *a*ssessment, *p*lan, the way the progress notes are organized in problem-oriented **medical** record keeping.

soap [*sōp*] any compound of one or more fatty acids, or their equivalents, with an alkali. Soap is a detergent and is employed in liniments and enemas and in making pills. It is also a mild aperient, antacid and antiseptic.

green s. a potassium soap made by saponification of vegetable oils, excluding coconut oil and palm kernel oil, without the removal of glycerin; it is the chief ingredient of green soap tincture.

medicated s. those containing additional ingredients, usually for the treatment of skin disorders, e.g. insecticides, keratolytics, antiseptics, antipruritics.

s. poisoning common dishwashing and laundry soaps can be a source of poisoning for dogs and cats. There can be gastrointestinal and neurologic signs.

soft s. (medicinal) green soap.

s. substitute detergents or cleansing creams for cleaning the skin, especially removing greasy films or glandular exudates.

soapwort ***Saponaria*** *officinalis*.

Soboliphyme baturini a nematode in the family Soboliphymatidae; found in the intestines of foxes, sables and cats.

social pertaining to living in a community.

s. dominance heirarchy social order.

s. order the ranking in which a group of animals establishes itself with the most dominant one in the number one position and the most retiring one in the last position. The order is maintained unless new animals are introduced.

s. organization an aggregation of individual animals into an integrated group based on the interdependence of the animals and their responses to each other.

s. rank see social order (above).

socialization [*so″shəl-ĭ-za′shən*] the process of familiarization between animals in a group and, in companion animals, between the animal and humans.

s. period the critical age when the young animal is most likely to establish social relationships, forming the basis for its personality, particularly toward humans, and trainability. In puppies, this is from approximately 3–12 weeks of age and approximately 2–7 weeks for kittens.

Society for the Prevention of Cruelty to Animals (SPCA) non-profit organization(s) concerned with animal welfare and, in many jurisdictions, able to prosecute cases of animal cruelty. In addition, they commonly deal with unwanted and stray companion animals, providing shelter and re-homing programs. The oldest organization in the United States is the American Society for the Prevention of Cruelty to Animals (ASPCA). See also **Royal Society for the Prevention of Cruelty to Animals.**

sociosexual behavior pertaining to sexual relationships between animals in groups; behavior such as dominance of one bull over another can have very important effects on the offspring of the groups of cows run with a group of bulls.

sock white mark on the feet. In horses this means from the coronet to halfway up the cannon. In dogs and cats, it is white from the paws up to the carpus or hock.

socket [*sok′ət*] a hollow into which a corresponding part fits.

dry s. alveolar **osteitis**.

tooth s. see **alveolus**.

sod-seeding resowing a pasture without ripping it up. Carried out with a special implement that places seed and fertilizer in a sliced furrow with minimum disturbance of existing sward.

soda [*so′də*] sodium carbonate.

baking s. sodium bicarbonate.

s. bush see ***Neobassia proceriflora***.

s. lime a mixture of 90% calcium hydroxide, 5% sodium hydroxide, 5% silica and water, used to absorb carbon dioxide from the exhaled air in a closed circuit anesthetic system. See also **baralime**.

sodium (Na) [*so′de-əm*] a chemical element, atomic number 11, atomic weight 22.990. See Table 4. Sodium is the major cation of the extracellular fluid (ECF), constituting 90–95% of all cations in the blood plasma and interstitial fluid; it thus determines the osmolality of the ECF.

s. acetate a systemic and urinary alkalizer, diuretic, and expectorant.

s. acetylsalicylate aspirin.

s. acid phosphate, s. biphosphate used as a dietary supplement of phosphorus for ruminants when only phosphorus is required and in small animals as a urinary acidifier.

s. aminoarsonate used as a feed additive to chickens and may cause arsenic poisoning if the dose rate is exceeded.

s. arsanilate used as a feed additive in the treatment of swine dysentery and in poultry and causes arsenic poisoning when dose rates are excessive.

s. arsenite used as a topical acaricide. See inorganic **arsenic** poisoning.

s. ascorbate a form of ascorbic acid; vitamin C.

s. azide used in weed control and the prevention of rot in fruit; used in serum samples to prevent bacterial overgrowth.

s. benzoate used topically as an antifungal agent in companion animals, and as a diagnostic aid in a liver function test.

s. bicarbonate a white powder found in most households in the form of baking soda; called also bicarbonate of soda. Used as a gastric antacid and as a systemic and urinary alkalinizer. See also **milk shake**. Used locally to remove mucus and to remove exudates and scabs.

s. cacodylate an organic compound yielding trivalent inorganic arsenic on metabolism in the body, similar in effects and toxicity to arsenic trioxide. Formerly used as a systemic treatment for chronic skin disease and capable of causing arsenic poisoning if used to excess.

s.-calcium channels see **channel**.

s. carbonate $Na_2CO_3 \cdot H_2O$, used as an alkalizing agent in pharmaceuticals, and has been used as a lotion or bath in the treatment of scaly skin, and as a detergent in companion animals.

s. channels see **channel**.

s. chlorate an old fashioned herbicide which is quite palatable to farm animals and toxic in moderate amounts. Large doses cause abdominal pain, staggering and purging. Lower doses cause methemoglobinemia and dyspnea.

s. chloride salt; a necessary constituent of the body and therefore of the diet; sometimes used parenterally in solution to replenish electrolytes in the body.

s. chloride nutritional deficiency not a common occurrence but is seen in grazing animals on sodium deficient pastures, where heavy potash fertilizer has been applied in animals that are milking heavily, growing rapidly or losing a lot of sweat. Signs include pica, drinking urine, polydipsia, polyuria and decrease in appetite, milk yield, body weight, and urinary sodium and chloride concentrations.

s. chloride poisoning salt poisoning; can occur via the diet due to accidental inclusion of too much salt, not enough water, or a combination of both. Most common is drinking of natural saline water from bore or deep well. Causes vomiting, gastroenteritis, diarrhea and dehydration most noticeable in lactating animals. Animals are restless and play with water, looking for fresh water. Water may also contain also magnesium, sulfate and carbonate ions. If water intake is restricted and salt intake normal a relative poisoning occurs. If combined with water deprivation causes **polioencephalomalacia** when the water intake returns to normal. In pigs the brain lesion is similar but because of the extensive infiltrations of eosinophils, characteristic of pigs, it is called eosinophilic meningoencephalitis.

s. chloroacetate a herbicide with very low toxicity potential.

s. citrate an alkalinizing agent; used also as an in vitro anticoagulant in blood stored for transfusion or diagnostic use, and in oral treatment for renal tubular acidosis.

s. cyanide a highly toxic industrial chemical and unlikely to enter the animal food chain unless as a result of a spill of reagents or industrial waste.

s. diethyldithiocarbamate a chelating agent used in the treatment for thallium poisoning; also used as an immunomodulator in the treatment of human immunodeficiency virus infection in humans.

s. fluoride a white, odorless powder used at one time for the treatment of ascariasis in pigs. Has no use in veterinary medicine comparable to its use as a prophylactic against dental caries in humans. See also **fluorosis**.

s. fluoroacetamide 1081; causes poisoning similar to sodium fluoroacetate (below).

s. fluoroacetate occurs naturally in some plants and limited use in agriculture as a rodenticide known as 1080 (to control rodents, coyotes, rabbits and opposums). The latter is a restricted substance and is only sold on license. Two forms of poisoning occur: (1) myocardial failure resulting in sudden death in herbivora; signs are dyspnea, cardiac irregularity; (2) excitement and convulsions in pigs and dogs. Both poisonings are highly fatal. Plants containing fluoroacetate are *Gastrolobium* spp., *Acacia georgina* (gidgee), *Dichapetalum* spp., *Palicourea* spp.
s. fluorosilicate is used as an insecticide in bait form for crickets and grasshoppers and as an insecticide dust for poultry. It is as toxic as sodium fluoride.
s. glutamate the monosodium salt of L-glutamic acid; used in treatment of encephalopathies associated with liver diseases. Also used to enhance the flavor of foods.
s. homeostasis maintenance of the body's sodium status at an appropriate concentration; effected principally by aldosterone increasing tubular resorption of sodium from the glomerular filtrate.
s. hyaluronate used in the treatment of degenerative joint disease in horses. See also **hyaluronan**.
s. hydroxide an all-purpose caustic. Its biggest use in veterinary medicine is to clean down fat-laden surfaces in abattoirs prior to disinfection.
s. hypochlorite a compound having germicidal, deodorizing and bleaching properties; used in solution to disinfect utensils, and in diluted form (Dakin's solution) as a local antibacterial and to irrigate wounds. A common disinfectant for a wide variety of uses in veterinary medicine, including application to cow's teats in mastitis control programs. Called also bleach.
s. iodide a compound used as a source of iodine and as an expectorant. At times used parenterally in the treatment of extensive ringworm, actinobacillosis and actinomycosis. Overuse causes **iodism**.
s. lactate a compound used in solution to replenish body fluids and electrolytes. See also **Hartmann's solution**.
s. lauryl sulfate an anionic surface-active agent used in shampoos as a detergent and wetting agent to increase skin penetration of active ingredients.
s. metabisulfite used as an antioxidant and as an aid in the making of ensilage. Also used as a preservative on meat, as a source of **sulfur** dioxide.
s. methanearsonate a herbicide—monosodium acid methanearsonate—causes arsenic poisoning.
s. molybdate used in salt mixture and as pasture topdressing as a prophylaxis against chronic copper poisoning in ruminants.
s. monofluoroacetate see sodium fluoroacetate (above).
s. nitrate used in food preservation especially meat pickling and as a fertilizer. Can cause nitrate–nitrite poisoning or nitrite poisoning in ruminants.
s. nitrite a vasodilator; used in the treatment of cyanide poisoning. Can cause methemoglobinemia and death from anoxia.
s. oleate used in the past by local injection in horses to cause inflammation and aid healing of chronic injuries such as splints and bucked shins.
s. oxalate see soluble **oxalate** poisoning.
s. pentachlorophenate used as a fungicide in wood preservatives. Acute poisoning after heavy dosing causes dyspnea and death due to respiratory failure.
s. perborate an oxidizing agent; used as a topical antiseptic and mouthwash.
s. phosphate an osmotic cathartic.
s. polyborate used indoors as a powder to control fleas in the environoment. Fleas are killed when they ingest it.
s.-potassium-ATPase pump see **NA^+, K^+-ATPase**.
s.-potassium channels see **channel**.
s./potassium ratio a low ratio, indicating hyponatremia and hyperkalemia, is characteristic of hypoadrenocorticism.
s. propionate used in the prophylaxis and treatment of primary ketosis in cows, and as a fungistat both topically and in preparations for animal medication.
s. pump see **NA^+, K^+-ATPase**.
s.-restricted diets used in the dietary management of heart disease and hypertension in dogs and cats.
s. salicylate an analgesic, antipyretic compound. See **salicylate**.
s. selenite used as treatment for severe nutritional deficiency of selenium. Overdose will cause poisoning by **selenium**.
s. stibogluconate a pentavalent antimonial used in the treatment of leishmaniasis. Called also antimony sodium gluconate.
s. sulfanilate rate of excretion is used as a sensitive test of urinary function. See also **sulfanilate**.
s. sulfate an osmotic cathartic; also used as a diuretic and sometimes applied topically in solution to relieve edema and pain of infected wounds. Called also Glauber's salts.
s. sulfite test 1. precipitates protein out of solution; a dramatic test for protein in urine. 2. a turbidity test on serum for proximate estimation of gamma globulin content and immunological status of newborn calf.
s. tetraborate called also borax; used as a weak disinfectant.
s. thiosulfate a compound used in the treatment of cyanide poisoning, and used in measuring the volume of extracellular body fluid and the renal glomerular filtration rate.
s. trichloroacetate a nontoxic herbicide.
s. versenate see **edetate**.

sodoku [*so'do-koo*] a relapsing type of infection in humans, dogs and cats due to *Spirillum minus*, an organism transmitted by the bite of an infected rat.

soft lacking in firmness.
s. rolypoly ***Salsola*** *australis*.
s. shell disease fish eggs lose their turgidity and become flat and wrinkled; the cause is unknown.
s. shelled eggs hen eggs layed without a hard shell, but covered by a thick membrane. May be due to nutritional reasons or occur in birds affected by avian infectious bronchitis and can persist for a long time into the recovery period.

Soft-coated wheaten terrier a medium-sized (30–40 lb), compact dog with a soft, silky, wavy, wheaten-colored coat that covers the face and body. The tail is docked. The breed is affected by a familial nephropathy.

soft palate the fleshy partition at the back of the mouth which separates the nasopharynx from the oropharynx and which, together with the hard palate, forms the roof of the mouth. Formerly called palatum molle; velum palatinum.
cleft s. p. commonly the posterior part is defective but may be part of a defect involving both soft and hard palates. Manifested by difficulties in sucking or nasal regurgitation of milk and food from a young age. Often associated with entrapment of the palate by the aryepiglottic fold. See also **cleft** lip.
s. p. dislocation see dorsal soft palate displacement (below).
dorsal s. p. displacement the free edge of the soft palate is displaced from its normal position under the epiglottis to lie over the opening of the larynx causing reduction in airflow. Common only in horses.
elongated s. p., overlong s. p. a common abnormality in brachycephalic dogs in which it causes inspiratory respiratory distress, gagging and coughing. The soft palate interferes with the epiglottis and glottis, particularly after it becomes inflamed and edematous. Other anomalies of the respiratory tract commonly are also present. Affected horses appear to choke, then continue to breathe through their mouth with a characteristic rattling sound. The cause and pathogenesis are unclear.
s. p. myositis may contribute to soft palate paresis.
s. p. paresis causes a functional pharyngeal paresis and the affected horse chokes up during exercise; often accompanies laryngeal hemiplegia.

softening a change of consistency, with loss of firmness or hardness.

Sogdianella moshkovskii the identity of this rickettsia has not been fully established. Reported to occur in a number of wild and domestic birds.

soil the earth, origin of all plant growth and the basis of all animal agriculture. Its characteristics of chemical composition, physical structure, especially porosity and water retaining capacity, its humus content, pH and salinity exert enormous effects on its productivity.
s. analysis an essential activity in densely farmed areas. Measures the soil content of total and available amounts of each of the important soil components.
s. contaminated herbage either from dust storms or in loose soil by hoof movement may contribute to dental attrition in sheep, or sand colic in horses.
s. eating a form of pica; caused by salt deficiency.
s. fumigants are used to prepare fields for planting and may cause poisoning in animals grazing them or eating crops harvested from them. See **methyl** bromide.

s. type includes clay, sand, loam.
soilage see zero **grazing**.
soiling see zero **grazing**.
sol [*sol*] a liquid colloid solution.
sol. solution.
solanaceous [*so"lə-na'shəs*] pertaining to or emanating from ***Solanum***.
solanidine a toxic steroid alkaloid in plants of ***Solanum***.
solanine [*so'lə-nēn*] a toxic glycoalkaloid in plants of ***Solanum***. Solanine is metabolized to the sugar solanose.
s. group the plants in *Solanum* spp. which contain solanine. Includes e.g. *S. dulcamara, S. lycopersicum, S. nigrum, S. melongena, S. pseudocapsicum,* and S. tuberosum.
Solanum [*so-la'nəm*] a widespread plant genus of the family Solanaceae which contains a number of valuable crop plants but also some poisonous ones. Poisoning may be due to (1) the presence in the plant of toxic glycoalkaloids which cause diarrhea, (2) alkamines, e.g. nitrosamines, which cause neuromuscular signs of incoordination, and the 'crazy cow' syndrome, or (3) calcinogenic glycosides which cause excessive deposition of calcium in tissues. Solanaceous plants which may cause diarrhea syndrome include *Solanum aculeastrum, S. americanum, S. aviculare, S. capsiciforme, S. capsicoides, S. carolinense, S. cinereum, S. dulcamara, S. elaeagnifolium, S. incanum, S. laciniatum, S. lycopersicum (Lycopersicum esculentum,* tomato), *S. mauritianum, S. melongena, S. nigrum, S. panduriforme, S. pseudocapsicum, S. quadriloculatum, S. rostratum, S. seaforthianum, S. simile, S. sturtianum, S. symonii, S. triflorum, S. tuberosum, S. vescum*. Solanaceous plants which cause nervous syndromes include *Solanum bonariensis, S. dimidiatum, S. fastigiatum, S. kwebense, S. luederitzii, S. lycopersicum, S. tenuiramosum, S. upingtoniae*. Solanaceous plants causing calcinosis include *S. glaucophyllum (S. malacoxylon), S. erianthum, S. linneanum* (*S. hermanii, S. sodomaeum*), *S. torvum*. Solanaceous plants causing miscellaneous syndromes include *S. carolinense* (inflammation of the mouth and esophagus), *S. tuberosum* (the common potato), which can cause carbohydrate engorgement. Eating of large quantities over a long period causes dermatitis of the lower limbs in cattle and buffaloes. Greened and sprouted potato tubers contain solanine and cause poisoning if fed without cooking or paring.
solar [*so'lər*] emanating from or pertaining to the sun's rays.
s. burn see **sunburn**.
s. dermatitis see solar **dermatitis**.
nasal s. dermatitis see solar **dermatitis**, **Collie** nose.
solar-induced squamous cell carcinoma see **squamous** cell carcinoma.
solar plexus [*so'lər plek'səs*] the network of ganglia and nerves in the center of the abdomen around the origin of the celiac and cranial mesenteric arteries composed principally of the celiac and cranial mesenteric ganglia; it is part of the autonomic nervous system. It is important in the control of the function of the liver, stomach, kidneys and adrenal glands.
solarization exposure to sunlight and the effects produced thereby.
solation [*sol-a'shən*] the liquefaction of a gel.
sole [*sōl*] the bottom of the foot or **hoof**.
s. abrasion traumatic injury to the sole of the hoof; more common and more serious in soft hooves caused by constant standing in wet footing.
s. abscess occurs in all ungulates but most common as a nonspecific disease in horses resulting from nail pricks. Causes pain and lameness, and tetanus in horses, and may extend up behind the wall of the hoof and discharge as a sinus at the coronet.
s. corium see solear **corium**.
dropped s. see **dropped** sole.
s. puncture penetration of the sole by a sharp foreign body, e.g. nail.
soft s. syndrome soft, crumbly horn in the sole of the hoof, usually all four hooves of the patient are affected, caused usually by failure of wear of the hoof, exacerbated by continued wetness and failure to trim overgrown hooves.
s. trauma bruising from excessive walking or walking on rough surfaces occur in horses and cattle. In horses, **corns** (2) may develop.
s. ulcer see **pododermatitis** circumscripta.
solenoglyphous a snake with mobile fangs that can be moved to give the best position for envenomation of the prey. Includes the vipers, puff adders and rattlesnakes.
Solenopotes capillatus a sucking louse of cattle in the family Linognathidae.
Solenopsis invicta fire ant; capable of causing damage to the conjunctiva in recumbent newborn animals.
solicitation a personal approach by a veterinarian to a person who is not a client and soliciting for any veterinary work that the person may have is unprofessional, unethical and, in most countries, illegal under the laws governing veterinary practice.
solid [*sol'id*] 1. not fluid or gaseous; not hollow. 2. a substance or tissue not fluid or gaseous.
Solidago North American plant genus in the family Asteraceae; contain an unidentified toxin. In some outbreaks there is suspicion that the poisoning is caused by a fungus growing on the plant but tests with the plant alone have proved its toxicity. Clinical signs include vomiting, dyspnea and death in most cases. Identified species include *S. chinensis, S. mollis* (*S. concinna*, range goldenrod), *S. odora, S. speciosa* (goldenrod), *S. spectabilis* (western goldenrod).
solids-not-fat (SNF) the substances in milk other than butterfat and water. They include casein, lactose, vitamins and minerals which contribute significantly to the nutritive value of milk.
soliped single-toed ungulate; an animal with a single uncloven hoof. Includes Equidae only. See also **monodactyl**.
solitary [*sol'ĭ-tar"e*] being the only one or ones.
s. cyst **unicameral** cyst.
s. tract nucleus the brainstem nucleus of the solitary tract, the tract carrying afferent parasympathetic nerve fibers.
solubility [*sol"u-bil'ĭ-te*] the quality of being soluble.
soluble [*sol'u-bəl*] capable of being dissolved.
s. glass see soluble **glass**.
solubles liquid containing soluble and very fine suspended particles in water or solvent. Mostly by-products of fermentation for the manufacture of alcohol. A good dietary protein supplement.
solute [*sol'üt*] the substance that is dissolved in a liquid (solvent) to form a solution.
s. diuresis increase in the volume of urine excreted as a result of an increase in the glomerular filtrate of any osmotically active solute.
solution [*sə-loo'shən*] 1. a liquid preparation of one or more soluble chemical substances usually dissolved in water. 2. the process of dissolving or disrupting.
aqueous s. one in which water is used as the solvent.
buffer s. one that resists appreciable change in its hydrogen ion concentration (pH) when acid or alkali is added to it.
colloid s., colloidal s. a preparation consisting of minute particles of matter suspended in a solvent.
hyperbaric s. one having a greater specific gravity than a standard of reference.
hypertonic s. one having an osmotic pressure greater than that of a standard of reference.
hypobaric s. one having a specific gravity less than that of a standard of reference.
hypotonic s. one having an osmotic pressure less than that of a standard of reference.
isobaric s. a solution having the same specific gravity as a standard of reference.
isotonic s. one having an osmotic pressure the same as that of a standard of reference.
molar s. a solution each liter of which contains 1 mole of the dissolved substance; designated 1 M. The concentration of other solutions may be expressed in relation to that of molar solutions as tenth-molar (0.1 M), etc.
normal s. a solution each liter of which contains 1 chemical equivalent of the dissolved substance; designated 1 N.
ophthalmic s. a sterile solution, free from foreign particles, for instillation into the eye; 'eye drops'.
physiological saline s., physiological salt s., physiological sodium chloride s. an aqueous solution of sodium chloride and other components, having an osmotic pressure identical to that of blood serum.
priming s. the fluid used to fill tubing and the reservoir of a cardiac bypass unit before use.
saline s. a solution of sodium chloride, or common salt, in purified water.
saturated s. a solution in which the solvent has taken up all of the dissolved substance that it can hold in solution.
sclerosing s. one containing an irritant substance that will cause obliteration of a space, such as the lumen of a varicose vein or the cavity of a hernial sac.
standard s. one containing a fixed amount of solute.

supersaturated s. one containing a greater quantity of the solute than the solvent can hold in solution under ordinary conditions.

volumetric s. one that contains a specific quantity of solvent per stated unit of volume.

solvent 1. capable of dissolving other material. 2. the liquid in which another substance (the solute) is dissolved to form a solution.

s. drag transfer of solutes across the intestinal wall by being carried along with the water flow driven by osmotic gradients across cell membranes.

s. extraction of oil seeds the oil is extracted by organic solvents, a modern process largely displacing extraction by pressure. The resulting cake or meal may be toxic, e.g. trichloroethylene extracted soybean meal.

s. poisoning cases of poisoning may be due to the solvent used in a medication, especially when these are petroleum products, as they are in many insecticide preparations.

soma [*so'mə*] 1. the body as distinguished from the mind. 2. the body tissue as distinguished from the germ cells. 3. the cell body.

Somali a medium to large breed of cat, recently recognized in some countries. It is similar in appearance to the Abyssinian but with a medium length haircoat, bushy tail and ruff around the neck. There are tufts of hair between the toes.

Somaphantus lusius a louse of guinea fowl.

somasthenia [*sōm"əs-the'ne-ə*] bodily weakness with poor appetite and poor sleep.

somatic [*so-mat'ik*] 1. pertaining to or characteristic of the body or soma. 2. pertaining to the body wall, not the viscera.

s. afferent system the system of sensory neurons scattered around the body and responding to pain, touch, temperature and other external stimuli.

s. cell see somatic **cell**.

s. cell count (SCC) the number of somatic cells per mL of milk. More than 95 per cent of somatic cells in milk are leucocytes (neutrophils, macrophages and lymphocytes) and the somatic cell count provides a sensitive and specific indicator of udder health and milk quality. Used on an individual cow basis, a count of <100000 cells/mL is considered to reflect a healthy mammary gland, whereas a count >200000 cells/mL is suggestive of bacterial infection. Somatic cells in the milk secrete proteolytic enzymes that partially degrade the casein and result in a decrease of the yield of cheese obtained from the milk. They also can change the taste and smell of the milk. There is an inverse relationship between the somatic cell count and milk production. The California mastitis test provides a cow-side measure of somatic cell count. See also **bulk tank** somatic cell counts.

s. cell hybridization fusion in the laboratory of two different populations of somatic cells.

s. cell nuclear transfer (SCNT) see c**cloning**.

s. mutation see somatic **mutation**.

s. myoneural junction see **myoneural junction**.

s. nerves nerves supplying the body wall and limbs.

s. pain pain emanating from muscles, skeleton, skin; pain in the parts of the body other than the viscera.

s. sensation central perceptions of sensory stimuli from the body wall and limbs include touch, temperature, tickle, itch, pain, conscious proprioception.

s. theory this postulates that very few immunoglobulin genes are inherited but there is great diversification in differentiating somatic cells.

somation variations in somatic structure that are not hereditary.

somat(o)- word element. [Gr.] *body*.

somatochrome [*so-mat'o-krōm*] any neuron which has a well-marked cell body completely surrounding the nucleus, its colorable protoplasm having a distinct contour; used also adjectively.

somatocrinin [*so"mə-to-kri'nin*] see **growth hormone** releasing hormone.

somatogenic [*so"mə-to-jen'ik*] originating in the body.

somatology [*so"mə-tol'ə-je*] the sum of what is known about the body.

somatomammotropin [*so"mə-to-mam'o-tro"pin*] see **placental** lactogen.

somatome 1. an appliance for cutting the body of a fetus. 2. a somite.

somatomedin [*so"mə-to-me'din*] any of a group of peptides found in the liver and in plasma which mediate the effect of growth hormone (somatotropin) on cartilage; they are responsible for uptake of sulfate and increased synthesis of collagen and other proteins by cartilage.

s. C participates in the limitation of secretion of growth hormone by the pituitary; produced in various tissues, especially liver; called also IGF-1 or insulin-like growth factor.

somatometry [*so"mə-tom'ə-tre*] measurement of the dimensions of the entire body.

somatopagus [*so"mə-top'ə-gəs*] conjoined twins united at the trunks.

somatopathy [*so"mə-top'ə-the*] a bodily disorder rather than a mental one.

somatoplasm [*so-mat'o-plaz'əm*] the protoplasm of the body cells exclusive of the germ cells.

somatopleure [*so-mat'o-ploor*] the part of the embryo which forms the lateral and ventral walls of the fetus. Consists of somatic mesoderm and ectoderm.

somatoschisis [*so"mə-tos'kĭ-sis*] 1. splitting of the bodies of the vertebrae. 2. a fissure of the trunk.

somatoscopy [*so"mə-tos'kə-pe*] examination of the body.

somatostatin [*so"mə-to-stat'in*] a cyclic tetradecapeptide hormone and neurotransmitter that inhibits the release of peptide hormones in many tissues. It is released by the hypothalamus to inhibit the release of growth hormone (GH, somatotropin) and thyroid-stimulating hormone (TSH) from the anterior pituitary; it is also released by the delta cells of the islets of Langerhans in the pancreas to inhibit the release of glucagon and insulin and by the similar D cells in the gastrointestinal tract.

somatotopic [*so"mə-to-top'ik*] related to particular areas of the body; a correspondence between the form of the body and its representation on an organ such as the brain. The motor and sensory cortices of the brain are arranged somatotopically, specific regions of the cortex being responsible for different areas of the body. See also somatotopical **projection**.

somatotopy see **somatotopic**.

somatotrope [*so-mat'o-trōp*] somatotroph.

somatotroph [*so-mat'o-trōf*] any of the cells of the adenohypophysis that secrete growth hormone.

somatotropin, somatotrophin [*so'mə-to-tro"pin*] growth hormone. See also **pituitary**.

bovine s. (BST) a protein secreted by the pituitary gland that stimulates body cell growth and milk production. It is available as a synthetically produced product for use in dairy cattle where it can increase milk production, especially in the first three months of lactation. Its use is controversial.

somatotype [*so-mat'o-tīp*] a particular type of body build.

somatotyping [*so-mat'o-tīp"ing*] objective classification of animals according to type of body build.

somatropin [*so-mat'ro-pin*] nonproprietary drug name for somatotropin (growth hormone).

somite [*so'mīt*] one of the paired block-like masses of mesoderm beside the neural tube of a vertebrate embryo, formed by transverse subdivision, that develop into the vertebral column, skin and muscles of the body.

somitomere in the developing vertebrate embryo, a segment of paraxial mesoderm.

somnifacient [*som"nĭ-fa'shənt*] causing sleep.

somniferous [*som-nif'ər-əs*] producing sleep.

somnolence [*som'nə-ləns*] sleepiness; also, unnatural drowsiness. A depressive mental state commonly caused by encephalitis, encephalomalacia, hepatic encephalopathy, hypoxia and some poisonings, e.g. *Filix mas*, the male fern.

Somogyi effect [*so'mo-je*] a rebound phenomenon occurring in diabetes mellitus; overtreatment with insulin induces hypoglycemia, which initiates the release of epinephrine, ACTH, glucagon and growth hormone, which stimulate lipolysis, gluconeogenesis and glycogenolysis, which, in turn, result in rebound hyperglycemia and ketosis.

Sonchus genus of the plant family Asteraceae; can cause nitrate–nitrite poisoning; called also sow thistles.

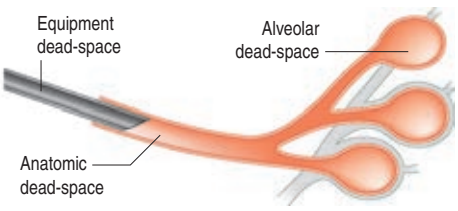
songbird fever an acute, febrile illness with vomiting and hemorrhagic diarrhea, observed in cats in the Northeastern USA during periods of seasonal bird migration; believed to be caused by *Salmonella typhimurium*.

sonicate [*son'ĭ-kāt*] 1. to expose to sound waves; to disrupt bacteria by exposure to high-frequency sound waves. 2. the products of such disruption.

VetBooks.ir

sonication [son"ĭ-ka'shən] exposure to sound waves; disruption of bacteria by exposure to high-frequency sound waves.
sonitus tinnitus.
sonogram [son'o-gram] a record or display obtained by ultrasonic scanning.
sonography [sə-nog'rə-fe] ultrasonography.
sonolucent [son"o-loo'sənt] in ultrasonography, permitting the passage of ultrasound waves without reflecting them back to their source (without giving off echoes).
sonopuncture [son"o-pungk'chər] ultrasonic stimulation of acupuncture points.
sonorous [son'ə-rəs, sə-nor'əs] resonant; sounding.
Sophora secundiflora [so-fo'rə] North American plant in legume family Fabaceae; toxin is assumed to be an unidentified quinolizidine alkaloid which causes a staggers syndrome in range sheep. When driven affected sheep tremble, stiffen and fall but recover quickly. Most recover if access to the plant is denied. Called also mescal bean, frijolito.
sopor [so'por] [L.] *deep or profound sleep*.
soporific [sop"o-rif'ik, so"po-rif'ik] 1. producing deep sleep. 2. an agent that induces sleep.
soporous [so'por-əs] associated with coma or deep sleep.
sorb [sorb] to attract and retain substances by absorption or adsorption.
sorbate see **sorbic acid**.
sorbefacient [sor"bə-fa'shənt] 1. promoting absorption. 2. an agent that promotes absorption.
sorbent [sor'bənt] an agent that sorbs.
sorbic acid [sor'bik] a fungistatic preservative used as a food preservative.
sorbitol [sor'bĭ-tol] a sugar alcohol found in various berries and fruits; in mammals, sorbitol is an intermediate in the conversion of glucose to fructose. It is found in lens deposits in diabetes mellitus. A 50% solution is used as an osmotic diuretic. Sorbitol is used as a sweetener in some dietetic foods; it has the same caloric value as other sugars.
s. dehydrogenase (SDH) enzyme which converts sorbitol into fructose; see L-iditol **dehydrogenase** (ID).
sorbose a sugar, a ketohexose, with properties similar to levulose; oral administration causes hemolytic anemia in dogs. Called also L-sorbose.
sordes [sor'dēz] foul matter collected on the lips and teeth in low fevers, consisting of food, microorganisms and epithelial elements.
sore [sor] a popular term for any lesion of the skin or mucous membrane.
bed s. decubital ulcer.
foam s. see **scalded skin syndrome**.
s. foot syndrome erosion of the pads in recently captured large cats. Caused by ceaseless walking and pivoting on a concrete floor.
s. head see **elaeophoriasis**.
s. hocks see ulcerative **pododermatitis**.
s. knee see **carpitis**.
s. mouth see contagious **ecthyma**, vesicular **stomatitis**.
s. muzzle in sheep, see **bluetongue**.
s. nose a crusting, inflammatory skin condition of the nose and muzzle in young, mature gerbils; it can extend to the legs and ventral body with secondary infection. Abrasions from bedding or cages may be an initating factor and there are excess secretions from the **Harderian gland** with accumulation of porphyrin pigment in the skin, causing irritation, self-trauma and secondary infection. Occurs in conditions of overcrowding and excessive humidity. Called also nasal dermatitis, facial dermatitis, bald nose.
pressure s. see **decubital ulcer**.
pus s. see **scalded skin syndrome**.
rub s. a sore found between the toes of Greyhounds and caused by pressure from a joint of a lesser digit on the side of a greater digit.
summer s. see **swamp cancer**.
sweat s. see **scalded skin syndrome**.
Sorghastrum nutans toxic plant in family Poaceae; causes cyanide poisoning.
Sorghum [sōr'gum] grass genus in the plant family Poaceae; can cause cyanide and nitrate–nitrite poisoning; the cyanide poisoning may be in the peracute, lethal, anoxia form or a chronic form manifested by spinal cord degeneration, ataxia, urinary incontinence and consequential pyelonephritis, or as congenital deformities including arthrogryposis. Includes *Sorghum* x *almum*, *S. bicolor* (*S. vulgare*, grain sorghum), *S. halepense* (Johnson grass), *S.* x *drummondii* (*S.sudanense*), *S. verticilliflorum* (wild sorghum). Includes very valuable fodder crops used extensively as ensilage or green chop, and a grain sorghum used for lot feeding. Fodder sorghum is the more dangerous but both should be considered as potentially poisonous.
soring abusive practice of accentuating a horse's step or gait for competitions. Achieved by irritating an animal's leg with chemical applications and injections or through mechanical irritants such as straps and chains.
sorption [sorp'shən] the process or state of being sorbed; absorption or adsorption.
sorrel 1. a weed and poisonous plant. See ***Rumex, Oxalis***. 2. a horse coat color, light or golden chestnut.
S.O.S. [L.] *si opus sit* (if necessary); a pharmaceutical directive in a prescription.
sotalol [so'tə-lol] a non-selective β-blocker used in the treatment of cardiac arrhythmias in dogs.
souffle [soo'fəl] a soft, blowing auscultatory sound.
cardiac s. any heart murmur of a blowing quality.
fetal s. a murmur sometimes heard over the pregnant uterus, supposed to be due to compression of the umbilical cord.
funic s., funicular s. a hissing souffle synchronous with fetal heart sounds, probably from the umbilical cord.
placental s. a souffle supposed to be produced by the blood current in the placenta; called also placental bruit.
uterine s. a sound made by the blood within the arteries of the gravid uterus.
sound [sound] 1. percept resulting from stimulation of the ear by mechanical radiant energy, the frequency depending on the species. 2. a slender instrument to be introduced into body passages or cavities, especially for the dilatation of strictures or detection of foreign bodies. See also **probe**. 3. a noise, normal or abnormal, emanating from within the body. 4. strong, in good condition and without significant defects, e.g. said of wool which has sufficient tensile strength to resist the rigors of processing; said also of teeth as *sound mouth* or a horse with no evidence of lameness or other clinical problems.
ejection s's high-pitched clicking sounds heard very shortly after the first heart sound, attributed to sudden distention of a dilated pulmonary artery or aorta or to forceful opening of the pulmonic or aortic cusps.
friction s. one produced by rubbing of two surfaces.
heart s's the sounds produced by the functioning of the heart. See **heart sounds**.
Korotkoff's s's those heard during auscultatory blood pressure determination.
percussion s. any sound obtained by percussion.
respiratory s. any sound heard on auscultation over the respiratory tract.
succussion s's splashing sounds heard on succussion over a distended stomach or in hydropneumothorax.
to-and-fro s. a peculiar friction sound or murmur heard in pericarditis and pleurisy.
urethral s. a long, slender instrument for exploring and dilating the urethra.
s. waves sound, the stimulus for hearing, consists of patterns of pressure waves generated in and passed through the air.
white s. that produced by a mixture of all frequencies of mechanical vibration perceptible as sound.
soundness having the capacity to perform the function for which the animal is about to be purchased or about to be accepted as an entrant in a contest. The expression is usually used with reference to horses. See also **breeding** soundness.
s. certificate a certificate setting out the identity of the animal, the client and the veterinarian, the date of the examination, the parts and functions examined, the abnormalities noted and the conclusion of the examining veterinarian as to the ability of the subject animal to perform the tasks expected of it.
s. examination a clinical, (including clinicopathological and radiological segments if appropriate) examination of an animal with a view to providing a certificate of soundness or suitability for sale.
sour side putrefaction on the sides of carcasses which have been hung too closely together in the chilling room and which have not cooled quickly enough at the points of contact.

source points powerful acupuncture points in the carpal and tarsal areas, used additionally to tonification and sedation points, in the treatment of organ disease or dysfunction.
sourcil [soor-sēl'] thickening of subchondral acetabular bone. Used as an indicator of biomechanics in the canine hip joint and in radiographic assessment for **hip** dysplasia.
sourgrass ***Rumex*** *acetosella*.
souring said of ham. See **taint**.
soursob ***Oxalis*** *pes-caprae*.
soutgannabos [Af.] ***Salsola*** *barbata*.
South African mastiff see **Boerboel**.
South African Merino sheep South African version of Merino sheep, originated chiefly from Australian Merino.
South African Veterinary Council the regulatory body for the veterinary and para-veterinary professions in South Africa with a statutory duty to determine scientific and ethical standards of professional conduct and education.
South American camelids include alpaca, guanaco, llama, vicuña.
South Devon a red, dual-purpose breed of cattle. Called also Devon.
South Suffolk a breed of meat **Downs**-type sheep produced by crossing **Southdown** and **Suffolk sheep**.
Southdown an English **Downs** type of short-woolled, meat sheep; polled, gray-brown face and legs. The origin of many crossbred flocks and popular sire of terminal fat-lamb cross. Dystocia is a problem in purebred flocks.
Southern blot [suth'ərn] a technique for detecting specific DNA sequences following agar gel electrophoresis of a set of DNA restriction enzyme digestion fragments. The fragments after electrophoresis are transferred to a nitrocellulose or nylon membrane by applying the membrane to the gel; the membrane is probed with a labeled probe that hybridizes to localize one or more of the separated fragments on the membrane. Named for Professor Sir Edward Southern, British molecular biologist.
southern mock orange ***Prunus*** *caroliniana*.
Southern transfer see **Southern blot**.
sow a female pig that has had a litter.
dry s. pregnant sow.
s. stall a farrowing stall with limited room for movement but maximum protection for the suckers.
thin s. syndrome **hyostrongylosis**.
non-productive s. days the sow is neither lactating nor gestating. Used as a herd measure of management during the period between weaning of the sow and successful mating.
soybean [soi'bēn] the leguminous plant *Glycine max* (syn. *G. soja*) used for the production of soya beans. The greatest use of the bean is the extraction of oil for industrial use. The beans are unsuitable for feeding in their raw state unless they are roasted because they contain growth-inhibiting factors.
s. meal the material left after extraction of soybean oil. It is poisonous if the oil is extracted by elution with trichloroethylene.
trichloroethylene-extracted s. meal causes a radiomimetic syndrome of anemia, leukopenia and submucosal petechiation.
sp. gr. specific gravity.
SPA staphylococcal protein A.
space [spās] 1. a delimited area. 2. an actual or potential cavity of the body. 3. the areas of the universe beyond the earth and its atmosphere.
dead s. 1. space remaining in tissues as a result of failure of proper closure of surgical or other wounds, permitting accumulation of blood or serum. 2. the portions of the respiratory tract (passages and space in the alveoli) occupied by gas not concurrently participating in oxygen–carbon dioxide exchange.
Disse s's small spaces between liver sinusoids and liver cells; conduits for liver lymph. Called also perisinusoidal space.



S-63: Types of dead-space in an anesthetic ventilation system. From Cunningham JG, Textbook of Veterinary Physiology, 3rd Edition. Saunders, 2002.

epidural s. the space between the dura mater and the lining of the spinal canal occupied by fat, blood vessels and nerves.
s's of Fontana fluid spaces separating fibrous trabeculae in the iridal angle meshwork.
interalveolar s. the part of the dental arch where there are no teeth.
intercostal s. the space between adjacent ribs.
interpleural s. mediastinum.
intervillous s. the space of the human and some other placentae into which the chorionic villi project and through which the maternal blood circulates.
lumbosacral s. the intervertebral space between the last lumbar and the first sacral vertebrae; suitable site for epidural injection.
lymph s's open spaces filled with lymph in connective or other tissue, especially in the brain and meninges.
Meckel's s. a recess in the dura mater that lodges the trigeminal ganglion.
mediastinal s. the space between opposing layers of mediastinal pleura containing the heart, trachea, esophagus and other structures. Not quite synonymous with mediastinum, which refers to the central partition dividing the thorax as a whole.
medullary s. the central cavity and the intervals between the trabeculae of bone that contain the marrow.
parasinoidal s's spaces in the dura mater along the superior sagittal sinus which receive the venous blood.
perisinusoidal s. formal name for Disse spaces (above).
perivascular s. a lymph space that surrounds the walls of an artery for a short distance as it enters the brain; the walls of the space are bound by arachnoid-like and pia-like membranes so that the intervening channel communicates with the subarachnoid space.
plantar s. a fascial space on the sole of the foot of primates, divided by septa into the lateral, middle and median plantar spaces.
pneumatic s. a portion of bone occupied by air-containing cells, especially the spaces constituting the paranasal sinuses.
retroperitoneal s. the space between the peritoneum and the dorsal abdominal wall; the space may be used for contrast radiography (pneumoretroperitoneum), and for special surgical access to abdominal organs in the roof of the abdomen where routine laparotomy is contraindicated..
retropharyngeal s. the space behind the pharynx, containing areolar tissue, lymph nodes, etc.
subarachnoid s. the space between the arachnoid and the pia mater, containing cerebrospinal fluid.
subdural s. the skender fluid-filled space between the dura mater and the arachnoid. Called also *spatium subdurale*.
subphrenic s. the space between the diaphragm and subjacent organs of bipeds.
Tenon's s. a lymph space between the sclera and Tenon's capsule.
space-occupying lesions substantial physical lesions, e.g. neoplasm, hemorrhage, granuloma, which occupy space; the effect is more significant if the lesion is within a space confined by bone, e.g. thorax, cranium, bone marrow cavity.
Spalding's sign [spawl'ding] in radiographs, overlapping of fetal cranial bones; a late sign of fetal death.
spaniel any of several breeds of bird dogs, used in hunting to 'flush' or 'spring' the game by following the scent. See **American water spaniel**, **Boykin spaniel**, **Brittany spaniel**, **Cavalier King Charles spaniel**, **Clumber spaniel**, **Cocker spaniel**, **Continental toy spaniels**, **English springer spaniel**, **Field spaniel**, **Irish water spaniel**, **King Charles spaniel**, **Sussex spaniel**, **Tibetan spaniel**, **Welsh springer spaniel**.
Spaniopsis [span"e-op'sis] a genus of biting flies in the family Rhagionidae. They are blood-suckers but do not appear to transmit disease.
Spanish [span'ish] pertaining to or emanating from Spain.
S. brown cattle Spanish version of Brown Swiss.
S. Merino sheep original Spanish Merino finewool sheep, ewes mostly polled, rams mostly horned.
S. water dog a medium sized dog with a distinctive long curly, woolly white, black or chestnut coat that may form cords covering the body and face. The tail is naturally short or may be docked.
Spanish fly [span'ish] contains **cantharides**. Called also *Cantharis vesicatoria* (syn. *Lytta vesicatoria*).
spanthoumelkbos ***Sarcostemma*** *viminale*.
sparganosis [spahr"gə-no'sis] infection with ***Spirometra*** *mansoni* (syn. *S. erinacei*), which invades the subcutaneous tissues of pigs causing inflammation and fibrosis. If the lymphatics are involved,

VetBooks.ir

there is edematous enlargement of the part. Transmissible to humans who eat infected meat.

sparganum [*spahr'gə-nəm*] pl. *spargana* [Gr.] a migrating plerocercoid of a tapeworm. Usually refers specifically to larvae of *Spirometra*. Causes **sparganosis** in humans and pigs.

sparrow small gray-brown bird with a universal distribution.

Java s. a large gray or white finch (up to 6 inches and 30 g) used as a companion bird; called also *Padda oryzivora*.

sparteine [*spahr'tēn*] a toxic alkaloid found in Spanish broom and lupins. It causes paralysis of sympathetic ganglia and motor nerve endings.

Spartium junceum [*spahr'she-əm*] shrub in the family Fabaceae. Contains the quinolizidine alkaloid cytisine which causes convulsions and fatal respiratory failure. Called also Spanish broom.

Spartothamnella juncea Australian plant in the family Verbenaceae; causes nitrate–nitrite poisoning.

spasm [*spaz'əm*] 1. a sudden involuntary contraction of a muscle or group of muscles. 2. a sudden but transitory constriction of a passage, canal or orifice. Spasms usually occur when the nerves supplying muscles are irritated, and are commonly accompanied by pain. Occasionally a Spasms may occur in a blood vessel, and is then called vasospasm. Spasms vary from mild twitches to severe **seizures** and may be the signs of any number of disorders.

bronchial s. bronchospasm; spasmodic contraction of the muscular coat of the smaller divisions of the bronchi.

inherited congenital s.'s in Jersey calves at birth; lethal within a few weeks; characterized by intermittent, vertical tremor of the head, neck and limbs, making progression and standing impossible; conditioned by a recessive gene.

muscle mass s. the basic functional defect in such diseases as Elso heel, inherited periodic spasticity.

nodding s. clonic spasm of the sternomastoid muscles, causing a nodding motion of the head.

spasmodic [*spaz-mod'ik*] of the nature of a spasm; occurring in spasms.

s. colic see spasmodic **colic**.

spasmolysis [*spaz-mol'ĭ-sis*] the arrest of spasm.

spasmolytic [*spaz"mo-lit'ik*] 1. arresting or checking spasms. 2. an agent that arrests spasms, especially of smooth muscle.

spasmophilia abnormal tendency to convulsions; abnormal sensitivity of motor nerves to stimulation with a resultant tendency to spasm.

spasmus [*spaz'məs*] [L.] *spasm*.

s. nutans see nodding **spasm**.

spastic [*spas'tik*] characterized by spasms, or tightening of the muscles, causing stiff and awkward movements and in some cases a scissors-like gait.

s. colon see irritable **colon** syndrome.

inherited s. paresis of cattle see **Elso heel**.

spasticity [*spas-tis'ĭ-te*] the state of being spastic.

inherited neonatal s. signs appear in calves at 2–5 days of age. Unable to stand; if lifted rigidity of all muscles with extension of limbs.

inherited periodic s. a defect in cattle which does not appear until they are adults. On rising from a recumbent position the hindlimbs are extended and the animal is unable to flex them. Spasticity may last for 15 minutes but the patient will eventually relax and walk normally. Causes inconvenience only. Called also stall-cramp, the stretches.

inherited progressive s. possibly inherited disease of Angora goats; characterized by development of lethargy and ataxia at about 2 months of age, followed by paresis, recumbency and euthanasia and necropsy lesions of vacuolation in neurons of the brain and spinal cord.

spat juvenile aquatic shellfish, especially oysters ready for settlement on solid surfaces—'spat fall'.

Spathiphyllum a genus of plants in the family Araceae; contain calcium oxalate raphide crystals and cause buccal irritation. Called also peace lily.

spatial [*spa'shəl*] pertaining to space.

s. clustering in geographical terms the cases in an outbreak of disease are clustered in groups and not spread randomly.

s. distribution the distribution of a population within an area.

Spatial Epidemiology Team an organization within the USDA Centers for Epidemiology and Animal Health (CEAH) that provides expertise in the use of geospatial methods to analyze and enhance animal health.

spatium [*spa'she-əm*] pl. *spatia* [L.] space.

s. interarticulare spaces between the arches of the vertebrae, as in pigs or young animals in which the space between the vertebral arches is large to accommodate the greater length of the vertebral bodies.

s. zonularia the many spaces between the fibers of the suspensory ligament of the lens.

spatula [*spach'ə-lə*] a wide, flat, blunt, usually flexible instrument of little thickness, used for spreading material on a smooth surface or mixing.

obstetric s. see **Keller spatula**, **De Bruin spatula**.

spatulate [*spach'ə-lāt*] 1. having a flat blunt end. In a surgical procedure, opening and spreading apart the ends of a tubular structure in order to increase the diameter of the orifice. 2. to mix or manipulate with a spatula.

spavin [*spav'in*] diseases of the hock joint.

bog s. chronic synovitis of the tibiotarsal joint which causes an obvious distention of the capsule of the joint. Called also tarsal hydrarthrosis.

bone s. osteoarthritis or osteitis of the distal intertarsal and tarsometatarsal joints of the horse. The lesions are those of a degenerative bone disease terminating in the formation of exostoses and in ankylosis of the joint. Lameness is a constant finding. There may or may not be a local bony swelling. Called also jack spavin.

knee s. an old-fashioned name for chronic carpitis in horses.

s. knife see Warmberg spavin **knife**.

occult s. a spavin in which the clinical signs are evident but there is no external bony enlargement.

s. test the horse's hindlimb is held in a flexed position, with the metatarsus parallel to the ground for several minutes. Increased lameness afterwards is considered a positive test for spavin. Called also hock flexion test.

spawn 1. fish eggs. 2. in aquatic animals, deposition of gametes directly into the water.

spawners see **broodfish**.

spay [*spa*] to remove the ovaries. See also **ovariohysterectomy**.

s. hook see spay **hook**.

s. spreader a device with a spring loop, like a safety pin, at one end and an outcurving blade at the end of each arm. The blades are inserted into the spay incision and the arms released.

vaginal s. ovaries are removed through a colpotomy incision; sometimes performed on mares.

spaying pertaining to **spay**.

S-64: Bog spavin. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

s. device see **Kimberling–Rupp spaying device**.

SPCA 1. serum prothrombin conversion accelerator (clotting factor VII). See also **clotting** factors. 2. Society for the Prevention of Cruelty to Animals; the counterpart in the USA and Canada of the RSPCA in some British Commonwealth countries.

SPD salmon poisoning disease.

spear grass see ***Stipa***, ***Stipagrostis***.

spearwort a common name for some plants in the genus ***Ranunculus***. Includes greater spearwort (*R. lingua*), lesser spearwort (*R. flammaula*).

special out of the ordinary.

s. diagnostic strategies includes all techniques which are not provided in the ordinary course of the services available at veterinary clinics and hospital, e.g. Compton metabolic profile, field response trial, retrospective mating analysis.

s. senses see special **sense**.

specialist [spĕ'shəl-ist] a veterinarian whose practice is limited to a particular branch of medicine or surgery, especially one who, by virtue of advanced training, is certified by a specialty board as being qualified to so limit his/her practice.

specialty [spĕ'shəl-te] a legally recognized field of practice of a specialist.

species [spe'shēz, spe'sēz] a taxonomic category subordinate to a genus (or subgenus) and superior to a subspecies or variety; composed of individuals similar in certain morphological and physiological characteristics, the important one of which is that they are capable of interbreeding to produce fertile and viable offspring.

s. difference the difference between species in their response to therapeutic agents, poisons and infections due to physical, biochemical, immunological differences.

s. specialist a veterinarian who specializes in the diseases and management of an individual animal species.

type s. the original species from which the description of the genus is formulated.

species-specific [spe"sēz-spə-sif'ik] characteristic of a particular species; having a characteristic effect on, or interaction with, cells or tissues of members of a particular species; said of an antigen, drug or infective agent.

speciesism term used in animal rights for prejudice or attitude of bias toward the interest of members of one's own species and against those members of other species.

specific [spə-sif'ik] 1. pertaining to a species. 2. produced by a single kind of microorganism. 3. restricted in application, effect, etc., to a particular structure, function, etc. 4. a remedy specially indicated for a particular disease. 5. in immunology, pertaining to the special affinity of antibody for the corresponding antigen.

s. acquired immunity see acquired **immunity**.

s. activity enzymes enzyme activity as V_{max}, measured as µmoles of substrate utilized or product produced per minute, expressed on a specific unit of comparison such as per mg protein or g of tissue weight or mL or L of solution such as plasma.

s. drug one that acts at only one type of receptor but may produce several pharmacological effects depending on which organs carry the operant receptor.

s. dynamic action heat produced by the metabolism of food and unavoidably lost to the animal. In cold environments it will be contributed to the maintenance of body temperature but in a hot environment it must be dispersed by the normal heat-dissipating mechanisms. Called also heat increment.

s. gravity (sp. gr.) the weight of a substance compared with the weight of an equal amount of some other substance taken as a standard. For liquids the usual standard is water. The specific gravity of water is 1; if a sample of urine shows a specific gravity of 1.025, this means that the urine is 1.025 times heavier than water. Specific gravity is measured by means of a hydrometer.

s. seasonals clusters of cases occurring at specific seasons.

specific pathogen free (SPF) a term applied to animals reared for experimentation or to commence new herds or flocks of disease-free animals. Animals usually obtained as for **axenic** animals but are then placed into a nonsterile environment in which they become infected with a range of microorganisms, many colonizing as normal flora. Certain defined specific pathogenic microorganisms are not present in the environment so that SPF animals can be stated to be free of infection or previous infection with the specified microorganism. See also **gnotobiotic** animal.

specificity [spes"ĭ-fis'ĭ-te] the quality of having a certain action, as of affecting only certain organisms or tissues, or reacting only with certain substances, as antibodies with certain antigens (antigen specificity).

drug s. the degree to which the effects of a drug are due to the one pharmacological action.

host s. the restricted infectivity of a particular parasite to a certain species or group of hosts.

test s. the probability of a test correctly identifying those patients which are not infected or which do not have the specified condition. A fundamental parameter of any diagnostic test. See also **sensitivity**.

specimen [spes'ĭ-mən] a small sample or part taken to show the nature of the whole, such as a small quantity of urine for urinalysis, or a small fragment of tissue for microscopic study.

forensic s. specimen collected in the knowledge that there will probably be litigation relating to the case. Requires complete, accurate identification of the specimen and the patient and client, and that a separate reserve specimen be kept for any further testing required by the court. All containers should be sealed so that they cannot be tampered with, and preferably in the presence of witnesses.

speckling see **ticking**.

spectacle [spek'tə-kəl] a round lens. Snakes lack movable eyelids and their corneas are protected by a transparent scale or spectacle which is shed and renewed at each ecdysis. See also **subspectacle**.

s. retention a common problem in snakes; caused by inappropriate humidity and other husbandry issues.

spectacles [spek'tə-kəlz] rings inserted through the nasal septum of birds to restrict vision and reduce the occurrence of cannibalism.

spectinomycin [spek"tĭ-no-mi'sin] an aminocyclitol antibiotic derived from *Streptomyces spectabili*; the hydrochloride is used as a feed additive for swine and chickens.

spectra plural of *spectrum*.

spectrin [spek'trin] a contractile protein attached to glycophorin at the cytoplasmic surface of the cell membrane of erythrocytes, considered to be important in the determination of red cell shape.

spectrometer [spek-trom'ə-tər] optical instrument for the measurement of the properties of light over a wide range of wavelengths from gamma rays to the far infrared. Used to identify substances and measure their concentration in solution.

spectrometry [spek-trom'ə-tre] identification of substances or determination of their concentration solution using a spectrometer.

spectrophotometer [spek"tro-fo-tom'ə-tər] an apparatus for determining the ability of a solution to absorb light in or near the visible spectrum by measuring the transmitted light at a specific wavelength.

spectrophotometry [spek"tro-fo-tom'ə-tre] the use of the spectrophotometer.

spectroscope [spek'trə-skōp] an instrument for developing and analyzing the spectrum of a substance.

spectroscopy [spek-tros'kə-pe] examination by means of a spectroscope.

nuclear magnetic resonance s. technique depending on measurements of specific radiofrequency emissions produced in a strong magnetic field from molecules containing nuclei with magnetic properties, e.g. ^{31}P, the most prevalent isotope of phosphorus.

spectrum [spek'trəm] pl. *spectra, spectrums* [L.] 1. the series of images resulting from the refraction of electromagnetic radiation (e.g. light, X-rays) and their arrangement according to frequency or wavelength. 2. range of activity, as of an antibiotic, or of manifestations, as of a disease.

absorption s. one obtained by passing radiation with a continuous spectrum through a selectively absorbing medium.

antibacterial s. the range of bacteria susceptible to a particular antimicrobial or class of antimicrobials.

broad-s. effective against a wide range of microorganisms.

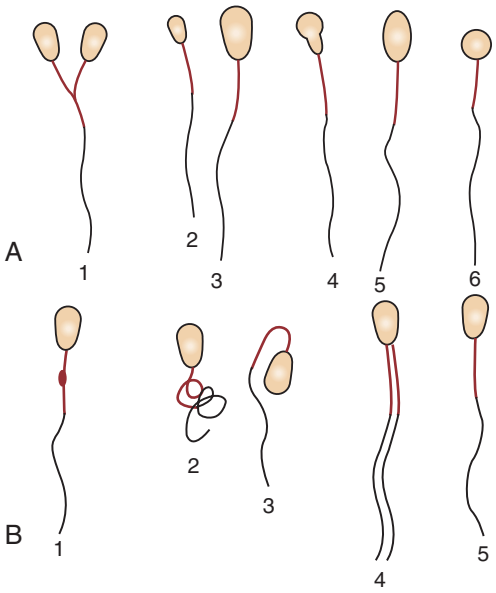
visible s. that portion of the range of wavelengths of electromagnetic vibrations (from 770–390 nm) which is capable of stimulating specialized sense organs and is perceptible as light.

speculum [spek'u-ləm] an instrument for opening or distending a body orifice or cavity to permit visual inspection.

eye s. the epithelial covering over the eye of reptiles; shed with the skin.

VetBooks.ir

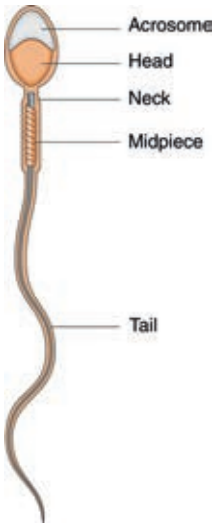
eyelid s. an instrument used to keep the eyelids apart during surgery.
Frick s. a simple metal tube 20 inches long × 1.5 inches diameter with ferruled strengthened ends; used to reach the pharynx of the cow and to pass a stomach tube without fear of damage by the cow's teeth.
Graves s. standard duckbill vaginal speculum. Inserted closed, opened by an exterior screw device that separates two thin blades, semicircular in cross-section. The cervix can be viewed through the external ring of the instrument.
McPherson s. a mouth speculum for use in the horse. Called also **Haussman gag**.
mouth s. see **mouth** speculum, **Schoupe speculum**, **Frick speculum**.
ophthalmic s. see eyelid speculum (above).
Polanski s. see thoroughbred speculum (below).
Schoupe s. used in equine dentistry to keep the mouth open. Consists of a long metal rod with a cross handle. The other end returns on itself and has at its end a coiled spring-like structure which is placed between the molars on the side opposite to where work is to be done.
stomach tube s. see Frick speculum (above), **Hauptner mouth gag**. For cattle there is also an instrument made out of a wooden rod with a hole through the center. This is placed between the cow's molars like a bit and held in position with a poll strap. It works adequately for a probang but is much inferior to the Frick speculum for a stomach tube.
thoroughbred s. a speculum used for vaginal inspection in mares. There are three slightly curved plates which lie close together when the instrument is closed and can be inserted easily into the vagina. They are opened by a screw mechanism externally causing the plates to separate radially and dilating the vagina. Known also as Polanski speculum.
vaginal s. see Graves speculum (above) and thoroughbred speculum (above).
speedy-cutting when the medial aspect of the carpus or metacarpus of the horse is struck by the hoof on the opposite forelimb when moving at a fast speed and when turned sharply.
s. boot a boot worn over the wall of the hoof to prevent this injury.
Speleognathus respiratory tract mites found in commercial poultry and pigeons but not a significant pathogen.
spelt a low-grade variant of wheat with similar feed quality but lower yield. Used only as stock feed. Called also *Triticum spelta*.
Spencer hemoglobinometer see Spencer **hemoglobinometer**.
sperm [*sperm*] the male germ cell. See also **spermatozoon**.
s. agglutinins anti-sperm antibodies of the IgG class occur as autoantibodies in dogs infected with *Brucella canis*. Antisperm antibodies may also occur following testicular trauma.
s. capacitation acquisition of the capacity to penetrate an ovum, not present at the time of delivery of the spermatozoon, and which requires a period of incubation in the female tract. It involves increased metabolic activity and motility and the removal of a chemical decapacitation factor from the spermatozoon. Capacitation must take place for the acrosome reaction to occur.
s. concentration a sperm count as measured in a hemacytometer or spectrophotometer; an indication of the health of the relevant testicles and a guide to the prospective fertility of the ejaculate and the donor.
s. live-dead ratio an indicator of the viability of the ejaculate as expressed in a slide count of a specially stained smear of the semen in which the dead and live sperm can be distinguished because of their differential staining.
s. morphology the normal anatomical structure of the **spermatozoon**. Abnormality of the structure of individual spermatozoa is used as a guide to the location and nature of the disease causing reduced reproductive efficiency.
s. motility the percentage of spermatozoa moving actively forward. Assessed under the microscope (400 × magnification) or by computerized imaging. See also **wave** motion; used to predict the probable fertility of the ejaculate.
s. motility index half the sum of the sample's sperm percentage motility + sperm progressive motility.
s. penetration assay see **ovum** penetration assay.



S-65: (A) Primary spermatozoal abnormalities involving the head include double head (bicephaly) (1), small head (microcephaly) (2), large head (macrocephaly) (3), pear-shaped head (pyriform) (4), elongated head (5), and round head (6). (B) Primary spermatozoal abnormalities involving the midpiece and tail include swollen midpiece (1), coiled midpiece and coiled tail (2), bent midpiece (3), double midpiece (4), and abaxial midpiece (5). From Hendrix CM, Sirois M, Laboratory Procedures for Veterinary Technicians, 5th Edition. Mosby, 2007.

s. stone hard bodies composed of inspissated masses of spermatozoa found in dilated remnants of epididymal ducts and produced by chronic epididymitis.
s. transport within both male and female reproductive tracts some movement forward results from the movements of the spermatozoa but most progress is the result of peristaltic movements by the tubular organs in which the spermatozoa find themselves at the time.
spermastasis accumulation of spermatozoa in the part of the male genital tract resulting from a blockage at the level of ampullae, ductus deferens or tail or epididymis.
spermatheca accessory organ opening into the common oviduct in female insects; stores spermatozoa delivered by the male during copulation; the sperm may remain viable for the life of the female.
spermatic [*spər-mat'ik*] pertaining to the spermatozoa or to semen.
s. cord the structure extending from the deep inguinal ring to the testis, comprising the ductus deferens, testicular artery and vein including the pampiniform plexus, lymphatic ducts, autonomic nerves as a testicular plexus, smooth muscle tissue around the vessels, called also internal cremaster muscle, and the visceral layer of the vaginal tunic. Clinicians are likely to include the external cremaster muscle, and the parietal layer of the vaginal tunic as parts of the cord, although, strictly, these structures simply surround the cord. Called also funiculus spermaticus.
s. cord torsion torsion of the cord to the point where circulation in the blood vessels of the cord ceases; rare but occasional occurrence in dogs, particularly where the testicle is retained and enlarged by tumor. Causes acute abdominal pain and death due to shock. Incorrectly called testicular torsion.
spermaticide [*sper'mə-to-sīd"*] spermicide.
spermatid [*sper'mə-tid*] a cell produced by meiotic division of a secondary spermatocyte; it develops into the spermatozoon.
spermatitis [*sper"mə-ti'tis*] inflammation of a vas deferens; deferentitis.
spermat(o)- word element. [Gr.] *seed;* specifically used to refer to the male germinal element.
spermatoblast [*sper'mə-to-blast"*] spermatid.
spermatocele [*sper'mə-to-sēl"*] a cystic distention of the epididymis or rete testis, containing spermatozoa.
spermatocelectomy [*spər-mat"o-sə-lek'tə-me*] excision of a spermatocele.
spermatocidal [*sper"mə-to-si'dəl*] destructive to spermatozoa.
spermatocyst [*sper'mə-to-sist"*] 1. a seminal vesicle. 2. spermatocele.

spermatocystectomy [sper'mə-to-sis-tek'tə-me] excision of a seminal vesicle.
spermatocystitis [sper'mə-to-sis-ti'tis] inflammation of a seminal vesicle.
spermatocystotomy [sper'mə-to-sis-tot'ə-me] incision of a seminal vesicle, for the purpose of drainage.
spermatocyte [spər-mat'o-sīt] the mother cell of a spermatid.
primary s. daughter cell of a spermatogonium (an incongruous nomenclature in such an intensely masculine context). It undergoes the first meiotic division.
secondary s. a cell produced by meiotic division of the primary spermatocyte, and which gives rise to the spermatid.
spermatocytogenesis [sper"mə-to-si"to-jen'ə-sis] the first stage of formation of spermatozoa, in which the spermatogonia develop into spermatocytes and then into spermatids.
spermatogenesis [sper"mə-to-si"to-jen'ə-sis] the development of mature spermatozoa from spermatogonia; it includes spermatocytogenesis and spermiogenesis.
spermatogenic [sper"mə-to-jen'ik] giving rise to spermatozoa.
s. cycle duration of the cycle which separates consecutive cell divisions of spermatogonia (pig, 8 days; sheep, 10 days; cattle 14 days) to produce spermatocytes.
s. wave spermatogenesis occurs in sequential waves along the length of the seminiferous tubules so that spermatozoa are produced in waves; the phenomenon which ensures that spermatozoa are produced continuously, except for seasonal pauses when spermatogenesis is initiated and terminated each year.
spermatogonium [sper"mə-to-go'ne-əm] pl. *spermatogonia* [Gr.] an undifferentiated male germ cell, originating in a seminal tubule and dividing into a new generation of spermatogonia or into two spermatocytes.
spermatoid [sper'mə-toid] resembling semen.
spermatolysin [sper"mə-tol'ĭ-sin] a lysin destructive to spermatozoa.
spermatolysis [sper'mə-tol'ĭ-sis] dissolution of spermatozoa.
spermatopathia abnormality of the semen.
spermatorrhea involuntary escape of semen, without orgasm.
spermatoschesis suppression of the semen.
spermatoxin [sper'mə-tok"sin] a toxin that destroys spermatozoa.
spermatozoa [sper"mə-to-zo'ə] see **spermatozoon**.
spermatozoal [sper"mə-to-zo'əl] pertaining to spermatozoa.
s. motility a guide to viability and potency of a semen sample; in ruminants, a highly motile sample shows wave movement under low power and individual sperm movement under high power. In species with high volume and low concentration, only individual motility is recorded.
spermatozoicide an agent that destroys spermatozoa; spermicide.
spermatozoon [sper"mə-to-zo'on] pl. *spermatozoa;* a mature male germ cell, the specific output of the testes, which impregnates the ovum in sexual reproduction. The mature sperm cell is microscopic in size. It looks like a translucent tadpole, and has a flat, elliptical head containing a spherical center section, and a long tail by which it propels itself with a vigorous lashing movement.
spermaturia [sper"mə-tu're-ə] seminuria.
spermectomy excision of part of the spermatic cord.
spermicide [sper'mĭ-sid] an agent destructive to spermatozoa.
spermidine [sper'mĭ-din] a polyamine first found in human semen but now known to occur in almost all tissues, in association with nucleic acids.
spermiduct [sper'mĭ-dukt"] a synonym for the ejaculatory duct and vas deferens together.
spermine [sper'min] a polyamine first found in human semen but now known to occur in almost all tissues, in association with nucleic acids.
spermiogenesis [sper"me-o-jen'ə-sis] the second stage in the formation of spermatozoa, in which the spermatids transform into spermatozoa.
spermioteleosis progressive development of the spermatogonium through various stages to the mature spermatozoon.
sperm(o)- word element. [Gr.] *seed;* specifically used to refer to the male germinal element.
spermolith [sper'mo-lith] a calculus in the vas deferens.
spermophlebectasia varicose state of the spermatic veins.
spermotoxin [sper'mo-tok"sin] a toxin lethal to spermatozoa; especially an antibody produced by injection of an animal with spermatozoa.
spewing sickness *Helenium* spp., *Hymenoxys* spp. poisonings.



S-66: Normal spermatozoon.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

spey spay.
SPF specific pathogen free.
Sphacelia typhina see **Neotyphodium** *coenophialum*.
Sphaeridiotrema a genus of small, globular digenetic trematodes in the family Psilostomatidae.
S. globulosus found in the intestine of wild and domestic ducks and in swans and causes severe enteritis. It has caused severe mortalities in swans.
S. spinoacetabulum inhibits the ceca and causes severe typhlitis.
Sphaerophorus necrophorus see ***Fusobacterium*** *necrophorum*.
Sphaerothecum destruens previously called the Rosette agent. Causes systemic disease in salmonid fish and some freswater species, characterized by swollen kidneys and spleen, and lymphocytosis. A member of the eukaryotic class *Mesomycetozoea*.
sphenion [sfe'ne-on] the point at the sphenoid angle of the parietal bone.
sphen(o)- word element. [Gr.] *wedge-shaped, sphenoid bone.*
sphenoid [sfe'noid] 1. wedge-shaped. 2. an irregular wedge-shaped bone at the base of the skull. See also Table 10.
s. bone fracture fracture of the basisphenoid bone occurs when the horse rears over backwards. Causes rotation of head, facial paralysis, occasionally hemorrhage into guttural pouch.
sphenoidal [sfe-noi'dəl] pertaining to the sphenoid bone.
sphenoiditis [sfe"noi-di'tis] inflammation of the sphenoidal sinus.
sphenoidotomy [sfe"noi-dot'ə-me] incision of a sphenoid sinus.
sphenomaxillary [sfe"no-mak'sĭ-lar"e] pertaining to the sphenoid bone and the maxilla.
sphenopalatine [sfe"no-pal'ə-tīn] pertaining to the sphenoid and palatine bones.
s. sinus in horses the sphenoid sinus is extended into the palatine bone.
Sphenosciadium capitellatum North American alpine plant in the family Apiaceae; contains an unidentified toxin which causes pulmonary edema and photosensitization. Called also whiteheads.
sphenotresia perforation of the base of the fetal skull in craniotomy.
sphenotribe an instrument used for crushing the base of the fetal skull.
sphere [sfēr] a ball or globe.
attraction s. centrosome.
segmentation s. 1. the morula. 2. a blastomere.
spher(o)- word element. [Gr.] *round, a sphere.*
spherocyte [sfēr'o-sīt] a spherical, darkly staining erythrocyte; readily detected in dogs because the typical central pallor is absent; characteristically found in some types of acquired hemolytic anemia, particularly immune-mediated.
spherocytosis [sfēr"o-si-to'sis] the presence of spherocytes in the blood.
hereditary s. an inherited autosomal, incompletely dominant trait in Japanese black cattle; causes hemolytic anemia due to mutations in the AE1 (anion exchanger 1, band 3) gene.
spheroid [sfēr'oid] a sphere-like body.

VetBooks.ir

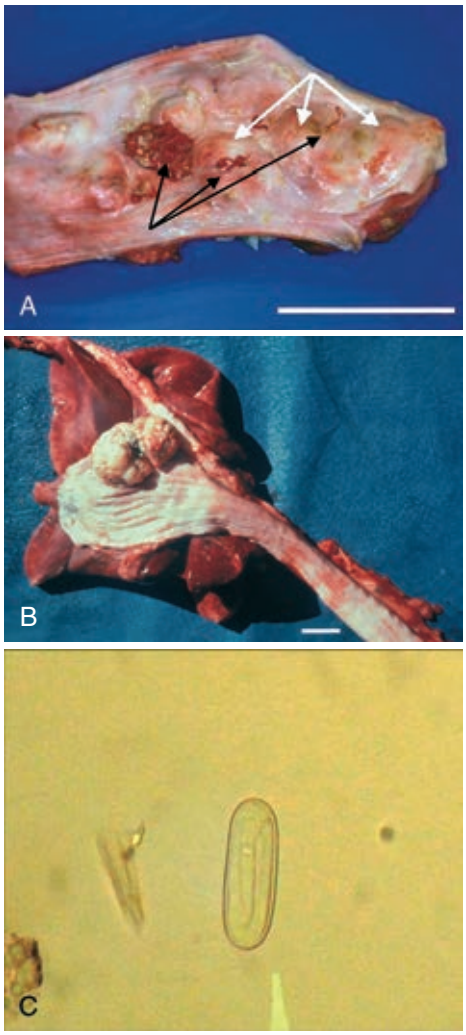
axonal s's these appear in axons in the early stages of development of progressive axonopathy; the spheroids are eosinophilic, round or oval swellings containing degenerate organelles. See also **torpedoes**.
spheroidal [*sfēr-oi'dəl*] resembling a sphere.
spheroma a globular tumor.
spherophakia [*sfēr"o-fa'ke-ə*] a spherical deformation of the lens.
spheroplast [*sfēr'o-plast*] gram-negative bacterial cell deprived of its cell wall, but retaining an intact plasma membrane. See also **protoplast**.
spherules [*sfēr'ūl*] double-contoured, highly refractile bodies in which the fungus *Coccidioides immitis* occurs in animal tissues. Called also sporangia.
sphincter [*sfingk'tər*] a circular muscle that constricts a passage or closes a natural orifice. When relaxed, a sphincter allows materials to pass through the opening. When contracted, it closes the opening. The principal abnormalities relate to function. Failure to open may be because of spasm or achalasia, due usually to failure of parasympathetic nerve supply. Failure to close is usually due to absence of sympathetic nerve supply. The important sphincters are the anal, ileal, pharyngoesophageal, pupillary, pyloric, reticulo-omasal, teat, urethral, vaginal and vesical.
cardiac s. the functional sphincter at the gastric end of the esophagus.
s. control is by the autonomic nervous system.
esophageal s. see cardiac **sphincter**.
s. of Oddi bile duct sphincter.
pupillary s. a ring of smooth muscle around the pupillary border of the iris.
sphincterectomy [*sfingk"tər-ek'tə-me*] excision of a sphincter.
sphincterismus [*sfingk"tər-iz'məs*] spasm of a sphincter.
sphincteritis [*sfingk"tər-i'tis*] inflammation of a sphincter, particularly the sphincter of Oddi.
sphincterolysis [*sfingk"tər-ol'i-sis*] surgical separation of the iris from the cornea in anterior synechia.
sphincteroplasty [*sfingk'tər-o-plas"te*] plastic reconstruction of a sphincter.
sphincterotomy incision of a sphincter.
sphingolipid [*sfing"go-lip'id*] one of the two dominant 'families' of phospholipids found in membranes; a type of phospholipid containing sphingosine (e.g. ceramides, sphingomyelins, gangliosides and cerebrosides), occurring in high concentrations in the brain and other nerve tissue.
sphingolipidosis [*sfing"go-lip"i-do'sis*] pl. *sphingolipidoses* [Gr.] a general designation applied to diseases characterized by abnormal storage of sphingolipids, such as **gangliosidosis**, **Gaucher's disease**, glucocerebroside, globoid cell **leukodystrophy** and **sphingomyelinosis**.
sphingolipodystrophy [*sfing"go-lip"o-dis'trə-fe*] any of a group of disorders of sphingolipid metabolism. See also **sphingolipidosis**.
sphingomyelin [*sfing"go-mi'ə-lin*] a group of phospholipids that on hydrolysis yield phosphoric acid, choline, sphingosine and a fatty acid. A major component of cell membranes found predominantly in the outer half of the lipid bilayer.
s. lipidosis see **sphingomyelinosis**.
sphingomyelinosis [*sfing"go-mi"ə-lin-o'sis*] an inherited deficiency of sphingomyelinase in cats, dogs and mice that results in abnormal accumulation of sphingomyelin in nervous tissue, liver and spleen. Clinical signs include retarded growth and neurological abnormalities from an early age. The disease in cats and miniature poodles closely resembles Niemann–Pick disease of humans. Called also sphingomyelin lipidosis.
sphingosine [*sfing'go-sēn*] a basic amino alcohol present in sphingomyelin and other sphingolipids.
Sphinx a type of cat derived from a mutant with a generalized absence of hair that is transmitted as a recessive trait. Now being promoted as a distinct breed. See also **alopecia** universalis. Called also Canadian hairless cat.
sphygmic [*sfig'mik*] pertaining to the pulse.
s. period the second phase of ventricular systole, between the opening and closing of the semilunar valves, while the blood is discharged into the aorta and pulmonary artery.
sphygm(o)- word element. [Gr.] *the pulse*.
sphygmobolometer an instrument for recording the energy of the pulse wave, and so, indirectly, the strength of the systole.
sphygmochronograph [*sfig"mo-kro'no-graf*] a self-registering sphygmograph.
sphygmodynamometer [*sfig"mo-di"nə-mom'ə-tər*] an instrument for measuring the force of the pulse.
sphygmogram [*sfig'mo-gram*] the record or tracing made by a sphygmograph; called also pulse tracing.
sphygmograph [*sfig'mo-graf*] an apparatus for registering the movements of the arterial pulse.
sphygmoid [*sfig'moid*] resembling the pulse.
sphygmomanometer [*sfig"mo-mə-nom'ə-tər*] an instrument for measuring arterial blood pressure.
Doppler-shift s. an instrument that replaces auscultation of the artery for the appearance and disappearance of Korotkoff sounds by an ultrasound flowmeter.
sphygmometer [*sfig-mom'ə-tər*] an instrument for measuring the force and frequency of the pulse.
sphygmoscope [*sfig'mo-skōp*] a device for rendering the pulse beat visible.
sphygmotonometer [*sfig"mo-to-nom'ə-tər*] an instrument for measuring the elasticity of arterial walls.
sphyrectomy excision of the malleus, or hammer, of the ear.
spica bandage [*spi'kə*] figure-of-eight bandage which is applied around a joint or trunk.
spicule [*spik'ūl*] 1. a sharp, needle-like body or spike. 2. part of the male genital apparatus in nematodes; they engage the female genital orifice during copulation.
Spiculocaulus a genus of nematodes in the family Protostrongylidae and found in the lungs of small ruminants.
S. austriacus found in goats and ibex.
S. kwongi found in sheep and goats.
S. leuckarti found in sheep and ibex.
S. orloffi found in sheep, goats and ibex.
Spiculopteragia a genus of worms in the family Trichostrongylidae, found in the abomasum.
S. boehmi found in moufflon and deer.
S. peruviana found in llama, alpaca and vicuña.
S. spiculoptera found in sheep and deer.
spider an arthropod of the class Arachnida.
black widow s. see ***Latrodectus*** *mactans*.
brown recluse s. a poisonous spider, *Loxoceles reclusa*, whose bite causes severe poisoning in humans.
cobweb s's members of the dipneumonomorph spiders in the family Theridiidae. Includes the red-back or black widow spider.
funnel-web s. a very venomous spider that lives in a funnel-shaped web built into a horizontal crack or existing burrow. A bite causes intense pain at the site and then generally, sweating, dehydration and paralysis, and is often fatal. Called also Sydney funnel-web spider, *Atrax robustus*, northern or tree-dwelling funnel-web spider (*A. formidabilis*).
hourglass s's those with the red hourglass-shaped marking on the ventral body characteristic of some members of the genus ***Latrodectus***, including the black widow and red backed spiders.
redback s. see ***Latrodectus***.
trapdoor s. common name for any of several large, hairy, harmless spiders in the family Ctenizidae that nest underground in long burrows in the earth. At the entrance is a hinged, accurately fitting trapdoor often made of alternate layers of earth and silk from which they prey on large terrestrial arthropods.
s. grass ***Brachyachne*** *convergens*.
s. lamb syndrome inherited **arachnomelia**.
spider cell [*spi'dər*] cells in rhabdomyosarcoma that have extensively vacuolated cytoplasm.
spike [*spīk*] 1. a sharp upward deflection in a curve or tracing, as on the encephalogram. 2. prepare samples with a known amount of substance for testing laboratory proficiency.
spikes see **peplomer**.
Spilopsyllus cuniculi a flea in the order Siphonaptera. A parasite of rabbits and hares and occasionally their predators; transmits myxomatosis. A cause of severe irritation on the pinnae of domestic cats. Called also European rabbit flea.
spina [*spi'nə*] pl. *spinae* [L.] spine; a slender process such as occurs on many bones.
s. bifida a developmental anomaly characterized by defective closure of the two halves of the vertebral arch through which the spinal cord and meninges may or may not protrude.
s. bifida cystica spina bifida in which there is protrusion through the defect of a cystic swelling involving the meninges (meningocele), spinal cord (myelocele) or both (meningomyelocele).

S

s. bifida occulta spina bifida in which there is a defect of the bony spinal canal without protrusion of the cord or meninges.
s. bifida ventralis a defect of closure on the ventral surface of the bony spinal canal, often associated with defective development of the abdominal and thoracic viscera.
spinach *Spinacia oleracea*.
Cape s. see *Emex australis* .
New Zealand s. *Tetragonia tetragonioides*.
red s. *Trianthema triquetra*.
Spinacia oleracea plant in the family Chenopodiaceae; can cause soluble oxalate poisoning comprising nephrosis, urolithiasis. Called also spinach.
spinal [*spi'nəl*] pertaining to a spine or to the vertebral column and in many instances to the spinal cord.
s. abscess infection may be introduced hematologically from navel infection to a vertebral body or up the vertebral canal from an infected docking wound. Clinically there is a development of paresis over a few days then paraplegia when the abscess is in the lumbar region or quadriplegia when it is located in the cervical area.
s. accessory nerve see accessory nerve, Table 14.
congenital s. stenosis stenosis of the vertebral canal present at birth; recorded in calves.
s. fibrocartilaginous emboli see fibrocartilaginous embolic **myelopathy**.
focal symmetrical s. poliomalacia see focal symmetrical spinal **poliomalacia**.
s. fusion surgical creation of ankylosis of contiguous vertebrae.
s. meninges see **meninges**.
s. meningitis see steroid-responsive **meningitis**-arteritis.
s. muscular atrophy see hereditary spinal muscular atrophy, hereditary neuronal **abiotrophy** of Swedish Lapland dogs.
s. myelitis see **myelitis**.
s. myelopathy see **myelopathy**.
s. nerve any of the paired nerves arising from the spinal cord and passing out between the vertebrae.
s. puncture introduction of a hollow needle into the subarachnoid space of the spinal canal, usually for the purpose of collecting a sample of cerebrospinal fluid, to introduce radiopaque material for myelography, or the injection of an anesthetic.
s. reflex any reflex action mediated through synapses in the spinal cord.
s. stenosis see **spinal cord** compression.
s. tap see spinal puncture (above).
s. trauma temporary or permanent dislocation of one or more spinal vertebrae; or fracture; causes immediate flaccid paralysis caudal to injury due to spinal shock, followed by residual signs due to damage to spinal cord tissue.
s. walking see **reflex** walking.
spinal cord that part of the central nervous system lodged in the spinal canal, extending from the foramen magnum to a point in the lumbar or sacral vertebrae, depending on the species.
s. c. abscess see **spinal** abscess.
s. c. atrophy diminution in mass of the entire cord, is usually the hallmark of undernutrition or old age, or both.
s. c. compression compression of the spinal cord. Compression may occur gradually due to space-occupying lesions of the vertebral canal, such as abscess, callus of a fracture, or a tumor, or acutely due to fracture dislocation or thrombosis. In general, clinical signs depend on the level of the spinal cord involved and the speed and the degree of compression and may include paresis, paralysis, urinary incontinence, loss of sensation, Horner's syndrome, and in acute lesions, spinal shock.
s. c. degeneration see **myelomalacia**.
s. c. hemorrhage see **hematomyelia**.
s. c. hypoplasia usually segmental, especially in the lumbar area.
s. c. local ischemia caused by embolus of a spinal artery; has the same effect as traumatic injury (see below).
s. c. tracts more or less distinct bundles of fibers within the white matter of the spinal cord. There are three funiculi on each side of the cord—dorsal, lateral and ventral; subdivisions within the funiculi include eleven major tracts—gracile and cuneate fasciculi, lateral and ventral corticospinal tracts, rubrospinal tract, dorsal and ventral spinocerebellar tracts, lateral and ventral spinothalamic tracts, elementary apparatus fibers, ventral corticospinal tract, vestibulospinal tract.
s. c. traumatic injury fracture or dislocation of one or more vertebrae; causes a syndrome of acute flaccid paralysis in the area supplied with nerves from the injured segment and spastic paralysis in the parts supplied by the cord segments caudal to the injury. In the early stages followoing injury spinal shock may also occur.
spinate [*spi'nāt*] thorn-shaped; having thorns.
spindle [*spin'dəl*] 1. mitotic spindle; the fusiform figure occurring during metaphase of cell division, composed of microtubules radiating from the centrioles and connecting to the chromosomes at their centromeres. 2. muscle spindle; a mechanoreceptor found within a skeletal muscle; the muscle spindles are arranged in parallel with muscle fibers. They contain three to 10 small, striated muscle fibers (intrafusal fibers) contained within a capsule and supplied with specialized motor and sensory nerves. They respond to passive stretch of the muscle but cease to discharge if the muscle contracts isotonically, thus signaling muscle length. The muscle spindle is the receptor responsible for the stretch or myotatic reflex.
s. wood, s. tree *Euonymus europaeus*.
spindle-cell tumors, spindle-cell carcinoma tumors that arise from spindle-shaped cells of the dermis and subcutis.
cutaneous s.-c. tumors include fibroma, fibrous histiocytoma, schwannoma, hemangiopericytoma and their corresponding malignant counterparts, equine sarcoid, collagen nevi, papilloma-virus-induced fibropapillomas and spindle-cell dermal melanomas. See also soft-tissue **sarcoma**.
spindle-shaped shaped like a round stick tapered at both ends.
spindly leg syndrome a suspected nutritional myopathy seen in frogs and toads; after metamorphosis, the forelimbs are underdeveloped.
spine, spina [*spīn*] 1. a thornlike process or projection. 2. the backbone, or vertebral column. See also **spinal**.
cuneal s. the axial ridge of the upper surface of the frog in the hoof of the horse that projects into the digital cushion.
iliac s. small salients along the dorsal and ventral borders of the ilium, divided into cranial and caudal, dorsal and ventral, in cats and dogs, contrasted to the single sacral and coxal tubers in large animals.
ischial s. the crest of bone to which the sacrosciatic ligament attaches and which provides the origin of the gluteus profundus muscle.
plant s's cause cutaneous laceration and subcutaneous abscess, oral mucosal laceration and ulceration, conjunctival injury.
scapular s. the ridge that divides the lateral surface of the scapula into the supraspinous and infraspinous fossae.
spinifugal [*spi-nif'u-gəl*] conducting or moving away from the spinal cord.
spinipetal [*spi-nip'ə-təl*] conducting or moving toward the spinal cord.
spinners type said of wool which is attractive to makers of yarns.
spinning top a device used to assess the accuracy of the timer on the X-ray machine.
spinobulbar [*spi"no-bul'bər*] pertaining to the spinal cord and medulla oblongata.
spinocellular [*spi"no-sel'u-lər*] pertaining to prickle cells.
spinocerebellar [*spi"no-ser"ə-bel'ər*] pertaining to the spinal cord and cerebellum.
s. tract a pair of tracts (dorsal and ventral) on each side in the lateral funiculus of the spinal cord carrying proprioceptive impulses from muscles, bones and joints to the cerebellum.
Spinoni Italiani a medium- to large-sized, strongly built, all-purpose gun dog with docked tail and a thick, medium-length wiry coat which forms a mustache and beard. The color is white, orange or brown with orange or brown markings, and the nose, lips and eyelids are fleshy red. Called also Italian coarsehaired pointer.
spinosad an insecticide derived from the actinomycete *Saccharopolyspora spinosa*; it has a novel mode of action on the nicotinic acetylcholine D alpha receptors with some effects on GABA, causing nerve excitation, paralysis and rapid death of the flea. Administered orally, once monthy, to dogs as a flea adulticide.
spinose ear tick [*spi'nōs*] see ***Otobius megnini***.
spinothalamic tract [*spi"no-thə-lam'ik*] two spinal cord tracts carrying afferent nerve fibers to the thalamus; includes two principal tracts, the **lemniscal** and the **extralemniscal** systems.

VetBooks.ir

spinous [spi'nəs] pertaining to or like a spine.
dorsal s. processes processes of the vertebrae that underlie the backline of the animal.
s. layer see **stratum** spinosum.
spiny sharp spines protrude.
s. clotburr ***Xanthium*** *spinosum*.
s. emex see ***Emex australis*** .
spiracle [spir'ə-kəl] small, circular openings in the exoskeleton of insects are the portal of entry for air into the insect body.
spiradenoma [spir"ad-ə-no'mə] adenoma of the sweat glands.
spiral [spi'rəl] 1. winding like the thread of a screw. 2. a structure curving around a central point or axis.
Curschmann's s's see **Curschmann's spirals**.
s. organ of Corti see **organ** of Corti.
s. penile deviation a defect in bulls. See **corkscrew** penis.
s. worm *Dispharynx nasuta*. See ***Synhimantus*** *spiralis*.
spiramycin [spir"ə-mi'sin] a macrolide antibiotic used primarily against penicillin-resistant staphylococci and for mycoplasmal diseases of swine and for swine dysentery. Administered by injection as the adipate ester.
spireme the threadlike continuous or segmented figure formed by the chromosome material during prophase.
spirilla [spi-ril'ə] plural of *spirillum*.
spirillicidal destroying spirilla.
spirillicide an agent that destroys spirilla.
spirillosis [spi"ri-lo'sis] a disease caused by presence of spirilla, such as avian stomatitis.
Spirillum [spi-ril'əm] a genus of gram-negative, motile, helical bacteria isolated from fresh water. Neither of the animal pathogens bearing the genus name belong in this genus.
S. minus, S. minor pathogenic for guinea pigs, rats, mice and monkeys and is the cause of ratbite fever (Sodoku).
S. pulli recorded as causing a diphtheritic stomatitis in chickens.
spirillum [spi-ril'əm] pl. *spirilla* [L.] 1. a spiral-shaped bacterium. 2. a member of the genus *Spirillum*.
spirit [spir'it] 1. a volatile or distilled liquid. 2. a solution of a volatile material in alcohol.
ammonia s's, aromatic s's of ammonia a mixture of ammonia, ammonium carbonate, and other agents once used as a stimulant or alterative for a languishing horse.
rectified s. alcohol.
spir(o)- 1. [Gr.] a combining form denoting relationship to a coil or spiral. 2. [L.] a combining form denoting relation to the breath or to breathing.
Spirocerca [spi"ro-ser'kə] a genus of spiruroid nematodes in the family Spirocercidae.
S. arctica found in dog, fox and wolf.
S. lupi found in domestic and wild Canidae and wild Felidae. The worms are located in the walls of the esophagus, the aorta and the stomach, and sometimes in other organs, persisting in nodules. The nodules may be large enough to cause obstruction of the esophagus and the aorta. The esophageal lesion converts to a fibrosarcoma or an osteosarcoma in a number of cases.
S. sanguinolenta see *S. lupi* (above).
spirocercosis [spi"ro-sər-ko'sis] see ***Spirocerca*** *lupi*.
Spirochaeta a genus of the family *Spirochaetaceae* of bacteria. Gram-negative, coiled bacteria, facultative or obligate anaerobes.
S. anserina now called *Borrelia anserina*; causes fowl **spirochetosis**.
S. penortha of uncertain taxonomic status; described as a cofactor in ovine footrot.
spirochaetosis see **spirochetosis**.
spirochete [spi'ro-kēt] 1. a highly coiled bacterium; a general term applied to any organism of the order *Spirochaetales*, which includes the causative organisms of human syphilis (*Treponema pallidum*), of avian spirochetosis (*Borrelia anserina*) and rabbit spirochetosis (*Treponema paraluiscuniculi*), and associated with swine dysentery (***Brachyspira*** *hyodysenteriae*) and footrot of sheep. 2. an organism of the genus *Spirochaeta*.
spirocheticide an agent that destroys spirochetes.
spirochetolysis the destruction of spirochetes by lysis.
spirochetosis [spi"ro-ke-to'sis] 1. an infectious disease of many species of fowl caused by *Borrelia anserina* and characterized by fever, cyanosis of the head and diarrhea. It is transmitted by the fowl ticks *Argas persicus, A. miniatus* and *A. reflexus*. Morbidity and mortality are very variable but may reach 100%. 2. a benign venereal disease of rabbits caused by ***Treponema*** *paraluiscuniculi*, characterized by small vesicles, scabs or ulcers which heal in 10–14 days. The lesions are confined to the genitalia, with a few animals also having lesions on the eyelids and lips. Called also rabbit syphilis, treponematosis, vent disease. 3. leptospirosis.
spirogram [spi'ro-gram] a graph of respiratory movements made by the spirometer.
spirograph [spi'ro-graf] an apparatus for measuring and recording respiratory movements.
spiroid [spi'roid] resembling a spiral.
spirometer [spi-rom'ə-tər] an instrument for measuring air taken into and expelled from the lungs. The spirometer provides a relatively simple method for determining most of the lung volumes and capacities that are measured in **pulmonary** function tests.
Spirometra [spi"ro-me'trə] a diphyllobothriidean tapeworm similar to *Diphyllobothrium* spp. that occurs in the intestines of wild carnivores and domestic cats and dogs. The larvae (plerocercoids) infest amphibians but humans can also be infected, the resulting disease being known as **sparganosis**. Includes *S. erinacei* (cats, dogs), *S. felis* (big zoo cats), *S. mansoni* (cats, dogs), *S. mansonoides* (cats, dogs, raccoons), *S. reptans* (New World primates).
spirometry [spi-rom'ə-tre] measurement of the breathing capacity by means of a spirometer.
spironolactone [spi"rə-no-lak'tōn] a competitive antagonist of aldosterone, used as a potassium-sparing diuretic.
Spironucleus a genus of diplomonad flagellaes that inhabit the alimentary tract of animals. A protozoan that causes 'hole-in-the-head disease' of ornamental fish.
S. muris a protozoan of mice. It causes weight loss, diarrhea and sometimes death.



S-67: (A) Caudal esophagus of a dog showing multiple parasitic nodules (white arrows) with red adult *Spirocerca lupi* worms (black arrows). Bar = 5.5 cm. (B) Caudal esophagus of a dog showing a cauliflower-like mass which is a *Spirocerca lupi*-associated osteosarcoma with regional megaesophagus. Bar = 5 cm. (C) A thick-shelled larvated *Spirocerca lupi* egg (35 × 15μm). From van der Merwe LL, Kirberger RM, Clift C, Williams M, Keller N, Naidoo V: *Spirocerca lupi* infection in the dog: A review. Vet J 176:294-309, 2008. Elsevier.

VetBooks.ir

Spiroptera incerta [spi-rop'tər-ə] see ***Habronema incertum***.

Spirura a genus of nematodes in the family Spiruridae found in the alimentary tract of carnivores, rodents and insectivores.

S. rytipleurites there are two varieties, one found in the stomach of the cat and fox and one in the hedgehog.

S. talpae found in the European common mole (*Talpa europea*) and the black rat *Rattus rattus*.

spiruroid roundworms of the order Spirurida. Includes the genera of *Cyrnea*, *Draschia*, *Habronema*, *Hartertia*, *Mastophorus*, *Protospirura*, *Spirura*, *Streptopharagus*.

spit defensive action of camelids where fluid material from the first compartment of the stomach is spat on other camelids or humans.

s. off repeated spitting activity of a female to a male camelid. Usually an indication of pregnancy.

spitz a general description of so-called 'Northern' or Nordic dog breeds with conformational characteristics resembling wolves. They have bushy tails carried upright or over the back, thick short stand-off coat with a ruff around the neck, a wedge-shaped head and small pricked ears. Characteristic of a number of dog breeds. See also **American spitz**, **Canaan dog**, **Canadian Eskimo dog**, **Eurasier**, **Finnish Lapphund**, **Finnish spitz**, **German spitz**, **Japanese Shiba inu**, **Japanese spitz**, **Norwegian** buhund, **Swedish Lapland dog**.

splake trout hybrids of the brook trout (male) and lake trout (female) (*S. fontinalis* x *S. namaycush*).

splanchnapophysis a bony process, such as a ventral process on certain vertebrae, that is associated with the viscera.

splanchnectopia displacement of a viscus or of the viscera.

splanchnesthesia [splank"nes-the'zhə] visceral sensation.

splanchnic [splank'nik] pertaining to the viscera.

s. circulation includes the mesenteric, splenic and hepatic beds, the first two comprising the major part of the inflow to the third.

s. nerves a group of sympathetic nerves serving the blood vessels and viscera of the abdomen.

splanchnicotomy [splank"ni-kot'ə-me] transection of a splanchnic nerve.

splanchn(o)- word element. [Gr.] *viscus* (viscera), *splanchnic nerve*.

splanchnocele [splank'no-sēl] hernial protrusion of a viscus. The portion of the embryonic body cavity from which the abdominal, pericardial and pleural cavities are formed.

splanchnocoele splanchnocele.

splanchnodiastasis displacement of a viscus or viscera.

splanchnolith intestinal calculus.

splanchnology [splank-nol'ə-je] science of the organs of the body, as of the digestive, respiratory and genitourinary systems.

splanchnomegaly [splank"no-meg'ə-le] enlargement of the viscera; visceromegaly.

splanchnopathy any disease of the viscera.

splanchnopleure [splank'no-ploor] the embryonic layer formed by union of the splanchnic mesoderm with endoderm; the digestive tube develops from it.

splanchnoptosis prolapse or backward displacement of the viscera.

splanchnosclerosis hardening of the viscera.

splanchnoskeleton skeletal structures connected with viscera.

splanchnotomy [splank-not'o-me] anatomy or dissection of the viscera.

splanchnotribe an instrument for crushing the intestine to obliterate its lumen.

splashing an abattoir term for large areas of hemorrhage in the form of brush marks or groups of spots, usually evident in muscles and under serous membranes.

splayed digits an inherited defect in cattle in which the tendons and ligaments that hold the claws of the foot together are relaxed so that the digits splay. There is difficulty in standing and walking and affected animals lie down most of the time.

splayleg [spla'leg] a congenital defect of the hindlimbs of piglets that prevents standing. The piglet is in sternal recumbency with the hindlimbs splayed and can only make swimming movements in attempts to rise. Some are crushed by the sow. Called also myofibril hypoplasia. Occurs also in rabbits.

spleen [splēn] a large lymphoid organ usually situated in the cranial part of the abdominal cavity on the left of the stomach. The spleen contains the largest collection of reticuloendothelial cells in the body. In ruminants the spleen is located on the left lateral wall of the rumen and reticulum and under the last two ribs on the left side. Called also lien.

S-68: Splayleg.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

accessory s. a small mass of tissue, histologically and functionally identical with that composing the normal spleen but found elsewhere in the body.

sago s. see **sago spleen**.

slaughter s. see **slaughter** spleen.

splenadenoma hyperplasia of the spleen pulp.

Splendidofilaria see ***Ornithofilaria***.

Splendore–Hoeppli material [splen-dor'ra hur'ple] the process whereby foreign material and certain microbial infections (actinomycosis, actinobacillosis, botryomycosis, nocardiosis) attract dense eosinophilic radiating club-shaped deposits of degraded antigen-antibody complexes. See also **club colony**.

splenectasis [sple-nek'tə-sis] splenomegaly.

splenectomy [sple-nek'tə-me] excision of the **spleen**. Most commonly performed in dogs and cats because of trauma or neoplasia.

splenectopia, splenectopy [sple"nek-to'pe-ə] see **splenic** displacement.

splenial [sple'ne-əl] pertaining to a splenium (anatomical).

splenic [splen'ik] pertaining to the spleen.

s. abscess caused by hematogenous spread of an infection elsewhere, by penetration by a foreign body from the reticulum in cattle, by ulceration from the stomach in the horse. Manifested by fever and toxemia, pain on palpation over the spleen and by a positive paracentesis sample.

s. artery see Table 9.

s. corpuscle lymph nodules in the splenic matrix.

s. displacement may be detectable on palpation. Usually caused by displacement of the stomach or intestine to which the spleen is attached.

s. enlargement see **splenomegaly**.

s. fever anthrax.

s. hyperfunction see **hypersplenism**.

s. rupture occurs with abdominal trauma in dogs and cats or with little or no trauma with a grossly enlarged spleen, e.g. splenic neoplasm or in bovine viral leukosis.

s. torsion a twisting or rotation of the spleen on its vascular pedicle, often in association with gastric dilatation–volvulus in large breed dogs, results in primarily venous congestion and possibly thrombosis and infarction. Clinical signs include abdominal distention and pain, vomiting, and in acute cases cardiovascular collapse and shock.

splenitis [sple-ni'tis] inflammation of the spleen, a condition that is attended by enlargement of the organ and severe local pain. Is usually a diffuse suppurative infection.

splenium [sple'ne-um] 1. a compress or bandage. 2. bandlike structure.

s. corporis callosi the posterior, rounded end of the corpus callosum.

splen(o)- word element. [Gr.] *spleen*.

splenocele [sple'no-sēl] hernia of the spleen.

splenocolic [sple"no-kol'ik] pertaining to the spleen and colon.

splenocyte [sple'no-sīt] the monocyte characteristic of splenic tissue.

splenography [sple-nog'rə-fe] 1. radiography of the spleen. 2. a description of the spleen.

splenohepatomegaly [sple"no-hep"ə-to-meg'ə-le] enlargement of the spleen and liver.

splenoid [sple'noid] resembling the spleen.

VetBooks.ir

splenolysin a lysin that destroys spleen tissue.
splenolysis [*sple-nol'ĭ-sis*] destruction of splenic tissue by a lysin.
splenoma [*sple-no'mə*] a splenic tumor.
splenomalacia [*sple"no-mə-la'shə*] abnormal softness of the spleen; lienomalacia.
splenomedullary [*sple"no-med'u-lar"e*] of or pertaining to the spleen and bone marrow; lienomedullary.
splenomegaly [*sple"no-meg'ə-le*] enlargement of the spleen. Is largely without clinical signs but it may be palpated during an examination through the abdominal wall in dogs and cats, rectally in horses and not at all in ruminants. The enlargements may be caused by abscess or neoplasm or there may be a diffuse enlargement caused by accumulation of hemolyzed red cells.
asymmetrical s. usually the result of trauma or neoplasia.
congestive s. in animals, most often caused by splenic torsion.
hemolytic s. that associated with hemolytic anemia.
siderotic s. splenomegaly with deposit of iron and calcium.
symmetrical s. usually caused by congestion or infiltration of the splenic tissue.
splenometry [*sple-nom'ə-tre*] determination of the size of the spleen.
splenomyelogenous [*sple"no-mi"ə-loj'ə-nəs*] formed in the spleen and bone marrow; lienomyelogenous.
splenomyelomalacia [*sple"no-mi"ə-lo-mə-la'shə*] softening of the spleen and bone marrow; lienomyelomalacia.
splenopancreatic [*sple"no-pan"kre-at'ik*] pertaining to the spleen and pancreas.
splenopathy [*sple-nop'ə-the*] any disease of the spleen.
splenopexy [*sple'no-pek"se*] surgical fixation of the spleen to prevent torsion of the spleen around the splenic pedicle.
splenopneumonia pneumonia attended with splenization of the lung.
splenoportography [*sple"no-por-tog'rə-fe*] radiography using a contrast agent injected into the pulp of the spleen to demonstrate portosystemic vascular anomalies.
splenoptosis [*sple"nop-to'sis, sple"no-to'sis*] backward displacement of the spleen.
splenorenal [*sple"no-re'nəl*] pertaining to the spleen and kidney, or to splenic and renal veins.
splenorrhagia [*sple"no-ra'jə*] hemorrhage from the spleen.
splenorrhaphy [*sple-nor'ə-fe*] suture of the spleen.
splenosis [*sple-no'sis*] widespread seeding of splenic implants on the serosal surfaces in the abdominal cavity; follows rupture of spleen, commonly after trauma.
splenotomy [*sple-not'ə-me*] incision of the spleen.
splenotoxin [*sple'no-tok"sin*] a toxin produced by or acting on the spleen; lienotoxin.
spliceosome [*spli'so-sōm*] a ribonucleoprotein complex involved in the splicing of RNA.
splicing [*spli'sing*] of RNA, the excision of introns from the primary transcript and the joining together of exons to make their finished mRNA. See also **ribonucleic acid**.
splint [*splint*] 1. a rigid or flexible appliance for fixation of displaced or fractured bones, or to support soft tissue structures such as the Achilles tendon or collateral ligaments post surgery or following trauma. 2. see also **splints**.
biphase s. an external mandibular splint used to stabilize fractures. It consists of fixation bolts placed in the mandible with an acrylic bar placed across the protruding ends, parallel to the mandible.
gutter s. one with a central channel into which the well padded limb is placed for support of a fracture.
half-pin s. open reduction fracture repair based on placing Steinmann pins through the cortex and at an acute angle to the bone, in both sides of the fracture. The pins are connected to each other with rods which are then locked together with a Kirschner clamp, the fracture reduced and the pin-clamp assembly readjusted. Half-pin systems include Jonas and Kirschner.
Kirschner–Ehmer s. see **Kirschner**–Ehmer splint.
lateral s. rigid splinting material such as plaster is applied to the lateral surface of a limb covered in a soft padded bandage to provide support and protection from angular or bending forces.
metal rod s. aluminum rods, bent to conform to the angles of the limb, are incoorporated into the outer layers of a soft padded bandage to provide support and protection from angular or bending forces.
modified spica s. similar to a lateral splint, but the bandaging and splinting is more extensive, being carried over the shoulder or hip and across the dorsal midline. Used to immobilize the humerus or femur, temporarily or as an adjunct to internal fixation.
Robert-Jones s. see Robert-Jones **bandage**.
Schroeder–Thomas s. a traction splint, made of aluminum rods and consisting of a padded ring with extended bars bent to a shape determined by the size of animal and type of fracture. The limb is suspended and traction applied to the joints proximal and distal to the fracture site by wrapping with padded bandages. Modified versions are used for radial and tibial fractures in large animals.
snowshoe s. molded to fit the bottom of an avian foot, it is suitable for supporting fractures of the digits in those species.
spoon s. concave channel splints of metal or plastic, commonly used over soft padding for fractures of the lower limb in dogs and cats.
Stader s. the original half-pin splint now largely superseded by the **Kirschner** splint. The pins have to be placed in the bone fragments in the position dictated by the configuration of the blocks into which the pins are fastened.
tape s. support with tape can be used on leg fractures in birds.
Thomas s. see Schroeder–Thomas splint (above).
traction s. see Schroeder–Thomas splint (above).
splint bone the second and fourth metacarpals or metatarsals of the horse that are greatly reduced in size and do not extend as far as the distal end of the third metacarpal.
splinting [*splin'ting*] 1. the application of a splint to reduce a fracture or to restrict movement. 2. tensing of muscles, especially ventral abdominal muscles, as a response to pain and as a protection against further injury.
s. materials used in splinting fractures. Includes plaster, fiberglass, wood, balsa wood, aluminum rod, steel pins, nails, plates, screws.
splints [*splints*] inflammation of the interosseous ligament between the small and large metacarpal bones of horses and an accompanying periostitis and exostosis production on the small metacarpal bone. The metatarsal bones are similarly but less frequently involved. Lameness is apparent during the development of the splints and is most noticeable after working. Subsequently the soreness disappears but the enlargement can be palpated, and seen in the worst cases.
split divided.
s. fats fats which have been split into fatty acids and glycerol by digestion. A preponderance of split fats over neutral fats in the feces suggests that the supply of lipase is adequate and that any steatorrhea that is present is probably due to malabsorption rather than maldigestion.

S-69: Modified Thomas splint.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

S

s. hand deformity see **ectrodactylia**.
s. pawpad disease a rare syndrome in dogs characterized by splitting and peeling of the keratin layer of footpads with lesions aggravated by pain and sel-trauma; lameness is variable. The cause is unknown.
SpO_2 pulse oximetry-detected hemoglobin saturation.
spodogenous caused by accumulation of waste material in an organ.
spoilage decomposition; said of meat, milk, animal feeds especially ensilage.
chemical s. occurs in preserved foods, especially canned ones. Is usually the result of interaction between the contents and an imperfect container. There may be gas produced, e.g. hydrogen swells, or discoloration of the tin.
spondylarthritis [*spon"dəl-ahr-thri'tis*] arthritis of the spine.
spondylitic [*spon"də-lit'ik*] pertaining to or marked by spondylitis.
spondylitis [*spon"də-li'tis*] inflammation of the vertebrae. See also **spondylosis**, **diskospondylitis**.
spondyl(o)- word element. [Gr.] *vertebra, vertebral column*.
spondyloarthropathy [*spon"də-lo-ahr-throp'ə-the*] disease of the joints of the spine.
spondylodynia [*spon"də-lo-din'e-ə*] pain in a vertebra.
spondyloepiphyseal dysplasia [*spon"də-lo-ep"ĭ-fiz'e-əl*] see **epiphyseal** dysplasia.
spondylolisthesis [*spon"də-lo-lis-the'sis*] forward displacement of a vertebra over a posterior segment due to a congenital defect or fracture in the pars interarticularis. Occurs in the giant breeds of dogs as (**cervical** spondylomyelopathy or wobbler syndrome) and as a developmental defect called kinky back in broiler chickens. Affected birds are unable to stand normally and may be completely paralyzed. The causative lesion is a deformity of the sixth thoracic vertebra but the cause of the defect is unknown.
spondylolysis [*spon"də-lol'ĭ-sis*] the breaking down of a vertebra.
spondylopathy [*spon"də-lop'ə-the*] any disease of the vertebrae. Associated with compression of peripheral nerve roots and spinal cord, causing pain and stiffness of the part. See also **spondylitis**, **spinal** abscess, **spondylosis**.
cervical s. see **cervical** spondylomyelopathy.
spondylopyosis [*spon"də-lo-pi-o'sis*] suppuration of a vertebra.
spondyloschisis [*spon"dĭ-los'kĭ-sis*] congenital fissure of a vertebral arch; spina bifida.
spondylosis [*spon"də-lo'sis*] ankylosis of a vertebral joint; also, a general term for degenerative changes in the spine. Commonly seen in dogs. In aged bulls spondylosis can cause pain in the back. There is difficulty rising, weakness, unsteadiness, knuckling and toe-dragging with the hind hooves.
s. deformans a chronic disease of the vertebrae, especially in the lumbar area, in old bulls, especially those in artificial insemination centers, and dogs. There is degenerative arthropathy at the articular processes and osteophyte development along the ventral edge of the vertebrae. The lesions are visible radiographically but there may be no clinical signs unless the new bone is injured. When this happens the affected animals are reluctant to rise or move their backs because of the pain that movement causes.
spondylosyndesis [*spon"də-lo-sin-de'sis*] surgical creation of ankylosis between contiguous vertebrae; spinal fusion.
sponge [*spunj*] a porous, absorbent mass, as a pad of gauze or cotton surrounded by gauze, or the elastic fibrous skeleton of certain species of marine animals.
s. forceps see **Foerster sponge forceps**.
gelatin s. (absorbable) a spongy form of denatured gelatin, soaked with thrombin and used for topical hemostasis.
spongiform [*spun'jĭ-form*] resembling a sponge.
s. encephalopathy a disease of the brain having the microscopic appearance of a sponge. The transmissible spongiform encephalopathies (TSEs) of animals and humans are **Creutzfeldt-Jakob disease** in humans and its variant, Gertstmann-Straussler-Scheinker disease in humans, **kuru**, fatal familial insomnia of humans, **scrapie** in sheep, goats and moufflon, transmissible encephalopathy of **mink**, chronic **wasting** disease of deer and elk, **bovine spongiform encephalopathy (BSE)**, TSE of zoo ungulates, and **feline** spongiform encephalopathy.
spongi(o)- word element. [L., Gr.] *sponge, spongelike*.
spongioblast [*spun'je-o-blast*] any of the embryonic epithelial cells developed about the neural tube, which become transformed, some into neuroglial and some into ependymal cells.

S-70: Spondylosis in a horse.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

spongioblastoma [*spən"je-o-blas-to'mə*] a tumor containing spongioblasts; a type of astrocytoma.
polar s. an astrocytoma with a predilection for the optic nerve and pons.
spongiocyte [*spun'je-o-sīt"*] 1. a neuroglia cell. 2. one of the cells with spongy vacuolated protoplasm in the adrenal cortex.
spongioform spongiform.
spongioid [*spun'je-oid*] resembling a sponge.
spongioplasm 1. a substance forming the network of fibrils pervading the cell substance and forming the reticulum of the fixed cell. 2. the granular material of an axon.
spongiosa [*spun"je-o'sə*] spongy; sometimes used alone to mean the spongy substance of bone (substantia spongiosa ossium).
primary s. the mineralized cartilage in the developing metaphysis.
secondary s. second stage in the mineralization of bony trabeculae; comprises the enlarged, mineralized bony trabeculae of the primary spongiosa.
spongiosaplasty [*spun"je-o'sə-plas"te*] autoplasty of the spongy substance of bone (substantia spongiosa ossium) to potentiate formation of new bone or to cover bone defects; cancellous bone graft.
spongiosis [*spun"je-o'sis*] intercellular edema within the epidermis; also describes intramyelinic edema in central nervous tissue.
spongiositis [*spun"je-o-si'tis*] inflammation of the corpus spongiosum of the penis.
spongy [*spun'je*] of spongelike appearance or texture.
s. degeneration see spongy **degeneration**.
spontaneous [*spon-ta'ne-əs*] having no apparent external cause.
s. abortion most animal abortions are spontaneous in contradistinction to the surgically and medically procured abortions of humans. See also **mismating**, **parturition** induction.
avian s. cardiomyopathy an idiopathic disease of 1–4 week old turkey poults causing sudden death or a brief period of dyspnea; the heart is visibly dilated.
s. internal hemorrhage causes sudden death in most cases; causes include cardiac tamponade, aortic or atrial rupture, splenic rupture.
s. pulmonary arteriopathy see ***Aelurostrongylus***.
s. regression when diseases resolve themselves without outside assistance.
s. virus encephalitis so called because the disease appears without the subject animal coming in contact with a known encephalitogenic agent. In most instances the occurrence is eventually explained by the presence of a hitherto unknown virus.
spoodles a hybrid name used to describe dogs produced from crossing Cocker spaniels and Poodles. Not a recognized breed.
sporadic [*spə-rad'ik*] occurring irregularly, usually infrequently.
sporadic leukosis leukosis of cattle which is other than bovine viral leukosis.
bovine s. l. occurs sporadically in animals less than 3 years old. There is a cutaneous form with temporary skin plaques which ultimately becomes systemic, a juvenile or calf form with multiple lymph node enlargement and a thymic form with compression of the jugular veins and brisket and submandibular edema.
equine s. l. characterized by subcutaneous and lymph node enlargements, jugular vein engorgement, cardiac irregularity, exophthalmos and anasarca or with diffuse involvement of the small intestine.
ovine s. l. characterized by lymph node enlargement, jugular vein engorgement, and hepatosplenomegaly; caused by bovine leukemia virus.

VetBooks.ir

porcine s. l. characterized by emaciation, weakness, anorexia, bone marrow involvement and hepatosplenomegaly.

sporadic lymphangitis [*spə-rad'ik lim-fan"je-i'tis*] a noncontagious disease of horses characterized by a sudden onset of severe swelling and pain in one hindleg. There is a high fever. Associated with infection of minor wounds on the leg, a lymphangitis and lymphadenitis and spread of infection to surrounding tissues. Called also bigleg, sporadic equine lymphangitis.

sporangia see **spherules**.

sporangiophore [*spə-ran'je-o-for*] a specialized hypha which gives rise to a sporangium.

sporangium [*spə-ran'je-əm*] any cyst which contains spores or spore-like bodies.

spore [*spor*] 1. a refractile, oval or spherical body formed within bacteria, especially *Bacillus* and *Clostridium* spp., usually under adverse conditions such as nutritional deprivation, and which is regarded as a fully infectious, resting stage during the life cycle of the cell. Spores are inactive metabolically, highly resistant to environmental changes and may survive, for example in soil, for many years. Bacterial spores come in various shapes and are given illustrative names such as drumstick, terminal and subterminal. 2. the reproductive element, produced sexually or asexually, of organisms, such as protozoa, fungi or algae.

s. former a bacteria or other small life form that forms spores.

sporicide [*spor'ĭ-sīd*] an agent that kills spores.

sporidesmin [*spor"ĭ-des'min*] pyrrolidone metabolites of the fungus *Pithomyces chartarum* that cause **facial** eczema in sheep and cattle.

Sporidesmium bakeri see *Pithomyces chartarum*.

sporoblast [*spor'o-blast*] an asexual reproductive phase in the development of some protozoan parasites. See also **sporogony**.

sporocyst [*spor'o-sist*] 1. any cyst or sac containing spores or reproductive cells; contained in the oocyst of coccidia in which sporozoites develop. 2. the larval stages of flukes in snails.

sporogenic [*spor"o-jen'ik*] producing spores.

sporogony [*spə-rog'ə-ne*] an asexual stage in the life cycle of an apicomplexan parasite, with development of sporocysts and sporozoites within the oocysts. The oocysts are extraintestinal (e.g. *Eimeria*, *Isospora*), or intraintestinal (*Sarcocystis*, *Cryptosporidium*).

sporont [*spor'ont*] an asexual stage of a protozoan parasite. See also **sporogony**.

sporoplasm [*spor'o-plaz-əm*] the protoplasm of a spore.

Sporothrix a genus of fungi.

S. carnis causes white mold on meat in storage.

***S. schenckii* (syn. *Sporotrichum schenckii, S. beurmonsis, S. beurmanii, S. equi, Ceratocystis stenoceras*)** causes **sporotrichosis**.

sporotrichin [*spə-rot'rĭ-kin*] a substance present in old broth cultures of *Sporothrix schenckii* and capable of eliciting a specific delayed type hypersensitivity reaction in infected animals.

sporotrichosis [*spor"o-trĭ-ko'sis*] a contagious disease in many species, including humans, caused by *Sporothrix schenckii*. It may occur in a cutaneous form, as localized, ulcerated nodules; a cutaneous–lymphatic form, seen particularly in horses as cutaneous nodules on the lower limbs, which may be connected by corded lymphatics and which discharge pus and then heal; or a disseminated form with infection of deep tissues, bone and viscera.

Sporotrichum [*spə-rot'rĭ-kəm*] see ***Sporothrix***.

Sporozoa [*spor"o-zo'ə*] previously considered a subphylum of endoparasitic protozoa; now referred to as the phylum Apicomplexa. Protozoa in this phylum usually have complex life cycles, involving three main phases: schizogony (asexual), gametogony (sexual) and sporogony (asexual).

sporozoa [*spor"o-zo'ə*] plural of *sporozoon*.

sporozoan [*spor"o-zo'ən*] 1. pertaining to the phylum Apicomplexa (previously Sporozoa). 2. an individual of the Sporozoa.

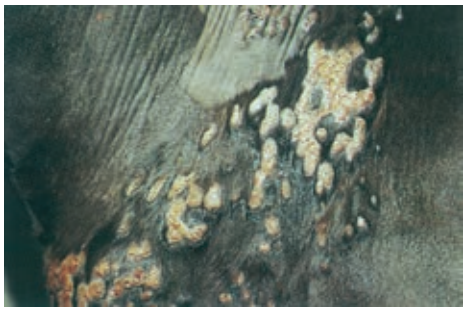
sporozoite [*spor"o-zo'īt*] a spore formed after fertilization; a sickle-shaped nucleated germ formed by division of the protoplasm during sporogony (asexual replication) of an apicomplexan parasite. The sporozoite is an infective stage (e.g. *Eimeria, Cryptosporidium).*

sporozoon [*spor"o-zo'on*] pl. *sporozoa* [Gr.] an individual organism of the Sporozoa.

sport see **mutation** (2).

sport hunting hunting without collection of a food or other commercial product; hunting for trophy or prize.

sporting dog see gun **dog**.



S-71: Sporotrichosis on a horse's shoulder.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

sporulation [*spor"u-la'shən*] formation of spores or sporozoites.

spot [*spot*] a small, roundish part of a surface which differs from the surrounding surface.

s. disease of turtles. See **shell rot**.

s. map a map with dots on it. Each dot marks where a case or some other incident of epidemiological interest occurred.

spot film see spot **film**.

s. film device a device attached to the X-ray machine which moves an X-ray cassette into position for exposure during a fluoroscopic examination.

spot-on a means of delivering medication topically, usually in a small area of the skin, where the active ingredient is absorbed percutaneously. A method used for flea control agents.

spotted characterized by spots.

s. dick see **Dalmatian**.

s. emu bush ***Eremophila*** *maculata*.

s. fever a febrile disease characterized by a skin eruption, such as Rocky Mountain spotted fever, boutonneuse fever, and other human infections due to tickborne rickettsiae.

s. fever tick ***Dermacentor*** *andersoni*.

s. fuschia ***Eremophila*** *maculata*.

s. horse Appaloosa.

spraddleleg, spraddle limb see **splayleg**.

sprain [*sprān*] wrenching or twisting of a joint, with partial rupture of its ligaments. There may also be damage to the associated blood vessels, muscles, tendons and nerves. A sprain is more serious than a strain, which is simply the overstretching of a muscle, without swelling. Severe sprains are so painful that the joint cannot be used. There is much swelling owing to hemorrhage from ruptured blood vessels.

sprained tendon see bowed **tendon**, **tendon** strain.

Spratt bone curette a single ended instrument with a round cup of various sizes on the end.

spray [*spra*] material applied in liquid form by pressure through a fine orifice creating a mist of fine droplets, e.g. insecticidal spray in a spray dip, pressure pack spray of insecticide or wound treatment.

s.-dehydrated a substance which has been dried by spraying onto a revolving heated drum and retrieved by scraping it from the drum.

s. drift chemical spray being applied to an agricultural crop may be toxic to animals and be carried from its target by wind. Poisoning by organophosphates and arsenic has been caused in this way.

s. freezing direct application of freezing agent, e.g. liquid nitrogen, by fine spray or stream.

s. race a lane with high fences, see **race** (2), used to restrain animals while they are being sprayed, usually with insecticide.

spraydip device for applying insecticide or other solution to the coat of animals, replacing the plunge dip. The animal walks through a compartment which carries spray nozzles on the sides, below and above. Excess spray drains into a sump and is reused.

spraying the pattern of urination typical of male cats but occasionally seen in females; after backing up to a vertical surface and while holding their tail erect, they void urine in a stream posteriorly onto the object. A form of olfactory communication, especially territorial marking. Called also urine marking.

inappropriate s. spraying on household objects. A common behavioral problem in domestic cats that may be related to stress

VetBooks.ir

or overcrowding, but sometimes it is caused by urinary tract disease.

spreading factor said of biological fluids, used in pharmaceutical preparations. See **hyaluronidase**.

spring rise [*spring*] a phenomenon in some nematode infestations, e.g. *Haemonchus* spp., in ruminants in which there is an increase in the number of eggs excreted in the feces during the spring months associated with parturition.

spring round-up [*spring*] traditional round-up (muster) each spring on beef cattle ranches to brand, dehorn, castrate the new calf crop and to draft off the yearlings into the group to be marketed.

spring viremia of carp [*spring*] an infection of carp caused by a *Rhabdovirus carpio* which occurs when water temperature rises in the spring and with environmental disturbances. It is characterized by generalized edema and hemorrhages with exophthalmus (pop eye), and a swollen abdomen (dropsy). There is often concurrent bacterial infection, particularly with *Aeromonas* spp. Important in European carp culture. A disease notifiable to the OIE (see Table 22).

springbok (*Antidorcas marsupialis*) a medium-sized, gazelle-like antelope with distinctive color and markings. The upper body is reddish-tan and the lower body is white with a wide, dark, diagonal stripe where the two colors meet. The horns are curved and medium length.

springbokbush see ***Hertia pallens***.

springer a North American term commonly used to describe heifers close to term with their first calf.

Springer spaniel see **English springer spaniel**, **Welsh springer spaniel**.

sprouted grain used as feed; see **hydroponics**.

sprue [*sproo*] a chronic form of malabsorption syndrome in humans occurring in two forms, tropical, which is associated with ingestion of gluten-containing foods (called also celiac disease), and nontropical. Malabsorption syndromes in dogs are sometimes compared with, but are not identical with, sprue. See wheat-sensitive **enteropathy** of Irish setters.

Spumaretrovirinae a subfamily of viruses in the family *Retroviridae*.

Spumavirus [*spu'mə-vi"rəs*] a genus of the family *Retroviridae*. Spumaviruses, which are also called foamy viruses, are non-pathogenic exogenous viruses that have characteristic morphology with prominent surface spikes. The virions contain significant amounts of double-stranded, full-length DNA and their assembly is unusual compared to other retroviruses. As example, equine foamy virus buds from the membranes within the cytoplasm. Some examples are chimpanzee foamy virus, simian foamy virus and human foamy virus. When cultured in cell cultures, spumaviruses form characteristic large vacuoles, but there is no disease association in animals.

spur [*spur*] 1. an abnormal projecting body, as from a bone. 2. a piece of riding gear worn on the heel of a horserider's boot and used to urge on a horse to a faster speed by digging the spur into the flank. 3. a sharp, horn-covered, bony projection from the shank of male birds of some species. Used as a weapon. Called also metatarsal spur. 4. tracheal spur, the ridge of tracheal cartilage that separates the beginning of the right bronchus from the beginnings of the left one.

s. veins subcutaneous veins visible over the ventral part of the chest of a horse (superficial thoracic vein). Subject to laceration by indiscriminate use of sharp spurs by the vigorous rider.

spurge common name for plants in several genera in the family Euphorbiaceae. Includes spurge olive (*Daphne mezereum*), caper spurge (*Euphorbia lathyrus*), Gascoyne spurge (*E. boophthona*), mat spurge (*E. drummondii*), petty spurge (*E. peplus*), sun spurge (*E. helioscopia*), white-margined spurge (*E. marginata*).

spurious [*spu're-əs*] simulated; not genuine; false.

sputum [*spu'təm*] mucous secretion from the lungs, bronchi and trachea which is ejected through the mouth by humans but not so in animals and it is assumed that it is swallowed.

s. cup a small (1 inch diameter) cup on a long handle for the collection of sputum from the pharynx of a large animal.

s. specimen a sample of mucous secretion from the bronchi and lungs. The specimen may be examined microscopically for the presence of malignant cells (cytological examination) or tested to identify pathogenic bacteria (bacteriological examination).

SPV sheeppox virus.

SQ subcutaneous.

squab baby or fledgling pigeon.

squalene [*skwah'lān*] an unsaturated terpene, which is an intermediate in cholesterol synthesis, and occurs normally at low concentrations in blood plasma and at elevated concentrations in viral influenza; used as a vehicle for pharmaceuticals.

squama [*skwa'mə*] pl. *squamae* [L.] a scale, or thin, platelike structure.

Squamata an order of animals, the scaly-bodied reptiles, including snakes and lizards.

squamatization [*skwa"mə-tĭ-za'shən*] flattened, eosinophilic keratinocytes replace basophilic, cuboidal basal cells.

squame [*skwām*] a scale or scalelike mass usually shed from a squamous epithelial surface. See also **dandruff**, **scale**.

squamoparietal, squamosoparietal [*skwa"mo-pə-ri'ə-təl*] pertaining to the pars squamosa, or squamous portion of the temporal bone, and the parietal bone.

squamous [*skwa'məs*] scaly or platelike.

s. bone the pars squamosa, or squamous portion of the temporal bone.

s. cell carcinoma (SCC) a carcinoma arising from squamous epithelium; relatively common, locally invasive and occasionally metastatic. They can arise in any stratified squamous epithelium, and less commonly in mucosa of other epithelial types. See also **Bowen's disease** and specific organ locations Squamous cell carcinomas are among the most common skin tumors in dogs and cats. They are particularly common in sun-exposed areas of skin such as the pinnae, eyelids or noses of white cats. Tumors are locally invasive and destructive, but are slow to metastasize.

s. eddy a common histological pattern in neoplastic and hyperplastic epidermal disorders. They are whorl-like patterns of squamoid cells.

s. metaplasia affected cells are converted to a squamous stratified type from the surface of which squames are shed.

ocular s. cell carcinoma occurs around the eye and is common in cattle, especially in breeds with little pigment in the eyelids or conjunctiva (Herefords). Sunlight, papilloma virus infection, skin pigmentation and heredity are all involved in susceptibility. Similar malignancies occur on the eye and eyelid of the horse. Called also cancer eye.

s. papilloma the common papilloma in all species except cattle and deer. Composed largely of epithelial tissue (in contrast to fibropapillomas), but many lesions are intermediate in type.

s. pearl see keratin **pearl**.

square knot [*skwār*] a secure knot made by a single throw of one of the two ends over the other, then a return and another single throw with both ends coming out on the same side of the loop, either both over or both under it. Called also reef knot. See also **knot**.

squash ***Curcurbita***.

Squatina squatina, S. angelus, S. laevis farmed finfish in family Squatinidae; called also angel shark, monk-fish.

squeejit ***Mentha satureioides***.

squill [*skwil*] the fleshy inner scales of the bulb of the white variety of ***Drimia maritima***; it contains several cardioactive glycosides. The red variety is used as a rat poison.

blue s. ***Merwilla plumbea***.

Mediterranean s. *Drimia maritima*.

red s. a cardiac glycoside (scilliroside) extracted from the dried bulbs of *Drimia maritima*. Was used therapeutically as a cardiac stimulant at one time, now used as a rodenticide. Poisoning, with

S-72: Squamous cell carcinoma on the nonpigmented nasal planum of a cat. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

S-73: Ocular plaque, an early precursor of ocular squamous cell carcinoma.
Courtesy of B Vanselow.

signs of bradycardia and convulsions, occurs with very large doses.

sea s. *Drimia maritima*.

white s. a cardiac glycoside called scillerin A obtained from the plant *Drimia maritima*.

squint [*skwint*] 1. lay term for **strabismus**. 2. to narrow the palpebral fissue, especially so as to improve vision.

squirrel [*skwur'əl*] rodent in the family Sciuridae; small, arboreal, mostly herbivorous and varying in color from gray to shiny black, red and cream, and in size from mouse to large cat. They are distinguished by their fine, dense fur and their bushy, plume-like tails.

s. fibroma a poxvirus disease caused by a member of the genus *Leporipoxvirus* in which there are typical subcutaneous fibroma lesions. The virus isolated from the lesions has been used to produce fibroma lesions in rabbits.

fox s. (*Sciurus niger*) this species has a characteristic of inherited porphyria manifested by fluorescence of bones and teeth when viewed under ultraviolet light, and a pink coloration of these and other tissues. There is no photosensitization.

squirreltail grass see ***Hordeum***.

SR sedimentation rate.

Sr chemical symbol, *strontium*.

SRC Science Research Council (UK).

SRH somatotropin releasing hormone (growth hormone releasing hormone).

SRMA steroid-responsive meningitis-arteritis.

SRP signal recognition particle.

SRS, SRS-A see **slow-reacting substance**.

ss. [L.] *semis* (one half).

SSA 1. special somatic afferent system of dendritic zones of neurons associated with the eye and ear. 2. sulfosalicylic acid.

SSPE subacute sclerosing panencephalitis.

SSRI selective serotonin reuptake inhibitor.

SSS sick sinus syndrome.

SST serum-separator tube. A type of blood collection tube with no anticoagulant but containing a gel that assists in separating serum from cells; used for biochemistry tests and serology.

$S_1S_2S_3$ pattern an electrocardiographic abnormality in which S waves are present in leads I, II and III. It is associated with right ventricular enlargement involving the base of the heart or the ventricular outflow tract.

stabilate [*sta'bĭ-lāt*] a mixture of blood and tick tissues, expected to contain infective elements of rickettsia or protozoa, in a stable state suitable for storage.

stabilization [*sta"bil-ĭ-za'shən*] the process of making firm and steady.

stable [*sta'bəl*] 1. animal accommodation, usually for horses. 2. to accommodate an animal in a stable as distinct from running at pasture. 3. steady; not easily swayed.

s. blackleg caused by the germination of latent spores of *Clostridium septicum* in tissues. The clinical disease is similar to blackleg.

s. cough any of the viral diseases of the upper respiratory tract of horses, but most commonly equine influenza.

stachybotryotoxicosis [*stak"e-bot"re-o-tok"sĭ-ko'sis*] the disease caused by poisoning by ***Stachybotrys atra***.

***Stachybotrys chartarum* (syn. *S. alternans, S. atra*)** [*stak"e-bot'ris*] a fungus that grows on stored feed and produces trichothecene mycotoxins. Poisoning is characterized by diarrhea, necrotic ulcers in the mouth, mucosal petechiation and agranulocytosis. See also **satratoxins**. Poisoning called alimentary toxic aleucia.

Stachys arvensis European plant in the family Lamiaceae; contains an unidentified toxin which causes tremor, incoordination and recumbency if exercised. There is no permanent damage. Called also stagger weed.

stactometer [*stak-tom'ə-tər*] a device for measuring drops.

Stader splint [*sta'dər*] see Stader **splint**.

staff [*staf*] a wooden rod or rodlike structure.

Staffordshire bull terrier a small (24–38 lb), very muscular and solidly built dog with broad head, moderately short muzzle, half-pricked ears and medium length tail. The coat is smooth and short and comes in many colors, except black and tan. See also **American Staffordshire terrier**.

Staffordshire shilling see shilling **alopecia**.

stag 1. in abattoir terminology a male animal castrated after it has matured sexually, i.e. more than a year old. Used mostly about cattle beasts or pigs. In rams the age limit is 6 months. In some areas also applied to an unbroken colt more than a year old. 2. to the game hunter an adult male of any of the large deer species.

stage [*stāj*] 1. a definite period or distinct phase, as of development of a disease or of an organism. 2. the platform of a microscope on which the slide containing the object to be studied is placed.

stagger bush ***Senecio latifolius, S. retrorsus, Lyonia ligustrina***.

stagger weed see ***Stachys arvensis***.

staggergrass see ***Amianthium muscaetoxicum, Melica decumbens***.

staggering disease see **Borna disease**.

staggers incoordination of any kind, including a tendency to fall, and recumbency if harassed.

blind s. incoordination, aimless wandering as in liver encephalopathy, carbohydrate engorgement. The syndrome called blind staggers of livestock in North America is mostly sulfur-associated polioencephalomalacia, previously erroneously attributed to selenium poisoning.

grass s. see **lactation tetany** (2).

paspalum s. see **paspalum ergot**.

ryegrass s. ruminants and horses grazing pastures dominated by *L. perenne* (perennial ryegrass) may be affected with a severe incoordination which appears with forced exercise but disappears if the animals are left to their own devices. Caused by tremorgen lolitrems from the endophyte *Neotyphodium (Acremonium) lolii* which infests the grass.

staging [*stāj'ing*] 1. the determination of distinct phases or periods in the course of a disease, the life history of an organism, or any biological process. 2. the classification of neoplasms according to the extent of the tumor.

TNM s. staging of tumors according to three basic components: primary tumor (T), regional nodes (N) and metastasis (M). Subscripts are used to denote size and degree of involvement; for example, 0 indicates undetectable, and 1, 2, 3 and 4 a progressive increase in size or involvement. Thus, a tumor may be described as $T_1N_2M_0$.

stagnant loop syndrome [*stag'nənt*] the syndrome of toxemia and dehydration caused by a loop or loops of atonic small intestine caused by partial obstruction, paralytic ileus or radiation injury. The stasis has the effect of encouraging growth of anaerobic bacteria and damage to enterocytes causing diarrhea.

Staib agar see birdseed **agar**.

stain [*stān*] 1. a substance used to impart color to tissues or cells, to facilitate microscopic study and identification. 2. an area of discoloration of the skin.

acid s. a stain in which the coloring agent is in the acid radical.

basic s. a stain in which the coloring agent is in the basic radical.

carbol fuschin s. used to stain some gram-negative bacteria, including *Campylobacter fetus*.

Castaneda's s. a technique for demonstrating chlamydial elementary bodies, using formol blue and safranin.

Diene's s. one containing methylene blue, maltose and azure II, used for staining mycoplasmal microcolonies.

differential s. one which facilitates differentiation of various elements in a specimen.

fluorescein s. one used for many diagnostic purposes, principally the detection of corneal ulceration. See **fluorescein**.

hematoxylin and eosin s. a staining method employed universally for routine histological examination of tissue sections. It is

a combination of the basic dye hematoxylin and the alcohol-based eosin. Nuclei stain blue (basophilic) and cytoplasm stain red.

India ink s. used to demonstrate capsules on *Cryptococcus neoformans* and some bacterial species.

lambing s. staining of the breech and back of the udder of a ewe caused by the passage of the fetal fluids and then the lochia. Used as a guide to whether or not the ewe has lambed and perhaps lost her lamb.

lissamine green s. topically applied dye used for detecting dead or devitalized corneal and conjunctival epithelial cells.

Luxol fast blue s. a stain for demonstrating myelin which is stained blue.

Macchiavello s. a basic fuscin solution for staining chlamydial elementary bodies.

Mallory's s. stains connective tissue blue.

Masson's trichrome s. connective tissue is stained green or blue, while cytoplasm is red. Useful for demonstrating collagen.

metachromatic s. one that produces in certain elements color different from that of the stain itself.

methanamine silver s. stains fungal elements in tissue a dark brown.

new methylene blue s. a metachromatic dye used for staining blood, vaginal smears, and tissue samples for cytological examination. Particularly useful in demonstrating reticulocytes.

Newman's s. used on smears of milk for demonstrating organisms in mastitis.

nigrosin s. an aniline dye used in wet mounts to demonstrate capsules, especially with ***Cryptococcus*** *neoformans*.

nuclear s. one that selectively stains cell nuclei, generally a basic stain.

oil red o s. stains lipids red.

periodic acid–Schiff (PAS) s. periodic acid followed by Schiff reagent stains polysaccharides, glycoproteins and glycolipids. It is used to demonstrate fungal elements.

Prussian blue s. see **Prussian blue**.

silver s. a method of demonstrating flagella on bacteria, or for visualizing very thin bacteria, such as leptospires. Also used to stain separated proteins in polyacrylamide gels.

Sudan s. see **Sudan**.

supravital s. a stain introduced in living tissue or cells that have been removed from the body.

tumor s. an area of increased density in a radiograph, due to collection of contrast material in distorted and abnormal vessels, prominent in the capillary and venous phases of arteriography, and presumed to indicate neoplasm.

van Gieson s. a stain specific for collagen; often used in combination with Verhoeff stain which identifies elastic fibers.

Verhoeff s. a stain specific for elastic fibers.

vital s. a stain introduced into the living organism, and taken up selectively by various tissue or cellular elements. Often used to determine the live/dead cell ratio in a cell population.

von Kossa s. a silver nitrate stain for phosphates and carbonates which are usually complexed with calcium.

Wright's s. a mixture of eosin and methylene blue, used for demonstrating blood cells.

Ziehl–Neelsen s. one of carbol fuchsin counterstained with methylene blue; used to demonstrate acid-fast organisms, especially *Mycobacterium* spp., in smears and tissues. A modified method using mild acid to decolorize is used for staining *Brucella* spp. and *Nocardia asteroides*. See also **acid-fast**.

stainable iron a method of staining a bone marrow smear to determine the amount of body storage of iron.

staining [*stān'ing*] 1. artificial coloration of a substance to facilitate examination of tissues, microorganisms or other cells under the microscope. For various techniques, see under **stain**. 2. marring the appearance.

chromosomal s. blood is collected in a highly aseptic manner and placed in tissue culture medium containing a stimulant to cell division. The leukocytes are collected, killed with a cytotoxic agent, enlarged by osmosis in a hypotonic liquid, placed on slides, fixed and stained.

bipolar s. concentration of stain at either end of rod-shaped bacteria; a characteristic of particular species, such as *Pasteurella* spp.

negative s. a procedure visualizing specimens by either light or electron microscopy. In light microscopy, India ink, which blocks the transmission of light is used as a negative stain to detect bacterial capsules. In electron microscopy, electron-dense salts such as sodium phosphotungstate are used in the examination of particles particularly viruses.

radiograph s. may be yellow or brown stains due to inadequate rinsing, or doubly refracting exhibiting different colors depending on angle of viewing.

stainless steel see **steel**.

staircase phenomenon a characteristic of cardiac muscle, the strength of the contraction increases as the interval between contractions increases, up to a point.

stalagmometer [*stal"ag-mom'ə-tər*] an instrument for measuring surface tension by determining the exact number of drops in a given quantity of a liquid.

stale horseman's term for the act of urination by a horse.

stalkage residue of a corn crop after the cobs have been picked by a mechanical harvester. The feed is mature and dry. It may be fed standing or cut and chopped. See also **stover**.

stall a small compartment to house one animal, usually a horse, cow or pig. Calves may also be housed in stalls for reasons of hygiene or in veal fattening units. A stall is usually just large enough for an animal to stand and lie in but insufficient to turn around in; in fact they may be designed specifically so that the animal cannot turn around. There may be a chain across the back, which is always open, or the animal is tied in with a neck chain or a headstall. In open access housing in modern cow barns no attempt is made to keep the cows in their stalls. See also **box** (2).

s. bed the floor of a stall. Most commonly concrete covered with straw, sawdust or other bedding but earth floors or sand on concrete are probably more comfortable for cows. Pigs manage all right on concrete without bedding.

s. fed cattle confined and fed in individual stalls. Contrast with pen-fed or lot-fed.

s. kicking a vice in horses which are kept in stalls for too long without exercise.

s.-related injury injuries incurred by being restrained in stalls, e.g. teat treads, broken tail.

tie s. a method of housing dairy cattle or sows where animals are neck or belly tied in a restricted stall area. Horses are usually cross-tied.

stall-cramp see inherited periodic **spasticity**.

stallion 1. an entire male horse aged 4 years and over. 2. in UK, applied to a male donkey (jack).

s. ring see stallion **ring**.

shuttle s. a breeding stallion that is transported between Northern and Southern hemispheres in order to be used during both breeding seasons, which occur at different times in each location.

teaser s. stallion used to detect those mares which are in estrus. During the breeding season those mares to be bred are brought into a crush and the teaser brought alongside. The mares that show estral signs are kept back, usually palpated per rectum to determine the state of their ovaries, and may be bred. The teaser is not used for breeding and is usually a pony or an infertile cryptorchid.

stance [*stans*] the **posture** or **position**.

sawhorse s. see sawhorse **posture**.

broad base s. standing with legs far apart; imparts more stability and seen with ataxia or generalized weakness. Called also base-wide and wide-base.

stanchion a specially designed headgate to hold an animal in place while allowing feeding and resting. Most commonly used for cattle.

s. head locks used between loose housing and feedbunks or feed alley in dairies. Are open while cows feed but are set up so that a throw of a single lever will close the several in a row and catch cows for examination or other procedures.

s. housing an older system where cows are tied in for the winter in head-locks of wood or metal and have a confined space in which to lie but feed troughs and water bowls are at the front of the stall and a gutter, nowadays fitted with a mechanical dung remover for the collection of manure and urine.

stand a standing crop of fodder plants or weeds, e.g. a stand of variegated thistle.

stand-off in ultrasonography, a device used to increase the distance between the transducer and skin in order to bring the area of investigation into the focal zone.

VetBooks.ir

S-74: Arched back and painful stance due to mycoplasmal arthritis.

standard [*stan'dərd*] something established as a measure or model to which other similar things should conform.
bacteriological s. of meat the standard bacterial count of meat beyond which local legislation forbids the sale or use of meat.
Standard Nomenclature of Veterinary Diseases and Operations (SNVDO) an early scheme for veterinary nomenclature based on the American Medical Association's Standard Nomenclature of Diseases and Operations (SNCO); first published by the AVMA in 1964 with subsequent revisions. Replaced by **SNOVET**.
Standard schnauzer see **Schnauzer**.
Standardbred a group of breeds of horses used in trotting races. See **American Trotter**. Called also Trotter.
standardization [*stan"dərd-ī-za'shən*] weighted averaging of a characteristic. It is usually specific to a standard distribution of age or other characteristic.
exposure factor s. in radiology is the elimination of variation as much as possible in as many as possible factors which affect the optimum exposure time. Includes using a standard anode-film distance, use of the same chemicals and preparation technique, eliminating surges and drops in input voltage, and use of the same screen-film combination.
standardized pertaining to data that have been submitted to standardization procedures.
s. morbidity rate see **morbidity** rate.
s. mortality rate see **mortality** rate.
standstill [*stand'stil*] cessation of motion, as of the heart (cardiac standstill) or chest (respiratory standstill).
Stangeria a genus of the family Stangeriaceae of cycads, restricted to southern Africa.
Stanleya pinnata North American selenium indicator plant in the family Brassicaceae; contains large amounts of selenium on soils rich in the element and can cause selenium poisoning characterized by lameness, hoof deformity, alopecia. Called also Prince's plume.
stannous [*stan'əs*] containing tin as a bivalent element.
stannum (Sn) [L.] *tin*.
stanozolol [*stan'o-zo-lol"*] an androgenic anabolic steroid used in the treatment of weight loss, debility and nonregenerative anemias.
Stanton's disease melioidosis.
stapedial [*sta-pe'de-əl*] pertaining to the stapes.
stapediovestibular [*sta-pe"de-o-vəs-tib'u-lər*] pertaining to the stapes and vestibule.
stapedius relating to the stapes or the stapedius muscle.
s. muscle a tiny striated muscle which aids in the dampening of the effects of high-frequency vibrations on the auditory apparatus.
stapes [*sta'pēz*] the innermost of the three ossicles of the ear; called also stirrup.
staphage lysate staphylococcus phage lysate; a preparation of *Staphylococcus aureus* and polyvalent staphylococcus bacteriophage that has been used as an immunomodulator in the treatment of refractory pyodermas.
staphylectomy uvulectomy in humans. In animals the term is used to describe resection of the posterior part of the soft palate.
staphyline [*staf'ə-lin*] 1. pertaining to the uvula. 2. shaped like a bunch of grapes.
staphylitis [*staf"ə-li'tis*] inflammation of the uvula or soft palate.
staphyl(o)- word element. [Gr.] *uvula, resembling a bunch of grapes, staphylococci*.
staphylococcal [*staf"ə-lo-kok'əl*] pertaining to *Staphylococcus* spp.
s. clumping test used as a means of measuring the quantity of fibrinogen-split products in a sample of blood.
equine s. dermatitis see **equine** staphylococcal dermatitis.
s. food poisoning a disease of humans caused by enterotoxins elaborated by coagulase-positive *Staphylococcus aureus* of human origin. Dangerous foods for this disease are ham, dried milk and cold meats generally. Domestic animals appear not to be susceptible to the toxins but the disease is important to veterinarians because animal products, especially milk and chicken meat from animals in their care, may be the origin of this severe, often epidemic, gastroenteritis.
s. granuloma persistent, low-grade infection of connective tissue or muscle by *Staphylococcus aureus* causing the development of granulomas which can become very large, most commonly in the chest of the horse and the mammary gland of the sow. The granuloma is a dense mass of fibrous tissue containing a large number of small abscesses containing thick yellow pus containing granules of club colonies. Called also botryomycosis.
s. hypersensitivity see bacterial **hypersensitivity**.
s. mastitis of cows caused by *S. aureus* may be chronic, acute or peracute with gangrene of the quarter and sometimes death of the cow.
s. phage lysate products see **staphage lysate**.
s. protein A a cell-bound protein expressed by most strains of *Staphyloccus intermedius* recovered from dogs and cats and by *Staphylococcus aureus*.
s. pyemia see **tick** pyemia.
s. septicemia of lambs and less commonly other neonates; high mortality rate; umbilical infection the likely entry portal.
staphylococcemia [*staf"ə-lo-kok-se'me-ə*] septicemia with staphylococci in the blood.
staphylococcin [*staf"ə-lo-kok'sin*] see **bacteriocin** (1).
staphylococcosis [*staf"ə-lo-kok-o'sis*] see **enzootic** staphylococcosis. Called also tick pyemia.
Staphylococcus [*staf"ə-lo-kok'əs*] a genus of spherical, gram-positive bacteria tending to occur in grapelike clusters; they are normal flora on the skin and in the upper respiratory tract and are the most common cause of localized suppurating infections. Pathogenic species are characterized by positive reactions in the **coagulase** test.
S. aureus a common and important cause of disease in animals including bovine **mastitis**, **tick** pyemia (enzootic staphylococcosis), abscesses, dermatitis, furunculosis, meningitis, osteomyelitis, food poisoning, wound suppuration, and **bumblefoot** in poultry. A significant pathogen of humans and also a common zooanthroponosis, particularly with multiply resistant human strains indroduced into surgical woounds in animals. *S. aureus* subsp. *anaerobius* causes lesions similar to caseous lymphadenitis in sheep.
S. epidermidis a common skin and mucosal inhabitant in humans and occasionally in animals living in association with humans.
***S. hyicus* (*S. hyos*).** causes **exudative** epidermitis and occasionally septic arthritis in pigs.
S. intermedius the major isolate from pyoderma and occasionally other pyogenic infections in dogs and cats and a rare cause of infection in other species.
S. pseudintermedius isolated from dogs, cats, horses and birds, and may be confused with *S. intermedius*. May be a common cause of pyogenic infections in dogs and cats.
S. xylosus a rare cause of mastitis in cattle.
staphylococcus [*staf"ə-lo-kok'əs*] pl. *staphylococci* [Gr.] any organism of the genus *Staphylococcus*.

S

coagulase-positive s. see **coagulase** test.
staphylodemodicosis demodectic mange complicated by infection with *Staphylococcus* spp.
staphyloderma [*staf"ə-lo-der'mə*] pyogenic skin infection by staphylococci.
staphylokinase [*staf"ə-lo-ki'nās*] a bacterial kinase produced by certain strains of staphylococci; it induces fibrinolysis by converting plasminogen to plasmin.
staphylolysin [*staf"ə-lol'ə-sin*] a substance produced by staphylococci that causes hemolysis.
staphyloma [*staf"ə-lo'mə*] protrusion of the sclera or cornea, usually lined with uveal tissue; may be congenital or post-traumatic.
anterior s. staphyloma in the anterior part of the eye.
corneal s. 1. bulging of the cornea with adherent uveal tissue. 2. one formed by protrusion of the iris through a corneal wound.
posterior s. backward bulging of sclera at posterior pole of eye.
scleral s. protrusion of the sclera, usually lined with uveal tissue.
staphyloplasty plastic repair of the soft palate.
staphyloptosis [*staf"əl-op-to'sis*] elongation of the soft palate.
staphylorrhaphy [*staf"ə-lor'ə-fe*] surgical correction of a midline cleft in the soft palate.
staphyloschisis [*staf"ə-los'kĭ-sis*] fissure of the soft palate.
staphylotomy 1. incision of the soft palate. 2. excision of a staphyloma.
staple a number of wool fibers naturally formed into a cluster about as thick as a human thumb but varying widely in size. Used with reference to fleeces of fine-wool sheep. Similar structures in longwool fleeces are called locks.
s. measurements includes staple length, staple strength, staple length variability, and the position of any break in the wool.
s. strength force required to break a staple of wool of a given thickness.
staples [*sta'pəl*] U-shaped stainless steel or vitallium units with sharp points used for surgical fixation.
epiphyseal s. used to staple epiphysis to metaphysis; have metal bracing at the corners. Are driven in to the bone while held in a special holder and are removed with a similar special instrument.
soft tissue s. come in a special appliance suitable for animal use. Are expensive but very saving of time. Used especially for skin closure, bowel anastomoses, ligation of pedicle, wherever conventional suturing is very consumptive of time or difficult because of awkward access.
stapling [*sta'pling*] the use of staples as surgical sutures and fixation.
STAR see **Cornell** STAR accelerated lambing system.
StAR [*stahr*] steroidogenic acute regulatory protein.
star a color marking in a horse's coat consisting of a white spot in the center of the forehead; just a few white hairs is sometimes called a flame.
star grass plants capable of causing cyanide poisoning; most are in the genus **Cynodon**. Includes African star grass, Rhodesian star grass, robust star grass (*C. nlemfuensis*), Naivasha star grass (*C. plectostachyus*).
gulf s. g. ***Brachyachne convergens***.
star of Bethlehem see ***Ornithogalum***.
starch [*stahrch*] 1. any of a group of polysaccharides of the general formula, $(C_6H_{10}O_5)_n$; it is the chief storage form of **carbohydrates** in plants. 2. granular material separated from mature grain of *Zea mays* (Indian corn, or maize); used as a dusting powder and tablet disintegrant in pharmaceuticals.
s. blockers inhibitors of alpha-amylase, used to decrease starch digestion and limit energy intake from starch.
s. digestion test a test to assess the ability of the intestine to digest and absorb a polysaccharide. Efficiency measured by the rise in blood glucose after oral administration of starch to an animal that has been fasted.
s. equivalent an outmoded way of estimating and expressing the energy value of a feed. Replaced now by **metabolizable** energy.
s. inhalation can occur in pigs in a poorly ventilated environment and when the feed is fed dry. Causes foreign body pneumonia.
s.–iodine complex is a deep blue color and this is used as an indicator of the amount of starch in a solution.
s. tolerance test see starch digestion test (above).
staring coat a dry haircoat lacking in luster, usually carrying dandruff or scurf. May be caused by poor cutaneous circulation and lack of sebaceous secretion resulting from a general state of ill health such as in any toxemia.

S-75: Carpal radiograph demonstrating transphyseal bridging using a 'staple'. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

Starling curves [*stahr'ling*] graphic curves that relate cardiac function to venous inflow. Called also cardiac function curve. See also **Frank–Starling mechanism**.
Starling's hypothesis, law [*stahr'ling*] the law relating to the passage of fluid out of a capillary depending on the hydrostatic and osmotic pressures of the blood and the same pressures of tissue fluid, the net effect of the opposing pressures determining the direction and rate of flow.
starry-sky effect the cytological effect created in a histological slide of a lymphosarcoma by the presence of a large number of tingible-body macrophages, usually associated with a high rate of **apoptosis**.
stars of Winslow red or dark dots and lines in the tapetal area of the ocular fundus in many species, especially cats and large herbivores. Represent the end-on view of prominent choroidal capillaries as they emerge through the tapetum to nourish the outer retina.
starter [*stahr'tər*] Welsh springer spaniel.
startle reaction [*stahr'tl*] the mental state of suddenly aroused awareness; manifested by a flight or fight or submit pattern of behavior and posture.
starvation [*stahr-va'shən*] long-continued deprivation of food and its morbid effects. Hunger, loss of body weight and decreased muscle power and endurance occur early. Late stages include signs of milk yield drop, cessation of defecation and drinking, emaciation, loss of skin turgor without dehydration, weakness, slow heart rate and hypothermia.
preoperative s. see preoperative **fasting**.
starve–feed cycle metabolic response to feeding usually involving an increased sensitivity to glucose resulting in markedly increased rates of insulin secretion after varying periods of starvation, such as an overnight fast in humans or a prolonged fast, or during winter in hibernating animals.
stasis [*sta'sis*] a stoppage or diminution of flow, as of blood or other body fluid, or of intestinal contents.
gastric s. reduced motility, without primary organic disease, leading to retention of gastric contents; may be a cause of vomiting. Can be caused by stress, trauma, ulcers, peritonitis and gastritis.
urine s. may be caused by abnormalities in structure or innervation of the urinary outflow tract that result in incomplete emptying of the bladder or pooling of urine in diverticula. Important in the etiology of cystitis.
-stasis word element. [Gr.] maintenance of (or maintaining) a constant level; preventing increase or multiplication.

VetBooks.ir

stat. [L.] *statim* (at once).
state [stāt] condition or situation.
excited s. the condition of a nucleus, atom or molecule produced by the addition of energy to the system as the result of absorption of photons or of inelastic collisions with other particles or systems.
ground s. the condition of lowest energy of a nucleus, atom or molecule.
refractory s. a condition of subnormal excitability of muscle and nerve following excitation.
resting s. the physiological condition achieved by complete rest for at least 1 hour.
steady s. dynamic equilibrium.
static [stat'ik] 1. stable with opposing forces in balance. 2. minor electric disturbance.
s. fetal cadaver see **mummification**.
s. reaction reflexes which maintain a steady posture; they may be local, segmental or general.
statim [sta'tim] [L.] *at once;* abbreviated stat.
station [sta'shən] 1. position; stance. 2. see **ranch**.
statistic [stə-tis'tik] a numerical value calculated from a number of observations in order to summarize them.
order s. see **rank**.
statistical pertaining to or emanating from statistics.
s. efficiency between-test comparisons are based on the ratio of sample sizes required for the tests to have equal probabilities of detecting the same false null hypothesis; the more efficient test will have the smaller sample size.
s. methods procedures for collecting, classifying, summarizing, analyzing and making conclusions about, data. See also **regression** (4), **path** analysis, **factor**, discriminant **analysis**.
s. significance see **significance**.
statistics [stə-tis'tiks] 1. numerical facts pertaining to a particular subject or body of objects. 2. the science dealing with the collection, tabulation and analysis of numerical facts.
inferential s. conclusions, usually quantitative, drawn from an analysis of data.
salvage s. statistical technique used in an attempt to derive some useful information from a poorly designed or poorly executed experiment.
vital s. see **vital** statistics.
statoacoustic [stat"o-ə- 'tik] pertaining to balance and hearing.
statoconia [stat"o-ko'ne-ə] [Gr.] plural of *statoconium*; minute calcareous particles in the gelatinous membrane surmounting the macula in the inner ear. Called also otoconia.
statoconial membrane part of each otolithic organ; the hair cells in the organ carry stereocilia which project from the hairs and into the statoconial membrane which is covered with otoliths.
statolith [stat'o-lith] 1. a granule of the statoconia. 2. see **otolith**.
STATs *s*ignal *t*ransducers and *a*ctivators of *t*ranscription; a class of transcription factors that are activated in the cytosol following ligand binding to cytokine receptors.
stature [stach'oor] the height of an animal in the standing position.
status [sta'təs] [L.] *condition, state*.
s. asthmaticus asthmatic crisis; a sudden, intense and continuous asthmatic attack with dyspnea, gagging and cyanosis. May be seen in feline bronchial asthma.
s. epilepticus rapid succession of epileptic spasms without intervals of consciousness; brain damage may result.
s. spongiosis see **spongiosis**, spongy **degeneration**.
stay apparatus [sta] the anatomical mechanism in both the fore- and hindlimbs of horses which enable the animal to stand with little or no muscular effort. Efficiency of the apparatus is based on the judicious location of fibrous tissue. Many muscles, ligaments and tendons participate, especially the suspensory ligament, the flexor tendons and their check (or accessory) ligaments, and in the hindlimb, the peroneus tertius and the patellar-locking mechanism.
stayer a horse that can gallop at racing speed for at least 1.5 miles (2.4 km).
steady-state level said of a medication regimen; a plateau.
steam the vapor created by heating water to 212˚F (100˚C).
s. sterilization see **sterilization** (2).
steaming up the practice of commencing to feed extra rations, especially of grain and concentrates, to late pregnant cows in an attempt to promote maximum milk production from the very beginning of the lactation. Feeding usually commences about 4 weeks before the due date.
steapsin the fat-splitting enzyme (lipase) of the pancreatic juice. Now more usually called pancreatic lipase.
steapsinogen the precursor of steapsin.
stearate [ste'ə-rāt] any compound of stearic acid.
stearic acid [ste-ar'ik] an 18 carbon saturated fatty acid from animal and vegetable fats.
stearin [ste'ə-rin] glycerol tristearate, a substance common in mammalian fat. Formed from the reaction of stearic acid with glycerol. See also **olein**, **palmitin**.
stear(o)- word element. [Gr.] *fat*.
steatitis [ste"ə-ti'tis] inflammation of fatty tissue. See also **yellow fat disease**.
steat(o)- word element. [Gr.] *fat, oil*.
steatocystoma [ste"ə-to-sis-to'mə] a human term for an epithelial cyst.
steatogenous [ste"ə-toj'ə-nəs] producing fat; lipogenic.
steatolysis [ste"ə-tol'ĭ-sis] the emulsification of fats preparatory to absorption.
steatoma [ste"ə-to'mə] pl. *steatomata, steatomas*. 1. lipoma. 2. a fatty mass retained within a sebaceous gland.
steatomatosis [ste"ə-to-mə-to'sis] the presence of numerous sebaceous cysts.
steatonecrosis [ste"ə-to-nə-kro'sis] fat necrosis.
steatopathy disease of the sebaceous glands.
steatopygia [ste"ə-to-pij'e-ə] excessive fatness of the buttocks; a normal state in **fat-tailed sheep**.
steatorrhea [ste"ə-to-re'ə] excess fat in the feces due to a malabsorption syndrome caused by disease of the intestinal mucosa or pancreatic enzyme deficiency. The feces are bulky, greasy, malodorous and pale in color.
pancreatic s. see exocrine **pancreatic** insufficiency.
steatosis [ste"ə-to'sis] fatty degeneration.
muscular s. excess fat deposits in muscle; a problem only at meat hygiene inspection.
STEC shiga toxin-producing *Escherichia coli*.
steed see **nag**.
steel an industrial metal.
steenboksuring ***Rumex*** *acetosella*.
steeplechase a horse race conducted over fences, open ditches and water jumps.
steeplechaser a horse schooled in and used for steeplechase racing.
steer castrated male cattle beast over a year of age. See also **bullock**, **buller steer**.
s. bulling see **bulling**.
steg stag.
stegnosis [steg-no'sis] constriction; stenosis.
Stegomyia fasciata [steg"o-mi'yə] a mosquito vector of the virus of fowl pox.
Steinmann name given to specific designs of orthopedic hardware.
S. extension extension exerted on the distal fragment of a fractured bone by means of a nail or pin (Steinmann pin) driven into the fragment. Called also nail extension.
S. pin intramedullary pin with a choice of ends, either screw, chisel or trocar. Can be plain at one end or have one of the selected points at each end. Pin drills to drill the holes for the pins, and a chuck to grasp the end of the pin and drive or rotate it are available.
stell circular stone or metal corral providing shelter for sheep in windswept, snow-susceptible areas. Has lean-to, inward-facing roof around the wall.
stella [stel'ə] pl. *stellae* [L.] star.
Stellaria media the widespread weed called chickweed, member of the family Caryophyllaceae, which may cause nitrate–nitrite poisoning.
stellate [stel'āt] star-shaped; arranged in rosettes.
s. ganglion cervicothoracic and middle cervical ganglion.
s. reticulum center of the enamel organ of the embryonic tooth.
stem cell [stem] see stem **cell**.
stem line-template a process of development of new muscle fibers, evident in the fetal and newborn pig and important in the development of splayleg in that species. A centrally located muscle fiber in a sublobule of muscle divides longitudinally or acts as a template for myoblasts to form a new fiber. The process is repeated until a whole new sublobule is formed.
Stemodia Australian plant genus in the Scrophulariaceae family; contain cucurbitane triterpene steroid glycosides causing

S

diarrhea, cardiac arrythmia and polyuria. Includes *S. florulenta* (Morgan flower), *S. kingii*.

sten(o)- word element. [Gr.] *narrow, contracted, constriction*.

Stenocarpella maydis a toxic fungus which grows on corn grain; causes incoordination and paresis in cattle in southern Africa and South America which are pastured on crops carrying infected cobs. Formerly called *Diplodia maydis*.

stenochoria [*sten"o-kor'e-ə*] stenosis.

stenocoriasis [*sten"o-kə-ri'ə-sis*] constriction of the pupil.

stenohaline species of fish capable of osmoregulation only in a narrow range of salinities; the opposite of **euryhaline**.

stenopeic [*sten"o-pe'ik*] having a narrow opening or slit.

stenosed [*stə-nōzd'*] narrowed; constricted.

stenosis [*stə-no'sis*] narrowing or contraction of a body passage or opening. See also specific anatomical sites.

aortic s. see **aortic** stenosis.

esophageal s. a common cause of esophageal obstruction, caused commonly by esophageal trauma, caused by foreign bodies or swallowing caustic or irritating substances, or severe esophagitis, as occurs in reflux under anesthesia; congenital stenosis is often associated with **tracheoesophageal** fistula.

left atrioventricular s. see mitral stenosis (below), **valvular** stenosis.

mesonephric duct s. occurs as stenosis of the ductus deferens or epididymis; may be associated with renal aplasia.

mitral s. a narrowing of the left atrioventricular orifice, causing signs of exercise intolerance, syncope and ultimately congestive heart failure. Occurs in association with mitral valve dysplasia in Newfoundlands and Bull terriers.

nasopharyngeal s. an acquired disorder in cats, usually following chronic upper respiratory infection, which causes upper airway obstruction with mucopurulent nasal discharge and a wheezing respiration, which is relieved with open mouth breathing.

paramesonephric duct s. focal defects in the duct lead to segmental aplasia or stenosis of the uterine tube or horn.

pulmonary artery s. the commonest cardiac defect in dogs; it is a narrowing of the pulmonary outflow tract and may occur in any one of a number of common sites including infundibular, valvular and subvalvular.

rectovaginal s. see **rectovaginal** constriction.

right atrioventricular s. see tricuspid stenosis (below).

subepiglottic s. has the effect of reducing air flow into and out of the lungs.

tricuspid s. narrowing or stricture of the tricuspid orifice of the heart. An uncommon congenital defect; accompanies tricuspid dysplasia, a heritable condition in Labrador retrievers.

valvular s. see **aortic**, **pulmonary**, **atrioventricular**.

stenostomia narrowing of the mouth.

stenothermal, stenothermic [*sten"o-ther'məl*] pertaining to or characterized by tolerance of only a narrow range of temperature.

stenothorax [*sten"o-thor'aks*] abnormal narrowness of the chest.

stenotic [*stə-not'ik*] marked by abnormal narrowing or constriction.

Stenson's duct duct of the parotid salivary gland.

stent [*stent*] a mold for keeping a skin graft in place, made of Stent's mass or some acrylic or dental compound; by extension, a device or mold of a suitable material used to hold a skin graft in place or to provide support for tubular structures that are being anastomosed. Also used in vascular and bile duct surgery, and repair of laryngeal, tracheal, nasal trauma and stenosis.

step cycle [*step*] the sum of the movements made during locomotion by a limb from the time it leaves the ground until it leaves the ground on the next occasion.

step mouth [*step*] marked variation in the height of adjoining molars causing difficulty, possibly pain or discomfort, during mastication; particularly in horses. Due usually to loss of an opposing tooth.

Stephania japonica plant member of the family Menispermaceae; contains an unidentified toxin which causes incoordination, recumbency, convulsions, paralysis. Called also *S. hernandifolia*.

Stephanofilaria [*stef"ə-no-fī-lar'e-ə*] a genus of nematodes in the family Filariidae; cause chronic dermatitis of cattle called cascado.

S. assamensis causes chronic dermatitis in buffaloes, goats and cattle. In cattle the disease is called humpsore.

S. dedoesi found in the skin of cattle.

S. dinniki causes filarioid dermatitis in black rhinoceros.

S. kaeli found on the legs of cattle.

S. okinawaensis causes dermatitis of the muzzle and teats of cattle.

S. stilesi causes dermatitis on the ventral abdominal wall of cattle.

S. zaheeri found on the inner side of the ear pinna of buffaloes.

stephanofilariasis [*stef"ə-no-fil"ə-ri'ə-sis*] see **stephanofilarosis**.

stephanofilarosis [*stef"ə-no-fil"ə-ro'sis*] infestation with filariid worms of the genus *Stephanofilaria*.

cutaneous s. *Stephanofilaria dedoesi* causes dermatitis in cattle (cascado). *S. kaeli* and *S. assamensis* cause dermatitis in cattle (humpsore), *S. zaheeri* causes contagious otorrhea (earsore), a dermatitis around the ear in buffalo, *S. stilesi* and *S. okinawaensis* also cause dermatitis in cattle. Similar infestations include *Parafilaria multipapillosa* which causes subcutaneous nodules in horses, *P. bovicola* causes similar lesions in cattle, *Suifilaria suis* does the same in pigs. The dermatitis is manifested by small papules that enlarge to form itchy, scabby lesions that suffer much rubbing. The lesions occur at various sites on the body depending on the species of worm. See ***Parafilaria***, ***Stephanofilaria***, ***Elaeophora schneideri***.

Stephanorossia palustris ***Oenanthe*** *palustris*.

Stephanostomum a genus of intestinal flukes in the family Acanthocolpidae.

S. baccatum found in the intestines of marine fish but thought to be not pathogenic.

stephanuriasis the disease of pigs caused by the kidney worm *Stephanurus dentatus*. Characterized by poor feed utilization and growth, and later emaciation, paralysis and ascites.

Stephanurus [*stef"ə-nu'rəs*] the only genus of importance in the nematode family Stephanuridae.

S. dentatus found in the kidneys of pigs and rarely as aberrant parasites in cattle and horses. It may also be found in the liver, pancreas and other organs of pigs.

Steppe several Russian breeds of cattle, e.g. Red Steppe, Grey Steppe.

stepwedge a block of aluminum shaped like a series of steps. Used to test the characteristics of the X-ray beam, film, filters and to standardize exposure factors.

stepwise incremental; additional information is added at each step.

s. multiple regression used when a large number of possible explanatory variables are available and there is difficulty interpreting the partial regression coefficients. **s. prospective trial** see **prospective** trial.

sterc(o)- word element. [L.] *feces*.

stercobilin [*stur"ko-bi'lin*] a bile pigment derivative formed by air oxidation of stercobilinogen; it is a brown-orange-red pigmentation contributing to the color of feces and also urine, where it is called **urobilin**.

stercobilinogen [*stur"ko-bi-lin'o-jən*] a bilirubin metabolite and precursor of stercobilin. Small amounts, termed **urobilinogen**, are found in the urine.

stercoracic involving **posterior** station development in trypanosomes.

Stercoraria the posterior station group of trypanosomes transmitted by contamination through the feces of the insect vector. Includes *Trypanosoma cruzi*, *T. lewisi*, *T. melophagium*, *T. nabiasi*, *T. rangeli*, *T. theileri*, *T. theodori*.

stercorarian, stercoral, stercoraceous, stercoracic [*stur"kə-rar'e-ən*] of fecal origin; said of trypanosomes (e.g. *Trypanosoma cruz*) passed to the mammalian host in the feces of the reduviid bugs. See also ***Stercoraria***.

S-76: Stephanophilarosis ('humpsore') in a cow. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

VetBooks.ir

stercorolith fecalith; an intestinal concretion formed around a center of fecal matter.
stercoroma [stur"kə-ro'mə] a tumor-like mass of fecal matter in the rectum; fecaloma.
stercus [L.] *dung, feces.*
stereo- word element. [Gr.] *solid, firm, three-dimensional.*
stereoarthrolysis [ster"e-o-ahr-throl'ĭ-sis] surgical formation of a movable new joint in cases of bony ankylosis.
stereoauscultation [ster"e-o-aws"kəl-ta'shən] auscultation with two stethoscopes, on different parts of the chest.
stereocampimeter [ster"e-o-kam-pim'ə-tər] an instrument for studying unilateral central scotomas and central retinal defects in humans.
